(3) All CRT inputs are suspended prior to processing. If maximum entries specified in appendix B-98 are exceeded, violations will be output on the F-85, Violation Reject Report.

(4) Suspended ZBLs may be displayed for review, change or deletion by entering D following the line titled "Display ZBLs for change or Deletion" and depressing the ENTER key. Each suspended ZBL will be displayed on a single line as shown in figure 2. When all suspended ZBLs cannot be presented on one Tube Face, depress the ENTER key for additional displays.

(a) Displayed ZBLs may be changed by positioning the cursor under the desired field and typing the correct data.

(b) To delete a ZBL, position cursor under the line, space out the Action Code and depress the ENTER key.

(c) To add a ZBL, position cursor on a blank line and type information. Depression of the ENTER Key will initiate validation of entered or changed ZBLs and display error message, if applicable. If entry or changes are valid, original input panel will be displayed on screen.

e. Workload can be pulled by the following elements when used in conjunction with Workload Request Action Codes, appendix A-42. To pull additional workload for Disposal Release Orders, DIC A5J, use DRO Code W in conjunction with Action Code.

Line Items/Weight
Geographic Shipping
Warehouse Area
PDT
Destination Activity Address Code
Consignee (Under emergency condition only.)
Special Projects (In conjunction with Service/Agency Code.)
Combination of first 4 listed above.

f. Applicable Action Codes:

CA - Geographic Area and Weight of MROs
CC - Consignee
CD - Project and Service/Agency
CE - Destination AAC
CG - Line Items, Warehouse, PDT, and Area
CI - Release Inventory/Documents
CJ - Line Items, PDT, and Area
CL - Line Items, Warehouse, and Area
CN - Line Items and Area
CQ - Line Items, Warehouse, and PDT
CS - Line Items and PDT
CT - PDT
CV - Line Items and Warehouse
CX - Line Items

g. Input Limits are as follows:

(1) Fifteen cards may be entered to pull workload by Special Project Code in conjunction with the Service/Agency Code.

(2) Thirty-five cards may be entered to pull workload by consignee under emergency conditions only.

(3) A hundred cards may be entered to pull workload by Destination AAC.

(4) Seventy-eight cards may be entered to pull workload by:

(a) Line Items, or

(b) Geographic Area, or

(c) Warehouse Area, or

(d) Planned Date to Transportation or a combination of subparagraphs (a) through (d) above.

APPENDIX E-098 V

WORKLOAD REQUEST CARD VIOLATIONS

1. INPUT DOCUMENT

Appendix B-98, Workload Request Card, DIC ZBL

2. INPUT TO PROCEDURE DECISION CHART

Appendix D-27

3. PURPOSE

This appendix provides instruction for the research, correction and reentry of Workload Request Cards which have been rejected from computer processing.

4. RESPONSIBLE ORGANIZATIONAL ELEMENT

The Workload Control Branch is responsibile for correction and reentry of all Workload Request Card violations rejected during computer processing.

5. PROCEDURES/INSTRUCTIONS

a. Whether the Workload Request Card is entered by remote terminal or through the Control Processing Unit, violations will be entered on the Violation Printout, appendix F-85.

b. Violations will be corrected and reentered immediately to computer program to ensure processing of Workload Request Card (s) prior to next shipping cycle.

c. Violation Codes (appendix A-82) assigned to this process and definitions are as follows:

VIOLATION/ REASON CODE	DEFINITION
RZ	Consignee invalid (pos. 48-53).
AK	Project Code invalid (pos. 54-56).
MD	Destination AAC invalid (pos. 57-62).
JK	PDT invalid (pos. 26-28).
CF	Action Code invalid (pos. 78-80).
JI	Line Item invalid (pos. 69-73).
JF	Area Code invalid (pos. 46-47).

VIOLATION/ REASON CODE	DEFINITION
JJ	Warehouse Area invalid (pos. 25).
UC	Card Entries in excess of table limits. (Action Code CE-100 Cards. All other Action Codes, 15 cards each.) (Position not applicable.)
SF	Workload Pull by PDT of DRO Invalid (pos. 19).

d. Reentry of corrected violation will be as follows:

NOTE: Appendix F-85, Violation Printout will show an asterisk under each card column of the input which is to be corrected. If the fields are all valid, but the input does not match a record, no asterisk will appear. However, the appropriate Violation Reason Code will appear in the Date Line containing the input image.

(1) Screen F-85 Violation Control Report and determine reason for rejection.

(2) Research documents utilized for preparation of original Workload Request Card DIC ZBL, appendix B-98; Workload Forecast, appendix F-38, Appendix E-098 P, etc.

(3) When the correct entry has been determined, annotate the corrected data directly below the erroneous field on the F-85 report using ink or distinctive colored pencil.

(4) Forward the annotated Violation Printout, appendix F-85 to the Office of Data Systems, via keypunch services, for reentry into the applicable process.

e. Violations received via remote terminal will be researched, corrected entry determined and reentry to applicable process will be made via remote terminal.

APPENDIX E-099 P

MRO/DRO CONTROL/STATUS REQUEST CARD

1. PURPOSE

This procedure prescribes the conditions under which an MRO/DRO Control/Status Request Card, DIC ZBM, appendix B-99, will be used.

2. APPENDICES USED IN THIS PROCESS

a. Chapter 60

b. Appendix A-42

c. Appendix B-66

d. Appendix B-99

e. Appendix F-40

f. Appendix F-69

g. Appendix F-107

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

The Shipping Documentation Branch is responsible for the determination that a ZBM card is required and the preparation thereof. Responsible also to establish the options available in appendix B-66 to provide a prepunched ZBM card for parcel post line items or freight line items or any combination specified in appendix B-66.

4. PROCEDURES/INSTRUCTIONS

This card is designed to accomplish a number of different functions predicated on the Action Code assigned. Completed parcel post, denial, local delivery, freight offered for shipment documentation is received in Shipping Documentation Branch. Documents are sorted into batches by mode, date shipped, date offered, and Action Codes as prescribed in subparagraphs a through i below. Verify quantities shipped, denied, and/or adjusted. Ensure that Delay Reason/Type of Hold Codes and adjustments to Parcel Post Automatic Clear Date are provided when applicable. Pull ZBM cards from suspense file if ZBM option is utilized. Prepare a coding sheet for each batch to be keypunched.

a. Change Data Elements on the Shipment Unit File.

A ZBM card will be used to change existing data on the Shipment Unit File for an individual line item. Positions 1-3, 8-14, and 15-18 must be completed and the only other fields in the card to be filled are those to be changed. Punch the correct data in the field of the card and this data will write over

the data already in the file. Action Code DA will be punched in pos. 79-80 to accomplish this action.

b. Overshipment of Quantity Ordered.

When the quantity actually shipped or offered, based on data annotated on the Shipment Planning Worksheet document, exceeds the quantity in the MRO/DRO control card because of item packaging characteristics, prepare a ZBM card indicating the quantity offered or shipped in pos. 21-25 and the overage in pos. 61-65. Use Action Code DB in pos. 79-80. If an overage is shipped to the PDO to comply with DSC instructions, follow the above instructions as to quantity using the same Action Code. Adjustments on partialled lines must always be indicated in the last action of that line.

c. Undershipment of Quantity Ordered.

When the quantity offered or shipped is less than the quantity in the MRO/DRO Control Card because of item packaging characteristics, prepare a ZBM card indicating the Action Code DD in pos. 79-80. Undershipment data will be on the Shipment Planning Worksheet. Adjustments on partialled lines must always be indicated in the last action of that line.

d. Denials.

(1) If the Shipment Planning Worksheet indicates an undershipment because of insufficient stock with the proper shelf-life, prepare a ZBM card using the Action Code DJ in pos. 79-80 indicating the quantity offered or shipped in pos. 21-25, and the quantity denied in pos. 61-65. The computer will prepare a denial A6_ for the quantity undershipped using the appropriate Management Code 3. If the undershipment is due to condition change, take the same action as above for quantities denied using Action Code DK. The computer will prepare an A6_ with Management Code 2. (Also submit DAC within 3 days.)

(2) Where a warehouse refusal exists, either partial or complete, the quantity offered or shipped will be in pos. 21-25 and the denial quantity in pos. 61-65 using Action Code DT in pos. 79-80; if a PDO shipment is involved, use the same Action Code. The computer will prepare an A6_ with Management Code 1.

(3) When the undershipment is because of insufficient stock with the proper type pack (subsistence only), prepare ZBM card using Action Code DE in pos. 79-80, indicating the quantity offered or shipped in pos. 21-25, and the shortage in pos. 61-65. The computer will prepare an A6_ with Management Code 4.

(4) When the undershipment is because reidentification of assets is in process, prepare a ZBM card using Action Code DG in pos. 79-80, indicating the quantity offered or shipped in pos. 21-25 and the shortage in pos. 61-65. The computer will prepare an A6_ with Management Code 5. (Also submit DD Form 1225 within 3 days.)

(5) When the denial is because the materiel was ordered in one continuous length (Advice Code 2N) but is not so available, prepare a ZBM card using Action Code DM in pos. 79-80, indicating the zero quantity offered or shipped in pos. 21-25, and the denied quantity in pos. 61-65. The computer will prepare an A6_ with Management Code 9.

(6) When the denial is because narcotic materiel was not available to supply exact quantity narcotic MRO in support of FMS transaction, prepare ZBM card using Action Code DL in pos. 79-80 and the denied quantity in pos. 61-65. The computer will prepare an A6_ with Management Code 8.

NOTE: Return, via mail, the Export Permit to DPSC, ATTN: Chief, Stock Control Division.

(7) With the exception of numeric (denial) Management Code 3 or 9, all other numeric (denial) Management Codes will be considered valid to specify conditions which preclude shipment of the directed DRO quantity or compliance with disposal instructions.

e. Cancellation of a Shipment Unit Line Item or Portion Thereof.

When notification (AC6/ACJ) is received from a DSC of a partial or complete cancellation of a line item, the computer History File is automatically queried to determine if cancellation is possible. Where the MRO is in process, a listing, appendix F-69, is prepared indicating current status. When the shipment is located and canceled quantity removed, prepare a ZBM card using data on the F-69 report and Action Code indicating the quantity canceled in pos. 61-65.

f. Picking, Packing, and Assembly.

Offering or closing of a line item after it is picked, packed, and assembled will be accomplished by use of a ZBM CARD UTILIZING Action Code DF. Data to complete this card will be on the Shipment Planning Worksheet. If it is found that a ZBM card is processed using a DF Action Code and that action is in error, a reversal action must be initiated to completely reverse the DF action by the use of Action Code DH.

g. Status Inquiry.

A ZBM card will be utilized to inquire the Shipment Unit File to obtain current status of either a Shipment Unit or a line item within a Shipment Unit. Action Code DN will be used and, if a specific line item inquiry is desired fill in the appropriate line item number in pos. 15-18. If status of the complete Shipment Unit is desired, leave pos. 15-18 blank. Complete status will be printed out on the Shipment Unit Line Item Inquiry Answer Report, appendix F-40.

h. Removal of a Shipment Unit Line Item from Mechanical Processing.

When it becomes necessary to process replies to followup, cancellation requests, History Inquiries manually, a ZBM card with Action Code DP is processed against that line item. Appendix F-107 will be output for manual control of the line item history. This Action Code should be used on an exception basis only.

i. Partial Action on a Set.

ZBM card, Action Code DF with zeros in quantity offered field and other than G, H, or 6 (parcel post) in mode field will indicate partial action on a set. Final action will be indicated by numeric 1 preceded by zeros in quantity offered field.

j. Rejected Materiel Release Order.

When it is required to reject an MRO containing Advice Code 2T (deliver to ultimate consignee by RDD or cancel) because the Transportation Officer has determined the RDD is past or cannot be met; ZBM card, Action Code DQ is processed against that line item. This action will close SU File output AE6/AEJ with Status Code CB, record in and close MRO History.

k. Extracted Line Item.

The use of Delayed Shipment Reason Code U in pos. 19 of ZBM card with Action Code DA will allow a line to be extracted from a Shipment Unit, and still allow all remaining lines in the Shipment Unit to be offered with input of a ZBP card.

l. Deleted Address Materiel Release Order.

When it is required to reject an MRO/DRO containing a shipping addressee that has been deleted from DoDAAD; ZBM card, Action Code DC is processed against that line item. This action will close SU File, output AG6 with Status Code BQ, record in and close MRO History.

5. TIME STANDARDS FOR DISTRIBUTION OF STATUS

ZBM cards will be processed to assure Shipment Status/Materiel Release Order Confirmation will be dispatched within the time-frames prescribed below:

a. Twenty-four hours after shipment (i.e., release to carrier) for FD 01-03 documents.

b. Forty-eight hours after shipment for PD 04-08 documents.

c. Three working days after shipment for PD 09-15.

6. DISTRIBUTION OF FORM

ZBM cards will be keypunched, verified and forwarded to the ODS for input to computer.

APPENDIX E-099 V

MRO/DRO CONTROL/STATUS REQUEST CARD VIOLATIONS

1. INPUT DOCUMENTATION

Appendix B-99, MRO/DRO Control/Status Request Card, DIC ZBM

2. INPUT TO PROCEDURE DECISION CHART

Appendix D-28

3. PURPOSE, CONTENTS AND RESPONSIBILITIES

This appendix provides instructions for the research, correction, and reentry of MRO/DRO Control/Status Request Cards which have been rejected from computer processing. The Shipping Documentation Branch is responsible for making necessary corrections. Reasons for computer rejection are as follows:

VIOLATION REASON CODE	DEFINITION
AS	Quantity invalid.
AH	Quantity offered/shipped minus quantity undershipped is greater than open balance.
AO	Quantity offered/shipped greater than open balance.
BA	Quantity offered/shipped plus adjusted quantity is greater than open balance.
CF	Action Code invalid.
C2	Adjustment quantity greater than open balance.
C4	Adjusted quantity plus offered/shipped quantity is less than open balance.
C5	Reversal quantity larger than offered/shipped quantity.
E7	Attempted reversal action on line item not offered/shipped.
F3	A duplicate MRO has been documented.
F4	A duplicate MRO has been offered or shipped.
HX	Total weight invalid.
IU	Shipment Unit control number invalid.
IX	Number of pieces invalid.

VIOLATION REASON CODE	DEFINITION
IY	Total cube invalid.
JB	Mode of shipment invalid.
JE	Shipment Unit line item number invalid.
KA	Line item and Shipment Unit number does not match Shipment Unit File.
PU	Input quantity to be canceled exceeds cancellation pending quantity.
ZL	Open balance minus quantity offered/shipped minus adjustment quantity field pos. 61-65, on undershipments, does not equal zero.
ZY	Quantity adjusted greater than quantity shipped on overshipment.
ZZ	On overshipments, quantity offered/shipped minus adjustment quantity does not equal open balance.
13	Parcel Post clear date.

4. PROCESSING/RESEARCH INSTRUCTIONS

Rejected records will be printed out on appendix F-85 report indicating the erroneous fields. All fields of the card are checked by the computer, therefore, when making corrections, ensure that all erroneous fields are corrected before reentering the card. The following Violation Reason Codes may reject from appendix D-28 processing and explanation of the error and what action should be taken are outlined.

a. VIOLATION REASON CODE AS.

This code indicates that the quantity shown in pos. 21-25 is other than all numeric, blank, or all zeros. With mode G, H, or 6, all zeros are invalid. Check record for alpha characters, check Shipment Planning Worksheet (SPW) for correct quantity.

b. VIOLATION REASON CODE AH.

This code indicates that on undershipments, the quantity shown in pos. 21-25 is more than the total balance to be shipped on the computer record. Check the SPW to verify quantity shown as offered or shipped.

c. VIOLATION REASON CODE AO.

This code indicates that the quantity shown in pos. 21-25 for Action Code DF (picked, packed, and assembled the quantity ordered) is greater than the balance shown on the computer file. Check the SPW to determine correct quantity to be shown.

d. VIOLATION REASON CODE BA.

This code indicates that when the quantity offered or shipped field, pos. 21-25 are not blank or zero, the adjusted quantity, pos. 61-65, plus the quantity offered or shipped, pos. 21-25, is greater than the open balance in the Shipment Unit File. Check the SPW to determine both quantity shipped or offered and the adjusted quantity shown. If the quantities agree with the input, prepare an inquiry ZBM card, Action Code DN, to determine open quantity in Shipment Unit File.

e. VIOLATION REASON CODE CF.

This code indicates the Action Code in pos. 79-80 is invalid for the ZBM DIC. Check the SPW to determine what action is indicated, then check appendix A-42 for proper code.

f. VIOLATION REASON CODE C2.

This code indicates that the adjusted quantity shown in pos. 61-65 is greater than the open balance in the Shipment Unit File. Check the SPW to determine the quantity offered or shipped and the adjusted quantity shown on the document.

g. VIOLATION REASON CODE C4.

This code indicates that when the quantity offered or shipped field, pos. 21-25, is not blank or zero, the adjusted quantity, pos. 61-65, plus the quantity offered or shipped, pos. 21-25, is less than the open balance in the Shipment Unit File. Check the SPW to determine both quantity shipped or offered and the adjusted quantity shown. If the quantities agree with the input, prepare an inquiry ZBM card, Action Code DN, to determine open quantity in Shipment Unit File.

h. VIOLATION REASON CODE C5.

This code indicates that when processing a reversal, Action Code DH, to reverse an Action Code DF, the quantity to be reversed, pos. 21-25, was not equal to or less than the quantity originally offered/shipped. The quantity to be reversed cannot be greater than the total quantity originally offered by the Action Code DF. Check the SPW to determine the quantity originally offered by the Action Code DF.

i. VIOLATION REASON CODE E7.

This code indicates that a reversal Action Code DH is being processed to reverse an action taken by Action Code DF. The Reject Code E7 indicates that the original DF action did not process, therefore, no reversal action can be accomplished. Check the original DF transaction to assure that it was properly processed.

j. VIOLATION REASON CODE F3.

This code indicates that a duplicate MRO has been received and documented. Every effort should be made to prevent this shipment from being made. Appendix F-107 is also provided as a manual record of action taken. See appendix D-57.

k. VIOLATION REASON CODE F4.

This code indicates that a duplicate shipment has been processed. See appendix D-57. This violation should be filed with appendix F-107 which was output when line item was coded DP in history as described in appendix D-57.

l. VIOLATION REASON CODE HX.

This code indicates that the data in the weight field, pos. 28-33, is invalid. Check for alpha characters in the field, then check the SPW to determine the correct weight data.

m. VIOLATION REASON CODE IU.

This code indicates that the shipment unit number field, pos. 8-14, is invalid. Check for alpha characters or all zeros. Check the SPW to determine the correct Shipment Unit number.

n. VIOLATION REASON CODE IX.

This code indicates that the number of pieces field, pos. 34-37, is invalid; i.e., not numeric for freight not numeric or blank for parcel post. Also check the SPW to determine the correct number of pieces listed.

o. VIOLATION REASON CODE IY.

This code indicates that the cube field, pos. 38-42, is invalid. Check for alpha characters and check the SPW for correct cube indicated.

p. VIOLATION REASON CODE JB.

This code indicates that the Mode of Shipment Code, pos. 47, is erroneous or blank. Check input image on the F-85 report, verify entry with SPW/DD Form 1348-1. Correct as shown on SPW/DD Form 1348-1, verify code is valid as shown in Mode of Shipment Codes, appendix A-17.

q. VIOLATION REASON CODE JE.

This code indicates that the line item number, pos. 15-18, is invalid. Check for alpha characters or zeros, also check the SPW for correct line item member shown.

r. VIOLATION REASON CODE KA.

This code indicates that the Shipment Unit number, pos. 8-14, and the line item number, pos. 15-18, (except on action codes where line item is blank) do not match the record in the Shipment Unit File. Check the SPW to ensure the correct Shipment Unit number and/or line item was punched into the input card.

s. VIOLATION REASON CODE PU.

This code indicates that the quantity to be canceled exceeds the quantity pending cancellation. Refer to source document or F-69 to determine correct quantity and reenter.

t. VIOLATION REASON CODE ZL.

This code indicates that on an undershipment the open balance in the Shipment Unit File minus the offered or shipped quantity in pos. 21-25 minus the adjusted quantity in pos. 61-65 does not equal zero. Check the SPW to determine if these quantities agree with what is punched in the card. If the quantities on the SPW agree with the input card, prepare an inquiry ZBM card, Action Code DN, to determine the quantity open on the Shipment Unit File.

u. VIOLATION REASON CODE ZY.

This code indicates that on an overshipment the adjusted quantity, pos. 61-65, is more than the total quantity offered or shipped, pos. 21-25. Check the SPW to determine correct quantity offered or shipped (should be more than quantity ordered shipped), the overshipment quantity is indicated in pos. 61-65.

v. VIOLATION REASON CODE ZZ.

This code indicates that on an overshipment the quantity offered or shipped, pos. 21-25, minus the adjusted quantity, pos. 61-65, does not equal the open balance in the Shipment Unit File. Check the SPW to determine the correct quantity offered or shipped and the overshipped quantity is indicated in pos. 61-65.

w. VIOLATION REASON CODE 13.

This code indicates that the parcel post clear date field, pos. 72-76, contains one of the following discrepancies:

(1) Positions 74-76, contains numeric data greater than 366 or less than 001.

(2) Positions 72-76 contains alphabetic data.

(3) Positions 72-76 is less than the clear date in the record being updated.

(4) The clear date in the record being updated has been deleted previously.

5. REENTRY INSTRUCTIONS

When corrections have been made and annotated on the appendix F-85 report, process through keypunch to Data Systems for reprocessing to the computer.

APPENDIX E-100 P

REQUESTING REWAREHOUSING

1. FORM/REPORT USED

Local coding sheet.

2. REASON/CRITERIA FOR PREPARATION

Appendix B-89, Rewarehousing Request, is prepared when rewarehousing cards, appendix B-72, are required to complete rewarehousing of materiel within specific FSCs or location parameters, and Popularity Group Code or Condition Code.

3. RESPONSIBLE ORGANIZATION ELEMENTS

Personnel of the Plans, Programs, and Procedure Branch, MSO will control the input of Rewarehousing Request Cards.

4. PROCEDURES/INSTRUCTIONS FOR PREPARATION OF FORM

a. Source of Information.

Data to complete local coding sheet will be obtained from locally approved rewarehousing plans.

b. Preparation of Form.

FIELD POSITION(S)	INSTRUCTIONS
1-3	ZUK.
8-11	Enter Low FSC parameter for which ZUN cards are required.
13-16	Enter the High FSC parameter for which ZUN cards are required. Field positions 8-11 and 13-16 will remain blank if all NSNs within location parameters are requested.
23	Enter Popularity Group Code. Popularity group items can only be obtained within FSC and location parameters.
26-37	Enter lowest location desired.
45-54	Enter highest location desired.
71	Enter Condition Code. Only Condition Codes other than A are authorized.
77-78	Enter 2-digit code for the organizational element preparing the request.

FIELD POSITION(S)	INSTRUCTIONS
79-80	Enter Action Code to designate the type of F printout required: FQ - F-23 listing in location sequence. FR - F-23 listing in stock number sequence. FS - F-30 listing in location sequence. FT - F-30 listing in stock number sequence.

c. Data may be entered via program $$UWME10.

5. DISPOSITION OF FORM

Local coding sheets will be returned to Plans, Programs and Procedures Branch, MSO and retained until Rewarehousing Cards are received. Local coding sheets will be utilized in processing any violations resulting from processing this request.

APPENDIX E-100 V

REQUEST FOR REWAREHOUSING VIOLATIONS

1. INPUT DOCUMENT

Appendix B-89, Rewarehousing Request Card, DIC ZUK

2. INPUT TO PROCEDURE DECISION CHART

Appendix D-86

3. PURPOSE, CONTENTS AND RESPONSIBILITIES

This appendix provides instructions for research, correction, and reentry of Rewarehousing Requests which have been rejected from computer processing. Plans, Programs, and Procedures Branch is responsible for correction and reentry of the corrected data. Reasons for computer rejection are as follows:

VIOLATION REASON CODE	DEFINITION
AF	Condition Code invalid or blank.
CF	Action Code invalid.
E5	Field that must have data contains blanks.
LK	High FSC Parameter invalid.
OI	Location Parameter invalid/incomplete.
OQ	Popularity Group Code invalid.
XE	Low FSC Parameter invalid.

4. PROCESSING/RESEARCH INSTRUCTIONS

a. VIOLATION REASON CODE AF.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Indicates that input card contained a Condition Code A or another invalid code.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Code must be B, C, F, G, J, K, L, M, N, or blank.

(b) Review the source documents and local coding sheets for possible input errors.

b. VIOLATION REASON CODE CF.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Indicates that Action Code was blank or invalid.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Must be alpha FQ, FR, FS, FT, or blanks.

(b) Review the source documents and local coding sheets for possible input errors.

c. VIOLATION REASON CODE LK.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Indicates data in pos. 13-16 are improperly entered. Must be all numeric (greater than low FSC) or blank when low FSC is blank. Mandatory if pos. 23 is other than blank.

(2) PROCESSING/RESEARCH REQUIRED:

Review the source documents and local coding sheets for possible input errors.

d. VIOLATION REASON CODE OI.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Indicates that location parameters contain invalid data or blanks.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Low parameter must be pos. 26 alpha, pos. 27-32 numeric, pos. 33 alpha, pos. 34 alpha/numeric and pos. 35-37 blank. If 12 position code - pos. 26 is alpha and pos. 27-37 must be numeric.

(b) High parameter must be pos. 43 alpha, pos. 44-49 numeric, pos. 50 alpha, pos. 51 alpha/numeric and 52-54 blank. If 12 position code - pos. 43 must be alpha and 44-54 numeric. Must be equal to or higher than low parameter.

(c) Review the source documents and local coding sheets for possible input errors.

e. VIOLATION REASON CODE OQ.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Indicates that pos. 23 contains an invalid Popularity Group Code.

(2) PROCESSING/RESEARCH REQUIRED:

Review the source documents (only Codes A, B, C, D, E, F, G, H, J, L, or blank may be entered) and check local coding sheets for possible input errors.

f. VIOLATION REASON CODE XE.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Indicates that data in pos. 8-11 are blank or not totally numeric filled. Mandatory entry if pos. 23 is other than blank.

(2) PROCESSING/RESEARCH REQUIRED:

Review the source documents and local coding sheets for possible input errors.

g. VIOLATION REASON CODE E5.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Indicates a field that must have data contains blanks.

(2) PROCESSING/RESEARCH REQUIRED:

Field positions 8-11, 13-16, 26-37, and 43-54 must not be all blank. Review the source documents and local coding sheets for possible input errors.

5. REENTRY INSTRUCTIONS

When correct data are obtained and Rewarehousing Cards are still required, annotate the correction on the F-85 listing below the erroneous field corresponding to the appropriate field positions using ink or a distinctive colored pencil. After all violations are corrected, reenter the data via program $$UWME10.

APPENDIX E-101 P

SHIPMENT UNIT COMPLETION CARD

1. PURPOSE

This procedure prescribes the conditions under which a Shipment Unit Completion Card, DIC ZBP, appendix B-101, will be used.

2. REFERENCES USED IN CONJUNCTION WITH THIS PROCESS

a. Chapter 60

b. Appendix B-66

c. Appendix B-101

d. Appendix D-30

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

The Shipping Documentation Branch is responsible for the completion and processing of the Shipment Unit Completion Card. Also responsible for establishing options provided in appendix B-66 for prepunching of ZBP cards for Parcel Post Shipment Unit, Freight Shipments Units, or any combination of these specified in appendix B-66.

4. PROCEDURES/INSTRUCTIONS

a. Based on the options available in appendix B-66, the computer will either provide ZBP cards for:

(1) Parcel Post Shipment Units.

(2) Both Parcel Post and Freight Shipment Units.

The ZBP cards, if provided under options above, will be prepared at the time the DD Form 1348-1 and the Shipment Planning Worksheet are released.

b. Depots using the automatic clear date option for parcel post shipments need not produce computer prepared ZBP cards for parcel post shipments. Under this process, the input of ZBP formats is confined to reporting exception information only, i.e., denials, hold code, parcel post to freight conversions, clear date adjustments, and so on.

c. The ZBP cards will be held in a suspense file and the DD Form 1348-1 and Shipment Planning Worksheet sent to the applicable warehouse to pick stock. Upon completion of the picking, packing, and assembly of the complete shipment unit, the Shipment Planning Worksheet will be used to match the applicable ZBP card held in suspense file per options (1) or (2) or will be used to completely prepare a ZBP card.

d. In addition to fields already prepunched into the card, data such as weight, number or pieces, cube, mode (if parcel post or Government truck), date shipped (if parcel post or Government truck), date to transportation (freight) will be obtained from the Shipment Planning Worksheet and entered in the card.

e. If any line item(s) within the Shipment Unit cannot be shipped as ordered, a ZBM with Delayed Shipment Reason Code U in pos. 19 will be used, see appendix E-099 for extracted line item(s).

f. Processing of the ZBP card accomplishes the following:

(1) Change freight Shipment Units to Status Code 1, "Offered to Transportation."

(2) Provide Shipment Status Cards to requisitioner or supplementary address for parcel post, when required.

(3) Provide the responsible DSC with a Materiel Release Confirmation for parcel post.

(4) Close parcel post line items into History File (except registered/certified/insured parcel post).

(5) Adjustments to computer assigned automatic clear dates for parcel post shipments.

5. TIME STANDARDS FOR DISTRIBUTION OF STATUS

ZBP cards will be processed to assure Shipment Status/Materiel Release Order Confirmation will be dispatched within the time frames prescribed below.

a. Twenty-four hours after shipment (i.e., release to carrier) for PD 01-03 documents.

b. Forty-eight hours after shipment for PD 04-08 documents.

c. Three working days after shipment for PD 09-15.

6. DISTRIBUTION OF FORM

ZBP cards will be keypunched, verified and forwarded to ODS for input to computer.

APPENDIX E-101 V

SHIPMENT UNIT COMPLETION CARD VIOLATIONS

1. INPUT DOCUMENT

Appendix B-101, Shipment Unit Completion Card, DIC ZBP

2. INPUT TO PROCEDURE DECISION CHART

Appendix D-30

3. PURPOSE, CONTENTS AND RESPONSIBILITIES

This appendix provides the Shipping Documentation Branch with instructions for the research, correction, and reentry of Shipment Unit Completion Cards which have been rejected from the computer processing, appendix F-85. Reasons for rejection are as follows:

VIOLATION REASON CODE	DEFINITION
IU	Shipment Unit File unmatched control number invalid.
HX	Total weight invalid.
IX	Number of pieces invalid.
IY	Total cube invalid.
KA	Input to Shipment Unit.
13	Julian date other than 1 through 366.

4. PROCESSING/RESEARCH INSTRUCTIONS

a. VIOLATION REASON CODE KA.

(1) VRC KA indicates that the Shipment Unit control number, pos. 8-14 in the input card, did not match an existing Shipment Unit control number in the Shipment Unit File.

(2) If the option is exercised not to receive a prepunched ZBP card from the computer and the Shipment Unit number was obtained from the Shipment Planning Worksheet, verify that the Shipment Unit number was punched correctly.

(3) If the Shipment Unit number was prepunched in the ZBP card by the computer, check to see if ZBM cards were previously submitted by line item to clear the Shipment Unit.

b. VIOLATION REASON CODE HX.

(1) VRC HX indicates that the Total Weight field, pos. 28-33, is invalid.

(2) Weight field will always be numeric or blank; check for any alpha characters in field, also check Shipment Planning Worksheet to ensure that weight was properly punched in the card.

c. VIOLATION REASON CODE IX.

(1) VRC IX indicates that the Number of Pieces field, pos. 34-37, is other than numeric for freight or numeric or blank for parcel post.

(2) Check Number of Pieces field to ensure that there are only numeric characters in the field, also check the Shipment Planning Worksheet to ensure that Number of Pieces was properly punched in the card.

d. VIOLATION REASON CODE IY.

(1) VRC IY indicates that the Unit Cube, pos. 38-42, is invalid.

(2) Unit Cube field will always be numeric or blank; check for any alpha characters in this field, also check the Shipment Planning Worksheet to ensure the Unit Cube was properly punched in the card.

e. VIOLATION REASON CODE IU.

(1) VRC IU indicates that the Shipment Unit Number, pos. 8-14, is invalid.

(2) Shipment Unit Number will always be numeric, check for any alpha characters in the field, also check the Shipment Planning Worksheet if the Shipment Unit Number was not prepunched in the card by the computer.

f. VIOLATION REASON CODE 13.

(1) VRC 13 indicates that the parcel post Clear Date field, pos. 72-76, contains one of the following discrepancies:

(a) Positions 74-76 contains numeric data greater than 366 or less than 001.

(b) Positions 72-76 contains alphabetic data.

(c) Positions 72-76 is less than the Clear Date in the record being updated.

(d) Clear date in the record being updated has been deleted previously.

(2) Research pertinent Shipment Unit record to determine correct clear date. Enter year in pos. 72-73 and Julian date in pos. 74-76.

5. REENTRY INSTRUCTIONS

When the correct data has been obtained, annotate the appendix F-85 report with the correct data above the erroneous entry and forward to keypunch for preparation of a reentry card into the applicable process.

best copy available

APPENDIX E-102 P

NEW RECEIPT INQUIRIES

1. PURPOSE

This appendix provides procedures for preparing New Receipt Inquiries required when materiel is received. The inquiries will normally be entered over remote terminals using keyboard or punched card entries. However, a card input is also provided for processing in Data Systems when necessary. Procedures for both remote and batch card input are provided in this appendix.

2. APPENDICES USED IN THIS PROCESS

a. Appendix B-41, Remote Receipt Inquiry.

b. Appendix B-102, Receipt and Locator Inquiry Card.

c. Appendix E-047 P, Receipts for Reporting and Storage.

d. Appendix F-200, Receipt Control Document (RCD).

e. Appendix F-201, Contract Data Sheet (CDS).

f. Appendix F-202, Storage Action Document (SAD).

3. REASON/CRITERIA FOR PREPARATION

a. To obtain PMR Locator File and Contract Data required for processing materiel receipts.

b. To establish necessary records on the Suspended Receipt File.

c. To generate the necessary Receipt Control documents.

4. RESPONSIBLE ORGANIZATIONAL ELEMENTS

Operations Branch, Receiving Division.

5. PROCEDURES/INSTRUCTIONS

a. Source of Information.

(1) Procurement Instrument (i.e., DD Form 250, DD Form 1155, DPSC Form 300-M, and so forth).

(2) DoD Single Line Item Release/Receipt Document (DD Form 1348-1).

(3) Packing List.

(4) Bill of Lading.

(5) Container Markings.

b. Receiving Materiel.

The detailed procedures of appendix E-047 P will be used. The processing of the New Receipt Inquiry will occur as soon as possible after physical receipt of materiel.

c. Types of Receipt Inquiry by Receiving Division.

(1) Type A or K Remote Inquiry Input - When using the remote terminal, the inquiry information will be keyed in over the remote keyboard. In both cases, the appendix B-41 format will be used and the inquiry input IAW appendix E-194 P.

(2) ZB6 Card Input - When, for any reason, it is necessary to process punched card input through Data Systems, the inquiry data will be annotated on a local coding sheet for keypunching in the format of appendix B-102. These cards will then be placed in a hold area pending receipt of the documents when the appendix B-102 input is used. The instructions that follow are intended primarily for preparation of the appendix B-41, Type A/K remote inquiry input, but the process for data entry will also apply for coding the appendix B-102 input.

d. Preparation of New Receipt Inquiry.

(1) Receiving Personnel:

(a) Provide the following mandatory information to the remote keyboard operator or keypunch operator by annotating on a coding sheet or other source form.

1. Type of inquiry - A or K.

2. Last nine digits (NIIN) of the NSN.

3. The Condition Code of the materiel.

4. The last five positions of the PIIN or if other than procurement, the document number.

5. Julian date.

(b) The following information will be provided when available.

1. Contract Line Item Number (CLIN) should be provided when known to ensure the most accurate selection of PMRR and Contract Data. This is most important for DICOMSS receipts to ensure proper selection of the PMR with DICOMSS unit price information, reference appendix E-140 P.

2. Supplementary PIIN (SPIIN) is a mandatory entry when the first position of the PIIN entry above (the ninth position of the full 13-position PIIN) is A, D or G.

3. Data of Pack may be entered for shelf-life items to extract file location data from the Locator Record; otherwise, leave blank.

4. Type of Pack may be entered if the receipt is a subsistence item; otherwise, leave blank.

5. If the PMR File indicates the DSC has backorders on hand, an Expedite Message will be generated on the A inquiry response and the Storage Action Document.

(2) Operator:

(a) Activate remote keyboard and observe display for message indicating that terminal is ready to accept data.

(b) Initialize terminal IAW appendix E-194 P.

(c) Request Type A/K inquiry (Code A) from inquiry display and depress ENTER key.

(d) Cursor will be positioned for NIIN entry.

(e) Enter all mandatory data IAW format, appendix B-41.

(f) Enter optional data, as required. Reference appendix B-41.

(g) Depress ENTER key. The A/K inquiry format will be displayed after data has been accepted for subsequent receipt inquiry action.

(h) Correct promptly all violations present on CRT display and reenter corrected data.

e. DOCUMENT OUTPUT

(1) The terminal operator will ensure that a sufficient supply of the required two-part paper is present in the terminal typewriter.

(2) An operator will distribute the receipts documents IAW the following general instructions and appendix E-047 P.

(3) All valid Type A receipt inquiries will generate two receipt documents. appendix F-200, F-202. A common Teleprocessing Control Number (TP Number) will be reflected on both documents. Type K receipt inquiries will only generate appendix F-202; the Receipt Control Document, appendix F-200 will not be output.

(4) Procurement Type A receipt inquiries may also generate a third receipt document - appendix F-201, Contract Data Sheet. This document will also reflect the same TP Number as its matching Receipt Control Document (F-200 and STOW Action Document F-202). Contract data, appendix F-201, will be displayed for Type K receipt inquiries; no hard copy will be produced.

(5) Each receipt, routed to Inspection/Classification Verification, will be matched by TP Control Number and date of receipt, in addition to NSN, PIIN SPIIN and CLIN to the appropriate set of receipt documents - Receipt Control Document, Contract Data Sheet (if applicable), and Stow Action Document. These documents in turn are related to each other by the above data plus common data of receipt and TP Control Number.

(6) The operator will examine the printed receipt document, remove the appropriate document sets, attach documents to physical receipt item, and forward for inspection/verification as required. Documentation will always be separated or torn apart prior to the RCD sheet. A complete set of receipt documents will be:

(a) Procurement with Contract Data:

Receipt Control Document	- 1 (RCD-1)	Only the Stow Action (Materiel
Stow Action Document	- 1 (SAD-2)	Movement Document) will be
Contract Data Sheet	- 3 (CDS-3)	produced for Type K inquiries.

(b) Procurement with no Automated Contract Data or Other than Procurement.

RCD-1 (Not available for Type K inquiry action.)
SAD-2 (Materiel Movement Document, identical to SAD-Z, will be output if Type K inquiry utilized.)

f. Inspection/Classification Verification Personnel.

(1) Personnel will receive documents and screen data ensuring that item matches receipt documentation.

(2) Receipt Control Document, appendix F-200, or Type K inquiry response will reflect, when available, data extracted from the PMR File. This document/display will be produced in four formats to correspond with the coding forms outlined in appendix B-108/109. The documents are furnished to act as a coding form for Receipt Confirmation Card preparation. The RCD-1 or Type K inquiry response may display the following messages:

(a) NO PMRR - No matching Prepositioned Materiel Receipt Card is available.

(b) INVENTORY - The NSN received is undergoing inventory action. Receiving personnel should placard receipt and perform appropriate inventory updates.

(c) NO WT/CU NO WT or NO CU - There is not unit weight or unit cube data on the locator file.

(d) DICOMSS item identification as follows:

BRAND CYCLE *
LOCAL CYCLE *
TROOP ISSUE *

*Appropriate DICOMSS Cycle Code will be printed/displayed in this position as appropriate in the finished RCD-1/Type K response.

(e) FRT DATA - This message will indicate that the Water Commodity Code, NMFC or LTL is missing from the locator record.

(f) NEW NIIN - NIIN has been changed due to SICC action. Inquiry has been made with new data (NIIN).

(g) PMR IN E - PMR File indicates receipt requires Preservation, Packing or Marking.

(h) A/R REQ - Acceptance Report Required. This message indicates the PMR Management Code (D or F) specifies destination acceptance and unless the contract specifies Past Pay an Acceptance Report, DIC PKP/N, is required.

(i) HSCC ABB, DEF - Hazardous Storage Compatibility Code. Abbreviated definition appears on the lower portion of the RCD-1.

(j) EXPEDITE - B/O PENDING - Indicates the DSC has backorders for the item, so processing of the receipt should be expedited.

(k) PMR IN E - A PMRC has been received which reflects Condition Code E, pos. 71, indicating the item has been purchased in this condition. The receipt will require minor preservation, packaging or marking, etc., to bring the stock to serviceable condition. This requirement will be reflected on the contract.

(3) Stow Action/Materiel Movement Document-2, appendix F-202 will be produced following the RCD-1.Related documents (RCD-1 and SAD-2) will reflect, in addition to the same NSN or NIIN and PIIN/Document Number, the same TP Number, Date of Receipt, and Due Date. Inspector/Verifier will ensure that the SAD accompanies the receipt and one copy of the RCD-1 when the item is forwarded to the appropriate Warehouse Area Control Branch for storage.

The SAD or Materiel Movement Document (MMD) may display the following messages:

(a) INVENTORY - The item is undergoing inventory action and requires prompt storage IAW Appendix E-110.

(b) NO LOCS AVAIL - There is a Locator Record but no locations are available for the NSN inquiry.

(c) EXPEDITE - B/O PENDING - Indicates the DSC has backorders for the item and storage action should be expedited.

(d) The Stow Action Document/Materiel Movement Document will offer a Stow Action input coding form for data reentry IAW appendix B-46/144.

(4) Contract Data Sheet-3, appendix F-201 will be output at the remote terminal whenever a procurement receipt inquiry results in a match with the Automated Contract Data. The CDS will contain the same CLIN as reflected in the RCD. Inspectors will carefully screen the CDS to ensure that the CLIN shown on the sheet matches the CLIN received. Additional Contract Data is available by remote inquiry IAW appendix E-061 P and appendix B-68. If Type K inquiry utilized, contract data will be displayed in conjunction with receipt PMR and confirmation data. Hard copy contract information, in this instance, will not be available.

APPENDIX E-102 V

NEW RECEIPT INQUIRY VIOLATIONS

1. INPUT DOCUMENTS

a. Appendix B-41, Type A Remote Receipt and Locator Inquiry.

b. Appendix B-102, Receipt and Locator Inquiry Card, DIC ZB6.

2. REFERENCE

Appendix D-24

3. PURPOSE, CONTENTS AND RESPONSIBILITIES

a. This appendix provides instructions for research, correction and reentry of Receipt and Locator Inquiries which have been rejected from computer processing. These error conditions will be output immediately at the remote terminal when a Type A inquiry is used; they will appear on the Violation Printout, appendix F-85, the day after the inquiry is processed when the ZB6 card input is used.

b. The Card Violation Codes for rejection are as follows:

VIOLATION REASON CODE	DEFINITION
AF	Invalid Condition Code.
AI	Invalid PIIN or Document Number.
AY	Invalid NIIN.
CK	Invalid Type Pack.
EX	Invalid Supplemental PIIN.
HH	Invalid Date of Pack/Expiration.
JM	Invalid Date of Receipt.

4. PROCESSING/RESEARCH REQUIRED

a. VIOLATION REASON CODE AF (CARD); COND ERROR (REMOTE).

(1) REASON FOR VIOLATION/ERROR CONDITION:

Invalid Condition Code entered in Type A or pos. 13 of ZB6 input.

(2) PROCESSING/RESEARCH REQUIRED:

Determine the correct Condition Code for NSN from the coding sheet and/or source document from which the inquiry was prepared.

b. VIOLATION REASON CODE AI (CARD); PIIN/DOC ERROR (REMOTE).

(1) REASON FOR VIOLATION/ERROR CONDITION:

Invalid last five position of PIIN or Document Number in Type A inquiry or pos. 14-18, DIC ZB6.

(2) PROCESSING RESEARCH REQUIRED:

Determine the correct terminal five positions of the PIIN or Document Number for the NSN by reference to the coding sheet and/or source document from which the original inquiry was prepared.

c. VIOLATION REASON CODE AY (CARD); NIIN ERROR (REMOTE).

(1) REASON FOR VIOLATION/ERROR CONDITION:

Invalid NIIN in Type A or pos. 4-12 of DIC ZB6 input.

(2) PROCESSING/RESEARCH REQUIRED:

Determine the correct NIIN for the PIIN or document number on the remote input or appendix F-85 printout by reference to the coding sheet and/or source document from which the original input was prepared.

d. VIOLATION REASON CODE CK (CARD); TYPE PACK ERROR (REMOTE).

(1) REASON FOR VIOLATION/ERROR CONDITION:

Invalid Type Pack in Type A or pos. 33 of ZB6 input.

(2) PROCESSING/RESEARCH REQUIRED:

Determine correct Type Pack by reference to the coding sheet and/or source document from which the original inquiry was prepared. Although alpha DICOMSS Cycle Codes are accepted in the Type Pack field of other receipt transactions, they are not acceptable in Type A or ZB6 inquiries. Entry must be blank or numeric 1, 2 or 4.

e. VIOLATION REASON CODE EX (CARD); SPIIN ERROR (REMOTE).

(1) REASON FOR VIOLATION/ERROR CONDITION:

Invalid Supplemental PIIN (SPIIN) in Type A or pos. 30-33 or AB6 input. SPIIN was blank when A, D, or G was present in first position of PIIN entry.

(2) PROCESSING/RESEARCH REQUIRED:

Determine the correct Supplemental PIIN for the PIIN or NIIN by reference to the coding sheet and/or source document from which the original was prepared.

f. VIOLATION REASON CODE HH (CARD); DATE PACK ERROR (REMOTE).

(1) REASON FOR VIOLATION/ERROR CONDITION:

Invalid Date of Pack/Expiration in Type A or pos. 34-37 of ZB6 input.

(2) PROCESSING RESEARCH REQUIRED:

Determine the correct Date of Pack/Expiration by reference to the coding sheet and/or source document from which the original was prepared. Be sure the first two positions are greater than 0 and less than 13.

g. VIOLATION REASON CARD JI (CARD); CLIN ERROR (REMOTE).

(1) REASON FOR VIOLATION/ERROR CONDITION:

Invalid Contract Line Item required in Type A inquiry in pos. 24-29 of DIC ZB6 input.

(2) PROCESSING/RESEARCH REQUIRED:

Determine correct CLIN by reference to original coding sheet or source document from which the original entry was made. First four positions must be numeric; last two alpha/numeric other than all zeros.

h. VIOLATION REASON CODE JM (CARD); RCVD ERROR (REMOTE).

(1) REASON FOR VIOLATION/ERROR CONDITION:

Invalid Date of Receipt in Type A or pos. 19-23 of ZB6 input.

(2) PROCESSING/RESEARCH REQUIRED:

Determine the correct Data of Receipt by reference to the coding sheet and/or source document from which the original inquiry was prepared. Be sure that the Date of Receipt is equal to or earlier than the current date.

5. REENTRY INSTRUCTION

a. If the Type A is being used, the corrected inquiry will be reentered immediately over the remote terminal. Contract data shall be entered and inquiry reentered by depressing ENTER key.

b. If the ZB6 is being used, the corrected data should be clearly annotated immediately below the invalid entry on the appendix F-35 printout. The printout should then be forwarded for keypunching of the corrected entry in the format of appendix B-102. The corrected inquiry card will be forwarded to Data Systems for reentry.

STORAGE LOCATION IDENTIFICATION LABEL

1. REPORT USED

Appendix C-104, Storage Location Identification Label.

2. REASON FOR PREPARATION

Provide a label that is placed on location to identify materiel, to reserve bin locations and to serve as the document to delete the Item Locator Subrecord. All occupied and reserved locations will display a Storage Location Identification Label. At DGSC, in DISARS controlled warehouses a DISARS Control Document (DCD) will be used in lieu of this label and processed IAW DISARS operating procedures.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Bin Operations Branch, Area Control Branches of Warehousing Division, MOWASP Data Control Branch, Management Support Office and Office of Data Systems.

4. INSTRUCTIONS FOR PROCESSING LABEL

a. Production Control Branch, Office of Data Systems will distribute the labels to the storage location by the first digit, or the first and second or the first three digits at depot option.

b. Upon receipt of label, Bin Operations Branch and Area Control Branches will affix the label to the designated location by whatever means are most satisfactory per type of storage (i.e., attached to used EAM Card for affixing to pallet affix directly to bin).

c. Upon deletion of stock from location.

(1) Bin Operations Branch and Area Control Branches may either:

(a) Remove the label from the storage location, print a D on the face of the label and annotate with organizational code (FRC), attach label to a larger surface (i.e., used EAM Card) if not already so affixed and forward to MOWASP Data Control Branch, Management Support Office.

(b) Transcribe data from label onto DLA Form 536 per appendix E-071 P, destroy the label and forward completed DLA Form 536 to MOWASP Data Control Branch or through keypunch facility.

(2) MOWASP Data Control Branch:

(a) Transcribe data from label onto DLA Form 536 per appendix E-071 P, or complete a Data Systems Request Form (local) and attach to a group of labels, or have card punch operator complete B-71 directly from information on label.

(b) Forward DLA Form 536, or label attached Data Systems Request, or punched B-71 to Office of Data Systems.

5. DISPOSITION OF FORM AFTER FINAL ACTION

a. Return label and DLA Form 536 to MOWASP Data Control Office upon completion of punching B-71.

b. MOWASP Data Conrol Branch retains C-104 and DLA Form 536 for 24 hours after processing cycle for resolving violations or followup, then destroy.

APPENDIX E-105 P

LOCATION SURVEY COMPLETION CARD

1. PURPOSE

a. Upon completion of a Location Survey Lot or to cancel a Survey Lot the Inventory Control Office will prepare a DIC ZEV, Location Survey Card/Scan, appendix B-105.

b. The entry of the ZEV will close out the summary file for that lot, initiate preparation of the management reports, and store information for weekly and monthly summary reports.

2. APPENDIX USED

Appendix B-105, Location Survey Completion Card/Scan, DIC ZEV.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

The Inventory Control Office, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. Immediately following the completion of a location survey lot and after all adds, deletes, and changes have been entered, the Inventory Control Office will initiate an appendix B-105, DIC ZEV, to close the lot.

b. Forward the format to keypunch/scan services for preparation of the input ZEV and forwarding to ODS.

c. The inputs will generate:

(1) Appendix F-53, Survey Analysis Report, to analyze the results of the survey and take corrective action where necessary.

(2) Appendix F-151, Management Actions, Part I, Detail, for use by warehousing to correct warehousing deficiencies and Part II, Summary, for use by Storage and Transportation to identify and correct problem areas.

(3) Appendix F-154, Location Survey Statistical Analysis Report; Part I, Monthly Statistical Report by ACB; Part II, DLA(M)927(O) for submission to DLA; and Part III, Survey Open not Completed/Canceled, which will reflect the absence of a valid DIC ZEV matching the survey number. Surveys indicated are not counted in the statistical analysis. Immediate investigation is required to determine the status of the reported open survey(s) and appropriate action taken to cancel or complete as indicated in subparagraphs a above, and d below.

d. When cancellation of a survey is desired, DIC ZEV, B-105 format, will be prepared with Action Code FL. This action will delete the survey lot from the Suspense File and remove the inspection date from the locator record and prevent the reporting of the survey as delinquent.

e. While a survey may be canceled with outstanding DIC ZBH rejects, a survey completion request will violate under the same conditions. All violated DIC ZBH inputs shall be corrected and reported to permit accurate statistical analysis reporting prior to submission of normal closure action.

APPENDIX E-105 V

LOCATION SURVEY COMPLETION CARD VIOLATIONS

1. INPUT DOCUMENT

Appendix B-105, Location Survey Completion Card/Format Violation, DIC ZEV

2. INPUT TO PROCEDURE DECISION CHART

Appendix D-35

3. PURPOSE, CONTENTS AND RESPONSIBILITIES

This appendix provides instructions for the research, correction, and reentry of Locator Completion Cards/Formats which have been rejected because data did not pass the computer edit criteria. The Inventory Office is responsible for the correction and reentry of the card. Reasons for computer rejection are as follows:

VIOLATION REASON CODE	DEFINITION
CF	Invalid Action Code.
WZ	Invalid survey lot number.
YK	Survey lot number not on record.

4. PROCESSING/RESEARCH INSTRUCTIONS

a. VIOLATION REASON CODE CF.

(1) REASON FOR VIOLATION/ERROR CONDITION:

VRC CF indicates that the Action Code in pos. 79-80 is other than FL or SC.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Review the Violation Printout, appendix F-85, to determine if error is evident.

(b) Review suspended copy of coding sheet to determine the correct data.

(c) Process correct data IAW paragraph 5 below.

b. VIOLATION REASON CODE WZ.

(1) REASON FOR VIOLATION/ERROR CONDITION:

VRC WZ indicates that survey lot number in pos. 6-10 is other than numeric fill - no blanks or alpha fill acceptable.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Obtain copy of coding sheet.

(b) Compare data elements in Violation Printout with the same data on coding sheet and correct data. Process IAW paragraph 5 below.

c. VIOLATION REASON CODE YK.

(1) REASON FOR VIOLATION/ERROR CONDITION:

VRC YK indicates that the survey lot number, pos. 6-10, in the input card/format does not match the computer assigned number on file.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Review the Violation Printout, appendix F-85, to determine if error is evident.

(b) Obtain suspense copy of the coding sheet.

(c) Compare data element on the printout with same data element on the coding sheet.

1. If entries are not identical, process correct data reflected on the coding sheet IAW paragraph 5 below.

2. If entries are identical, review coding sheet for compliance with instructions furnished in appendix E-105 P, or review the location survey schedule to determine the correct entry. Ensure that survey was not completed by previous closure action.

(d) Process correct data IAW paragraph 5 below.

5. REENTRY INSTRUCTIONS

a. When the correct data has been determined, annotate the correction on the Violation Printout, appendix F-85, directly below the erroneous entry using ink or a distinctive colored pencil.

b. Forward the annotated listing to ODS, via keypunch services for reentry into the applicable process.

APPENDIX E-106 P

CHANGES TO THE COMPLETED RECEIPTS FILE

1. PURPOSE

a. This procedure describes the means of correcting elements of data recorded in the Completed Receipts File (CRF) or deleting the receipts record completely. Certain data changes will also affect the contract data and the PMR file in addition to updating the CRF.

b. In order to maintain accurate and current contract data, it is most important that completed receipt changes be prepared accurately and as rapidly as data becomes available. Therefore, it is most important to record in a timely manner all changes to completed receipts which directly affect contract data. Data changes which affect contract data are:

Quantity
CLIN - Contract Line Item Number
PIIN - Procurement Item Instrument Number
SUPP PIIN - Supplementary PIIN
Condition
NSN
Deletes

2. APPENDICES USED IN THIS PROCESS

a. Appendix A-42

b. Appendix B-106

c. Appendix D-61

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Receipt Documentation Branch, Receiving Division, Directorate of Storage and Transportation.

4. PROCEDURES/INSTRUCTIONS

a. Source of Information.

(1) A decision has been made that an element of data on a Completed Receipt File Record (or the record itself) is in error and conveys a false reporting situation.

(2) Those elements of data in the Completed Receipt File that can be changed or added and the corresponding Action Codes (appendix A-42) used to specify the type of correction are as follows:

ELEMENT OF DATA	ACTION CODE
Delete total record	HA
Routing Identifier	HB
Stock Number	HC
Type Pack	HD
Unit of Issue	HE
PIIN/Document No. or Suffix	HF
Line/Supp Address	HG
Del Order/Signal/Fund	HH
Distribution	HJ
Project	HK
Ownership/Purpose	HL
Condition	HM
Management	HN
Weight	HQ
Quantity	HR
Supp PIIN	HP
Supp Address	HU
Shipment Number and/or Shipment Number Suffix Code	HW

NOTE: Changes to the CRF for data elements marked (*) will also be passed to update the matching Contract Data, if the matching record has not been transferred to history status.

b. Receipt Documentation Branch.

(1) Prepare a Keypunch Coding Sheet (local) for a Completed Receipt Change, DIC ZEW, in the format of appendix B-106.

(2) The new data to be recorded in the Completed Receipt File will be entered in pos. 53-67, starting with pos. 52 and leaving unused columns blank. Appropriate Action Code will be entered in pos. 79-80.

(3) Field positions 53-67 will be left blank and Action Code HA will be entered in pos. 79-80 when entire record is to be deleted.

(4) The deletion of an entire record in the Completed Receipt File may require DSC notification. If required, prepare a teletype to the DSC, advising the action that has been taken against a previously reported receipt. When the deletion action involves a procurement record for which Contract Data (CD) is maintained, the change will:

(a) Delete or reverse the matching CD record quantity recorded as received.

(b) Activate the PIIN of CD record if the erroneous receipt action had caused the PIIN to be flagged for removal to history. For PIIN records already transferred to history, no action will be taken.

(5) Retain source document and/or copy of keypunch coding sheet (local) for two days, to be used to correct the input transaction for reentry in the event it is rejected from computer processing and is listed on a Violation Printout, appendix F-85.

(6) Forward original copy to keypunch services.

c. Keypunch Services.

(1) Prepare General Purpose Card as indicated on keypunch coding sheet (local), which is the format of a Completed Receipt Change Card, DIC ZEW, appendix B-106.

(2) Forward keypunched card, DIC ZEW, to Office of Data Systems for input of the Daily Receipts Module.

d. Mechanical Processes.

(1) The Completed Receipt Change, DIC ZEW, will match the CRF record by NSN, PIIN/Document Number, Supplementary PIIN, CLIN and Condition, as appropriate, in addition to TP Number and Date of Receipt.

(2) The new (revised) data will overlay the matching data (specified by the Action Code) on the CRF record.

(3) If the DIC ZEW involves a procurement record, action will be mechanically taken to update matching Active Contract Data. No matching active contract correction will occur if the Contract PIIN has been completed and output on the Contract Audit Report, appendix F-203. If a match is found in the CD the following update activity will mechanically occur.

TYPE OF CRF CHANGE	CONTRACT DATA UPDATE TO BE PERFORMED
QUANTITY	Add to or subtract from the due-in quantity. Add or remove CLIN completion flag (see note 2 below). Add or remove PIIN completion flag (see note 2 below). Reestablish PMRR.
CONDITION (Change from issuable condition to Non-Issuable only, i.e., from A to L)	Transfer quantity in old condition to new or gaining condition. Add or remove Contract PIIN and CLIN Completion flag (see note below). No replacement of PMRR is necessary.
CLIN	Remove the quantity recorded for the old CLIN. Add this same quantity to the "due-in" for the new or gaining CLIN. Remove old CLIN completion flag, if necessary. Add new CLIN completion flag, if applicable. Flag PIIN for completion, if applicable. Reinstate PMRR quantity for old CLIN, if PMR was originally available. Decrement matching PMRR.
SPIIN/PIIN or NSN	Decrement or remove old PIIN/SPIIN/NSN quantity. Add same quantity to the correct PIIN/SPIIN/NSN Contract Record. Add and remove contract completion flags, as necessary. Reestablish the PMRR quantity for the old PIIN/SPIIN/NSN, if a PMRR was originally available. Decrement the matching PMRR quantity for the new PIIN/SPIIN/NSN.
DELETE	Remove quantity from the contract "Quantity Received" field. Reset contract completion flags as necessary.

NOTE: Each Contract Line (CLIN) is flagged as complete when the received quantity matches the Contract PIIN quantity. When all CLINs for the PIIN are completed, the PIIN is flagged as complete. The contract will then appear on the monthly Contract Audit Report; reference appendix F-203.

(4) Adjustment or changes to CRF records which evidence Acceptance Reporting requirements will not result in the automatic output of an Acceptance Report or an F-204, Acceptance Action Report. If a change/delete affecting Acceptance Report data is made to a CRF record reflecting an A/R flag, a Manual Report (A/R) should be prepared IAW appendix B-134 to inform the DCASR of the new receipt status.

APPENDIX E-106 V

COMPLETED RECEIPT CHANGE CARD VIOLATIONS

1. INPUT DOCUMENT

Appendix B-106, Completed Receipt Change Card, DIC ZEW.

2. INPUT TO PROCEDURE DECISION CHART

Appendix D-61

3. PURPOSE, CONTENTS AND RESPONSIBILITIES

This appendix provides instructions for the review, correction, and reentry of a Completed Receipt Change Card which has rejected from computer processing. Receipt Documentation Branch is responsible for the correction of errors and reentry of the card as required. Reasons for computer rejection and element responsible for corrections are as follows:

VIOLATION REASON CODE	DEFINITION
AF	Condition Code invalid.
AI	PIIN/Document number invalid.
AS	Quantity invalid or blank.
AY	NSN/FSC invalid.
BB	Submitted value matches file value.
CF	Action Code invalid.
D9	TP control number invalid.
EX	Supplementary PIIN invalid.
HQ	No matching record in completed receipt file.
HX	Total weight invalid.
JM	Date of receipt invalid.

4. PROCESSING/RESEARCH INSTRUCTIONS

The following types of errors have rejected from computer processing for reasons cited below:

a. VIOLATION CODE AF - Condition Code (pos. 41) blank or other than A through M (except I).

b. VIOLATION CODE AI - PIIN/Document Number (pos. 17-30) contained other than alpha/numeric characters or the PIIN/Document Number in the Key data field does not equal the PIIN/Document Number in the new data field.

c. VIOLATION CODE AS - Quantity field (pos. 53-67, New Data field) contained data other than all numeric or zero filled.

d. VIOLATION CODE AY - NSN in pos. 4-16 contained alphas or blanks.

e. VIOLATION CODE BB - The Action Code submitted is HC, HF, HG, HM or HU and the value in the New Data field (pos. 53-67) is the same as the value for that data element in the Completed Receipts record. Verify the value in pos. 53-67. If correct, no action is necessary.

f. VIOLATION CODE CF - Action Code field (pos. 79-80) on the input document was other than those authorized in appendix A-42 to identify the specific actions to be taken in the Completed Receipt File.

g. VIOLATION CODE D9 - TP Control Number field (pos. 46-51) contained other than numeric.

h. VIOLATION CODE EX - Supplementary PIIN field (pos. 31-34) contained data other than all blanks or all alpha/numeric filled.

i. VIOLATION CODE HQ - Input was unmatched to Completed Receipt File on either Stock Number (pos. 4-16) and/or Document Number (pos. 17-30), the Supplementary PIIN (pos. 31-34, if entered), or the CLIN (pos. 35-40, if entered).

j. VIOLATION CODE HX - Total Weight field (pos. 53-67, New Data field) contained other than numeric.

k. VIOLATION CODE JM - Data received (pos. 41-45) contained other than numeric or was zero filled. Date received cannot be greater than current date.

5. REENTRY INSTRUCTIONS

a. Annotate the correct data directly below the erroneous data on the Violation Printout, appendix F-85, using ink or a distinctive colored pencil.

b. Forward the annotated Violation Printout, appendix F-85, to the Office of Data Systems, via keypunch services, for reentry to the computer.

APPENDIX E-107 P

COMBINING SUs IN A SINGLE CONTAINER

1. PURPOSE

This procedure describes the process to be used to reconsolidate line items that have been single lined from the same basic SU or to consolidate shipments to the same consignee for transportation economy.

2. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

3. PROCEDURES/INSTRUCTIONS

a. General

This process provides the means to combine SUs using other than the consolidated pack process.

b. CRT Initialization

(1) To initiate the program, key in $$UWFF05 and depress the ENTER key.

(2) This input will result in the display of the combining SUs in a single container menu. See figure 1.

c. Select the particular process code, key it in and depress ENTER. Input of this transaction will result in one of the following displays:

1=Return to menu. See figure 1.
2=Establish combined SU shipments. See figure 2.
3=Add more combined SUs to master SU. See figure 3.
4=Establish/update master SU container data. See figure 4.
5=Review combined SUs by master SU number. See figure 5.

d. File maintenance preparation

(1) 2=Establish combined SU shipments.

(a) This process is used to establish a master SU and to combine up to 79 sub SUs with the master. See figure 6.

(b) The cursor is automatically positioned at the master SU field. Key in a seven or eleven position SU and the check digit. This SU is established as the master SU for the new combined shipment unit.

(c) The cursor will then automatically position in the SU number field for entry of the sub SUs.

(d) When all the sub SUs have been keyed in, put the alpha Y in the final field and depress ENTER. This will chain the SUs together and automatically take you to option 4.

NOTE: If you know that there will be additional sub SUs to put with this master but they are not readily available, you need only to omit the Y from the final field and depress ENTER. This will clear the screen for further processing but will still chain the previous SUs together.

(2) 3=Add more combined SUs to master SU.

(a) This process allows you to add SUs to the master any time after option 2 is completed and before option 4 is accomplished. See figure 7.

(b) The cursor will automatically position at the master SU field. Key in the master SU and the check digit. The cursor will then move to the SU number field for keying in of any additional sub SUs you wish to add.

(c) When all sub SUs have been keyed in, put the alpha Y in the final field and depress ENTER.

NOTE: The alpha Y need only be entered in the final field of the last sub SU.

(3) 4=Establish/update master SU container data.

(a) This process closes the container, offers the shipment unit to transportation and prints the label and route slip.

(b) The cursor will be automatically placed in the type (container) field and the master SU will be in the SU number field if options 2 or 3 were completed with the alpha Y in the final field.

(c) The cursor will be positioned at the SU number field if options 2 or 3 were not completed with the alpha Y in the final field. The master SU will then have to be keyed in by the operator.

(d) Enter type container, container weight, cube and if type container is either a pallet or skid the weight for the pallet or skid and depress ENTER. See figure 8.

(e) Successful entry will initiate the offer process and result in the output of a shipment label and route slip.

(4) 5=Review combined SUs by master SU number.

(a) This option provides online capability to view the combined SU records.

(b) The cursor will automatically position at the master SU field. Key in the master SU and depress ENTER. See figure 9.

4. ERROR MESSAGES/ACTIONS

ERROR MESSAGE	CAUSE/ACTION
NO SUB SU ENTERED	Probable Cause: No sub SU was entered in the SU number field. Action: Verify and enter sub SUs.
SU INVALID STATUS	Probable Cause: Status is other than A or B. Action: Review paperwork. If correct SU was entered, refer to supervisor.
MSTR NOT ELIG TO COMBINE BECAUSE OF TYPE-CARGO	Probable Cause: Shipment units with Type Cargo Code A, F, I, J or M are not eligible for consolidation. Action: The SU must be extracted from the consolidation.
MSTR NOT ELIG TO BECAUSE OF SPEC-REQ-TYPE-CARGO CODE	Probable Cause: Special requirements code must be other than A. Action: The SU must be extracted from the consolidation.
GBL PREVIOUSLY ASSIGNED	Probable Cause: SU has been previously assigned to a GBL. Action: Notify supervisor for research.
FLAGD FOR CANCEL-LATION REF-E44	Probable Cause: SU has been flagged for cancellation. Action: Notify supervisor for research.
NOT ELIG BECAUSE OF DESTINATION	Probable Cause: The destination of the sub SU must match the destination of the master SU. Action: Verify and remove from consolidation.
NOT ELIG BECAUSE OF NSN	Probable Cause: Shipment units having Type Cargo Codes other than A, F, H, I, J, M, Q or Z may be consolidated only when the stock number of sub SUs matches the stock number of the master SU. Action: The SU must be extracted from the consolidation.
NOT ELIG BECAUSE OF TYPE-CARGO	Probable Cause: Shipment units with Type Cargo Code A, F, I, J or M are not eligible for consolidation. Action: SU must be extracted from consolidation.

ERROR MESSAGE	CAUSE/ACTION
NOT ELIG BECAUSE OF SPEC-REQ-CODE	Probable Cause: Shipment units with special requirement code A are not eligible for consolidation. Action: SU must be extracted from consolidation.
ONLY 79 SUB SUs MAY BE COMBINED	Probable Cause: Number of sub SUs combined with master SU exceeds 79. Action: Verify and remove excess.
MASTER SU ZEROS	Probable Cause: An entry has not been made in the master SU field. Action: Verify and enter data.
TYPE CONTAINER INVALID	Probable Cause: Incorrect container type or weight entered in the P/S weight field when container is other than a pallet or skid. Action: Verify data and reenter.
WEIGHT INVALID	Probable Cause: Entry omitted from weight field. Action: Verify and enter weight.
CUBE INVALID	Probable Cause: Entry omitted from cube field or decimal omitted from entry. Action: Verify and enter/reenter cube.
SU NOT MASTER SU	Probable Cause: A sub SU was entered in the master SU field. Action: Verify input and reenter correct master SU.
SU NOT FOUND	Probable Cause: The SU entered has completed processing. Action: Review input. If correct SU was entered, refer to supervisor.
FINAL INDICATOR MUST BE SPACE OR Y	Probable Cause: Incorrect data entered in the final field. Action: Verify input and reenter.
INVALID PALLET/SKID WEIGHT	Probable Cause: Entry omitted from P/S weight field and type container is pallet or skid. Action: Verify and enter pallet or skid weight.

ERROR MESSAGE	CAUSE/ACTION
SU IS NOT A COMBINED SU	Probable Cause: SU enter in master SU field has not been combined. Action: Verify input with source document and reenter correct data.

APPENDIX E-108 P

RECEIPT CONFIRMATION CARDS

1. PURPOSE

This procedure describes the method of recording receipt data in Suspended Receipt File for the purpose of preparing the Materiel Receipt Card (MRC), appendix B-20 or B-21.

2. APPENDICES USED IN THIS PROCESS

a. Appendix B-108, Receipt Confirmation card (Short Form).

b. Appendix B-109, Receipt Confirmation Card (Long Form).

c. Appendix F-200, Receipt Control Document.

d. Appendix F-201, Contract Data Sheet.

e. Appendix D-69, Receipt Confirmation Cards.

f. Appendix E-047 P, Receipts for Reporting and Storage.

g. Appendix E-194 P, Initializing Receiving Teleprocessing Operations.

3. RESPONSIBLE ORGANIZATION ELEMENT

Receipt Documentation Branch, Receiving Division, DS/T, are responsible for processing Receipt Confirmation Cards (RCCs) IAW this procedure.

4. PROCEDURES/INSTRUCTIONS

a. Inspection/condition verification personnel will receive the document package together with the matching receipt items from Operations Branch, Receiving Division. Visually verify that the document package contains:

(1) Two copies each of appendix F-200, Receipt Control Document (RCD); two copies of appendix F-202, Storage Action Document (SAD); and

(2) Two copies of appendix F-201, Contract Data Sheet (CDS), if the item is procurement receipt and automated Contract Data is available.

(3) Ensure that the document package contains matching documents - all copies will reflect the same TP Control Number in the upper right-hand corner of the RCD-1, SAD-3, and CDS-2, if applicable.

b. Verify that received items(s) and accompanying documentation agree in the following criteria:

(1) The received CLIN is the same as recorded on the RCD-1 or CDS-2 documents. If not, prepare a Contract Inquiry IAW appendix B-68, using the correct CLIN. The RCD-1 display message indicating availability of additional CLINs may be used as inquiry guidance.

(2) If a Supplemental PIIN was required by the A inquiry, verify that the item marking/paperwork SPIIN agrees with the CDS-2 SPIIN.

(3) If no CDS-2 was received, check inquiry format and item criteria for mismatching information which may have caused the failure to obtain a Contract Data output. Failure to find a PMRR will also result in missing Contract Data.

c. If Contract Data is available, review receipt history portion of the output and the message line (below the receipt history data) for:

(1) Receipt history in excess of the CDS-3 space. If more than three receipts are recorded, it will be necessary to obtain completed receipt inquiry response to determine the quantity received and confirmed to date.

(2) The Contract Data Sheet will also display, when necessary, a message to indicate that additional receipts for the PIIN, NIIN and CLIN are in process; that is, the Suspended Receipt File has like records in process.

d. Perform inspection/condition verification actions as required.

e. If a PMR Record was available, the "RCC Input" portion of the RCD-1 will be annotated in the format outlined in appendix B-108, DIC ZV_/ZW_. The following instructions apply (abbreviations/legends shown are as they appear on the RCD-1, appendix F-200 and the Receipt Confirmation input display):

(1) DIC - Document Identifier Code is offered in a partially completed format. Completion of the DIC coding is a required entry of the third position IAW appendix A-1.

(2) TP CNTL NR - The Teleprocessing Control Number is preprinted on the RCD-1 and is a mandatory entry.

(3) QUANTITY - Seven-position entry obtained from the RCD-1. Precede significant digits with zeros if used for batch input. See paragraph 4e(7) below, if quantity exceeds five (99,999) positions.

(4) WEIGHT - Seven-position entry. Precede significant digits with zeros to complete seven positions if batch input used. May be zero filled. See paragraph 4e(7) below if weight exceeds five (99,999) positions.

(5) WHSE - The Warehouse Area is a mandatory entry of three positions (alpha/numeric/numeric). For Management Codes J, L, and M, a locally assigned dummy code (e.g., Z99) should be established for entry purposes. If Management Code is J, M, or Z, the system will automatically assign Warehouse Area 999 for possible reporting on the appendix F-248, Monthly Summary of Late Receipts. If Management Code is L, the computer will automatically assign 888 for possible reporting on the appendix F-248.

(6) Discrepancy Code (DISCR) - Obtained from the RCD-1. A mandatory 2-position code. The first position will be IAW appendix A-26. The second position will be IAW appendix A-27. When multiple discrepancies are identified on one receipt, the most significant discrepancy will be recorded. Appendix A-26 codes are assigned in a sequence of descending significance, e.g., C would be recorded rather than F, or M rather than P. When no discrepancy is found, Code W or X will be utilized as applicable.

(7) Quantity or Weight Override (OVR) - Will be entered whenever the quantity or weight entry exceeds 99,999 (five positions) to prevent inadvertent entries of excessive weight or quantity. If the item is a procurement receipt (DIC ZV_), and the quantity entered exceeds the variance acceptable (as shown on the Contract Data Sheet, CDS-2), the OVR indicator "X" must be used or the RCC will be violated as exceeding Contract due-in quantity. If the quantity overage violation occurs and is not acceptable, contact receipt inspector for proper determination. Do not enter "X" override unless authorized.

(8) Condition Code (CND) - Obtained from the RCD-1; need only be entered if Condition Code printed on first line is incorrect. If Condition Code is H, Management Code must be J or M. Leave one space in input card if not entered.

(9) Management Code (MGT) - Obtained from RCD-1; need only be entered when applicable or when Management Code on first line is incorrect. Code R will be used, in general, to inform the Item Manager that a discrepancy report is being submitted. If Code is J or M, Condition Code must be H. (Items originally inquired under Condition Code H will automatically be assigned Management Code M.) Leave one space in input card if not entered and other data to follow.

(10) Line Item/Supplementary Address (CLIN/SUPP ADD) - Entered only when CLIN or Supplementary Address on the PMR is incorrect.

(11) Unit of Issue (UI) - Obtained from second line; to be entered only when UI on PMR response is determined to be incorrect. When the UI is changed, care must be taken to assure that the quantity is compatible with the reported UI.

(12) Federal Supply Class (FSC) - Entered only when the FSC on the PMR response line is determined to be incorrect. Leave four spaces in input if not entered.

(13) Shipment Number (SHIPMENT NO) - Appropriate entry for DIC ZV_ or ZWT input. Shipment Number (see Shipment Number Suffix) is a mandatory entry when available on the DD Form 250/1155 and/or when the PMR Management Code on the first line of the RCD-1 is D or F. This field must be zero filled if a vendor shipment number is not available. DIC ZW_ input will exhibit Signal Code (SIG CD), Fund Code (FUND CD) and Project Code (PRJ CD), if available.

(14) Suffix Code (SFX) - To be entered when receipt is split for different Condition Codes or excessive quantity. Need not be entered when there is no split for condition and quantity greater than 99,999 is less than 10,000,000. Reference OVR indication, paragraph 4e(7) above.

(15) Final Shipment Number Suffix (SS) - Enter the Shipment Suffix. If shipment represents final quantity due-in, enter Z. It is a mandatory requirement to perpetuate the Shipment Suffix as reflected on shipping document (DD Form 250 or 1155).

(16) Administering Location Code (ADM) - The ADM or Contract Administration Service Code, 001 through 172, must be available for each procurement receipt, DIC ZV_/ZX_ whose contract specifies a DCASR as the payment office. The presence of ADM Codes other than 001 through 172 on the RCD-1 or CDS indicates no Acceptance Reporting via DIC PKN/P is required. Therefore, the RCC, DIC ZV_, will not require an ADM entry. If no Automatic Contract Data is available or the ADM Code is blank, entry of XXX will be necessary to waive Automatic Acceptance Reporting output when PMR Management Code is D or F, destination acceptance. Automatic Acceptance Reporting should never be canceled when the hard copy of the contract specifies payment will be made by a DCASR.

(17) Quantity Shipped (QTY SHIP) - Obtain quantity in Purchase Units from the vendor documentation and enter on the DIC ZV_ input when the Administering Location Code (ADM) entry is 001 through 172. This field may be blank only when an invalid ADM Code is present or the ADM entry is XXX. An invalid ADM Code is present when the RCD-1 or the CDS reflects a code other than 001 through 172.

NOTE: Shipment Number, Administering Location Code and Quantity Shipped will all require valid fill if any of these contain data for DIC ZV input only.

f. Appendix B-108 supplies guidance in preparing RCC input. It is a straight line format and offers both batch (card), as well as display entry information and formats. The display format, when requested IAW appendix E-194 P, will be output at a remote CRT terminal. The Receipt Confirmation will match the RCC Input coding form on the RCD-1, thereby simplifying remote data input. In general, the following rules apply:

(1) The cursor will move to the next remote data entry header automatically after data (all) positions have been filled or skipped.

(2) Do not precede quantity or weight with zero fill on remote entries; enter actual quantity or weight received and skip to the next field. Program will mechanically right adjust as necessary, after the field skip key has been depressed.

(3) The coding form (RCD-1) and RCC remote display read left to right and top to bottom.

(4) Batch entries will continue to require seven-position quantity and weight entries.

g. If a PMR record was not available, the RCC DIC ZX_/ZY_ will be prepared and input in the format of appendix B-109. The following instructions apply (abbreviations/legends shown are as they appear on the RCD-1 (RCC input) and the Receipt Confirmation remote display entry):

(1) Document Identifier Code (DIC) will be entered from data supplied on the RCD-1/RCC input. The third position will be IAW appendix A-1.

(2) Routing Identifier Code-To (RIC) - Obtained from the RCD-1 RCC input. May be determined by interpreting the PIIN or Document Number as follows:

		RIC	MANAGER CODE
SC0100 or	DLA100	S9T	T
SC0200 or	DLA120	S9M	M
SC0300 or	DLA13H	S9S	S
SC0400 or UDGSC or	DLA400	S9G	G
SC0500 or UDISC or	DLA50	S9I	I
SC0700 or UDCSC or	DLA70	S9C	C
SC0900 or UDESC or	DLA900	S9E	E

NOTE: When the return has no recorded manager, the third position of the RIT may be established as that of the DSC having responsibility for the FSC of the receipt.

(3) Type Pack (TP PK) - Obtained from the first line. For DICOMSS the appropriate DICOMSS Cycle Code (if known) may be entered; for Troop Issue Items (Item Manager S/U) the Type Pack fields must be a valid TP PK and other than blank fill. Leave one position blank if not entered. If a DICOMSS Cycle Code is entered, the DICOMSS Indicator (DICOMSS IND) field must reflect a D entry.

(4) Procurement Item Instrument Number of Document Number (PIIN/DOC NMBR) - Obtained from the RCD-1. If the DIC is ZX_, the 13-position PIIN will be entered. If DIC is ZY_, the 14-position Document Number will be entered.

(5) Condition Code (COND) - When there is no PMR match, the Condition Code field will be filled with the correct Condition Code during receipt processing and will serve as the source of the Condition Code entry.

(6) Management Code (MGT) - Obtained from the first line. Leave blank.

(7) Line Item (CLIN) of Supplementary Address (SUPP ADD) - Obtained from the first line.

NOTE: If correct CLIN cannot be determined for a procurement receipt, the managing DSC must be contacted to determine what CLIN to enter.

(8) Unit of Issue (UI) - Obtained from the RCD-1. If the UI printed from the locator file when the Type A inquiry was made is determined to be incorrect, the printed UI will be crossed off and the correct code will be

annotated on the RCC input of the RCD-1. The annotated code on the first line will be entered in the input card; if not crossed off, no entry will be made. When the UI is changed, care must be taken to assure that the quantity received is compatible with the reported UI.

(9) Federal Supply Class (FSC) - Obtained from the first line. If an FSC printed on the RCD-1 from the locator file, when the Type A inquiry was made, is determined to be incorrect, the printed FSC will be incorrect, the printed FSC will be crossed off and the correct FSC will be annotated on the RCC input. The annotated FSC will be entered in the input. If not crossed off, no entry will be made.

(10) Supplemental PIIN (SPIIN) - Obtained from the RCD-1. Must be entered if ninth position of PIIN is A or D.

(11) Ownership/Purpose Code (OP) - May be left blank if not known.

(12) TP Control Number (TP CNTL NR) - Preprinted on both the RCD-1 and its RCC input format to assist in reentry.

(13) Quantity (QUANTITY) - A mandatory seven-position entry on the display input and advance cursor to next entry. Do not precede with zero fill. Data quantity will be mechanically right adjusted for remote input after the balance of the field has been skipped.

(14) Weight (WEIGHT) - A mandatory seven-position entry on the batch (card) input. Enter actual weight received on remote display input and skip or advance cursor to next entry. Do not precede with zero fill. However, seven position zero fill is valid. Data quantity will be mechanically right adjusted for all remote inputs.

(15) Warehouse Area (WHSE). Mandatory entry of three positions (alpha/numeric/numeric). For Management Code J, L, or M, a locally assigned dummy code (e.g., Z99) should be established for entry purposes. If Management Code is J or M, the system will automatically assign Warehouse Area 999 for possible reporting on the appendix F-248, Monthly Summary of Late Receipts. If Management Code is L, the computer will automatically assign 888 for possible reporting on the appendix F-248.

(16) Discrepancy Code (DISCR) - Obtained from the RCD-1. A mandatory two-position code will always be entered. The first position will be IAW appendix A-26. The second position will be IAW appendix A-27.

(17) Quantity/Weight Override (OVR) - Enter "X" when either quantity or weight exceeds 99,999.

(18) Shipment Number (SHIPMENT NR) - Appropriate entry for DIC ZX_ or ZYT input. Shipment number (see shipment number suffix) is a required entry when available on the DD Form 250/1155 and/or when the PMR Management Code on the first line of the RCD-1 is D or F. This field may be zero filled if a vendor shipment number is not available. DIC ZY_ input will exhibit Signal Code (SIG CD), Fund Code (FUND CD) and Project Code (PRJ CD), if available.

NOTE: Shipment Number, Administering Location Code and Quantity Shipped will all require valid fill if any of these contain data for DIC ZV_ input only.

(19) Suffix Code (SFX) - Obtained from the RCD-1. To be entered when receipt is split for different Condition Codes or excessive quantity. Need not be entered when there is no split for condition and quantity is greater than 99,999 and less than 10,000,000. Leave one space in input when SFX Code not entered and other data to follow.

(20) DICOMSS Indicator (DICOMSS IND) - An alpha D. To be entered for a DICOMSS receipt only. Valid fill of this field will permit entry of a valid Cycle Code in the appropriate area.

(21) Shipment Number Suffix (SHIP NR SFX) - It is a mandatory requirement to perpetuate the Shipment Number Suffix as reflect on the shipping document DD Form 250/1155. Enter alpha code otained from the RCD-1. Code Z indicates that the shipment represents final receipt of the contract due-in quantity. Entry is applicable for procurement RCC DIC ZX_ only.

(22) Administering Location Code (ADM) - The Administering Location Code/ Contract Administering Service Code (CAS) 001 through 172 must be entered on all DIC ZX_ input when contract specification requires destination acceptance and payment made by a DCASR. This field is a mandatory entry when a valid Shipment Number is entered.

h. Appendix E-194 P contains the instructions for activating the display for DIC ZX_ or ZY_ RCC inputs where coding form appears on the RCD-1. The input format (RCC input), as well as the display at the remote terminal, are offered in a like format. Data shall be entered as required opposite the appropriate header/legend and the RCC input will be mechanically constructed with data in the proper columns.

i. If it is determined that the NIIN of Date Received printed on the RCD-1 is in error, the Suspended Receipt Record must be deleted using the format of appendix B-43 or B-97 and processed IAW appendix E-182 P. A Type A inquiry will then be processed to obtain a new Receipt Document Package. Both copies of the new SAD-3 and one copy of the RCD-1 will be forwarded immediately to Storage Division to ensure that the materiel is not stowed, labeled, or reported incorrectly. If the Stow Notice (appendix B-46 or B-144) has already been processed, a remote terminal message or F-246 report providing the Stow Notice data will be produced. The Receipt Stow Notice will be reinput for the new TP Control Number by Receiving Division at the same time the new RCC is processed.

j. If it is determined that data elements other than NIIN or Date Received must be changed and these elements cannot be changed using the RCC, it will be necessary to process a Suspended Receipt File Maintenance Card in the format of appendix B-145 or B-148 and in accordance with procedures provided in appendix E-162 P.

k. When all data elements required for the RCC input have been determined, the annotated RCD-1 coding sheet will be forwarded to keypunch or remote terminal for the preparation of the computer input in accordance with local procedures.

l. After the RCC has been processed, the document (RCD-1) should be filed as completed and is to be retained for 90 days and then destroyed. The CDS-3 shall be destroyed at the time of RCC input and/or at the time of completion of Receipt Inspection.

m. The processing of the RCC completes the Receiving Division actions on a receipt transaction. The corresponding MRC (appendix B-18 or B-19) will not be transmitted to the DSC by the computer until a Receipt Stow Notice (appendix B-46 or B-144) is processed by Storage Division unless the RCC indicates the materiel is being transferred to PDO (Condition Code H and Management Code J, M, or Z; inquiries in Condition Code H will be automatically assigned Management Code M, or if the receipt has been lost, Management Code L). In these cases, the MRC will be transmitted as soon as the RCC is entered. Even though an RCC indicating a routing receipt has been processed, the entry of a Suspended Receipt File Maintenance Card, which changes Management Code to identify a Lost Receipt will cause the MRC to be transmitted to the DSC without a Receipt Stow Notice being processed.

n. Since the computer will record the date on which the RCC is processed, it is important that the RCC be processed as quickly as possible to avoid late receipts and reflect high performance. However, it is not necessary to have the RCC processed before the corresponding Receipt Stow Notice is entered by Storage Division. These inputs may be processed in any sequence.

o. To assist the receipt personnel in preparing timely RCC input, the MRC due date will be mechanically computed and will appear in the upper right-hand corner of the RCD-1 (just below the TP Number). This date is the actual day that the receipt will be considered late if a valid MRC is not generated.

p. The Hazardous Storage Compatibility Abbreviated Definition will, when available from the basic item record, be printed as a final line message on the RCD. The actual Hazardous Storage Compatibility Code (HSCC), reference appendix A-33, will appear on the Storage Action Document, reference appendix F-202.

q. The presence of an Administering Location Code (001 through 172) together with shipment number (or zero fill), shipment number suffix and quantity shipped (when available) will assist the process outlined in appendix D-69 and D-70 to automatically output Acceptance Reports, DICs PKN/P. Reference appendix E-047 P for additional details.

r. When the Administering Location Code is not 001 through 172 or is not available, and only the DCASR and/or DoDAAC is available from the hard copy contract or DD Form 250/1155, the Administering Location Code can be determined from the following table:

DCASR	DoDAAC	ADMINISTERING LOCATION CODE
Atlanta	S1102A	001
Boston	S2202A	020
Chicago	S1402A	040
Cleveland	S3602A	050
Dallas	S4403A	070
Los Angeles	S0506A	102
New York	S3303A	121
Philadelphia	S3910A	142
St. Louis	S2603A	160

5. DATA ENTRY INSTRUCTIONS

a. The normal method of entering RCC input will be via remote display terminal, using the RCC input coding sheet on the RCD-1. The capability to enter RCC data in punched card form will also be available.

b. The entry of valid input through the remote terminal will always be answered by a printed response of a new display input format, i.e., a blank RCC input format identical with the previous input.

c. Prior to entry of any RCC or other receipt input through remote display terminal, it is necessary to initialize the terminal IAW appendix E-194 P. All displays will reflect data to offer additional help in preparing the required data entry.

APPENDIX E-108 V

RECEIPT CONFIRMATION CARD VIOLATIONS

1. INPUT DOCUMENTS

a. Appendix B-108, Receipt Confirmation Card, DIC ZV_ or ZW_.

b. Appendix B-109, Receipt Confirmation Card, DIC ZX_ or ZY_.

2. INPUT TO PROCEDURE DECISION CHART

Appendix D-69.

3. PURPOSE, CONTENTS AND RESPONSIBILITIES

a. This appendix provides instructions to the Receipt Documentation Branch for research, correction, and reentry of Receipt Confirmation Cards (DICs ZV_, ZW_, ZX_, and ZY_) which have been rejected from computer processing.

b. Inputs of ZV_ and ZW_ transactions are prepared when a PMR File record existed for the receipt. Inputs of ZX_ and ZY_ transactions are prepared when no PMR File record existed for the receipt. Since, in some cases, the data required to prepare the Materiel Receipt Card for the DSC can be obtained from the PMR record, more data are required for the ZX_ and ZY_ inputs than are required for ZV_ and ZW_ inputs. However, all data required in the ZV_ and ZW_ inputs are also required in the ZX_ and ZY_ inputs.

c. Two types of violations can occur:

(1) Content Violations - Those errors which normally can be identified by reviewing the input card alone. Remote terminals will mechanically display this type of error using the word "ERROR" directly opposite the invalid data entry. Such violations include invalid code entries and data incompatibilities wherein one code or data entry conflicts or is not compatible with another in the input card. These violations always require correction to the input.

(2) Process Violations - Those errors which are identified by comparing or attempting to compare the input with a computer fill record. Such violations include mismatches between key elements in the input card and a related file, and data incompatibilities wherein data entered in the input conflicts or is incompatible with data in the matching file record. These violations may require correction to the input data or the file record.

d. Violation Reason Codes (VRCs) and definitions which apply are as follows:

(1) Content Violations:

(a) DICs ZV_, ZW_, ZX_, and ZY_:

VIOLATION REASON CODE	DEFINITION
AF	Condition Code invalid.
AN	UI invalid.
AS	Quantity/Quantity Shipped invalid.
AW	Management Code invalid.
AY	FSC invalid.
AZ	Suffix Code invalid.
BK	DICOMSS indicator (DIC ZX_ only).
D9	TP control number invalid.
HX	Weight invalid.
IU	Shipment number invalid.
JI	Contract line item invalid (ZV_, ZX_, only).
JJ	Warehouse area invalid.
8V	Discrepancy Code invalid.
UB	Quantity/Weight excessive.

(b) DICs ZX_ and ZY_ (in addition to the above):

VIOLATION REASON CODE	DEFINITION
AI	PIIN or document number invalid.
AC	Routing Identifier Code to invalid.
CK	Type Pack invalid (non-DICOMSS or S/U manager only).
EX	Supplemental PIIN invalid.
4K	Cycle Code invalid (DICOMSS only).

(2) Process Violations:

(a) DICs ZV_, ZW_, ZX_, and ZY_:

VIOLATION REASON CODE	DEFINITION
AJ	Duplicate document (Receipt Confirmation Card already recorded).
K8	Invalid Receipt Confirmation format.
K9	Invalid Receipt Stow Notice format recorded on file.
SX	Receipt action invalid (does not match file record on elements indicated).
UB	Quantity in excess of contract "Due-In" Quantity (DIC ZV_ only).
E5	Field that must contain data contains blanks.

(b) DICs ZX_ and ZY_ (in addition to the above):

VIOLATION REASON CODE	DEFINITION
A6	Unit of Issue blank.
A9	Federal Supply Class blank.

4. PROCESSING/RESEARCH INSTRUCTIONS

a. Content Violations - The following VRCs recorded on the appendix F-85, Violation Printout, for Receipt Confirmation input with the appropriate input data element underlined with asterisks.

(1) CONDITION ERROR, VRC AF.

(a) REASON FOR VIOLATION/ERROR CONDITION:

Condition Code entered in the input is other than blank or alpha A through M (except I): The Condition Code entered is other than H and Management Code is J or M.

(b) PROCESSING/RESEARCH REQUIRED:

Determine the correct Condition Code from the PMR Receipt Confirmation portion of the corresponding RCD-1 document. The field may be left blank in which case the Condition Code entered on the Type A inquiry will be used in Materiel Receipt Card transmitted to the DSC and entered in the locator record for the location added on the Receipt Stow Notice if an existing location is

not used. If it appears the Receipt Confirmation Card was rejected because the Condition Code is other than H when the Management Code is J or M, the Management Code entry should also be verified prior to reentry using Condition Code H.

(2) UNIT ISSUE ERROR, VRC AN.

(a) REASON FOR VIOLATION/ERROR CONDITION:

UI is other than alpha or blank.

(b) PROCESSING/RESEARCH REQUIRED:

Determine the correct UI from the RCC input (ZX_ or ZY_) or (ZV_ or ZW_) of the PMR answer portion of the RCD-1. The correct UI can be verified by reference to the Stock Locator File or other appropriate sources. When the correct UI is determined, the quantity received should also be verified to be sure it is compatible with the reported UI prior to reentry.

(3) QUANTITY ERROR, VRC AS (See QTY-WT REL ERROR VRC UB).

(a) REASON FOR VIOLATION/ERROR CONDITION:

Quantity Received entered in the input card is other than all numeric or numeric less than one. Quantity may exceed 99,999 with no OVR indicator and/or exceed contract limitation, if DIC is ZV_.

(b) PROCESSING/RESEARCH REQUIRED:

Determine the correct quantity by reference to the RCC input of the Receipt Control Document (RCD-1). If the significant digits agree, be sure that all seven positions of the quantity field are filled, significant digits preceded by zeros. Enter OVR indicator only after verifying that quantity is correct. Correct quantity and reenter.

(4) QUANTITY SHIPPED ERROR, VRC AS (DIC ZV_ only).

(a) REASON FOR VIOLATION/ERROR CONDITION:

Quantity shipped contained other than all numeric or was numeric less than one (zero fill).

(b) Determine correct quantity shipped by reference to the Receipt Document, DD 250/1155, etc. Correct quantity and reenter.

(5) MGT ERROR, VRC AW.

(a) REASON FOR VIOLATION/ERROR CONDITION:

Management Code entered in the input card is other than blank or J, K, M, N, P, Q, R, S, U or Z; or Condition Code is H and Management Code is other than J or M.

(b) PROCESSING/RESEARCH REQUIRED:

Determine the correct Management Code from the RCD-1, PMR answer, DIC ZX_ or ZY_, or the RCC input of the DIC ZV_ or ZW_ or the Receipt Confirmation portion of the corresponding RCD-1. If it appears the Receipt Confirmation Card was rejected because Condition Code was H and Management Code was other than J or Z, both entries should be verified before the corrected card is reentered.

(6) FSC ERROR, VRC AY.

(a) REASON FOR VIOLATION/ERROR CONDITION:

FRC is other than all numeric greater than all zeros or blank.

(b) PROCESSING/RESEARCH REQUIRED:

Determine the correct FRC from the Receipt Confirmation portion of the RCD-1. The correct FSC can also be determined by reference to other appropriate sources or to the Stock Locator File for the NIIN being reported.

(7) SUFFIX CD ERROR, VRC AZ.

(a) REASON FOR VIOLATION/ERROR CONDITION:

Suffix Code entry is other than alpha or blank.

(b) PROCESSING/RESEARCH REQUIRED:

Determine the correct Suffix Code by reference to the RCD-1, RCC input, or the PMR answer portion of the corresponding Receipt Control Document.

(8) DICOMSS IND ERROR, VRC BK.

(a) REASON FOR VIOLATION/ERROR CONDITION:

Can occur only on DICOMSS receipts - DICOMSS Indicator is other than alpha D.

(b) PROCESSING/RESEARCH REQUIRED:

Enter alpha D if input document receipt of DICOMSS item. Refer to other receiving documentation when necessary to establish this information.

(9) TP NUMBER ERROR, VRC D9.

(a) REASON FOR VIOLATION/ERROR CONDITION:

TP Control Number entered in input was other than numeric or was numeric less than 10, in which case the number cannot be correct. If the entry is all

numeric greater than nine, the error is caused by a transposition of digits or entry of an erroneous digit which causes the validation computation to produce a check digit which does not equal the check digit entered in the card.

(b) PROCESSING/RESEARCH REQUIRED:

Determine the correct TP Control Number by reference to the Receipt Confirmation portion of the corresponding RCD-1. If, for some reason, the RCD-1 is not available for research, process a Type N inquiry to the Suspended Receipt File by NIIN in the format of appendix B-44 and IAW appendix E-165 P. The inquiry response will provide the correct TP Control Number for reentry.

(10) WEIGHT ERROR, VRC HX (See VRC UB, also).

(a) REASON FOR VIOLATION/ERROR CONDITION:

Weight is other than all numeric, or exceeds 99,999 with no OVR indicator.

(b) PROCESSING/RESEARCH REQUIRED:

Determine the correct weight by reference to the RCC input corresponding RCD-1. Weight may be all zeros, but all seven positions of the weight field must be filled, significant digits being precede by zeros. Correct weight and reenter.

(11) SHIPMENT NUMBER ERROR, VRC IU (ZV_ and ZX_ only).

(a) REASON FOR VIOLATION/ERROR CONDITION:

The shipment number entered contained blanks or was less than seven positions long, was not all zero filled or, if other than zero filled, did not contain three alpha characters in the first three positions of the shipment number followed by four numeric figures in the last positions of the shipment number.

(b) PROCESSING/RESEARCH REQUIRED:

Determine the correct shipment number by reviewing the corresponding RCD-1 or associated receipt document, i.e., DD Form 250. Correct and reenter.

(12) CLIN ERROR, VRC JI (ZV_ and ZX_ only).

(a) REASON FOR VIOLATION/ERROR CONDITION:

The first four positions of CLIN are other than all numeric greater than zero and the last two positions are other than alpha/numeric. If DIC is ZX_ and the CLIN is all blanks, the card will also reject with this VRC. Any entry is permitted in this field if DIC is ZW_ or ZY_.

(b) PROCESSING/RESEARCH REQUIRED:

Determine the correct CLIN from the corresponding RCC input or PMR answer portion of the RCD-1. The contract and other receiving documentation should also be reviewed to assure the correct CLIN is being reported. When the CLIN cannot be determined through research, the managing DSC must be contacted to determine what CLIN to enter.

(13) WHSE ERROR, VRC JJ.

(a) REASON FOR VIOLATION/ERROR CONDITION:

Warehouse Area Code is configured as other than alpha/numeric/numeric.

(b) PROCESSING/RESEARCH REQUIRED:

Determine the correct code from the RCC input corresponding RCD-1. Entry of a dummy code (not a valid warehouse area on the depot) configured as alpha/numeric/numeric will be accepted, but will cause erroneous data on the appendices F-71 and F-248 reports if the receipt is late. A dummy code entry is required when the receipt is lost or transferred to PDO.

(14) DISC-CD ERROR, VRC 8V.

(a) REASON FOR VIOLATION/ERROR CONDITION:

The first position of the Discrepancy Code entry is other than alpha (except I or O) and/or the second position is other than S, D, or X.

(b) PROCESSING/RESEARCH REQUIRED:

Determine the correct code from the RCC input correponding the RCD-1. Entry of any code meeting the validation criteria will be accepted; however, if the code entered is not correct, erroneous data will appear on the appendix F-144 report and in MIS data related to receipt items inspected.

(15) OVR ERROR, VRC UB.

(a) REASON FOR VIOLATION/ERROR CONDITION:

Quantity or weight entry exceeds five positions 99,999, or quantity exceeds contract limits (DIC ZV_ only) with no override code present. Do not arbitrarily enter X unless reason for error condition is completely resolved.

(b) PROCESSING/RESEARCH REQUIRED:

If quantity/weight exceeds 99,999, enter X in override indicator. If no quantity or weight entry exceeds five positions, refer to Process Violation, Paragraph 4b(5) above.

(16) PIIN/DOC NMBR ERROR, VRC AI (ZX_ and ZY_ only).

(a) REASON FOR VIOLATION/ERROR CONDITION:

PIIN or Document Number entry is other than alpha/numeric. When the DIC is ZX_, the last position may be blank and no violation will occur.

(b) PROCESSING/RESEARCH REQUIRED:

Determine the correct entry by reference to the RCD-1 or reference referral to the contract and other receiving documentation.

(17) TYPE ERROR, VRC CK (ZX_ and ZY_ only)

(a) REASON FOR VIOLATION/ERROR CONDITION:

Type Pack is other than blank or numeric 1, 2, or 4 on a non-DICOMSS receipt. Type Pack may not be blank if third position of RIC (To) is equal to SU. It will be possible to have an alpha entry (other than O) or a numeric 6 accepted without violation when the RIC (To) is S9S, and receipt is identified as DICOMSS, (reference DICOMSS Indicator).

(b) PROCESSING/RESEARCH REQUIRED:

Determine the correct Type Pack by reference to the corresponding RCD-1.

(18) SPIIN ERROR, VRC EX (ZX_ and ZY_ only).

(a) REASON FOR VIOLATION/ERROR CONDITION:

Supplemental PIIN entry on input is other than blank, alpha/numeric, or blank/blank/RB. All blanks will also reject with this VRC if the ninth position of the PIIN is A, D, or G.

(b) PROCESSING/RESEARCH REQUIRED:

Determine the correct Supplemental PIIN entry by reference to the corresponding RCD-1. If the Supplemental PIIN printed on the Receipt Control Document (RCD-1) is considered to be correct, the field may be left blank on the reentry. The reentered Supplemental PIIN must be blank or match the Type A inquiry input exactly or a SX violation will occur (see subparagraph b(1) below).

(19) RIC (TO) ERROR, VRC AC (ZX_ and ZY_ only).

(a) REASON FOR VIOLATION/ERROR CONDITION:

The Routing Identfier Code (To) entry (S9C, E, I, G, M, T, S or U) on input does not match the Manager Code on the Locator File. Entry of S9U or S9S is valid where the Manager Code is S and will be considered to match the Locater File.

(b) Determine the Correct RIC (To) by inquiring the Locator File. Inquire by batch DIC ZBJ or on line IAW appendix E-163 P.

b. Process Violation - The following violations will appear on the appendix F-85, Violation Printout. When a specific data element is mismatched, it will be underlined with asterisks on the report.

(1) DUPLICATE ERROR, VRC AJ.

(a) REASON FOR VIOLATION/ERROR CONDITION:

A matching Suspended Receipt record exists on the file, but a Receipt Confirmation date is already recorded in the record.

(b) PROCESSING/RESEARCH REQUIRED:

Immediately notify Storage Division that the corresponding Receipt Stow Notice should be withheld pending resolution. Process a Suspended Receipt File inquiry in the format of appendix B-146 and IAW appendix E-165 P. Review appendix F-247 inquiry response the following day to determine if the confirmation data recorded in the file is correct. If correct, do not reenter input and notify Storage Division that the Receipt Stow Notice may be released. If the confirmation data is incorrect, process a Suspended Receipt File Maintenance Card in the format of appendix B-145 and IAW appendix E-162 P to correct the erroneous data element(s). Upon determination that the change is effected, notify Storage Division that the Receipt Stow Notice may be released. It will also be possible to enter the Suspended Receipt File Maintenance Card directly at a remote terminal for immediate validation and processsing. If the PMR status of the record is changed, requiring a different Receipt Confirmation Card input (i.e., ZV_ rather than ZX_), an appropriate message indicating this will be printed at the terminal. The Receipt Confirmation can then be entered in the correct format to complete the action.

(2) DOCUMENT ERROR, VRC K8.

(a) REASON FOR VIOLATION/ERROR CONDITION:

A ZV_ or ZW_ input was processed when a ZX_ or ZY_ input is required; or a ZX_ or ZY_ input was processed when a ZV_ or ZW_ input is required.

(b) PROCESSING/RESEARCH REQUIRED:

Determine the correct input required by reference to the corresponding RCD-1 and Suspended Receipt File inquiry, if necessary. Correct input and reenter.

(3) PROCESS ERROR, VRC K9.

(a) REASON FOR VIOLATION/ERROR CONDITION:

A Receipt Stow Notice is recorded for the matching Suspended Receipt Record and the Receipt Confirmation input contains Condition Code H and/or Management Code J, L, or M or a Short Form Receipt Stow Notice (no location added) has been processed and the Condition Code of the Receipt Confirmation Card input is J, K, or L.

(b) PROCESSING/RESEARCH REQUIRED:

Determine if the Condition Code and Management Code of the Receipt Confirmation are correct. If not, correct input and reenter. If the entries are correct, coordinate with Storage Division to determine why the Receipt Stow Notice was processed. If the Receipt Stow Notice was processed erroneously, delete the Suspended Receipt File Record using appendix B-43 or B-97 and process IAW appendix E-182 P. Enter a Type A inquiry to create a new record and reprocess the Receipt Confirmation using the new TP Control Number.

(4) NO MATCH ERROR, VRC SX.

(a) REASON FOR VIOLATION/ERROR CONDITION:

This VRC can apply to two different errors related to the matching of the input card with a record in the Suspended Receipt File. The following conditions are possible:

1. There is no record in the Suspended Receipt File with a matching TP Control Number; or

2. Does not match the input on PIIN or Document Number or Supplemental PIIN.

(b) PROCESSING/RESEARCH REQUIRED:

Determine the condition causing the violation by referring to the Appendix F-85 printout.

1. If the TP Control Number is underlined with asterisks, no matching record was found in the Suspended Receipt File, Verify the input TP Control Number by referring to the Receipt Confirmation portion of the corresponding RCD-1. If the input is in error, correct the entry and reenter. If the input appears to be correct, confirm that no record exists on the file by processing a Type Q inquiry in the format of appendix B-45 and IAW appendix E-165 P. If no record exists, determine if another action was processed to delete or clear the record. Process a Completed Receipt File inquiry in the format of appendix B-61 to determine if the receipt was previously cleared. If it is determined that the receipt was correctly deleted or cleared, do not reenter input. If the record was incorrectly deleted, process a new, Type A inquiry, immediately

locate the materiel and attach the new Storage Action Document (SAD-2), coordinate with Storage Division as necessary, and process the Receipt Confirmation Card using the new TP Control Number. If the record was incorrectly cleared, determine the error and contact the DSC directly to have the appropriate adjustment action taken. Determine if a record exists which should have been cleared in suspense and take action necessary to clear the record. Change the Completed Receipt File record using appendix B-106 as necessary to reflect any adjustments in the completed records.

2. If the PIIN, or Document Number, or Supplemental PIIN is underlined with asterisks, determine if the input entry of the noted data element is correct by referring to the PMR Answer and the Receipt Confirmation input portion of the corresponding RCD-1, the contract, or other receiving documentation. If incorrect, correct and reenter. If the input is correct, determine from the RCD-1 the corresponding element printed from the Type A inquiry and verify that it is incorrect. Process a Suspended Receipt File Maintenance Card in the format of appendix B-145 IAW appendix E-162 P. The Receipt Confirmation may be reentered immediately but may violate if the PIIN/Document Number or Supplemental PIIN change causes the PMR status of the record to change as well. If it is not necessary to process the Receipt Confirmation immediately, withhold the Receipt Confirmation and review the F-246 report IAW appendix E-193 P the following day to determine the type of Receipt Confirmation required (appendix B-108 or B-109) and process the Receipt Confirmation accordingly. If the Receipt Confirmation must be processed the same day to avoid a late receipt, process a Type P inquiry using the new data to determine if there is no matching PMR. It will also be possible to process the Maintenance Update directly into the remote terminal for immediate validation and processing. If there is a change in the PMR status of the record, a message indicating this will be printed at the terminal.

(5) EXCESSIVE QUANTITY, VRC UB (DIC ZV_ only)

(a) REASON FOR VIOLATION/ERROR CONDITION:

Quantity entered is valid but contract data reflects a high limit quantity less than quantity entered in RCC.

(b) PROCESSING/RESEARCH REQUIRED:

Determine if quantity entered is in error. Correct and reenter. Reinquire for overage quantity and suspend excess in accordance with appendix E-047 P.

(6) FIELD MUST CONTAIN DATA, VRC E5 (DICs ZV_ and ZX_ only).

(a) REASON FOR VIOLATION/ERROR CONDITION:

Shipment number was blank when Administering Location Code contained valid fill (or the reverse) for DIC ZX- input. Shipment Number, Administering Location Code, or Quantity Shipped fields reflected one or more fields with valid data and one or more blank fields.

(b) PROCESSING/RESEARCH REQUIRED:

Determine missing data (Shipment Number, Administering Location Code or Quantity Shipped) from review of RCD-1 or associated receipt/contract data. Reenter missing data field.

(7) UNIT OF ISSUE BLANK, VRC A6 (DICs ZX_ or ZY_).

(a) REASON FOR VIOLATION/ERROR CONDITION:

No Unit of Issue was entered and there is no Unit of Issue for this NIIN in the Suspended Receipts File.

(b) PROCESSING/RESEARCH REQUIRED:

Enter the correct Unit of Issue from the packing ticket or other appropriate source.

(8) FEDERAL SUPPLY CLASS, VRC A9 (DICs ZX_ or ZY_).

(a) REASON FOR VIOLATION/ERROR CONDITION:

No Federal Supply Class was entered and there is no Federal Supply Class for this NIIN in the Suspended Receipts File.

(b) PROCESSING/RESEARCH REQUIRED:

Enter the correct Federal Supply Class from the packing ticket or other appropriate source.

5. REENTRY INSTRUCTIONS

a. When the correct input data have been determined, the corrections will be annotated on the source document (RCD-1) or a new coding sheet will be prepared, depending upon local procedures. The corrected document may then be forwarded to keypunch or remote operator for data preparation/input.

b. If it is necessary that the Receipt Confirmation be processed today to avoid a late receipt, the input will be immediately reentered to assure that the Materiel Receipt Confirmation is processed on time.

APPENDIX E-109 P

GUARANTEED TRAFFIC/SMALL PARCEL RATE BASE FILE MAINTENANCE

1. PURPOSE

The Guaranteed Traffic/Small Parcel Rate Base File is used by the MOFAST Freight Rating process to automatically compute and assign transportation costs to freight moving under Guaranteed Traffic tariffs. Government Bills of Lading rated with rates loaded in this file will generate a suspended record for comparison with payment to the carrier by the U.S. Finance and Accounting Center for identification of possible carrier overcharges. This appendix describes the procedures for maintaining the Guaranteed Traffic/Small Parcel Rate Base File.

2. APPENDICES USED IN THIS PROCEDURE

a. Appendix B-200

b. Appendix F-45

c. Appendix F-194, Parts 11 and 12

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division DS/T

4. PROCEDURES/INSTRUCTIONS

a. This procedure will be used to update the Guaranteed Traffic/Small Parcel Rate Files by CRT. These files are listed below with a brief description of the purpose and content of each file.

(1) Rate Group Table - This table provides a means of typing SPLCs in a region having the same rates per hundred together.

(2) Small Carrier Zone Table - This table provides a means of typing all SPLCs in an area having the same rate per shipment together.

(3) Rates Per Hundred - This file provides rates per hundred by rate group. All SPLCs in a rate group must be identified by relating them in the SPLC Rate Group Table.

(4) Small Carrier Rates - This file provides per shipment type rates. All SPLCs covered by the same actual charge must be releated in the Small Carrier Zone Table prior to loading these rates.

b. Processing Procedure

(1) To begin processing, enter $$UWFK71 (this is a one time entry) and depress the ENTER key. The following message will be displayed:

UWFK71 G U A R A N T E E D / S M A L L P A R C E L R A T E S

M E N U S E L E C T I O N

```
ENTER ONE OF THE FOLLOWING SECTION CODES:
  K = RATES PER HUNDRED
  L = SMALL CARRIER RATES
  O = SMALL CARRIER ZONE TABLE
  1 = SPLC RATE GROUP TABLE

SECTION-CODE _

  VALID ACTION CODES ARE:
    A = ADD     (TO INSERT IN BETWEEN EXISTING
    C = CHANGE      AREAS/SPLCS MAKE CODE IIIIII)
    D = DELETE
    I = INQUIRY
    S = ADD OR UPDATE WITH SAME DATA
    P = PACK / COMPRESS ZONE/GROUP TABLES
  RETURN TO MENU BY PRESSING PF1/SF1
```

(2) Enter the section code for the file desired.

(a) K = Rates Per Hundred. Entry of K in the section code will bring up the following display:

```
                                RATES PER HUNDRED

SECTION-CODE K                     CARRIER      RATE-GROUP      TYPE-SERVICE

 WGT-01-RATE     WGT-02-RATE      WGT-03-RATE    WGT-04-RATE     WGT-05-RATE
00000  00000    00000  00000     00000  00000   00000  00000    00000  00000

 WGT-06-RATE     WGT-07-RATE      WGT-08-RATE    WGT-09-RATE     WGT-10-RATE
00000  00000    00000  00000     00000  00000   00000  00000    00000  00000

 WGT-11-RATE     WGT-12-RATE      WGT-13-RATE    WGT-14-RATE     WGT-15-RATE
00000  00000    00000  00000     00000  00000   00000  00000    00000  00000

 WGT-16-RATE     NR-FLAT-RATES
00000  00000          00

ACTION    CARRIER       RATE-GROUP-CODE       TYPE-SERVICE
```

1. To add a record, enter Action Code A, Carrier Code (SCAC), a three position locally assigned rate group code and a locally assigned type service code. A successful entry will bring up the following display:

ADD/UPDATE RATES PER HUNDRED

SECTION-CODE K CARRIER GFLS RATE-GROUP ZZZ TYPE-SERVICE A

WGT-01-RATE	WGT-02-RATE	WGT-03-RATE	WGT-04-RATE	WGT-05-RATE
00000 00000	00000 00000	00000 00000	00000 00000	00000 00000
WGT-06-RATE	WGT-07-RATE	WGT-08-RATE	WGT-09-RATE	WGT-10-RATE
00000 00000	00000 00000	00000 00000	00000 00000	00000 00000
WGT-11-RATE	WGT-12-RATE	WGT-13-RATE	WGT-14-RATE	WGT-15-RATE
00000 00000	00000 00000	00000 00000	00000 00000	00000 00000
WGT-16-RATE	NR-FLAT-RATES			
00000 00000	00			

Enter the maximum weight in each weight-rate group and the rate in cents. If a minimum charge is in effect, enter the maximum weight and the rate in the first weight-rate group. Enter each weight-rate group up to sixteen and enter 01 in the NR-FLAT-RATE field. This will establish the first weight-rate group as a minimum charge.

2. To add data that is similar to data already existing in the file, a dupe feature is available. Enter Action Code S, the carrier code, the rate group code and the type service code of the existing file. Depress the ENTER key. When the display comes up, modify the carrier, rate-group or type service and any rate data that needs to be changed. Depress the ENTER key. A successful entry will establish a new record.

3. To change or update a record, enter Action Code C, the carrier code, the three position rate group code and the type service code. Depress the ENTER key. When the display appears, modify the data and depress the ENTER key.

4. To delete a record, enter Action Code D, the carrier code, the rate group code and the type service of the record to be deleted. Depress the ENTER key. A successful entry will delete the record in its entirety.

5. To inquire a record, enter Action Code I, the carrier code, the rate group code and the type service code of the record desired. Depress the ENTER key. A successful entry will display that record.

(b) L = Small Carrier Rates. Entry of L in the section code will bring up the following display:

SMALL CARRIER RATES

```
SECTION-CODE L                          CARRIER        WEIGHT     TYPE-SERVICE

ZONE-01-RATE    ZONE-02-RATE    ZONE-03-RATE    ZONE-04-RATE    ZONE-05-RATE
  *    00000      *    00000      *    00000      *    00000      *    00000

ZONE-06-RATE    ZONE-07-RATE    ZONE-08-RATE    ZONE-09-RATE    ZONE-10-RATE
  *    00000      *    00000      *    00000      *    00000      *    00000

ZONE-11-RATE    ZONE-12-RATE
  *    00000      *    00000
```

1. To add a record, enter Action Code A, carrier code, the weight for which the rate applies and a locally assigned type service code. A record has to be built for each pound. A successful entry will bring up the following display:

ADD/UPDATE SMALL CARRIER RATES

```
SECTION-CODE L                      CARRIER PURL  WEIGHT 001  TYPE-SERVICE 1

ZONE-01-RATE    ZONE-02-RATE    ZONE-03-RATE    ZONE-04-RATE    ZONE-05-RATE
  *    00000      *    00000      *    00000      *    00000      *    00000

ZONE-06-RATE    ZONE-07-RATE    ZONE-08-RATE    ZONE-09-RATE    ZONE-10-RATE
  *    00000      *    00000      *    00000      *    00000      *    00000

ZONE-11-RATE    ZONE-12-RATE
  *    00000      *    00000
```

Enter the zone code and the actual shipment charge for the weight group shown on the first line of the display.

2. To add similar data i.e., the next weight for that carrier and type service. Enter Action Code S, the carrier code, the weight that rates are established for and the type service code. Depress the ENTER key. A successful entry will display an existing record. Modify the carrier, weight and/or type service code and any zone/rate field that need to be changed. Depress the ENTER key. A successful entry will establish a new record.

3. To inquire, change or delete a record in the Small Carrier Rate File, enter the applicable action code, the carrier code, the weight group and the type service code.

(c) 0 = Small Carrier Zone Table. Entry of a zero in the section code will bring up the following display:

```
SMALL CARRIER ZONE TABLE FILE

SECTION-CODE 0                                                CARRIER     000

AREA/ZONE  AREA/ZONE  AREA/ZONE  AREA/ZONE  AREA/ZONE  AREA/ZONE  AREA/ZONE
****** *   ****** *   ****** *   ****** *   ****** *   ****** *   ****** *
****** *   ****** *   ****** *   ****** *   ****** *   ****** *   ****** *
****** *   ****** *   ****** *   ****** *   ****** *   ****** *   ****** *
****** *   ****** *   ****** *   ****** *   ****** *   ****** *   ****** *

ACTION      CARRIER     RECORD 000
```

1. To establish an area/zone table, enter Action Code A and the carrier code. Enter a six, four or two position SPLC code in the area field and a one position zone code. SPLCs must be loaded in the file in descending order, i.e., six, four and two positions. If a two position SPLC is used, it establishes that zone for every six or four position SPLC in a regional grouping unless they are specifically designated in the table. If a two or four position SPLC is used to establish a zone, the asterisks following must be deleted with either the space bar or EOF key.

2. To modify a record, enter Action Code C, and the carrier code. Depress the ENTER key. Make any changes such as adding to an existing record, deleting individual area/zone fields from an existing record, etc.

3. To delete a record, enter Action Code D and the carrier code. Depress the ENTER key. A successful entry will delete the record in its entirety.

4. To inquire a record, enter Action Code I and the carrier code. A successful entry will display the record. If there are more records for that carrier, enter Action Code I and depress the ENTER key.

5. If you have deleted several area/zone relationships in the body of a table, you can compress the file by entering Action Code P and the carrier code.

6. To insert an SPLC into the body of the table, enter Action Code C, the carrier code and the record sequence. Depress the ENTER key. When the record is displayed, overlay the existing SPLC with I's where the new SPLC is to be inserted. Depress the ENTER key. The new display will have a field with asterisks for the new SPLC. Enter Action Code C, carrier code and the record sequence and depress the ENTER key. The new SPLC can then be inserted where there are asterisks.

(d) 1 = SPLC Rate Group Table. Entry of 1 in the section code will bring up the following display:

```
                              SPLC RATE GROUP TABLE

SECTION-CODE  1                                                CARRIER     000

  SPLC  GRP  SPLC  GRP  SPLC  GRP  SPLC  GRP  SPLC  GRP  SPLC  GRP  SPLC  GRP
 ****** *** ****** *** ****** *** ****** *** ****** *** ****** *** ****** ***
 ****** *** ****** *** ****** *** ****** *** ****** *** ****** *** ****** ***
 ****** *** ****** *** ****** *** ****** *** ****** *** ****** *** ****** ***
 ****** *** ****** *** ****** *** ****** *** ****** *** ****** *** ****** ***
 ****** *** ****** *** ****** *** ****** *** ****** *** ****** *** ****** ***
 ****** *** ****** *** ****** *** ****** *** ****** *** ****** *** ****** ***
 ****** *** ****** *** ****** *** ******

ACTION    CARRIER      RECORD 000
```

To add, change, delete, inquire or compress the file, follow the steps outlined in subparagraphs (c)1. through 6.

5. ERROR MESSAGES

Program validation will identify error conditions and return the entry display with the corresponding Error Message at the bottom of the display. The cursor will be positioned at the field containing the error. The Error Messages, with probable cause and corrective action information are as follows:

ERROR MESSAGE	CAUSE/ACTION
INVALID ACTION CODE	Probable Cause: An action code was entered that was other than A, C, D, I, S or P. Action: Verify the input and reenter.
TYPE SERVICE MUST BE ALPHA/NUMERIC	Probable Cause: An entry was made with numeric type service in the Rate Per Hundred File. Action: Verify the input and reenter using an alpha or special character type service code.
RECORD NOT FOUND	Probable Cause: An inquiry was made to a record that has not been established. Action: Verify the input and reenter or establish a new record.
RECORD ALREADY ON FILE	Probable Cause: An attempt was made to establish a record duplicating a record already on the file. Action: Verify the input and reenter.

ERROR MESSAGE	CAUSE/ACTION
TYPE SERVICE CODE MUST BE NUMERIC	Probable Cause: An attempt was made to use an alpha type service code on Small Carrier Rate File. Action: Verify the input and reenter using a numeric type service code.
RECORD SEQUENCE VALID ONLY ON INQUIRY OR CHANGE	Probable Cause: An add or delete action was made using the record sequence number as part of the key in the Small Carrier Zone Table or the SPLC Rate Group Table. Action: Verify the entry and reenter using only the action code and the carrier code.
MORE THAN 10 INSERTS PER SCREEN	Probable Cause: An attempt was made to insert more than 10 SPLCs or Areas in the tables. Action: If more than 10 insets are necessary to a table, made several entries to accomplish the task.
NO CARRIER ENTERED	Probable Cause: An attempt was made to access a rate base file or table without entering a carrier code. Action: Verify the entry and reenter using a carrier code.
ONLY 100 RECORDS ALLOWED	Probable Cause: An attempt was made to build more than 100 displays for either the Small Carrier Zone Table or the SPLC Rate Group Table. Action: Notify the supervisor that you have exceeded the table allowance.
INVALID DATA	Probable Cause: The weights are not in consecutive order in the Rate Per Hundred file. Action: Reenter the weights starting with the lowest weight first.
UWFK71 BAD RETURN FROM UWFK7- ********	Probable Cause: Program failure. Action: Record entire message and notify the programmer.

APPENDIX E-110 P

RECEIPT STOW NOTICES

1. PURPOSE

This procedure describes the method of recording storage data in the Suspended Receipt File for the purpose of clearing the suspense on an in-process receipt and updating the Stock Locator File when necessary and identify count to MIS Record as Bin or Bulk Action.

2. APPENDICES USED IN THIS PROCESS

a. Appendix B-46, Type S Remote Stow Notice Input.

b. Appendix B-144, Receipt Stow Notice.

d. Appendix D-70, Receipt Stow Notice.

e. Appendix E-047 P, Processing Receipts for Reporting and Storage.

f. Appendix F-202, Storage Action Document.

g. Appendix F-200, Receipt Control Document.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

The various warehousing elements in Storage Division involved in stowing newly received materiel will be responsible for processing Receipt Stow Notices IAW this procedure.

4. PROCEDURES/INSTRUCTIONS

a. Warehouse Area receives the materiel with two copies of annotated Storage Action Document (SAD-2) from the Operations Branch, Receiving Division.

(1) The Storage Action Document (SAD-2) will be output with three types of locator answers. All documents will be composed of a "Locator Answer" section and a "Stow Action Input" format. The Locator Answer will reflect the following messages:

(a) NO LOC REC FOR NIIN - There is no basic locator record available for the NIIN (which will be shown) entered in the original Type A inquiry.

(b) NO LOCS AVAIL - No locations are available for the NSN, condition (or other) characteristics of the Type A inquiry.

(c) INVENTORY - The NSN indicated is undergoing inventory action.

Additional information/messages which may have a bearing on storage actions will be received from the Receipt Control Document (RCD-1), which will be forwarded with the SAD-2 to Warehousing Division; i.e., Brand Name, Troop Issue, Cycle Codes, Hazardous Storage Compatibility Abbreviated Definition, Expedite-B/O Pending, etc.

(2) In addition to the locator data and available location information, the SAD-2 will offer a coding format for Stow Notice input, IAW appendix B-110. This Stow Notice coding form will be used by elements of both Receiving and Warehousing Divisions to annotate required data; i.e., receipts inspections, annotated inspection date, date of pack, etc. Warehousemen must annotate Action Code and as required, type storage or location.

b. Review SAD-2 to determine if active locations are recorded for the item on the Stock Locator File. Verify that the item characteristics (i.e., NSN, Condition Code, Type Pack) are compatible with the locations provided.

c. If item characteristics are not compatible with the locations provided or four locations are provided and cannot be used (insufficient space for quantity received), process a Type B Locator Inquiry in the format of appendix B-42 and IAW appendix E-163 P to obtain additional locations containing the same item with the same characteristics of the received materiel.

d. At this point, the materiel will be in one of two categories requiring different procedures as follows:

(1) Usable active location available:

(a) If a location already recorded on the Stock Locator File can be used to stow the receipt, the materiel will be placed in the appropriate location. The SAD-2 will be annotated to indicate that an existing location was used. This can be done by circling the location used on the SAD-2 or if the location is not printed on the SAD-2, the TP Control Number can be circled in the Stow Action Input portion of the form, but in any case the action code for identifying location as a Bin or Bulk must be annotated on the form. This can be accomplished by entering "SA" for Bin "SK" for Bulk (Mandatory Entry). Local procedures will dictate what annotations are required to include signature and date, if desired.

(b) One copy of the annotated SAD-2 will be forwarded to a remote terminal, keypunch, or scanner typist for data preparation and processing. The other copy of the SAD-2 may be destroyed or returned to the Warehouse Area Control Office for filing according to local procedures.

(c) If one active location is used for a portion of the receipt and one or more vacant locations are used for the remainder, the same procedure will be used except that the new location will be annotated on the SAD-2 to add the new location(s) to the Stock Locator File. In keeping with warehousing policy, this condition in a Bin area requires rewarehousing of all of the materiel into

a new, larger location. The previously recorded location would then have to be deleted by processing an Item Locator Subrecord Deletion in the format of appendix B-71. The new location will be recorded by using the procedures described in subparagraph (2) below.

(2) No usable active location available:

(a) If it is necessary to stow the receipt in a vacant location(s) not recorded in the Stock Locator File, an appropriate location will be found and the materiel stowed. The SAD-2, Stow Action Input will be annotated to indicate the Warehouse Location(s) and Type of Storage Code(s) in the appropriate blocks of the Stow Notice portion of the SAD-2. The Stow Action Input portion of the form displays additional fields (2 and 3) for Type Pack, Location, Type Location Code or Date of Pack. Therefore additional Locations, Types of Storage, Types of Location, and/or Dates of Pack/Expiration may be annotated as necessary, but in any case, the Warehouseman must enter action code for identifying the location as either Bin or Bulk. This can be accomplished by annotating LA for Bin or LK for Bulk. THIS IS A MANDATORY ENTRY. The appropriate field positions or positions of data fill are outlined in appendices B-46 and B-144 when applicable. The same Date of Inspection, Unit of Pack, and Lot/Contract Number and Indicator as annotated on the Stow Action Input portion of the SAD-2 will be applied to the second and/or third locations and their related locator updates. When applicable, other data (i.e., Inspection Date, Unit Pack, Date of Pack) will also be entered if not already annotated by Receiving Division. Local procedures may also require annotation, signature, date, or other information.

(b) One copy of the SAD-2 will be securely attached to the location as a temporary label. The other copy of the SAD will be forwarded to a remote terminal or keypunch for data preparation. If local procedures require retention of a record for followup purposes, the SAD (copy) will be returned for filing after input is prepared.

(3) Usable reserved location provided:

When a Bin Location with a Type Location Code of 1 is printed on the SAD-2 and the location can be used to stow the receipt, a short form Receipt Stow Notice (Type S Remote input or ZZS card with SA or SK Action Code) will be processed as described in subparagraph (1) above.

(4) Unusable reserved location provided:

When a Bin Location with a Type Location Code of 1 is printed on the SAD-2 and the location cannot be used to stow the receipt, a long form Receipt Stow Notice (Type S Remote input or ZZS card with LA or LK Action Code) will be processed to record the actual location used as described in subparagraph (2) above. In addition, it will be necessary to process on Item locator Subrecord Deletion (DIC ZBA with Action Code FW) to delete the reserved location from the Locator File, since this location became obligated when the SAD-2 was produced.

e. If a Warehouse Area determines that the received materiel should be stowed in an area other than that annotated on the SAD-2, the TP Control Number and the new area will be recorded and the materiel with the copies of the SAD-2 will be forwarded to the appropriate area. The TP Control Number recorded in Area Control Office will allow later followup, if necessary.

f. It is not necessary to process an Item Locator Subrecord Add (appendix B-71) in conjunction with stowage of a receipt. When it is necessary to add a location (or up to three separate locations), the long form Receipt Stow Notice combined with the Suspended Receipt File Record provides sufficient information to prepare the Locator Add(s) automatically. The computer will process the Locator Add whenever a Receipt Stow Notice with Action Code LA or LK is entered. This will always be accomplished after both the Receipt Confirmation Card (appendices B-108 and B-109) and the Receipt Stow Notice have been processed.

g. When Bulk Receipts are moved directly to the Warehouse Area, the appropriate receiving information (i.e., NIIN, last five positions of PIIN/ Document Number, Condition Code, Supplemental PIIN) will be communicated to the Receiving Division for preparation of the Type A inquiry. The resulting document package will be taken to the Warehouse Area where the materiel is being off loaded and where the RCD-1 and SAD-2 will be annotated IAW appendix E-047 P. One copy of the annotated SAD-2 will be returned to Receiving Division. The two copies of the SAD-2 will be processed IAW the above procedures. It is essential that RCD-1 and SAD-2 be generated prior to stowage to allow placarding of the materiel if the item is under inventory. The Stow Action Document will reflect the word "Inventory" within the Locator Answer Line, when necessary.

5. DATA ENTRY INSTRUCTIONS

a. Remote Input - If the Receipt Stow Notice is to be input over the remote terminal the S inquiry designator will be used instead of the ZZS DIC. If the Stow Notice is not adding a location, the S designator and the 6-position TP Control Number and a 2-position Action Code SA or SK are the only data elements required. If the Stow Notice is adding a location, the S will be entered, followed by TP Control Number, LA or LK Action Code, FRC and all location information (see appendix B-46). Accepted inputs will be identified by the printing of "OK" at the terminal. Rejected inputs will cause the printing of a VRC or error message at the terminal.

b. Prior to entry of a remote input, the remote terminal operator will initialize the device IAW appendix E-194 P to accept Receiving Document Identifier Codes applicable to storage activity. Terminal display input format for the S type Terminal display input format for S type inquiry will be in the same format as the SAD-2, Stow Action input coding form.

c. Input to Data Systems - If the Receipt Stow Notice is to be processed in punched card or scanner sheet form in Data Systems, the ZZS DIC must be used. If no location is added the DIC, TP Control Number, FRC, and Action Code are required entries. If a location is to be added, the locator information would also be entered in addition to these elements (see appendix B-144). Rejected inputs will be identified on the appendix F-85, Violation Printout, the day after the input is processed.

d. The entry of a valid input through the remote terminal will be answered by either the display of the required file data or the display of a new (blank) input format identical to the previous inquiry, i.e., a valid Stow Notice will be followed by a blank Stow Notice display. If input is not valid, the appropriate error message will be printed at the terminal.

e. Appendix C-41, Notice of Availability/Shipment Document, DD Form 1348-5.

APPENDIX E-110 V

RECEIPT STOW NOTICE VIOLATIONS

1. INPUT DOCUMENTS

a. Appendix B-46, Type S Remote Receipt Stow Notice.

b. Appendix B-144, Receipt Stow Notice, DIC ZZS.

c. Appendix E-184 P, Initializing Receiving Teleprocessing.

2. INPUT TO PROCEDURE DECISION CHART

Appendix D-70

3. PURPOSE, CONTENTS AND RESPONSIBILITIES

a. This appendix provides instructions to the various responsible elements in Storage Division for research, correction, and reentry of Receipt Stow Notices which have been rejected from computer processing.

b. Receipt Stow Actions may be processed/input by remote keyboard terminals or card input. When storage updates are reported via punched card, DIC ZZS, violations will be identified on the appendix F-85, Violation Printout by Violation Reason Codes (VRC) the day following input. Erroneous data will be underlined by asterisks. Stow Action updates, Type S inputs processed through the remote keyboard will be validated at the time of input. Violations will be identified on the display (CRT) screen using the word ERROR printed next to the applicable data entry. Violations will also appear as an error message; i.e., NO MATCHING SUSPENSE RECORD, INVALID FORMAT, etc. Errors shall be immediately corrected and reentered IAW appendix E-194 P.

c. Two types of violations can occur.

(1) Content Violations:

Those errors which normally can be identified by reviewing the input card alone. Such violations include invalid code entries and data incompatibilities wherein one code or data entry conflicts with another in the input card. These violations always require correction to the input.

(2) Process Violations:

Those errors which are identified by comparing or attempting to compare the input with a computer file record. Such violations include mismatches between key elements in the input and a related file, and data incompatibilities wherein data entered in the input conflicts or is incompatible with data in the matching file record. These violations may require correction to the input or the file record.

e. VRCs and definitions which apply are as follows:

(1) Content Violations:

VIOLATION REASON CODE	DEFINITIONS
AP	Location invalid.
CF	Action Code invalid.
D6	Lot/Contract indicator invalid.
D9	TP Control Number invalid.
HG	Type of Storage Code invalid.
HH	Date of Pack/Expiration invalid.
HU	Unit Pack invalid.
HV	Type Location Code invalid.
HW	Inspection Date invalid.

(2) Process Violations:

VIOLATION REASON CODE	DEFINITIONS
K9	Invalid Receipt Stow Notice format.
SX	Receipt Action invalid (does not match file record on elements indicated).
S1	

4. PROCESSING/RESEARCH INSTRUCTIONS

a. Content Violations:

The following VRCs printed on the appendix F-85, Voilation Printout, or the remote display terminal with the appropriate data elements underlined with asterisks.

(1) LOCATION ERROR, VRC AP.

(a) REASON FOR VIOLATION/ERROR CONDITION:

Warehouse location entered in the input is other than alpha in the first position, numeric in positions 2-7 or alpha in the last two positions.

(b) PROCESSING/RESEARCH REQUIRED:

Determine the correct entry by reference to the source document, SAD-2 or other. If the location cannot be definitely determined from the source document, a search will be made in the warehouse area to find the receipt and the correct location for reentry.

(2) ACTION CD ERROR, VRC CF.

(a) REASON FOR VIOLATION/ERROR CONDITION:

Action Code of the input is other than LA, LK, SA, or SK.

(b) PROCESSING/RESEARCH REQUIRED:

Determine the correct entry by reference to the source document (SAD-2). If Action Code is not annotated on the document, obtain correct Action Code from the warehouseman who initialed the SAD-2 document.

(3) LOT-CONT-IND ERROR, VRC D6.

(a) REASON FOR VIOLATION/ERROR CONDITIONS:

Lot/Contract Indicator in the input is other than C, L, R, or blank.

(b) PROCESSING/RESEARCH REQUIRED:

Determine the correct entry by reference to the source document (SAD-2 or other). If the correct entry cannot be determined from the source document, obtain the correct indicator from appropriate personnel in Receiving Division.

(4) TP NUMBER ERROR, VRC D9.

(a) REASON FOR VIOLATION/ERROR CONDITION:

TP Control Number entered in the input was other than numeric or was numeric less than 10, in which case the number cannot be correct. If the entry is all numeric greater than nine, the error is caused by a transposition of digits or entry of an erroneous digit which causes the validation computation to produce a check digit which does not equal the check digit entered in the input.

(b) PROCESSING/RESEARCH REQUIRED:

Determine the correct TP Control Number by reference to the coding sheet, SAD-2, Storage Action Input, or other source document from which the input was prepared. If the correct number cannot be determined by reference to available documentation, process a Type N inquiry to the Suspended Receipt File by NIIN in the format of appendix B-44 and IAW appendix E-165 P. The inquiry response will provide the correct TP Control Number for reentry.

(5) TYP-STOR-CD ERROR, VRC HG.

(a) REASON FOR VIOLATION/ERROR CONDITION:

Type of Storage entry is other than alpha/numeric/alpha and Action C is LA, LK or multiple location (second and/or third) have been annotated on Stow Notice without related Type Storage Code entries.

(b) PROCESSING/RESEARCH REQUIRED:

Determine the correct Type of Storage Code, or codes if multi locations are entered from the source document (SAD-2 or other). If correct code(s) cannot be determined from the source document, identify appropriate Type of Storage Code by direct inspection of the location ente in the input.

(6) DATE-PACK-CD ERROR, VRC HH.

(a) REASON FOR VIOLATION/ERROR CONDITION:

The Date of Pack/Expiration entered in the input is other than blan numeric, or the entry is numeric other than all zeros and the first positions are not greater than zero and less than 13 and the last two posit (year) are not equal to or greater than current year, or expiration date is entered for shelf-life item. Date of Pack/Expiration may not be blank if is designated as Shelf-Life in Location.

(b) PROCESSING/RESEARCH REQUIRED:

Determine the correct date by reference to the source document (S or other). If the correct entry cannot be determined from the source docum obtain the correct element from the appropriate personnel in Receiving Divi or inspection of the materiel in location.

(7) UNIT PACK-CD ERROR, VRC HU.

(a) REASON FOR VIOLATION/ERROR CONDITION:

The Unit Pack entry in the input is other than numeric or blank.

(b) PROCESSING/RESEARCH REQUIRED:

Determine the correct entry by reference to the source document (or other). If the correct Unit Pack cannot be determined from the s document, the correct entry will be detemined by inspection of materi location.

(8) TYP LOC ERROR, VRC HV.

(a) REASON FOR VIOLATION/ERROR CONDITION:

Type Location Code entry is other than blank, alpha A or K.

(b) PROCESSING/RESEARCH REQUIRED:

Determine the correct entry by reference to the source document (SAD-2 or other). If correct entry cannot be determined from the source document, obtain the correct code from personnel in the appropriate area control branch office of the Warehouse Division.

(9) INSP-DATE ERROR, VRC HW.

(a) REASON FOR VIOLATION/ERROR CONDITION:

Action Code is LA or LK and the Inspection Date entry is other than blank or numeric, or there is a numeric entry other than all zeros and the first two positions are not greater than zero or are more than 13.

(b) PROCESSING/RESEARCH REQUIRED:

Determine the correct entry by reference to the source document (SAD-2 or other). If the correct entry cannot be determined from the source document, contact inspection personnel in Receiving Division to obtain the correct date for reentry. It should be noted that this corresponding element in the appendix B-71, Item Locator Subrecord Addition, must be numeric or zero filled. However, this element may be left blank in the Receipt Stow Notice and the computer will automatically zero fill this field when the locator add is prepared.

b. Process Violations (error messages on remote input are shown in parenthesis).

(1) ERROR MESSAGE - INVALID STOW ACTION, VRC K9 (Invalid Format).

(a) REASON FOR VIOLATION/ERROR CONDITION:

Receipt Stow Notice is short form (to clear the receipt suspense record and identify location as bin or bulk action for count to MIS record), but should have been long form (to add a new location). This condition will occur when no location was available on the response to the Type A inquiry, or the Condition Code on the Receipt Confirmation Card from Receiving Division was J, K, or L.

(b) PROCESSING/RESEARCH REQUIRED:

Determine if the complete Stow Notice input was processed properly by referring to the source document (SAD-2). If the Receipt Stow Notice appears to be correct, request Receiving Division review to determine if the Condition Code on the Receipt Control Document, RCD-1 was correct.

(2) ERROR MESSAGE - STOW ACTION INVALID NO MATCH, VRC SX (No Match).

(a) REASON FOR VIOLATION ERROR/CONDITION:

TP Control Number of input does not match a TP Control Number in the Suspended Receipt File.

(b) PROCESSING/RESEARCH REQUIRED:

Determine if the correct TP Control Number was entered by referring to the source document (SAD-2 or other). If number in the input appears to be correct, notify Receiving Division that Receipt Stow Notice was rejected and request that a Completed Receipt File Inquiry be processed to determine if the receipt record was cleared properly; also, request a check to determine if the record was deleted. If the record was deleted, determine the correct TP Control Number and other data that may have been changed. If NIIN and/or Condition Code have changed, obtain the new SAD-2 and assure that the materiel was properly stowed and labeled. If the Receipt Stow Notice is long form to add a new location, process a Type B Locator Inquiry to determine if the location is recorded on the Stock Locator File.

5. REENTRY INSTRUCTIONS

When the correct input data has been determined, the corrections may be annotated on the source document, if necessary. If the original input was processed in card form (appendix B-144), the reentry input should be processed over the remote terminal (appendix B-46) to assure immediate processing and avoid further delays.

APPENDIX E-111 P

ON-LINE UPDATE OF BIN/BULK AND LOCATION DATA BY AREA CONTROL BRANCH

1. PURPOSE

a. This procedure describes the actions required by the individual depots to change the Bin/Bulk Indicator entry in a Materiel Release Order (MRO) In-Process File record.

b. This can be accomplished on-line by the MRO processing personnel during normal processing of MRO data.

c. This capability, however, is only available at the Defense Depots where the automated Special Purpose Data (SPD) counts program is implemented.

2. REFERENCES

Appendix D-214.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Warehousing Division, DS/T.

4. PROCEDURES/INSTRUCTIONS FOR AREA CONTROL BRANCH PROCESS

a. General

On occasion, circumstances require the ability to change some of the entries in the MRO In-Process File, so a program has been developed to satisfy the need. The circumstances are related to the automated Special Purpose Data (SPD) counts, so are limited to activity within the Bin/Bulk area, temporarily.

b. Source of Information

(1) The MRO is the primary source of information for accomplishing the function of the Area Control Branch process. Much of this information is printed on the MRO (DD Form 1348-1) by the computer. Additional information is annotated on the MRO by the picker and the packer.

(2) The Area Control Branch personnel must determine whether an update of the MRO In-Process File is required before shipment is made, and this decision is based on annotations made by the picker and the packer.

(a) If an MRO is dropped that will involve a "loose issue", the portion of the MRO that is filled in the Bin area will be stamped or marked, so as to make it obvious that it was picked in the Bin area.

(b) If an MRO for a Bin item is selected and/or packed in the Bulk area, the Inprocess File must be updated accordingly (see paragraph 4b(3)(c), below).

(c) If, however, the item is a Bulk item, the portion picked in the Bin area must be clearly identified, and the In-Process File updated accordingly (see paragraph 4b(3)(c), below).

(d) If an MRO for a Bulk item that is filled in the Bulk area, BUT is moved to the Bin area for packing and shipment, then the In-Process File must be updated accordingly (see paragraph 4b(3)(c), below).

(3) To update the In-Process File, first you initiate the terminal (CRT) for Area Control Branch processing.

(a) Enter the following program call via the CRT: $$UWFB70. If entered correctly, this will bring up the BIN/BULK AND LOCATION UPDATE format as shown below.

UWFB70 BIN/BULK AND LOCATION UPDATE

FUNCTION	APPLICATION DESCRIPTION
L	UPDATE BY LINE ITEM
S	UPDATE BY SHIPMENT UNIT
PF1	UPDATE BY LINE ITEM
PF2	UPDATE BY SHIPMENT UNIT

ENTER FUNCTION

(b) After deciding whether the entry should be accomplished by Line Item or by Shipment Unit, key in either L or S, as appropriate. That will bring up one of two screens.

(c) The screen below is used to enter line by line. ERROR MESSAGES are also displayed. For a full list of these ERROR MESSAGES, see paragraph 5.

UWFB70 BIN/BULK AND LOCATION UPDATE

LI-NUMBER	CK-DG	OPT-CD	WHSE-LOC	PACK-LOC	MESSAGES
1700019000100	8	1			REJECTED - REASON 1
1700019000100	0	1			
1700174000100	4	1			REJECTED - REASON 2
1700175000100	2	2			
1700178000100	7	2	J12345678912		
1700177000100	9	2			
1700179000100	5	3			REJECTED - REASON 3
1700180000100	9	3			
1700182000100	5	4	JK1234567		
1700183000100	3	4			REJECTED - REASON 4
1700101000100	9	5			
1700098000100	5	6			
1700102000100	7	R			
1700181000100	7	7			
1700185000100	7	8			

(d) The cursor will automatically appear at the first position of the LI-NUMBER field. Enter the L/I Number and the Check Digit as they appear on the MRO (DD Form 1348-1). You will note when the L/I Number has been entered, the cursor moves automatically to the first position of the next entry field, and it will continue to do so through the rest of the screen format.

(e) Following is a list of valid option codes used in $$UWFB70:
1 - Bulk item changed to Bin; selected and packed in Bin area.
2 - Bin item changed to Bulk; selected and packed in Bulk area.
3 - Bulk item; picked in Bulk, but packed in Bin area.
4 - Bulk item; loose issue, picked and packed in Bin area.
5 - Bin item; picked in Bin area and packed in Bulk area.
6 - Bulk item changed to Bin; picked in Bin and packed in Bulk area.
7 - Bin item changed to Bulk; picked in Bulk and packed in Bin area.
8 - Bulk item; loose issue, picked in Bin and packed in Bulk area.
BLANK - Location update ONLY.
R - Reversal action.

```
UWFB70                BIN/BULK AND LOCATION UPDATE

SU-00000000000      CK-DG 0  OPT-CD   PACK-LOC       WHSE-LOC
```

****

(f) The program allows you to enter all, or any portion of, a Shipment Unit (S/U). The screen above shows the basic data elements needed for the program. When these data elements of a S/U are input, the program will review the file and provide all the L/I Number data automatically, as shown below.

```
UWFB70                BIN/BULK AND LOCATION UPDATE

SU-33015620000      CK-DG 5  OPT-CD R  PACK-LOC 123  WHSE-LOC 123456789 123
```

LI-NUMBER	SEL	BBI	PACK-LOC	WHSE-LOC	MESSAGES
33015620001	X	E	T91	T170111AA	
33015620002	X	E	T90	T053620CB	
33015620003	X	E	T90	T050344CC	
33015620004	X	E	T90	T040420EB	
33015620005	X	E	T92	T132908BB	
33015620006	X	E	T90	T050646CA	
33015620007	X	E	T92	T159701AA	
33015620008		2	T96	T331306BA	
33015620009	X	E	T92	T154236CA	
33015620010	X	E	T94	T21111111	
33015620011	X	E	T94	T223872AC	
33015620012	X	E	T96	T254369AD	
33015620013	X	E	T98	T54327812345	
33015620014	X	E	T98	T54327812346	
33015620015	X	E	T98	T54327812347	

(g) By entering an X in the SEL column following a L/I Number, that line will be automatically updated with the appropriate Check Digit, Packing Location, and Warehouse Location (as shown in the screen above) and entered in the record, saving the time and effort involved in the manual entry of each line.

(h) The automated entry program will pick up at the first line in a SU in which it finds an X in the SEL column and all subsequent identical lines with an X in the SEL column will be entered as well. This grouping and automated entry of identical line can be done several times within one SU.

(i) Only those lines without an X in the SEL column will require manual and individual entry via the screen in paragraph 4b(3)(d) above. This automation of entry by S/U should reduce manual entries and associated errors to a minimum and save time as well.

5. ERROR MESSAGES/ACTION

Error messages will be displayed to the right of the invalid entry (per paragraph 4b(3)a, above). When processing multiple inputs, the program will accept valid entries and then only display erroneous entries with their associated error messages. The operator need only to overlay the invalid data and reenter it. When research is required, using $$UWFQ45, enter an L to inquire the LI-FILE.

ERROR MESSAGE	CAUSE/ACTION
LI RECORD NOT FOUND	Probable Cause: Transposed transaction number. Action: Enter the Line Item (L/I) from the MRO (DD Form 1348-1).
INVALID CHECK DIGIT	Probable Cause: Erroneous entry. Action: Enter the Check Digit as it appears on the MRO (DD Form 1348-1).
INVALID OPTION CODE	Probable Cause: Erroneous entry or operator tried to change to what it already is. Action: Check to see if entry is a valid Option Code and/or use $$UWFQ45 to query item. See paragraph 6b for valid Indicator codes.
REJECTED UPDATE - REASON 1	Probable Cause: Option Code 1 was input, and the code of record did not indicate Bulk. Action: Research, using $$UWFQ45, to see what Bin/Bulk Indicator is of record for the item. A reversal action may be necessary, or possibly no action at all may be required.

ERROR MESSAGE	CAUSE/ACTION
REJECTED UPDATE - REASON 2	Probable Cause: Option Code 2 was input, and the code of record did not indicate Bin. Action: Research, using $$UWFQ45, to see what Bin/Bulk Indicator is of record for the item. A reversal action may be necessary, or possibly no action at all may be required.
REJECTED UPDATE - REASON 3	Probable Cause: Option Code 3 was input, and the code of record did not indicate Bulk. Action: Research, using $$UWFQ45, to see what Bin/Bulk Indicator is of record for the item. A reversal action may be necessary, or possibly no action at all may be required.
REJECTED UPDATE - REASON 4	Probable Cause: Option Code 4 was input, and the code of record did not indicate Bulk. Action: Research, using $$UWFQ45, to see what Bin/Bulk Indicator is of record for the item. A reversal action may be necessary, or possibly no action at all may be required.
REJECTED UPDATE - REASON 5	Probable Cause: Option Code 5 was input, and the code of record did not indicate Bin. Action: Research, using $$UWFQ45, to see what Bin/Bulk Indicator is of record for the item. A reversal action may be necessary, or possibly no action at all may be required.
REJECTED UPDATE - REASON 6	Probable Cause: Option Code 6 was input, and the code of record did not indicate Bulk. Action: Research, using $$UWFQ45, to see what Bin/Bulk Indicator is of record for the item. A reversal action may be necessary or possibly no action at all may be required.
REJECTED UPDATE - REASON 7	Probable Cause: Option Code 7 was input, and the code of record did not indicate Bin. Action: Research using $$UWFQ45, to see what Bin/Bulk Indicator is of record for the item. A reversal action may be necessary, or possibly no action at all may be required.

ERROR MESSAGE	CAUSE/ACTION
REJECTED UPDATE - REASON 8	Probable Cause: Option Code 8 was input, and the code of record did not indicate Bulk. Action: Research using $$UWFQ45 to see what Bin/Bulk Indicator is of record for the item. A reversal action may be necessary, or possibly no action at all may be required.
NOT VALID FOR LOCATION UPDATE	Probable Cause: 1. Tried to make a location change using Option Code 4. 2. Tried to make a location change using Option Code 5. 3. Tried to make a location change using Option Code 8. 4. Tried to make a location change when a previous Option Code 4, 5 or 8 had been processed against the record. Action: A reversal action may be necessary, or possibly no action at all may be required.

6. INTERIM BIN/BULK INDICATOR CODES

a. Because this program provides the ability to change the Bin/Bulk Indicator in the MRO In-Process File, it has been necessary to develop some interim codes that indicate what the item's code had been before it was changed. Then when the Line Item is shipped, and the transaction is moved out of the In-Process File to the History File, the Bin/Bulk Indicator is converted back to the original code of record. This has to be done in order to keep SPD counts in consonance with the F-9 counts.

b. These interim codes are as follows:

(1) 1 - Bin item packed in Bin area.

(2) 2 - Bulk item packed in Bulk area.

(3) A - Bulk item changed to a Bin item, packed in Bin area.

(4) B - Bin item changed to a Bulk item, packed in Bulk area.

(5) C - Bin item packed in Bulk.

(6) D - Bulk item changed to Bin item, packed in Bulk area.

(7) E - Bin item changed to Bulk item, packed in Bin area.

(8) L - Bulk item, loose issue, picked and packed in Bin.

(9) M - Bulk item, loose issue, picked in Bin, packed in Bulk area.

(10) P - Bulk item, picked in Bulk and packed in Bin area.

APPENDIX E-112 P

FSC CHANGE CARD

1. FORM USED

Appendix B-112 and Appendix D-42, FSC Change Card.

2. REASON/CRITERIA FOR PREPARATION

This card is used to change the FSC in the Locator File to the new FSC entered in the form. In the event that an incorrect FSC is added to the Locator record, this card provides the capability of correcting the FSC.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

The MOWASP Data Control Branch is responsible for submission of the FSC Change Card.

4. PROCEDURES/INSTRUCTIONS FOR PREPARATION OF LOCAL CODING SHEET FOR FSC CHANGE

a. When an incorrect FSC is detected, an FSC Change Card will be prepared in the following format on local coding sheet:

FIELD POSITION(S)	INSTRUCTIONS
1-3	Enter DIC ZUT.
8-20	Enter new NSN.

b. Signature Requirements.

The signature block will be completed by the originator, and the date of preparation will be placed in the date block.

c. Distribution of Form.

The FSC Change Card (Local Coding Sheet) will be processed through keypunch facilities and forwarded to ODS.

5. DISPOSITION OF FORM

The FSC Change Card (Local Coding Sheet) will be retained by the MOWASP Data Control Branch for a period of 24 hours after processing action to Data Systems for resolving violation and followup.

APPENDIX E-112 V

FSC CHANGE CARD VIOLATIONS

1. INPUT DOCUMENT

Appendix B-112, FSC Change Card, DIC ZUT.

2. INPUT TO PROCEDURE DECISION CHART

Appendix D-42

3. PURPOSE, CONTENTS AND RESPONSIBILITIES

This appendix provides instructions for the research, correction and reentry of FSC Change Card which have been violated from computer processing. MOWASP Data Control Branch is responsible for the correction of errors and reentry of the card as required. Reasons for computer rejection are as follows:

VIOLATION REASON CODE	DEFINITION
AY	NIIN/FSC invalid.
LP	Unmatched NIIN.

4. PROCESSING/RESEARCH INSTRUCTIONS

a. VIOLATION REASON CODE AY.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Violation Reason Code AY indicates that data in pos. 8-20 of the input document was other than an authorized NSN.

(2) PROCESSING/RESEARCH REQUIRED:

Review the suspense file of FSC Changes forms for a possible keypunch error. If keypunching was correct, refer to source document (Incomplete Locator Item Data, F-34).

b. VIOLATION REASON CODE LP.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Violation Reason Code LP indicates that the NIIN in the input did not match the NIIN in the Locator File.

(2) PROCESSING/RESEARCH REQUIRED:

Review the suspense file of FSC Changes forms for a possible keypunch error. If keypunching was correct, refer to source document (Incomplete Locator Item Data, F-34).

5. REENTRY INSTRUCTIONS

a. When the correct data has been determined, annotate the correction directly below the erroneous data field on the Violation Printout (F-85) using a ballpoint pen to print legible characters.

b. Keypunch a new FSC Change Card using corrected data and forward to ODS for reentry into the applicable process.

APPENDIX E-113 V

AC6/AC7/AK6, ACJ/AKJ, AF6 AND AFJ REJECTS

1. INPUT DOCUMENTS

a. Appendix B-17, Cancellation Card AC6/AC7/AK6.

b. Appendix B-60, MRO Followup Card AF6.

c. Appendix B-227, DRO Followup/Cancellation/Followup on Cancellation Card.

2. INPUT TO PROCEDURE DECISION CHART

Appendix B-17 to appendix D-43. Appendix B-60 to appendix D-44. Appendix B-227 to appendices D-43 and D-44.

3. PURPOSE, CONTENTS AND RESPONSIBILITIES

To provide instructions for the correction and reentry of cancellation and MRO/DRO Followup Cards rejected during entry processing. Shipping Documentation Branch will receive F-85 report containing AC6/AC7/AK6, ACJ/AKJ, AF6 and AFJ violations with Violation Reason Code AB, Invalid Routing Identifier Code - From, and Violation Reason Code 3V - Cancellation for Commissary Support MRO. Reasons for rejection are as follows:

VIOLATION REASON CODE	DEFINITION
AB	Routing Identifier (From) invalid.
AS	Quantity invalid or blank.

4. PROCESSING/RESEARCH INSTRUCTIONS

a. VIOLATION REASON CODE AB.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Violation Reason Code AB indicates a document has been received with an invalid "From" Routing Identifier in pos. 67-69. (This violation is not suspended in the Cumulative Register.)

(2) PROCESSING/RESEARCH REQUIRED:

(a) Attempt to identify the DSC/ICP that submitted the document through interrogation of the MRO History File.

1. Prepare MRO Register/History Inquiry Card, appendix B-115, as outlined in appendix E-115 P, DIC ZCT.

2. Forward Inquiry Card to Data Processing via keypunch services or by use of remote entry devices, for mechanical processing.

3. Receive F-67, MRO Inquiry Answer.

(b) Review F-67 and determine correct "From" Routing Identifier.

1. Prepare and input a corrected AF6 card, appendix B-60, if reject was an MRO followup or AFJ card, appendix B-227 if reject was a DRO followup.

2. Prepare and input a corrected AC6/AC7/AK6 card, appendix B-17, if reject was an MRO cancellation/cancellation followup or ACJ/AKJ card, appendix B-227, if reject was a DRO cancellation/cancellation followup.

(c) When F-67 is received printed "No Record", review appendix A-67 to determine which center has the management responsibility for the Federal Supply Class (FSC). Correct RIC "From" and enter card to computer.

(d) When FSC is not shown in appendix A-67, prepare Item Locator Inquiry Card, appendix B-79, as outlined in appendix E-079 P, using Action Code FE, pos. 79-80.

(e) Forward ZBJ card to Data Systems to obtain printout of F-37, Locator Record Reply.

(f) Receive F-37 Report, determine Commodity Manager Code, correct RIC and forward card to Data Systems. Commodity Managers are shown in appendix A-44.

NOTE: Commissary Support Brand Name and Local Purchase Items cannot be canceled in the normal sense. The F-85 report with VRC 3V will be routed to the TO for acquisition of disposition of assets information from DPSC.

b. VIOLATION REASON CODE AS.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Violation Reason Code AS indicates that a document has been received with invalid "Quantity" in pos. 25-29.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Prepare MRO Register/History Inquiry Card, appendix B-115, DIC ZCT.

(b) Forward Inquiry Card to ODS for processing.

(c) Receive F-67 report, MRO Inquiry Card Answer.

(d) Review F-67 report and determine correct "Quantity".

(e) Prepare and input a corrected card.

1. Prepare AF6, appendix B-60 if reject was an MRO followup.

2. Prepare AC6, appendix B-17 if reject was an MRO cancellation.

3. Prepare AFJ, appendix B-227 if reject was a DRO followup.

4. Prepare ACJ, appendix B-227 if reject was a DRO cancellation.

APPENDIX E-114 P

MANAGEMENT DATA REPORT, RCS DLA(M)26(C)MIN

1. FORMS/REPORTS USED

a. Appendix A-83, Management Information System Element Number.

b. Appendix B-95, Management Information System Report Card.

c. Appendix B-135, Management Information System Card.

d. Appendix D-80, Procedure Decision Chart - Management Information System Card.

e. Appendix D-102, Management Information System Report Card.

f. Appendix E-135 P, Procedures for Processing MIS Data Change Card, ZUM, B-135.

g. Appendix E-135 V, Procedures for MIS Data Change Card Violations, ZUM, B-135.

h. Appendix F-9, Management Information System (MIS) Feeder Data.

i. Appendix F-63, Feeder Storage Space Report.

j. Appendix F-99, Management Information System (MIS) Change Card Listing.

k. Appendix F-128, Transportation Management Analysis by Mode of Shipment.

l. Data Systems MOWASP Input-Output Officer's Report.

2. REASON/CRITERIA FOR PREPARATION

Subject report is prescribed by HQ DLA in DLAH 7730.2, Management Information System Glossary.

3. RESPONSIBLE ORGANIZATIONAL ELEMENTS

a. The Office of Data Systems provides the appendix F-9 as an output of the process depicted in appendix D-102.

b. Management Support Office, Directorate of Storage and Transportation, accomplished management review of the data for operational planning.

c. Performance Analysis and Reports Division, Office of Comptroller, maintains central repository for central clearance of all materiel released outside the command.

4. PROCEDURES/INSTRUCTIONS FOR PREPARATION OF REPORT

a. Data elements to be reported are established in the DLAH 7730.2, Management Information System Glossary. Element numbers for which data is extracted at HQ DLA from the RCS DLA(M)232(O)MIN are not listed. Data elements marked with an asterisk (*) indicates the element must continue to be transmitted by electrical means even though minimize is imposed.

b. Sources of Information.

(1) Appendix F-9, Part 2.

(2) Appendix F-63, F-128, F-154, F-146.

(3) MOWASP I/O Officer's Report.

(4) Manual Procedure Counts.

c. Preparations of Report.

(1) Management Support Office personnel assigned responsibility for the preparation of MIS reports will extract data from indicated sources on following pages.

(2) Detailed instructions on the mechanics of preparing and submitting the RCS DLA(M)26(C)MIN in MIS Card Format are provided in the DLAH 7730.2, Management Information System Glossary.

d. Processing Adjustments to Appendix F-9 Reports.

(1) Maintaining the accuracy of the F-9 Feeder Data for mechanically accumulated data elements will sometimes require increase or decrease adjustments in the daily and cumulative F-9 counts. Such adjustments will be processed in accordance with appendix E-135 P, in card format as shown in appendix B-135.

(2) Output of increase/decrease adjustments will be reflected in the MIS Change Card Listing, appendix F-99.

e. Signature/Approval Authority.

Approval is subject to local MIS supervisory control. Adequate reports control procedures will be established to ensure that MIS cards are keypunched and transceived.

f. Distribution of Report.

The computer prepared F-9 will be distributed as follows:

(1) The original and one copy to the Performance Analysis and Reports Division, Office of Comptroller.

(2) Two copies to the Management Support Office.

(3) Two copies to the Workload Control Branch, Operations Control Office, Directorate of Storage and Transportation.

(4) MIS Cards are transceived to HQ DLA and filed by the Office of Data Systems.

(5) MOWASP Reports and other source documents are filed by the Office of the Comptroller.

5. DISPOSITION OF REPORT AFTER FINAL ACTION

a. Daily/weekly F-9 listings will be retained three months and then destroyed.

b. Monthly listings (final reports) for a report period to HQ DLA as controlled by the Comptroller will be filed by the:

(1) Office of Comptroller - three years.

(2) Directorate of Storage and Transportation - one year.

c. MIS Card files are to be retained three months by the Office of Data Systems and then destroyed.

d. Supporting MOWASP and other source documents will be retained for three months as a minimum.

PROGRAM	RCS 26 NO.	TITLE	DEFINITION	SOURCE
300	115	Line Items Researched D	Number of line items (MROs) on which research was conducted by Denial Research Personnel (DRP) and to initial denial during the issue function, whether subsequently filled, partially filled or denied.	See 4b(4)
300	*94A3	Line Items Received for Stock from Set Disassembly (Memo) D1, D2, D4	Number of medical line items dissassembled from sets for placement into stock.	See 4b(4)

PROGRAM	RCS 26 NO.	TITLE	DEFINITION	SOURCE
300	127B	Solid Rail Cars Received D1, D3, D4	Number of rail cars received DRP containing one line item of materiel, regardless of quantity.	See 4b(4)
300	127C	Mixed Rail Cars Received D2, D3, D4	Number of rail cars received DRP containing two or more line items of materiel, regardless of quantity.	See 4b(4)
300	*132	Line Items in Store - DLA Depots - DLA Materiel (includes IPE) D	Number of line items of DLA-owned materiel in store (different National Stock Numbers) at end of the report period.	F-63, TOTAL DLA MANAGERS
300	*132A	Line Items in Store, IPE only (MEMO) D1, D4	Number of line items of IPE in store (different NSNs) ERP.	F-63
300	*133	Line Items in Store - DLA Depots - Non-DLA Materiel D	Number of line items of non-DLA-owned materiel in store at end of the report period.	F-63, TOTAL NON-DLA COMMODITY MANAGERS
300	134E	Parcel Post Packages Shipped D	Number of parcel post packages shipped during report period.	See 4b(4) and I/O Officer's Report Analysis of SUUP EXIT DATA
300	134H	Rail Cars Shipped D	Number of rail cars (solid and/or mixed) shipped DRP containing one or more line items of materiel, regardless of quantity.	See 4b(4)
300	148A	Stock Location Surveys (includes IPE) D	Total number of DLA and Non-DLA stock locations for which a location survey was accomplished by DLA-operated storage or distribution depots DRP.	F-9 Report, PT.2

PROGRAM	RCS 26 NO.	TITLE	DEFINITION	SOURCE
300	148A1	Stock Location Surveys, IPE Only (Memo) D1, D4	Total number of IPE stock locations for which a location survey was accomplished DRP.	F-154 Report
300	148A2	Stock Location Survey Errors (Includes IPE), Number D	Total number of stock location survey errors found DRP.	F-154 Report
300	151M	Line Items Inspected other than New Procurement (Includes IPE) D	Number of DLA and non-DLA line items received and inspected or classified other than "Inspection and Acceptance at Destination" actions.	See 4b(4)
300	151N	Unit and Set Assembly D	Number of line items assembled and/or disassembled into units or sets DRP, DLA and non-DLA materiel.	See 4b(4)
300	153A	IPE Repaired/Overhauled, End Items D1, D4	Number of end items of IPE repaired/overhauled DRP. Includes direct and reimbursable.	See 4b(4)
300	153C	IPE Inspected/Tested, End Items D1, D4	Number of end items of equipment analytically inspected/operationally tested during report period.	See 4b(4)
300	155M	IPE Items Received D1, D4	Number of items of IPE received for storage during report period.	See 4b(4)
300	155M1	IPE Skid Components Received (Line Items) D4	Line Items of IPE skid components received for storage during report period.	See 4b(4)

best copy available

PROGRAM	RCS 26 NO.	TITLE	DEFINITION	SOURCE
300	*155M2	IPE Items Returned to Storage from Maintenance Processing D1, D4	Number of items of IPE received in storage area DRP that were initially processed from storage to maintenance area for maintenance processing. Excluded are IPE items reported as receipts under D/E 155M.	See 4b(4)
300	155P1	DODIER in Storage, Number D1, D4	Number of general reserve DODIER items of IPE in storage ERP.	See 4b(4)
300	155P2	MHA in Storage, Number D1, D4	Number of Military Hold Account (MHA) items of IPE in storage ERP.	See 4b(4)
300	155P4	Plant Equipment Package (PEP) Items in Storage, DIPEC Number D1, D4	Number (PEP) package items of IPE (DIPEC, reportable DLAM 4215.1) in storage ERP.	See 4b(4)
300	155P5	PEP Items in Storage, Non-DIPEC, Number D1, D4	Number of PEP Package Items (Non-DIPEC, reportable, in storage ERP. (When items are boxed, each box will count as one item.)	See 4b(4)
300	155P6	DLAIER Items in Storage, Number D1, D2, D3, D4	Number of DLAIER package items in storage ERP. (Each component (ICN) will be counted as one item.)	See 4b(4)
500	155S	IPE Disposal Accomplished D1, D4	Number of items of IPE transferred from DIPEC accountability to PDO through issuance and transfer of accountability on DD Form 1149 or 1348 DRP.	See 4b(4)

PROGRAM	RCS 26 NO.	TITLE	DEFINITION	SOURCE
300	156D1	IPE Items Shipped, Total D1, D4	Number of items of IPE that were shipped DRP. (When PEP items are shipped in boxes, each box will count as one item; DLAIER packages (tool set) will count as one item.)	See 4b(4)
300	156D2	IPE Skid Components Shipped (Line Items) D4	Line items of IPE skid components that were shipped DRP.	See 4b(4)
300	156D3	IPE Items Withdrawn from Storage for Maintenance Processing D1, D4	Number of items of IPE withdrawn from storage and moved to maintenance area for test/inspect/ repair/overhaul DRP.	See 4b(4)
300	157	IPE Items Maintenance Completed On Time, Percent D1, D4	Percent of Customer Support items having maintenance completed and released to transportation for shipment on time DRP.	See 4b(4)
300	203E	Traffic Services - Freight B/L Processed - Inbound D	Number of inbound bills of lading processed during report period. Includes commercial bills and private carriage. Each continuation sheet should not be counted as as additional bill of lading.	See 4b(4)
300	*203E2	Traffic Services, Freight B/L Processed, Inbound with Discrepancies (Memo of 203E) D	Number of inbound B/L processed DRP, with discrepanceies, including commercial bills and private carriage. Each continuation sheet should not be counted as an additional B/L.	See 4b(4)

PROGRAM	RCS 26 NO.	TITLE	DEFINITION	SOURCE
300	*203F	Traffic Services - Freight B/L Processed Outbound D	Number of outbound bills of lading processed during report period. Includes commercial bills and private carriage. Each continuation sheet should not be counted as an additional bill of lading.	F-9 PT.2
300	203H	Traffic Services - Freight Movements D	Number of release requests processed during report period.	See 4b(4)
300	203I	Traffic Services - TCMDs Processed D	Number of transportation control and movement documents (TCMDs) processed during report period.	F-9 Part 2
300	236V	Line Items Received for Stock Exclusive of Parcel Post - DLA Materiel D	Number of document line items received for stock during period, exclusive of those received via parcel post - DLA materiel.	See 4b(4)
300	236V1	Short Tons Received for Stock, Exclusive of Parcel Post - DLA Materiel D	Number of short tons received for stock during report period, exclusive of those received via parcel post - DLA materiel.	See 4b(4)
300	236W	Line Items Received for Stock Exclusive of Parcel Post - Non-DLA Materiel D	Number of document line items received for stock during report period, exclusive of those received via parcel post - non-DLA materiel.	See 4b(4)
300	236W1	Short Tons Received for Stock Exclusive of Parcel Post - Non-DLA Materiel D	Number of short tons received for stock during report period, exclusive of those received via parcel post - non-DLA materiel.	See 4b(4)

PROGRAM	RCS 26 NO.	TITLE	DEFINITION	SOURCE
300	236X4	Line Items Shipped by Freight D	Number of line items on DLA and Non-DLA release orders or other authorized shipping orders, e.g., DD Form 1149, released to carrier, port or consignee, exclusive of parcel post shipments, United Parcel Service Shipments, and DROs.	F-9, Part 2
300	236X5	Short Tons Shipped by Freight D	Number of short tons of DLA and Non-DLA materiel released to carrier, port or consignee DRP, exclusive of parcel post, United Parcel Service Shipment, and DROs.	F-128
300	236X7	MRO Line Items Shipped by United Parcel Service (UPS) D	Number of MRO line items shipped by surface United Parcel Service and Blue Label Air United Parcel Service (mode of shipment code 5).	F-9, Part 2
300	237A4	Maintenance, Items Completed at Depot, DCSC Materiel D3, D4	Number of items of DCSC materiel on which repair was completed during the reporting period.	See 4b(4)
300	237B4	Maintenance, Items Completed at Depot, DGSC Materiel D3, D4	Number of items of DGSC materiel on which repair was completed during the reporting period.	See 4b(4)
300	237C4	Maintenance, Items Completed at Depot, DPSC, Clothing and Textile Materiel (Except Army Clothing) D1, D3	Number of items of DPSC-C&T materiel on which repair was completed during the reporting period.	See 4b(4)
300	237H1	Maintenance, Items scheduled for Completion - Next Month, DCSC Materiel D3, D4	Number of DCSC items scheduled for completion of repair in the succeeding month ERP.	See 4b(4)

PROGRAM	RCS 26 NO.	TITLE	DEFINITION	SOURCE
300	237H2	Maintenance, Items Scheduled for Completion - Next Month, DGSC Materiel D3, D4	Number of DGSC items scheduled for completion of repair in the succeeding month ERP.	See 4b(4)
300	237H3	Maintenance, Items Scheduled of Completion - Next Month, DPSC Clothing & Textile Materiel (Exclude Used Clothing) D3	Number of DPSC-C&T items scheduled for completion of repair in the succeeding month ERP.	See 4b(4)
300	237H5	Maintenance, Items Scheduled for Completion - Second Month, DCSC Materiel D3, D4	Number of DCSC items scheduled for completion of repair in the second month ERP.	See 4b(4)
300	237H6	Maintenance, Items Scheduled for Completion - Second Month, DGSC Materiel D3, D4	Number of DGSC items scheduled for completion of repair in the second month ERP.	See 4b(4)
300	237H7	Maintenance, Items Scheduled for Completion - Second Month, DPSC Clothing and Textile Materiel (Exclude Used Clothing) D3	Number of DPSC-C&T items scheduled for completion of repair in the second month ERP.	See 4b(4)
300	237I1	Maintenance, Items Scheduled for Completion - Third Month and Beyond, DCSC Materiel D3, D4	Number of DCSC items scheduled for completion of repair in the third month and beyond ERP.	See 4b(4)

PROGRAM	RCS 26 NO.	TITLE	DEFINITION	SOURCE
300	237I2	Maintenance, Items Scheduled for Completion - Third Month and Beyond, DGSC Materiel D3, D4	Number of DGSC items scheduled for completion of repair in the third month and beyond ERP.	See 4b(4)
300	237I3	Maintenance, Items Scheduled for Completion - Third Month and Beyond, DPSC Clothing & Textile Materiel (Exclude Used Clothing) D3	Number of DPSC-C&T items scheduled for completion of repair in the third month and beyond ERP.	See 4b(4)
300	237J	Percent of Mission Stock Items Completed on Time D3, D4	Percent of items completed on time DRP.	See 4b(4)
300	237J1	Maintenance, Manhours Required to Complete Repair - DCSC Material D3, D4	Estimated manhours required to complete repair for all DCSC materiel scheduled on open work orders ERP.	See 4b(4)
300	237J2	Maintenance, Manhours Required to Complete Repair - DGSC Material D3, D4	Estimated manhours required to complete repair for all DGSC materiel scheduled on open work orders ERP.	See 4b(4)
300	237J3	Maintenance, Manhours Required to Complete Repair - DPSC Clothing & Textile Material (Exclude Used Clothing) D3	Estimated manhours required to complete repair for all DPSC Clothing & Textile material scheduled on open work orders ERP.	See 4b(4)
300	237K6	Items Classified as Nonrepairable D3	Number of items of DPSC used clothing classified as nonrepairable DRP.	See 4b(4)

PROGRAM	RCS 26 NO.	TITLE	DEFINITION	SOURCE
300	440	MRO Line Items on Hand in Computer D	Number of MRO line items on hand ERP which are still being held in the computer bank. (Excludes DROs.)	F-9, Part 2
300	440A	Daily Average MRO Line Items on Hand in the computer D	Average number of MRO line items on hand in the computer each day DRP. (Excludes DROs.)	Manual accumulation of daily F-9 report count of data element 440 for the reporting month, divided by the number of calendar days in the month.
300	441	MRO Line Items on Hand in Storage, Processing D	Number of MRO line items on hand ERP which have been released for processing, but have not been offered to transportation. (Excludes DROs.)	F-9, Part 2
300	441A	Daily average MRO Line Items On Hand In Storage D	Average number of MRO line items on hand in storage DRP. (Excludes DROs.)	Manual accumulation of daily F-9 report count of data element 441 for the reporting month, divided by the number of calendar days in the month.
300	442	MRO Line Item on Hand Offered but not Shipped D	Number of MRO line items on hand ERP which have been offered to transportation but have not been released to a carrier. (Excludes (DROs.)	F-9, Part 2

PROGRAM	RCS 26 NO.	TITLE	DEFINITION	SOURCE
300	442A	Daily Average MRO Line Items Offered But Not Shipped D	Average number of MRO line items on hand which have been offered to transportation but have not been released to the carrier DRP. (Excludes DROs.)	Manual accumulation of daily F-9 report count of data element 442 for the reporting month, divided by the number of calendar days in the month.
300	442B	MRO Line Items forced closed D	Number of MRO (DIC A5_ except A5J) Lines closed by the depot, (Action Codes GX and GC Only) after research determined that no record exists of the shipping document (DD Form 1348-1) or any other record to verify action was taken to ship, deny, or cancel the MRO.	F-9, Part 2
300	474A	Line Items Received for Research D	Number of line items received DRP on which research is required due to initial denial during the issue function whether subsequently filled, partially filled, or denied.	See 4b(4)
300	474B	Backlog of Line Items Requiring Research D	That portion of line items which represents an excess beyond the capability of existing resources at EOP on which research is required due to initial denial during the issue function, whether subsequently filled, partially filled, or denied.	See 4b(4)

PROGRAM	RCS 26 NO.	TITLE	DEFINITION	SOURCE
300	474C	Manhours Required to accomplish Backlog in Denial Research D	Manhours required to accomplish the backlog of line items requiring research.	See 4b(4)
300	474D	Line Items On Hand EOP Requiring Research D	Number of line items on hand EOP on which research is required.	See 4b(4)
300	475A	Line Items Received for Unit and Set Assembly D	Number of line items received DRP which require assembly/dis-assembly into units or sets, DLA and non-DLA materiel.	See 4b(4)
300	475B	Backlog of Units/Sets Requiring Assembly/ Disassembly D	That portion of line items which represents an excess beyond the capability of existing resources at EOP which require assembly/dis-assembly into units, DLA and non-DLA materiel.	See 4b(4)
300	475C	Manhours Required to accomplish Backlog in Unit and Set Assembly D	Manhours required to accomplish the backlog of line items to be assembled/disassembled into units or sets, DLA and non-DLA materiel.	See 4b(4)
300	475D	Line Items On Hand EOP for Unit and Set Assembly D	Number of line items available for assembly/ disassembly into units or sets at EOP. DLA and non-DLA materiel.	See 4b(4)
300	476A	Locations Scheduled for Stock Location Surveys D	Number of DLA and non-DLA stock locations scheduled DRP for which a location survey was and/or will be accomp-lished by DLA-operated storage or distribution depots.	See 4b(4)

PROGRAM	RCS 26 NO.	TITLE	DEFINITION	SOURCE
300	476B	Backlog of Stock Location Surveys D	That portion of the scheduled DLA and non-DLA stock locations which were not accomplished and represent an excess beyond the capability of existing resources at EOP.	See 4b(4)
300	476C	Manhours Required to Accomplish Backlog of Stock Location Surveys D	Manhours required to accomplish the backlog of DLA and non-DLA stock locations requiring a location survey.	See 4b(4)
300	476D	Locations On Hand at EOP for Stock Location Surveys D	Number of scheduled DLA and non-DLA stock locations on hand EOP on which a location survey was not accomplished.	See 4b(4)
300	477A	Items Requiring Inspection, Stored Materiels D	Number of items of materiel in storage requiring inspection DRP.	See 4b(4)
300	477B	Backlog of Items Requiring Inspection Stored Materiels D	Number of items of materiel in storage requiring inspection representing an excess beyond the capability of existing resources EOP.	See 4b(4)
300	477C	Manhours Required to Accomplish Backlog of Items Requiring Inspection, Stored Materiels D	Manhours required to accomplish the backlog of items of materiel in storage requiring inspection.	See 4b(4)

APPENDIX E-115 P

ON-LINE UPDATE OF SPD MASTER RECORDS

1. PURPOSE

a. This appendix provides instructions to the various responsible elements in Management for the loading and maintaining of the Receiving Special Purpose Data (SPD), Master Record (XMR) and the SPD Bin/Bulk Master Record (XMM).

b. The SPD Master Records may be processed/input by the Remote Keyboard terminals only by utilizing program $$UWME10. Input through the remote keyboard will be validated at the time of input.

2. REFERENCES

a. Appendix B-178, Receiving SPD Master Record.

b. Appendix B-224, SPD Master Record.

c. Appendix D-214, Processing Special Purpose Data (SPD) Counts in the Bin/Bulk Area.

3. RESPONSIBLE ORGANIZATION

Office of the Controller, Methods and Standards Representative.

4. PROCEDURE/INSTRUCTIONS

To begin processing, enter $$UWME10 and depress the ENTER key. The following screen will be displayed. Depending on whether the Receiving SPD Master Record (XMR) or the Bin/Bulk SPD Master Record (XMM) Screen is desired, enter the Document Identifier Code (DIC) required.

DATA ENTRY (MENU)

UWME10
Choose One of the Following DIC'S:

DIC	APPENDIX	DIC	APPENDIX	DIC	APPENDIX	DIC	APPENDIX	DIC	APPENDIX
CKK	B-15	DAC	B-22	DJA	B-26	DKA	B-25	DZD	B-6
XMM	B-224	XMR	B-178	ZAC	B-22	ZAD	B-62	ZAF	B-158

a. If DIC XMM is entered the following screen will be displayed:

B-224 SPD MASTER RECORD

(01-03) DIC: XMM	(04-06) WHS-CD:
(07-09) SPD-CD:	(10-10) CMDTY-CD:
(11-11) MAINT-CD:	(12-16) ORG-CD:
(17-25) CST-CD:	(26-29) SPD-STD-NO:
(30-34) WRK-CTR-CD:	

(1) To Add a Record, ENTER:

(a) Warehouse Code - A three position alphanumeric code that is the first three positions of the Warehouse Location Code.

(b) SPD Code - A three position numeric code identified in appendix D-214.

(c) Commodity Manager - A one position alphanumeric code identified in appendix A-44 (Optional Entry).

(d) Maintenance Code - Enter an A.

(e) Organization Code - A four position alphanumeric code locally assigned.

(f) Cost Code - A nine position numeric code locally assigned.

(g) SPD Standard Number - A four position numeric code assigned.

(h) Work Center Code - A five position alphanumeric code locally assigned (Optional Entry).

(2) To change an Existing Record,

(a) If a change is required to the SPD Record Code and/or the Warehouse Code, you must delete the old record and establish a new record.

(b) If a change is required to other than the SPD Record Code and the Warehouse Code, for example the SPD Standard number, field positions 1-10 must match the existing record. Maintenance Code C will be entered in position 11.

(3) To delete an Existing Record, all field positions are required. Maintenance Code D will be entered in position 11.

(4) A successful entry will display the message, ENTRY ACCEPTED.

(5) An unsuccessful entry, the cursor will go to each field in error and a message will be displayed indicating the error.

b. If DIC XMR is entered the following screen will be displayed:

B-178 RECEIVING SPD MASTER RECORD

(01-03) DIC: XMR	(04-11) BLANK
(12-13) RCVG-SITE-ID-CD	(14-18) MPLOYE-ID-NO:
(21-21) MAINT-CD:	(22-22) MPLOYE-TY
	(23-25) RCVG-SITE-LOC
	(26-60) MPLOYE-NAME:

(1) To Add a Record, ENTER:

(a) Receiving Site ID Code - A two position alphanumeric code identifying the kind of receipt involved and which relates to a specific Work Center.

(b) Employee Identification Number - A five position numeric code assigned each employee. Preceding zeros not required.

(c) Maintenance Code - Enter an A.

(d) Employee Type - A one position alpha code identifying whether an employee type is a verifier or an inspector accomplishing the action.

(e) Receiving Site Code - A two position alphanumeric code identifying whether the Site is Bulk, Central, or Direct (W/house) Receiving and an area or commodity that can be related to a specific work center.

(2) To Change an Existing Record:

(a) If a change is required to the Employee and/or the Terminal Indentification Number, you must delete the old record and establish a new record.

(b) If a change is required to the Employee Type, field position 1-20 must match existing record. Maintenance Code C will be entered in position 21.

(3) To Delete an Existing Record, all field positions are required. Maintenance Code D will be entered in position 21.

(4) A successful entry will display the message, ENTRY ACCEPTED.

(5) An unsuccessful entry, the cursor will go to each field in error and a message will be displayed indicating the reason.

5. ERROR MESSAGES

Program validation will identify error conditions and return the entry display with the corresponding Error message at the bottom of the display. The cursor will be positioned at the field containing the error. The error messages, with probable cause and corrective action information are as follows:

ERROR MESSAGE	CAUSE/ACTION
WAREHOUSE CODE	Probable Cause: An entry other than alphanumeric or blank was entered. Action: Verify the input and reenter, first position being alpha.
SPECIAL PURPOSE DATA CODE (SPD)	Probable Cause: An entry other than all numeric was entered. Make sure the SPD Code is valid (appendix D-214); otherwise, the XMS record will reject indicating No Matching Master. Action: Verify the input and reenter, all numeric.
COST CODE	Probable Cause: An entry other than all numeric was entered. Action: Verify the input and reenter, all numeric.
ORGANIZATION CODE	Probable Cause: An entry other than all alphanumeric was entered. Action: Verify the input and reenter, all alpha.
SPECIAL PURPOSE DATA STANDARD NUMBER	Probable Cause: An entry other than all numeric was entry. Action: Verify the input and reenter, all numeric.
EMPLOYEE IDENTIFICATION NUMBER	Probable Cause: An entry other than all numeric was entered. Preceding zeros not required. Action: Verify the input and reenter.
EMPLOYEE TYPE	Probable Cause: An entry other than I or V was entered. Action: Verify the input and reenter I or V.
RECEIVING SITE CODE	Probable Cause: An entry other than B, C or D was entered first position. An entry other than A-Z and 2-9 (less I, O, 1, 0) was entered second position. Action: Verify the input and reenter B, C or D first position and A-Z, 2-9 (less I, O, 1, 0) second position.

ERROR MESSAGE	CAUSE/ACTION
MAINTENANCE CODE	Probable Cause: An entry other than A, C or D was entered. Action: Verify the input and reenter only A, C or D.

APPENDIX E-116 P

SURVEILLANCE INSPECTION/OPERATIONAL TEST NOTICE CARD (DLA FORM 540)

1. PURPOSE

This procedure describes the usage of DLA Form 540, Inspection Test Card (short title), to accomplish the surveillance/inspection of items in storage locations.

a. An Inspection Test Card with DIC ZC0 is produced by Data Systems for each item/location identified as either a Type II Shelf-Life item or as requiring inspection as evidenced on the inspection schedule established in appendix F-20. Data elements shown on the Inspection Test Card are utilized to reflect the results of completed inspections and to accomplish the locator file update.

b. Inspection Test Cards identified by DIC ZC9 will be mechanically prepared for only those items identified as being nonextendible Type I Shelf-Life Stock. The DIC ZC9 Inspection Test Cards will be used exclusively for the purpose of transmitting a count (quantity) of items affected by the automatic Condition Code downgrade action. Therefore, update capabilities other than location and quantity are not an authorized function of the DIC ZC9. The date of Condition Code downgrade (new date of inspection) and the associated new Condition Code will be entered in the card by a mechanical process and requires no further manual entry/update. Inspection activities will review the F-20 listing and the DIC ZC9 documents to ensure that the adjustment is acceptable. Physical inspection of nonextendible items should be limited to recording the count until an item reaches its expiration date, at which time a DIC ZC9 card is produced automatically to downgrade the item to Condition Code H. Inspection activities will then reinput the DIC ZC9 card for appropriate processing.

2. APPENDICES USED IN THIS PROCESS

a. Appendix B-116

b. Appendix C-54

c. Appendix F-20

d. Appendix F-91

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Directorate of Storage and Transportation and applicable subordinate elements.

4. PROCEDURES/INSTRUCTIONS

a. As established by appendix F-20, Shelf-Life Inspection Schedules are prepared by Data Systems with corresponding DLA Form 540, Inspection Test Cards, IAW appendix D-2. Inspection Test Cards are in the format as shown in appendices B-116 and C-54 and are assigned DIC ZC0.

b. Delinquent Inspection Test Cards will be produced concurrent with the scheduled months inspection documentation. The inspection schedule, appendix F-20, will identify those Inspection Test Cards in delinquent or late inspection status. Proper followup or inspection action will be taken on these delinquent records to ensure that they are updated before expiration of the current inspection schedule.

c. Inspection schedules and Inspection Test Cards, DICs ZCO/ZC9, will be used in physical accomplishment of inspection counting for the items scheduled in a given month. The Inspection Test Cards will ultimately be reentered into the computer for updating the locator file when inspection has been accomplished.

d. A ZCO Inspection Test Card will be produced by the computer as a result of a shelf-life coded location subrecord with a missing Inspection Date. The ZCO card and corresponding F-20 listing will identify the missing data by printing 9999 in the old date field. Input of valid date will be accomplished by entry of the missing element to the ZCO card.

e. The ZCO card may also be utilized by an inspector to accomplish an unscheduled inspection or to correct and update a nonextendable shelf-life item record for which a ZC9 has been generated.

f. The ZC9 Inspection Test Cards will be completed as follows:

(1) Review the Condition Code downgrade and, if acceptable, physically count stock and annotate quantity in pos. 54-58. Forward card to ODS as complete. The depot should question the appropriate DSC prior to downgrading whenever any doubt exists that the downgrading action is valid.

(2) If stock in location is exhausted, zero fill quantity field, pos. 54-58, to delete location record from future inspection schedules.

(3) If item requires rewarehousing due to downgrade of stock condition (for example, to Condition Code J), annotate card with quantity involved, pos. 54-58, new location, pos. 24-35, and indicator, pos. 59, plus new Type of Storage, pos. 74-76. A separate delete via ZBA input must be processed to delete the vacant location.

(4) The Condition Code field in ZC9 Inspection Test Cards will be prepunched with the proper Condition Code downgrade action as outlined in chapter 11 of this volume. Condition Codes will be mechanically assigned based upon the number of months of shelf-life remaining until expiration date. Due to special item characteristics the (new) date of inspection may not be acceptable. In these special instances, the DIC ZCO card format should be manually prepared with the proper date of inspection entered in pos. 49-52 together with other data as required IAW appendix B-116. Destroy the old DIC ZC9.

(5) Upon expiration of shelf-life (when current date equals stock expiration date) a ZC9 will be mechanically prepared transferring the stock to Condition Code H.

(6) DIC ZC9 cards annotated with quantity and, if applicable, location data will upon processing create a Materiel Adjustment Card, appendix B-22, DIC DAC which is mechanically forwarded to the appropriate DSC. This DAC will contain a document number constructed IAW appendix D-39 instructions and will contain the 6-position DoDAAC (of the managing DSC), a 4-position Julian date followed by a 4-position specific serial number for Condition Code changes to H. Condition Code changes of other than H will contain a document number ending with 9999. Management code Z, pos. 66, entries are not required on DIC ZC9s as assigned document number will automatically appear on the F-91 report. When a change to Condition Code H occurs the AC9 test inspection card should be completed and returned to Office of Data Systems as near to the end of the 30 day inspection period as possible. Manual preparation of the DD Form 1348-1 must be accomplished reflecting the exact quantity that was recorded on the ZC9.

(7) If the DIC ZC9 document is not used due to various data element errors, the locator record and/or location data must be corrected to prevent the DIC ZC9 from appearing on subsequent inspection schedules as delinquent record. Screen record data to identify error requiring update/change:

(a) Review Shelf-Life Code assigned to determine if stock item is a Type II or invalid Shelf-Life Code erroneously identified as a nonextendible Type I item.

(b) Is the automatic downgrade date (date of next inspection) valid?

(c) Is the expiration date valid?

(d) Is the automatic Condition Code downgrade, pos. 48, valid?

NOTE: Special inspection criteria may affect the normal computer Condition Code downgrade criteria as reflected in chapter 11, paragraph 311203C of this volume.

(e) A ZC9 document may be produced in advance of the 6-month or 3-month criteria. This may occur due to an incorrect expiration or inspection date originally (manually) assigned, or the date of next inspection has been deliberately entered by qualified inspector to force the production of the inspection document at a specific time governed by special inspection criteria. The ZC9 document should be carefully reviewed in conjunction with the F-20 report to ensure that the condition downgrade is not prematurely accomplished.

(8) Appropriate action will be taken to correct erroneous data element(s) by manually preparing DIC ZC0 or other suitable locator update/change documents as necessary.

f. Stock Readiness Branch will accomplish the physical inspection of Type II shelf-life coded items or other stock items as deemed necessary as follows:

(1) Initiate DD Form 1225, Storage Quality Control Report, when materiel is found to be unserviceable and/or reidentification or a Condition Code change is required, IAW appendix E-160 P.

(2) Placard the suspended materiel.

(3) Initiate DD Form 1222, Results of and Request for Tests, when required, IAW appendix E-033 P.

(4) Annotate Inspection Test Card, DIC ZCO only, with new (next) inspection date when materiel is found to be serviceable and no adjustments are required.

(5) When inspection reveals that the lot/contract number, or lot/contract indicator listed on the Inspection Test Card, DIC ZCO or ZC9, does not match the materiel in the specified location, it will be necessary for the Stock Readiness Branch to submit a Stock Locator Change Document (DLA Form 536) to change the Locator Record to match the materiel in the location. The Change Document will be attached to the corresponding Inspection Test Card.

(6) When inspection indicates that data on the Inspection Test Cards and materiel in location do not agree, annotate required updating entries on the Inspection Test Card, IAW appendix B-116. Entries subject to updating are as follows: (Applicable to DIC ZCO only, unless otherwise noted, reference appendix B-116).

(a) New Condition Code (if applicable).

(b) Date of next inspection (new). Enter zeros if date is unknown at the time of preparation of the new input (for Condition Code H, J, and L only).

(c) New Shelf-Life Code (if applicable).

(d) Quantity (if Condition Code is changed). Mandatory entry for DIC ZC9.

(e) Management Code (if applicable). Code Z if the materiel adjustment document required on Condition Code changes is to be supported by a DD Form 1225. Code M, J, T or E if Condition Code of the materiel has been changed to H.

(f) New Type Storage Code, also applicable to DIC ZC9.

(g) New Date of Pack/Expiration.

(h) Location, if stock is rewarehoused. Also applicable to DIC ZC9.

(7) Annotate listings with changes reflected on the Inspection Test Cards.

(8) Forward updated Inspection Test Cards, DIC ZCO and ZC9, to ODS as completed.

NOTE: Cards changing the Condition Code of shelf-life items will be forwarded within the last 15 days of the inspection month.

APPENDIX E-116 V

SURVEILLANCE INSPECTION/OPERATIONAL TEST NOTICE CARD VIOLATIONS

1. INPUT DOCUMENT

Appendix B-116, Inspection Test Card (Short Title), DIC ZC0/ZC9

2. INPUT TO PROCEDURE DECISION CHART(S)

Appendix D-39

3. PURPOSE, CONTENTS AND RESPONSIBILITIES

This appendix provides instructions for research, correction, and reentry of Inspection Test Cards, DIC ZC0/ZC9, which have been rejected from computer processing. Quality Control Branch is responsible for the correction of errors and reentry of the card as required. Reasons for computer rejection are as follows:

VIOLATION REASON CODE	DEFINITION
AF	Condition Code invalid.
AP	Warehouse Location Code invalid.
AS	Quantity invalid or blank.
AW	Management Code invalid (not applicable to ZC9).
AY	Invalid stock number.
D6	Lot contract indicators invalid.
HB	Shelf-Life Code invalid.
HG	Type Storage Code (new) invalid.
HH	Date of Pack invalid.
HW	Inspection date invalid.
LP	No matching master locator record.
SR	Document number range not in file (not applicable to ZC9).
SY	Record not in classification suspense file (not applicable to ZC9).
YM	New location required.

4. PROCESSING/RESEARCH INSTRUCTIONS

a. VIOLATION REASON CODE AF.

(1) REASON FOR VIOLATION/ERROR CONDITION:

VRC AF indicates that new Condition Code in pos. 48, was not alpha or blank, (see appendix A-16) for DIC ZC0, or was not B, C, or H for DIC ZC9.

(2) PROCESSING/RESEARCH REQUIRED:

Review the Violation Printout (appendix F-85) to determine the error involved. Research the inspection schedules and records to determine the correct new alpha Condition Code or if space is to be left blank.

(3) For reentry instructions see paragraph 5 below.

b. VIOLATION REASON CODE AP.

(1) REASON FOR VIOLATION/ERROR CONDITION:

VRC AP indicates that data in pos. 24-35 and/or pos. 36-47 was other than an alpha/numeric entry for the location. (See appendix A-50.)

(2) PROCESSING/RESEARCH REQUIRED:

Review the Violation Printout (appendix F-85) to determine the error involved. Research the inspection schedules and records to determine the correct alpha/numeric location for the scheduled item.

(3) For reentry instructions see paragraph 5 below.

c. VIOLATION REASON CODE AS.

(1) REASON FOR VIOLATION/ERROR CONDITION:

VRC AS indicates that pos. 54-58 was other than a numeric quantity entry, was blank when the old Condition Code differed from the new Condition Code, or was blank on DIC ZC9.

(2) PROCESSING/RESEARCH REQUIRED:

Review the Violation Printout (appendix F-85) to determine error involved. Research the inspection records, schedules, and/or location(s) of item to determine correct quantity which must be entered.

(3) For reentry instructions see paragraph 5 below.

d. VIOLATION REASON CODE AW.

(1) REASON FOR VIOLATION/ERROR CONDITION:

VRC AW indicates that entry in pos. 66 was not a Management Code M when pos. 48 was Condition Code H or a valid Management Code when pos. 48 was any other Condition Code (for DIC ZC0), or that entry in pos. 66 was not either blank or a valid Management Code for DIC ZC9.

(2) PROCESSING/RESEARCH REQUIRED:

Review the Violation Printout (appendix F-85) to determine the error(s) involved. Research the inspection schedules and records to determine the correct Management Code of if space is to be left blank. (See pos. 66, appendix B-116.)

(3) For reentry instructions see paragraph 5 below.

e. VIOLATION REASON CODE AY.

(1) REASON FOR VIOLATION/ERROR CONDITION:

VRC AY indicates that data in pos. 8-20 was not a valid National Stock Number.

(2) PROCESSING/RESEARCH REQUIRED:

Review the Violation Printout (appendix F-85) to determine the error involved. Research the inspection schedules and records to determine the correct stock number.

(3) For reentry instructions see paragraph 5 below.

f. VIOLATION REASON CODE D6.

(1) REASON FOR VIOLATION/ERROR CONDITION:

VRC D6 indicates that entry in pos. 72 is not a valid Lot or Contract Indicator: L, C, or R.

(2) PROCESSING/RESEARCH REQUIRED:

Review the Violation Printout (appendix F-85) to determine the error involved. Enter the correct code from the locator record.

(3) For reentry instructions see paragraph 5 below.

g. VIOLATION REASON CODE HB.

(1) REASON FOR VIOLATION/ERROR CONDITION:

VRC HB indicates that new Shelf-Life Code in pos. 53 was not valid or blank. See appendices A-47 and B-116.

(2) PROCESSING/RESEARCH REQUIRED:

Review the Violation Printout (appendix F-85) to determine the error involved. Research the inspection schedules and records to determine the correct new Shelf-Life Code or if space is to be left blank.

(3) For reentry instruction see paragraph 5 below.

h. VIOLATION REASON CODE HG.

(1) REASON FOR VIOLATION/ERROR CONDITION:

VRC HG indicates entry in pos. 74-76, Type Storage Code, was not alpha/numeric/alpha.

(2) PROCESSING/RESEARCH REQUIRED:

Review the Violation Printout (appendix F-85) to determine error. Determine correct type storage code and reenter, after correction, IAW paragraph 5.

i. VIOLATION REASON CODE HH.

(1) REASON FOR VIOLATION/ERROR CONDITION:

VRC HH indicates entry in pos. 77-80, Date of Pack, was not all blank or numeric. Date of Expiration was not a two-digit month of greater than 00, or less than 13 or a two-digit year. The date cannot exceed 66 months from current month. An additional 6 months is provided on the maximum shelf-life period to accommodate items that are age controlled by quarters of the year (reference MIL STD 1523).

(2) PROCESSING/RESEARCH REQUIRED:

Review the Violation Printout (appendix F-85) to determine error involved. May require reinspection to determine correct date. Reenter after correction, IAW pragraph 5 below.

j. VIOLATION REASON CODE HW.

(1) REASON FOR VIOLATION/ERROR CONDITION:

VRC HW indicates that an invalid inspection date was entered in pos. 60-63.

(2) PROCESSING/RESEARCH REQUIRED:

Review the Violation Printout (appendix F-85) to determine if date in card is less than current date or if data field contains other than numerics.

(3) For reentry instructions see paragraph 5 below.

k. VIOLATION REASON CODE LP.

(1) REASON FOR VIOLATION/ERROR CONDITION:

VRC LP indicates that ZCO, Inspection Test Card, does not match Master Locator Record.

(2) PROCESSING/RESEARCH REQUIRED:

Review the Violation Printout (appendix F-85) to determine the error(s) involved. Research the inspection records, schedules, and locations for the stock number concerned and determine the following:

(a) Has item been shipped since the inspection schedule was prepared?

(b) Has item been rewarehoused since the inspection schedule was prepared?

(c) Is item in location as shown on the original inspection schedule?

(d) Has any action occurred since the inspection schedule was prepared that effected the item?

(3) For reentry instructions, see paragraph 5 below.

l. VIOLATION REASON CODE SR.

(1) REASON FOR VIOLATION/ERROR CONDITION:

VRC SR indicates that a document number range was not available for this commodity manager, DIC ZCO only.

(2) PROCESSING/RESEARCH REQUIRED:

Review Violation Printout (appendix F-85) to determine error involved. Obtain a block of numbers from DSC concerned and submit to ODS IAW table 30, appendix B-66. Once established, this block of numbers remains constant in the computer for assignment to mechanically generated Materiel Adjustment Cards. When document number range has been exhausted for the day, the computer will return ZCO to internal input file for next day processing.

m. VIOLATION REASON CODE SY.

(1) REASON FOR VIOLATION/ERROR CONDITION:

VRC SY indicates that on second reentry ZC0, Inspection Test Card, does not match the Classification Suspense File on Condition Code J, K, or L (see appendix D-63).

(2) PROCESSING/RESEARCH REQUIRED:

Review Violation Printout (appendix F-85) to determine error(s) involved. Research inspection records and schedules to determine correct Condition Code of item and to verify its status as being suspended pending results of tests and/or inspection.

(3) For reentry instructions, see paragraph 5 below.

n. VIOLATION REASON CODE YM.

(1) REASON FOR VIOLATION/ERROR CONDITION:

VRC YM indicates that alpha X is entered in pos. 59 but that a new location is not entered in pos. 24-35.

(2) PROCESSING/RESEARCH REQUIRED:

Review Violation Printout (appendix F-85) to determine error involved. Research the inspection schedules and records to determine correct alpha/numeric location of item and to verify that an X is entered in pos. 59 if there was a Condition Code change to a partial quantity presently on the classification suspense file. This is the only circumstance under which a new location is established by use of the ZC0, Inspection Test Cards. Review ZC9 to determine if rewarehousing action did occur or if the X in pos. 59 was in error.

(3) For reentry instructions, see paragraph 5 below.

5. REENTRY INSTRUCTIONS

Using Violation Printout (appendix F-85) as the basis, accomplish the following:

a. When correct data has been determined, annotate correction directly below erroneous entry.

b. Reenter the corrected data via program $$UWME10.

6. FLOW CHART

Flow chart not required.

APPENDIX E-117 P

CLASSIFICATION SUSPENSE REPORT

1. REPORT USED

Appendix F-22, Classification Suspense Report.

2. CRITERIA FOR PREPARATION

a. The Classification Suspense Report lists all stock numbers on which action has been suspended for over 10 days due to their classification into Condition Code J, K, or L. Stock numbers will again appear on the report each 7 days thereafter.

b. Warehouse location of the suspended item will appear on the report for only those records established from receipt actions (DIC ZV_, ZW_, ZX_, ZY_) or Surveillance Inspection Operational Test Notice Cards (DIC ZCO).

3. RESPONSIBLE ORGANIZATIONAL CONTROL ELEMENT

Quality Control Office, Stock Readiness Branch, Warehousing Division, and Receiving Division, DS/T.

4. INSTRUCTIONS FOR PROCESSING

This report will be reviewed for necessary followup. When reclassification action is completed, the partially punched ZAC card will be completed and reinput to update the computer files.

5. DISPOSITION OF THE REPORT

As the report is output weekly, after followup action has been taken on required items, the report may be destroyed.

APPENDIX E-119 P

ACTIVITY ADDRESS FILE INQUIRIES

1. PURPOSE

This procedure describes the actions necessary to inquire the Activity Address File for addresses and other related information.

2. APPENDICES USED IN THIS PROCESS

a. Appendix A-43

b. Appendix B-119

c. Appendix D-97

d. Appendix F-84

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

DS/T

4. PROCEDURES/INSTRUCTIONS

a. General

This procedure covers Activity Address File inquiries which may be obtained on-line by CRT or using card input for batch processing.

b. CRT Inquiry

(1) Inquiry by AAC and TAC.

(a) To initiate the program key in $$UWSH15 and press the ENTER key. The CRT will be dedicated to Activity Address Code (AAC) inquiries until another $$ entry is made.

(b) This input will result in a display of inquiry entry data. See figure 1 below for example.

(c) Enter the AAC record for which inquiry is desired. Enter Type Address Code, reference appendix A-43, if one specific TAC is desired. If a TAC is not entered all addresses on file for the AAC will be displayed. Press the ENTER key. Input of this transaction will result in output of shipment planning data and requested addresses. See figures 2 and 3 below for examples.

(2) Destination Cross-Reference to Activity Address Code Inquiry.

(a) To initiate the program key in $$UWSH60 and press the ENTER key. The CRT will be dedicated to the Destination Cross-Reference inquiry until another $$ entry is made.

(b) This input will result in a display of inquiry entry data. See figure 4 below for example.

(c) Enter the DCR for which inquiry is desired. Press the ENTER key. This transaction will result in a display of all AACs that have the same Destination Cross-Reference. See figures 5 and 6 below for examples.

(d) If the DCR entered is not on the cross reference file, the message "DCR NOT FOUND" will display.

c. Card Input Inquiries

(1) Inquiry by AAC and TAC.

This can be accomplished by card input as well as CRT input mentioned above. Appendix B-119 provides the format for card preparation. Output from this input will be printed on the Activity Address Record Listing, F-84, section 1.

(2) Destination Cross-Reference to Activity Address Code.

This input provides a list of AACs that have the same Destination Cross-Reference. Input must be prepared per appendix B-119 and processed through the Entry System. Output for this transaction appears on the Activity Address Record Listing, F-84, section 5.

(3) ZIP Code to Activity Address Codes.

(a) This transaction provides the Type 2 address of all AACs which do not contain a destination cross-reference and the Type G address for all AACs with a DCR value within the prescribed ZIP Code.

(b) Input must be prepared per appendix B-119 and processed through the Entry System. Output for this transaction appears on the Activity Address Record Listing, F-84, section 6.

(c) This inquiry is used to determine activities which may be located at the same destination and to determine if a destination address(es) is established.

APPENDIX E-120 P

MAP OVERAGE MRO LISTING FOR DEPOTS

1. PURPOSE

This procedure describes the actions for processing the SAMMS F-121A, FMS and MAP Grant Aid Overage MRO Listing, F-121B, FMS and MAP Grant Aid Overage MRO Listing for Depots, and F-121C, Unconfirmed Redistribution/Disposal Transactions over 100 days old, which is created at the DSCs and forwarded to the depots on a quarterly basis.

2. APPENDICES USED IN THIS PROCESS

a. Appendix A-12

b. Appendix A-42

c. Appendix B-14

d. Appendix B-81

e. Appendix B-94

f. Appendix B-99

g. Appendix B-101

h. Appendix B-115

i. Appendix B-128

j. Appendix B-208

k. Appendix E-234 P, Part B

l. Appendix F-67

m. Appendix F-78

n. Appendix F-83

o. Appendix F-87

p. Appendix F-89

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

MAP Coordinator, Directorate of Storage and Transportation.

4. PROCEDURES/INSTRUCTIONS

The SAMMS F-121B report is described in the attachment 1 to this appendix. Since lines appearing on this listing may also appear on the daily MRO Status Detail - Parts 1 and 2 - Warehouse PDT/MDT Control Listings (appendices F-78 and F-87), expedite the processing of the F-78 in order to cause a reduction in the total number of MROs appearing on the F-121B. Upon receipt of the report by the MAP Coordinator, the following steps should be taken:

a. Compare new listing with last previous listing, which should be annotated with the action taken. If a record is repeated and the action previously taken should have closed it on the DSC's record, a narrative identifying the record and the action previously taken should be prepared and forwarded to the DSC by letter, messsage, or telephone call.

b. If the record did not previously appear on the report, prepare a history inquiry using either appendix B-115 or appendix B-208.

c. Upon receipt of the results of the inquiry, either an F-67 report or CRT display, determine the status of the MRO. If it is still open and should be closed out, use appendices B-99, B-101, or B-128 as appropriate. If it is still open and awaiting response to an NOA, prepare a Supply Status Transaction IAW appendix B-94, using a BL Status Code in pos. 65-66 and the Date to Transportation in pos. 70-73. If it is still open and awaiting shipment, prepare a Supply Status Transaction using a BA Status Code and the estimated date shipment will be made in pos. 70-73. If there is no record of the MRO, prepare a Supply Status Transaction with a BF Status Code. If the MRO was previously canceled, prepare a Cancellation Request Answer IAW appendix B-81. If the MRO was previously shipped and confirmed, prepare a duplicate Materiel Release Confirmation IAW appendix B-14. If the MRO is open and no positive determination of its status can be determined, force close the MRO using appendix B-126 with Action Code GX.

d. Annotate the current listing with action taken and file for use with next quarterly listing.

e. Forward all prepared transactions, as completed, to Office of Data Systems for transmission via AUTODIN.

ATTACHMENT 1

APPENDIX F-121 B
EXTRACTED FROM DLAM 4140.2, VOLUME II

MAP OVERAGE MRO LISTING FOR DEPOTS

1. PURPOSE

To provide a listing of those ILP overage MROs which contain a MRO Control Section No-Record Indicator Code of 7 (indicating that the DSC has received no reply from a MRO followup previously sent), 9 (indicating that the DSC has received a DIC AE6 BA from the depot), or 2 (indicating that the DSC has received a DIC AE6 BL from the depot) and the MRO is over 45 days old (7, 9) or 90 days old (2) and the total dollar value of the requisition is $25 or more.

2. ORIGIN

This listing is prepared as a result of the process depicted in appendix D-95, and outlined in DLAM 4140.2, Volume II, Chapter 4.

3. FREQUENCY

This listing is output on a monthly basis.

4. FORMAT

a. Heading Line: Standard identification.

b. Data Organization:

(1) Sequence:

(a) Major: RIC of the distribution activity to which the MRO (and MRO followup) was submitted or the RIC of the SSD/DSSP which submitted the post-post action.

(b) Minor: NO-REC Indicator Code.

(c) Minor: MRO Date. Date the MRO was established (DIC A5_) beginning with those that are the oldest from the current day and ending with those that are the youngest.

(d) Minor: Document Number.

(2) Spacing: Double.

(3) Page Break: RIC change and NO-REC Indicator Code change within RIC.

c. Captions of Data Elements:

(1) DIC - Document Identifier Code

(2) RIC - Routing Identifier Code

(3) NATL STK NR - National Stock Number

(4) UI - Unit of Issue

(5) QTY - Unshipped quantity as recorded in ARCSF

(6) DOCUMENT NUMBER - Document Number recorded in ARCSF

(7) D/S - Demand or Suffix Code recorded in ARCSF

(8) SUP ADDR - Supplementary Address

(9) SC - Signal Code

(10) FC - Fund Code

(11) DIS - Distribution Code

(12) PRJ - Project Code

(13) PR - Priority

(14) RDD - Required Delivery Date

(15) ADV - Advice Code

(16) RIF - Routing Identifier Code of DSC

(17) O/P - Ownership or Purpose Code

(18) C - Condition Code

(19) M - Management Code

(20) UP - Unit Price

(21) FU - Indication that a Customer Followup has been recorded in the Supply Section of the ARCSF as follows:

(a) Code 1 - Followup has been received and pos. 3 contains C or 1.

(b) Code 2 - Followup has been received and pos. 3 contains 2.

(c) Code 3 - Followup has been received and pos. 3 contains 3.

(d) Code A - Followup has been received containing C or 1 in pos. 3 and current FU Indicator is 2 (denotes previous receipt of DIC AF2), or followup has been received containing 2 in pos. 3 and current FU Indicator is 1 (denotes previous receipt of DIC AF1 or AFC).

(e) Code B - Followup has been received containing 1 or C in pos. 3 and current FU Indicator is 3 (denotes previous receipt of DIC AF3), or followup has been received containing 3 in pos. 3 and current FU Indicator is 1 (denotes previous receipt of DIC AF1 of AFC).

(f) Code C - Followup has been received containing 2 in pos. 3 and current FU Indicator is 3 (denotes previous receipt of DIC AF3), or followup has been received containing 3 in pos. 3 and current FU Indicator is 2 (denotes previous receipt of DIC AF2).

(g) Code D - Followup has been received containing 1 or C in pos. 3 and current FU Indicator is C; followup has been received containing 2 in pos. 3 and current FU Indicator is B, or followup has been received containing 3 in pos. 3 and current FU Indicator is A.

(h) Code T - Followup has been received containing a T in pos. 2.

(22) DSCFU - Indication of Followup Status as originated by processing DSO (and recorded in the NO REC field of the MRO Control Section, ARCSF) as follows:

(a) Code 2 - Indicates that a DIC AE6 BL has been received from the depot.

(b) Code 7 - Indicates no reply received from MRO/DRO Followup output to shipping depot previous month.

(c) Code 9 - Indicates that a DIC AE6 BA has been received from the depot.

(23) MRODTE - Date MRO was prepared and forwarded to shipping depot.

5. DISTRIBUTION AND RETENTION

Two copies to the MAP Coordinator within the DSO.

APPENDIX E-121 P

ITEM ANALYSIS EXCEPTION REPORT CONDITION CODE

1. PURPOSE

This report provides:

a. Means of verifying Condition Codes of items in storage other than Condition Code A.

b. Means of monitoring stocks in hold areas and/or unclassified stocks in storage.

c. Means of reconciling suspense files of DD Form 1225.

d. Knowledge of condition of stocks in storage.

2. APPENDICES USED IN THIS PROCESS

a. Appendix B-79

b. Appendix D-23

c. Appendix F-26

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Quality Control Branch (Management Support Office), Inspection Branch (Receiving Section) and Stock Readiness Branch (Warehousing Division).

4. PROCEDURE/INSTRUCTIONS

a. Prepare Locator Inquiry card on a local coding data sheet as follows:

FIELD POSITION(S)	ENTRIES
1-3	Enter DIC ZBJ.
71	Enter Condition Code (other than A) for which report is desired.
77-78	Enter Functional Routing Code of originator.
79-80	Enter Action Code FH.

b. Forward local coding data sheet to Office of Data Systems via keypunch.

c. Responsible Organizational Element will compare this report to the Classification Suspense Report (F-22) to verify correctness of computer files for materiel in suspense due to condition.

5. DISPOSITION OF REPORT

Retain for 30 days then destroy.

APPENDIX E-122 P

ITEM ANALYSIS REPORT/COMMODITY MANAGER

1. FORMS/REPORTS USED

a. Appendix A-42

b. Appendix A-44

c. Appendix B-79

d. Appendix D-23

e. Appendix F-27

2. REASON/CRITERIA FOR PREPARATION

a. This report provides the media for:

(1) Review and audit to correct erroneous assignment of Commodity Manager Codes.

(2) Review of dual ownership.

(3) Followup with appropriate DSC when applicable to obtain disposition of stock.

b. The Commodity Manager Code in the Item Locator Record is the basis for preparation of reports to HQ DLA, and/or DSC; preparation and routing of adjustments, reconciliation of inventories and location surveys.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

MSO, MOWASP Data Control Branch.

4. PROCEDURE/INSTRUCTIONS

a. As requested by input of appendix B-79, DIC ZBJ, with Action Code FJ.

b. Any organization having the requirement for the F-27 report will prepare a local coding sheet to inquire the Item Locator Record and Locator Subrecord as follows:

FIELD POSITION(S)	ENTRIES
1-3	Enter DIC ZBJ.
6	Enter applicable Commodity Manager Code (appendix A-44).
77-78	Enter FRC of originator.
79-80	Enter Action Code FJ.

c. Forward coding sheet to keypunch services for keypunching the ZBJ card. Verify and forward to ODS.

d. Review and process the F-27 report as follows:

(1) Review data for errors, i.e., erroneous Commodity Manager in relation to stock number. Initiate corrective action, as necessary.

(2) Review dual ownership stocks and determine if dual code remains applicable.

(3) Investigate items under research for correct code.

(4) Followup with DSC to obtain disposition of stock.

5. DISPOSITION OF REPORT

Destroy after correction and/or followup action has been completed.

APPENDIX E-123 P

MRO/DRO HISTORY MANUAL CONTROL CARD

1. FORM/REPORT USED

   a. General Purpose Detail Card

   b. Local Coding Data Sheet

   c. Appendix F-50

   d. Appendix F-107

2. REASON/CRITERIA FOR PREPARATION

When an error has been detected in the MRO/DRO History File, input and processing of this card, DIC ZAQ, appendix B-123 will change the MRO/DRO History supply status to DP. The DP code will prevent automatic replies to followups and cancellation request. All future followups and cancellation actions will be printed out on the F-50 listing for manual processing. When MRO/DRO History records have been changed, the document will be printed out on the F-107.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Shipping Documentation Branch.

4. PROCEDURES/INSTRUCTIONS FOR PREPARATION OF FORM

   a. Source(s) of Information.

      (1) Original document.

      (2) Code(s) from applicable A series appendices.

      (3) Format of inquiry, appendix B-123.

   b. Distribution of Form/Report.

Forward completed local coding data sheet to Office of Data Systems via keypunch services for input to MOWASP computer.

5. PROCEDURES/INSTRUCTIONS FOR PROCESSING RESPONSE TO RETURNED FORM/REPORT

When MRO/DRO History records have been changed, the document will be printed out on the F-107 listing. Procedures for processing and review of this listing are detailed in appendix F-107, paragraph 6 of this volume.

6. DISTRIBUTION OF FORM/REPORT AFTER FINAL ACTION

Office of the initiator will destroy local coding data sheet on receipt of the F-107 listing.

APPENDIX E-123 V

MRO/DRO HISTORY MANUAL CONTROL CARD VIOLATIONS

1. INPUT DOCUMENT

Appendix B-123, General Purpose Card, DIC ZAQ.

2. INPUT TO PROCEDURE DECISION CHARTS

Appendix D-1

3. PURPOSE, CONTENTS AND RESPONSIBILITIES

This appendix provides instructions for the research, correction, reentry and/or deletion, as appropriate, of violations resulting from inputs of the MRO History Card, DIC ZAQ. Reasons for computer rejection and organizational element responsible for corrections are as follows:

VIOLATION REASON CODE	RESPONSIBLE ORGANIZATION	DEFINITION
C6	Shipping Documentation Branch	Invalid document number or Invalid Routing Identification Code From.
C7	Shipping Documentation Branch	Violation reflects history record is still open.

4. PROCESSING/RESEARCH INSTRUCTION

a. VIOLATION REASON CODE C6.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Violation Reason Code C6 denotes the input (ZAQ) card document number (pos. 30-44) or the Routing Identifier Code From, pos. 67-69 does not match the History File.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Processing personnel will compare the exception data on the F-85 listing with the original document, local coding data sheet and keypunch card available, and correct any keypunch error or error in transcription.

(b) Continue the processing as outlined in paragraph 5 below.

b. VIOLATION REASON CODE C7.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Violation Reason Code C7 denotes the input (ZAQ) card has violated because the history record is still open.

(2) PROCESSING/RESEARCH REQUIRED:

(a) The processing personnel will verify the information on the F-85 report through comparison of the original source document, local coding sheet, and input document. If an error in keypunch or an error in transcribing data from one form to another is detected, correct and continue processing. If no error is detected, interrogate the MRO/DRO history register in accordance with appendix E-115 P to determine the exact status and continue process by input of DIC ZBM with Action Code DP (see appendix E-098 P).

(b) Continue processing as outlined in paragraph 5 below, when errors are located and corrected.

5. REENTRY INSTRUCTIONS

Since violations are not suspended, reentry will be based on research findings and further action taken as applicable. Alternate action as follows:

a. Annotate the correction of the F-85 listing directly below the erroneous field corresponding to the appropriate card column using ink or a distinctive colored pencil.

b. Line through the entry on the F-85 listing and re-input a corrected MRO History Control Card, DIC ZAQ.

c. Line through the entry on the F-85 listing and discontinue action.

APPENDIX E-128 P

GOVERNMENT BILL OF LADING CLOSEOUT/MRO FORCE CLOSE CARD

1. PURPOSE

To prescribe procedure for preparation and processing of Government Bill of Lading Closeout/MRO Force Close Card, DIC, ZEN, appendix B-128.

2. REFERENCES

a. Chapter 60

b. Appendix A-42

c. Appendix B-66

d. Appendix B-128

e. Appendix D-31 (Input)

f. Appendix D-98 (Output)

3. RESPONSIBLE ORGANIZATIONAL ELEMENTS

The Shipping Documentation Branch is responsible for completion and processing of Government Bill of Lading Closeout Card, DIC ZEN; also, they will establish options as outlined in appendix B-66. The Commercial Traffic Branch and the Shipping Documentation Branch are responsible for completion of MRO Force Close Card.

4. PROCEDURES/INSTRUCTIONS

a. The GBL Closeout Card will:

(1) Be utilized to close out the shipment unit file and to update history files. Coding Clerks will receive documents for completed Registered/Insured Parcel Post, Shipments. Documents will be sorted by Mode, Date Shipped, and Action Code. Prepare a coding sheet for each batch to be keypunched.

(2) Be prepared as follows:

(a) When all actions have been completed and freight shipments have been released to carrier.

(b) When partial or total quantity ordered has been shipped by Insured/Registered Parcel Post. Enter Action Code GT for total shipped quantity. Enter Action Code GS when quantity adjustment occurs.

(3) Be in accordance with the format outlined in appendix B-128, subparagraph 3a.

(4) Be computer prepared during the Shipment Unit and Documentation process, appendix D-98 based on options exercised. Options are as follows:

OPTION	EXPLANATION
1	One card will be prepared for each Shipment Unit.
2	One card will be prepared for each line item (MRO) of a Shipment Unit.

(5) Have following data elements in the card prepunched and interpreted upon output from the computer.

(a) Document Identifier, pos. 1-3.

(b) Shipment Unit Number, pos. 8-14.

(c) Shipment Unit Line Item Number, pos. 15-18. (Option code 2 only.)

(6) Have the following Action Codes, appendix A-42, used in conjunction with this process and entered as applicable in pos. 79-80 of the GBL Closeout Card(s).

ACTION CODE	EXPLANATION
GS	Closeout items offered to transportation by Shipment Unit or Line Item Number.
GT	Closeout items by Line Item Number, whether offered to Transportation or not.
GZ	Closeout item by Line Item Number; do not open new GBL block.

(7) The Shipping Documentation Branch will receive the GBL Closeout Card(s) DIC ZEN at the same time as distribution is made of other Shipment Unit documentation (appendix D-98).

(8) Be maintained in a suspense file pending completion of other related actions.

(9) Upon completion of other related actions, e.g., shipment offered to Transportation, B/L prepared, and so on, the Shipping Documentation Branch will receive an annotated copy of the Shipment Planning Worksheet (SPW).

(10) Matching GBL Closeout Card(s), (ZEN) will be pulled from the suspense file.

(11) SPW will be screened and determination made as to type of card(s) required to close out file.

(a) When all lines of the Shipping Unit have been shipped or otherwise accounted for by other actions, one GBL Closeout Card will be prepared to close out the Shipment Unit File.

(b) When the Shipping Unit or a line item of the Shipping Unit is partially shipped one GBL Closeout Card will be prepared for each line item of the Shipping Unit.

(12) Prepare appropriate GBL Closeout Card(s) in the format outlined in appendix B-128. Data for applicable fields will be entered as indicated on the SPW. Ensure that Delay Reason/Type of Hold Codes are provided when applicable. Submit card(s) via keypunch to Office of Data Systems for processing to applicable programs(s) (appendix D-31).

(13) Procedure for processing computer rejects of ZEN cards are outlined in appendix E-128 V.

b. The MRO Force Close Card will:

(1) Be used to "force close" the Shipment Unit File and MRO History records of those MRO received and recorded but cannot be located or confirmed thereafter through positive supply actions(s). When research fails to produce the transaction, this is a method of clearing/closing the computer record.

(2) Prepare a coding sheet for each line to be "force closed."

(3) Be in accordance with the format outlined in appendix B-128, paragraph 3c.

(4) Contains Action Code GX, appendix A-42 in pos. 79-80.

NOTE: Line "force closed" will be recorded by MIS as a late shipment when history record is complete. Valid weight and cube, if present in record, will not be overlayed with 0001.

c. The GBL Closeout Card will:

(1) Be used in conjunction with the following action codes in pos. 79-80 to initiate computer processes as follows:

ACTION CODE	EXPLANATION
GQ	Request output of F-138 sequenced as per option 2, reference appendix B-128
GR	Account for a GBL number not utilized in MOWASP by clearing it from the GBL register.

ACTION CODE	EXPLANATION
GW	Request output of F-138 sequenced as per option 1, reference appendix B-128
GY	Close open block of GBLs.

(2) Prepare appropriate GBL Closeout Card(s) in the format outlined in appendix B-128. Data for applicable fields will be entered as indicated. Submit card(s) via keypunch to ODS for processing to applicable program.

5. TIME STANDARDS FOR DISTRIBUTION OF STATUS

ZEN cards will be processed to assure Shipment Status/Materiel Release Order Confirmation will be dispatched within the time-frames prescribed below:

a. Twenty-four hours after shipment (i.e., release to carrier) for PD 01-03 documents.

b. Forty-eight hours after shipment for PD 04-08 documents.

c. Three working days after shipment for PD 09-15.

APPENDIX E-128 V

GOVERNMENT BILL OF LADING CLOSEOUT/MRO FORCE CLOSE CARD VIOLATIONS

1. INPUT DOCUMENT

Appendix B-128, Government Bill of Lading Closeout/MRO Force Close Card, DIC ZEN.

2. INPUT TO PROCEDURE DECISION CHART

Appendix D-31

3. PURPOSE, CONTENTS AND RESPONSIBILITIES

This appendix provides instructions for the research, correction, and reentry of Government Bill of Lading Closeout/MRO Force Close cards which have been rejected from computer processing. The Shipping Documentation Branch is responsible for corrections and reentry of cards. Reasons for computer rejection are as follows:

VIOLATION REASON CODE	DEFINITION
AS	Quantity invalid.
CF	Action Code invalid (appendix A-42).
D9	Control number invalid.
E2	ZEN card with GS Action Code entered for Shipment Unit or line item(s) not totally offered to transportation.
E3	Transportation Control Number (TCN) invalid.
IU	Shipment Unit control number invalid.
JB	Mode of Shipment Code invalid (appendix A-17).
JD	Secondary mode code invalid.
JE	Shipment Unit line item number invalid.
KA	Input to Shipment Unit File unmatched.
LH	Export Destination Code invalid.
LI	State Code invalid.
LX	Control number indicator invalid.

VIOLATION REASON CODE	DEFINITION
LZ	Bill of Lading number or parcel post registration number invalid.
MA	Lines not ready to be shipped.
MM	Force Close indicator invalid.
Q6	Attempt to Force Close a record with cancellation flag in the SU File.
RC	Release indicator/reason for GBL clearance invalid.
TA	Fund appropriation invalid.
TC	Transportation cost invalid.
ZV	TCN partial number invalid.

4. PROCESSING/RESEARCH INSTRUCTIONS

a. To identify errors in the input document (ZEN card) a Violation Printout, appendix F-85 will be received by the Shipping Documentation Branch.

b. Violation Printout, appendix F-85, will show an asterisk under each card column of the input image which is to be corrected. If the input fields are all valid, but the input does not match a record, no asterisks will appear. However, the appropriate VRCs will appear in the data line containing the input image.

c. Multiple violations may be shown, ensure all errors are corrected prior to reentry.

d. The following rejects may be received during processing of the GBL Closeout Card, DIC ZEN, appendix D-31. Processing and explanation of the error and what action to take are outlined below:

(1) VIOLATION REASON CODE AS.

This code indicates that the quantity field entries, pos. 21-25, is other than numeric or quantity does not match Shipment Unit File record. Match input data with SPW for correct entries.

(2) VIOLATION REASON CODE CF.

This code indicates that the action code for this process, pos. 79-30, is in error. Check input image on F-85 report and entries on the SPW to verify appropriate action code to be utilized as follows (appendix A-42):

ACTION CODE	DEFINITION
GQ	Request output of F-138 report data sequence option 2.
GR	Account for GBL number not utilized in MOWASP.
GS	Closeout items offered to transportation by Shipment Unit or line item number.
GT	Closeout items by line item number whether offered to transportation or not.
GW	Request output of F-138 report data sequence option 1.
GX	Force Close a Materiel Release Order.
GY	Close open block of GBLs.
GZ	Closeout item by line item number; do not open new GBL block.

(3) VIOLATION REASON CODE D9.

This code indicates that the document control number is blank or other than 1 or 2. Determine origin of input image on F-85 report and enter correct number accordingly.

(4) VIOLATION REASON CODE E2.

This code indicates that the line item has not been offered to Transportation and will not process when used with Action Code GS, pos. 79-80. Check input image on the F-85 report and verify correct action to be taken from data entries on the SPW.

(5) VIOLATION REASON CODE E3.

This code indicates that the Transportation Control Number (TCN) is other than alpha/numeric, contains special characters, or all zeros. Check input image on the F-85 report. Check SPW for correct entry.

(6) VIOLATION REASON CODE IU.

This code indicates that the Shipment Unit Number field, pos. 8-14, is other than numeric or is blank. Check input image on F-85 report for alpha or blank entries. Check SPW for correct Shipment Unit Number.

(7) VIOLATION REASON CODE JB.

This code indicates that the Mode of Shipment Code, pos. 47, is erroneous or blank. Check input image on F-85 report, verify entry with SPW. Correct as shown on SPW and verify code is valid as shown in Mode of Shipment Codes, appendix A-17.

(8) VIOLATION REASON CODE JD.

This code indicates that the Secondary Mode Code entered in pos. 7 is not in accordance with appendix A-17. Check input image on F-85 report and verify entries as shown on SPW (appendix C-19).

(9) VIOLATION REASON CODE JE.

This code indicates that the is other than numeric. Check input image on F-85 report for alpha entries. Check SPW for correct Shipment Unit Line Item Number.

(10) VIOLATION REASON CODE KA.

This code indicates that the input document entries, pos. 8-14 and/or pos. 15-18, do not match data in the Shipment Unit File. Check input image on F-85 report and verify entries as shown with data on the SPW. Correct entries for Shipment Unit Number or Shipment Unit Line Item Number as applicable.

(11) VIOLATION REASON CODE LH.

This code indicates that the Export Destination Code entered in pos. 4 is not in accordance with appendix A-79. Check input image in F-85 report and verify entries as shown on request for F-138.

(12) VIOLATION REASON CODE LI.

This code indicates that the State Code entered in pos. 5-6 is not in accordance with appendix A-80. Check input image on F-85 report and verify entries as shown on request for F-138.

(13) VIOLATION REASON CODE LX.

This code indicates that the number control indicator in pos. 48 is not an alpha other than O. Check input image on F-85 report and verify entries with data on SPW.

(14) VIOLATION REASON CODE LZ.

This code indicates that the Bill of Lading Number is invalid or that the Parcel Post registration number, pos. 49-56, is invalid. Check input image on F-85 report to determine error. Check SPW or Parcel Post register for correct entry.

(15) VIOLATION REASON CODE MA.

This code indicates that the materiel requested is not ready to be shipped. Verify reason why materiel is not ready for shipment.

(16) VIOLATION REASON CODE MM.

This code indicates that the Force Close Indicator was blank or other than HF. Check input image on F-85 report and determine error.

(17) VIOLATION REASON CODE Q6.

This code indicates an attempt to force close a record in the SU File, when the record already contained a cancellation flag. Check for receipt of appendix F-69, Notice of Cancellation Request. Take action to complete the transaction as directed in appendix E-005 P.

(18) VIOLATION REASON CODE RC.

This code indicates that the Release Indicator/Reason for GBL Clearance entered in pos. 29 is other than numeric 1, 2, or 3. Check input image on F-85 report and verify entries as shown on SPW.

(19) VIOLATION REASON CODE TA.

This code indicates that the Fund Appropriation entered in pos. 57-58 is not in accordance with appendix A-93. Check input image on F-85 report and verify entries as shown on SPW.

(20) VIOLATION REASON CODE TC.

This code indicates that the Transportation Cost entered in pos. 59-65 was not all numeric, or did not contain an R in pos. 59 with a zero in pos. 60 and numerics in 61-65. Check input image on F-85 report and verify entries with data on SPW.

(21) VIOLATION REASON CODE ZV.

This code indicates that the TCN Partial Number entered in pos. 46 is numeric. Check input image on F-85 report and verify entries with data on SPW.

e. Shipping Documentation Branch will prepare and submit a ZBM, Inquiry Card, Action Code DN in the format prescribed by appendix B-99 to obtain shipping data for individual lines of a Shipping Unit or for an entire Shipping Unit. The inquiry answer will be received on appendix F-40 and data entries will be utilized for reentry of rejected ZEN cards as necessary.

5. REENTRY INSTRUCTIONS

a. When the correct entry has been determined, annotate the corrected data directly below the erroneous field on the F-85 report using ink or a distinct colored pencil.

b. Verify that all violations have been corrected on the F-85 report.

c. Forward the annotated Violation Printout, appendix F-85 to the Office of Data Systems via keypunch services, for reentry into the applicable process.

APPENDIX E-129 P

ACTIVITY ADDRESS FILE

1. PURPOSE

This procedure describes the file maintenance activities necessary to maintain the Activity Address File.

2. APPENDICES USED IN THIS PROCESS

a. Appendix A-43

b. Appendix A-65

c. Appendix A-80

d. Appendix A-82

e. Appendix A-96

f. Appendix B-126

g. Appendix B-127

h. Appendix B-129

i. Appendix B-160

j. Appendix B-176

k. Appendix B-177

l. Appendix D-96

m. Appendix F-84

n. Appendix F-85

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Directorate of Storage and Transportation.

4. PROCEDURES/INSTRUCTIONS

a. General

(1) This procedure provides instructions for accomplishing all Activity Address File maintenance.

(2) Chapter 2 of this manual describes the use and content of the Activity Address File.

b. CRT Initialization.

(1) To initiate the program key in $$UWSH05 and press the enter key. The CRT will be dedicated to AAC file maintenance until another $$ entry is made.

(2) This input will result in a display of the file maintenance document identifiers. See figure 1 below for example.

c. Select the particular document identifier and key it in and press Enter. Input of this transaction will result in one of the following displays.

(1) ZGP - Activity Address Local Data Changes (additions and changes). See figure 2 below for example.

(2) ZGR - Activity Address Local Data Changes (deletions). See figure 3 below for example.

(3) MA1 - Military Assistance Program Address Directory (add). See figure 4 below for example.

(4) MA2 - Military Assistance Program Address Director (change). See figure 5 below for example

(5) MA3 - Military Assistance Program Address Directory (delete). See figure 6 below for example.

(6) TA1 - Activity Address Directory Card (add). See figure 7 below for example.

(7) TA3 - Activity Address Directory Card (change). See figure 8 below for example.

(8) TA4 - Activity Address Directory Card (delete). See figure 9 below for example.

(9) ZNZ - Activity Address Individual Line (change). See figure 13 below for example.

(10) ZVD - Freight Destination Address Directory Card. See figure 10 below for example.

(11) ZVE - Special Delivery Instruction Card. See figure 11 below for example.

(12) ZVE - Activity Address Individual Line Change. See figure 13 below for example.

d. File Maintenance Preparation.

All file maintenance transactions can be accomplished via CRT as specified in paragraphs 4b and c above, or via card format.

(1) ZGP - Activity Address Local Data Changes (add and changes).

(a) This transaction is used to add or change locally developed shipment planning data relating to Activity Address Codes and to provide DLA common data elements developed by DGSC.

(b) Appendix B-126 specifies the data which must be entered in the various fields of the card format. This same criteria applies for the CRT input.

(c) This transaction is really three transactions in one.

1. Establishment of a Destination Cross-Reference (DCR). This entry establishes a reference in the Activity Address record which indicates that shipment planning data and GBL addresses for this Activity Address Code are located on the Destination Activity Address Code record. This input only allows entry of data elements contained in the first line of the CRT display up to and including Mode Restriction (MR). This technique is used when there are several Consignee Codes located at one destination. Development of Destination AACs and the providing of DCRs is accomplished by DGSC.

2. Establishment of shipment planning data for activities located in the CONUS or Canada. Input data indicated in first line of CRT display and second line under CONUS planning data in accordance with appendix B-126. DCR field must be left blank.

3. Establishment of shipment planning data for overseas activities. Input data indicated in first line of CRT display and second line under overseas planning data in accordance with appendix B-126.

(2) ZGR - Activity Address Local Data Changes (deletes).

(a) This transaction is used to delete locally developed and DLA common shipment planning data.

(b) Enter the Type Action Code 1 for CONUS activities and 2 for overseas activities, enter the effective date of the change, and fill the fields which are to be deleted with 9s.

(3) MA1, MA2, and MA3 - Military Assistance Program Address Directory Transactions.

(a) These transactions are to correct original transactions transceived by the Defense Automated Addressing System (DAAS) which rejected for input errors and appear on the Violation Reject Report, F-85.

(b) Appendix B-127 specifies data which must be entered in the various fields of the card formats. This same criteria applies for the CRT input.

(c) Entry of Deletion Date TMDTE is only required for Type Address Code (TAC) 9. The program will automatically build a TA4 deletion transaction which will be passed to a recycle tape and processed on the date indicated as TMDTE.

(4) TA1, TA3, and TA4 - Activity.

(a) These transactions are to correct original transactions transceived by DAAS which rejected for input errors and appear on the Violation Reject Report, F-85. They are also used to establish locally developed Type Address Codes 1, 2, and 8 for special project addresses.

(b) Appendix B-129 specifies data which must be entered in the various fields of the card formats. This same criteria applies for the CRT input.

(c) Input of Special Pack Indicator, SPI, Control List Indicator, (CLI), and Termination Date, TMDTE, are only required for processing Type Address Code 8 for establishing project name and description. Project name can not exceed 20 positions and project description cannot exceed 25 positions. If the project does not have a specific termination date, enter all zeros for TMDTE. The program will build a TA4 deletion transaction for the project. This transaction will be passed to a recycle tape and processed on the date indicated as TMDTE.

(5) ZVD - Freight Destination Address Directory Card.

(a) This transaction establishes or deletes Government Bills of Lading (GBL) Ship To Addresses and GBL Destination Addresses. These addresses may be established against any AAC record contained in the Activity Address File that contains a Destination Cross-Reference value of MASTER or blank. These addresses are used by the MOFAST GBL preparation programs and are provided to all DLA shipping activities by DGSC via AUTODIN. Local input will only be made to correct rejects which appear on the F-85 Violation reject report. This transaction is also used to establish POE and POD TAC 2 freight addresses.

(b) Appendix B-176 specifies data which must be entered in the various fields of the card formats. This same criteria applies for the CRT input.

(c) To delete any of the above addresses, enter only the first line of data on the CRT display with an X in the DELETE FLAG. When adding transactions the DELETE FLAG is left blank.

(d) To delete the entire AAC record enter only the first line of data on the CRT display with an F in the DELETE FLAG.

(6) ZVE - Special Delivery Instruction Card.

(a) This transaction for GBL action establishes or deletes special delivery instructions destination addresses. These instructions are used by MOFAST GBL preparation programs and are provided to all DLA shipping activities by DGSC via AUTODIN. Local input will only be made to correct rejects which appear on the F-85 Violation Reject report.

(b) Appendix B-177 specifies data which must be entered in the various fields of the card formats. This same criteria applies for the CRT input.

(c) To delete special instructions, enter only the first line of data on the CRT display with an X in the DELETE FLAG. When adding special instructions the DELETE FLAG is left blank.

(7) ZNZ - Activity Address Individual Line Change.

(a) This transaction is used to update address records which are on the file. This change updates the individual line indicated by the line number. This transaction is used for all types of Address Codes except 8 and 9.

(b) Appendix B-160 specifies data which must be entered in the various fields of the card format. This same criteria applies for the CRT input.

e. File Maintenance Input.

(1) File maintenance transactions prepared on cards must be taken to the Office of Data Systems for input through the entry system.

(2) After entering necessary data on the CRT display, press the ENTER key. Successful input will result in one of the following messages to be displayed at the bottom of the CRT display.

UPDATE COMPLETED ENTER
THE NEXT DIC FORMAT
REQUIRED XXX
or
TRANS WAS EDITED AND
RECYCLED DUE TO FUTURE
EFF DATE ENTER THE NEXT
DIC FORMAT REQUIRED XXX
or
UPDATE COMPLETED--AAC WILL
DELETE NEXT BATCH CYCLE ENTER
THE NEXT DIC FORMAT REQUIRED

NOTE 1: After successful processing and receiving one of the update complete messages the operator has the option of reusing the previous DIC display or entering a new DIC.

NOTE 2: On all DIC displays except ZGP and ZGR the input data from the previous transaction will be blanked out when one of the above messages is displayed.

NOTE 3: On the ZGP and ZGR displays the input data from the previous transaction will remain displayed. The operator will need to alter only the data fields that require change for the next transaction.

(3) All successful update transactions will be printed on the Activity Address Record Listing, F-84, section 2. This report includes file maintenance transactions which were received via local input and AUTODIN input.

f. Error Messages/Actions.

(1) Rejects from local card input and AUTODIN input will appear on the Violation Reject Report, F-85. The violated fields will be underscored with asterisks and the Violation Reason Codes will be listed to the right of the transaction. Review this listing daily and correct through CRT or card input.

(2) Rejects from CRT input are displayed immediately on the screen. The original input is displayed with a message at the top of the screen, INPUT ERRORS CORRECT AND RETRY. The fields which have violated will have the Violation Reject Code displayed below them. If address lines are in error the Violation Reject Code will appear to the right of the address lines, see figure 12 below for example. Correct the data fields which are in error and press the enter key. Successful correction will result in a message, reference paragraphs 4e(2)(a) and (b) above. If additional errors are detected a new error display will be provided.

(3) Violation Reject Codes pertaining to Address File Maintenance.

VRC	REASON	DIC
AA	Document Identifier Code invalid.	ZVD, ZVE
B6	Parcel Post Zone Code invalid.	ZGP
B8	POE/POD or DCR invalid or not on file.	ZGP, MA1, MA2, TA1, TA2
CF	Action Code invalid or blank.	ZGP, ZGR
D4	SPLC invalid.	ZGP
E4	Duplicate input.	TA1, MA1
EV	BBP invalid.	TA1
GB	Type Address Code invalid or blank.	ZVD, ZVE, ZNY
HI	Cards 2-7 violate because of card 1 violation.	TA1, TA3, MA1, MA2

VRC	REASON	DIC
IJ	Special Pack Indicator invalid.	TA1, TA2
IK	Control List Indicator invalid.	TA1, TA2
JF	Geographical Area Code invalid.	ZGP
JS	Geographical Sub-Area Code invalid.	ZGP
KB	Address File identifier invalid or blank.	MA1, MA2, MA3
KC	Freight Forwarder Location Code invalid.	MA1, MA2
KH	MAPAC Special Instruction Indicator Code invalid.	MA1, MA2
KJ	Cross-Reference MAPAC not on file.	MA1, MA2
KN	Deletion date invalid.	MA1, MA2
KO	MAPAC invalid or blank.	MA1
KZ	Effective date invalid or blank.	ZGP, ZGR, TA1, TA3, TA4, MA1, MA2, MA3
LI	State Code invalid.	ZGP, ZGR
LY	Address Code not on file.	ZVD, ZVE, ZGR, TA2, TA3, ZNZ
MD	Coded address blank or invalid.	TA1
PA	Descriptive data missing.	MA1, MA2, TA1, TA3
PB	Card Code invalid.	ZVD, MA2, TA1, TA3, TA4, ZVE, ZNZ
RZ	Consignee invalid.	ZVD, ZVE
ZI	Government Bill of Lading Office Code invalid.	ZGP
ZJ	Activity address record contains DCR.	ZVD, ZVE
ZN	Mode Restriction Code invalid.	ZGP

VRC	REASON	DIC
ZU	DISCOMSS Bank Code invalid.	ZGP
3G	UPS/FEC Service Code invalid.	ZGP
3H	SPLC in A, B, C, type address blank or invalid.	ZVD
3J	Project Code not on project table indicating Special Address.	TA1
3Z	BBP not on file.	TA1, TA3
4B	Type Address Code not on file.	ZVD, ZVE, MA2, MA3, TA3, TA4 ZNZ
8K	Invalid Consolidated Pack Indicator.	ZGP, ZGR
8L	Invalid data.	ZGP, ZGR

g. Special Notes:

(1) The only way to delete an AAC record in total is by processing a TA4 or MA3 transaction.

(2) The following are definitions of abbreviations used on CRT displays.

AAC - Activity Address Code
APOD - Aerial Port of Debarkation
APOE - Aerial Port of Embarkation
BBP - Breakbulk Point
BG - SEAVAN Booking Group
CLI - Control List Indicator (Project)
CP - Consolidated Pack Indicator
DBC - DICOMSS Bank Code
DCR - Destination Cross Reference
DIC - Document Identifier Code
EFDTE - Effective Date
FFLC - Freight Forwarder Location Code
FID - Address File Identifier (FMS/Grant Aid)
GA - Geographical Area Code
GBLO - Government Bill of Lading Office Code
MR - Mode Restriction Code
P/P - Parcel Post Zone Code
SE - SEAVAN Indicator
SII - Special Instruction Indicator (FMS/Grant Aid)
SPI - Special Pack Indicator (Project)
SPLC - Standard Point Location Code
ST - State Code
ST NR - SEAVAN Stop Number

TA - Type Action Code
TAC - Type Address Code
TT - Transit Time
TRM - CONUS Military Air Terminal Identifier
UF - United Parcel/SPA Service Code
WPOD - Water Port of Debarkation
WPOE - Water Port of Embarkation

(3) Master Records. These records are AACs which have other AACs pointing to them (via the Destination Cross-Reference) for shipment planning data and Government Bill of Lading data. The file maintenance program automatically places the word MASTER in the DCR field of any record which has another AAC pointing to it. If a TA4 or MA3 is input to delete an AAC designated as MASTER the program will select a new MASTER out of the group of AACs and will transfer the Government Bill of Lading addresses and shipment planning data to the new MASTER. The program will also update the DCR field in all related records with the new MASTER record.

(4) With the exception of the ZGP, ZGR, and ZNZ transactions, all transactions function as a complete overlay of input data.

(5) Input of ZVD. TAC A, B, and C addresses, reference appendix B-176, require the SPLC code to be entered in the last eight positions of the second address line as (999999). When processing this transaction by CRT input the SPLC can be entered immediately following address data in the second line as (999999).

APPENDIX E-130 P

INVENTORY CATEGORY CARD

1. PURPOSE

The Inventory Category Card, appendix B-130, DIC ZEP, is used to enter an Inventory Category Code in the locator file. This code indicates to the Physical Inventory Branch the frequency of inventory of the item.

2. APPENDICES USED IN THIS PROCESS

a. Appendix A-54, Inventory Category Codes.

b. Appendix B-130, Inventory Category Card, DIC ZEP.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Physical Inventory Branch, Directorate of Storage and Transportation.

4. PROCEDURES/INSTRUCTIONS

a. Periodically, DSCs code each NSN on the accountable records into the following categories:

CODE	DEFINITION
H	High dollar value items. Any item having three annual demands or more and an annual demand value of $4500.00 or more.
E	Critical and pilferable items. This includes security classified items, assemblages, serially-numbered items, and unclassified, but pilferable items.
T	Items with 40 or more annual demands and an annual dollar demand value of $1399.99 or less.
L	Items with three or more annual demands and an annual dollar demand value of between $1400.00 and $4499.99.
U	Sensitive items. This includes narcotics, precious metals, drug abuse items, and medicinal spirits.
O	All other items not included in one of the above groups.

b. DSCs will produce CK6 cards to the Item Data Bank to record the Inventory Category Codes. Item Data Bank will forward change to depots as normal changes to the Item Data Bank.

c. The defense depots will process ZEP cards to the computer to mark the locator records with the category code. For non-DLA items which are not updated by the Item Data Bank, any alpha or numeric code may be used except those shown in subparagraph a above or those assigned as Commodity Manager Codes in appendix A-44. Codes may be assigned locally to non-DLA items only. To process a locally assigned code, prepare input card in the format of appendix B-130 using DIC ZEP.

APPENDIX E-130 V

INVENTORY CATEGORY CARD VIOLATIONS

1. INPUT DOCUMENT

Appendix B-130, Inventory Category Card, DIC ZEP

2. INPUT TO PROCEDURE DECISION CHART

Appendix D-9

3. PURPOSE, CONTENTS AND RESPONSIBILITIES

This appendix provides instructions for the research, correction, and reentry of Inventory Category Cards which have been rejected from computer processing. Physical Inventory Branch is responsible for the correction of errors and the reentry of the card as required. Reason for rejection and element responsible for corrections are as follows:

VIOLATION REASON CODE	DEFINITION
AY	Invalid NSN.
LR	Invalid Inventory Category Code.

4. PROCESSING/RESEARCH INSTRUCTIONS

a. VIOLATION REASON CODE AY.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Violation Reason Code AY indicates that data in pos. 8-18 (NSN) did not contain all numeric characters.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Review the Violation Printout, F-85, to determine cause of reject. An asterisk (*) will appear below the data element in error on the input image.

(b) If it is obvious that the NSN was erroneously punched in the wrong field position, such as 7-17 or 9-19, indicate correction on the F-85.

(c) If DIC in pos. 1-3 is ZEP, the input was locally prepared. Research source coding sheet to determine cause of reject.

b. VIOLATION REASON CODE LR.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Violation Reason Code LR indicates that an invalid Inventory Category Code was entered in pos. 72 or that pos. 72 was blank.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Review the Violation Printout, F-85, to determine cause of reject. An asterisk (*) will appear below the data element in error on the input image.

(b) If it is obvious that the Inventory Category Code was erroneously punched in the wrong field position, such as pos. 71 or 73, indicate correction on the F-85.

(c) If DIC in pos. 1-3 is ZEP, the input was locally prepared. Research source coding sheet to determine cause of reject.

5. REENTRY INSTRUCTIONS

a. When the correct entries have been determined, annotate the correction, on the F-85, directly below the proper field positions. (Field positions 8-18 for NSN or pos. 72 for sample Inventory Exception Code.) Use ink or colored pencil to make these annotations.

b. Forward the annotated Violation Printout through keypunch services to the Data Processing Element for reentry into the applicable process.

APPENDIX E-131 P

SATELLITE REPORT PRINTING SYSTEM

1. PURPOSE

This program controls the printing of the hard copy reports. From the display screen, the user can control forms selection, printer selection, prioritization and deletion of reports.

2. APPENDICES USED IN THIS PROCESS

None.

3. PROCEDURES/INSTRUCTIONS

a. CRT Initialization.

(1) Key in $$ UTOT63.

(2) Depress ENTER key. This will display the information panel.

(a) The Depot ID field must be entered.

(b) The printer name is optional. If entered all reports will be assigned to be printed on the printer name that was keyed in.

(3) Depress the ENTER key and the display of those reports that were generated in the batch run will be displayed as follows:

(a) CODE - This will be initialized with a space. Enter a P to request the report name. Enter a D to delete the report name. Enter a C to clear the previous code. (This must be used for reprinting a report.)

(b) PRINTER NAME - This field will be initialized to the printer name that was entered on the first display. The printer name can be entered to whatever printer device to which the operator desires the report to be printed.

(c) LINE COUNT - This field contains the number of lines to be printed for the report name.

(d) REPORT NAME - This field contains the identification of the report, i.e., UWF082P4 is the F-82 part 4 Report.

(e) FORM NAME - This field tells the operator what part paper or form the report is to be printed on.

(f) DATE - This field contains the date the report was generated.

(g) TIME - This field contains the time the report was generated.

(h) REMARKS - This field will contain blanks when the report has not been printed. A PRINTED remark will be displayed when the report has been requested for print. A DELETED remark will be displayed when the report has been deleted by the operator.

(i) RESTART PARAMETERS - This field is provided to reprint reports by selected keys. Once a report has been printed and it is desired to reprint only selected portions of the report, the report should be cleared and then printed again using the RESTART parameters. The parameters that will be used are: K2 "key" P=page count. Examples: During the printing of the DD Form 1348-1, the printer has a jam. The operator corrects the problem and continues the print. When the print is finished it is determined that page 00050A through 00055A need to be reprinted. The operator will clear the selected line on the panel for DD Form 1348-1, then the operator will put the code into the DD Form 1348-1 to the selected printer before depressing ENTER place the cursor in the REMARKS/RESTART parameters field and key in the following: K="00050A", P=5. This will cause the program to search for page 00050A and print 5 DD Forms 1348-1 starting at 00050A and ending at 00055A. If only one page was needed the page count should be P=1. All reports that need to be reprinted on selected keys should use the page count.

5. ERROR MESSAGES/ACTION

Messages will be displayed at the bottom of the panel. If an error is made, the cursor will return to the field where the invalid data was entered.

UT063-01-MODULE UTOT64 RETURNED THE FOLLOWING CODE: rrr ssssssss

Explanation: Subroutine UTOT64 returned a nonzero return code. rrr is the return code. ssssssss is the status code. Refer to DLAH 4730.1, Volume V, Part 8, Chapter 13, Section 7.4 (RETURN CODES) for an explanation of the return code.

System Action: The program is terminated.

User Response: Notify the System Management Office (Host Computer Site) of the error.

UTOT53-020UTOT620A - INVALID RETURN CODE: r, FUNCTION: f

Explanation: The DBDAM access method returned a code indicating that there is a problem. f was the function code used. Refer to DLAH 4730.1, Volume V, Part 8, Chapter 5, Section 5.8 (RETURN CODES) for an explanation of the return code.

System Action: The program is terminated.

User Response: Notify the System Management Office (Host Computer Site) of the error.

UTOT63-03-dsname CAN NOT BE LOCATED, RC=rrr

Explanation: The data set (dsname) could not be located in the catalog. rrr is the return code issued by the LOCATE MACRO. Refer to IBM publication OS/VS2 System Programming Library: Data Management (File No. S370-30, Order No. GC26-3830) for an explanation of the codes.

System Action: The program is terminated.

User Response: Notify the System Management Office (Host Computer Site) of the error.

UTOT63-04-dsname IS NOT ONLINE

Explanation: The volume containing data set (dsname) is not online to the teleprocessing system.

System Action: The program is terminated.

User Response: Notify the System Management Office (Host Computer Site) of the error.

UTOT63-05-dsname ALLOCATION, RC=rrr, EC=eeee, IC=iiii

Explanation: DYNAMIC ALLOCATION has issued a nonzero return code. dsname is the data set name. rrr is the return code. eeee is the error code. iiii is the information code. Refer to IBM publication OS/VS2 MVS System Programming Library: Job Management (File No. S370-36, Order No. GC28-0627) for an explanation of the codes.

System Action: The program is terminated.

User Response: Notify the Sytem Management Office (Host Computer Site) of the error.

UTOT63-06-dsname CAN NOT BE OBTAINED, RC=rrr

Explanation: The data set (dsname) could not be located on the volume. rrr is the return code issued by the OBTAIN MACRO. Refer to IBM publication OS/VS2 System Programming Library: Data Management (File No. GC26-3830) for an explanation of the codes.

System Action: The program is terminated.

User Response: Notify the System Management Office (Host Computer Site) of the error.

UTOT63-07-pppppppp IS AN INVALID NAME

Explanation: The printer name (pppppppp) is not defined in the teleprocessing system.

System Action: The entry is not accepted.

User Response: Correct the printer name and depress the ENTER key.

UTOT63-08-FORMS IDENTIFICATION ffff IS NOT DEFINED

Explanation: The forms identification (ffff) is not defined in the program.

System Action: The entry is not accepted.

User Response: Notify the System Management Office (Host Computer Site) of the error.

UTOT63-09-CHANNEL cc IS NOT DEFINED IN FORMS IDENTIFICATION ffff

Explanation: The forms identification (ffff) defined in the program does not have the channel (cc) specified.

System Action: The entry is not accepted.

User Response: Notify the System Management Office (Host Computer Site) of the error.

UTOT63-10-UTOT630A CAN NOT BE ALLOCATED, RC=rrr, EC=eeee, IC=iiii

Explanation: DYNAMIC ALLOCATION has issued a nonzero return code. UTOT630A is the JES SYSOUT DD statement name. rrr is the return code. eeee is the error code. iiii is the information code. Refer to IBM publication OS/VS2 MVS System Programming Library: Job Management (File No. S370-36, Order No. GC28-0627) for an explanation of the codes.

System Action: The program is terminated.

User Response: Notify the System Management Office (Host Computer Site) of the error.

UTOT63-11-INVALID DEPOT IDENTIFICATION

Explanation: The depot identification is not supported in the teleprocessing system.

System Action: The entry is not accepted.

User Response: Correct the depot identification and depress the ENTER key.

UTOT63-12-SYSTEM IS NOT AVAILABLE

Explanation: SRPS is not available in this copy of the teleprocessing system.

System Action: The entry is not accepted.

User Response: Verify that you are signed on to the correct system.

UTOT63-13-RESTART KEY NOT FOUND

Explanation: The RESTART key that was entered does not exist on the report.

System Action: The entry is not accepted.

User Response: Reenter a valid key and depress the enter key.

APPENDIX E-132 P

INVENTORY ANALYSIS REQUEST CARD

1. PURPOSE

This procedure describes the method used by Inventory Office to obtain a printout of appendix F-8, Locator Analysis Report, to assist in preparation of Annual Inventory Schedule, appendix C-67.

2. APPENDICES USED IN THIS PROCESS

a. Appendix B-132, Inventory Analysis Request Card

b. Appendix D-34, Procedure Decision Chart for Inventory Analysis Request Card

c. Appendix F-8, Locator Inventory Analysis Report

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Inventory Office, D/D

4. PROCEDURES/INSTRUCTIONS

a. Depots must prepare annual schedules for inventories IAW appendix C-67, and in order to prepare these schedules, a printout of appendix F-8, Locator Inventory Analysis Report is required.

b. Printout of appendix F-8 is obtained via card input of DIC ZEU, Inventory Analysis Request Card, appendix B-132.

c. The resulting printout, appendix F-8, will be utilized by D/D for preparing annual and quarterly Schedules of Inventories and for determination of workload, as described in appendix E-133 P.

d. Care should be exercised in preparation of appendix B-132 in entering the figures in pos. 6-9. This figure indicates the number of NSNs to be grouped within an FSC to facilitate the scheduling of workload into the Inventory Workload Bank. The beginning and ending NIIN will be shown.

APPENDIX E-132 V

INVENTORY ANALYSIS REQUEST CARD VIOLATIONS

1. INPUT DOCUMENT

Appendix B-132, Inventory Analysis Request Card, DIC ZEU

2. INPUT TO PROCEDURE DECISION CHART

Appendix D-34

3. PURPOSE, CONTENTS AND RESPONSIBLITIES

This appendix provides instructions for the research, correction, and reentry of Inventory Analysis Request Cards which have been rejected from the computer processing and appear on Violation Printout, appendix F-85. Physical Inventory Branch is responsible for the correction of the errors and the reentry of the card as required. Reasons for computer rejection are as follows:

VIOLATION REASON CODE	DEFINITION
W2	NIIN Parameters invalid.
CF	ACTION Code invalid.

4. PROCESSING/RESEARCH INSTRUCTIONS

a. VIOLATION REASON CODE W2.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Violation Reason Code W2 indicates that data in pos. 6-9 of the input card ZEU, appendix B-132, was invalid.

(2) PROCESSING/RESEARCH REQUIRED:

Review source coding sheet to determine number of NIINs originally desired. Prepare and process corrected ZEU card using valid number.

b. VIOLATION REASON CODE CF.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Violation Reason Code CF indicates that data in pos. 79-80 of the input card, ZEU, appendix B-132, was invalid.

(2) PROCESSING/RESEARCH REQUIRED:

Reference appendix B-132 for appropriate Action Code. Prepare and process corrected ZEU card using valid Action Code.

APPENDIX E-134 P

ACTIVITY ADDRESS FILE MASS UPDATE

1. PURPOSE

This procedure describes the actions necessary to accomplish a mass update to the Activity Address Records.

2. APPENDICES USED IN THIS PROCESS

a. Appendix B-117

b. Appendix D-183

c. Appendix F-84

d. Appendix F-85

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Directorate of Storage and Transportation.

4. PROCEDURES/INSTRUCTIONS

a. Preparation of the mass update transaction will be in accordance with appendix B-117. This transaction is designed to screen the Address File for all records which match the input parameters. When a match is found the record will be updated with data contained in the input data card.

b. A maximum of 50 transactions may be processed during a given cycle. Transactions must be prepared and taken to the Office of Data Systems for processing.

c. Careful analysis must be accomplished to assure that parameters which are entered are correct. Failure to do this may cause disasterous results. The following are a few examples of how this transaction may be used:

(1) Entry of the following data will result in all AAC records containing Air Port of Debarkation FRF to be updated with Air Port of Embarkation TIK.

(a) Parameter Card.

FIELD POSITION(S)	INSTRUCTIONS
1-3	Enter ZYP.
4-5	Enter 01.
6	Enter A.
7-43	Leave blank.
44-46	Enter FRF.
47-80	Leave blank.

(b) Update Data Card.

FIELD POSITION(S)	INSTRUCTIONS
1-3	Enter ZYP.
4-5	Enter 01.
6	Enter B.
7-40	Leave blank.
41-43	Enter TIK.
44-80	Leave blank.

(2) Entry of the following data elements will result in all AAC records containing Destination Cross-Reference Code 45789A to be updated to Destination Cross-Reference Code 52178L.

(a) Parameter Card.

FIELD POSITION(S)	INSTRUCTIONS
1-3	Enter ZYP.
4-5	Enter 02.
6	Enter A.
7-12	Enter 45789A.
13-80	Leave blank.

(b) Update Data Card.

FIELD POSITION(S)	INSTRUCTIONS
1-3	Enter ZYP.
4-5	Enter 02.
6	Enter B.
7-12	Enter 52178L.
13-80	Leave blank.

d. All validation rejects will be output on the F-85, Violation Reject report. Make necessary corrections and process in next mass update cycle.

e. All Activity Address Records which are changed will be output on the F-84, Activity Address Record Listing, section 2.

APPENDIX E-135 P

MIS DATA CHANGE CARD

1. PURPOSE

This appendix provides the procedural steps:

a. Required to reflect increase/decrease adjustment to recorded quantities on appendix F-9. Totals on file are not adjusted by input to the subject file.

b. Taken when collecting statistics for a special study.

2. APPENDICES USED IN THIS PROCESS

a. Appendix A-83

b. Appendix B-135

c. Appendix F-9

d. Appendix F-99

e. Miscellaneous manual records related to shipping and receiving functions or special studies.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

a. Primary responsibility for adjusting data to be printed on F-9 listings rests with the MOWASP Data Control Branch, Management Support Office, Directorate of Storage and Transportation.

b. Adjustments may be made by any Office or Directorate.

c. Project input may be arranged by any Directorate. Conflicting interests for file space, if any, will be resolved by the MOWASP Data Control Branch.

4. PROCEDURES/INSTRUCTIONS

a. Personnel assigned responsibility (paragraph 3) for the preparation of draft or finalized on/off-post statistical reports or studies prepare B-135, DIC ZUM as needed. Local code sheets, annotated copies of F-9, or study work sheets are authorized as source data for key punching the ZUM card.

b. Data input adjusting quantities on F-9 will be routed to the Office of Data Systems for processing through the Office of Comptroller.

c. Data input updating study will be routed to the Office of Data Systems by the Directorate responsible for the study.

best copy available

d. B-135, DIC ZUM cards, will be returned to the controlling Directorate for file and review in conjunction with F-9 update actions. See appendices E-036P/E-114 P.

e. B-135 cards will be destroyed on receipt of appendix F-99.

APPENDIX E-135 V

MIS DATA CHANGE CARD VIOLATIONS

1. INPUT DOCUMENT

Appendix B-135, Management Information System Card, DIC ZUM

2. INPUT TO PROCEDURE DECISION CHART

Appendix D-80

3. PURPOSE, CONTENTS AND RESPONSIBILITIES

a. Violation corrective actions for ZUM, B-135 card entries concerning adjustments to the F-9 listing will be corrected or coordinated by the Management Support Office, Directorate of Storage and Transportation. If required, other directorates will provide adjustment criteria and/or statistical data.

b. Violation corrective actions for ZUM, B-135 card processed for special depot projects will be returned from Office of Data Systems to the originating Directorate for corrective actions.

c. Computer rejections reflected on F-85 and organizational corrections include:

VIOLATION REASON CODE	DEFINITION
12	Invalid MIS Service Group Code.
AS	Quantity invalid.
DB	Remarks field blank.
DH	Priority Code invalid.
E5	Field that must have data contains blanks.
QK	MIS element number invalid.
T5	Attempt to adjust elements not on F-9 report.

4. PROCESSING/RESEARCH INSTRUCTIONS

a. Violation Reason Code 12.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Violation Reason Code 12 indicates that the MIS Manager Code pos. 12-13 is other than 01-16, excluding 9.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Review of F-85, 80-80 printout of the B-135 will provide the element number assigned to the original entry. Comparison with normal record data will indicate correct code for adjustment.

(b) The F-85 will be annotated with correct data, other violations corrected, if required, key punched and reprocessed to the Office of Data Systems.

b. VIOLATION REASON CODE AS.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Violation Reason Code AS indicates that quantity in pos. 15-23 is invalid.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Review of F-85, 80-80 printout of B-135 will provide the element number (pos. 7-12) and the remark (pos. 39-62) of the violated B-135. Reference to the document or the project designated in the remarks field will provide the source information used for the initial input. Review of source documentation will provide corrective information.

(b) The F-85 will be annotated with correct data, other violations corrected, if required, key punched and reprocessed to the Office of Data Systems.

c. VIOLATION REASON CODE DB.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Violation Reason Code DB indicates that data in pos. 39-62 (remarks field) is blank. When element number all 9s, there must be data in the remarks field.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Review of F-85, 80-80 printout of B-135 will provide the element number assigned for the initial entry (pos. 7-13). Comparison of this element number with those listed in A-83 will reveal the type of function expected to receive adjustment. File reviews of suspense actions in these functions (receipt, shipping, special project, and so on) should reveal documentation to reference in the remarks columns.

(b) The F-85 will be annotated with correct data, other violations corrected, if required, key punched and reprocessed to the Office of Data Systems.

d. VIOLATION REASON CODE DH.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Violation Reason Code DH indicates that the Priority Code, pos. 11, is other than 1, 2, or 3.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Review the F-85, 80-80 printout of the B-135 will indicate an entry of an invalid Priority Code. Reference to the manual record data will indicate correct code for adjustment.

(b) The F-85 will be annotated with correct data, other violations corrected, if required, key punched and reprocessed to the Office of Data Systems.

e. VIOLATION REASON CODE E5.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Violation Reason Code E5 indicates that a field (pos. 77-78) that must have data contains blanks. The Functional Routing Code (FRC) must be added to the B-135 card to identify onto the F-99 the originator of the adjustment.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Reference to the manual record data or contact with the responsible organization for the element number to be adjusted will provide identity (FRC) of the originator.

(b) The F-85 will be annotated with the FRC, other violations corrected, if required, key punched and reprocessed to the Office of Data Systems.

f. VIOLATION REASON CODE QK.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Violation Reason Code QK indicates that the element number in pos. 7-12 is not coded as prescribed in appendix A-83. First position of element number cannot be alphabetic. Element must be adjustable.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Review of F-85 80-80 printout of B-135 will provide the initial basis for input (remarks - pos. 39-62) while the quantity field will indicate plus or minus additions to the element concerned.

(b) The remark reference (e.g., requisition number, project number) will be reviewed and compared with A-83 to determine the correct element number.

(c) The F-85 will be annotated with correct data, other violations corrected, if required, key punched and reprocessed to the Office of Data Systems.

g. VIOLATION REASON CODE T5.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Violation Reason Code T5 indicates that the element number key punched in the initial B-135 card was not matched with a corresponding number in the computer file.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Comparison of the violated element number indicated on the F-85 with element numbers listed in appendix A-83 will reveal that the MIS element number in the B-135 card is not authorized, i.e., is not listed in A-83. Review the remarks field and the A-83 breakouts to annotate the F-85 with correct data.

(b) The F-85 will be annotated with correct data, other violations corrected, if required, key punched and reprocessed to the Office of Data Systems.

APPENDIX E-136 P

TRANSPORTATION CONTROL AND MOVEMENT DOCUMENT (DD FORM 1384)

1. FORM USED

Appendix C-48, Transportation Control and Movement Document (DD Form 1384).

2. REASON FOR PREPARATION

The Transportation Control and Movement Document (TCMD) is prepared and submitted when a SEAVAN shipment is released to the initial carrier or his agent. The TCMD signed by the carrier provides a receipt for the SEAVAN shipment.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation Office, Directorate of Storage and Transportation (DS/T).

4. PROCEDURES/INSTRUCTIONS FOR PREPARATION OF FORM

a. References.

(1) Military Sealift Command (MSC) Container Agreement and Rate Guide (RG-4).

(2) DoD 4500.32-R, Change 18.

NOTE: Contract of Carriage for SEAVAN Service. When a SEAVAN shipment is made under the MSC Container Agreement, which requires linehaul or drayage, the MSC Clearance/Shipping Order (MSC Form 4612/1) together with the DoD Ocean Manifest (DD Form 1385) constitutes the contract of carriage and incorporates all the terms of that agreement. Accordingly, the Government Bill of Lading (GBL) (SF 1103) is not required and will not be prepared or issued for any portion of the services provided under the MSC Container Agreement.

b. Sources of Information.

The TCMD is prepared from information obtained from the SEAVAN Consist (appendix F-62), the Shipment Planning Worksheet (appendix F-79), or the DoD Single Line Item Release/Receipt Document (DD Form 1348-1) accompanying the shipment.

c. Preparation of Form.

When a SEAVAN shipment is made under the MSC Container Agreement, the shipping activity will prepare a TCMD (receipt). The TCMD will contain the following information as a minimum:

(1) Consignor - Block 3.

(2) Point of Delivery to Carrier - Block 25a.

(3) Category of Cargo - Block 4.

(4) Port of Embarkation (POE) Block 6.

(5) Transportation Control Number (TCN) - Block 10.

(6) Carrier - Block 18.

(7) Container Number - Block 2.

(8) Container Owner - Block 21.

(9) Seal Number - Block 31.

(10) Date of Release to Carrier - Block 29.

d. Signature Requirements.

The TCMD will be signed by the initial carrier or his agent at the time the SEAVAN is release for shipment.

e. Distribution of Form.

The TCMD (DD Form 1384) is a standard seven part form. The carrier will be furnished a copy of the signed TCMD (receipt). The Transportation Office will maintain the required file(s) of TCMDs processed.

5. DISPOSITION OF FORM AFTER FINAL ACTION

The completed TCMD will be attached to and retained with corresponding shipping documents (i.e., DD Form 1348-1) until the basic document is destroyed under current records disposition procedure.

APPENDIX E-137 P

RESEARCHING LOST SHIPMENT DOCUMENTATION

1. PURPOSE

This procedure describes actions necessary to research lost shipment documentation when the MDT has passed and Shipping Division has not offered to Transportation or shipped Parcel Post and appears on the MRO Late in Process Report (F-44), when the line item appears overdue on the Transportation DTT Control Listing (F-87), or when the line item appears on the Warehouse PDT Control Listing (F-78).

2. APPENDICES USED IN THIS PROCESS

a. Appendix A-42

b. Appendix B-99

c. Appendix B-128

d. Appendix F-44

e. Appendix F-78

f. Appendix F-87

g. Appendix F-89

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Shipping Documentation Branch, Shipping Division and Commercial Traffic Branch, Transportation and Traffic Management Office, Directorate of Storage and Transportation.

4. PROCEDURES/INSTRUCTIONS

a. Shipping Documentation Branch.

Upon determining that an MRO has not been shipped or offered to Transportation and is past due initiate the following action:

(1) Secure an SU Line Item Inquiry Answer Report (F-40) through input of a ZBM (B-99) that portray the status of the line item and primary location for stock selection.

(2) Research area of prime location, packing area and assembly area.

(3) Check racks and other locations in the assembly/shipping area for packages that may still have shipping documentation attached.

(4) Check Parcel Post documents held in file for research of violations.

(5) Check cancellations for possibility of shipment being stopped and ZBM not cleared.

(6) Check violations listings in the event updating action violated that was not corrected and reentered.

b. Commercial Traffic Branch.

Upon determining that a line remaining on the Transportation DTT Control Listing (F-87) or Warehouse PDT Control Listing (F-78) is past due initiate the following action:

(1) Research all areas where GBLs are prepared in the event documentation has been misplaced or attached to other units through error.

(2) Determine if the line was included in a release size shipment for which a release had not been received.

(3) Review "Challenge File" in the event shipment was suspended pending a challenge reply.

(4) Review GBL File to determine if line had been shipped but not confirmed.

c. Upon completion of research take the following action:

(1) If line item value is less than $25.00:

(a) The MRO Force Close Card will be used to "force close" the Shipment Unit File and the MRO History record.

(b) Prepare a coding sheet for each line to be "force closed".

(c) Use the format outlined in appendix B-128, paragraph 3b. Must contain Action Code GX, in pos. 79-80.

(2) If line item value is over $25.00 and it is possible to contact consignee:

(a) When ascertained that materiel was received, secure sufficient information to prepare a confirmation.

(b) When discovered that materiel was not received, process line item as in subparagraph (1) above, and advise consignee to initiate requisition followup action.

NOTE: DSC will make decision as to reinstating requisition.

(3) After 90 days have passed and all efforts to confirm have been exhausted, process line item as in subparagraph (1) above.

(4) The HF indicator will identify in the History File items force closed by a purge.

d. The branch, which on review of the appendix F-44, determined a "forced close" action was required and initiated a "force close" input to close the computer record, will check the F-89 listing for the result of the transaction. The Physical Inventory Branch will use the appendix F-89 for the purpose of rectifying/evaluating inventory shortages.

5. DISPOSITION OF REPORT AFTER FINAL ACTION

Destroy F-89 reports for DoD activities 45 days after "force close" action and 45 days after "force close" action for MAP/FMS.

APPENDIX E-138 P

SPECIAL PROJECT MRO(S)

1. PURPOSE

This procedure describes the method of processing materiel release orders on special projects.

2. REFERENCES

a. Appendix B-66

b. Appendix B-129

c. Appendix C-11

d. Appendix D-96

e. Appendix E-129 P

f. Appendix F-4

3. RESPONSIBLE ORGANIZATION

Shipping Documentation Branch, Shipping Division, Directorate of Storage and Transportation.

4. PROCEDURES/INSTRUCTIONS

a. Project Processing:

(1) MROs containing Project Codes will be processed strictly in accordance with the assigned Priority Designator as prescribed in the UMMIPS and inferred/requested preferential treatment to the contrary will be disregarded. MROs with OSD/JCS Project Codes will be ranked above all other MROs with the same Priority Designator for processing purposes.

(2) Processing personnel will establish an active file of data involving any special handling requirements for special projects and maintain the project file as prescribed in appendix B-66. However, if it becomes necessary to manually handle each individual MRO for control or reporting purposes, the special project file should be coded (pos. 75 of appendix B-129) to produce the appendix F-4, Special Projects and FMS Case Control Listing, for each MRO pertaining to the project. This will facilitate finding the individual MRO in the output of DD Form 1348-1s.

b. Project Cancellations:

(1) Upon notification from DLA that a special project has been canceled and that in process MROs are not to be shipped, take the following action:

(2) Prepare appendix B-129 to print in-the-clear instructions of "Project Cancelled" and code to require an appendix F-4 output. Remove this control after 30 days have elapsed.

(3) Upon receipt of an appendix F-4, locate applicable MROs. Forward 1348-1s to the DSC for cancellation action under cover letter explaining that the project has been canceled.

c. Project Terminated:

(1) When the termination date is reached for a special project, unshipped MROs that have not been canceled by the DSC will be processed as Category A projects.

(2) Prepare appendix B-66 with Action Code EA to delete the special project from table 02.

APPENDIX E-139 P

NONADDRESSED OR TERMINATED ACCOUNT MRO(S)

1. PURPOSE

This procedure describes the method for manual processing of nonaddressed MROs or MROs containing terminated accounts.

2. APPENDICES USED IN THIS PROCESS

a. Appendix C-11

b. Appendix D-98

c. Appendix E-129

d. Appendix A-9

e. Appendix F-84

f. Appendix F-107

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Shipping Documentation Branch, Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. Processing personnel will, upon receipt of nonaddressed MROs, take the following actions:

(1) Screen the DoDAAD Handbook (DLAH 4000.25 D) and applicable Amendments thereto.

(a) If a good shipping address is listed for the account number, prepare a shipping label and process the MRO in the normal manner.

(b) If the Activity Address Code has been deleted, see F-84, prepare a DIC ZBM (Action Code DC). The computer will subsequently create a DIC AG6 with Status Code BQ and forward to the DSC.

(c) If the account number is not listed, contact the applicable Service Control Point for a shipping address.

(d) If a good shipping address is obtained, prepare a shipping label and process the MRO in the normal manner.

(e) Take action to file maintain the DoDAAD File with the applicable information obtained from subparagraphs (a) and (c) above, as prescribed in appendix E-129.

(2) If a good shipping address cannot be obtained from subparagraphs (a) and (c) above, take the following action:

(a) Check the Fund Code in pos. 52 and 53 of the MRO with the Fund Code assignment in appendix A-9.

(b) Contact the applicable disbursement officer as to the validity of the account number utilized in the MRO.

(c) If the account number is not valid, place MRO in DP status and return to the applicable DSC/ICP for cancellation action.

b. Receive F-107, report of MROs in DP status and retain pending followup action by the DSC/ICP.

APPENDIX E-140 P

DIRECT COMMISSARY SUPPORT SYSTEM (DICOMSS)

1. PURPOSE

a. This procedure outlines the various actions required for receiving and storing, Brand Name, Troop Issue, and Local Purchase items to specific overseas commissaries. It also provides instructions governing receipt and storage of tax free cigarettes, which require a high degree of protection, and the disposition of Condition Code L materiel. For instruction on shipping refer to SEAVAN Shipment Planning, appendix E-038 P and SEAVAN Shipment Planning, chapter 9 of this volume.

b. Local supplemental procedures necessary to meet the operational requirements unique to an individual depot are authorized providing they do not conflict with DLAM 4140.2, volume III, chapter 20; or DPSC Manual 4100.2; and the instructions provided therein.

2. APPENDICES/REFERENCES USED IN THIS PROCESS

a. DPSC Manual 4100.2

b. Chapter 9, SEAVAN Shipment Planning

c. Chapter 20, Direct Commissary Support System (DICOMSS)

3. RESPONSIBLE ORGANIZATIONAL ELEMENTS

a. Office of Data Systems (ODS).

b. Directorate of Storage and Transportation (DS/T).

(1) Commissary Support Division.

(2) Management Support Office (MSO).

(3) Receiving Division.

(4) Shipping Division.

(5) Transportation and Traffic Management Office.

(6) Warehousing Division.

4. PROCEDURES/INSTRUCTIONS

a. Shipment Planning Branch will:

(1) Receive three copies of the Commissary Support Cycle Planning Report, appendix F-73, from ODS. Report provides a summarization of lines, pieces, weight/cube, and Compatibility Code within consignee.

(2) Forward one copy to DPSC.

(3) Review report to determine discrepancies and/or missing commissaries and report same to the Commissary Support Division who in turn will notify DPSC.

(4) Review report to determine container requirements in coordination with the carrier to assure availability of equipment.

(5) Obtain SEAVAN releases from Military Traffic Management and Terminal Service (MTMTS).

b. Commissary Support Division will receive a copy of the Commissary Support Cycle Planning Report, appendix F-73, for review and utilization as a workload indicator.

c. ODS will:

(1) Receive from DPSC the Commissary Support Item Identification Card (DIC CKK), appendix B-15; for Brand Name, Local Purchase, and Troop Issue items. DICOMSS Type of Item Codes are contained in appendix A-31.

NOTE: The Emergency Item Locator Record Listing, appendix F-51, will contain the Type of Item Code, Compatibility Code, and Density Code for Troop Issue items under the Test Restorative Code heading. Violations from this input will be forwarded to the MOWASP Data Control Branch.

(2) Provide two copies of DICOMSS Locator Update Listing, appendix F-104, to the MOWASP Data Control Branch. Listing is generated automatically as a result of changes or additions to the file. The file may be queried by stock number through use of the Item Locator Record Inquiry Card (DIC ZBJ-A/C GA), appendix B-79. The DICOMSS Locator Inquiry Listing, appendix F-105, resultant from such query will be forwarded to the requester (FRC).

d. The MOWASP Data Control Branch will:

(1) Receive the Validation Reject Report, appendix F-85, from ODS and take immediate appropriate corrective actions. DIC CKK, appendix B-15, violations must be corrected and reentered prior to the next update and such action will be stringently controlled. DIC DU_, appendix B-18, Violations for DICOMSS NSNs must be corrected to ensure availability of DICOMSS unit price Comparative Data at time of receipt confirmation.

(2) Produce, in coordination with ODS, the DICOMSS Emergency Locator Listing, appendix F-106, through the input of a Locator Inquiry Card (DIC ZBJ-A/C GB). This listing is produced in three parts: Part I - Brand Name Items; Part II - Local Purchase Items; and Part III - Troop Issue Items; and is distributed as follows:

(a) Shipment Planning Branch (one copy).

(b) Security copy for emergency use (one copy).

(c) Commissary Support Division (one copy).

(d) Maintain one copy in a manner similar to the F-51 report.

(3) Review Troop Issue items (FSC 8900) on the Emergency Item Locator Record Listing, appendix F-51, to assure the presence of the Item and Compatibility Codes. Troop Issue items will be denoted by a "T" in the Item Code. Compatibility Codes will be entered in conjunction with the Shipment Planning Branch.

(4) Upon receipt of the DICOMSS Locator Update Listing, appendix F-104, take immediate action to review and complete missing data elements. Contact DPSC to resolve conflicts.

e. ODS will update the Prepositioned Materiel Receipt (PMR) File upon receipt of PMR Card (DIC DU_) from DPSC. This file, in addition to the Locator File, will be available for Type A Inquiry and production of the Receipt Control Document (RCD-1), appendix F-200.

f. Operations Branch, Receiving Division will:

(1) Process all DICOMSS materiel through the MOWASP System in the same manner as other DLA materiel. Quantity overages and/or damaged materiel will be accepted and processed IAW appendix E-150 P, Procedures for Preparation of Report of Item Discrepancy (ROID) (see DLAR 4140.55). Display resulting from a Type K or L Inquiry for Troop Issue, Brand Name, or Local Purchase, will contain, on the top of the CRT display, the Type of Item Code in-the-clear.

(2) Process all DICOMSS receipts to confirmation as expeditiously as possible, but not later than the fourth working day after receipt.

g. Receipt Documentation Distribution Element will:

(1) Followup on all receipts by noon of the fourth workday for receipt and/or location confirmations not received from the Commissary Support Division.

(2) Maintain a file of the Orders for Subsistence (DPSC Form 300-M), appendix C-51, received from DPSC. This file will be used when shipments arrive without a DPSC Form 300-M.

(3) Complete Type K or L response, ON-LINE RECEIVING PROCESSING - DWASP PROTOTYPE display provided in formats DIC ZV_ or ZX_, Receipt Confirmation - long or short. These displays are provided, in lieu of appendix F-200, RCD-1. The DIC ZV_/ZX_ confirmation display and input format has been revised for DICOMSS receipts. These special input screens now provide for display of the DICOMSS Unit Price (an added element of DICOMSS PMR data) and an input field for DICOMSS Variable Price Reductions (VPR). This DICOMSS VPR is a mandatory entry when the PMR reflects Management Code A (DICOMSS) or the NSN reflects alpha A, B, J, L or S. Display will be coded IAW appendix E-047 and E-108.

(4) Research and resolve unmatched D4S documents.

(5) Forward completed receiving document (i.e., DPSC Form 300-M) to remote terminal for entry IAW appendix E-194 and E-108 P.

NOTE: Damaged and/or discrepant materiel will be processed the same as other DLA materiel. For Condition Code L materiel, prepare a Classification Delete Card, DIC ZHW, to clear the Classification Suspense Report, appendix F-22. Violations occurring on any Receipt Documents (e.g., DU_s, ZV_s, ZX_s) will be corrected and reentered.

h. Commercial Traffic Branch, Transportation Office will forward one copy of all SF 363s, appendix C-37, indicating carrier discrepancy to DPSC.

i. Inspection Branch, Receiving Division will prepare and forward SF 364, a copy of the RCD, and DD Form 6, appendix C-7, indicating vendor discrepancy to the Quality Control Office for review and distribution.

j. Operations Branch, Receiving Division will, upon receipt of tax-free cigarettes, process the receiving document IAW current procedures and dispatch carrier with receiving documents directly to the secured storage area for unloading.

k. Warehousing Division (Secured Storage Area) will:

(1) Assure, upon arrival of carrier, that sufficient personnel are assigned to keep constant surveillance of the carrier and its contents until carrier is unloaded.

(2) Offload, tally-in, and release carrier. (Obtain signature of carrier agent to acknowledge damage to materiel and/or discrepancies in shipment.)

(3) Prepare and maintain a Transaction Record of Sensitive Items (DLA Form 539), appendix C-77, of all receipt, issue, adjustments, balances, and so forth.

l. Commissary Support Division will:

(1) Accomplish, upon receipt of materiel, the DPSC Form 300-M and Stow Action Document (SAD-2). Place a copy of the RCD-1 and SAD-2 in suspense. The Stow Action portion of the SAD-2 must be completed or an established location must be circled. When completing the SAD-2 Stow Input, the inspection date will be zero filled and the date of pack left blank. When materiel is received without the DPSC Form 300 or the PMRC, and acceptance has been directed by the DSC, prepare the normal Stow Input entries on the SAD-2, appendix F-202. In addition, the contract number (as shown on the carrier's freight bill) will be entered in the PIIN/Document Number block of the RCD-1 which will be forwarded to Receiving Documentation with other RCD-1 Forms. (See paragraph 3 below.) If DICOMSS Cycle Code extent option is exercised, enter the Cycle Code in the type of pack (TYP) field of the CRT display as the last position of the Location Code to which the materiel has been assigned.

NOTE: If Type K or L inquiry was involved in the confirmation process, a Materiel Movement Document (MMD) will be produced in lieu of the Storage Action Document, SAD-2. This MMD is essentially the same as the SAD-2, but due to the absence of the RCD-1, the MMD reflects: PIIN, SPIIN, CLIN, U/I, Quantity, overage Indicator, Weight and Type of Pack or Cycle Code, appendix F-202. It is also intended to serve as a location input coding form and validation requirements are identical to those related to SAD-Z processing.

(2) Affix, upon receipt of, the Storage Locator Identification Label, appendix C-104, to the related location and destroy suspense copy of the Stow Action Document, SAD-2. When stock is depleted, remove the C-104, annotate delete, and forward to the MOWASP Data Control Branch.

(3) Forward the completed SAD-2/RCD-1 and DPSC Form 300-M to the Receipt Documentation Branch not later than 1200 hours of the second working day after receipt of materiel.

(4) After receipt and while in store, materiel having concealed damage will be treated the same as other DLA items under MOWASP (adjust to Condition Code L, prepare Storage Quality Control Report (DD Form 1225), appendix C-5, in accordance with procedures contained in appendix E-160 P.

(5) Review daily Commissary Support Management Report, F-92, parts 4 and 5, to determine if stock needs to be rewarehoused on DICOMSS Cycle Code I (Residual) based on notification from DPSC, or DICOMSS MRO cancellations and followups.

(6) Prepare DIC CRS reversal when review of the F-92, part 4, reveals that the full quantity of the CRS is not available for transfer to residual (Cycle Code I). The DIC CRS reversal will be prepared manually by depot personnel following appendix B-27 format except:

(a) Enter S9S in pos. 4-6.

(b) Enter an X overpunch in pos. 25.

(c) Enter the quantity short in pos. 25-29 (this is the quantity difference between the original CRS quantity and the quantity available for transfer to residual).

(d) Enter RIC of the applicable DICOMSS depot in pos. 67-69.

(7) Conduct an investigation and the results of the investigation will be submitted to DPSC-SSN within 30 days of initiation of the DIC CRS reversal (see paragraph (6) above) when:

(a) The shortage involves tobacco products (FSG8975) regardless of dollar value.

(b) When the dollar value of the item short exceeds $500.00.

m. Receipt Documentation Distribution Element will:

(1) Process the RCC input to the remote terminal in sufficient time for input to locator update following the receipt confirmation in ODS.

(2) Contact DPSC when a "No PMRC No DPSC Form 300-M" condition exists upon receipt of a shipment to substantiate creditability of shipment.

(3) Retain completed contract files for DICOMSS items for three months after date of last receipt in completed contract file. Receipts for Brand Name and Local Purchase will be retained an additional three months in the records holding area. Telecon acceptance will be annotated on the reverse side of the carrier's freight bill, indicating the name of the individual directing acceptance, DPSC office symbol, telephone extension, date and time.

(4) Receive a weekly report of amended or canceled contracts from DPSC. Review contract files for Brand Name and Local Purchase items and annotate adjustments accordingly.

(5) Research and resolve invalid commissary receipts.

(6) Establish an informal document control register for reporting residual stock which will contain as a minimum: document number, stock number, quantity, and date. The document will be constructed as follows:

DLA13H

Last two positions of FY (i.e., 74), Z constant, Serial Number - starting with 0001 (start over when 9999 has been used).

(7) Assign, upon receipt of an IOM from the Commissary Support Division reporting residual (frustrated) stock, a document number, make a Type B Inquiry, and complete the ZX_ Receipt Document under current MOWASP procedures except as follows:

DICOMSS VPR	- Enter Unit Price or VPR, two whole numbers and five decimal positions.
Ownership/Purpose Code	- Constant A
Condition Code	- Constant A

n. Shipment Processing:

(1) Refer to chapter 9 and appendix E-038 P for procedures covering SEAVAN Shipment Planning of DICOMSS materiel.

(2) Condition Code L materiel returned to the contractor will be packed, marked and shipping documents completed in accordance with current procedures. Distribution of DD Form 1348-1 is as follows:

(a) Original - Shipping Documentation Branch.

(b) One copy - Receipt Documentation Branch.

(c) Three copies - Packing List.

(d) One copy - Quality Control Office.

APPENDIX E-143 P

ENTRY/EXIT EXCEPTION LIST

1. PURPOSE

To prescribe the procedure for processing the F-113, Entry/Exit List (Code C), including:

a. DZB or DZG transaction received from DSCs and ICPs.

b. ZBM, ZBP, or ZEN inputs which result in shipment status and there is no AUTODIN Routing Indicator data for the Requisitioner, Supplemental Addressee, and/or Service/distribution activity.

NOTE: The F-113 listing received as as result of ZF7 input violation (appendix D-62) are processed IAW appendix E-086 V, and F-113 listing resulting from ZF6 Input violation (appendix D-59) are processed IAW appendix E-060 V.

2. APPENDICES USED IN THIS PROCESS

a. Appendix B-10, Reject Transaction Card.

b. Appendix B-11, Storage Item Data Correction Card.

c. Appendix B-65, Service and Distribution/Indicator Card.

d. Appendix D-28, MRO Control and Status Request Card.

e. Appendix D-30, Shipment Unit Completion Card.

f. Appendix D-31, GBL Closeout Card.

g. Appendix D-75, Special Entry-Exit Print-punch.

h. Appendix E-060 P, Preparing Service and Distribution/AUTODIN RI Card.

i. Appendix F-113, Entry/Exit Exception List.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Original copy of F-113 to Communications Division, Directorate of Installation Services, copy to Shipping Division, copy to Commercial Traffic Branch, MOWASP Data Control Branch, DS/T. All recipients will review reject listing and take action to correct.

4. PROCEDURES/INSTRUCTIONS

a. Processing personnel will take the following action upon receipt of the F-113 for:

(1) Lack of Communication Routing Indicator in AUTODIN File for the Distribution Code Address reflected in pos. 30 and 54. Transmit an AS3 card IAW subparagraph b below, and update the AUTODIN Routing File IAW appendix E-060 P by input of a ZF6 (appendix B-65 format) to prevent future rejections.

(2) Lack of TAC Type 1 address in DoDAAD File for requisitioner, pos. 30-35. Transmit an AS1 card IAW subparagraph b below, and update the DoDAAD File IAW appendix E-129 P by input of TA1 Update Card (appendix B-129) to prevent future rejections.

(3) Lack of a TAC Type 1 address on file for the supplementary addressee. Transmit an AS2 card IAW subparagraph b below, and update the DoDAAD File IAW appendix E-129 P by input of TA1 Update Card (appendix B-129) to prevent future rejections.

(4) Lack of a Service and Distribution Code in AUTODIN File. Transmit AS_ card IAW subparagraph b below, and update the AUTODIN Routing File IAW appendix E-060 P by input of a ZF6 (appendix B-65) to prevent future rejections.

(5) Storage Item Data Correction Card, DIC DZB, received from DSCs and ICPs.

(a) Review printout of DIC DZB, noting action required as indicated in pos. 7, "Item Data Correction Code," appendix A-40.

(b) Prepare SIC document IAW appendix B-23 utilizing the appropriate DIC and Phrase Code to accomplish the correct change to the Locator File and output of appendix F-82 for processing IAW appendix E-023 P. RIC (From), pos. 67-69, appendix B-23, should read "SAB" to assume processing in MOWASP.

(6) Transaction Rejection Cards, DIC DZG, received from ICPs for manual review.

(a) Review erroneous data indicated by reject advice code (appendix A-41) pos. 79-80 to determine status of depot record.

(b) After error has been determined and corrected, retransmit under corrected/original DIC which was rejected.

(c) Transaction rejects received with Reject Advice Codes that research reveals to be erroneous will be returned offline indicating the Reject Code cited in the incoming transaction is <u>not in error</u> according to the recipient's records.

(d) Transaction Reject Cards may be received by mail. These will be interpreted and researched against the depot record and the corrected/original transaction will be prepared and returned in the same manner as in subparagraph (5)(a)2 above.

b. When the shipment priority is 1-8, convert the AS_ card to TWX and send to the addressee. When the priority is 9-20, mail the AS_ card to the addressee.

c. When it is determined that the rejected document represents a DoDAAD Update "Batch Control Narrative Card" inserted in the communication batch by the DAASO, processing personnel will review the narrative message(s) and when any specific batch of DoDAAD Update Cards is not received (i.e., batches 1, 2, and 4 for day 137 are received, but batch 3 of 4 is missing) will request the Digital Communication Branch to obtain a retransmission for processing.

d. Transactions listed on report with DIC TM_ and with matching punched card document will be forwarded to the Transportation Office, DS/T, for processing according to procedures of appendix E-005 P.

APPENDIX E-146 P

COMMUNICATION REJECTS LISTING

1. PURPOSE

This procedure describes the processing of the Communication Rejects Listing, appendix F-116 and related punched cards. This listing is prepared during the communication validation process of the Entry System (see appendix D-71) on receipt of erroneous AUTODIN messages or teletype formatted messages received via AUTODIN.

2. APPENDICES USED IN THIS PROCESS

a. Appendix F-116

b. All MILSTRIP/MILSTRAP card formats.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

The listing (and accompanying cards) will be used as a basis for contacting the Installation Services.

4. PROCEDURES/INSTRUCTIONS

The listing (and accompanying cards) will be used as a basis for contacting the sender for clarification, correction, or retransmission of an erroneous AUTODIN record or as the basis for contacting operating elements of the local activity for disposition of messages received via AUTODIN.

a. The Communication Rejects Listing, appendix F-116, may reflect the following in-the-clear reject messages:

COMM RI IN ERROR
ERROR-MULTI-CALL MSG
SUS CLASS MSG-CONSOLE MSG PRTD
DM-DISREGARD MSG
NO HEADER
HEADER BEFORE EXPECTED EOT
EOT NOT EQUAL TO HDR
RECORD COUNT IN ERROR
RECORD COUNT = 2
PILOT HDR
DUPLICATE MSG-NOT PROCESSED
TTY W/DP HDR
TTY W/TTY HDR

b. When appendix F-116 reflects the messages COMM RI IN ERROR or ERROR MULTI-CALL MSG, Communication Division personnel will contact the message originator (identified by the Station Serial Number and AUTODIN Routing Indicator) and explain that the message was received in error and suggest that the originator retransmmit to the correct addressee.

c. When appendix F-116 reflects the message SUS CLASS MSG-CONSOLE MSG PRTD, Communication Division personnel will determine whether or not the console operator on duty at the time of receipt contacted personnel cleared for access to classified information and initiated the Input Message Inquiry Card, DIC ZZB, appendix B-87, to determine contents of the suspected input message.

(1) When proper inquiry action has been initiated, no further action is required.

(2) When contents of the suspected input message have not been determined, notify the "properly cleared personnel" IAW local activity instructions and when required assist in preparation and processing of the inquiry action.

d. When appendix F-116 reflects the message DM-DISREGARD MSG, no further action is required.

e. When appendix F-116 reflects the messages NO HEADER, HEADER BEFORE EXPECTED EOT, EOT NOT EQUAL TO HDR, RECORD COUNT IN ERROR, or RECORD COUNT = 2, Communication Division personnel will contact the message originator and explain the circumstance of violation and request retransmission of a corrected message.

NOTE: The message HEADER BEFORE EXPECTED EOT may require reinput of a second complete message, i.e., that portion of reject starting at the second header line and continuing through the EOT record.

f. When appendix F-116 reflects the message PILOT HDR, only the Pilot Header Format record appears on the Communication Reject List; remaining portion of the input AUTODIN message has continued processing. No action is required.

g. When appendix F-116 reflects the message DUPLICATE MSG-NOT PROCESSED, Communication Division personnel will initiate an Input Message Inquiry Card, DIC ZZB, appendix B-87, to obtain a printout of the original message on file. On receipt of the printout, the two messages will be compared; and if identical, the duplicate (F-116) will be destroyed. When the two messages are not identical the Communications Division personnel will contact the message originator and request retransmission of the second message under a new date time group, month and year.

h. When appendix F-116 reflects the messages TTY W/DP HDR or TTY W/TTY HDR, Communication Division personnel will contact the local activity operating element (shipping, receiving, transportation) and determine disposition of the teletype received via AUTODIN.

APPENDIX E-147 P

INQUIRY TO THE RECEIVED/TRANSMITTED AUTODIN MESSAGE HISTORY TAPES

1. PURPOSE

This procedure describes the preparation and flow of the Input Message Inquiry Card, DIC ZZB, and the Output Message Inquiry Card, DIC ZZC, for inquiry into the Received (i.e., input) and/or Transmitted (i.e., output) AUTODIN Message History Tapes.

2. APPENDICES USED IN THIS PROCESS

a. Appendix B-87

b. Appendix B-88

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Communications Operations Branch, Office of Data Systems.

4. PROCEDURES/INSTRUCTIONS

a. As the need becomes apparent, as a result of receipt of a Communication Rejects Listing, appendix F-116; on receipt of a request for information or retransmission of an AUTODIN message or a receipt of an inquiry from external sources for specific information on a transmitted AUTODIN message, Inquiry Cards, DIC ZZB and ZZC, will be prepared by the Communications Operations Branch, Office of Data Systems. These documents will be prepared using the data elements and card formats reflected in appendices B-87 and B-88.

b. These inquiry cards may not be input directly into computer processing since the Received/Transmitted AUTODIN Message History Tapes are filed in the tape library. Input of these documents must be coordinated with the console operator on duty so that appropriate tapes may be located and mounted on the computer.

c. Further, when inquiry into the Received AUTODIN Message History Tape is being made in response to a SUSPECTED CLASSIFIED MESSAGE output over the console or an appendix F-116, all appropriate security measures should be taken in accordance with local activity procedures, to prevent compromise of classified information.

5. FLOW CHART

Not required.

APPENDIX E-149 V

DOCUMENT MODIFIER VIOLATIONS

1. INPUT DOCUMENT

Appendix B-4, Document Modifier, DIC AM_.

2. INPUT TO PROCEDURE DECISION CHART

Appendix D-90

3. PURPOSE, CONTENTS, AND RESPONSIBILITIES

This appendix provides instructions for research, correction, and reentry of Document Modifiers rejected from computer processing. The Shipping Documentation Branch, Shipping Division is responsible for the correction of errors and reentry of the card as required. Reason for computer rejection is as follows:

VIOLATION REASON CODE	DEFINITION
AB	Routing Identifier From invalid.

4. PROCESSING/RESEARCH INSTRUCTIONS

a. REASON FOR VIOLATION/ERROR CONDITION.

Violation Reason Code AB indicates a Document Modifier has been received with an invalid "FROM" Routing Identifier in pos. 67-69. (This violation is not suspended in the Cumulative Register.)

b. PROCESSING/RESEARCH REQUIRED.

Attempt to identify the applicable DSC/ICP that submitted the Document Modifier, through interrogation of the MRO Register/History.

(a) Prepare MRO Register/History Inquiry Card (appendix B-115 as outlined in appendix E-115 P, DIC ZCT).

(b) Forward Inquiry Card to Office of Data Processing via keypunch services or by use of remote entry devices, for mechanical processing.

(c) Receive MRO Inquiry Answer Listing (appendix F-67).

(d) Review listing (appendix F-67) to determine:

1. When MRO record open in Register/History matching Document Modifier, determine commodity manager and continue processing as outlined in paragraph 5 below.

2. When MRO record not available from Register/History or record has been closed (shipped/denied, etc.), disregard/discard the Document Modifier and the Violation Record.

5. REENTRY INSTRUCTIONS

Annotate the correction(s) on the F-85 listing directly below the erroneous field corresponding to the appropriate field positions using ink or a distinctive colored pencil. Prepare Document Modifier Card (appendix B-4). Forward to the Office of Data Systems, for reentry into the appropriate process.

NOTE: System will not process a Document Modifier to change MRO record in a data field other than Media and Status Code (pos. 7) Distribution Code (pos. 54-56) or Required Delivery Date (pos. 62-64).

APPENDIX E-150 P

REPORT OF DISCREPANCY (ROD)

1. FORM/REPORT USED

Appendix C-36, Report of Discrepancy (SF 364).

2. REASON/CRITERIA FOR PREPARATION

a. SF 364, Report of Discrepancy, will be prepared in accordance with DLAR 4140.55 in all instances when one or more of the following conditions exist:

(1) Shipping-Type (Item) Discrepancies.

(a) Shipments from DoD activities, GSA Supply Distribution Facilities, and Contractors/Manufactures or Vendors. (Shipments from contractors/manufacturers or vendors will be reported regardless of dollar value Discrepant Conditions identified below, to be reported when valued in excess of $50 per line item, will be reported when valued in excess of $25 per line item on shipments from DoD source of supply to customers outside of DoD and from a GSA Source of supply to DoD customers).

1. Shortages or overages valued in excess of $50 per line item, except classified or protected items which will be reported regardless of dollar value.

2. Erroneous materiel, unacceptable substitutes, or duplicate shipments, regardless of dollar value, are received.

3. Materiel received is valued in excess of $50 per line item from canceled (confirmed only) requisitions. A copy of the confirmation of cancellation is required.

4. The condition (DoD shipments only) of an item in excess of $50 per line item in value is found to be other than that shown on the shipping document, or in the case of subsistence, on supporting inspection/test certificates or records. See DoD 4140.17-M, Military Standard Requisitioning and Issue Procedures (MILSTRIP).

5. Materiel received is valued in excess of $50 per line item on which the shelf-life has expired and for subsistence, there is no indication the item has been inspected under shelf-life extension procedures.

6. Materiel, regardless of value, is shipped to the wrong activity.

7. Item technical data markings are missing and/or incomplete. (These are markings on or attached to item inside of container, when applicable, as for certain items of equipment.)

8. Supply documentation is missing/improperly prepared.

9. Items, valued in excess of $50 per line item, reported shipped by Parcel Post are not received or are received in a damaged condition.

10. Materiel received for repair has been stripped of parts or components (cannibalized including Basic Issue Items (BII)) without inventory manager authorization, regardless of dollar value.

11. Product quality deficiencies relative to Grant Aid shipments regardless of dollar value.

12. Repetitive discrepancies, regardless of dollar value, are observed or when any other condition of an item, not enumerated herein, unless excluded by paragraph I C, is detected at time of receipt.

(b) Materiel Returns. SF 364 will be submitted for discrepancies regardless of condition that exists in materiel return shipments (excess and redistributable materiel) from CONUS and overseas activities (including returns from FMS purchasers) when the dollar value is:

1. Equal to or greater than $100 per line item on shipments form DoD activities, and from FMS purchasers to DoD activities.

2. Greater than $25 per line item from civilian activities to DoD. (EXCEPTION FOR RETURNS BETWEEN U.S. ACTIVITIES: When the materiel return shipments are classified as unserviceable and uneconomically reparable upon receipt, the receiving activity may, if a mechanical reports capability exists, provide such reports to the shipping activity in lieu of SF 364. As a minimum, such reports will include materiel return document number, quantity and explanation of condition classification). Discrepancies pertaining to classified materiel or protected items will be reported on SF 364 regardless of dollar value or condition.

(c) Disposal Shipments. SF 364 will be submitted for discrepancies (as specified in subparagraph a) in shipments to and from Defense Property Disposal Activities when the dollar is equal to or greater than $100 per line item. (EXCEPTION: SF 364 will be submitted for shipments of pilferable/sensitive materiel regardless of dollar value).

(2) Packaging Discrepancies.

(a) Any unsatisfactory condition resulting from improper packaging which causes or renders the item, shipment, or package to be vulnerable to any loss, delay or damage when the estimated or actual cost of correction exceeds $50. This may include loss or damage to the item, shipment or package except when a report is otherwise required as prescribed in DLAR 4500.15.

(b) Packaging discrepancies resulting in damaged materiel which may endanger life, impair combat or deployment operations or affect other materiel will be reported immediately to the shipping activity, contracting office, and control point by the quickest communication medium to enable the shipper to take immediate corrective action. The formalized SF 364 will be transmitted by mail within 24 hours of the initial report.

(c) Improper identification of containers or items which require opening the container or results in improper storage of the materiel, regardless of cost.

(d) Any packaging discrepancy, regardless of cost, involving hazardous materiels, including improper identification markings of items, packs of unitized loads, regardless of whether damage or other unsatisfactory condition has resulted.

(e) Excessive packaging by contractors resulting in additional costs to the Government.

(f) Packaging discrepancies involving shipments of personal property not conforming to specifications. (Packaging discrepancy reports on personal property shipments will be prepared at ocean and air terminals only.)

(g) Packaging discrepancies resulting in delay or additional packaging costs at Consolidation and Containerization Points (CCPs). The activity responsible for operating the terminal or port of embarkation/debarkation will be responsible for the report preparation of discrepancies noted on shipments moving through the activity.

(h) Repetitive packaging discrepancies which impose a significant burden on receiving or transshipment activities.

b. Report of item discrepancy (SF 364) will be prepared within 15 days of detection.

3. RESPONSIBLE ORGANIZATIONAL ELEMENTS

a. Receipts Inspection Branch, Receiving Division, is responsible for initiating Report of Discrepancy for shipments received by the Depot, maintaining suspense file of RODs generated, and following-up with appropriate DSCs for disposition instructions.

b. Quality Control Division/Branch will receive, effect investigation, maintain controls (suspense), and report investigative results to the DSCs for all RODs received from customers against shipments made by the Depot.

c. Warehousing and Shipping Divisions will perform storage and shipping operations as required.

4. PROCEDURES/INSTRUCTIONS FOR PREPARATION OF FORM/REPORT

a. Source(s) of Information.

SF 364 is prepared from information obtained from the DoD Single Line Item Release/Receipt Document, DD Form 1348-1; DD Form 250; DD Form 1155; or the Shipping Document for GFM Turn-In, DD Form 1483; accompanying the materiel.

NOTE: For receipts moving on Government Bills of Lading only, the SF 364 will be prepared at the time of submission of a Materiel Receipt Card, DIC ZV_/ZW_, indicating Condition Code F, G, H, K, or L and Management Code Z. Appendix E-047 P outlines the processing materiel receipt transactions that will produce:

(1) A Materiel Receipt Card, DIC D4_/D6_, in accordance with appendix B-20/B-21.

(2) A partially punched Materiel Adjustment Card, DIC ZAC, in accordance with appendix B-22, less quantity and Condition Code.

b. Preparation of Form/Report.

Prepare SF 364 as follows:

BLOCK NUMBER	TITLE	INSTRUCTIONS
1	Date of Preparation	Report is prepared in sequence of year, month, day. This sequence should also be used in all date entries. For example, June 1, 1980, is written 80 JUNE 01, and November 9, 1980, is written 80 NOV 09.
2	Report Number	The country and record control number must be shown for Grant Aid as a part of the Report Number.
3	TO	Name, Address, ZIP Code, and Activity Address Code or Routing Identifier Code and attention symbol/code of action activity. When both shipping-type (item) discrepancies and packaging discrepancies are reported for the same item, enter "See item 15" and enter addresses and/or codes of both action activities in item 15.
4	FROM	FROM name, address, and ZIP Code of the reporting activity (consignee).
5a	Shipper's Name	Shipper's Name. Enter name and address of shipper (consignor) when different from item 3.
5b	Number and Date of Invoice	Enter number and date of vendor's invoice or shipper's bill number. Attach copy of SF 364. (Not applicable to packing discrepancies.)

BLOCK NUMBER	TITLE	INSTRUCTIONS
6	Transportation Document Number	Enter the type of transportation document, Government Bill of Lading (GBL), Commercial Bill of Lading (CBL), Manifest, Waybill, insured/certified parcel post number, or Transportation Control and Movement Document (TCMD) and the identifying number assigned to such document. This is a mandatory entry when shipment received was made via traceable means, e.g., GBL, CBL. Further, for shipment type (item) discrepancies include the following statement in item 12, "Shortage has been verified as not being transportation related." (For Grant Aid include a copy of the GBL/CBL if available.)
7a	Shipper's Number	Enter shipment number (when more than one shipment is made under a contract or requisition) and contract/document number (e.g., contract, purchase order).
7b	Office Administering Contract	Name, Address and ZIP Code of the Contract Administration Office which directed/arranged shipment.
8	Requisitioner's Number	Enter the requisitioning activity's number, e.g., requisition, purchase request. Entry of the applicable requisition document number is mandatory in all instances, even though a contract purchase order is involved.
9a	NSN/Part Number and Nomenclature	If item received is different than item shown on and shipping documents, show each item on a separate line.
9b	Unit of Issue	Show the unit of issue as billed or indicated on shipping document for each item listed in item 9. (Not applicable for packaging discrepancies.)
9c	Quantity Shipped/Billed	Quantity of item billed/shipped. When Discrepancy Code C-1 is applicable, enter the quantity and the Supply Condition Code (reference DoD 4140.17M, MILSTRIP, Chapter 3) of the item when shipped.

BLOCK NUMBER	TITLE	INSTRUCTIONS
		e.g., 980A as shown on shipping document, (Not applicable for packaging discrepancies.)
9d	Quantity Received	Enter quantity of item received.
10a	Discrepancy Quantity	Enter discrepant quantity. If Discrepancy Code C1 is applicable, enter the quantity and the Supply Condition Code (reference DoD 4140.17M MILSTRIP, Chapter 3) of the item received. If total quantity received is classified under more than one Condition Code, enter separately each partial quantity so classified followed by the applicable Condition Code, e.g., 960A, 20F. NOTE: Where quality deficiencies in Grant Aid Shipments or shelf-life discrepancies are involved and Code Q1 or C2 is applicable, show the following information under item 12, "Remarks." Manufacturer's Name Contract/Purchase Order Number if not Shown in Item 7a Date of Manufacture, Pack, or Expiration Lot/Batch Number Location of Material Name, Address, and Telephone Number of Contact Nature of Complaint (Stating in detail why material is unsatisfactory.)
10b	Discrepancy Unit Price	As billed or indicated on shipping document. (Not applicable to packaging discrepancies.)
10c	Discrepancy Total Cost	Total Cost (10a X 10b). For packaging deficiencies, enter cost of corrective action.
10d	Discrepancy Code	Nature of the discrepancy using the codes listed on face of form. If a discrepancy condition exists that is not listed, place Code Z1 and describe discrepancy in item 12, Remarks.

BLOCK NUMBER	TITLE	INSTRUCTIONS
11	Action Code	Indicate action requested of activity to which report is addressed by use of codes listed on face of form. If action is other than that covered by listed Action Codes, insert Code 1Z and explain action requested in item 12, Remarks. NOTE 1: Action Codes 1D or 1F will not be used on reports prepared to cover shipments directed by DoD stock funded activities and from GSA. Materiel still required must be re-requisitioned. NOTE 2: Action Code 1E applies only to Local Purchase Items.
12	Remarks	To be used for any supplemental information, e.g.: Clarification of the combination of discrepancy and actions codes. Explanation of shipping-type (item and packaging discrepancies, if needed. Required breakout of cost to reports in terms of time and materiel. Specific data, i.e., appearance, lot batch number, manufacture/packaging date, inspector number and inspection date, probable cause of improper packaging and suggested correction action. MAP/Grant Aid. When reporting products with quality deficiencies or packaging discrepancies, cite the specific violation of regulation, specification, packaging instruction or contract. Shortages or Non-receipt or items shipped by Parcel Post to GSA. A statement must be included in item 12 to indicate if all packages shown in item 5 of DD Form 1348-1 were received. Medical Materiel involving Refrigeration or Frozen Storage. Provide the information requested with shipments of such materiel.

BLOCK NUMBER	TITLE	INSTRUCTIONS
		Photos. Include photos if they would help determine the cause of the discrepancy; deficiency.
13	Funding and Accounting Data	For packaging discrepancies, enter the acounting/appropriation data needed by the action activity to credit the account of the reporting activity for costs involved in correcting the reported discrepancies. This item does not apply to shipping-type (item) discrepancies.
14a	Typed or Printed Name, Title and Phone Number of Preparing Official	Self-explanatory. When non-DoD action activities and are involved, include both commercial and AUTOVON numbers.
14b	Signature	Self-explanatory.
15	Distribution Addresses for Copies	Enter other addresses receiving copies of the report.

c. When the report of item discrepancy reflects an Action Code to which a reply is applicable or if the situation warrants, the reverse side of the report will be completed by the appropriate action office as follows:

BLOCK NUMBER	TITLE	INSTRUCTIONS
16	FROM	The FROM address will be that of the activity preparing the reply.
17	Distribution Addresses for Copies	Enter addresses receiving copies of the reply in addition to addressee listed on item 18.
18	TO	The TO address will be that of the activity indicated in item 4 on the face of the form.
19		Provide advice of action taken. Place X in appropriate box(es).
20		Provide disposition instructions by placing an X in the appropriate box(es).

BLOCK NUMBER	TITLE	INSTRUCTIONS
21		Enter an X to indicate to the reporting activity that a new requisition is required if the material is still needed.
22		Enter an X to indicate a replacement shipment will be made and the approximate date of the shipment.
23	Remarks	Enter any clarification or information necessary for a complete reply. Enter corrective action taken to preclude future packaging discrepancies.
24a	Typed or Printed Name and Phone Number of Preparing Official	Self-explanatory. When item 18 is a non-DoD activity include both commercial and AUTOVON numbers.
24b	Signature	Self-explanatory.
24c	Date	Self-explanatory.

d. Distribution of Form/Report:

(1) Receipts Inspection Branch:

(a) Assemble the SF 364 with receiving report (DD Forms 250, 1348-1, and so on) and forward to the Quality Control Branch.

(b) Place one copy of the SF 364 with the DD Form 250, DD Form 1155, and/or Vendor Invoice or Packing List in a suspense file (Active Award Document File), in document number sequence.

(c) Place one copy of the SF 364 with the suspended materiel.

(2) Quality Control Branch:

(a) Make distribution to DSC/DCASR, etc., as required IAW DLAR 4140.55.

(b) Place one copy of SF 364 in suspense.

(c) Submit a followup to appropriate DSC when a response (initial, interim, or final) has not been received within 45 days after submission of the SF 364. If a response is not received within 30 days of the followup, a second followup should be submitted to the DSC for Command attention. Once a response (initial, interim, or final) has been received, no further followup is required. Additional followup may be initiated at the discretion of the Depot Commander, based on the circumstances or condition created by the delay in the DSC providing final action.

5. PROCEDURE/INSTRUCTIONS FOR PROCESSING RESPONSE TO OR RETURNED FORM/REPORT

a. When report was prepared for contractor receipts that were unsatisfactory, rejected or quantity overage:

(1) Quality Control Branch. Receive completed SF 364 (accompanied by MRO, if applicable), annotated with disposition instructions and take appropriate action as listed below:

(a) When disposition instructions indicate that the discrepancy report is not valid, or is valid and the deficiency should be corrected, forward instructions to Receipt Documentation Branch for action.

(b) When disposition instructions indicate deficient/discrepant materiel should be returned to contractor or reshipped:

1. Use MRO to prepare Materiel Release/Receipt Document, DD Form 1348-1.

2. Forward Materiel Release/Receipt Document to Receipt Documentation Branch.

(2) Receipt Documentation Branch. Receive instructions and/or DD Form 1348-1 for processing shipments or for correcting deficiencies:

(a) Obtain matching Active Award Document file folder and Materiel Adjustment Card, DIC ZAC, from suspense file. Accomplish action required by the disposition instructions, i.e., execute payment copies of contract or PKN/PKP if materiel accepted into Condition Code A from Condition Code L. Place contract in active or completed file as appropriate.

(b) Prepare/complete Materiel Adjustment Card, DIC ZAC, (see appendix B-22) with the "FROM" field, pos. 71; the "TO" field, pos. 66 and the quantity to be adjusted in pos. 25-29, when report is not valid, or is valid and the deficiency is to be corrected.

(c) Forward Materiel Adjustment Card, DIC ZAC, to Data Systems processing to clear Classification Suspense record and to forward the Materiel Adjustment Card, DIC DAC, to the DSC.

(d) When materiel is to be reshipped, obtain location of materiel, in accordance with applicable Condition Code and enter data in block F of DD Form 1348-1.

(e) Forward DD Form 1348-1 to Warehousing Division to pick stock, and subsequently forward to Shipping Division for normal shipping action in accordance with appendix E-011 P.

(f) Clear Classification Suspense Report (F-22) by preparation of a Classification Suspense Deletion Card, DIC ZHW in accordance with appendix B-74. See appendix E-074 P. Forward ZHW card to Data Systems for processing.

b. When report was prepared for contractor receipts that were unserviceable:

(1) Quality Control Branch will receive completed SF 364 when disposition instructions indicate that materiel should be held, pending receipt of missing/replacement components:

(a) Initiate followup for components as required.

(b) Notify Receipts Documentation Branch that components will be received.

(c) Notify the DSC/ICP by letter when missing components are received and/or repair to discrepant materiel has been accomplished.

(2) Receipts Documentation Branch will:

(a) Add component information to Active Award Document File.

(b) Receive replacement components from contractor.

(c) Forward components with instructions to Stock Reading Branch.

(3) Stock Readiness Branch will accomplish repair and/or replacement of components.

(4) Process documentation as in paragraph 5a(2) above.

c. When report was prepared for Other Than Procurement Receipts:

(1) Classified Unserviceable. Receive and process disposition instructions in accordance with chapter 17 of this volume, as furnished by the DSC.

(2) Classified Condition Code K.

(a) Quality Control Branch will:

1. Receive completed SF 364 annotated with technical information or disposition instructions.

2. Notify Warehousing Divison when disposition instructions direct the materiel be classified into a specific Condition Code.

3. Process Disposal Release Order, DIC C5J, accompanying the SF 364 when instructions are to transfer the materiel to the Property Disposal Officer.

(b) Warehousing Branch will process the materiel when technical information allows complete classification, place materiel in proper Condition Code, and update basic Locator File.

(c) Receipts Documentation Branch will process documentation as in appendix E-047 P, paragraph 4b(13)(f)3.

d. When report was prepared for a shortage Receipt Documentation Branch will place the SF 364 covering shortages in suspense file for 10 days, pending possible receipt in subsequent delivery.

(a) If shortage is received, destroy SF 364 and return contract or flimsy to appropriate files. Cross-reference the matching receipt documents for reconciliation purposes.

(b) In those instances where shortage has not been received, process SF 364 and accomplish distribution.

(c) In those instances where shortage is received within 30 days from date SF 364 was prepared, process a cancellation of the original SF 364. "Cancelled" will be annotated at top of form and the following statement will be entered in the Remarks block: "Shortage Received _____ SF 364 Canceled." Accomplish distribution and return contract or flimsys to appropriate file.

6. DISPOSITION OF FORM/REPORT AFTER FINAL ACTION

Receipt Documentation Branch will:

a. Insert the completed SF 364 in document number sequence in Completed Award Document File.

b. Destroy any remaining copy(ies) of the SF 364 and the partially prepared Materiel Adjustment Card, DIC ZAC, if applicable.

APPENDIX E-151 P

MRO(S) UNDER EMERGENCY CONDITIONS

1. PURPOSE

This procedure describes the method and additional actions required in the processing of MROs received when the cognizant DSC is inoperative.

2. RESPONSIBLE ORGANIZATIONAL ELEMENT

Warehousing Division.

3. PROCEDURE/MRO PROCESSING ACTION

Upon receipt of an MRO from special IFA cycle, the PDD/SSD activity will:

a. Ship to CONUS activities identified by an alpha in the third position of the DIC, pos. 3, Condition Codes C, B or A stocks in that respective order.

b. Ship to Overseas (O/S) activities, identified by a numeric in the third position of the DIC, pos. 3, Condition Codes B or A stocks only in respective order.

c. The Condition Code of materiel shipped will be entered in pos. 71 of the MRO.

d. Only one condition of materiel will be shipped on a given MRO. If assets in any one condition are not sufficient to satisfy the total requisition quantity, the condition that is available will be shipped.

e. A new A5_ MRO will be produced for the remaining quantity by advancing the document Suffix Code and reentering it into the MOWASP System.

APPENDIX E-153 P

DOCUMENTS AE_(WESP)

1. PURPOSE

This procedure describes the method for processing of AE transactions with Status Code CA when all storage sites have been checked for assets.

2. RESPONSIBLE ORGANIZATIONAL ELEMENT

Shipping Documentation

3. PROCEDURES/INSTRUCTIONS

Prepare document with a DIC AE1, 2 or 3, and Status Code CA in pos. 65 and 66. The following action will be taken:

a. Stamp the document with the following statement: "Emergency operating conditions in effect. Requested item currently not available. Suggest Naval Supply Centers, Oakland, Calif (RIC NO__) or Norfolk, Va (RIC NN__) or Atlanta Army Depot Ga. (RIC AA__) be queried for item desired: If queries are unsuccessful local purchase is authorized on a one-time basis."

b. Mail or deliver the above document by courier service to the original requisitioner.

APPENDIX E-154 P

EXCEPTION REQUISITIONS UNDER EMERGENCY CONDITIONS

1. PURPOSE

This procedure describes the method for processing of A0_, A3_ and A4_ transactions with a third position of 5 or E, materiel requisitions with exception data. These documents may be received via mail, message, telecon or punch card.

2. RESPONSIBLE ORGANIZATIONAL ELEMENT

Shipping Documentation.

3. PROCEDURES/INSTRUCTIONS

a. Processing personnel upon receipt of exception type requisitions will establish an active suspense file of source data by document number sequence.

b. Reproduce or prepare appendix B-4, B-6 or B-9 with 8 or 9 underpunch in pos. 3. Enter 9 in pos. 3 when exception data invokes special address and computer is to leave shipment label blank. Process A0_, A3_ or A4_ as directed in paragraph 319202b.

NOTE: Documents forwarded to another DLA activity will be accompanied by the related source document and exception data.

c. Upon receipt of the Materiel Release Document (DD Form 1348-1 Flimsy), pull the related source document and annotate the exception data on the DD Form 1348-1 and shipment planning worksheet.

d. File source document in completed exception data file by document number and current month for 45 days then destroy.

e. Forward the DD Form 1348-1 and SPMSD to the applicable storage warehouse for processing.

APPENDIX E-156 P

TRANSPORTATION DISCREPANCY REPORT

1. FORM/REPORT USED

Appendix C-38, Transportation Discrepancy Report (DISCREP), SF 361.

2. REASON/CRITERIA FOR PREPARATION

a. The SF 361 will be prepared when the dollar value of a transportation discrepancy is unknown or exceeds $100.00 for the following conditions:

(1) Overage, shortage, or astray freight to include shortage of entire shipment (more than 30 workdays after receipt of advance copy of GBL).

(2) Partial loss, theft, or pilferage.

(3) Discrepancies involving materiel received for transshipments.

b. The SF 361 will be prepared and submitted within 24 hours after discovery of the following transportation discrepancies involving Government-owned property:

(1) Use of improper loading, stowing, handling, blocking, lashing, or bracing procedures.

(2) Significant or repetitive discrepancies by the same shipper, in connection with preparation/distribution of Government Bill of Lading (GBL) or Commercial Bill of Lading (CBL).

(3) When placarding, labeling, and/or certifying of conveyance for transporting ammunition, explosives, or other dangerous materiel is not in accordance with Department of Transportation, Federal Aviation Agency, U.S. Coast Guard, Military, Federal, or other regulatory directives.

(4) Use of improper or inadequate carrier handling, service, or equipment.

(5) Violation of military regulations or carrier tariff requirements.

(6) When security regulations or pouch mail limitations are not adhered to.

(7) When transit time exceeds average or established transit time between point of origin and destination by 72 hours for expedited or premium transportation or seven calendar days by other methods.

(8) Broken, missing, or inadequate seals.

(9) Improper marking when the discrepancy adversely affects the shipment or conflicts with regulatory requirements pertaining to transportation.

(10) Frustrated shipments because of nonobservance of Terminal Facilities Guide (DLAH 4510.1) or related publications.

(11) Other transportation discrepancies not specifically stated above.

3. RESPONSIBLE ORGANIZATIONAL ELEMENTS

a. Inspection Branch, Receiving Division, will complete blocks 1-14 of the SF 361, and 17-18.

b. Commercial Traffic Branch, Transportation and Traffic Management Office (TTMO), will complete blocks 15-16 of the SF 361 and make distribution.

4. PROCEDURES/INSTRUCTIONS FOR PREPARATION OF SF 361

a. Source of Information.

Entries for SF 361 are obtained from the following:

(1) Materiel Inspection and Receiving Report, DD Form 250, DoD Single Line Item Release/Receipt Document, DD Form 1348-1, or Order for Supplies or Services, DD Form 1155, as applicable.

(2) Freight Bill.

(3) Bill of Lading, either Government (GBL) or Commercial (CBL), as used.

b. Preparation of SF 361:

(1) A DISREP will be prepared when required for CBL shipments and for GBL shipments. Prepare SF 361 in original and required number of copies, as necessary, in the following manner:

BLOCK	TITLE	INSTRUCTIONS
1	Date	Date on which report is prepared. Enter in year, month, and day sequence.
2	File Reference	Number assigned by reporting activity. Composition of the file reference number will provide the following information in sequence: Reporting activities DoD Activity Address Code, a four digit number (0001-9999)to cover each DISREP issued within the calendar year.
3	To	Name, address, DoDAAD Code (if assigned), and ZIP Code of office scheduled to receive the initial copy (indicate in block 15 the DoDAAD Codes of all other recipients).

BLOCK	TITLE	INSTRUCTIONS
4	Reporting Activity	Enter name, address, DoDAAD Code, and ZIP Code of activity.
5	Consignor	Shipper's name, address, DoDAAD Code, and ZIP Code; also show the military office administering the contract. Subcontractors will not be shown as consignors. (See Material Inspection and Receiving Report, DD Form 250).
6	Consignee	Enter "Same as Item 4."
7	Shipper (if other than consignor)	The activity physically making shipment for the account of consignor shown in item 5, e.g., subcontractor.
8	Point of Origin	City and state where carrier accepted the shipment.
9	Identification (Conveyance/Voyage Number) and Carrier Routing	Identification number of car, truck, trailer, as appropriate. Enter routing shown on transportation document.
10	Destination	City and state of destination, where consignee accepted delivery, as shown on covering transportation document.
11	Documentation Data	
11A	Carrier's Delivery Receipt Number	Number appearing on the carrier's delivery receipt Number (waybill, pro, freight bill/warrant).
11B	Bill of Lading Number	Enter number under appropriate heading (GBL/CBL).
11C	Exception Noted on GBL	Check yes or no as applicable.
11D	Type of Shipment Code	Enter mode of shipment in accordance with A-17.
11E	Type of Discrepancy Code	Enter applicable codes. Multiple discrepancies will require entries in several places. (See subparagraph (2) below.)
11F	Date Carrier Signed for Shipment	Date carrier representative affixed signature on transportation document.

BLOCK	TITLE	INSTRUCTIONS
11G	Date Consignee Received Shipment	Self-explanatory.
11H	Date Discrepancy Discovered	Self-explanatory.
11I	Date Carrier Notified	Self-explanatory.
11J	Document Attached	Check applicable block(s) for attachment of documentation photographs.
11K	This is a Survey Document	Check applicable block.
11L	Seal Number and Condition	Check applicable block for seals intact/broken/missing. Enter seal numbers, if applicable, and explain any variance between seal numbers shown on transportation documentation.
11M	Inspection Data	Self-explanatory.
11N	Disposition Data	Self-explanatory.
12	Discrepancy Data	
12A	Acquisition Document and/or Transportation Control Number	Enter TCN.
12B	Commodity, Stock Number UFC, NMFC Number	Enter Stock Number, noun description of commodity, and other data as available.
12C	Type of Pack	Enter applicable code, shown on appendix A-72.
12D	Quantity Discrepant (Pieces)	Enter actual number of pieces of freight that are discrepant as evidenced by the applicable Bill of Lading or governing transportation document.
12E	A/D/O/S Code	Enter A for Astray, D for Damage, O for Overage, or S for Shortage.
12F	Unit of Issue	Self-explanatory.
12G	Units Billed/Shipped	Enter actual number of units of issue billed/shipped as evidenced by the applicable billing or authorized shipping document.

BLOCK	TITLE	INSTRUCTIONS
12H	Discrepant Units	Enter actual number of units of issue discrepant.
12I	Discrepant Weight	Enter weight of discrepant quantity.
12J	Value or Cost of Repair	Enter actual value of loss sustained or cost of repairs. Enter value of materiel when reporting over/astray freight.
13	Remarks	Describe discrepancy in detail with facts only. Personal opinion will not be included unless substantiated by the report or document attached. Describe "other" transportation type discrepancies.
14	Responsibility	The Transportation Officer or his authorized agent, i.e., the Inspection Branch, Receiving Division, normally will make this determination based on findings and factual evidence available. If sufficient evidence to make such a determination is not available, check "other" and state "unknown."
15	Distribution of Copies	Indicate complete distribution of copies.
16A	Typed Name, Title and Telephone Ext.	Self-explanatory
16B	Prepared by (Signature)	Signature of preparing Transportation Officer (or authorized agent).
17	Discrepancy Data	Continuation of data from block 12.
18	Remarks	Continuation of data from block 13.
19	Action by Reviewing Officials	Leave blank by initiating activity. (Note: To be completed by the officials authorized to relieve accountability. Detailed findings of any Surveying Officer or board will be included as a part of the DISREP.)
20	Action by Finance Center	Leave blank by initiating activity.

(2) The codes listed below will be entered in block 11E, "Type Discrepancy Code," SF 361; e.g., if shortage is due to theft or pilferage, the code T or P will be entered in the "shortage" block, or if actual cause of shortage is unknown, the code S will be entered; spoilage will require the code G in the "damage" block; improper loading, blocking, or bracing with damage to freight will be coded K in the "damage" block; vandalism or wreck will require the entry of code V or W, respectively in the damage block; improper loading, blocking, or bracing without damage will be coded as K in the "other" block. Multiple discrepancies will require entries in several blocks.

CODE	DISCREPANCY
A	Astray
B	Broken, missing, improper, or inadequate seals.
C	Carrier tariff requirements, Military/GSA Transportation regulations not observed.
D	Damage
E	Water damage.
F	Fire
G	Spoilage
H	Excessive transit time.
J	Improper carrier handling, service, or equipment.
K	Improper loading, stowing, blocking, or bracing.
L	Partial loss.
M	Improper marking or labeling which adversely affects or could affect transportation.
N	Misconsigned shipment.
O	Overage
P	Pilferage
Q	Rough handling.
R	Transportation regulations covering classified materiel not observed.
S	Shortage
T	Theft
V	Vandalism
W	Wreck
X	Other
Z	Concealed damage.

c. The following stamp will be placed on the discrepancy reports which are prepared when hazardous materials are reported to the DSCs.

EXPEDITE
Hazardous Material

d. Signature/Approval Requirement.

Block 16A, SF 361, will be prepared for the signature of the Transportation Officer, or authorized agent.

e. Distribution of SF 361.

(1) Inspection Branch, Receiving Division, will:

(a) Forward original to Commercial Traffic Branch, TTMO.

(b) Retain one copy in suspense file.

(2) TTMO will complete applicable blocks and make distribution in accordance with DLAR 4500.15, Appendix E, Section III.

(a) Retain one copy in the GBL File.

(b) One copy in Survey File, if required.

f. Warehousemen receiving shipments containing overages, shortages, or damage will immediately notify Commercial Traffic Branch, and give the following information:

Name of Carrier
Freight Bill Number
Date of Freight Bill
Shipper
Contract or TCN Number
Stock Number
Number of Pieces, Over, Short, or Damaged
Weight of Individual Cartons
Unit Price
Date Shipment Received

NOTE: Warehousemen receiving shipments containing only damaged materiel will also notify Receiving Inspection Branch immediately on discovery.

5. PROCEDURES/INSTRUCTIONS FOR PROCESSING RESPONSE TO RETURNED SF 361

a. Receiving Division will receive the SF 361 from the DSC/ICP and take action as follows:

(1) When disposition instructions indicate materiel is to be returned and/or reshipped, process the Materiel Release Orders, DIC A5_, accompanying the SF 361 to the mechanical system (see chapters 4 and 60 of this volume) for preparation of a Single Line Item Release/Receipt Document, DD Form 1348-1 to reship the materiel.

(2) When disposition instructions indicate materiel is to be transferred to the Property Disposal Officer, process the Disposal Release Order, DIC C5J, accompanying the SF 361 to the mechanical system (see chapter 12 of this volume) for preparation of a DD Form 1348-1 to transfer the materiel.

(3) Take corrective action on astray shipment, as indicated by consignor in block 19c as response to DISREP.

(4) Insert the completed SF 361 in document number sequence in Completed Award Document/Receiving Document (Other than Procurement Sources) Files.

(5) Forward copy to Commercial Traffic Branch, TTMO.

b. Warehousing and Shipping Division will process the DD Form 1348-1 and ship transfer to PDO, the materiel (see appendices E-011 P and E-032 P).

c. Receipt Inspection Branch will inspect recouped materiel the same as a new receipt.

6. DISPOSITION OF SF 361 AFTER FINAL ACTION

Completed SF 361 will be retained with corresponding receiving document/GBL until the document is destroyed under current records disposition procedures. Destroy any remaining copies of SF 361.

APPENDIX E-158 P

RECONCILIATION - DELETED LOCATION INQUIRY CARD

1. PURPOSE

This card is prepared to allow inquiry into the Deleted Location File by NSN for denial research purposes.

2. APPENDICES USED IN THIS PROCESS

a. Appendix B-158, Deleted Location Inquiry Card.

b. Appendix F-269, Denial and Deleted Location Listing.

3. RESPONSIBLE ORGANIZATIONAL ELEMENTS

Warehousing Division.

4. PROCEDURE/INSTRUCTIONS

a. The F-269 listing is prepared daily as a result of processing denials to the computer. If a printout of the Deleted Location File, F-269 listing, is desired on a given NSN prior to the processing of a denial, a DIC ZAF card will be prepared for the NSN involved. Multiple ZAF cards for different NSN(s) may be submitted at one time.

b. Complete the ZAF local coding sheet as follows:

FIELD POSITIONS	INSTRUCTIONS
1-3	Enter DIC ZAF.
4-7	Leave blank.
8-20	National Stock Number.
21-76	Leave blank.
77-78	Enter applicable FRC.
79-80	Leave blank.

c. Distribution of Form:

(1) Local coding sheet in the format of appendix B-158 will be forwarded via OCR of keypunching services to the ODS.

(2) Local coding sheets will be returned to the Warehousing Division to be retained for two days to be utilized in processing any violations resulting from processing this input.

5. FLOW CHART

Flow chart not required.

APPENDIX E-159 P

RECEIPTS PROCESSING UNDER EMERGENCY SITUATIONS

1. PURPOSE

This appendix prescribes the action to be taken in the storage of materiel receipts during emergency situations.

2. RESPONSIBLE ORGANIZATIONAL ELEMENT

Warehousing Division.

3. PROCEDURES/INSTRUCTIONS

During emergency situations requiring the use of backup site, materiel receipts will be stored in the following manner:

a. Upon receipt of materiel in the storage area, screen the latest F-51 and F-52 reports and annotate locations or indicate no location on the accompanying documentation.

b. Store materiel utilizing the normal MOWASP Process, except when a new location is established.

c. When it becomes necessary to establish a new location, one copy of the transaction will be filed in suspense, pending the return to normal operations.

d. Subsequent receipts after the establishment of the suspense file of new locations, in addition to subparagraph (1) above will be screened.

e. Bin labels received from location update will be screened across the new location suspense file and the file copy annotated to indicate that the bin label has been received.

f. Opon termination of the backup support, a new F-51 will be produced.

APPENDIX E-160 P

DISCREPANCY DISCOVERED IN STORAGE

1. FORM/REPORT USED

Appendix C-5, Storage Quality Control Report (DD Form 1225).

2. REASON/CRITERIA FOR PREPARATION

This form will be completed and forwarded through the Quality Control Office to the DSC/ICP when:

a. There is a difference between contents of an original container (a previously unopened container as evidenced by banding, cleats, and tape strappings) and the quantitative data marked thereon.

b. Stock is found to be unidentified or misidentified.

c. Inspection reveals a condition change to F, G, J, or L is necessary and when the true condition is unknown or cannot be determined.

d. When requested by the DSC/ICP to support other condition changes or classifications.

e. To recommend 100 percent inspection for lot or identified segment of stock when the quality history reveals a high SQL.

f. Materiel is determined to be unserviceable/uneconomically reparable and is assigned to Condition Code H, a DD Form 1225 may be prepared at the discretion of the Quality Control Office and filed in depot files in draft form. The form will be prepared and retained only for circumstances which would indicate the managing DSC may request a report of survey or other action which would require detailed reasons for the action taken. Unless extenuating circumstances exist, a DD Form 1225 will not be prepared for small dollar value transactions when cost of preparation will equal or exceed the value of the materiel.

g. Evidence of pilferage is found.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

The Stock Readiness Branch and the Quality Control Office are responsible for the preparation, processing, and control of this form.

4. PROCEDURES/INSTRUCTIONS FOR PREPARATION OF FORM/REPORT

a. DD Form 1225 will be used by the distribution activities to report discrepancies found during surveillance inspections, when spot inspecting outgoing shipments, and discrepancies found during inventories, rewarehousing projects, or locator surveys.

b. Handwritten reports are acceptable provided all copies are legible. Repetitive information such as name and address of the reporting activity, and name and title of the originator, may be entered by addressograph or other suitable means.

c. Data will be entered on the form from inspection findings, and DD Forms 250/1155 for contractor shipments; DD Form 1348-1 for shipments other than contractors; appendix B-116, i.e., receiving award, and report of survey, when readily available. The inspectors enter NA in each block when information is not available.

(1) When materiel is discovered in-storage with latent defects that were not discovered at the time of receipt, and the necessary contract data connected with the receipt (see subparagraphs (2), (3), and (4) below) can be identified, appendix B-22, DIC ZAC, with Action Code RA will be prepared manually IAW appendix E-022 P in lieu of the appendix B-116. Input of the ZAC transaction will establish item in the Classification Suspense File and output DIC DAC with data to the DSC.

(2) Materiel having a defect or condition which is the fault of the original supplier and for which a contract or Procurement Instrument Identification Number (PIIN) is available is documented as follows:

If the ninth position (fifth position from the right) of the PIIN is A or D and additional data consisting of Contract Line Item Number (CLIN) and supplementary PIIN can be determined, the materiel will be assigned Condition Code L on the locator subrecord, a Document Identifier ZAC will be prepared by using the original PIIN, CLIN, and supplementary PIIN and submitted for computer processing. A DD Form 1225 will be prepared IAW this appendix and forwarded to the indicated DSC/ICP. If the CLIN and/or supplementary PIIN data is not available at the site and cannot be determined, the materiel will be assigned Condition Code J, a /DIC ZCO (appendix B-116) will be prepared and processed, and a DD Form 1225 containing all available data and a statement that the defect is believed to be receipt-related, but sufficient contract data is not available to place the materiel in Condition L, will be forwarded to the DSC.

(3) If the fifth position from the right is other than A or D and a CLIN is available or can be developed, the materiel will be assigned Condition Code L, a Document Identifier ZAC using the original PIIN and CLIN processed, and a DD Form 1225 prepared and forwarded to the DSC. If the CLIN is not identifiable, the materiel will be assigned Condition Code J, a DIC ZCO (appendix B-116) will be prepared, and a DD Form 1225 containing all available data and a statement that the defect is believed to be receipt related, but sufficient contract data is not available to place the materiel in Conditional Code L, will be forwarded to the DSC.

(4) When a defect or discrepancy is noted in stored materiel and is determined to be caused by conditions other than vendor responsibility or if the PIIN is not available, a ZCO transaction with a depot assigned document number will be processed to assign the Condition Code as shown on appendix A-16 and a DD Form 1225 submitted if pertinent.

d. One copy of each DD Form 1225 prepared due-to evidence of pilferage will be forwarded to Chief, Security Division for review and appropriate action.

NOTE: Suspected pilferage will be reported to Chief, Warehousing Division and Chief, Security Division as soon as discovered.

e. Five copies of the form will be prepared for discrepancies reportable to the DSC/ICP.

(1) The following entries, as applicable, will be made on the form:

BLOCK NUMBER	TITLE	EXPLANATION AND INSTRUCTIONS
1	Date	Enter, as applicable, preparation date; or, enter date surveillance inspection was accomplished.
2	Report Number	Enter from appendix F-91 Document Number when produced as result of items due for surveillance inspection (appendix B-116) and ZCO resulting from condition change; otherwise, use locally assigned identifying number.
3	To	Enter the name and address of the DSC managing the item.
4	From (Installation Reporting)	Self-explanatory.
5	Stock Number	Enter applicable stock or part number.
6	Type of Inspection	Check applicable block.
7	Nomenclature	When identity is unknown or questioned give complete description, using block 35 as necessary. a. Physical Characteristics: (1) Materiel, metal, wood, plastic, rubber, fabric, and so on. (2) Dimensions, length, width, thickness. (3) Finish, paint, plated, polished.

BLOCK NUMBER	TITLE	EXPLANATION AND INSTRUCTIONS
		b. Electrical Characteristics: (1) Voltage, wattage, amperage, AC or DC. (2) Frequency, ohms, cycles, and tolerance. c. Mechanical Characteristics: (1) Air, hydraulic, gas operated. (2) Fuel capacity, HP, RMS, PSE. d. Any Additional Information: Such as type, model, catalog, or figure number, next higher assembly, component specification.
8	Model Number	Enter applicable model number when available.
9	Serial Number	Enter applicable serial number and/or registration number when available.
10	Condition Code	Enter Condition Code from appendix B-116 as currently recorded on accountable records. Enter A if no reasons exist to the contrary.
11	Lot Batch or Control Number	Enter locally established number to identify the perimeter or segment of supplies being examined or enter lot number from appendix B-116 as applicable. Use lot or contract indicator with lot number when obtained from appendix B-116. Prepare separate report for each lot.
12	Expiration Date	Enter expiration date for items subject to age control. Enter phrase "See Back" and make breakout by quantity and date when more than one expiration date exists within the same lot.
13	Unit Price	The unit price of the item being reported as given in the price list or catalog. Estimate a unit price when item is not listed.

BLOCK NUMBER	TITLE	EXPLANATION AND INSTRUCTIONS
14	Unit of Issue	Enter unit of issue of the item being reported.
15	Contractor Considered Liable	Check block which expresses the inspectors opinion. When "yes" block is checked, explain fully in block 35 and transfer stocks to Condition L.
16	Contractor or Packed By	Enter contractor's name and address and packers name and address (if different) when known.
17	Contractor No.	Enter the number originally assigned to the source document, DD Form 250 (block 9), DD Form 1155, DD Form 1348-1, pos. 30-43 as recorded or the item(s) containers or from appendix B-116.
18	Date of Manufacuture	Enter date of manufacture. Usually stamped on item or on original pack.
19	Date of Pack	Enter from appendix B-116 or inspection findings the date of pack as applicable, otherwise, enter NA.
20	Level of Pack	Check appropriate level of pack.
21	Level of Preservation and Packaging	Check appropriate block.
22	Condition of Packaging	Check appropriate block. Packaging must be sufficient to prevent damage through normal handling.
23	Marking is Adequate	Check appropriate block indicating adequancy for storage, inventory, and assembly for shipment.
24	Sample Shipped To	Enter the name of the laboratory which received samples, as indicated on DD Form 250 (block 26) DD Form 1155 or DD Form 1348-1; or enter the name of the laboratory furnished samples as a result of DD Form 1222 or inspection findings, if applicable; otherwise, leave blank.
24a	Quantity Shipped	Enter quantity actually shipped.

BLOCK NUMBER	TITLE	EXPLANATION AND INSTRUCTIONS
24b	Date Shipped	Enter date shipped. If date is estimated, indicate.
25	SQL	Enter SQL in percent as determined by the lot inspected when applicable.
26	No. Samples Examined	Enter number of items subjected to inspection. This quantity should equal the total entered by Condition Code in block 29.
27	Lot Size	Enter the total units represented by the lot designator, batch or control number in block 11, or the total units in a fixed lot. Enter NA for moving or running lots.
27a	Lot Type	Fixed, running or mixed.
28	Serviceability Standard	Cite any specific standard used to classify the defects being reported, item specification, contract requirements, serviceability standard furnished by DSC, etc.
29	Reclassification of Supplies Inspected	Enter Condition Code, quantity, and location to correspond with line items A through F as follows:

LINE ITEM	CONDITION CODE
A	A
B	B, C, D
C	E, F, G
D	H
E	J, K, L
F	Explain

NOTE: Initiate ZAC/ZCO as required.

30	Estimated Cost to Repair	Enter estimated cost (labor plus parts) to repair total units based on modification instructions or inspectors findings as applicable.

BLOCK NUMBER	TITLE	EXPLANATION AND INSTRUCTIONS
31	Estimated Cost for Preservation, Packaging Packing and Marking	Estimated cost to include the direct labor plus direct supplies (based on local rates) times an overhead factor for indirect labor and administrative burden, i.e., $362.00 plus $16.00 times 163% equal $616.14.
32	Total Estimated Cost	Enter total of block 30 and 31.
33	Name of Activity Which Can Perform Repairs	Enter known modification/repair activity or repacking facilities; otherwise, enter unknown.
34	Authority for Special Inspection	Enter from inspection request data, the teletype number; office symbol of originating office; or name and office of requester; and the date of request, if applicable; otherwise, leave blank.
35	Findings and Recommendations	Enter complete findings to include a discrepant container number, shippers inspector/packer's name, current and new NSN marked and actual quantities, and so on, and any historical data not otherwise provided. Also furnish any recommendations insufficient detail so they can be used by the DSC as a basis for determining materiel disposition. Include "Request Disposition Instructions if applicable as the last entry in this block.
36	Typed Name of Inspector	Type or print inspectors full name.
37	Date Inspected	Self-explanatory.
38	Signature of Responsible Official	Usually the inspector performing the inspection or the quality control specialist clearing and maintaining followup on the submission.
39	Date Signed	Date cleared for submission to the DSC/ICP.
40 thru 44		Leave blank. Blocks as applicable will be completed by the DSC/ICP.

(2) The following stamp will be placed on the discrepancy reports which are prepared when hazardous materials are reported to the DSCs.

EXPEDITE
Hazardous Material

(3) When the from documents a change in container quantities, the container will be remarked with the correct quantity.

(4) When the form documents a reidentification to a new NSN, remark all stock, locations, and containers to the correct stock number. Rewarehouse materiel if required and update the locator file in accordance with appendices E-071 P and E-073 P.

(5) When the form documents a reidentification which cannot be identified to an NSN and the estimated total dollar value is $100.00 or less, prepare a Single Line Release/Receipt Document, DD Form 1348-1, to ship the materiel to PDO, the following entries will be made:

FIELD LEGEND	POSITION(S) OR BLOCK	INSTRUCTIONS
Routing Identifier Code	4-6	Enter RIC of distribution activity.
Stock Number or Part Number	8-22	Enter PN or local control number.
Unit of Issue	23-24	Enter applicable Unit of Issue.
Quantity	25-29	Enter quantity being shipped to PDO.
Document Number	30-43	Enter document number assigned DD Form 1225.
Signal Code	51	Enter M.
Condition Code	73	Enter applicable code.
Unit Price	74-80	Enter Unit Price from block 11, prefix with zeros as required.
Shipped From	Block A	Enter shipper.
Shipped To	Block B	Enter applicable PDO.
Marked For	Block C	Enter DSP.

FIELD LEGEND	POSITION(S) OR BLOCK	INSTRUCTIONS
Project	Block D	Utilize for authority. Enter DLAM 4140.2, DD Form 1225, Report Number, or other specific authority for directed action and date.

5. DISTRIBUTION OF FORM/REPORT

a. The completed DD Form 1225 will be distributed as follows:

(1) Original and two copies to the applicable DSC.

(2) Fourth copy with suspended materiel.

(3) Fifth copy retained by Quality Control Office.

b. Followup as prescribed in chapter 70 of this volume.

6. PROCEDURES/INSTRUCTIONS FOR PROCESSING RESPONSE TO OR RETURNED FORM/REPORT

Upon the return of DD Form 1225 identifying unidentified materiel, containers and materiel will be marked; rewarehousing accomplished, locator file updated, and/or such other actions directed by the DSC/ICP will be accomplished. When item is sent to Disposal, a copy will be sent with the DD Form 1348-1 to the PDO.

7. DISPOSITION OF FORM/REPORT AFTER FINAL ACTION

Completed DD Form 1225 will be destroyed one year after completion of actions required by paragraph 5 above, unless materiel is sent to Disposal. When materiel is shipped to the PDO, one copy of the DD Form 1348-1 and a completed DD Form 1225 will be retained for six months to support disposal action and answer inquiries concerning the materiel.

APPENDIX E-162 P

SUSPENDED RECEIPT FILE MAINTENANCE

1. PURPOSE

This procedure describes when and how Suspended Receipt File Maintenance will be used to change data elements in the Suspended Receipt File.

2. APPENDICES USED IN THIS PROCESS

a. Appendix B-145, Suspended Receipt File Maintenance Card.

b. Appendix B-148, Type R Suspended Receipts File Maintenance Input.

c. Appendix D-95, Suspended Receipt File Maintenance Card.

d. Appendix E-47 P, Processing of Receipts for Reporting and Storage.

e. Appendix E-108 P, Processing of Receipt Confirmation Cards.

f. Appendix E-194 P, Initializing Receipt Terminal Processing.

g. Appendix E-110 P, Processing of Receipt Stow Notices.

h. Appendix F-10, Changed Receipt Date Listing.

i. Appendix F-200, Receipt Control Document, RCD-1.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Receipt Documentation Branch, Receiving Division, DS/T, is responsible for processing Suspended Receipt File Maintenance Cards IAW this procedure.

4. PROCEDURES/INSTRUCTIONS

a. The purpose of Suspended Receipt File Maintenance is to change specific data elements in a Suspended Receipt File record without changing the TP Control Number of the record. The only time the Maintenance Input will be used is when the need for a data element change is recognized after the materiel has been forwarded to Storage Division for stowage. Having the ability to change receiving data elements in the suspense record will allow data adjustments without deleting the record and requiring Storage Division be notified that the TP Control Number for the receipt is changed. This input will be used only when the change cannot be made using the deletion process without coordinating with Storage Division.

b. Since the purpose of the maintenance update is to change data elements which are of no interest to the Storage Division, it will not be possible to change NIIN without deleting the record. When the NIIN is to be changed, a Suspended Receipt File Record Deletion (appendix B-43 or B-97) will be

processed IAW appendix E-182 P, followed by processing of a Type A Inquiry (appendix B-41 or B-102) IAW appendix E-102 P to establish a new record with the correct NIIN or date. A copy of the new RCD and two copies of the SAD-2 will then be forwarded to Storage Division to replace the document package previously forwarded with the materiel.

c. Also, it will not be possible to change Condition Code with the Maintenance Card if the Receipt Confirmation Card (RCC) (appendix B-108 or B-109) has already been processed and the materiel is turned over to Storage Division. It will be necessary to delete the record as indicated in subparagraph b above.

d. When the materiel is turned over to Storage Division and the RCC has been processed or the RCC cannot be used to correct the specific data element, the Maintenance Card will be used. It should be noted that the long form RCC (appendix B-109) is not to be used to change the last five positions of the PIIN/Document Number or the Supplemental PIIN.

e. The Type R inquiry, appendix B-148, will provide a method to change Suspended Receipt File Records. The remote terminal will be activated for this purpose in accordance with appendix E-194 P or, as an alternate method, the Suspended Receipt File Maintenance Card will be used to change the following data elements as indicated:

DATA ELEMENT	ACTION CODE	WHEN USED
RIC (To)	HB	Before or after RCC.
Type Pack	HD	Before or after RCC.
UI	HE	After RCC only.
PIIN/Document Number	HF	Before or after RCC.
CLIN	HG	After RCC only.
Signal/Fund	HH	After RCC only.
Distribution Code	HJ	Before or after RCC.
Project Code	HK	After RCC only.
Ownership/Purpose Code	HL	Before or after RCC.
Management Code	HN	After RCC only.
Supplemental PIIN	HP	Before or after RCC.
Weight	HQ	After RCC only.
Quantity	HR	After RCC only.

DATA ELEMENT	ACTION CODE	WHEN USED
Suffix	HS	After RCC only.
FSC	HT	After RCC only.
Supplementary Address	HU	After RCC only.
Discrepancy Code	HV	After RCC only.
Shipment Number and/or Shipment Number Suffix Code	HW	After RCC only.
Date of Receipt	HX	Before or after RCC.

f. The Maintenance Card can be used to delete certain data elements in the record, if desired. These are:

Type Pack
Line Item Number/Supplementary Address
Management Code
Supplemental PIIN
Shipment Number
Project Code
Ownership/Purpose Code
Signal/Fund Code
Distribution Code
Suffix Code

NOTE: Suspended Receipt File changes will not affect Contract Data or any procurement record. Contract Data is not affected until the MRC is prepared.

g. It is possible to process the Suspended Receipt File Maintenance Card in punched card form in Data Systems or through a remote terminal. When the remote input is used, validation and processing will occur immediately. This method of input should be used to correct erroneous data elements whenever the RCC has already been processed and there is a possibility that the Receipt Stow Notice may be processed prior to the Maintenance Card, causing the record to be cleared and the invalid element to be entered in the Materiel Receipt Card (appendix B-20 or B-21) transmitted to the DSC.

h. When the Maintenance Card or R input is used to change key elements that are used to access the PMR File or cause a specific PMR Record to be flagged, the PMR File will be updated accordingly. For example, if there is a PMR Record matching the corrected Supplemental PIIN entered in the Maintenance Card, that record will then be flagged indicating a receipt is in process.

i. It is possible that processing a change to key element will cause a change to the PMR status of the receipt. For example, if a receipt record exists on the Suspended Receipt File with an erroneous Supplemental PIIN and there was no PMR Record matching the incorrect Supplemental PIIN when the Type

A inquiry was processed, the proper RCC input would be in the appendix B-109 format with DIC ZX_. If a Maintenance Input is processed to correct the Supplemental PIIN before the RCC is processed and there is a PMR match on the correct Supplemental PIIN, the required RCC input would then be in the format of appendix B-108 with DIC ZV_. This change in the required RCC input will be indicated on the appendix F-246, Report of Receiving Actions Required, the following day (if the Maintenance Card was processed through the remote card reader). In this situation, the required data elements will be transferred automatically from the matching PMR Record to the Suspended Receipt File Record. But no new RCD-1 will be printed. If it is necessary to determine the PMR Record data elements prior to processing the RCC, a Type P Remote PMR File Inquiry in the format of appendix B-147 should be processed against the matching PMR Record IAW appendix E-061 P.

j. Only one data element may be changed with a single Suspended Receipt File maintenance action. All maintenance actions will contain an Identifier/ Document Identifier Code, TP Control Number of the record to be changed, and Action Code. The second position reference in the following applies only to remote Type R updates and is a position reference rather than a position indication, see appendices B-145/B-148.

(1) RIC (To): Enter the correct RIC in pos. 10-12/10-12 and Action Code HB in pos. 79-80/8-9.

(2) Type Pack: Enter the correct Type Pack in pos. 10/10 or leave pos. 10/10 blank to blank Type Pack in the file. Enter Action Code HD in pos. 79-80/8-9. May not be used to blank Type Pack if receipt is managed by Manager S or U.

(3) UI: Enter the correct UI in pos. 10-11/10-11. Enter Action Code HE in pos. 79-80/8-9. Be sure the quantity reported is compatible with the new UI.

(4) PIIN/Document Number: Enter the correct PIIN or Document Number in pos. 10-22/10-22 or pos. 10-23/10-23 (whichever is applicable). Enter Action Code HF in pos. 79-80/8-9.

(5) CLIN: Enter the correct CLIN in pos. 10-15/10-15. Enter Action HG in pos. 79-80/8-9.

(6) Signal/Fund: Enter the correct Signal/Fund Codes in pos. 10-12/10-12 or leave pos. 10-12/10-12 blank to delete the codes in the file. Enter Action Code HH in pos. 79-80/8-9.

(7) Distribution Code: Enter the correct Distribution Code in pos. 10/10 or leave pos. 10/10 blank to delete the code in the file. Enter Action Code HJ in pos. 79-80/8-9. (Note: The code entered in the file record can only be determined by processing an inquiry to the Suspended Receipt File (appendix B-146) or the corresponding record in the PMR File (appendix B-61).)

(8) Project Code: Enter the correct Project Code in pos. 10-12/10-12 or leave pos. 10-12/10-12 blank to delete the code in the file. Enter Action Code HK in pos. 79-80/8-9.

(9) Ownership/Purpose Code: Enter the correct Ownership/Purpose Code in pos. 10/10 or leave pos. 10/10 blank to delete the code in the file. Enter Action Code HL in pos. 79-80/8-9.

(10) Management Code: Enter the correct Management Code in pos. 10/10 or leave pos. 10/10 blank to delete the code in the file. Management Code cannot be changed to J using this input. Enter Action Code HN in pos. 79-80/8-9 (see subparagraph k below).

(11) Supplemental PIIN: Enter the correct Supplemental PIIN in pos. 10-13/10-13 or leave pos. 10-13/13 blank to delete the entry in the file. Enter Action Code HP in pos. 79-80/8-9.

(12) Weight: Enter the correct Weight in pos. 10-16/10-16; precede significant digits with zeros to complete seven positions. Enter Action Code HQ in pos. 79-80/8-9.

(13) Quantity: Enter the correct Quantity Received in pos. 10-16/10-16; precede significant digits with zeros to complete seven positions. Enter Action Code HR in pos. 79-80/8-9.

(14) Suffix: Enter the correct Suffix Code in pos. 10/10 or leave pos. 10/10 blank to delete the code. Enter Action Code HS in pos. 79-80/8-9.

(15) FSC: Enter the correct FSC in pos. 10-13/10-13. Enter Action Code HT in pos. 79-80/8-9.

(16) Supplementary Address: Enter the correct Supplementary Address in pos. 10-15/10-15. Enter Action Code HU in pos. 79-80/8-9.

(17) Receipt Discrepancy Code: Enter the correct code in pos. 10-11/10-11. Enter Action Code HV in pos. 79-80/8-9.

(18) Shipment Number: Enter the correct Shipment Number in pos. 10-16/10-16. Right-justify, preceding significant digits with zeros.

(19) Date Received: Enter the correct Julian date in pos. 10-14/10-14. Enter Action Code HX in pos. 79-80/8-9. The date entered may not be later than the date of Inquiry (date of establishment) of the Suspended Receipt File record. A change in date of receipt will cause the record to be output on a special report, F-10. The record will reflect the old and the new (changed to) date of receipt.

k. One of the common uses of the Suspended Receipt File Maintenance will be to identify a lost receipt after the RCC has been processed. In this case the receipt record will be in suspense status awaiting input of a Receipt Stow Notice when it is determined that the materiel has been lost. Processing of a

ZZR/Type R Maintenance update with Action Code HN changing the Management Code to L will cause the D4_ or D6_ Materiel Receipt Card to be transmitted to the DSC and all files to be updated without awaiting a Stow Notice.

1. DICOMSS depots should note that the Suspended Receipt File Maintenance Card cannot be used to modify either the DICOMSS Cycle Code or Document Availability Code. The occurrence of such changes should be slight and in the few instances that these modifications are necessary, the Suspended Receipt File record containing the erroneous data element should be deleted and another Type A inquiry processed to create a new record in which the correct data can be entered using the RCC (see subparagraph b above).

5. DATA ENTRY INSTRUCTIONS

Prepare a coding sheet for the ZZR or Type R input as indicated above. Forward the coding sheet for keypunching. After the punched card has been prepared, forward card to Data Systems. Enter Type R update directly through keyboard of remote terminal. It is necessary to initialize the terminal IAW appendix E-194 P prior to using the keyboard (CRT display).

APPENDIX E-162 V

SUSPENDED RECEIPT FILE MAINTENANCE CARD VIOLATIONS

1. INPUT DOCUMENT

a. Appendix B-145, Suspended Receipt File Maintenance Card, DIC ZZR.

b. Appendix B-148, Type R Suspended Receipts File Maintenance Input.

2. INPUT TO PROCEDURE DECISION CHART

Appendix D-95

3. PURPOSE, CONTENTS AND RESPONSIBILITIES

a. This appendix provides instructions to the Receipt Documentation Branch for research, correction, and reentry of Suspended Receipt File Maintenance Cards (DIC ZZR or Type R inquiry) which have been rejected from computer processing.

b. Maintenance update inputs are prepared to modify data elements in the Suspended Receipt File.

c. Two types of violations can occur:

(1) Content Violations:

Those errors which normally can be identified by reviewing the input card alone. Such violations include invalid code entries and data incompatibilities wherein one code or data entry conflicts or is not compatible with another in the input card. These violations always require correction to the input card.

(2) Process Violations:

Those errors which are identified by comparing or attempting to compare the input with a computer file record. Such violations include mismatches between key elements in the input card and a related file, and data incompatibilities wherein data entered in the input card conflicts or is incompatible with data in the matching file record. These violations may require correction to the input card or the file record.

d. VRCs and definitions which apply are as follows:

(1) Content Violations:

VIOLATION REASON CODE	DEFINITION
AI	PIIN/Document Number invalid.
AN	UI invalid.
AS	Quantity invalid.
AW	Management Code invalid.
AY	FSC invalid.
AZ	Suffix Code invalid.
CF	Action Code invalid.
CK	Type Pack invalid.
D9	TP Control number invalid.
EX	Supplemental PIIN.
HX	Weight invalid.
JI	CLIN invalid.
JM	Date of receipt invalid.
8V	Discrepancy Code invalid.

(2) Process Violations:

VIOLATION REASON CODE	DEFINITION
CF	Action Code invalid.
SX	Receipt action invalid (does not match file record on elements indicated).
JM	Date of receipt invalid.

4. PROCESSING/RESEARCH INSTRUCTIONS

a. Content Violations:

The following VRCs will be recorded on the appendix F-85, Violation Printout or printed at the remote terminal. The erroneous data element will be underlined with asterisks.

(1) VIOLATION REASON CODE AI.

(a) REASON FOR VIOLATION/ERROR CONDITION:

Action Code is HF and PIIN or Document Number entered in pos. 10-23 of the input is other than alphanumeric. Only the last position (pos. 23) of the entry may be blank.

(b) PROCESSING/RESEARCH REQUIRED:

Determine the correct entry by reference to the source document.

(2) VIOLATION REASON CODE AN.

(a) REASON FOR VIOLATION/ERROR CONDITION:

Action Code is HE and UI entered in pos. 10 of the input is other than alpha.

(b) PROCESSING/RESEARCH REQUIRED:

Determine the correct UI by reference to the source document.

(3) VIOLATION REASON CODE AS.

(a) REASON FOR VIOLATION/ERROR CONDITION:

Action Code is HR and Quantity entered in pos. 10-16 is other than numeric greater than zero.

(b) PROCESSING/RESEARCH REQUIRED:

Determine the correct Quantity for reentry by referring to the source document.

(4) VIOLATION REASON CODE AW.

(a) REASON FOR VIOLATION/ERROR CONDITON:

Action Code is HN and Management Code entered in pos. 10 of the input card is other than blank, L, N, P, Q, or Z.

(b) PROCESSING/RESEARCH REQUIRED:

Determine the correct Management Code for reentry by referring to the source document.

(5) VIOLATION REASON CODE AY.

(a) REASON FOR VIOLATION/ERROR CONDITION:

Action Code is HT and FSC entered in pos. 10-13 is other than numeric.

(b) PROCESSING/RESEARCH REQUIRED:

Determine the correct FSC for reentry by referring to the source document. If necessary, process a Locator File inquiry to determine the correct FSC for the NIIN recorded in the Suspended Receipt File record being modified. Reenter the correct FSC.

(6) VIOLATION REASON CODE AZ.

(a) REASON FOR VIOLATION/ERROR CONDITION:

Action Code is HS and Suffix Code entered in pos. 10 of input is other than blank or alpha (other than O or I).

(b) PROCESSING/RESEARCH REQUIRED:

Determine the correct Suffix Code for reentry by referring to the source document. Verify applicable Suffix Code by checking documents related to other records associated with the receipt. Reenter the correct code.

(7) VIOLATION REASON CODE CF.

(a) REASON FOR VIOLATION/ERROR CONDITION:

Action Code entered in pos. 79-80 of the input is other than HB, HD, HE, HF, HG, HH, HJ, HK, HL, HN, HP, HQ, HR, HS, HT, HU, or HV.

(b) PROCESSING/RESEARCH REQUIRED:

Determine the correct Action Code from the source document. If necessary, analyze the data element entered in pos. 10-33 of the input in conjunction with the DLA Form 529 to determine the Action Code required for reentry.

(8) VIOLATION REASON CODE CK.

(a) REASON FOR VIOLATION/ERROR CONDITION:

Action Code is HD and Type Pack Code entered in pos. 10 of the input is other than blank, 1, 2, or 4. May not be blank if Item Manger reflected in the Suspense File record is S/U.

(b) PROCESSING/RESEARCH REQUIRED:

Determine the correct Type Pack by reference to the source document.

(9) VIOLATION REASON CODE D9.

(a) REASON FOR VIOLATION/ERROR CONDITION:

TP Control Number entered in pos. 4-9 of the input is other than numeric or was numeric less than 10, in which case the number cannot be correct. If the entry is all numeric greater than nine, the error is caused by a transposition of digits or entry of an erroneous digit which caused the validation computation to produce a check digit which does not equal the check digit entered in the card.

(b) PROCESSING/RESEARCH REQUIRED:

Determine the correct TP Control Number by reference to the source document (coding sheet, DLA Form 529). If the correct number cannot be determined from the source documents, process a Type N or Type Q inquiry to the Suspended Receipt File by NIIN in the format of Appendix B-44 and IAW Appendix E-165 P. The inquiry response should provide the correct TP Control Number for reentry.

(10) VIOLATION REASON CODE EX.

(a) REASON FOR VIOLATION/ERROR CONDITION:

Action Code is HP and Supplemental PIIN entered in pos. 10-13 is other than blank, alpha/numeric, or "bbRB".

(b) PROCESSING/RESEARCH REQUIRED:

Determine the correct Supplemental PIIN for reentry by referring to the source document.

(11) VIOLATION REASON CODE HX.

(a) REASON FOR VIOLATION/ERROR CONDITION:

Action Code is HQ and Weight entered in pos. 10-16 of the input is other than all numeric.

(b) PROCESSING/RESEARCH REQUIRED:

Determine the correct Weight for reentry by referring to the source document.

(12) VIOLATION REASON CODE JI.

(a) REASON FOR VIOLATION/ERROR CONDITION:

Action Code is HG and CLIN entered in pos. 10-15 of the input is other than numeric greater than zero in pos. 10-13 and/or pos. 14-15 is other than alpha/numeric.

(b) PROCESSING/RESEARCH REQUIRED:

Determine the correct CLIN for reentry by reference to the DLA Form 529 or contract, if necessary.

(13) VIOLATION REASON CODE JM.

(a) REASON FOR VIOLATION/ERROR CONDITION:

Action Code is HX, but date of receipt is other than numeric (must be between 1 and 366).

(b) PROCESSING/RESEARCH REQUIRED:

Determine correct date and reenter.

(14) VIOLATION REASON CODE 8V.

(a) REASON FOR VIOLATION/ERROR CONDITON:

Action Code is HV and Discrepancy Code in pos. 10-11 is in error pos. 10 is other than alpha and/or pos. 11 is other than S, D, or X.

(b) PROCESSING/RESEARCH REQUIRED:

Determine the correct Discrepancy Code by reference to the source document. Reenter the correct code.

b. Process Violations.

(1) VIOLATION REASON CODE CF.

(a) REASON FOR VIOLATION/ERROR CONDITION:

The Action Code entered in the input card is incompatible with the DIC of the matching Suspended Receipt File Record. If the DIC of the record is ZW_ or ZY_, Action Code cannot be HG. If the DIC of the record is ZV_ or ZX_, Action Code cannot be HU.

(b) PROCESSING/RESEARCH REQUIRED:

Determine the correct entry by reference to the source document. Reenter the correct code.

(2) VIOLATION REASON CODE SX.

(a) REASON FOR VIOLATION/ERROR CONDITION:

TP Control Number in pos. 4-9 of the input does not match any record in the Suspended Receipt File.

(b) PROCESSING/RESEARCH REQUIRED:

Review source document to assure that the TP Control Number entered in the input card is correct. If incorrect, reenter input with the correct TP Control Number. If TP Control Number of the input is correct, process a Type N inquiry by NIIN to the Suspended Receipt File in the format of appendix B-44 to assure the TP Control Number is not recorded on the file. If no record exists, review documentation to determine if the record has been deleted. If deleted erroneously, take necessary action to restore the record (Type A inquiry) and coordinate with Storage Division, as required. If not deleted, process an inquiry to the Completed Receipt File in the format of appendix B-61 to determine if the Materiel Receipt Card (MRC) was transmitted to the DSC with the erroneous data. If the MRC was processed, take action necessary to notify the DSC and Storage Division (if required) and process a Completed Receipt Change Card in the format of appendix B-106 to update the completed record.

(3) VIOLATION REASON CODE JM.

(a) REASON FOR VIOLATION/ERROR CONDITION:

Date of receipt entered was valid for content, but the date was later than date record was established (inquired date) on Suspended Receipt File.

(b) PROCESSING/RESEARCH REQUIRED:

Inquire suspended record. Determine valid date and reenter.

5. REENTRY INSTRUCTIONS

When the correct input has been determined, reprocess the input card through the card reader of a remote terminal or forward for processing in Data Systems.

APPENDIX E-163 P

LOCATOR INQUIRY

1. PURPOSE

The inquiry on the CRT will provide all locations for an item. These inquiries will be used in storing materiel and picking items for shipments. They may also be needed during inspection or inventory functions.

2. RESPONSIBLE ORGANIZATIONAL ELEMENT

Warehousing Division, Area Control Branches, Operations Control Office, Physical Inventory Branch, Receiving Division and Inspection Branch will make these inquiries as needed.

3. PROCEDURES/INSTRUCTIONS

a. Operation of CRT Locator Inquiry Program.

(1) Enter $$UWMN10.

The data shown on figure 1 below will appear on CRT screen.

(2) Enter NIIN of NSN desired and, if desired, enter condition.

001110255_

(3) There are two possible screen faces depending upon the total number of locations.

(a) If there are 15 or less locations, figure 2 below will be displayed. This represents the locator header record and up to 15 locations. If another NSN is to be inquired, follow the instruction on the last line of the screen which reads:

NO MORE LOCS, ENTER NEXT NIIN AND COND

(b) If there are more than 15 locations, figure 3 below will be displayed. The operator has two options; (1) to look at additional locations, or (2) to go to a new NSN.

1. If more locations are desired, follow the first part of the instruction on the last line of the screen which reads "PRESS ENTER FOR ADDITIONAL LOCS". If the operator continues to press enter, all the locations for this NSN will appear on the screen in groups of 15 (see figure 4 below). When all the locations for the NSN have been displayed, the following message will appear on the last line of the last screen with locations:

NO MORE LOCS, ENTER NEXT NIIN AND COND

2. If, after reviewing the first 15 locations, another NSN is to be inquired, replace the second NIIN with the NIIN of the next NSN desired and enter.

001110234A000011110234Z

Example: If the next NIIN to be inquired is 002220456, the NIIN portion of the instruction will look like the following:

001110234Z000022204 56Z

If a specified Condition Code only is desired, replace the last Z with the desired Condition Code.

(4) The following are other messages which may appear:

(a) NIIN CHANGE REENTER XXXXXXXXX - This message indicates the NIIN has changed. The new NIIN (which is printed in the message) must be reentered. See figure 5 below.

(b) ACCESS ERROR REENTER NIIN AND COND CODE __ - The field at the end of the message indicates the Error Code. Reenter the inquiry.

(c) NIIN NOT ON LOCATOR.

(d) NO LOCATIONS ENTER NEXT NIIN AND COND - See figure 6 below.

(e) INCORRECT ENTRY CORRECT AND REENTER.

(f) WRONG NUMBER OF CHARACTERS - REENTER.

(g) INVALID CONDITION REENTER NIIN AND COND.

b. Description of CRT Face (Header Record).

CRT FACE	DESCRIPTION
LINE ONE	
NSN	National Stock Number
M	Manager (appendix A-44)
UI	Unit of Issue (appendix A-48)
NOMEN	Nomenclature
A	Air Cargo Code
AC	Air Commodity

CRT FACE	DESCRIPTION
WCOM	Water Commodity
SR	Special Requirements Code (appendix A-81)
HZ	Hazardous Storage Compatibility Code (appendix A-33)
NMFC	National Motor Freight Code
SF	National Motor Freight Code Suffix
T	Less Than Truckload Rate (appendix A-49)
C	Less Than Carload Rate (appendix A-49)
S	Storage Intransit Code (appendix A-51)
UCUBE	Unit Cube

LINE TWO - Data

LINE THREE

UWT	Unit Weight
S	Shelf-Life Indicator (appendix A-47)
TR	Test Restorative Code (1st position A-31, 2nd position A-68, 3rd position A-69)
P	Physical Security Code (appendix A-28)
P	PoP Group Code (appendix A-52)
M	Monthly Demand
A DEM	Average Demand
I	Inventory Category Code (appendix A-54)
F	Inventory Flag (appendix A-55)
COFF	Inventory Cutoff Date
RF	Receipt Flag
ESTAB	Date Record Established
REPT	Date of Late Incomplete Report
R	Remove Tag (appendix A-53)

CRT FACE	DESCRIPTION
T	Temporary Flag
P	Print Flag
T	Prime Tag
i	Inquiry Tag
D	DEMIL Code (appendix A-35)

LINE FOUR - Data

c. Description of CRT Face (Trailer Record)

CRT FACE	DESCRIPTION
1st Entry	Condition (appendix A-16)
2nd Entry	Type Pack Code (appendix A-4)
3rd Entry	Type Location Code (appendix A-58)
4th Entry	Date of Pack/Expiration Date (XXXX MO-YR)
5th Entry	Type Storage Code (appendix A-45)
6th Entry	Location (appendix A-59)
7th Entry	Inspection Date (XXXX MOYR)
8th Entry	Unit of Pack
9th Entry	Lot/Contract Number (Subsistence only)
10th Entry	Lot/Contract Indicator (Subsistence only)
11th Entry	Commercial and Government Entity Code (JAN Class S Items only)
12th Entry	Lot Date Code (JAN Class S Items only)

NOTE: The sequence of validation is Condition Code, then NIIN. Only the first invalid data entry will be answered. All data entries following the ERROR entry should be checked before reentry of the inquiry. Validation and answering process is accomplished real time (immediately).

APPENDIX E-165 P

SUSPENDED RECEIPT FILE INQUIRIES

1. PURPOSE

This procedure describes the method for accessing and obtaining information from records in Suspended Receipt File.

2. APPENDICES USED IN THIS PROCESS

a. Appendix B-44, Type N Remote Suspended Receipt File Inquiry - by NIIN.

b. Appendix B-45, Type Q Remote Suspended Receipt File Inquiry - by TP Control Number.

c. Appendix B-146, Suspended Receipt File Inquiry.

d. Appendix D-106, Suspended Receipt File Inquiry.

e. Appendix E-194 P, Initializing Receiving Terminals.

f. Appendix F-247, Suspended Receipt File Inquiry Response.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

This procedure will be utilized by any organizational element required to obtain information from specific Suspended Receipt File records.

4. PROCEDURES/INSTRUCTIONS

a. This procedure will be used whenever it is necessary to determine the current status of a receipt action, if a receipt is in process on a specific item or where a receipt has been stowed. Inquiries may be processed through a remote terminal or in card form in Data Systems. The remote inquiries will be answered immediately at the remote terminal from which the inquiry originated. Card inquiries to Data Systems will be answered on the appendix F-247 report the day after the inquiry was entered.

b. Because of time constraints, the answers to remote inquiries will be limited to the most commonly required data elements in the Suspended Receipt Record. Responses appearing on the appendix F-247 report will contain all available data elements in the record. Types of inquiries that may be entered and the applicable input formats are as follows:

(1) Appendix B-44, Remote Inquiry by NIIN (Type N).

(2) Appendix B-45, Remote Inquiry by TP Control Number (Type Q).

(3) Appendix B-146, Card Inquiry by NIIN (Action Code HY).

best copy available

(4) Appendix B-146, Card Inquiry by TP Control Number (Action Code HX).

(5) Appendix B-146, Card Inquiry for the Total File (Action Code HZ).

c. Procedures for entering the inquiries and the various responses to be provided are described below.

(1) Activate remote keyboard (CRT display) in accordance with appendix E-194 P to process the required type of Receipt Inquiry.

(2) Remote Inquiry by NIIN. Enter the inquiry input on the keyboard of a remote terminal. Only two data entries are required, as indicated in appendix B-44; N in the first position and the NIIN being inquiried in pos. 2-10. If no active receipts exist for the item being inquiried, the message "NO RECORD" will be printed immediately after the input data. If a match is found, the Suspended Receipt File (SRF) record associated with the input NIIN will be displayed.

(3) Remote Inquiry by TP Control Number. Enter the inquiry input on the keyboard of a remote terminal or have inquiry keypunched in a punched card and enter the card in a remote card reader. Only two data entries are required as indicated in appendix B-45; Q in the first position and the TP Control Number being inquiried in pos. 2-7. If a record for the TP Control Number cannot be found in the Suspended Receipt File, the message "NO RECORD" will be printed immediately after the input data. If a match is found, data elements from the record will be printed immediately after the input data. Each data element will be separated by a space. Since the inquiry response will be printed on plain continuous form paper, a clear plastic overlay will be used to identify the data elements. The data to be provided are as follows:

(a) PIIN or Document Number. The complete number will be printed if available. If no PMR Record was available and the Receipt Confirmation Card has not been processed, only the last five positions (from the Type A inquiry) will be printed.

(b) Supplemental PIIN. If the receipt is other than procurement and reverse billing is applicable, "bbRB" will be printed.

(c) CLIN or Supplementary Address. If data is not available, this field will be blank.

(d) FSC. Since the NIIN will be known, only the FSC portion of the NSN will be NSN will be printed if available, otherwise the field will be blank.

(e) UI.

(f) Condition Code.

(g) Management Code.

(h) Manager Code.

(i) Quantity. Will appear only if the Receipt Confirmation Card has been processed.

(j) Date Received.

(k) Confirmation Date. The date on which the Receipt Confirmation Card was processed, if applicable.

(l) Stow Date. The date on which the Receipt Stow Notice was processed, if applicable.

(m) Location. The complete location number will be printed if the Receipt Stow Notice identified a new location for the receipt. If the Receipt Confirmation Card has been processed and no new location was established on the Stow Notice or no Stow Notice has been processed, the warehouse area to which receiving forwarded the materiel for stowage will be printed in the first three positions of this field. If neither the Receipt Confirmation nor the Stow Notice has been processed, the field will be blank.

(4) Card Inquiry by NIIN. Prepare a coding sheet in the format of appendix B-146 using Action Code HY. Forward the coding sheet for keypunching and processing of the punched card in Data Systems. Review the appendix F-247 report the following day for the inquiry response. If no matching NIIN is found on the Suspended Receipt File, the response will be the NIIN in the appropriate column of the report followed by the message "NO RECORD". If matching records are available, a complete response will be provided for each matching record found on the file.

(5) Card Inquiry by TP Control Number. Prepare a coding sheet in the format of appendix B-146 using Action Code HX. Forward the coding sheet for keypunching and processing of the punched card in Data Systems. Review the appendix F-247 report the following day for the inquiry response. If no matching TP Control Number is found on the Suspended Receipt File, the response will be the TP Control Number in the appropriate column of the report followed by the message "NO RECORD". If a matching record is found, a complete response will be provided.

(6) Card Inquiry for the Total File. This type of inquiry must be used sparingly because of the computer time required to print the entire Suspended Receipt File. When the report is required for control purposes, the inquiry should be input no more frequently than once a week, preferably for weekend processing. The system will not accept more than one inquiry of this type per day. To enter the inquiry, prepare a coding sheet in the format of appendix B-146 using Action Code HZ. Forward the coding sheet for keypunching and processing of the punched card in Data Systems. The following day the F-247 will contain a printout of every record on the Suspended Receipt File.

d. Procedures for processing of inquiry violations appear in appendix E-165 V. When an inquiry results in no match to the file, it is considered to have obtained a valid inquiry response (NO RECORD) and is not treated as a violation.

5. DATA ENTRY INSTRUCTIONS

Inquiries may be keyed into a remote terminal, processed in card form through a remote card reader or processed in card form in Data Systems. Inquiries for the total file cannot be entered through a remote terminal, but must be processed in Data Systems. Prior to entry of the remote input through an terminal device, it is necessary to initialize the terminal IAW appendix E-194 P.

APPENDIX E-165 V

SUSPENDED RECEIPT FILE INQUIRY VIOLATIONS

1. INPUT DOCUMENTS

a. Appendix B-44, Type N Remote Suspended Receipt File Inquiry - by NIIN.

b. Appendix B-45, Type Q Remote Suspended Receipt File Inquiry - by TP Control Number.

c. Appendix B-146, Suspended Receipt File Inquiry.

2. INPUT TO PROCEDURE DECISION CHART

Appendix D-106

3. PURPOSE CONTENTS AND RESPONSIBILITIES

a. This appendix provides instructions to the Receiving Division for research, correction, and reentry of Suspended Receipt File Inquiries which have been rejected from computer processing. This procedure applies to inputs processed through a remote terminal or in card form in Data Systems.

b. Violations of remote inputs will be identified by the printing of Violation Reason Code (VRC) at the remote terminal from which the inquiry was entered. Violations of card inputs in Data Systems will appear on the Violation Printout (appendix F-85) with the errors identified by appropriate VRCs. In both cases, erroneous data elements will be underlined with asterisks.

c. When an inquiry input results in a no match condition, it is considered to have obtained a valid inquiry response (NO RECORD) and is not treated as a violation. Therefore, only content violations can occur on a Suspended Receipt File Inquiry. These violations are identified by validating the input data alone without reference to the file.

d. VRCs and definitions which apply are as follows:

VRC	DEFINITION
AY	Invalid NIIN.
CF	Action Code invalid.
D9	Invalid TP control number.

4. PROCESSING/RESEARCH INSTRUCTIONS

Actions related to the various VRCs are as follows:

a. VIOLATION REASON CODE AY.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Inquiry is a Type N or Action Code is HY and the NIIN of the input is other than all numeric greater than zero (except alpha A, B, J, L, or S may be entered in the third position).

(2) PROCESSING/RESEARCH REQUIRED:

Determine the correct NIIN by reference to the source document and reenter.

b. VIOLATION REASON CODE CF. (Appendix B-146 input only.)

(1) REASON FOR VIOLATION/ERROR CONDITION:

Action Code is other than HX, HY or HZ.

(2) PROCESSING/RESEARCH REQUIRED:

Determine the correct Action Code by reference to the source document and reenter.

c. VIOLATION REASON CODE D9.

(1) REASON FOR VIOLATION/ERROR CONDITIONS:

Inquiry is a Type Q or Action Code is HX and TP Control Number of input is other than all numeric greater than nine, the error is caused by a transposition of digits or entry of an erroneous digit which causes the validation computation to produce a check digit which does not equal the check digit entered in the input.

(2) PROCESSING/RESEARCH REQUIRED:

Determine the correct TP Control Number by reference to the source document and reenter.

5. REENTRY INSTRUCTIONS

When the correct data has been determined reenter the punched card or remote input IAW appendix E-165 P.

APPENDIX E-166 P

ELECTRIC ACCOUNTING MACHINE CARDS VIA IBM MODEL 1056 CARD READER

1. PURPOSE

This procedure describes the method for processing the input cards to be transmitted via remote date communication system.

2. APPENDICES USED IN THIS PROCESS

a. B Series Appendices

b. D Series Appendices

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Management Support Office, Inventory Office, Quality Control Office, Transportation and Traffic Management Office, Receiving Division, Warehousing Division, and Shipping Division.

4. PROCEDURES/INSTRUCTIONS

Processing personnel will:

a. Prepare input cards by keypunch process. (Note: Card(s) must have upper left corner cut.)

b. Deliver cards to operator, card reader.

c. Operator, Remote Keyboard.

(1) Terminal set-up. Control switches are positioned as follows:

(a) SYSTEM - Attend - ON.

(b) PRINTER 1 - Rec - ON.

(c) PRINTER 2 - Rec - ON.

(d) KEYBOARD - 1 - OFF.

(e) READER 1 - Send - ON.

(f) PUNCH 1 OR CPO -1- OFF.

(g) SYSTEM - Program - ON.

(h) EOB - Auto - ON.

(i) SYSTEM - ON.

(j) TEST - OFF.

(k) SINGLE CY - 1 - OFF.

(l) RDR STOP - 1 - OFF.

(2) Operating instructions:

(a) Place card(s) in hopper, top edge (12's edge) first, face down.

(b) Depress POLL REQUEST key.

(c) Remove card(s) when Model 1056 Reader has automatically reached EOB.

d. Processed card(s) will be temporarily filed by preparing Office/Division for use in violation research. Destroy input card(s) after one workday.

APPENDIX E-168 P

SHIPPING GOVERNMENT FURNISHED MATERIEL (GFM)

1. PURPOSE

This procedure describes the method of shipping GFM from storage at defense depots.

2. APPENDICES USED IN THIS PROCESS

a. Appendix C-11

b. Appendix C-19

c. Appendix C-32

d. Appendix C-58

e. Appendix F-42

3. RESPONSIBLE ORGANIZATIONAL ELEMENTS

Shipping Division, Warehousing Division, and Transportation and Management Division.

4. PROCEDURES AND INSTRUCTIONS

a. DD Form 1348-1 and DLA Form 674, Shipment Planning Worksheet (SPW), will be received by Shipping Documentation Branch, Shipping Division, for shipments of GFM with the exception of shoe lasts. Where shoe lasts are involved, the SPW will be used in lieu of DD Form 1348-1 and no Unit Load Tally is required.

b. Shipments of GFM are provided under bailment or nonbailment depending on Advice Code in pos. 65-66 of DD Form 1348-1, as described in chapter 13, paragraph 313201 of this volume.

c. Shipping Documentation Branch will:

(1) Add exception data as required.

(2) Record following information in GFM Control Register when locally required:

Date Received
Date to be Shipped
Shipment Unit Number
Document Number
Method of Shipment
Bailment - Nonbailment

(3) Assure location is available on DD Form 1348-1.

(4) Prepare Military Shipment Label Stencil (DD Form 1387) and place in message envelope with DD Form 1348-1 and forward to GFM Clerk, Warehousing Division.

d. GFM Clerk, Warehousing Division, will make following entries in the control register when locally required:

Date Received
Time Received
Shipment Unit Number
Document Number
Date Assigned to Stock Selector

e. Stock Selector, Warehousing Division, receives all copies of DD Form 1348-1, selects stock from location provided, and moves LTL to packing area. Annotates type of container, weight, and cube of unit pack on the DD Form 1348-1. Pulls pallet cards and delivers with annotated DD Forms 1348-1 to the GFM Clerk, Warehousing Division.

f. GMF Clerk, Warehousing Division.

(1) Prepares Unit Load Tally from pallet cards. Files pallet cards and copy of DD Form 1348-1 for at least 90 days, then destroys. Furnishes Unit Load Tally, Shipment Label Stencils, and five copies of DD Form 1348-1 to Operations Branch, Shipping Division, on LTL.

(2) Furnishes five copies of Unit Load Tally to Stock Readiness Branch, Warehousing Division, on truckload lots, annotating date and place sent on the control register.

g. Operations Branch, Shipping Division.

(1) Receives GFM Shipments of LTL with documentation to include, Shipment Label Stencils, Unit Load Tally, and five copies of DD Form 1348-1.

(2) Attaches above documentation to materiel and forwards to domestic packing area.

(3) Utilizes data from DD Form 1348-1 to post Summary Analysis of Released Workload, part 2, appendix F-42; and forwards five copies of DD Form 1348-1 with Unit Load Tally to Shipping Documentation, Branch, Shipping Division.

h. Documentation Branch Shipping Division.

(1) Receives all copies of SPW, DD Forms 1348-1, and annotates the following for each line of SU:

Quantity
Number Pieces
Type Pack
Package Number
Weight and Cube

(2) Destroys copies number 2, 3, and 4 of SPW, retains copy number 1 of SPW; and forwards four copies of DD Form 1348-1, with six copies of Unit Load Tally Sheets and one copy of SPW to the Commercial Traffic Branch, Transportation and Traffic Management Office.

i. Contractor Pick-Up.

When materiel is picked up by contractor's truck bailment, ensures that the signature of the truck driver is obtained on the DD Form 1348-1. The GFM Clerk, Warehousing Division, receives DD Forms 1348-1 and Unit Load Tally Sheets and makes necessary entries in the GFM Control Register, if required.

j. Denials.

Depots will report partial or complete denials by telephone to appropriate DSC. No issues will be made on partial denials unless so instructed by DSC. Denials reported by telephone will be confirmed by DIC A6_ documentation.

6. DISTRIBUTION OF DOCUMENTATION

a. One copy of DD Form 1348-1 and one copy of Unit Load Tally will be forwarded to appropriate DSC/ICP upon completion of shipment, either bailment or nonbailment.

b. Transportation and Traffic Management Office will secure proper signature on shipping documentation and file IAW chapter 13, paragraph 313201a(3) and b(5) of this volume.

c. One copy of DD Form 1348-1, Unit Load Tally Sheet, and SPW to Shipping Documentation Branch for preparation of closeout documents, clearing control register, and filing.

APPENDIX E-169 P

MOFAST PARTIAL LINE DELETE

1. PURPOSE

This procedure describes the process that will be utilized to cancel a partial (13 position) SU and close the SU/LI record.

2. APPENDICES USED IN THIS PROCEDURE

a. Appendix B-151

b. Appendix D-138

3. RESPONSIBILE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. General

This process will reverse a partial line action and delete the applicable shipment unit. Only one partial line can be deleted per entry. The partial being deleted must be the last partial for the applicable shipment (deletion of the last partial will cause the previous partial to become the last partial). Deletion of additional partials will require additional entries. The shipment unit status of the partial being deleted and the previous partial must be A.

b. CRT Initialization.

(1) Key in $$UWFQ20.

(2) Press the ENTER key. The entry will dedicate the CRT to partial line delete with the following display:

```
UWFQ20-00 DELETE PARTIALED LINE ITEM
ENTER DATA
```

NOTE: The CRT will remain dedicated to the partial line delete input until another $$ prefix is entered.

c. The CRT operator will key in data following the ENTER DATA message utilizing the following format:

AAAAAAAAAAAAA,B

Where:

A - Shipment Unit Number (13 positions)
B - Check Digit

If the data is entered successfully the following message is displayed:

```
AAAAAAAAAAAAA,B
PROCESS COMPLETED
ENTER DATA
```

If the entry is unsuccessful, one of the error messages in paragraph 5 of this procedure will appear.

5. ERROR MESSAGES/ACTION

The following error messages will include the input that generated the error condition as part of the display.

ERROR MESSAGE	CAUSE/ACTION
AAAAAAAAAAAAA,B INVALID ENTRY ENTER DATA	Probable Cause: Data entered does not conform to the specified input format. Action: Review entered data for errors and reenter data.
AAAAAAAAAAAAA,B INVALID CHECK-DIGIT ENTER DATA	Probable Cause: Invalid check digit or a transposed number in the SU number. Action: Verify SU number, check digit and reenter data.
AAAAAAAAAAAAA,B PARTIAL SU NOT FOUND ENTER DATA	Probable Cause: Operator has entered an incorrect SU/LI number or the SU has cleared the In-Process File. Action: Verify the SU number and reenter data. If message persists, inquire (appendix E-234 P, part B, $$UWFH55) to verify that the SU is not on file.
AAAAAAAAAAAAA,B PARTIAL LI NOT FOUND ENTER DATA	Probable Cause: Operator has entered an incorrect SU/LI number or the SU has cleared the In-Process File. Action: Verify the SU number and reenter data. If message persists, inquire (appendix E-234 P, part B, $$UWFH55) to verify that the SU is not on file.

ERROR MESSAGE	CAUSE/ACTION
AAAAAAAAAAAAA,B PARTIAL SU STATUS INVALID ENTER DATA	Probable Cause: SU status is invalid for update being attempted (status is other than A). Action: Inquire (appendix E-234 P, part B, $$UWFH55) to determine current status. The SU status can be returned to A utilizing program $$UWFH25, CC entry code (appendix E-234 P, part A) providing that if a GBL number is assigned, it has not been printed (status Z). NOTE: If the SU is part of a consolidated pack and has a status code of K, M, or N, it must be processed through the UNCHAIN option in program $$UWFF75 (appendix E-224 P) prior to entry of CC type action, program $$UWFH25.
AAAAAAAAAAAAA,B PARTIAL SU STATUS INVALID ENTER DATA	Probable Cause: SU status is invalid for update being attempted (status is other than A). Action: Inquire (appendix E-234 P, part B, $$UWFH55) to determine current status. The SU status can be returned to A utilizing program $$UWFH25, CC entry code (appendix E-234 P, part A) providing that if a GBL number is assigned, it has not been printed (status Z).
AAAAAAAAAAAAA,B PREVIOUS SU NOT FOUND ENTER DATA	Probable Cause: Operator has entered an incorrect SU/LI number or the previous partial for this SU has cleared the In-Process File. Action: Verify the SU/LI number and reenter data. If message persists inquire (appendix E-234 P, part B, $$UWFH55) to verify that the SU/LI is not on file.
AAAAAAAAAAAAA,B PREVIOUS LI NOT FOUND ENTER DATA	Probable Cause: Operator has entered an incorrect SU/LI number or the previous partial for this SU has cleared the In-Process File. Action: Verify the SU/LI number and reenter data. If message persists inquire (appendix E-234 P, part B, $$UWFH55) to verify that the SU/LI is not on file.

ERROR MESSAGE	CAUSE/ACTION
AAAAAAAAAAAAA,B NOT LAST PARTIALED ENTER DATA	Probable Cause: Operator is attempting to delete other than the last partial. Action: Delete the last partial first. Delete other partials in descending order until the desired partial is deleted.
AAAAAAAAAAAAA,B UWFQ20, BAD RETURN FROM UWFQ20 ******** ENTER DATA	Probable Cause: System error has occurred. Action: Annotate the message displayed and notify supervisor.

APPENDIX E-170 P

ACTIVATING WORKLOAD FROM THE INVENTORY WORKLOAD BANK

1. PURPOSE

This procedure contains instructions for activating workload from the Inventory Workload Bank (IWB) for physical count.

2. APPENDICES USED IN THIS PROCESS

a. Appendix B-90

b. Appendix B-91

c. Appendix F-16

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Inventory Office, Directorate of Distribution.

4. PROCEDURES/INSTRUCTIONS

a. The forecast of NSNs to be counted, outlined in appendix F-16, is the basic document reflecting summary data on record in the IWB and is the source document for activating workload.

b. Workload may be pulled from appendix F-16, part I report, by use of the appendix B-90 format. Workload from appendix F-16, part II, report, may be accomplished by use of appendix B-91 format. Workload may be pulled from appendix F-16, part III report, by use of the appendix B-170 format. Multiple inputs can be made for any given day and with the same cutoff date.

c. Based on cutoff dates established by the DSC inputs and local resources available to count, the Inventory Office will prepare input appendices B-90 and B-91 to schedule workload for a given day. Care will be taken to only schedule those NSNs that can be counted in a single workday. High volume and fast moving items should be scheduled in the first part of a week to provide time for completion of inventory and not delay MROs over the weekend. Slow moving items should be scheduled during the last part of the week, thereby reducing the possibility of delaying MROs. Determination of the cutoff date on input to activate workload from the IWB is a significant and important factor in the workload activation process. The cutoff date cannot be less than 5 days from the date the input is to be processed by the computer. If less, the input will be rejected. The date may be greater than 5 days in the future, but the locator will not be flagged and control of documents will not begin until 5 days before the cutoff date regardless of the date the NSN is activated.

d. Items scheduled as sample inventory counts will be pulled as a single lot for a given day.

e. Data may be deleted from the IWB by input of appendix B-90, with Action Code WY.

f. Inquiry of specific NSNs in the IWB may be accomplished by input of appendix B-90, with an Action Code GA. This action will generate an F-16, part 5 Report.

NOTE: Once a cutoff date is established, that date will remain in the IWB until flag date (5 days before cutoff date) is reached (when flag date has passed, the inventory may be canceled by input of a DIC ZAS, appendix B-70).

g. Deleted records will be reported on F-117 report. If inventory is still required, an appendix B-67 input should be prepared to reestablish record in the IWB.

APPENDIX E-171 P

TELEPHONE FOLLOWUP REQUESTS FROM REQUISITIONERS/DSC(S)

1. FORMS/REPORTS USED

a. Appendix B-115, DIC ZCT, MRO Register/History Inquiry.

b. Appendix F-67, MRO Inquiry Answer.

2. PURPOSE

This procedure describes the authorized type of telephone followup and actions required to answer them.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Shipping Documentation Branch, Shipping Division, Director of Storage and Transportation.

4. PROCEDURES/INSTRUCTIONS

a. Telephone followups will be accepted and manually processed only when the following criteria are met:

(1) Materiel Release Orders for medical items wherein receipt of the item has a direct bearing on health and welfare of the persons served by the requisitioner.

(2) In exceptional cases wherein an emergency or special conditions have arisen since the requisition was submitted, the Branch Chief exercising good judgement may authorize answer procedures on other IPG I Materiel Release Orders only.

b. In all other cases, callers will be instructed to submit the appropriate followup transaction via AUTODIN.

5. PROCESSING INSTRUCTIONS

a. If accepted, the caller will be required to furnish the following information:

Document Number
Suffix Code
Issue Priority Group
National Stock Number

b. Research all in-process or recently completed parcel post records, GBLs, and Logair/Quick Trans manifests for record of the MRO; prepare a Type B inquiry to obtain warehouse locations and search warehouse for Materiel Release Order.

c. If the Materiel Release Order is found during the search, call the inquirer and furnish following data as applicable:

(1) Planned shipment date and planned mode.

(2) Actual mode, actual date shipped to include when applicable; parcel post insured number, TCN, GBL or manifest number and carrier.

d. If Materiel Release Order is not located, caller will be informed that data will be furnished as soon as possible after receipt of MRO History Reply (appendix F-67).

e. Utilizing data furnished prepare MRO Register/History Inquiry Card (appendix B-115) and process to the computer for printout of MRO History Reply (F-67).

f. Upon receipt of (F-67) inform caller of status of MRO then destroy the F-67.

APPENDIX E-177 P

RECONCILIATION OF OPEN MRO(S)

1. PURPOSE

This procedure prescribes the conditions under which MROs may appear on the open reconciliation report and the appropriate action necessary to correct the discrepancy.

2. REFERENCES

a. Appendix D-14

b. Appendix F-47

3. FREQUENCY

Upon request (recommended quarterly), to the Data Systems Manager to run MOWASP section UWTROOM. This run requires from one to four hours based on number of open records and size of the MRO History File.

4. RESPONSIBLE ORGANIZATIONAL ELEMENT

a. Office of Data Systems.

b. Shipping Documentation Branch, Directorate of Storage and Transportation.

5. PROCEDURES/INSTRUCTIONS

a. The Open MRO Reconciliation Report consists of four parts as follows:

(1) Part I - MRO records open in MRO History only, not matching an open record in the SU File or the workload bank.

(2) Part II - MRO Bank Report lists MRO records in the bank with no MRO History or out-of-balance record, quantity record unbalanced.

(3) Part III - Shipment Unit Add-On File Report lists MRO records in that file with no MRO History record or out-of-balance record.

(4) Part IV - Shipment Unit File Report lists MRO records open in the SU File with no MRO history record or out-of-balance record.

b. The Shipping Documentation Branch, upon receipt of the open MRO Reconciliation Report (F-47) will take the following action:

(1) Part I:

(a) Items appearing on this report are MROs in the MRO History File with no matching transaction record or an out-of-balance record condition with no additional record of the transaction throughout the system. Corrective action should include:

1. Review GBL/TCN Cross-Reference Listing, appendix F-43, from MRO released date, to locate GBL numbers assigned to applicable activity address. Screen GBLs for line item shown on F-47 report.

2. When shipment is confirmed, request Data Systems Manager to delete the record or use ZAQ transaction, appendix B-123 to place the history record in DP Status.

3. When evidence of shipment cannot be located, contact the appropriate DSC/ICP, requesting status in manager's history file. When status received, request Data System Manager to delete the record.

(b) Items appearing on this number are transactions that have been canceled from the workload bank. To correct these entries, take the following corrective action:

1. Prepare a ZBJ locator basic interrogation.

2. Screen for an inventory cutoff date, if inventory date is subsequent to the MDT of the erroneous transaction. Prepare an AG6 transaction (appendix B-8).

3. Forward the cancellation to the DSC under cover letter explaining that they are old cancellation actions on items that have been inventoried since the initial cancellation request.

4. Request that the Inventory Manager determine the appropriate action required.

5. Specify that the DSC History Record for these MROs should be closed.

6. If the locator interrogation does not indicate a subsequent inventory has been accomplished, prepare an AG6 cancellation and transmit to the DSC. Report all records cleared by the above actions to the Data Manager requesting that they be removed from the MRO History File.

(c) Items appearing on this report with shipment units numbers should be reported to the Data Manager for removal from the MRO History File. These items are recorded at the ICP in two categories as follows:

1. MRO Records already closed in the ICP Files.

2. MRO Records open in the ICP files with advance delivery dates from followup action. Removal of the record from MRO History of category in subparagraph (a) 2 and (b) 2 items above, will create an AE6 reply at the time of the next followup.

(2) Part II:

(a) Items appearing on this report are MROs in the workload bank with an out-of-balance condition in the History File.

(b) These are items in the workload bank that have had a partial cancellation processed against them, therefore, causing an out-of-balance condition.

(c) No corrective action is required by the DP. Release of the MRO from the workload bank and subsequent confirmation action will automatically correct all records.

(3) Part III:

(a) Items appearing on this report are MROs in the Shipment Unit Add-On File with no matching MRO History record or an out-of-balance condition.

(b) If the section UWTROOM is run subsequent to a Shipment Unit update and History update this part of the report will not be received; items will appear in part IV.

(4) Part IV:

(a) Items appearing on this report are MROs in the Shipment Unit File with no matching History record or an out-of-balance condition.

(b) These MROs will be duplicates of an MRO in history that has been shipped previously.

(c) Locate the applicable MRO.

(d) Prepare a ZBM transaction to clear the Shipment Unit File and place the item in DP status.

(e) Report the MRO to the DSC as a duplicate, by preparing a Supply Status Card, DIC AE6 with Status Code CF in pos. 65-66, transmit document to DSC.

6. DISPOSITION OF REPORT

Report should be retained pending the removal of the history transactions reported to the Data Manager and then destroyed.

APPENDIX E-178 P

MRO STATUS DETAIL REQUEST CARD

1. PURPOSE

This card input (DIC ZUG) is used to request printout of MRO Status Detail listings, appendices F-78 and F-87.

2. APPENDICES USED IN THIS PROCESS

a. Appendix B-58

b. Appendix D-105

c. Appendix F-44

d. Appendix F-78

e. Appendix F-87

3. RESPONSIBLE ORGANIZATIONAL ELEMENTS

a. Shipping Documentation Branch.

b. Commercial Traffic Branch.

4. PROCEDURES/INSTRUCTIONS

a. Input will be used to request printout of specific criteria of line items on appendices F-78 and F-87, as outlined in appendix B-58 after review of appendix F-44, MRO Status Summary Listing.

b. Only one detail card can be input for each report and must be coordinated with the Office of Data Systems. DST may request through ODS that the entire range of MRO status detail be output in the F-78/F-87 reports; however, ODS will not process both a request for a complete and a specific detail on the same report. When both requests are received, the complete detail report will be output.

APPENDIX E-178 V

MRO STATUS DETAIL REQUEST CARD VIOLATIONS

1. INPUT DOCUMENT

Appendix B-58, MRO Status Detail Request Card, DIC ZUG.

2. INPUT TO PROCEDURE DECISION CHART

Appendix D-105

3. PURPOSE, CONTENTS AND RESPONSIBILITIES

The Shipping Documentation Branch will research, correct and reenter violated MRO Status Detail Request Cards in accordance with this procedure. Reasons for computer rejection by Violation Reason Codes, in alphabetical order, are listed below.

VIOLATION REASON CODE	DEFINITION
DA	Stock Location Group Code invalid.
DH	IPG indicator invalid.
JA	Age category indicator invalid.
KX	Delay Reason Code invalid.
LA	Transportation Hold Code invalid.
LD	Detail report indicator invalid.

4. PROCESSING/RESEARCH INSTRUCTIONS

a. VIOLATION REASON CODE DA.

(1) REASON FOR VIOLATION/ERROR CONDITION:

(a) If pos. 7 is 0, pos. 8-31 must be blank.

(b) If pos. 7 is alpha, only alpha entries or blanks are acceptable in pos. 8-31.

(c) If pos. 7 is blank.

(2) PROCESSING/RESEARCH REQUIRED:

Review input to determine error condition. Take action to determine correct entry(s), repunch card and resubmit.

b. VIOLATION REASON CODE DH.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Field positions 32-34 must contain at least one numeric one entry. The only acceptable entries are 1 and 0.

(2) PROCESSING/RESEARCH REQUIRED:

Review input to determine error condition. Take action to determine correct entry(s), repunch and resubmit.

c. VIOLATION REASON CODE JA.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Field positions 56-57 and 58-59 must contain numerics 01 through 10. Field positions 58-59 must be equal to or greater than pos. 56-57.

(2) PROCESSING/RESEARCH REQUIRED:

Review input to determine error condition. Take action to determine correct entry(s), repunch and resubmit.

d. VIOLATION REASON CODE KX.

(1) REASON FOR VIOLATION/ERROR CONDITION:

(a) If pos. 35 is 0, pos. 36-47 must be blank.

(b) If pos. 35 is alpha/numeric, entries in pos. 35-47 must be alpha or blank.

(c) If pos. 35 is blank.

(2) PROCESSING/RESEARCH REQUIRED:

Review input to determine error condition. Take action to determine correct entry(s), repunch and resubmit.

e. VIOLATION REASON CODE LA.

(1) REASON FOR VIOLATION/ERROR CONDITION:

(a) If pos. 48 is 0, pos. 49-55 must be blank.

(b) If pos. 48 is alpha/numeric, pos. 48-55 must be alpha or blank.

(c) If pos. 48 is blank.

(2) PROCESSING/RESEARCH REQUIRED:

Review input to determine error condition. Take action to determine correct entry(s), repunch and resubmit.

f. VIOLATION REASON CODE LD.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Field position 4 must be numeric 1 or 2.

(2) PROCESSING/RESEARCH REQUIRED:

Review input to determine error condition. Take action to determine correct entry(s), repunch and resubmit.

APPENDIX E-179 P

RECEIPT AND ISSUE OF MULTIPLE MANAGED ITEMS

1. PURPOSE

This procedure describes the method for receiving, controlling and issuing of multiple managed items for inclusion in an end item. In addition, this procedure describes the method of processing multiple managed items which are accumulated as a result of a disassembly action.

2. RESPONSIBLE ORGANIZATIONAL ELEMENT

Unit and Set Assembly Branch, Warehousing Division, Directorate of Storage and Transportation.

3. PROCEDURES/INSTRUCTIONS

The activity performing the operation will:

a. Receive from the DSC a Project Order (DLA Form 531) to perform an operation such as assembly, repair, manufacture, alteration, conversion or modification of an end item.

b. Return a copy of Project Order to the DSC advising of the actual point where the operation will be performed and the ship to, mark for information in order that the component items can be shipped directly to the activity performing the operation.

c. Receive from the center directing the operation a prepunched materiel receipt card (DIC D4_ or D6_) for each stock number being shipped directly to the operation area. Notify the warehouse section in order that space can be allotted for the shipment.

d. Receive copies of shipping document (DD Form 250/DD Form 1348-1) indicating that materiel has been received at the operation point. Copies of DD Form 250 will be distributed in accordance with instructions on the form.

e. Annotate on the prepunched Materiel Receipt Card, quantity from above mentioned shipping document and the date received. Also, condition of the materiel.

f. Annotate necessary information on the manual locator card.

g. Mail the annotated prepunched Materiel Receipt Card to the DSC reflected in pos. 4-6 of the card.

h. Receive by mail from the DSC, Materiel Release Orders. Drop quantity requested from the manual locator card for the stock number requested and applicable document number. Forward DD Form 1348-1 (five copies) to the warehouse area. Hold one copy of the DD Form 13481 in suspense pending completed action.

i. Receive from the actual operation point four copies of DD Form 1348-1 indicating that materiel has been physically moved from the warehouse area to the operation area. Files are to be set up by Directive Number, pos. 54-56, of DD Form 1348-1, where applicable, otherwise, by Document Number.

j. Forward Materiel Confirmation Card to the DSC cited in pos. 67-69. This document will serve as a materiel release confirmation or a partial or complete denial to the DSC. In the case of partial or complete denials, the quantity denied will be annotated.

k. Receive by mail from the DSC, information regarding NSN, unit of issue changes, and so on. Make necessary changes to the locator record and the physical stock where applicable.

l. Receive instructions from the DSC relative to disposition of multiple managed items accumulated as a result of a disassembly directive. For those items moved into the operation warehouse, forward a National Receipt Card, D6L, to the DSC directing the disassembly operation.

m. Receive from the DSC a letter requesting a special inventory. Compare the physical count with the count on the manual locator card. Adjust where necessary and forward by letter to the appropriate DSC the physical count.

APPENDIX E-180 P

SUPPLY DENIALS

1. PURPOSE

This procedure establishes a uniform method for the research and reporting of Supply Denials.

2. RESPONSIBLE ORGANIZATIONAL ELEMENTS

a. Warehousing Division.

(1) Initial search for materiel.

(2) Report shortages to Inventory Control office.

(3) Initiate action(s) to prevent recurring denials.

b. Inventory Control Office.

(1) Research records.

(2) Final search of storage areas.

(3) Report denial to Shipping Documentation Branch.

c. Shipping Documentation Branch. Preparation and submission of denial data to Office of Data Systems (ODS).

d. ODS. Process and transceive denial data to the appropriate DSC/ICP.

3. POLICY/CRITERIA

a. Supply denials, on items of pilferable nature, when pilferage is indicated, will be reported to the Security Division through channels by the Warehousing Division.

b. Issue Priority Group (IPG) I denial investigation, due to time limitations, will be expedited. Research will be limited to receiving records, temporary locations, and materiel enroute to permanent locations. In the event a denial is reported and the materiel is found later, the DSC/ICP will be notified by TWX within 24 hours by the Inventory Control Office.

c. IPGs II and III MROs will be thoroughly investigated prior to submitting denial to the DSC/ICP. Warehouse and Inventory personnel will search all available locations and available records to locate stock or reveal reason(s) for shortages. Areas to search will include, but are not limited to inspection, stock catalogs, receiving, inventory and the storage action document (appendix F-202).

d. Denial Time-Frame. Denials will be processed (to include investigation and confirmation) on or before the Mandatory Date to Transportation (MDT) shown on the DD Form 1348-1.

e. Special Inventories. Special inventories, as a result of supply denials, will not be accomplished until requested by the DSC/ICP.

f. DD Form 1225, Storage Quality Control Report. When a denial is initiated as a result of stock being found unserviceable or misidentified, the stock picker will notify personnel of Stock Readiness Branch who will inspect materiel, initiate DD Form 1225, and forward to Quality Control Office for immediate reporting to DSC/ICP.

g. Warehousing personnel will obtain Type B inquiry(s), search all available locations, then notify warehouse foreman of pending denial. The warehouse foreman will personally check locations and adjacent areas for stock and determining stock is not available report shortage to Inventory Control Office.

h. Denials will be reported through ODS to the proper DSC/ICP, utilizing DD Form 1348m, Materiel Release Document prepared on hand and recorded for a Condition Code other than the outlined below will be entered in pos. 72 of the A6_.

i. Management Codes. The following Management Codes (with applicable Action Code for appendix B-99, DIC ZBM) will be used in reporting supply denials to DSC/ICPs:

MANAGEMENT CODE	ACTION CODE	USE
1	DT	Denied. Stock exhausted for stock number and Condition Code requested. Unsuccessful search of stored materiel has been made. Materiel may be on hand and recorded for a Condition Code other than the requested code.
2	DK	Denied. Materiel in physical location found to be other than recorded condition. Materiel adjustment transaction will be provided to the managing DSC. This code is used to indicate the physical materiel has, for example, deteriorated, been damaged, or found to be incomplete and requires the assigning of a new Condition Code.
3	DJ	Denied. Materiel not available having the required shelf-life as specified on the release document. Materiel adjustment transaction is not pertinent.
4	DE	Denied. Materiel not available in the type pack specified on the release order (subsistence only).

MANAGEMENT CODE	ACTION CODE	USE
5	DG	Denied. Materiel in physical location found to be misidentified. Reidentification of assets in process and storage location will advise results by DD Form 1225. Assets not available in the physical location to supply requests stock number.
8	DL	Warehouse denial due to narcotic materiel not available to supply exact quantity MRO in support of FMS.
9	DM	Denied. Materiel was ordered in one continuous length but is not so available.

4. PROCEDURES/INSTRUCTIONS

a. Warehouse stockpicker will receive DD Form 1348-1, Release Receipt Document, printed with locations, from Foreman Area Control Branch and proceed to location to select stock. Select stock in accordance with NSN, item description, condition, quantity, UI, and as applicable type of pack, date of pack, and so on, as indicated on DD Form 1348-1. When sufficient stock is not available in locations printed on DD Form 1348-1, obtain additional locations, Type B inquiry, and attach acquired location listing to DD Form 1348-1. (Procedure for obtaining additional locations - appendix E-163 P.) Check additional locations for availability of stock. Check all warehouse sources to locate stock. The current status of a receipt action (if a receipt action for a specific item is in process or where it has been stowed) can be obtained by implementing appendix E-165 P. (Note: When sufficient stock is in location to fulfill DD Form 1348-1 requirement, partial quantities will not be removed until Inventory Control Office has completed research for the item. Warehouseman will then select stock immediately upon return of partialed MRO.)

(1) When stock is exhausted:

(a) Line through, annotate with kill and initial each location that is being deleted on the DD Form 1348-1 and the Type B inquiry listing.

(b) Delete the location by utilizing the Storage Location Identification Label, if available.

(c) If label is not available and location is still recorded on the computer, prepare DLA Form 536 Delete. The Type B inquiry will indicate whether location is still recorded on the computer record. (Note: Do not prepare delete transaction if location is flagged for replenishment action.)

(2) When quantity of stock is short, annotate quantity short, and indicate all locations and other areas that have been searched with the shortage still existing.

(3) Forward all copies of DD Form 1348-1, Type B inquiry listing and DLA From 536 attached to Foreman Area Control Branch advising him of the shortage.

b. Foreman Area Control Branch will personally check location(s) for stock and sign DD Form 1348-1 certifying unavailability of item/quantity after an exhaustive search has been made to locate same. Forward denial document with attachments to Inventory Control Office. Forward DLA Form 536 via keypunch/OCR typist to Office of Data Systems.

c. Inventory Control Office personnel will receive the potential denial document with attached Type B inquiry listing and annotated information. Process as follows:

(1) "NMCS" and "999" potential denials investigation and research must be completed within eight hours.

(2) All other IPG I potential denials investigation and research will be expedited. (Note: Warehouse denials will not be reported, regardless of shipment priority, until receipts have been screened to determine if materiel is enroute to permanent location or being held in other temporary location.)

(3) Make search for shortages on all other potential denials. Areas to be searched will include, but are not limited to, inspection, processing, C&P, storage, and temporary location of receipts. Records to review will include but not be limited to inspection, master stock catalog, appendix F-269, Denials and Deleted Location Listing, and appendix F-202, Storage Action Document.

(4) Accomplish the following actions:

(a) Sufficient quantity of materiel is located to complete shipment:

1. Extract one copy of DD Form 1348-1, annotate with appropriate research information and forward to the Chief, Warehousing Division.

2. Enter location of materiel on remaining copies of DD Form 1348-1 and forward to proper Area Control Branch for stock selection.

(b) Partial denial:

1. Make the following entries on DD Form 1348-1:

a. Circle quantity ordered shipped in pos. 25-29; enter quantity available above the circle.

b. Circle quantity printed in block Q; enter quantity available above circle.

c. Enter quantity denied and appropriate Management Code in block U.

d. Sign and date in lower part of block D.

2. Reproduce one copy of DD Form 1348-1, annotate with research information and forward to Chief, Warehousing Division.

3. Forward one copy of DD Form 1348-1 to Shipping Documentation Branch. (Note: Quality Control Division/Branch will select samples, complete quality check and return copy of documents to Inventory Control Office prior to submission of DD Form 1348-1 to Shipping Documentation Branch.)

4. Forward remaining copies of DD Form 1348-1 to the proper Area Control Branch for stock selection.

(c) Total denial:

1. Make the following entries on DD Form 1348-1:

a. Circle quantity ordered shipped in pos. 25-29.

b. Circle quantity printed in block Q.

c. Enter quantity denied and appropriate Management Code in block U.

d. Sign and date in lower part of block D.

2. Forward original copy of DD Form 1348-1 to Shipping Documentation Branch. Forward a copy to appropriate Area Control Branch. Forward remaining copies to Quality Control Division/Branch.

d. Foreman Area Control Branch will receive results of inventory research. Direct selection of stock upon return of partialed MRO. Ensure deletion of exhausted location(s). Prepare DLA Form 536 for location(s) not on computer record and containing stock after MRO has been filled. Forward DLA Form 536 via keypunch/OCR typist to ODS. Chief, Warehousing Division will receive and review a copy of DD Form 1348-1 and take action deemed necessary to prevent recurrence of discrepancy.

e. Shipping Documentation Branch will receive copy of DD Form 1348-1 indicating a supply denial action. Annotate/verify the quantity denied in block U and date of action. Forward DD Form 1348-1 through keypunch/OCR typist for preparation of appendix B-99, MRO Control/Status Request Card, DIC ZBM to update computer record and provide confirmation/status to DSC/ICP. File completed DD Form 1348-1 for one year then destroy.

5. DD FORM 1348-1 WITH NO WAREHOUSE LOCATION (NLD)

a. Shipping Documentation Branch will receive all DD Form 1348-1, Release/Receipt Documents with no warehouse location cited by the computer. "No Loc" MROs/DROs are assigned to Major Sort Group Code B by the computer. Forward all NLDs to Inventory Control Office.

b. Inventory Control Office will receive documents and process as follows:

Submit Type B inquiry to computer.

(1) Location available. Extract a copy of DD Form 1348-1, annotate with research information and forward to Chief, Warehousing Division. Enter location of materiel on remaining copies of DD Form 1348-1 and forward to the proper Area Control Branch for stock selection.

(2) No location available. Research the following:

(a) Appendix F-269, Denials and Deleted Location Listing.

(b) Appendix F-51, Emergency Item Locator Record Listing.

(c) Appendix F-52, Item Locator Transaction Record.

(d) Appendix B-25, Physical Inventory Count Cards.

(e) Query Quality Control Branch on stock other than Condition Code A.

(3) Annotate DD Form 1348-1 with available information. Results of investigation will indicate areas and location to be checked. When materiel is found, process DD Form 1348-1 as outlined in paragraph 5b(2)(a) above. When materiel cannot be found, denial action will be initiated and copies of DD Form 1348-1 will be distributed as outlined in paragraph 4c(4)(c) above.

APPENDIX E-182 P

SUSPENDED RECEIPT FILE RECORD DELETIONS

1. PURPOSE

This procedure describes the method for deleting a record in the Suspended Receipt file.

2. APPENDICES USED IN THIS PROCESS

a. Appendix B-43, Type D Suspended Receipt Record Deletion.

b. Appendix B-97, Suspended Receipt Record Deletion, DIC ZZN.

c. Appendix D-43, Suspended Receipt Record Deletion.

d. Appendix E-102 P, Procedures for Preparing Receipt Record Deletion.

e. Appendix E-193 P, Procedures for Processing the Report of Receiving Actions Required.

f. Appendix E-194 P, Initializing Receiving Teleprocessing.

g. Appendix F-68, Deleted Suspense Record Listing.

h. Appendix F-200, Receipt Control Document (RCD-1).

i. Appendix F-202, Stow Action Document (SAD-2).

j. Appendix F-246, Report of Receiving Actions Required.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Operations Branch and Receipt Documentation Branch, Receiving Division, DS/T, are responsible for processing Suspended Receipt Record Deletions, when necessary.

4. PROCEDURES/INSTRUCTIONS

a. The Suspended Receipt Record Deletion will be used to delete erroneous records from the suspended Receipt File. Deletion action may be used when:

(1) The original Type A inquiry was prepared using an incorrect NIIN.

(2) Type A inquiry activity was performed in error.

(3) The Receipt Confirmation has been prepared and input with a Condition Code error, while the materiel was released to Storage Division.

(4) The original data error (on the A inquiry) cannot be corrected in Suspended Receipt Maintenance action or any combination of the above which renders the original receipt document package useless.

b. When a record is deleted because a data element was in error in the Type A inquiry, a new type A inquiry using the correct data element should be processed immediatly after the deletion has been effected. A type D remote input will be answered by the printed response "OK" when a valid deletion action is processed. A listing of all deleted records will be output on the day following the deletion IAW appendix F-68, Deleted Suspense Record listing.

c. When a deletion is processed to a Suspended Receipt File record which already contains Stow Notice information, the record will be deleted but the stow information will be printed out for reentry. If the record is deleted using a Type D remote input, the stow information will be printed immediately at the remote terminal from which the deletion was entered. If the record is deleted using the ZZN card input, the stow information will be printed on the Report of Receiving Action Required (appendix F-246) the following day. See appendix E-193 P.

d. In every case in which the deletion action is used to modify NIIN, Condition Code, or Type Pack after the materiel has been turned over for stowage, Storage Division will be notified to assure that the materiel is stowed and labeled correctly. In addition, two copies of the SAD-2 produced from the new Type A inquiry, together with the RCD-1 (one copy), will be forwarded to the Warehouse Area responsible for stowing the receipt.

e. The following instructions apply to entry of the Suspended Receipt Record Deletion when the remote input (appendix B-43) is used on the remote keyboard IAW appendix E-194 P.

(1) Enter D in the first position.

(2) Enter the TP Control number of the record to be deleted in pos. 2-7.

f. The following instructions apply to entry of the Suspended Receipt Record Deletion when the card input (appendix B-97) is to be processed in Data Systems. An appropriate coding sheet will be prepared for keypunching of a punched card.

(1) Enter ZZN in the first three positions.

(2) Enter the TP Control Number of th record to be deleted in pos. 4-9.

g. Procedures for entry of the Type A inquiry to reestablish the Suspended Receipt Record appear in appendix E-102 P. Procedures for correcting violations in the Suspended Receipt Record Deletion input appear in appendix E-182 V.

5. DATA ENTRY INSTRUCTIONS

The appendix B-43 format may be entered over a keyboard at a remote terminal or keypunched in a punched card. Prior to entry at a remote input it is necessary to initialize the terminal IAW appendix E-194 P. The appendix B-97 format will utilize punched cards.

APPENDIX E-182 V

SUSPENDED RECEIPT FILE RECORD DELETION VIOLATIONS

1. INPUT DOCUMENTS

a. Appendix B-43, Type D Remote Suspended Receipt Record Deletion.

b. Appendix B-97, Suspended Receipt Record Deletion, DIC ZZN.

2. INPUT TO PROCEDURE DECISION CHART

Appendix D-48

3. PURPOSE, CONTENTS AND RESPONSIBILITIES

a. This appendix provides instructions to the Receipt Documentation Branch for research, correction, and reentry of Suspended Receipt Record Deletions which have been rejected from computer processing. This procedure applies to inputs processed through a remote terminal or in card form in Data Systems.

b. Violations of remote inputs will be identified by the printing of a VRC or an error message at the remote terminal from which the input was entered. Violations of card inputs will appear on the Violation Printout (appendix B-85) with the errors identified by appropriate VRCs. In both cases erroneous data elements will be underlined with asterisks.

c. Two types of violations can occur:

(1) Content Violations:

Those errors which normally can be identified by reviewing the input alone. Such violations include invalid code entries and data incompatibilities wherein one code or data entry conflicts or is not compatible with another in the input. These violations always require correction to the input.

(2) Process Violations:

Those errors which are identified by comparing or attempting to compare the input with a computer file record. Such violations include mismatches between key elements in the input and a related file, and data incompatibilities wherein data entered in the input conflicts or is incompatible with data in the matching file record. These violations may require correction to the input or the file record.

d. VRCs and definitions which apply are as follows:

VIOLATION REASON CODE	DEFINITION
D9	TP control number invalid.
SX (No Record)	Receipt actions invalid (does not match file record on TP control number).

4. PROCESSING/RESEARCH INSTRUCTIONS

a. Content Violation - VIOLATION REASON CODE D9.

(1) REASON FOR VIOLATION/ERROR CONDITION:

TP Control Number of input is other than all numeric greater than nine. If the entry is numeric greater than nine, the error is caused by a transposition of digits or the entry of an erroneous digit which causes the validation computation to produce a check digit which does not equal the check digit entered in the input.

(2) PROCESSING/RESEARCH REQUIRED:

Determine the correct TP Control Number by reference to the source document and reenter.

b. Process Violation - VIOLATION REASON CODE SX (No Record).

(1) REASON FOR VIOLATION/ERROR CONDITION:

There is no record in the Suspended Receipt File with a TP Control Number matching that entered in the input.

(2) PROCESSING/RESEARCH REQUIRED:

Determine if the input is correct by referring to the source document. If the input is correct, process an inquiry to the Completed Receipt File in the format of appendix B-61 to determine if the record has been cleared. If cleared erroneously, contact the DSC immediately to have the appropriate adjustment action taken and coordinate as necessary with Storage Division to correct any stowage or locator update error. If it is determined that the record was not cleared, investigate to determine if a deletion action was processed by another source.

5. REENTRY INSTRUCTIONS

When the correct input has been determined, reprocess the input with corrected data. Destroy all copies of the Receipt Document Package (Receipt Control Document, Storage Action Document and, if applicable, Contract Data Sheet--RCD, 1, SAD-2 and CDS-3, respectively). If copies of the old SAD-2 have been forwarded to Storage Division, forward copies of the new RCD-1 and SAD-2 generated from the corrected Type A inquiry (if applicable) to Storage Division with instructions to destroy the copies of the old form.

APPENDIX E-183 P

MISSING DATA ELEMENTS REPORT (PRIME DEPOT)

1. REPORT USED

Appendix F-86, Missing Data Element Report.

2. REASON FOR PREPARATION

Provide a document which identifies missing data elements that require research to complete the Basic Locator Record and update the Central Data Bank.

3. APPENDICES USED IN THIS PROCESS

a. Appendix A-28

b. Appendix A-44

c. Appendix A-47

d. Appendix A-48

e. Appendix A-49

f. Appendix A-54

g. Appendix A-57

h. Appendix A-81

i. Appendix B-73

j. Appendix D-15

k. Appendix D-17

l. Appendix D-45

m. Appendix E-073 P

4. RESPONSIBLE ORGANIZATIONAL ELEMENT

MOWASP Data Control Branch, MSO.

5. INSTRUCTIONS FOR PROCESSING REPORT

a. MOWASP Data Control Branch receives missing Data Elements Report (appendix F-86) and determines which data elements are needed to complete the Basic Record.

(1) Unit of Issue, pos. 23-24. Source of research: catalogs, DSC/ICPs, DLSC Files, and appendix A-48.

(2) Item Description, pos. 25-33. Source of research: DSC/ICPs, DLSC Files, or location of materiel, as required.

(3) Physical Security Code, pos. 44. Source of research: DSC/ICPs, physical examination of materiel, and appendix A-28.

(4) Unit of Weight, pos. 58-63. Source of research: physical weighing of materiel.

(5) Unit Cube, pos. 64-69. Source of research: physical measurement of materiel.

(6) Shelf Life, pos. 70. Source of research: DLAM 4155.5, appendices, DSC/ICPs, and appendix A-47.

(7) Man-Hour Standard Application Code, pos. 73-74. Source of research: individual DLA Man-Hour Standard Tables and appendix A-57.

(8) Commodity Manager, pos. 76. Source of research: catalogs, DSC/ICPs, DLSC Files, and appendix A-44.

(9) Inventory Category Code, pos. 72. Source of research: Inventory Monitor, DSC ICP, and appendix A-54.

(10) NMFC, pos. 34-39. Source of research: National Motor Freight Classification Guide, physical examination of materiel, supply catalogs, and DLSC Files.

(11) NMFC Suffix, pos. 45-46. Source of research: physical examination of materiel and Freight Description Files.

(12) Freight Rating LTL, pos. 40. Source of research: Uniform Freight Classification (FCC 11 and appendix A-49).

(13) Freight Rating LCL, pos. 47. Source of research: Uniform Freight Classification (FCC 10 and appendix A-49).

(14) Water Commodity Code, pos. 49-53; Air Commodity Code, pos. 54-55; Air Cargo Dimension Code, pos. 56. Source of research: DoD 4500.32-R (MILSTAMP).

(15) Special Requirement Code, pos. 75. Source of research: DoD 4500.32-R (MILSTAMP) and appendix A-81.

(16) Determine duplicates and annotate on F-86 report.

NOTE: Mandatory data element for reentry applies to subparagraphs (1) through (10) above, and subparagraphs (12) through (15) above. Subparagraphs (11) and (16) are not mandatory.

b. Prepare necessary documentation (DIC ZBC) appendix B-73, for input to Basic Locator Record and automatic update of Central Data Bank. Research, correct, and reinput violation rejects.

6. DISPOSITION OF REPORT

Destroy upon completion of requirements contained in appendix E-073 P.

APPENDIX E-184 P

MONTHLY RECONCILIATION UNMATCHED BALANCE/TRANSACTIONS

1. PURPOSE

This procedure describes the method used to reconcile the unmatched balance/transactions between depots and DSCs reflected on appendix F-146, Monthly Reconciliation unmatched Balance Transaction Listing and the method used for clearing or the reporting of the out-of-balance condition to the applicable DCSs.

2. CHAPTER AND APPENDICES USED IN THE PROCEDURE

a. Chapter 72, Reconciliation of Depot and DSC Balance and Transaction Records.

b. Appendix A-32, Descrepancy Reason Codes.

c. Appendix B-7, Materiel Release Order.

d. Appendix B-8, Materiel Release Denial/Adjustment Card.

e. Appendix B-14, Materiel Release Confirmation.

f. Appendix B-17, Cancellation Followup on Cancellation Request.

g. Appendix B-20, Materiel Receipt Card (Procurement).

h. Appendix B-21, Materiel Receipt Card (O/T Procurement).

i. Appendix B-22, Materiel Adjustment Document.

j. Appendix B-23, Storage Item Change Cards.

k. Appendix B-25, Physical Inventory Count Cards.

l. Appendix B-32, Disposal Release Order.

m. Appendix B-61, Inquiry Card for Completed Receipt File Printout.

n. Appendix B-62, Balance/Transaction Materiel Adjustment Document.

o. Appendix B-63, DSC Inventory Adjustment.

p. Appendix B-80, Cancellation Request Answer Cards (Shipment Status).

q. Appendix B-81, MRO/DRO Cancellation Request Answer Card.

r. Appendix B-94, Supply Status Card.

s. Appendix B-107, Inquiry for Transaction Record.

t. Appendix B-109, Classification Report Card.

u. Appendix B-166, Inventory Balance Notification Card.

v. Appendix B-225, Disposal Release Confirmation/Status Card.

w. Appendix B-226, Disposal Release Denial/Adjustment Card.

x. Appendix B-227, DRO/Followup/Cancellation/Followup on Cancellation.

y. Appendix C-33, DLA Form 1301 Depot Balance/Transaction Data, Transaction Discrepancy Form.

z. Appendices D-122 through D-131.

aa. Appendix F-29, Completed Receipt File Printout.

ab. Appendix F-67, Materiel Release Order (MRO) Inquiry Answer.

ac. Appendix F-145, Depot Balance and Transaction File Printout.

ad. Appendix F-147, Depot Balance and Transaction Data Violation Listing.

ae. Appendix F-148, DSC Balance and Transaction File Printout.

3. RESPONSIBLE ORGANIZATIONAL ELEMENTS

a. Inventory Office.

b. Quality Control Office.

4. PROCEDURE/INSTRUCTIONS

a. Inventory Office Receives from the ODS the F-146 and referenced F reports prepared as a result of the monthly match.

b. Review the F-146 report for unmatched records. Depot personnel will complete preparation and forward DLA Form 1301 to the applicable DSC, when required, within 30 days of the production of the F-146 report.

c. Compare the unmatched transactions against the same transactions in the F-145 and F-148 listings and verify the DICs.

d. When taking action to reconcile/resolve mismatched transactions, the procedures noted in subparagraph e below will be followed, with this exception: If the dollar value of the discrepancy of any individual transaction is less than $10 (i.e., the difference between DSC and depot transaction quantity times Unit Price is less than $10), a DLA Form 1301 will <u>not</u> be prepared and forwarded to the DSC. If research at the depot does not lead to positive resolution of the discrepancy, action will be taken to adjust the quantity to

agree with the DSC balance, using DIC ZAD. The only times a DLA Form 1301 should be prepared for a discrepancy of less the $10 is for pilferable/ sensitive items (Inventory Category Code E or U), or if the discrepancy represents a large quantity of a very low-priced item which could significantly affect the asset balance in the judgement of Depot Inventory Office personnel.

e. Except as noted in subparagraph d above, take the following actions IAW DIC and message reflected under the unmatched record.

(1) DIC D7_ and message reflects No Matching Depot.

(a) When the Management Forced Directed Code (MFDAC) for a D7_ transaction is a 7, prepare a DIC ZAD transaction to decrease the Depot Balance by the quantity in the D7_, with no further research.

(b) If document number and NSN is reflected in appendix F-148 and analysis of the automatic output appendix F-67 reflects no record, assumption will be made that the document has not been received at the depot. Document data will be recorded on DLA Form 1301 with Reason Code A-1.

(2) DIC D4_ or D6_ and message reflects No Matching Depot.

(a) Prepare a DIC ZB1 Inquiry Card for Completed Receipt File printout using Action Code FP (NSN) to obtain the F-29 printout.

(b) If the F-29 printout reflects (no record) prepare another DIC ZB1 using Action Code FM (Document Number) for F-29 printout.

(c) When the F-29 printout reveals the possibility of a discrepant NSN, data will be provided to the Quality Control Office for corrective action. When the Quality Control Office verifies the discrepancy, prepare corrective action to the Depot Balance File using DIC ZAD as the transaction DIC and D4_ or D6_ as the original DIC.

(d) If research fails to uncover matching record, document data will be recorded on DLA Form 1301 with Reason Code A-10 and additional data as required.

(e) If the F-29 report reflects a matching record for the unmatched record, prepare DIC ZAD input to reflect the matching record in the Depot Transaction File. Contact the Receiving Division and request determination be made as to why entry was not in the Depot Transaction File.

(f) If the F-148 printout reflects a duplicate receipt record and the F-145 printout only reflects one record, enter data on the DLA Form 1301 using Reason Code A-9 and entering additional data that may be required.

(3) DIC A5_ and message reads No Matching Center.

(a) Check the date reflected in the document number. If the date is over 45 days old, check the purged or Microfiche F-145 files for a previous A5_ with the same document number. If a matching record is found, enter data on the DLA Form 1301 report using Reason Code A-5 and furnish proof of shipment data.

(b) DIC A5_ (except A5J) and message reads No Matching Center. Research reveals that this transaction is a duplicate shipment that was not discovered until shipment was complete. Prepare DLA Form 1301 using Reason Code A-8 and furnish shipment data and date the F-68, Duplicate MRO In-Process Report, was forwarded to the DSC.

(c) DIC A5_ (except A5J) and message reads No Matching Center. Research reveals that this transaction is a duplicate MRO that was discovered prior to shipment. DIC AE6 Status Code CF has been forwarded to the DSC. Enter DIC ZAD, appendix B-62, to reverse the duplicate A5_ and clear the unmatched transaction.

(d) DIC A5_ (except A5J) and message reads No Matching Center. Research reveals that this transaction is a recreated, previously force-closed MRO. Enter DIC ZAD, appendix B-62, to reverse the recreated A5_ and clear the unmatched transaction.

(e) On remaining unmatched A5_ documents, prepare DLA Form 1301 for each transaction using REason Code A-10 and annotating proof of shipment data in the remarks areas.

(4) DICs A6_, ARA and ARB and the message reads No Matching Center. Prepare DLA Form 1301 with Reason Code A-10 and complete the details of the mismatch in the depot remarks portion of the form to the effect that the depot made transactions but the DSC took no D7_ or D7_ reversal action to these transactions.

(5) DIC AG6 with Status Code BQ and message reads No Matching Center. This no matching transaction indicates that the depot has canceled a shipment upon request and reported the action to the DSC but the DSC has not taken action. Prepare DLA Form 1301 using Reason Code A-5 and check the AG6 BQ block. Annotate comments in the remarks column as necessary.

(6) DIC D4_ or D6_ and message reads No Matching Center.

(a) Compare the unmatched transaction against the F-145 printout and check for duplicate receipt action. If a duplicate is found, prepare DIC ZAD to reverse the receipt action and clear the unmatched record. Contact the Receiving Division and furnish information as needed concerning duplicate receipt processing.

(b) All other D4_ and D6_ unmatched transactions will be entered on separate DLA Forms 1301 using Reason Code A-2 and annotating any remarks that may be pertinent.

(7) DIC D8A or D9A.

(a) These type adjustment actions will be received from the DSC as a result of processing DIC DKA Summary Inventory Count Cards.

(b) No actual match will be made since these records will be entered into the Depot Transaction File as received from the DSC.

(8) DICS D8C and D9C.

(a) The DB and TD program does prepare these records from DIC DAC Materiel Adjustment Condition Code changes prepared by each depot.

(b) These depot prepared DICs D8C and D9C will be matched on a daily basis as the D8Cs and D9Cs are prepared and forwarded to the depots from the DSCs processing actions.

(c) Mismatches occurring as a result of the daily compares will be printed out on appendix F-147, Depot Balance and Transaction Data Violation Listing, VRC PU. Procedures for clearing these entries or this listing are covered in appendix E-185 V.

(d) DICs D8C and D9C transaction which have not cleared on a daily basis and are still not matched as of the monthend will reflect on the F-146 monthly reconciliation unmatched balance/transaction listing and will be cleared as follows:

1. If the DSC created DICs D8C and D9C reflect a quantity other than the quantity reflected in the depot D8C and D9C, the Quality Control Office will be informed and a check will be made of the DAC Files for verification of quantity.

2. A check will also be made to determine if a document is infloat which would account for the difference in quantity.

3. When it has been determined that a quantity difference does exist between the DAC quantity and the depot prepared DICs D8C and D9C or that a document is infloat, DIC ZADs, D8C and D9C will be prepared to adjust the quantity as appropraite.

4. When no depot errors can be detected, DLA Form 1301 will be prepared for forwarding to the DSC describing in detail the existing problem between quantities.

(e) After completion of analysis:

1. Ensure three copies of the DLA Form 1301 has been prepared for each discrepancy found.

NOTE: The Unit Price and Total Price fields in the DLA Form 1301 are to be considered optional entires. If the Unit Price if readily available, it should be entered and extended to the Total Price. If it is not readily available, enter N/A in both fields. Preparation and submission of these forms should not be delayed due to research of the Unit Price.

2. Prepare a summary report listing total of discrepancies found by Reason Code for each DSC.

3. Prior to forwarding the DLA Forms 1301 and Summary Report to the DSC, resubmit a ZCT inquiry for each discrepancy with a Reason Code A-1. Upon receipt of the F-67 report, review and remove DLA Forms 1301 for those documents that have been received. Update the Summary Report.

4. Prepare Cost Benefit Analysis Report.

5. Forward the original and one copy of each DLA Form 1301 and the summary report to the DSC, ATTN: D SC-OM (for DPSC, the office symbols used will be TM, Clothing and Textiles; SM, Subsistence; and AM, Medical). File the third copy of the DLA Form 1301 in a suspense file. (Note: It is not necessary to accumulate all DLA Forms 1301 for a particular DSC prior to forwarding any of them. Since research to the DSC is facilitated by receiving the DLA Forms 1301 as close as possible to the original transaction date, it is recommended that these forms be forwarded by First Class Mail on a daily basis, ensuring that data for the Summary Report has been recorded.)

6. Receive, from the DSC, one copy of the DLA Form 1301 discrepancy report with action taken or comments.

7. Pull suspended copies of the DLA Form 1301, compare action required and taken; if action is complete, destroy file copy and file the copy returned from DSC in completed file.

8. Update Cost Benefit Analysis Report as applicable.

9. Compare all filed (complete and incomplete) copies of DLA Form 1301 discrepancy report to following months transaction files to ensure update.

10. If corrective action cannot be taken by DSC, request an inventory for balance adjustment.

NOTE: In the future, as each depot assumes the Mechanized Inventory System into their operations, the DB and TD program will prepare DICs D8A and D9A from the DKAs. These depot prepared DICs can then be matched with the DICs prepared by the DSC as a result of the depot's DKAs.

APPENDIX E-185 V

DEPOT BALANCE AND TRANSACTION DATA VIOLATIONS

1. PURPOSE

a. This procedure describes the method used for processing back into the Depot Balance and Transaction Data System rejects resulting from records generated by both the DSCs and depots that do not meet the validation requirements.

b. This procedure also describes the method used for clearing transactions not matching between DSC prepared DICs D8A and D9A, or D8C and D9C and depot prepared DICs D8A and D9A, or D8C and D9C that may occur during the daily process. (See note below.)

2. APPENDICES USED IN THIS PROCESS

a. Appendix B-61, Inquiry Card for Completed Receipt File Printout.

b. Appendix B-62, Balance/Transaction Materiel Adjustment Document.

c. Appendix B-107, Inquiry for Transaction Record.

d. Appendix B-109, Classification Report Card.

e. Appendix C-33, Depot Balance/Transaction Discrepancy Form.

f. Appendices D-122 through D-131.

g. Appendix F-29, Completed Receipt File Printout.

h. Appendix F-67, Materiel Release Order (MRO) Inquiry Answer.

i. Appendix F-145, Depot Balance and Transaction File Printout.

j. Appendix F-146, Monthly Reconciliation Unmatched Balance Transaction Listing.

k. Appendix F-147, Depot Balance and Transaction Data Violation Listing.

l. Appendix F-148, DSC Balance and Transaction File Printout.

3. RESPONSIBLE ORGANIZATIONAL ELEMENTS

a. Inventory Office.

b. Quality Control.

4. PROCEDURES/INSTRUCTIONS

Inventory Office:

a. Receive from the Office of Data Systems the F-147, Depot Balance and Transaction Data Violation Listing.

b. Review listing for violations occurring because of validation rejects. These violations are identified by Violation Reason Codes and by asterisks appearing beneath the field in error. Take action as follows:

(1) If the rejected entries were generated by the depot (identified by ZAD as the transaction document identifier):

(a) Match against the input documentation to determine if keypunch or scan typing error has occurred.

(b) If error cannot be detected, match against the original documentation to determine if transposition error has occurred.

(c) Take corrective action as necessary using ZAD as the transaction document identifier.

(2) If the rejected entries were generated by the DSC, contact the applicable center by telephone and request corrective action.

c. Review listing for violations occurring because of daily mismatched DICs D8C and D9C, take action as follows:

(1) If the DICs D8A, D9A, D8C, and D9C reflect a quantity other than the quantity reflected on the depot D8A and D9A or D8C and D9C, the Quality Control Office will be informed and a check will be made of the DAC Files for verification of quantity. (See note below.)

(2) A check will also be made to determine if a document is infloat, which would account for the difference in quantity.

(3) When it has been determined that a quantity difference does exist between the DAC quantity and the depot prepared DICs D8A and D9A or D8C and D9C, or that a document is infloat, two DIC ZADs will be prepared to adjust the quantity as appropriate. (See note below.)

(4) When no depot errors can be detached, an appendix C-33 Form (DLA Form 1301) will be prepared for forwarding to the DSC describing in detail the existing problem between quantities.

NOTE: In the future, as each depot assumes the Mechanized Inventory System into their operations, the DB and TD program will prepare DICs D8A and D9A from the DKAs. These depot prepared DICs D8A and D9A can then be matched with the DICs D8A and D9A prepared by the DSC as a result of the depot's DKAs.

APPENDIX E-186 P

DISCREPANCY EVALUATION LISTING

1. PURPOSE

Provide Inventory Monitors with instructions for clearing inventories.

2. APPENDICES USED IN THIS PROCEDURE

a. Appendix E-190 P

b. Appendix F-7

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Inventory Office, Directorate of Storage and Transportation.

4. PROCEDURES/INSTRUCTIONS

a. The Discrepancy Evaluation Listing (appendix F-7) will be reviewed daily by the Inventory Monitors.

b. The Inventory Monitors will investigate each NSN listed on the Discrepancy Evaluation Listing in an attempt to resolve discrepancy.

c. The Inventory Monitors will examine the following factors to determine causes of discrepancies.

(1) Check receipts and MRO activity.

(a) Open documents that require update.

(b) Receipt quantities debited by computer which might be included in physical count.

(c) Receipt quantities debited by computer from which issues have been made.

(d) MRO or receipt updated with erroneous Management Codes.

(e) Lost receipts.

(f) Receipts that have been updated but not confirmed.

(2) Check deleted locations on possible shortages.

(3) Check locator for possible rewarehousing activity.

(4) Check count cards for transcription or clerical errors or additional information.

(5) Compare present count with "Prior Invt. History."

d. If the cause of the discrepancy is not revealed as a result of above action, an additional count will be made unless the dollar variance falls under the set criteria.

e. If the cause of the variance is found as a result of subparagraph c above, the Inventory Monitor will take necessary action to make correction. If the quantity shown in "Balance to DSC" is different than the corrected count, a written notice will be forwarded to DSC.

f. If a second count is entered that agrees with first count, a discrepancy evaluation report will be printed showing a quantity under "balance to DSC." This is still considered a discrepancy, and further investigation by means of the transaction register may be required.

g. If the second count does not agree with the first, the Inventory Monitor will determine whether a third count is required.

h. Third counts should be thoroughly scrutinized by Inventory Monitor and Chief, Inventory Office, prior to releasing inventory count to the DSC.

i. After input of release action, the action taken will be noted on the F-7 report and retained in the Inventory Office for 30 days.

j. The Inventory Monitor will review the F-120 report to ensure that all MROs suspended for Inventory are released.

APPENDIX E-187 P

LOGISTICS REASSIGNMENT STORAGE INFORMATION CARDS-OFF-LINE

1. PURPOSE

This procedure describes the actions that will be followed to process Logistics Reassignment Storage Information Cards (DIC DZC, appendix B-6) which have either violated, are Manager S or T, or are for classified or sensitive items. These cards are reflected on the F-103.

2. APPENDICES USED IN THIS PROCESS

a. Appendix B-6, Logistics Reassignment Storage Information Reply Card.

b. Appendix F-103, Delinquent Logistics Reassignment Storage Information Reply Cards.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Inventory Office, Directorate of Storage and Transportation.

4. PROCEDURES/INSTRUCTIONS

a. Entries appear on the F-103 listing because the transaction is indicated as Manager S or T, the transaction is for a classified or sensitive item, or the transaction caused a new DB&TR balance record to be created.

b. Inquire the depot locator.

(1) If there is no location, prepare a DIC DZD, appendix B-6, with zeros in the Transfer Quantity field, pos. 25-29.

(2) If there is a location(s), conduct a warehouse count (a warehouse count is a count of materiel in location with no controls or adjustments) of the location(s). Prepare a DIC DZD, appendix B-6, with the count quantity entered in pos. 25-29. The Routing Identifier Code From, pos. 67-69, in the DIC DZC (on the F-103) becomes the Routing Identifier Code To in pos. 4-6 of the DIC DZD. Field positions 76-80 of DIC DZD will always be zero filled.

c. Steps outlined in paragraph 4b above must be accomplished within five workdays. Entries on the F-103 will appear daily until the DIC DZD has been completed and entered.

APPENDIX E-189 P

MARKING INVENTORY PLACARDS

1. PURPOSE

To ensure that the "Do not Inventory" Placard exhibits sufficient information to permit stray placards to be reassociated with the proper receipt/stock location. Display of the placard at the proper stock location is vital in ensuring count adjustment accuracy and to assist in preparing proper update data when the integrity of placarded stock is destroyed.

2. RESPONSIBLE ORGANIZATIONAL ELEMENTS

Receiving and Warehousing Divisions, Directorate of Distribution.

3. PROCEDURE/INSTRUCTIONS

a. Receiving Division will mark Inventory Receipts in accordance with the following instructions.

(1) Carefully screen, on a daily basis, all Type A inquiry responses on DLA Form 529 for evidence that the NSN is under inventory.

(2) When the inquired NSN is indicated as being involved in an inventory action, prepare a "Do Not Inventory" Placard as follows:

(a) Annotate the Inventory Cutoff Date (ICOD) on the placard.

(b) Count and annotate the number of packages/boxes, and so forth.

(c) Enter total quantity and,

(d) Annotate the stock number (NSN).

(e) T. P. number.

(f) Add 15 days to ICOD and enter new resultant date to the placard, following "Remove after." This date will permit old placards, related to inventories, to be removed periodically from the system.

(3) Attach the placard to the box/pallet or package in a secure manner to prevent loss in transit to storage location. Method by which the placard is attached shall not obscure placard visibility.

(4) Enclose all small size or small quantities of items in a clear plastic bag and attach a properly annotated placard.

(5) Do not enter location data at this time. This information shall be annotated on the placard at the time of actual storage by the warehouseman.

(6) Process inventory receipt in accordance with standard procedures.

b. Warehousing Division will screen all Type B inquiry responses on bulk type receipts initially bypassing central receiving, for evidence of inventory action. Under inventory, detail data will be displayed in the Locator Answer.

(1) Process inventory flagged stock under current procedures.

(2) Prepare a "Do Not Inventory" Placard as follows:

(a) Count total packages and quantity and enter data on placard.

(b) Annotate NSN on placard.

(c) Inventory Cutoff Date is not present on B Inquiry response - data will be obtained from Type A inquiry (DLA Form 529) and entered on placard at time of storage.

c. Warehousing Division will process placarded receipts from the bulk receiving areas and central receiving as follows:

(1) Stow receipt in location on DLA Form 529 in accordance with standard procedures. In addition,

(2) Ensure that the placard is clearly visible when stock is in location. Further, ensure that placard location will not be hidden or obscured by future stock location additions.

(3) Do not remove placard from small plastic bagged items - stow bag and placard in bin container.

(4) At the time of stowage, annotate specific location data on placard and inspect placard to ensure balance of entries are accurate and correct. As Type B inquiry does not exhibit cutoff date, it will be necessary to verify and enter additional data as necessary, using pink copy of DLA Form 529 obtained from receiving (Type A inquiry).

(5) On placards not containing a "Remove After" date, add 15 days to ICOD and enter resulting date in space provided. Placard will be removed and destroyed on expiration of this computed date.

d. Warehousing Division will rehang all placards which by accidental means become detached from location, using data contained on placard. Astray placards will not be destroyed until it is verified that the NSN is no longer under inventory.

(1) Receipts for which placarded identity cannot be retained will be processed using instructions contained in appendix E-014 and E-190.

(2) The placard, in this case, will be attached to the B-93 update action and in addition, annotated "Updated Status Code 4 - Identity not Retained."

(3) After completion of update action, placard will be forwarded to Inventory Office.

APPENDIX E-190 P

INQUIRIES AND UPDATES TO THE INVENTORY DOCUMENT CONTROL FILE THROUGH THE TELEPROCESSING SYSTEM

1. PURPOSE

This procedure prescribes the actions to be taken to update or inquire the Inventory Document Control File or mechanically adjust inventory counts through the Teleprocessing System as follows:

a. Inquire MROs or update open MROs.

b. Inquire receipts or update open receipts when the identity of the placarded receipt cannot be retained or when a receipt will be held in the Receiving Division until completion of the inventory.

c. Update open computer prepared Inventory Count Cards (DIC ZKA).

d. Accomplish mechanical adjustment of Inventory Counts and outline the options to release an inventory or to make further analysis.

e. Inquire the IDC File for complete information pertaining to an NSN, i.e., NSN information, deleted location, center strike balance information, count information, and information pertaining to documents controlled during the inventory.

2. APPENDICES USED IN THIS PROCEDURE

a. Appendix A-86

b. Appendix A-87

c. Appendix B-25

d. Appendix E-014

e. Appendix E-025

f. Appendix E-055

g. Appendix F-07

h. Appendix F-72

i. Appendix F-108

3. RESPONSIBLE ORGANIZATIONAL ELEMENTS

a. Inventory Office.

b. Receiving Division.

c. Warehousing Division.

4. PROCEDURES/INSTRUCTIONS

a. When the CRT terminal is open for work the operator will key in the call characters for the Inventory System. Characters to be entered are $$UWMI35. This is a one time entry. Depress the ENTER key and the data shown on figure 1 of this appendix will be displayed.

b. To process Physical Inventory Count Cards:

(1) Key count into the CRT (5 digits) - COUNT.

(2) Depress the ENTER key.

(3) The following message will display on the CRT:

ENTER COUNT CARD SERIAL #, QUANTITY
TO UPDATE OR END TO TERMINATE

(4) Enter the following data:

(a) Count Card Serial Number and Check Digit (7 digits) - 0923991.

(b) Comma (1 digit) - ,

(c) Quantity (up to 34 digits where T = Times and P = Plus) - 2T2P2.

(5) The following data will be reflected on the CRT:

0923991 2T2P2

(6) Sight verify serial number and quantity. If data is typed wrong, space to the error and retype.

(7) Depress the ENTER key. The file on the computer is now updated.

(8) If an error has been made, refer to error messages in paragraph 4g.

(9) To continue updating count cards, repeat steps in subparagraphs (4) through (7) above.

(10) When all desired count cards are updated, enter END (3 digits).

(11) Depress ENTER key. Count card updates are now complete. The following message will appear on the CRT:

TRANSACTION COMPLETE, MAKE NEXT ENTRY

c. To process Materiel Release Order updates to the IDC File (see note 1 for Issue Adjustment Criteria):

(1) Enter the following data:

Record ID (1 digit) - M

Comma (1 digit) - ,

Document Number (15 digits including suffix) - WT4TWX80160057B

Comma (1 digit) - ,

Status Code (1 digit) (appendix A-85) - 6

Comma (1 digit) - ,

Quantity Shipped (up to 5 digits) - 8

Comma (1 digit) - ,

Quantity Canceled (up to 5 digits) -

Comma (1 digit) - ,

Quantity Denied (up to 5 digits) - 2

Comma (1 digit) - ,

Quantity Over (up to 5 digits) -

Comma (1 digit) - ,

Quantity Under (up to 5 digits) -

NOTE: If any quantity field is to be left blank, do not leave a space between commas (see example in subparagraph (2) below).

(2) The following data will be reflected on the CRT:

M WT4TWX80160057B,6,8,,2

(3) Sight verify; correct if necessary.

(4) Depress ENTER key. The file is now updated. The following message will appear:

TRANSACTION COMPLETE, MAKE NEXT ENTRY

(5) If an error has been made, refer to error messages in paragraph 4g.

(6) To inquire a specific MRO on the IDC File enter:

Record ID (1 digit) - M

Comma (1 digit) - ,

Document Number (15 digits including suffix) - WT4TWX80160057B

Comma (1 digit) - ,

Alpha I (1 digit) - I

(7) Depress the ENTER key. The display shown in figure 2 below, will be reflected on the CRT.

d. To process Receipt Updates to the IDC File (used only to break a placarded receipt or when a receipt will be held in Receiving Division until completion of the inventory (see note 2 for Receipt Adjustment Criteria):

(1) Enter the following data:

Record ID (1 digit) - R

Comma (1 digit) - ,

TP Number (6 digits) - 372196

Comma (1 digit) - ,

Status Code, Number 1 or 4 only (1 digit) (appendix A-85) - 4

(2) The following data will appear on the CRT:

R 372196,4

(3) Sight verify; correct if necessary.

(4) Depress ENTER key. The file is now updated.

(5) If an error has been made, refer to paragraph 4g below.

(6) To inquire a specific receipt on the IDC File enter:

Record ID (1 digit) - R

Comma (1 digit) - ,

TP Number (6 digits) - 372196

Comma (1 digit) - ,

Alpha I (1 digit) - I

(7) Depress the ENTER key. The display shown on figure 3 below, will be reflected on the CRT.

NOTE 1: ISSUE ADJUSTMENT CRITERIA

STATUS CODE	TYPE RECORD	MRO MGT. CODE	ADJ. CODE	ACTION REQUIRED
Blank	B	R or Blank	C	Deduct quantity ordered from summarized count. Add quantity denied or canceled to strike balance and summarized count.
Blank	B	U	C	No action.
Blank	A	R, U, or Blank	C	Indicate incomplete data on remote typewriter or generate F-7 if batch processing.
1	A	R or Blank	C	Deduct quantity ordered from count summary.
1	A	U	C	No action.
2 or 7	A	R, U, or Blank	N	Indicate incomplete data on remote typewriter or generate F-7 if batch processing.
3	C	R or Blank	N	No adjustment is required to count summary. Add quantity denied, canceled, or under-shipped to strike balance. Deduct quantity overshipped from strike balance.
3	C	U	N	Add quantity shipped to summarized count. Deduct overshipped quantity from strike balance.

STATUS CODE	TYPE RECORD	MRO MGT. CODE	ADJ. CODE	ACTION REQUIRED
4	C	R or Blank	N	If first count, deduct quantity shipped from summarized count, Add quantity denied to summarized count. No action if second or third count.
4	C	U	N	If first count, no action, If second or third count, add quantity shipped to summarized count.
5	C	R or Blank	N	If second count, deduct quantity shipped from summarized count. Add quantity denied, canceled, or undershipped to strike balance. Deduct quantity overshipped from summarized count and strike balance. No action if third count.
5	C	U	N	If second count, no action. If third count, action required same as Status Code 4.
6	C	R or Blank	N	If third count, action required same as Status Code 5, second count.
6	C	U	N	If third count, no action.

NOTE 2: RECEIPT ADJUSTMENT CRITERIA

STATUS CODE	TYPE RECORD	ADJ. CODE	MRC DATE	ACTION
Preflag Receipts (date received before locator is flagged):				
b	B	D	--	Initial establishment of record. No action.
b	B	D	--	No RCC (receipt action). Prepare UW-108, part II, beginning 2 days before cutoff date. Send to Receiving.
b	B	D	--	No ZZS (stow action). Prepare UWF-108, part I, beginning 2 days before cutoff date. Send to Receiving.
b	B	D	--	Receipt open after cutoff day. Inventory will automatically be canceled.

STATUS CODE	TYPE RECORD	ADJ. CODE	MRC DATE	ACTION
1 (Manual)	B	D	N/A	Receipt held in Receiving Division until Completion of inventory. Receipt will be ignored in the adjustment process. If any further receipt action follows: a. On or before cutoff day, status code will become blank, and Adjustment Code will become D. b. After cutoff day, inventory will be automatically canceled.
7	D	E	Before Cutoff Day	Receipt confirmed, no adjustment required.
7	D	D	On Cutoff Day	Receipt confirmed. Receipt quantity will be added to the center strike balance quantity.
Date of Receipt on or after flag day and through cutoff day.				
b	A	D	—	Initial establishment of record. No action.
b	A	D	--	No RCC (receipt action). Prepare UWF-108 part II, beginning 1 day before cutoff day. Send to Receiving.
b	A	D	--	No ZZS (stow action). Prepare UWF-108 part I, beginning 1 day before cutoff day. Send to Warehousing.
1 (Manual)	A	D	N/A	Receipt held in Receiving Division until completion of inventory. Receipt will be ignored in the adjustment process. If the inventory adjustment has not been completed, the status code will become D, receipt will follow normal processing. If the adjustment action has been completed: a. Through batch process, inventory will automatically be canceled.

STATUS CODE	TYPE RECORD	ADJ. CODE	MRC DATE	ACTION
				b. Through TP, error message will appear on CRT "ADJUSTMENT COMPLETED WITH-OUT RECEIPT, INVENTORY SHOULD BE CANCELLED." Inventory Monitor should take manual action to cancel the inventory.
2	D	E	Before Cutoff Day	Receipt confirmed, add quantity received to summarized count.
2	D	D	On or After Cutoff Day	Receipt confirmed, receipt quantity will be added to summarized count and to the center strike balance quantity.
4 (Manual)	A	D	--	Identity of placarded receipt is lost, receipt not confirmed. No action required.
4 (Manual)	D	E	Before Cutoff Day	Identity of placarded receipt is lost, no adjustment action required.
4 (Manual)	D	D	On or After Cutoff Day	Identity of placarded receipt is lost, receipt quantity will be added to center strike balance quantity.
Date of Receipt is after cutoff date.				
b	A	D	--	Initial establishment of record, no action required unless placard is broken.
2	D	C	After Cutoff Day	Receipt confirmed, no adjustment action required. Inventory not to be held awaiting confirmation of this receipt.
4 (Manual)	A	D	--	Identity of placarded receipt is lost, no action required on this receipt.
4 (Manual)	D	C	After Cutoff Day	Identity of placarded receipt is lost, deduct receipt quantity from summarized count.

NOTE: No F-108 will be prepared for after cutoff day receipts unless the placard is broken.

e. To accomplish mechanical adjustment of inventory counts for a parameter of count cards or for a single count card:

(1) Enter the following:

Record ID (1 digit) - A

Comma (1 digit) - ,

Enter low count card serial number including check digit (7 digits) - 0923991

Comma (1 digit) - ,

Enter high count card serial number including check digit (7 digits) - 0924998

or

Enter "ADJUST"

Depress ENTER Key.

(2) The program will now bring in all count cards within the requested parameter which have been updated and are ready for adjustment and process these in count card serial number sequence.

(3) If the word ADJUST was entered, the program will bring in all count cards which have been updated and are ready for adjustment and process these in count card serial number sequence.

(4) The data shown in figures 4 and 5 below, will be printed on the remote printer when open MRO(s) or open receipts are delaying inventory count adjustment.

(5) Contact Warehousing or Receiving Division requesting status of the open MRO or receipt record(s) on the IDC File. Expedite updating the documents as outlined in appendix E-055 P for MROs and appendix E-014 P for receipts.

(6) The data shown in figure 6 below, will appear on the CRT when a physical count has been processed, but a discrepancy exists between the inventory count and the strike balance.

(7) If the NSN under inventory is a non-DLA NSN it will never be automatically released. There will be no strike balance from the ICP; therefore, a second count card will always be produced and a F-7 listing will always be printed. The inventory monitor must take the option to release the

count. (Any receipt/issue document in-process or coming in-process while the non-DLA NSN is under inventory will cause the inventory for that NSN to be canceled.)

(8) Refer to appendix A-86 to determine the proper Option Code to accomplish the adjustment.

(a) Enter Option Code (1 digit) numeric 1 through 6 or alpha A through C.

(b) Depress ENTER key.

NOTE: In the event the inventory monitor chooses not to adjust the inventory displayed on the CRT and wants to by-pass it, he may do so by depressing the ENTER key without having entered an Option Code. He may also terminate the adjustment at this time by entering S for stop and then depressing the ENTER key.

(9) If Option Code 6 was entered, the next count card (second or third count) will be produced on the remote printer. The data shown in figure 7 below, will be displayed on the CRT.

(10) This printout will be processed as a normal count card (see paragraph 4b above).

(11) If all data cannot be displayed on the CRT screen at one time, the entire data will be printed on the remote printer.

(12) If an error has been made in input, refer to paragraph 4g below, for error messages.

f. To inquire all records for a single NSN which is undergoing inventory:

(1) Enter the following:

Record ID (1 digit) - N

Comma (1 digit) - ,

NSN (13 digits) - 4210002704512

(2) Depress ENTER key. The data shown in figure 8 below, will appear on the screen.

(3) If all of the data cannot be displayed on the CRT screen at one time, the entire data will be printed on the remote printer.

(4) If adjustment action is completed and the inventory has been released, the option field will reflect the option taken.

(5) If count cards have been produced but adjustment has not been completed, the STAT field will reflect I; if count card is not produced the field will be blank.

(6) If materiel is owned by another manager, the manager and quantity adjusted will also be reflected.

g. The following error messages may be displayed on the screen.

(1) General.

(a) Error Message INPUT ENTRY LENGTH ERROR

The length of the input data is incorrect.

(b) Error Message NO MATCHING RECORD

The record is not currently in the IDC File (NSN, document number, receipt, TP number or count card serial number).

(c) Error Message INVALID REQUEST CODE

The request code/record ID is other than C, A, M, N or R (the first character of input data).

(d) Error Message QUANTITY FIELD SIZE ERROR

The quantity fields in an MRO are greater than 5 digits. The quantity fields in count card update calculate to be greater than 7 digits.

(e) Error Message QUANTITY FIELD NOT NUMERIC

The quantity fields in MRO update or count update are other than numeric.

(2) MRO Updates.

(a) Error Message INVALID DOCUMENT NUMBER

The first 14 positions of the MRO document number contain other than alpha or numeric characters.

(b) Error Message QUANTITY OVER AND UNDER CONFLICT

The quantity overshipped and quantity undershipped fields are both filled.

(c) Error Message STATUS CODE/QUANTITY INPUT CONFLICT

Input of Status Code 1, 2, or 7 with quantities; input of Status Code 3, 4, 5,

(d) Error Message QUANTITIES INPUT DO NOT EQUAL ORDERED

Quantities shipped plus canceled, plus denied, plus undershipped, minus overshipped, do not equal quantity ordered.

(e) Error Message INVALID STATUS CODE

Input of MRO Status Code other than 1 through 7.

(3) Receipt Updates.

(a) Error Message TP CONTROL NUMBER NOT NUMERIC

The TP control number contains other than numeric characters.

(b) Error Message INVALID STATUS CODE

Input of receipt Status Code other than 1 or 4.

(c) Error Message RECEIPT ALREADY IN PROCESS

Input of Status Code 1 after receiving has indicated any of the following actions: RCC, ZZS date or MRC date.

(d) Error Message STATUS CODE 4 INCOMPATIBLE WITH RECEIPT STATUS

When the IDC File indicates a receipt record with other than Status Code blank and Type Record A, or Status Code 2 and Type Record D.

(e) Error Message ADJUSTMENT COMPLETED, INVENTORY SHOULD BE CANCELLED

Input of Status Code 4 when the receipt was previously updated with Status Code 1 and the inventory has already been adjusted.

(4) Count Card Updates.

(a) Error Message COUNT CARD SERIAL NUMBER IS INVALID

The count card serial number is not all numeric (the first 5 digits of the serial number).

(b) Error Message INVALID CHECK DIGIT

The count card serial number check digit is incorrect (sixth position of the serial number).

(c) Error Message COUNT QUANTITY VALUE EXCESSIVE

The count quantity exceeds a maximum value of 9,999,999.

(d) Error Message "INVALID FIELD SEPARATOR"

The field separator between the check digit and the quantity is other than a comma or a blank.

(5) Adjustments.

(a) Error Message "INVALID OPTION CODE"

The error was caused by one or more of three things; option taken was other than 1 through 6/A through C, option 6 used after input of third count, or accepted count number is greater than the number of counts that were taken.

(b) Error Message "COUNT CARD SERIAL NUMBER IS INVALID"

Either the high or the low count card serial number in the parameter are other than numeric.

(c) Error Message "INVALID CHECK DIGIT"

Count card serial number check digit for either or both of the high or low serial numbers is incorrect.

(6) Inquiry of NSN.

Error Message "NSN NOT NUMERIC" - The input NSN is not numeric.

APPENDIX E-191 P

INVENTORY HISTORY PRINTOUT

1. PURPOSE

This procedure contains instructions for requesting and for the use of Inventory History Printout which are furnished automatically during the mechanical inventory adjustment functions.

2. APPENDICES USED IN THIS PROCEDURE

a. Appendix B-96

b. Appendix F-98, Parts 1 and 2

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Inventory Control Office, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. The inventory history listing/microfiche (appendix F-98, parts 1 and 2) will be used when a stock balance discrepancy exists between DSC balance records and stock on hand at the depot found through an inventory. The inventory history listing/microfiche will be used as a research tool for investigations of overage or shortages after the inventory has been accepted.

b. Input of appendix B-96 will be used to request the appendix F-98, part 1, Inventory History listing.

c. The appendix F-98, part 2, Listing/microfiche, will automatically be prepared at the first of each month for all inventories which were completed during the previous month.

d. The inventory history listing/microfiche will contain a summary of information pertaining to all inventories conducted for each NSN during the previous month. This will include count information, strike balance information, all transactions (MROs and receipts) which were controlled during the inventory, and the inventory cutoff date of the last inventory conducted prior to the current report.

e. The appendix F-98, part 1, will be available for DIC ZAT inquiry for all inventories for 15 days after the monthend. This allows time for preparation of the appendix F-98, part 2, microfiche. At the conclusion of the 15-day period, all Inventory History Files will be purged and all data from the preceding month dropped, except for count information for inventories involving a major variance ($800.00 or more) or any variance of the item is critical or sensitive (Inventory Category Code E or U). This count information will remain in the history file until the next inventory, at which time it will be purged and dropped.

f. Analyze the appendix F-98 and determine, if possible, the probable cause(s) of the inventory loss or gain. If a determination of the causes can be made, include the findings in return correspondence to the DSC.

APPENDIX E-192 P

MONTHLY SUMMARY OF LATE RECEIPTS

1. FORM/REPORT USED

Appendix F-248, Monthly Summary of Late Receipts.

2. REASON/CRITERIA FOR PREPARATION

The Monthly Summary of Late Receipts is produced automatically at the end of the month and reflects all late receipt lines for which a Materiel Receipt Card has been transmitted in the previous month.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Responsibility for review of the report will be assigned locally by DS/T. At a minimum the Chief, Receiving Division, will review part 1 of the report and the Chief, Storage Division, will review part 2.

4. PREPARATION OF THE REPORT

The appendix F-248 report will be produced monthly from a computer scan of the Completed Receipts File IAW appendix D-49. Only those receipts identified as late will be reported. Total depot processing time will be computed as the number of workdays between the Date Received and the date the Materiel Receipt Card (MRC) was transmitted to the DSC (the Date Received is not included as processing days). When the total depot processing time, as here defined, exceeds 4 days on a D4_ MRC, the receipt will be counted as late. When the total depot processing time exceeds 7 days on D6_ MRC, the receipt will be counted as late.

5. DISTRIBUTION OF THE REPORT

One copy of each part of the report will be forwarded to the MSO, one copy of part 1 of the report will be forwarded to the Chief, Receiving Division, and one copy of part 2 of the report will be forwarded to the Chief, Storage Division. This distribution may be modified locally as required.

6. PROCEDURES/INSTRUCTIONS FOR USING THE REPORT

a. Part 1.

The first part of the report stratifies the number of late lines in the previous month by type (Procurement or other than Procurement) and the number of days required for each segment of processing in Receiving Division, including total time between Date Received and processing of the Receipt Confirmation Card. This information will indicate what areas of processing might have been responsible for the lates and perhaps lead to increasing resources or improving methods in those areas. By comparing the data with local processing standards, management can focus attention on specific problem areas where improvement will increase effectiveness.

b. Part 2.

The second part of the report stratifies the number of late lines in the previous month by type (Procurement or non-Procurement), warehouse area, and the number of days required for receipt stowage (days between processing of the Receipt Confirmation Card and Receipt Stow Notice). Although this is not an absolute measurement of total processing time utilized in Storage Division, it does indicate the time devoted to the stow action after all receipt processing actions in Receiving Division have been completed. The report reflects when excessive time utilized in the stowage process causes late receipts, allowing management to pinpoint problems in specific warehouse areas.

7. REPORT DISPOSITION

The report should be retained a sufficient amount of time to allow complete analysis and resolution of significant problems and then destroyed.

APPENDIX E-193 P

REPORT OF RECEIVING ACTIONS REQUIRED

1. FORM/REPORT USED

Appendix F-246, Report of Receiving Actions Required.

2. REASON/CRITERIA FOR PREPARATION

The Report of Receiving Actions Required is produced when input of a Suspended Receipt Record Deletion (appendix B-97) deletes a record which contains Stow Notice information or a Suspended Receipt File Maintenance Card (appendix B-145) changes a data element which causes the PMR status of the record to be changed. When comparable deletions (appendix D-43) or changes are processed through a remotc terminal, the F-246 report is not produced but messages corresponding to the F-246 report lines are printed immediately at the remote terminal. These procedures apply to the remote messages as well as the F-246 report.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

The report will be utilized by the originator of the Suspended Receipt Deletions and Maintenance Cards which will normally be the Receipt Documentation Branch, Receiving Division. Anyone who originates B-97 deletions or B-145 maintenance cards for input in Data Systems is responsible for reviewing the F-246 report the following day and taking action as described below.

4. PREPARATION OF THE REPORT

The F-246 report and corresponding remote messages will be produced when Stow Notice information appears in deleted Suspended Receipt File records or a data element change in a Suspended Receipt Record necessitates changing the PMR status (from No PMR available to PMR available or vise versa).

5. DISTRIBUTION OF THE REPORT

One copy to the originator of the initiating input.

6. PROCEDURES/INSTRUCTIONS FOR USING THE REPORT

a. Deletion Actions. When a Suspended Receipt Record deletion is input using the B-43 format and the record to be deleted contains Stow Notice information, the applicable stow data will be printed at the remote terminal. When the deletion is input using the B-97 format and stow information is contained in the Suspended Receipt Record, an image of the deletion input and the corresponding stow information will be printed on the F-246 report the following day. In either case, it is essential that the stow information be reinput using the TP Control Number of the Type A inquiry processed to replace the deleted record. The new Stow Notice may be entered by the originator of

the deletion or the originator of original Stow Notice depending upon local procedures. The new Stow Notice should be input as soon as possible after the new Type A inquiry has been processed. The reinput of the Receipt Stow Notice will be in the format of appendix B-46 or B-144 and processed IAW appendix E-110 P. If the remote message or the F-246 report line contains only the 3-position warehouse area in the location column a short form Receipt Stow Notice will be reinput. If the remote message or the F-246 report line contains Type of Storage Code and a full 9-position location number a long form Receipt Stow Notice will be reinput.

b. Maintenance Actions. When a Suspended Receipt File Maintenance (appendix B-145) is processed through the remote terminal and the change results in a change to the PMR status of the Suspended Receipt Record, a message indicating the new type of Receipt Confirmation (RCC) required to clear the record will be printed at the remote terminal. When a comparable maintenance update is input followed by an in-the-clear message regarding the RCC will be printed on the F-246 report the following day. Data element changes which can affect PMR status are changes to PIIN/Document Number or Supplemental PIIN. If no PMR Record was available prior to the data element change and the change results in a PMR record being matched, the message appearing at the remote terminal or on the F-246 report will be "ZV/ZW RECEIPT CONFIRMATION NOW REQUIRED." If a PMR was available prior to the data element change and the change results in a no match condition, the message will be "ZX/ZY RECEIPT CONFIRMATION NOW REQUIRED." When either of these messages appear the Receipt Control Document corresponding to the receipt will be clearly annotated to indicate the change and the appropriate Receipt Confirmation in the format of appendix B-108 or B-109 will be input IAW appendix E-108 P.

7. REPORT DISPOSITION

A copy of the report will be retained until the corresponding valid transactions (Receipt Stow Notice or Receipt Confirmation) have been processed to the system without being rejected. The report may then be destroyed.

APPENDIX E-194 P

INITIALIZING RECEIVING TELEPROCESSING AND BATCH ENTRY OPERATIONS

1. PURPOSE

This procedure provides instructions for initializing the remote CRT display devices to accept keyboard teleprocessing inputs associated with the inspection, confirmation, storage and general processing of new receipts.

2. APPENDICES USED IN THIS PROCESS

a. Appendix B-41, Remote Receipt Inquiry.

b. Appendix B-43, Type D Suspended Receipt Record Deletion.

c. Appendix B-44, Type N Remote Suspended Receipt File Inquiry By NIIN.

d. Appendix B-45, Type Q Remote Suspended Receipt File Inquiry - By TP Control Number.

e. Appendix B-46, Type S Remote Receipt Stow Notice Input.

f. Appendix B-68, Type C Contract Data Inquiry.

g. Appendix B-69, Type E Completed Receipt Inquiry.

h. Appendix B-98, Workload Request Card.

i. Appendix B-108, Receipt Confirmation Card (Short Form - PMRR Available).

j. Appendix B-109, Receipt Confirmation Card (Long Form - No PMRR Available).

k. Appendix B-147, Type P Prepositioned Materiel Receipt Inquiry.

l. Appendix B-148, Type R Suspended Receipts Maintenance Input.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

a. Any depot element involved in the receipt processing activity may process any of the inputs/inquiries described in paragraph 2 above by utilizing this procedure to activate the remote keyboards, display and printing terminals.

b. Receiving and Warehousing Divisions will be responsible for the inspection receipts recording and storage of new receipts in accordance with appendix E-047 P.

4. PROCEDURES/INSTRUCTIONS

a. Prior to processing the inputs of paragraph 2 above, through a remote terminal, it is necessary to initialize the terminal to be used. This can be done once a day prior to entry of the first input. There is no need to closeout the terminal at the end of the day.

b. For those terminals to be used for remote, keyed entry will be activated to accept transactions as follows:

(1) Prior to entry of first daily input, examine Cathode Ray Tube (CRT) screen display for an indication that Teleprocessing (TP) function is operational; i.e., message, terminal ID, current year and Julian date.

(2) If this data is not present, depress the key PA1 and the above data will be displayed.

(3) The display screen will also furnish the partial key "$$UW" with the cursor under the U. The operator will enter the key "UWRT10" (immediately after the $$) and depress the ENTER key.

(4) The operator may elect to initialize Type B Locator Inquiries IAW appendix E-163 P. While the terminal is being used for Type B input, it may not be used for those inputs outlined in paragraph 2 above.

c. The Receipt Subsystem Inquiry display will appear upon successfully initializing the terminal with program key $$UWRT10, reference figure 1 below.

d. A remote terminal operator will select the type of inquiry or input desired. identifying the display required; reference figures 2 through 10 below. All inputs except RCC data require one character; RCC updates (figures 11 through 16) require all three positions of DIC; i.e., enter ZVS for the Procurement RCD display. Depress ENTER key to select display and to enter inquiry or confirmation data. Figures 20 through 27 represent applications (inputs and responses/displays) of the DWASP PROTOTYPE/SINGLE STATION RECEIPT PROCESSING SYSTEM. Response to a valid Type K or L inquiry will result in the display of:

(1) Figure 22 and 23 - DICOMSS Receipt Confirmation Screens. Note: Use is restricted to processing DICOMSS receipt confirmations, in lieu of RCD-1 forms.

(2) Figures 24 through 27 - General Receipt Confirmations, used in lieu of RCD-1 coding forms.

e. Except for appendix B-98, figure 17, all remote inputs described in paragraph 2 above, will be validated and processed immediately upon entry. Appendix B-98, Workload Request Card, will be validated immediately but will be held for processing later.

f. Successful input of the inquiry or update type will activate a special CRT display tailored for inquiry or RCC update. Each display, figures 1 through 27 below, is complete with entry requirements, data titles/headers, and a self-positioning cursor. The operator may skip data fields as specified in the applicable B appendix requirements.

g. Inquiry, as well as RCC data formats, may be changed as required without displaying the Receiving Subsystem inquiry process display. At the conclusion of any successful input, the same display format as previously entered, will be offered again. The message at the bottom of the display states:

ENTER CODE FOR NEXT INQUIRY TO BE PROCESSED
DEPRESS ENTER KEY

(1) To use same display format, continue to enter necessary data.

(2) To change display, enter required document identifier in spaces XXX provided by moving cursor to this area. Depress ENTER key.

(3) The requested/new display format will be presented on the tube face (screen) with cursor positioned for the first required data entry.

h. To completely erase or cancel a display or data recorded (complete or incomplete) depress "Erase Input" key. This action will cancel the display and return the primary display.

i. Format errors will reflect the word "Error" opposite the data entry. The exceptions to this are the special DWASP Prototype - Single Station Inquiry/Responses, figures 20 through 27. Validation and processing errors will be identified by asterisks directly under the invalid data field. Processing errors will be identified by an in the clear message and VRC, when applicable. Violation Reason Codes will not be presented for format errors. Process errors such as "No Matching Record or Incorrect Format" will appear on line 23 of the display (24 total lines) accompanied by the VRC applicable.

(1) Under normal conditions, the system will always print available Contract Data in response to Type A receipt inquiries on procurement receipts. At depot option, however, it is possible to limit the printed output as follows:

(a) No Contract Data Output.

(b) No Contract Data on Blanket Purchase Agreement (BPA) receipts ("A" in the ninth position of the PIIN field in the matching PMR record).

(c) No Contract Data on source acceptance procurement receipts ("E" in the Management Code field of the matching PMR record).

(2) All other system functions related to Contract Data maintenance will be accomplished regardless of the option selected. These options should only be exercised as a consequence of established policy or in times of extreme emergency as regards to available computer processing time. Instituting one of these options can only be carried out by the Office of Data Systems (ODS). The option will remain in effect until positive action is taken by ODS to return to normal printing of all Contract Data, or select another option.

5. DATA ENTRY INSTRUCTIONS

a. The initializing action described above need only be accomplished once each processing day for each terminal. If the program key $$UWRT10 is changed, the terminal must be reinitialized to continue receipts processing.

b. Correct only the data in error as the total display will be read and mechanically entered each time the ENTER key is depressed, regardless of the position of the cursor.

c. Process errors; for example "No Matching Record," may not be immediately correctable. Therefore, depress PRINT key to obtain hard copy; continued processing. This procedure may also be followed if the operator cannot resolve the error condition. Hard copy printing of the display is available by operator option.

APPENDIX E-195 P

MOFAST MICROFICHE HISTORY UPDATE PROCESS

1. PURPOSE

This input is made through CRT to update the microfiche GBL History record (see part 1) and GBL/MRO Microfiche Record Update (see part 2) after the GBL has been printed, but prior to actual print of the hard copy microfiche record. Updates or deletions may be made at least 10 days, on-line, after print of the original GBL. Updates are made in GBL format. Any data entered to the GBL Cover Sheet or Continuation Sheet will be in the same location or sequence on the microfiche as the previous data except where new data is entered. This new data will be in the sequence desired by the input operator. Each change to the GBL on the cover page and on any continuation page must be made to the microfiche history record by the operator using this process. No changes or totals are made automatically.

2. APPENDICES USED IN THIS PROCEDURE

a. Appendix B-195

b. Appendix D-136

c. Appendix E-238 P, Part G

d. Appendix F-190

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. Part 1, GBL Microfiche Record Update.

(1) General

This process allows update of all data elements of the GBL Cover Sheet and Continuation Sheet except the GBL number. The updates are made by CRT up to at least 10 days after print of the original Bill of Lading. The process has a security controlled access to the update program of the GBL History. The program call input includes the operator's security identification which must be authorized and assigned by the depot Data Systems Security Officer. The update programs cannot be displayed if the computer does not recognize the operator's security number. In addition, the operator's initial identification will be input as a part of the History Update process so the microfiche history records show who made the changes to a specific GBL record.

(2) CRT Initialization.

(a) Key in $$UWFN75.

(b) Operator Security Identification.

(c) Press ENTE key. This entry will dedicate the CRT input station with the following menu display:

```
UWFN75   FREIGHT WAYBILL AND BILL OF LADING CONTINUATION SHEET

                 OPER:     IDENTIFICATION
                  ACT:     GBL COVER SHEET
                             AG = ADD
                             IG = INQUIRY
                             UG = UPDATE
                           CONTINUATION SHEET
                             AC = ADD
                             IC = INQUIRY
                             UC = UPDATE
                           CARRIER AND RIN STATEMENTS
                             IS = INQUIRY
                             MS = MODIFY
                  GBL:     GBL-NUMBER
                   SU:     SHIPMENT UNIT WITHIN THE GBL
          NMFC-SEQ-NO:     THE COUNT OF THE NMFC WITHIN THE SU
              STMT-NO:     CARRIER OR RIN STATEMENT NUMBER PREFIXED BY C OR R

OPER    ACT       GBL        SU 0000000000000    NMFC-SEQ-NO 0000    STMT-NO

      NOTE:  YOU MAY RETURN TO THIS DISPLAY BY PRESSING PF/SF KEY #1
```

The CRT program will remain dedicated to this process as long as it is active. When activity ceases for a predetermined period the screen face will blank out, requiring input of the program call number and operator security identification number to reobtain the display. This will prevent unauthorized use of the program. However, care should be taken by the operator to clear the program upon completion of use.

(3) The following CRT displays are used in the process of adding, updating and inquiring GBL Microfiche History data:

(a) Cover Sheet 1.

LINE6
```

NOTE: This display represents Carrier/RIN statement that appear on the continuation pages. There may be one carrier statement and/or up to four RIN notes.

(4) GBL Microfiche History Inquire/Update will be accomplished by the following procedures:

(a) Inquire GBL Cover Page Data.

1. Enter Operator Identification (necessary only on menu display).

2. Enter IG Action Code.

3. Enter GBL Number.

4. Do not enter SU Number or NMFC-SEQ-NO (leave ZEROS).

5. Press ENTER key.

6. Cover Sheet 1 display will appear on CRT.

7. Press ENTER key to view Cover Sheet 2.

NOTE: The remainder of the GBL can be viewed by continuing to press the ENTER key.

(b) Update GBL Cover Page Data.

1. Enter Operator Identification (necessary only in menu display).

2. Enter IG Action Code.

3. Enter GBL Number.

4. Do not enter SU Number or NMFC-SEQ-NO (leave ZEROS).

5. Press ENTER key to view Cover Sheet 1 data (to view Cover Sheet 2 data press the ENTER key a second time).

6. Change Action Code to UG.

7. Update data.

8. Press ENTER key.

NOTE 1: Any additional notes which appear on the original GBL may be entered on the Continuation Summary Data display. See instruction note for entry to that display for update. Reference note after paragraph (d)9 below.

NOTE 2: To delete a GBL, enter an X in the DLTE-IND field on the Cover Sheet 2 display. This will delete all information pertaining to the GBL.

(c) Add a GBL to Microfiche.

1. Enter Operator Identification (necessary only on menu display).

2. Enter AG Action Code.

3. Enter GBL Number.

4. Do not enter SU Number or NMFC-SEQ-NO (leave ZEROS).

5. Press ENTER key.

6. Cover Sheet 1 display will appear on CRT.

7. Enter applicable GBL Data.

8. Press ENTER key.

9. Cover Sheet 2 display will appear on CRT.

10. Enter applicable GBL Data.

11. Press ENTER key.

12. The Continuation Summary Data Display will appear on the CRT.

13. Action Code must be AC. Leave SU and NMFC-SEQ-NO field as is.

14. Enter applicable continuation page summary and TAC data.

15. Press the ENTER key.

16. The SU Data Display will appear on the CRT.

17. Action Code must be AC. Do not change the SU and NMFC-SEQ-NO field.

18. Enter applicable SU Data for first SU on GBL.

19. Press the ENTER key.

20. The NMFC/Container Data display will appear on the CRT.

21. Action Code must be AC. Do not change the SU and NMFC-SEQ-NO field.

22. Enter applicable NMFC, Container, and Freight Description Data.

23. Press the ENTER key.

24. The NMFC/Container Data Display will appear on the CRT for data to be added for the next container in the SU.

NOTE 1: Subparagraphs 21 through 24 should be repeated for all NMFC/Containers in the SU.

NOTE 2: Additional Shipment Units can be added by following the procedure for adding Shipment Units to a GBL.

(d) Inquire/Update Continuation Summary Data.

1. Enter Operator Identification (necessary only on menu display).

2. Enter IC Action Code.

3. Enter GBL Number.

4. Enter zeros in SU Number and NMFC-SEQ-NO field.

5. Press the ENTER key.

6. The continuation Summary Data Display will appear on the CRT.

To update, do the following additional steps:

7. Change Action Code to UC.

8. Update data.

9. Press the ENTER key.

NOTE: Any additional entry notes on the hard copy GBL may be updated on the Continuation Summary Data CRT display by entering the code -- in the first two positions of the first line after the TAC (transportation appropriation code), then entering the desired message. The Action Code must be UC. There are 53 positions available of any remaining lines under the last TAC. Blank positions under the titles weight and charge must be left blank.

(e) Inquire/Update SU Data.

1. Enter Operator Identification (necessary only on menu display).

2. Enter IC Action Code.

3. Enter GBL Number.

4. Enter Shipment Unit Number.

5. Enter zeros in NMFC-SEQ-NO field.

6. Press the ENTER key.

7. The continuation SU Data Display will appear on the CRT.

To update, do the following additional steps:

8. Change Action Code to UC.

9. Update data.

10. Press the ENTER key.

NOTE: To delete an SU from a GBL enter an X in the DLTE-IND field on the continuation SU Data Display. This will delete all records pertaining to the SU.

(f) Inquire/Update NMFC/Container Data

1. Enter Operator Identification (necessary only on menu display).

2. Enter IC Action Code.

3. Enter GBL Number.

4. Enter Shipment Unit Number.

5. Enter NMFC-SEQ-NO.

NOTE: This is the sequence the NMFC/Container appears on the continuation page per SU.

6. Press the ENTER key.

7. The NMFC/Container Data Display will appear on the CRT.

NOTE: If the NMFC-SEQ-NO is not known, enter 0001 and data for the first NMFC/container will appear. By continuing to press the ENTER key the operator can page consecutively through the NMFC/container records until the record needed is displayed.

To update, do the following additional steps:

8. Change Action Code to UC.

9. Update data.

10. Press the ENTER key.

NOTE: To delete an NMFC/container record from a GBL. Enter an X in the DLTE-IND field on the continuation NMFC/Container Data Display.

(g) Add an SU to a GBL. The operator may add a Shipment Unit to a GBL after a Shipment Unit that is already on the GBL or if necessary as the first Shipment Unit on the GBL. The process is as follows:

1. Enter Operator Identification (necessary only on menu display).

2. Enter IC Action Code.

3. Enter zeros in SU and NMFC-SEQ-NO field.

4. Press the ENTER key.

5. The Continuation Summary Data Display will appear on CRT.

6. Change Action Code to AC.

7. In the SU field, enter the Shipment Unit Number of the Shipment Unit which will precede the new Shipment Unit being added. Enter zeros in SU field if the new Shipment Unit is to be sequenced first on the GBL.

8. Enter zeros in NMFC-SEQ-NO field.

9. Press the ENTER key.

10. The SU Data Display will appear on the CRT.

11. Action Code must be AC. Do not change the SU and NMFC-SEQ-NO fields.

12. Update SU Data on display.

13. Press the ENTER key.

14. The NMFC/Container Data Display will appear on CRT.

15. Action Code must be AC. Do not change the SU and NMFC-SEQ-NO field.

16. Enter applicable NMFC, Container, and Freight Description Data.

17. Press the ENTER key.

18. The NMFC/Container Data Display will appear on the CRT for data to be added for the next container in the SU.

NOTE: There should be at least one NMFC/Container Record added for each SU added.

19. When finished the operator may do one of the following:

a. Press the ENTER key without entering any data and the menu display will appear on the CRT.

b. Change the Action Code and access fields and continue making inquiries/changes to different records.

c. Enter nines in the NMFC-SEQ-NO field and press ENTER key to add another SU.

(h) Add an NMFC/Container to a GBL.

1. Enter Operator Identification (necessary only on menu display).

2. Enter AC Action Code.

3. Enter GBL Number.

4. Enter in the SU field the Shipment Unit Number.

5. Enter in the NMFC-SEQ-NO field the sequence number of the NMFC/container which will precede the new NMFC/container being added.

6. Press the ENTER key.

7. The continuation NMFC/container Data Display will appear on the CRT.

8. Do not change Action Code, SU, or the NMFC-SEQ-NO field.

9. Enter applicable NMFC, Container, and Freight Description Data.

10. Press the ENTER key.

11. The continuation NMFC/Container Data Display will appear on the CRT for data to be added for the next container in the SU.

12. When finished the operator may do one of the following:

a. Press the ENTER key without entering any data and the menu display will appear on the CRT.

b. Change the Action Code and access fields and continue making inquiries/changes to different records.

c. Enter nines in the NMFC-SEQ-NO field and press ENTER key to add another SU.

(i) Inquire Carrier and RIN Statements.

1. Enter Operator Identification.

2. Enter IS Action Code.

3. Enter GBL Number.

4. Enter Carrier Statement Number prefixed by C or RIN number prefixed by R.

5. Press ENTER key.

6. The Carrier or RIN statement will appear on the CRT.

<u>To Update, do the following additional steps</u>:

7. Change Action Code to MS.

8. Update Data.

9. Press ENTER key.

(5) Additional Considerations. The operator may page through a GBL (advance from one display to the next) by continuing to press the ENTER key.

(6) As there are a number of standard clauses on the GBL which are lengthy, it is necessary to only place an X or blank out the X to change whether these clauses should be on the microfiche record, on the screen face where indicated. Examples of these clauses are Hazardous Certification, Released Valuation, Aircraft Limitation, Pro Number, Trip ID Clause, Rated Same or Lower Clause.

NOTE: When operator has completed using program, clear the CRT to prevent security violations.

b. Part 2, GBL/MRO Microfiche Record Update.

(1) General. This procedure allows operator to add GBL/MRO data to GBL microfiche history if the GBL records are available in the MOFAST GBL History File, and the Shipment Unit record is not on the In-Process File.

(2) CRT Initialization.

(a) Key in $$UWFN70.

(b) Operator Security Identification.

(c) Press the ENTER key. This entry will dedicate the CRT input station with the following display:

```
ACT AM GBL     SU 0000000000000
         1         2         3         4         5         6         7         8
12345678901234567890123456789012345678901234567890123456789012345678901234567890123456789

 2345678901234567890123456789012345678901234567890123456789012345678901234567890123456789 0

ENTER DATA
```

(3) Enter key data elements to obtain the required display for microfiche update processing as follows:

ACT AM = Action Code (AM Entered by Computer)
GBL = GBL Number (Keyed In)
SU = Shipment Unit Number (Keyed In)

Add GBL/MRO data to GBL microfiche history if the Shipment Unit is available in the MOFAST History File. MRO DATA key in required missing MRO data (80 positions) from DD 1348-1. Repeat additional MROs in same SU. When the above entry has been keyed in, press the ENTER key. If the entry is successful, the following will appear on the CRT:

PROCESS COMPLETE ENTER DATA

Additional entries may then be input.

5. ERROR MESSAGES/ACTION

a. Part I (UWFN75).

ERROR MESSAGE	CAUSE/ACTION
INVALID OPERATOR SECURITY ID	Probable Cause: Operator identification not recognized by computer. Action: Operator identification must be entered in the program security table as authorized by the Depot Security Officer. Determine who is authorized and have them make the updates or obtain authorization to update the program Security Identification Table.
INVALID OPERATOR CODE	Probable Cause: Operator Code not entered. Action: Enter operator initials.
DISPLAY ID ERROR - NOTIFY PROGRAMMER	Probable Cause: Internal program error. Action: Notify programer.
ACTION CODE INVALID	Probable Cause: Type Action Code inptu does not match actions desired. Action Codes must be: GBL Cover Sheet - AG, IG, UG GBL Continuation Sheet - AC, IC, UC Action: Determine type update required and input proper Action Code.
INVALID GBLP	Probable Cause: GBL number must be first position alpha, remainder of positions numeric. Action: Determine correct GBL number and reenter.
UWFN75 BAD RETURN FROM UWFN75	Probable Cause: System error has occurred. Action: Record message, notify supervisor, continue processing.
NO COVER SHEET RECORD ESTABLISHED	Probable Cause: Attempting to add Continuation Sheet data without first establishing a GBL Cover Sheet record.

ERROR MESSAGE	CAUSE/ACTION
	Action: Establish a GBL Cover Sheet record.
INVALID DATA	Probable Cause: Data entered not valid or in error.
	Action: Determine correct data and reenter.
RECORD NOT FOUND	Probable Cause: Data entered not valid or record not established.
	Action: Determine correct data and reenter or if valid, establish record.
ALL COVER SHEET DATA NOT FOUND	Probable Cause: All records not present when building second display.
	Action: Determine what is missing that is required and add data.
INVALID ADD - RECORD 1	Probable Cause: GBL Cover Sheet record already added.
	Action: Change add Action Code to update Action Code.
INVALID ADD - RECORD 2	Probable Cause: GBL Cover Sheet record already added.
	Action: Change add Action Code to update Action Code.
INVALID ADD - RECORD 3	Probable Cause: GBL Continuation Sheet record already added.
	Action: Change add Action Code to update Action Code.
COVER SHEET INFORMATION MISSING	Probable Cause: Cover Sheet 2 data not established.
	Action: Determine missing data, establish record by entering missing data.
INVALID UPDATE ACTION	Probable Cause: Operator trying to update a record that is not there; or operator trying to update a record without inquiring the record first.
	Action: Inquire the record; if data not present, change Action Code to add data and reenter data.
TAC RECORD ERROR	Probable Cause: No TAC record established.
	Action: Establish TAC Code record.

ERROR MESSAGE	CAUSE/ACTION
NO GBL SU RECORD ESTABLISHED	Probable Cause: SU record has never been established for the GBL. Action: Determine if SU is correct. Make inquiry and if correct, establish SU record for GBL.
INVALID STATEMENT NUMBER PREFIX	Probable Cause: The number preceding the carrier or RIN statement was other than a C or R. Action: Verify the input and reenter.
INVALID CARRIER STATEMENT NUMBER	Probable Cause: The carrier statement number requested was not on file. Action: Verify the statement number. If correct, establish a carrier statement in program UWFK90.
INVALID RIN STATEMENT NUMBER	Probable Cause: The RIN statement number requested was not on file. Action: Verify the statement number. If correct, establish a RIN statement in program UWFK90.

b. Part II (UWFN70).

ERROR MESSAGE	CAUSE/ACTION
NO GBL HISTORY RECORD	Probable Cause: GBL number entered invalid or GBL History record not created or reprinted. Action: Determine correct GBL number, reenter or create GBL History record.
INVALID SU STATUS	Probable Cause: SU status not proper for addition of MRO to GBL microfiche history record. Action: Shipment Unit must be confirmed and in Z status before data can be processed in this program. Notify supervisor.
GBL - MRO NOT NEEDED	Probable Cause: MRO data entered for a Shipment Unit for which MRO data will automatically be prepared. Action: Enter next MRO.

ERROR MESSAGE	CAUSE/ACTION
GBL NOT EQUAL SU-GBL ENTER Y IF VALID	Probable Cause: SU has been assigned to a different GBL than entered. Action: Notify supervisor for research. Check SU for accuracy, check GBL for accuracy, and enter Y if valid by overlaying the asterisk with the Y on the bottom center of the display as follows:

```
ACT AM GBL K0000143 SU 0051268000000
          1         2         3         4         5         6         7         8
12345678901234567890123456789012345678901234567890123456789012345678901234567890123456789

 23456789012345678901234567890123456789012345678901234567890123456789012345678901234567890

GBL NOT EQUAL SU-GBL ENTER Y IF VALID   *
```

ERROR MESSAGE	CAUSE/ACTION
SU NOT FOUND - ENTER MRO DATA	Probable Cause: MRO data required for completion of record. Action: Determine MRO data and enter.
INVALID SU ENTERED	Probable Cause: SU is all zeros; or SU pos. 12 and 13 are greater than zero and pos. 8-11 are equal to zero. Action: Determine correct SU and reenter.
INVALID GBL ENTERED	Probable Cause: GBL entered is not 8 positions long nor first position alpha, seven positions numeric. Action: Determine correct number and reenter.
SU FOUND - MRO DATA NOT NEEDED	Probable Cause: Entered MRO data when SU still in process. The MRO will be created automatically from the In-Process File. Action: No further action required. Continue to process.

APPENDIX E-196 P

CARRIER/RIN STATEMENT MAINTENANCE

1. PURPOSE

This appendix provides for maintenance of a file to contain carrier instructions, carrier discount statements and Routing Instruction Notes (RIN) to be printed on the bill of lading. Access to this file is by carrier statement or RIN number entered during the billing process. A complete printout of the file is available in F-194, part 10.

2. APPENDICES USED IN THIS PROCEDURE

a. Appendix B-156

b. Appendix D-203

c. Appendix F-194, part 10

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T

4. PROCEDURES/INSTRUCTIONS

a. The MOFAST Carrier/RIN Statement Maintenance process is initiated by entering program call number $$UWFK90. This action will dedicate the CRT to this procedure until another call number is entered.

b. The initial CRT display is as follows:

```
UWFK90        CARRIER / RIN STATEMENT MAINTENANCE

                    ACTION:
                        I = INQUIRY
                        A = ADD
                        D = DELETE
                        U = UPDATE
                    TYPE STATEMENT:
                        C = CARRIER STATEMENT
                        R = RIN STATEMENT
                    CODE:
                        THREE POSITIONS AVAILABLE

            ACTION      TYPE STATEMENT      CODE
```

c. Operators response:

(1) Inquiry of Carrier or RIN statement. Key in Action Code I, Type Statement C or R and the three position code you wish to inquire. Depress the ENTER key. If the input is successful, the following display will appear:

```
UWFK90-00          CARRIER / RIN STATEMENT MAINTENANCE

        RIN 111
        LINE1   SHIPPER TO LOAD CONSIGNEE TO UNLOAD
        LINE2
        LINE3
        LINE4
        LINE5
        LINE6

        ACTION      TYPE STATEMENT      CODE
```

(2) Addition of a Carrier or RIN statement. Key in Action Code A, Type Statement Code C or R and the three position code you wish to add. Depress the ENTER key. If the input is successful, the following display will appear:

```
UWFK90-00          CARRIER / RIN STATEMENT UPDATE / ADD

        RIN 316
        LINE1
        LINE2
        LINE3
        LINE4
        LINE5
        LINE6
```

(3) Type up to six lines for a Carrier or RIN statement. Depress the ENTER key. If the input is successful, the following display will appear:

```
UWFK90-00          CARRIER / RIN STATEMENT MAINTENANCE

        RIN 316
        LINE1     THIS CERTIFIES THAT FILLED CONTAINERS WERE TRANS-
        LINE2     PORTED BY THE SAME CARRIER THAT IS TRANSPORTING
        LINE3     THESE EMPTY CONTAINERS
        LINE4
        LINE5
        LINE6

        ADD SUCCESSFUL

        ACTION        TYPE STATEMENT      CODE
```

(4) Deletion of a Carrier or RIN statement. Key in Action Code D, Type Statement Code C or R and the three position statement number. Depress the ENTER key. If the input is successful, the following display will appear:

```
UWFK90-00          CARRIER / RIN STATEMENT MAINTENANCE

        RIN 316
        LINE1     THIS CERTIFIES THAT FILLED CONTAINERS WERE TRANS-
        LINE2     PORTED BY THE SAME CARRIER THAT IS TRANSPORTING
        LINE3     THESE EMPTY CONTAINERS
        LINE4
        LINE5
        LINE6

        DELETE SUCCESSFUL

        ACTION        TYPE STATEMENT     CODE
```

(5) Update of a Carrier or RIN statement. Key in Action Code U, Type Statement Code C or R and the three position statement number. Depress the ENTER key. If the input is successful, the following display will appear:

```
UWFK90-00          CARRIER / RIN STATEMENT UPDATE / ADD

        RIN 316
        LINE1     THIS CERTIFIES THAT FILLED CONTAINERS WERE TRANS-
        LINE2     PORTED BY THE SAME CARRIER THAT IS TRANSPORTING
        LINE3     THESE EMPTY CONTAINERS
        LINE4
        LINE5
        LINE6
```

(6) Make any necessary changes. Depress the ENTER key. If the input is successful, the following display will appear:

```
UWFK90-00          CARRIER / RIN STATEMENT MAINTENANCE

        RIN 316
        LINE1     THIS CERTIFIES THAT FILLED CONTAINERS WERE TRANS-
        LINE2     PORTED BY THE SAME CARRIER THAT IS TRANSPORTING
        LINE3     THESE EMPTY CONTAINERS
        LINE4
        LINE5
        LINE6

        UPDATE SUCCESSFUL

        ACTION        TYPE STATEMENT     CODE
```

5. ERROR CONDITIONS/ACTION

ERROR MESSAGE	CAUSE/ACTION
INVALID ACTION	Probable cause: The action code entered was other than A, I, U or D. Action: Reenter the input using a valid action code.
TYPE STATEMENT INVALID	Probable cause: The type statement entered was other than C or R. Action: Reenter the input using either Type Statement Code C - Carrier or R - RIN.
NO ADD MADE FIRST TWO LINES SPACES	Probable cause: Self-explanatory. Action: Reenter the statement being added to the file and begin on line one of the display.
RECORD ALREADY ON FILE	Probable cause: Self-explanatory. Action: Inquire the statement. If change required, update with a U Action Code.
RECORD NOT FOUND	Probable cause: Self-explanatory. Action: Verify the input. If a record is required for that statement, add with an A Action Code.
CAR / RIN DELETED	Probable cause: An entire statement was deleted in an update mode by entering spaces to all six lines. Action: None required.

APPENDIX E-208 P

LOCATIONS FOR BULK STORAGE

1. PURPOSE

This procedure establishes the method of assigning a storage location in bulk storage to stocks in storage which have the same Stock Number, Date of Pack/Expiration, Condition Code, Container Markings, and other physical characteristics.

2. APPENDICES USED IN THIS PROCESS

a. Appendix B-71

b. Appendix C-104

c. Appendix E-047 P

d. Appendix E-071 P

e. Appendix E-072 P

f. Appendix E-104 P

3. RESPONSIBLE ORGANIZATIONAL ELEMENTS

a. Area Control Branches of Warehousing Division.

b. Direct Commissary Support Division.

4. INSTRUCTIONS

a. Receipts stored in bulk warehouses. The Warehousing Division will store in accordance with the storage plan and concepts of good warehousing to facilitate inventory and enhance the selection of stock on a First-In-First-Out (FIFO) or shelf-life bases.

b. Storage locations will be accomplished and recorded in accordance with the provisions of appendix E-047 P, paragraph 4c.

c. To negate the possibility of loading the item sublocator record to the extent that Type B inquiries must sometimes be handled on an exception basis, multiple locations for the same item stored in rows or stacks side-by-side will not be established. Instead, only one location will be established, and placards will be affixed to this location as shown on the attached storage example. This placard will contain the Storage Location Identification (SLID) Label and instruction to the stock selectors to pick from an end stack or row to the right or left (whichever is applicable) of the prime location.

d. This method will eliminate the requirement to establish these locations when stored and delete a location when the stack or row is emptied.

e. Items stored as a result of rewarehousing actions will be processed in accordance with the provisions of appendix E-072 P.

f. Locations established as a result of rewarehousing will conform to the procedures outlined in subparagraph c above.

g. Ensure SLID labels are affixed to blank ADP card before applying them to pallet/pallet rack.

h. Assign a single location (the prime location) in bulk storage to stocks in storage located in multiple locations for the same item stored in rows or stacks side by side. Delete all other adjacent locations for the same item.

i. Ensure placard "Pick from Other End" is affixed to the prime location, to the right or left. Instruct selectors to pick stocks from the correct end stack or row to the right or left (whichever is applicable) of the prime location.

NOTE: HOLDER FOR AFFIXING THE STORAGE LOCATION IDENTIFICATION LABEL (C-104) AND "PICK-FROM" INSTRUCTIONS

APPENDIX E-209 P

STOCK SEGREGATION NOTICE

1. PURPOSE

To provide local procedures for processing DD Form 1348-1, Stock Segregration Notice, DIC CNS.

2. APPENDICES USED IN THIS PROCESS

a. Appendix A-63

b. Appendix B-8

c. Appendix B-71

d. Appendix B-204

e. Appendix B-209

f. Appendix C-11

g. Appendix F-107

3. RESPONSIBLE ORGANIZATIONAL ELEMENTS

Operations Control Office, Warehousing Division and Shipping Division.

4. PROCEDURES/INSTRUCTIONS

a. Operations Control Office will receive DD Forms 1348-1, Stock Segregration Notice (DIC CNS), Major Sort Group Code Q. Distribute Stock Segregration Notices to appropriate Warehouse Area Control Branch.

b. Warehousing Division will distribute documents for stock selection in the following manner:

(1) Select quantity shown in pos. 25-29.

(2) Store materiel in segregated storage location.

(3) Placard materiel with the Service Inventory Control Point (ICP) which is accountable and controls the materiel. The Service ICP is entered in pos. 78-80 of the DD Form 1348-1.

(4) Enter the action taken in block U of the DD Form 1348-1, i.e., quantity segregrated or quantity denied, with appropriate Action Code.

(5) Enter name and date action taken in block 1. Enter segregated location in block FF of flimsy.

(6) Prepare Item Locator Change Card (DIC ZBA) appendix B-71, with Action Code FZ, upon movement of stock to segregated location. Forward ZBA card to Data Systems for processing.

(7) Forward copy number 1 of the DD Form 1348-1 to Shipping Division.

c. Shipping Division will:

(1) Receive appendix F-107 report, History File Listing of Items in DP Status. File in Active Suspense File.

(2) Receive copy number 1 of DD Form 1348-1 from Warehousing Division and post action taken to the report (appendix F-107).

(3) Prepare card formats as follows:

(a) Prepare Materiel Release Confirmation Card, ARO, appendix B-204, for quantity segregated.

(b) Prepare Materiel Release Denial/Adjustment Card, A6_, appendix B-8 for quantity denied.

(c) Prepare Materiel Receipt Card, DIC D6Z, for the quantity of stock segregated and forward to the owning Military Service ICP in pos. 4-6 of D6Z card, appendix B-21.

5. DISTRIBUTION OF FORM/REPORT

Forward cards for transceiving and file F-107 report in completed file for 90 days.

APPENDIX E-210 V

COMMISSARY SUPPORT ITEM IDENTIFICATION CARD VIOLATIONS

1. INPUT DOCUMENT

Appendix B-15, DIC CKK.

2. INPUT TO PROCEDURE DECISION CHART(S)

Appendix D-120

3. PURPOSE, CONTENTS AND RESPONSIBILITIES

This appendix provides instructions for the research, correction, and reentry of Commissary Support Item Identification Cards which are rejected by MOWASP computer edits. Directorate of Storage and Transportation will receive a violation printout (appendix F-85) showing each rejected input. Reasons for computer rejection are as follows:

VIOLATION REASON CODE	DEFINITION
AN	Unit of Issue invalid.
AY	Stock Number invalid.
CF	Action Code invalid.
IC	Water Commodity invalid.
IE	Case Weight invalid.
IF	Case Cube invalid.
Z7	Data Field invalid.

4. PROCESSING/RESEARCH INSTRUCTIONS

a. VIOLATION REASON CODE AN.

This code indicates that the data in pos. 44-45 of the CKK was other than an authorized Unit of Issue Code as defined in appendix A-48. Review the Violation Printout (appendix F-85), and review source document to determine the correct code.

b. VIOLATION REASON CODE AY

This code indicates that the data in pos. 8-20 of the CKK was other than an authorized stock number as listed in the Federal Supply Catalogs or Master Item Identification List (MIIL). Review the Violation Printout (appendix F-85) to determine the error involved. Review the MIIL and/or the DPSC Form 300 File to determine the correct stock number.

c. VIOLATION REASON CODE CF

This code indicates that an Action Code other than 1A, 1B, 1C, 2A, or 2B was entered into the input. The F-85 report should be reviewed to determine if local correction is possible, review the source document if applicable, or contact the DSC by telephone to determine the correct code.

d. VIOLATION REASON CODE IC

This code indicates that the data in pos. 38-42 of the CKK was other than as authorized in DLAM 4500.32R. Review the Violation Printout (appendix F-85) to determine the error involved and if local correction is possible. Check DLAM 4500.32R or contact the DSC by telephone to determine the correct code.

e. VIOLATION REASON CODE IE

This code indicates that the data in pos. 25-30 of the CKK was blank or contained alphas. Review the Violation Printout (appendix F-85) to determine the error involved. Check the DPSC From 300 File to determine the correct case weight.

f. VIOLATION REASON CODE IF

This code indicates that the data in pos. 31-36 of the CKK was blank or contained alphas. Review the Violation Printout (appendix F-85) to determine the error involved. Check the DPSC From 300 File to determine the correct case cube.

g. VIOLATION REASON CODE Z7

This code indicates that the data field that is asterisked on the F-85 report is not compatible with the standard for that data element as expressed in appendix B-15. The F-85 report should be reviewed in context with appendix B-15 and the source document, if applicable. If the correction cannot be determined locally, the DSC should be contacted via telephone for guidance.

5. REENTRY INSTRUCTIONS

a. When the correct data is determined, annotate the correction directly below the erroneous field using ink or a distinctively colored pencil.

b. Forward the annotated listing to the Office of Data Systems for reinput.

APPENDIX E-211 P

CONSIST HEADER DATA CARD

1. PURPOSE

To prescribe procedures for preparation of the CONSIST Header Data Card, DIC ZUU. The data input in the card represents the header data for the SEAVAN CONSIST covering a particular SEAVAN.

2. REFERENCES USED IN THIS PROCESS

a. Chapter 20

b. Appendix A-17

c. Appendix B-121

d. Appendix E-140 P

e. Appendix F-62

f. Appendix F-75, Parts 1, 2, and 3

g. DoD 4500.32-R, MILSTAMP

(1) Appendix B, Section 3

(2) Appendix B, Section 4

(3) Appendix B, Section 17

(4) Appendix F, Figure F-5

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Shipment Planning Branch, Transportation Office is responsible for reviewing the Commissary Support Shipment Planning Worksheet and submission of the CONSIST Header Data Card(s) for the applicable SEAVAN CONSISTS.

4. PROCEDURES/INSTRUCTIONS

a. Receive daily Commissary Support Shipment Planning Worksheet, appendix F-75.

b. Review worksheet and determine most advantageous load plan.

c. Determine in coordination with appropriate operating elements resource requirements required to accomplish the workload.

d. Prepare and submit CONSIST Header Data Card, DIC ZUU, in the format prescribed by appendix B-121, using referenced appendices to assure proper coding.

e. Submit one card for each CONSIST load of materiel to be released from the Commissary Support Workload Bank.

f. Procedures for processing violation relative to the CONSIST Header Data Card, DIC ZUU, are outlined in appendix E-211 V.

APPENDIX E-213 P

COMMISSARY SUPPORT MANAGEMENT DATA CARD

1. PURPOSE

To prescribe procedures for preparation of the Commissary Support Management Data Card, appendix B-211, DIC ZUW.

2. RELATED APPENDICES

a. Appendix A-30

b. Appendix D-121

c. Appendix F-92

3. REASON/CRITERIA FOR PREPARATION

To establish the basis or constants to be used for performance evaluation of the depot for a particular Commissary Support requisition cycle.

4. RESPONSIBLE ORGANIZATIONAL ELEMENT

The Commissary Support Division, Directorate of Storage and Transportation.

APPENDIX E-213 V

COMMISSARY SUPPORT MANAGEMENT DATA CARD VIOLATIONS

1. INPUT DOCUMENT

Appendix B-211, Commissary Support Management Data Card, DIC ZUW.

2. INPUT TO PROCEDURE DECISION CHART

Appendix D-121

3. PURPOSE, CONTENTS AND RESPONSIBILITIES

This appendix provides instructions for the research, correction, and reentry of Commissary Support Management Data Cards which have been rejected from computer processing. Reasons for computer rejection by Violation Reason Codes, in alphabetic order, are listed below. The Commissary Support Division is responsible for processing all Violation Reason Codes.

VIOLATION REASON CODE	DEFINITION
3W	RDD invalid.
4K	Cycle Code invalid.
4L	Cycle date invalid.
4M	No later than delivery date invalid.
4N	Number of line items due-in invalid.
4O	Ton due-in invalid.
4P	MROs due-out invalid.

4. PROCESSING/RESEARCH INSTRUCTIONS

a. VIOLATION REASON CODE 3W.

This code indicates that the data in pos. 13-17 of the ZUW was blank or contained alphas. Review the Violation Printout (appendix F-85) to determine the error involved. Review the Commissary Support Cycle Planning Report (appendix F-73) to determine the correct RDD.

b. VIOLATION REASON CODE 4K.

This code indicates that the data in pos. 5 of the ZUW was blank or contained numerics. Review the Violation Printout to determine the error involved. Review DICOMSS Cycle Codes (appendix A-30) to determine the correct alpha code.

c. VIOLATION REASON CODE 4L.

This code indicates that the data in pos. 7-11 of the ZUW was blank or contained alphas. Review the Violation Printout to determine the error involved. Review appendix A-12, DPSCM 4100.2 to determine the correct date.

d. VIOLATION REASON CODE 4M.

This code indicates that the data in pos. 19-23 was blank or contained alphas. Review the Violation Printout to determine the error involved. Review appendix A-12, DPSCM 4100.2 to determine the correct date.

e. VIOLATION REASON CODE 4N.

This code indicates that the data in pos. 25-29 was other than numeric or was a zero. Review the Violation Printout to determine the error involved. Review the manual record of data obtained by phone from DPSC to determine the correct number.

f. VIOLATION REASON CODE 4O.

This code indicates that the data in pos. 31-35 was other than numeric or was zero. Review the Violation Printout to determine the error involved. Review the Commissary Support Cycle Planning Report (appendix F-73) to determine the correct entry.

g. VIOLATION REASON CODE 4P.

This code indicates that the data in pos. 37-42 was other than numeric or was zero. Review the Violation Printout to determine the error involved. Review the Commissary Support Cycle Planning Report (appendix F-73) to determine the correct entry.

5. REENTRY INSTRUCTIONS

a. When the correct data is determined, annotate the correction directly below the erroneous field using ink or a distinctively colored pencil.

b. Forward the annotated listing/repunch and resubmit to the Office of Data Systems for reinput.

APPENDIX E-214 P

DISPOSAL OF DICOMSS RESIDUAL MATERIEL

1. PURPOSE

This procedure provides guidance in reporting and disposing of DICOMSS residual materiel accumulated at defense depots.

2. APPENDICES/REFERENCES USED IN THIS PROCESS

a. DoD 4160.21-M, Defense Disposal Manual.

b. Appendix B-20, Materiel Receipt Card (Procurement Instrument Source).

c. Appendix C-71, Stock Locator Change Document, DLA Form 536.

d. Appendix C-104, Storage Location Identification (SLID) Label.

e. Appendix E-071 P, Preparing Item Locator Subrecord Addition, Deletion, and Change Card.

f. Appendix E-140 P, Direct Commissary Support System (DICOMSS).

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

a. Commissary Support Division.

b. MOWASP Data Control Branch.

4. INSTRUCTIONS/PROCEDURES

a. Instructions.

(1) Tax-free cigarettes are excluded from disposal through Defense Property Disposal Office (DPDO) or from issue to local commissary stores.

(2) All DICOMSS receipt not shipped within 90 days are considered "residual" materiel. Maximum effort will be exerted to ensure optimum economic use of this materiel through support of normal customer demands or sales to local commissary stores.

(3) Residual materiel will be reported via AUTODIN to DPSC IAW appendix E-140 P utilizing appendix B-20 and the appropriate Condition Codes:

(a) Materiel reported under Condition Code A to DPSC will be:

1. Reviewed against the DPSC requisition file to satisfy customer demands. If materiel can be used to satisfy a customer demand, an MRO will be generated.

2. If an open requisition does not exist, DPSC will generate an exception MRO with document number blank. Distribution depot will add the local commissaries requisition (document number) and ship materiel.

(b) H - Materiel unfit for human consumption. DPSC will generate a Disposal Release Order (DRO) (DIC C5J) for destruction/PDO action as applicable.

(c) C - Materiel dropped from the Master Item Identification List (MIIL) or materiel with a "short shelf-life" date (e.g., mayonnaise, salad dressing, cookies, potato chips). DPSC will not review condition C materiel against their requisition file but will generate an exception MRO authorizing issue to a local commissary.

(4) Local Army/Air Force Commissaries will be contacted by DPSC or the distribution depot to develop outlets for residual materiel. DPSC will provide exception MROs (less document number) for the materiel. The Commissary accepting the residuals will provide document numbers for the completion of the shipping/billing process.

(5) When residual materiel cannot be matched to a requisitioner's needs or directed to be sold through the local DPDO facilities by DPSC, then DPSC will direct the distribution depot to destroy the materiel.

(6) Residual materiel scheduled for destruction must be supported by an Economic Cost Evaluation Certification (ECEC) prepared/approved by DPDO/Defense Property Disposal Region (DPDR) IAW DoD 4160.21-M, Chapter XIV, as follows:

(a) The ECEC will be prepared as a paragraph added to the DRO by the local DPDO for materiel having a line item acquisition value of $100.00 to $999.99.

(b) The ECEC will be prepared as an added paragraph to the DRO by the DPDO for materiel having a line item acquisition value of $1000.00 or more, with review and approval by the DPDR.

(c) Materiel having a line item acquisition value of less than $99.99 will not require an ECEC.

(7) Residual materiel which consists of food products will be physically stored within the Commissary Support Division storage area prior to destruction or sale.

(8) When sale through DPDO is applicable, the local DPDO will:

(a) Coordinate with the distribution depot to arrange inspection.

(b) Notify the Commissary Support Division by DPDS Form 1427 (supersedes DD Form 1427) of the time and date buyer will be allowed to pick up materiel.

(9) It is mandatory that:

(a) Prospective bidders be escorted during inspection of residual materiel by Commissary Division personnel.

(b) DPDO personnel will oversee the loading of residual materiel being picked up by buyers in consort with Commissary Division personnel.

b. Procedures:

(1) Commissary Support Division will:

(a) Establish necessary controls for identifying, placarding/segregating, and reporting residual materiel to DPSC (ATTN: DPSC-SSS).

(b) Prepare one of the following:

1. Stock Locator Change Document, DLA Form 536, IAW appendices C-71 and E-071 P. The following data will be printed on the DLA Form 536 to preclude erroneous issue action and to further identify the stock.

a. Condition Code (subparagraph a(3) above).

b. Large bold letters within the "Delete" portion - "DICOMSS RESIDUAL."

2. SLID label:

a. Remove the SLID from materiel, rack, and so on.

b. Affix to a used EAM card.

c. Print the following:

Condition
DICOMSS RESIDUAL
FRC

(c) Forward DLA Form 536/SLID to MOWASP Data Control Branch.

(2) MOWASP Data Control Branch will:

(a) Receive DLA Form 536/SLID.

(b) Prepare the following:

1. Item Locator Subrecord Addition, Deletion, and Change Card IAW appendices B-71 and E-071 P.

2. Materiel Receipt Card IAW appendix B-20, paragraph 4b.

(c) Forward keypunched documents to ODS for processing.

(3) Commissary Support Division will:

(a) Receive disposition instructions from DPSC.

(b) Process as follows:

1. MRO (full/partial utilization): Process IAW instructions contained in the DD Form 1348-1.

2. DRO:

a. Contact the local Army Veterinary for consumption fitness certification IAW DoD 4160.21-M, Chapter VI, paragraphs 65 and 90.

b. Contact the local DPDO to review the residual materiel to determine whether it is acceptable for disposal through DPDO. Grouping of materiel by lots will be determined by DPDO.

c. Initiate action as follows:

(1) Materiel acceptable to DPDO:

(a) Obtain a DPDS Form 1427 from the DPDO.

(b) Deliver materiel to the authorized buyer.

(2) Materiel not acceptable to DPDO:

(a) Obtain an ECEC from the DPDO prior to destruction.

(b) Destroy materiel IAW provisions of DoD 4160.21-M and any applicable local depot procedures.

5. FLOW CHART

Flow chart is not required.

APPENDIX E-215 P

MOFAST IN-PROCESS SHIPMENT UNIT FILE BUILD

1. PURPOSE

The MOFAST In-Process File is created directly from MOWASP shipping documentation processes. The purpose of this procedure is to explain the data entry functions which support this process.

2. APPENDICES USED IN THIS PROCEDURE

a. Appendix B-66, Tables 11 and 12

b. Appendix D-29

c. Appendix D-98

d. Appendix D-137

e. Appendix E-066 P

f. Appendix E-066 V

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

MSO, DS/T

4. PROCEDURES/INSTRUCTIONS

a. The MOWASP shipping documentation process provides the majority of data for Shipment Unit (SU) and Line Item (LI) records contained in the teleprocessing system.

b. Table and control file numbers 11 and 12 (as noted in appendices B-66, E-066 P, and E-066 V) provide additional data essential for system operation. Input to each of these tables is coordinated through the MSO, DS/T based on input from the Transportation and Warehousing Divisions.

c. The SU number check digit and parcel post automatic clear date is assigned according to the process described in appendix D-98. The SU Process Code is determined according to processes noted in appendix D-137. Automatic clear date and process code criterion have a direct impact upon performance reporting and system operation. Therefore, changes to these items must be coordinated through HQ DLA organizational elements.

APPENDIX E-216 P

AUTOMATED SHIPMENT PROGRAM AREA CONTROL BRANCH PROCESSING

1. PURPOSE

This procedure describes the actions required to perform the Automated Shipment Program functions normally performed in the Area Control Branch, DS/T. Also described are actions required to remove a Line Item (LI) from a Shipment Unit (SU) and place it in history, reject a duplicate MRO, and reject an MRO because RDD cannot be met.

2. APPENDICES AND REFERENCES USED IN THIS PROCEDURE

a. DLAM 4140.2, Chapter 60

b. Appendix A-17

c. Appendix A-21

d. Appendix A-102

e. Appendix A-104

f. Appendix B-216

g. Appendix C-11

h. Appendix D-148

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Warehousing Division, DS/T

4. PROCEDURES/INSTRUCTIONS FOR AREA CONTROL BRANCH PROCESS

a. General

The final configuration of a SU should be determined in the Area Control Branch before the SU enters automated terminal processing. If a change to the computer record is called for, it should be made before the parcel post SU is confirmed or before the freight SU enters automated terminal processing. Changes to record may be: Changing the quantity shipped (denials or overages), changing the mode of shipment, establishing hold codes for detained shipments, entering a reportable quantity indicator, extending or deleting the parcel post automatic clear date, and the actual confirmation action for those parcel post SUs for which an automatic clear date has not been assigned or has been deleted. No change can be made in the Area Control Branch after the SU enters automated terminal processing.

b. Source of Information.

(1) The MRO is the primary source of information for accomplishing the functions of the Area Control Branch process. Much of this information is computer printed on the MRO. Additional information is annotated on the MRO by the picker and packer.

(2) The Area Control Branch personnel must determine whether an update of the in-process record in the computer is required before shipment is made or automated terminal processing begins. Some examples of these update situations are:

(a) The picker may not have sufficient quantity in location, therefore, requiring denial research. To allow time for this research a Hold Code may be applied.

(b) After denial research, there may still be insufficient quantity available, therefore, the quantity shipped in the in-process record must be changed.

(c) The packer may determine the materiel requires preservation and packaging before shipment - another requirement for a Hold Code.

(d) The packer may ship the MRO by freight instead of parcel post, therefore, action to delete the automatic clear date should be initiated. The mode of shipment will be changed in the freight terminal when the SU is offered.

(e) The packer may determine that a hazardous substance offered for transportation is equal to or exceeds a Reportable Quantity (RQ); therefore, the Shipment Unit Line Item Record must be flagged.

(3) All adjustments required to a record will be annotated on the MRO by the picker or packer and sent to the Area Control Branch for updating the computer record by CRT.

c. Initialize Terminal (CRT) for Area Control Branch Processing.

(1) Enter the following program call to the computer via CRT:

$$UWFB01

If the entry is made correctly the response on the CRT will be:

UWFB01-003 AREA CONTROL BRANCH ENTER DATA

If the entry is made incorrectly, one of the error messages listed in paragraph 5 of this procedure will appear.

(2) The next entry should begin immediately following the "ENTER DATA" message and would appear, for example:

UWFB01-XX AREA CONTROL BRANCH
ENTER DATA A,1234567,8,,,,,

(3) The type of content and format of the entry for Area Control Branch process is basically the same for the following actions:

(a) Changing the mode of shipment.

(b) Extending or deleting the automatic clear date.

(c) Assigning Hold Code.

(d) Confirming shipment of parcel post.

(e) Changing the warehouse location in the SU/LI record.

(4) The format and format explanation is:

A,VVVVVVV,W,X,Y,Z,C,LLL

Where:

A - Type Action Code (Always required.)
V - Shipment Unit Number (7, 11, or 13 positions always required.)
W - Check Digit (Always required.)
X - Mode Code (Required only when requesting a change of mode.)
Y - E or D (See subparagraph f for explanation (required only when adjusting automatic clear date).)
Z - Automated Shipment Program Hold Code from appendix A-21 (Required only when assigning a Hold Code.)
C - Confirmation Code (Enter C when confirmation of shipment is desired in lieu of the parcel post automatic clear date.)
L - Warehouse Location (three, nine or twelve-position location.)

(a) Only those fields need be filled which are pertinent to accomplish the desired action. However, a field separator (,) must be entered to separate each field even if the field is blank, for example:

A,1362407,8,,,,,

(b) To change the mode, the new Mode Code is inserted between the third and fourth commas; to adjust the automatic clear date an E or D is inserted between the fourth and fifth commas; to apply a Hold Code, the desired Hold Code is inserted between the fifth and sixth commas; and to confirm a shipment, a C is inserted between the sixth and seventh commas; and to change the warehouse loction, the 3-, 9- or 12-position location is entered after the seventh comma, for example:

A,1236240,0,,,,,T31

d. Change Mode of Shipment (parcel post or freight) for an Entire SU.

(1) When it becomes apparent that the weight and/or size of a SU does not allow or justify shipment under the computer assigned mode, it is necessary to change the mode in the In-Process File. Usually this is after picking and packing has been accomplished and the final configuration of the shipment has been established.

(2) A copy of the MRO is annotated by circling the planned mode, or stamped as requiring conversion to another mode. The conversion is accomplished through the CRT by entering the SU number, check digit, and desired Mode Code from appendix A-17.

(3) Mode Code adjustments are restricted to parcel post modes G, H, 6 or 7. Conversion of a parcel post shipment to a freight mode is accomplished by the freight offering process at the freight terminal. The entry format and format explanation is:

A,VVVVVVV,W,X,,,,

Where:

A - Type Action Code
V - Shipment Unit Number
W - Check Digit
X - New Mode Code

(a) If the entry was made correctly the following display will appear:

XX (THIS LINE IS THE ACTUAL ENTRY) XX
UPDATE SUCCESSFUL
ENTER DATA

(b) If the entry was made incorrectly, one of the error messages in paragraph 5 of this procedure will appear.

e. Change Mode of Shipment for one LI in a Multiline SU.

(1) When it is necessary to change the mode of shipment for one LI in a multiline SU, the entry will cause a new SU to be formed for the LI. The number for the new single-line SU is assigned by combining the original 7-digit SU number with the 4-digit LI number to total 11 digits. This is the new SU number.

(2) The change of mode is accomplished by entering the Type Action Code, the new 11-digit SU number, check digit, and the new Mode Code from appendix A-17 in the following format:

A,VVVVVVVVVVV,W,X,,,,

Where:

A - Type Action Code
V - Shipment Unit Number
W - Check Digit
X - New Mode Code

(3) The same response displays will appear for changing the mode of several LIs in an SU. Multiple entries of the above format can be made, one LI per entry.

f. Extend or Delete the Automatic Clear Date.

(1) The computer assigns each eligible parcel post SU an automatic clear date. The automatic clear date is the date the parcel post SU will be assumed to be shipped and the computer record automatically confirmed unless exception action is taken to block the confirmation. The automatic clear date is a 3-digit Julian date figure found between two asterisks in block Y of the parcel post MRO.

(2) When it is evident, during the shipping process, that an SU or an LI cannot be shipped on or before the automatic clear date, the date must be changed in the In-Process File by extending it one day or deleting it entirely. The stock picker or packer should circle the automatic clear date to indicate adjustment required. If one additional day is sufficient time to complete shipment, it is advisable to extend the date instead of deleting it. Once the automatic clear date has been deleted, the automatic confirming action is blocked. The confirmation must then be manually initiated. The automatic clear date can be extended only one day per entry. Additional days require multiple entries. Caution should be exercised not to extend the automatic clear date past the MDT. This will cause a late shipment unless the confirmation is manually initiated before the MDT.

(3) To extend the automatic clear date for an entire SU, enter the following format:

A,VVVVVVV,W,,E,,,

(a) The format for deleting the automatic clear date is the same with the exception that a D replaces the E in the format.

A,VVVVVVV,W,,D,,,

Where:

A - Type Action Code
V - Shipment Unit Number
W - Check Digit
E - Constant E for Extending Automatic Clear Date One Day
D - Constant D for Deleting Automatic Clear Date

(b) If the entry was made correctly, the following display will appear on the CRT:

XX (THIS LINE IS THE ACTUAL ENTRY) XX
UPDATE SUCCESSFUL
ENTER DATA

(c) If the entry was made incorrectly, one of the error messages listed in paragraph 5 of this procedure will appear.

(4) To adjust the automatic clear date for one LI in a multiline SU enter the following format:

A,VVVVVVVVVVV,W,,E,,,

or

A,VVVVVVVVVVV,W,,D,,,

Where:

A - Type Action Code
V - Shipment Unit Number (Eleven digits comprised of original SU number plus LI number.)
W - Check Digit
E - Constant E for Extending Automatic Clear Date One Day
D - Constant D for Deleting Automatic Clear Date

(a) If the entry was made correctly, the following display will appear on the CRT:

XX (THIS LINE IS THE ACTUAL ENTRY) XX
UPDATE SUCCESSFUL
ENTER DATA

(b) If the entry was made incorrectly, one of the error messages listed in paragraph 5 of this procedure will appear on the CRT.

(c) The above entry for one LI in a multiline SU will cause the LI to be automatically single-lined from the original SU and assigned to a new 11-digit SU.

g. Assign Hold Code to SU or LI.

(1) Hold Codes are assigned when it is necessary to hold a shipment at the shipping activity beyond the normal shipping period. Some common reasons for applying Hold Codes are denial research, shipment consolidation, care and preservation, and delay requested by consignee. Hold Codes do not prevent a shipment from becoming late, but they do indicate the reason a shipment is late. These Reason or Hold Codes appear on the MRO Status Detail Reports, F-78 and F-87.

(2) A Hold Code can be assigned to an entire SU or to one LI in a SU in which case the LI is automatically extracted from the original SU and assigned an 11-digit SU number.

(3) Hold Code input is confined to alpha data which identify delays occurring in the area control branch.

(4) To assign a Hold Code for an entire SU, enter the Type Action Code A, SU number, check digit and desired Hold Code in the following format:

A,VVVVVVV,W,,,Z,,

Where:

A - Type Action Code
V - Shipment Unit Number
W - Check Digit
Z - Hold Code (Appendix A-21)

(a) If the entry was made correctly, the following display will appear on the CRT:

XX (THIS LINE IS THE ACTUAL ENTRY) XX
UPDATE SUCCESSFUL
ENTER DATA

(b) If the entry was made incorrectly, one of the error messages listed in paragraph 5 of this procedure will appear on the CRT.

h. Initiate Denials/Cancellations or Overages.

(1) When it is necessary to change the quantity being shipped due to shortage or overage, the picker should circle quantity on the MRO and enter the quantity to be shipped immediately above. The appropriate Action Code from appendix A-104 should also be annotated on the MRO.

(2) Denials and cancellations are the responsibility of the area control branch for all complete denials and for parcel post partial denials. Freight partial denials should be accomplished during automated terminal processing.

(3) This program also provides capability to process the following actions:

(a) Action Code DP - Remove a LI from the SU and place in history. This action will produce a F-107 report used for manual control.

(b) Action Code DR - Reject an MRO which is an exact duplicate of an MRO in process.

(c) Action Code DQ - Reject an MRO because the required delivery date (RDD) cannot be met.

(4) To accomplish a denial action, enter the Type Action Code B, the 11-position SU/LI number, check digit, quantity shipped, and the quantity Action Code from the MRO. Complete denials and cancellations require the entry of a zero in the quantity shipped field. Use of Action Codes DP, DR, or DQ requires the Quantity Shipped field be blank. Input format is as follows:

B,VVVVVVVVVVV,W,XXXXX,YY or
B,VVVVVVVVVVV,W,,YY (Format for Action Code DP, DR, or DQ)

Where:

B - Type Action Code
V - Shipment Unit/LI Number (Eleven positions or Thirteen positions for a partialed LI.)
W - Check Digit
X - Quantity Actually being Shipped
Y - Quantity Action Code from Appendix A-104

(a) If the entry was made correctly, the following display will appear on the CRT:

XX (THIS IS THE ACTUAL ENTRY) XX
UPDATE SUCCESSFUL
ENTER DATA

(b) If the entry was made incorrectly, one of the error messages listed in paragraph 5 of this procedure will appear on the CRT.

(5) Quantity field may be one through five positions. If the adjusted quantity is less than the requested quantity on the MRO, the quantity Action Code must be one which indicates undershipment. If the quantity is more than the requested quantity (overage), the quantity Action Code must indicate overshipment. An error message will alert the operator if the quantities and Action Codes do not correspond.

(6) Complete denial or cancellation of an LI will cause it to be automatically removed from a multiline SU and reassigned to an 11-digit SU/LI number or a SU number by itself. The automatic clear date for the 11-position SU will be deleted. No further action is required to confirm a complete denial or cancellation.

(7) A partial denial or cancellation action will not delete the automatic clear date. The automatic clear date can be deleted as described in paragraph 4f of this procedure. Deletion of the automatic clear date will require a confirmation action as described in paragraph 4i below, of this procedure.

i. Confirm a Parcel Post SU (nonregistered).

(1) Most parcel post SUs are assigned an automatic clear date which causes the SU to be confirmed without manual action. However, parcel post shipments which are not assigned an automatic clear date and SUs for which the automatic clear date has been deleted require a confirmation action to complete the shipment.

(2) To confirm an entire SU, enter the Type Action Code A, SU number, check digit, four commas to close the unused fields, and a C and comma in the following format:

A,VVVVVVV,W,,,,C,

Where:

A - Type Action Code
V - Shipment Unit Number
W - Check Digit
C - Confirmation Code

(a) If the entry was made correctly, the following display will appear on the CRT:

XX (THIS LINE IS THE ACTUAL ENTRY) XX
UPDATE SUCCESSFUL
ENTER DATA

(b) If the entry was made incorrectly, one of the error messages listed in paragraph 5 of this procedure will appear on the CRT.

(3) To confirm one LI in a multiline SU, enter the Type Action Code A, SU number (11 or 13 positions), check digit, four commas to close the unused fields, and a C and a comma in the following format:

A,VVVVVVVVVVV,W,,,,C,

Where:

A - Type Action Code
V - Shipment Unit Number
W - Check Digit
C - Confirmation Code

(a) If the entry was made correctly, the following display will appear on the CRT:

XX (THIS LINE IS THE ACTUAL ENTRY) XX
UPDATE SUCCESSFUL
ENTER DATA

(b) If the entry was made incorrectly, one of the error messages listed in paragraph 5 of this procedure will appear on the CRT.

(c) This format when entered for a LI which has not previously been removed from a SU will cause the LI to be automaticaly assigned to an 11-digit SU.

(4) Adjustments to Mode or Hold Code can be accomplished with the confirmation entry. The pertinent Mode or Hold Code is entered as part of the confirmation format. It is not necessary to delete or extend the parcel post automatic clear date since the confirmation action will close the SU record at the end of the current day's business. The entry format used is as follows:

A,VVVVVVV,W,X,Y,Z,C,LLL

Where:

A - Type Action Code
V - Shipment Unit Number (7, 11, or 13 Positions)
W - Check Digit
X - Mode Code (Parcel post only G, H, 6 or 7.)
Y - Parcel Post ACD Adjustment (Leave blank on confirmation entry.)
Z - Hold Code (See appendix A-21)
C - Confirmation Code C
L - Warehouse Location (3 or 9 Positions)

j. Warehouse Location Adjustment.

(1) Whenever a document is sent to another warehouse for processing the SU/LI record can be updated to reflect the warehouse that the document was sent to.

(2) The updated warehouse location can then be used to provide a general location of where the document could possibly be found in cases such as lost documents, processing cancellations, and so forth.

(3) The change of warehouse location is accomplished by entering the type Action Code, 11- or 13-digit SU/LI number, check digit, and the warehouse location in the following format:

A,VVVVVVVVVVV,W,,,,,LLL

or

A,VVVVVVVVVVV,W,,,,,LLLLLLLLL

Where:

A - Type Action Code
V - Shipment Unit Number
W - Check Digit
L - Warehouse Location (The first three positions or the full nine-position location.)

(a) If the entry was made correctly, the following display will appear on the CRT.

XX(THIS LINE IS THE ACTUAL ENTRY)XX
UPDATE SUCCESSFUL
ENTER DATA

(b) If the entry was made incorrectly, one of the error messages listed in paragraph 5 of this procedure will appear on the CRT.

(c) The above entry for one LI in a multi-line SU will cause the LI to be automatically single-lined from the original SU and assigned to a new 11-digit SU.

(d) Adjustments to the warehouse location can be accomplished during the input of other A type action adjustment transactions.

k. Shipment Unit Inquiry.

(1) All of the above actions will change information stored in the computer's SU File. It is necessary to have access to this information to know whether an update action has been accomplished or is yet to be accomplished.

(2) To display information associated with an in-process record on the CRT, enter the Type Action Code C, SU/LI number and the Inquiry Code A in the following format:

C,VVVVVVVVVVV,A

Where:

C - Type Action Code
V - Shipment Unit Number
A - Inquiry Code

(a) If the entry was made correctly, the following display will appear on the CRT:

```
 C,28763420001,A
SL TOT S M H MGT LOC PDT DOFF DSHP DCLR
  0001  B       C11 7101 0000 0000 0000

DDEN DCAN Q-ORD Q-OFF Q-SHP Q-DEN QCAN C
0000 0000 00001 00000 00000 00000 00000

Q-OPN M-OPN M-EPT E-M-SHP  GBL-NR ID  T
00001 00001 00000   00000
```

(b) If the entry was made incorrectly, one of the error messages listed in paragraph 5 of this procedure will appear on the CRT. The data displayed includes:

SL - Single-Line Indicator (X if any action has caused the LI to be removed from a Multiline SU.)
TOT - Total number of line items in the SU.
S - Status (Must be A or B to update SU file information through the area control branch process.)
M - Mode of Shipment
MGT - Management Code
LOC - Warehouse Area Code
PDT - Planned Date to Transportation
DOFF - Date Offered to Transportation
DSHP - Date Shipped
DCLR - Automatic Clear Date (Parcel Post)
DDEN - Date Denied (Julian date of denial action.)
DCAN - Date Canceled (Julian date of cancellation action.)
Q-ORD - Quantity Ordered
Q-OFF - Quantity Offered
Q-SHP - Quantity Shipped
Q-DEN - Quantity Denied
Q-CAN - Quantity Canceled
C - Cancellation Flag (Must be a C prior to processing a cancellation action against this record.)
Q-OPN - Quantity Open (Quantity not yet shipped or denied.)

M-OPN* - MOFAST Quantity Open
M-EPT* - MOFAST Exception Quantity
E* - Quantity Exception Code
M-SHP* - MOFAST Quantity Shipped
GBL-NR - GBL Number (Number the freight LI was shipped under, or a registered or insured number for parcel post.)
ID - GBL Identification Code
T - A Program Key

*These fields identify quantities and action in MOFAST records prior to file maintenance routines which update other quantity fields.

(3) To obtain the same format with the addition of the MRO image (the top print line of the MRO), enter the Action Code C, SU/LI number and Inquiry Code B instead of A.

(a) If the entry was made correctly, the following display will appear on the CRT:

```
XXXXXXXXXX(MRO DATA)XXXXXXXXXX
XXXXXXXXXX(MRO DATA)XXXXXXXXXX

SL TOT S M H MGT LOC  PDT DOFF DSHT DCLR
  0001 A B       C11 7101 0000 0000 0000

DDEN DCAN Q-ORD Q-OFF Q-SHP Q-DEN QCAN C
0000 0000 00001 00000 00000 00000 00000

Q-OPN M-OPN M-EPT E M-SHP  GBL-NR ID  T
00001 00001 00000   00000
```

(b) If the entry was made incorrectly, one of the error messages listed in paragraph 5 of this procedure will appear on the CRT.

(4) To display information associated with an in-process record on the CRT which has been partialled (13-position SU/LI) enter the Type Action Code C, SU/LI/partial number and the Inquiry Code A or B (depending on whether or not the 80-position MRO data is to be displayed) in the following format:

C,VVVVVVVVVVV,Z

Where:

C - Type Action Code
V - Shipment Unit/LI/Partial Number
Z - Inquiry Code (A or B)

(5) The Automated Shipment Program also provides the capability to inquire the MOWASP History File through the CRT. This entry causes a MRO Register/ History Inquiry Card, ZCT, to be generated and processed through MOWASP which subsequently produces the MRO inquiry answer, F-67, for distribution the next day. The entry format for requesting an inquiry of MOWASP through the CRT is:

C,XXXXXXXXXXXXXX,C,ZZ

Where:

C - Type Action Code
X - Document Number from MRO (14 or 15 Positions)
C - Type Inquiry Code (Constant C)
Z - Functional Routing Code of the Requesting Organization

(a) If the entry was made correctly, the following display will appear on the CRT:

XX(THIS LINE IS THE ACTUAL ENTRY)XX
UPDATE SUCCESSFUL
ENTER DATA

(b) If the entry was made incorrectly, one of the error messages listed in paragraph 5 of this procedure will appear on the CRT.

1. Establish a Reportable Quantity Indicator.

(1) When a hazardous substance is equal to or exceeds the weight parameters per package as established in Section 172.101 of Code of Federal Regulation 49, a reportable quantity indicator must be established in the Shipment Unit Line Item File.

(2) A copy of the Shipment Unit Line Item is annotated or stamped as requiring a reportable indicator established. This update is accomplished through CRT entry by entering the Type Action Code, 7/11/13-digit Shipment Unit Line Item Number and the Check Digit in the following format:

R,VVVVVVVVVVV,W,X

Where:

R - Type Action Code
V - Shipment Unit Line Item Number (11 or 13 Positions)
W - Check Digit
X - Reverse Code (R or blank)

(a) If the entry was made correctly, the following display will appear:

XX(this line is the actual entry)XX
UPDATE SUCCESSFUL
ENTER DATA

(b) If the entry was made incorrectly, one of the error messages in paragraph 5 of this procedure will appear.

5. ERROR MESSAGES/ACTIONS

a. All of the update and inquiry actions described in this procedure have checks for incorrect entries built in the computer. If an incorrect entry is made, a 3-line message with an error message (from the list below) on the second line, will be displayed in the following format:

1st line - XXX(input transaction)XX
2nd line - Error Message
3rd line - Enter Data

Example:

A,3426A32,3,,,,C,
SU NOT NUMERIC
ENTER DATA

ERROR MESSAGE	CAUSE/ACTION
DATA FORMAT ERROR	Probable Cause: The data entered does not follow the specified format requirements or the SU number is not equal to 7, 11, or 13 positions. Action: Reference the correct format in the above procedures and reenter data accordingly. Make sure that the number of positions in the SU number are 7, 11, or 13.
SU NOT NUMERIC	Probable Cause: An alpha character was entered in the area reserved for SU number. Shipment Unit number must be all numeric. Action: Determine correct SU number from MRO and reenter data with correct SU number.
INVALID TYPE ACTION CODE	Probable Cause: Type Action Code entered was not A, B, or C. Action: Reenter using A, B, or C Type Action Code.
INVALID MODE CODE CHANGE	Probable Cause: The Mode Code entered was other than G, H, 6, 7 or blank. Action: Reenter data using G, H, 6, 7 or blank Mode Code.

ERROR MESSAGE	CAUSE/ACTION
CHECK DIGIT INVALID	Probable Cause: Entry contained an invalid Check Digit or a transposed number in the SU number. Action: Reenter data verifying the SU number and Check Digit.
INVALID PARCEL POST CODE	Probable Cause: The Parcel Post Code entered was other than D, E, or blank. Action: Reenter data using a D, E, or blank Parcel Post Code.
INVALID CONFIRMATION CODE	Probable Cause: The Confirmation Code entered was other than a C, or blank. Action: Reenter data using a C or blank Confirmation Code.
INVALID HOLD CODE	Probable Cause: Entry included a Hold Code not listed in appendix A-21. Action: Determine correct Hold Code and reenter data.
INVALID QUANTITY ACTION CODE	Probable Cause: Entry included a quantity Action Code not listed in appendix A-104. Action: Determine correct quantity Action Code and reenter data.
INVALID QUANTITY	Probable Cause: Non-numeric data in the Quantity Shipped field or the entry included data in the Quantity Shipped field with a DP, DQ or DR Action Code. Action: Verify the quantity being shipped (MRO) and the quantity Action Code required (appendix A-104) and reenter data.
INVALID TYPE INQUIRY CODE	Probable Cause: The operator has attempted to input an FRC for a C type action with an A or B Inquiry Code or the operator used a C Type Inquiry Code and did not enter data in the FRC field. Action: Determine correct input and reenter data following formats described in the above procedures.

ERROR MESSAGE	CAUSE/ACTION
INVALID SHIPMENT UNIT STATUS	Probable Cause: Shipment Unit Status Code must be A or B. Code A indicates the record has not been changed. Code B indicates an adjustment has been made to the record in the area control branch. See appendix A-102 for definition of other status codes. Action: Shipment Unit has entered automated terminal processing, if freight, or has been confirmed, if parcel post. If a change is required to a freight SU, the change must be coordinated with the MOFAST terminal to return the status to A or make the desired change during terminal processing. If the SU is a confirmed parcel post, the change must be made manually through MOWASP. Notify supervisor to accomplish coordinated change.
SU NOT ON FILE	Probable Cause: Shipment Unit number entered does not match any SU presently in process. Action: Compare the SU number from the MRO with the SU number entered and returned in the error message display. a. If the SU numbers do not match, reenter entry with correct SU number from MRO. b. If the SU numbers do match, inquire the SU record as described in paragraph 4k of this procedure, to determine if a single-line indicator (X) is present in the record. If it is present, it may indicate one LI of a multiline SU has been single-lined and reassigned to an 11-digit SU. The original SU has subsequently been shipped and confirmed clearing the 7-digit SU record. Reenter data using an 11- or 13-digit SU number. c. If the error message persists, the action must be processed manually through MOWASP input. d. If the entry is for inquiry only and no SU record is found, a MOWASP inquiry can be made as described in paragraph 4k(5) of this procedure.

ERROR MESSAGE	CAUSE/ACTION
NO RECORD ON LI-FILE	Probable Cause: Line Item number entered does not match any LI presently in-process. The LI has probably been single-lined from the original SU. Action: Compare the SU/LI number (11 or 13 positions) on the MRO with the SU/LI number entered. a. If the numbers do not match, reenter with correct SU/LI number from the MRO. b. If the SU/LI numbers do match, inquire the SU record, as described in subparagraph of this procedure, to determine if the single-line indicator is present in the record. If it is present and the LI record is not accessible, it indicates the single-lined line has been shipped and the record cleared. If a change is required to the completed shipping action, it must be accomplished manually.
INVALID TRANSACTION	Probable Cause: Entry is attempting to extend or delete an automatic clear date which has been cleared or has not been assigned. Action: Proceed with next action.
INVALID SHIPMENT UNIT MODE	Probable Cause: The SU or LI mode is not G, H, 6 or 7 (parcel post). Before the SU can be confirmed the mode must be G, H, 6 or 7. Action: Change the mode code in the SU/LI record as described in paragraph 4d of this procedure. Reenter the confirmation action.
INVALID QUANTITY CHANGE	Probable Cause: Data entered in the quantity shipped and quantity Action Code fields do not agree (i.e., quantity shipped indicates undershipment and quantity Action Code indicates overshipment). Action: Examine the entered quantity adjustment in relation to the quantity Action Code to determine if the code and quantity are valid. NOTE: A DL or DM quantity action code requires a zero in the quantity shipped field.

ERROR MESSAGE	CAUSE/ACTION
INVALID ENTRY DUE TO PENDING DEN/CAN	Probable Cause: Input to cancel or deny the line item quantity has previously (during the current day) been entered. Action: Inquire the LI record and review the quantity in the MOFAST exception quantity field. a. If the MOFAST exception quantity is correct, no further processing is required. b. If it is necessary to modify the MOFAST exception quantity the operator should clear the MOFAST exception quantity ($$UWFH25, CQ type input). c. Reenter data using an adjusted Quantity Shipped.
CANCEL ACTION NOT VALID	Probable Cause: A cancellation has been attempted on a record for which an AC6 cancellation has not been received (on FMS this check is ignored) or the Ownership Code, MRO pos. 70, is not alpha for a type action DB or DD (overage or underage due to packaging). Action: Review the MRO to ensure the correct SU/LI number is entered with the correct quantity adjustment. If message persists, notify supervisor. Decision should be made to ship exact quantity ordered or process a complete denial.
INVALID ENTRY DUE TO PREV DEN/CAN	Probable Cause: A denial or cancellation action was entered on a previous day. The adjustment was reported to the ICP at that time. Action: Quantity adjustment to this record must now be accomplished manually. Coordinate action with special processing to place the MRO in DP status.
INVALID DENIAL-QTY OUT-OF-BALANCE	Probable Cause: The transaction is attempting to enter a denial (Action Code DE, DJ, DK or DT) with a quantity shipped that indicates an overshipment. Action: Examine the entered quantity adjustment in relation to the quantity Action Code to determine if the code and quantity are valid.
UWFB01 BAD-RETURN FROM UWFL01 XXXXXXXX	Probable Cause: System error caused by other than operator input. Action: Record error message and notify supervisor.

ERROR MESSAGE	CAUSE/ACTION
INVALID LOCATION	Probable Cause: The location entered is other than 3 or 9 positions or contains other than alphanumeric data. Action: Verify location and reenter data.
INVALID REQUEST - MEDALOC ITEM	Probable Cause: Shipment is flagged as MEDALOC eligible and the POE is other than 103 or 303 which indicates shipment to a collocated container consolidation point. Action: Reroute Shipment Unit through the container consolidation point or remove MEDALOC eligible indicator from the MOFAST Shipment Unit by using program $$UWFH25, CE type input (appendix E-234) or if the Shipment Unit record POE is invalid update the record with POE 103/303 as appropriate using program $$UWFQ45 (appendix E-231), this should only be done if the shipment is to be made to other than a collocated MEDALOC container consolidation point.

APPENDIX E-217 P

PARCEL POST PROCESSING

1. PURPOSE

This procedure covers processing of special Parcel Post (PP) shipments (registered, insured, certified, weapons system pouch, international mail, and Foreign Military Sales (FMS) with Notice of Availability). Assignment of registration numbers is accomplished in the PP processing area.

2. APPENDICES USED IN THIS PROCEDURE

a. Appendix A-104

b. Appendix A-105

c. Appendix B-206

d. Appendix D-165

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. This system operates in an on-line environment and covers processing of special handling of PP using three basic entries:

(1) Completion Entry.

(2) Missing Line Entry.

(3) Quantity Change Entry.

b. Key in the call characters for PP program, $$UWFC01. Press the ENTER key. (This is a one-time entry.) Following is the return showing formats for the three entries:

```
UWFC01-00  SPECIAL HANDLING PARCEL POST
    TYPE,PP,SU-NUM,CHK-DIG,       ,REG
     C,  X, XXXXXXX,  X,       ,XXXXXX
     M,     XXXXXXX,  X,   XXXX
    TYPE,  SU-NUM, CHK, LINE, QTY,  CDE
     Q,   XXXXXXX,  X,  XXXX, XXXXX, XC
```

NOTE: The Cathode Ray Tube (CRT) will remain dedicated to parcel post processing until another $$ prefix is entered.

c. After a CRT has been initialized the operator need only honor the data requests that appear on the display to process parcel post. The entries are defined as follows:

(1) COMPLETION ENTRY:

(a) Key in type entry, Parcel Post Code, Shipment Unit number (7, 11, or 13 positions), check digit and register number separated by commas with double commas between check digit and register number as follows:

C,X,XXXXXXX,X,,XXXXXXXX

(b) Press the ENTER key. If the above information has been entered successfully the following message will display:

ENTRY COMPLETE ENTER DATA

(c) The CRT is then ready for another entry.

(2) MISSING LINE ENTRY:

(a) Key in the type entry, Shipment Unit number (7, 11, or 13 positions), check digit, and line number separated by commas as follows:

M,XXXXXXX,X,XXXX

(b) Press the ENTER key. If the above information has been entered successfully the following message will display:

ENTRY COMPLETE ENTER DATA

(c) The CRT is then ready for another entry.

NOTE: Up to five line items can be entered with one entry and each line item entered will be single-lined.

(3) QUANTITY CHANGE ENTRY:

(a) Key in Type Code, Shipment Unit number (7, 11 or 13 positions), check digit, line item number, quantity change and quantity Action Code separated by commas as follows:

Q,XXXXXXX,X,XXXX,XXXXX,XX

(b) Press the ENTER key. If the above information has been entered successfully the following message will display:

ENTRY COMPLETE ENTER DATA

(c) The CRT is then ready for another entry.

NOTE 1: Line item number entry can be one to four positions. Quantity change entry can be one to five positions. Register number can be four to eight positions.

NOTE 2: Each Q or M entry must be followed up with a C entry.

5. ERROR MESSAGES/ACTIONS

ERROR MESSAGE	CAUSE/ACTION
FORMAT ERROR	Probable Cause: Self-explanatory. Action: Reenter data in correct form.
SU NOT NUMERIC	Probable Cause: Self-explanatory. Action: Reenter correct data.
REGISTER INVALID	Probable Cause: Self-explanatory. Action: Reenter correct data.
QTY NOT NUMERIC	Probable Cause: Self-explanatory. Action: Reenter data with correct quantity.
QTY-CDE INVALID	Probable Cause: Self-explanatory. Action: Reenter data with correct quantity Action Code.
CHECK DIGIT ERROR	Probable Cause: Self-explanatory. Action: Reenter data with correct check digit.
CODE ENTERED NOT CORRECT FOR QTY REQUESTED	Probable Cause: Self-explanatory. Action: Reenter data with correct quantity Action Code.
STATUS CODE INVALID	Probable Cause: Self-explanatory. Action: Reenter data with correct Status Code.
NO RECORD ON FILE	Probable Cause: Self-explanatory. Action: Enter the correct Shipment Unit number.
NUMBER OF LINES ON SU IS 2	Probable Cause: Self-explanatory. Action: Shipment Unit is a single-line SU.

ERROR MESSAGE	CAUSE/ACTION
QUANTITY ERROR PENDING DENIAL/CANCELLATION	Probable Cause: A denial or cancellation has already been entered for this day. Action: Inquire the LI record ($$UWFQ45, appendix E-238 P, part D) and review the quantity in the MOFAST exception quantity field. a. If the MOFAST exception quantity is correct, no further processing is required. b. If it is necessary to modify the MOFAST exception quantity, the operator should clear the MOFAST exception quantity ($$UWFH25, CQ option, appendix E-234 P, part A). (Note: SU Status must be A prior to use of the CQ option.) c. Reenter data using an adjusted quantity shipped.
QUANTITY CHANGE INELIGIBLE FOR UPDATE	Probable Cause: A cancellation has been attempted on a record for which an AC6 cancellation has not been received (on FMS this check is ignored) or the Ownership Code, MRO pos. 70, is not alpha for a type action DB or DD (overage or underage due to packaging). Action: Review the MRO to ensure the correct SU/LI number is entered with the correct quantity adjustment or await receipt of the cancellation notice, F-69.
QUANTITY PREVIOUSLY DENIED/CANCELLED	Probable Cause: Transaction is attempting to enter a denial to a record for which a partial cancellation has already been sent to the ICP or a cancellation is being entered to a record for which a denial has been sent to the ICP. Also, a denial/cancellation quantity must exceed any previous denial/cancellation quantity that may exist on the record. Action: Investigation action is required by special processing to place the MRO in DP status.
QTY SHIPPED MUST BE GREATER THAN ZERO	Probable Cause: Quantity entered for quantity shipped is is zero for type action DD (undershipment). Action: Quantity must be greater than zero.

ERROR MESSAGE	CAUSE/ACTION
INVALID REQUEST - MEDALOC ITEM	Probable Cause: Shipment is flagged as MEDALOC eligible and the POE is other than 103 or 303 which indicates shipment to a collocated container consolidation point. Action: Reroute Shipment Unit through the container consolidation point or remove MEDALOC eligible indicator from the MOFAST Shipment Unit by using program $$UWFH25 CE type input (appendix E-234) or if the Shipment Unit record POE is invalid, update the record with POE 103/303 as appropriate using program $$UWFQ45 (appendix E-231), this should only be done if the shipment is to be made to other than a collocated MEDALOC container consolidation point.

APPENDIX E-219 P

MOFAST PROCESSING FREIGHT USING MOFAST SORTER PROGRAMS
PART A
INITIAL INPUT

1. PURPOSE

To provide operational instructions on entering initial container data for containers to be accumulated on the MOFAST Sorter.

2. APPENDICES USED IN THIS PROCESS

a. Appendix B-197

b. Appendix D-140

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. General

(1) Each installation has, at its option, different types of sorter configurations. As a consequence, different types of computer interfaces are used. Daily system "Power Up" for either system should be accomplished utilizing locally established procedures.

(2) The CRT operator uses this procedure to record container data in the MOFAST Shipment Unit/Line Item (SU/LI) record. Container weight and cube are automatically recorded from the weighing/cubing device either just prior to or immediately after this entry. Data entered is used to assign the container to the sorter accumulation line and initiate the offering process. This procedure also provides the capability to single-line a multiline Shipment Unit.

b. The operator must make sure that all containers are cleared from the release station (Cubitron and Sort area) prior to starting the sorting process.

(1) CRT Initialization.

(a) Key in program call $$UWFE01.

(b) Press the ENTER key.

(c) If the entry is successful the display identified in figure 1 below will appear. Note how the word CLEAR is displayed in the operator input area (lower left corner of the display).

(d) Press the ENTER key. This action will cause the word CLEAR to be treated as input data. The input will be treated as a special request function and cause the system to reset its controls.

(e) If the entry is successful the word CLEAR will be displayed in the upper left corner of the display with the greater than symbol pointing to the entry. See figure 2 below for an example. This indicates that the CLEAR command was the last entry entered by the operator. At this point the operator is ready to start entering container data. The cursor has been positioned at the start of the input line (lower left corner of the display) allowing the operator to key in data without having to position the cursor.

(2) Sorter Processing.

(a) The operator obtains data annotated on each container and keys in the data in the following format (see figure 3 below for an example):

AAAAAAAAAAAAA,B,CCC,DD,E,F,

Where:

A - Shipment Unit Number (7, 11, or 13 Positions)
B - Check Digit
C - Container Number (May be 1 to 3 digits.)
D - Type Container (May be blank if CT.)
E - Final Code (Enter C, E or a comma to indicate blank as indicated on container marking.)
F - Single Line Indicator (Enter X to establish a single line SU; otherwise, leave blank. Data entry must contain an 11-position SU number when used.)

(b) If the entry is successful, the container will be released from the input station. The input data will reappear under the previous input with the greater than symbol pointing to it. See figure 4 below. The greater than symbol will always appear in front of the last successful entry made by the operator.

(c) After the container is released from the input station, the weight, cube and length will be displayed on the same line as the operator input data. See figure 5 below. Along with the Cubitron data will be the sorter line number assignment. The container will be sorted to the specific sort line assigned above.

(d) The operator can route containers from the input station to the reject line when required, i.e., container markings or documentation discrepancies which cannot be resolved by the operator. This action is accomplished by keying in an R in the first position of the operator input area and pressing the ENTER key.

(e) The operator can also route containers from the input station to two additional sort lines (DDOU lines 98 and 99, DDMT lines 70 and 71). This action is accomplished by keying in an 8 or 9 in the first position of the operator input area and depressing the ENTER key.

NOTE: Prior to using this option the sort lines identified above must be blocked from normal sorter line assignment. This is accomplished by using program $$UWFQ35, Option K, appendix E-238 P, part B.

(3) Assign an alternate CRT.

Only one CRT terminal on the MOFAST teleprocessing network may utilize this program. The assigned CRT should not be utilized for other operational programs, i.e., inquiries, to eliminate the possibility of data loss. If the assigned CRT goes down and becomes inoperative (CRT, control unit or line problems) the following actions can be used to assign an alternate CRT.

(a) Key in program call $$UWFE01 on the alternate CRT.

(b) Press the ENTER key.

(c) If the entry is successful the display identified in figure 1 below, will appear.

(d) Overlay the word CLEAR (located in the operator input area) with the word CHANGE.

(e) Press the ENTER key.

(f) Issue a CLEAR command as identified in the following paragraph.

(4) System Reset.

During processing it may become necessary to resynchronize the sorter components due to various MHE or data transmission problems. The operator will be alerted to these situations via error messages (paragraph 5 below). The following actions will be required to reset the system controls.

(a) Remove all containers from the release station (Cubitron and Sort areas).

(b) Key in the word CLEAR in the operator input area.

(c) Press the ENTER key.

(d) If the entry is successful resume processing.

(e) If the entry is unsuccessful contact Data Systems for support.

(5) Final Code Update.

Entry of the final Container Code (C or E) is required when processing the highest numbered container in a Shipment Unit. If the input is accomplished without a final code, the SU status will not be updated and subsequent processing actions (exception and release input) will be inhibited. When the above situation is encountered the final code may be entered using the final Container Code update option in program UWFQ35, appendix E-238 P part B.

5. ERROR MESSAGES/ACTION

a. The following messages will appear on the CRT at the input station. The message will appear to the right of the invalid input. See figure 6 below for an example.

ERROR MESSAGE	CAUSE/ACTION
INVALID SU INVALID CK DIGIT INVALID CONTAINER INVALID FINAL CD INVALID ENTRY INVALID SGL LINE IND	Probable Cause: All of the messages indicate invalid data for the prescribed entry format. Action: Obtain the correct data from the container markings or documentation. Corrections can be made by moving the cursor to the erronecus data in the display, overlay the entry with correct data and press the ENTER key.

b. The following messages and will appear on the CRT at the input station. The message will appear under the operator input area.

ERROR MESSAGE	CAUSE/ACTION
REMOVE BOXES BETWEEN CUBITRON AND SORTER, THEN ENTER CLEAR COMMAND	Probable Cause: MHE or data transmission problems. Not operator caused. Action: Remove containers from the release station (Cubitron and Sort areas) and issue a clear command to reset the system. If error message persists contact Data Systems for support.
$$UWFE01 CURRENTLY ASSIGNED TO ANOTHER TERMINAL	Probable Cause: Only one CRT terminal on the MOFAST teleprocessing network may use the program. Action: If it is necessary to change the CRT assigned, follow the instructions to assign an alternate CRT (paragraph 4b (3) above).

c. The following messages will be printed on the release printer (DDOU) or the route slip printer (DGSC and DDMT). The applicable SU number will be included as part of the printed message. Containers for which the input was made will be routed to the reject line.

ERROR MESSAGE	CAUSE/ACTION
SU RECORD NOT FOUND REENTER	Probable Cause: The SU number has passed the SU/check digit validation but cannot match a record on the SU file. Most likely the SU entered should be an 11-digit number. Action: Check the documentation to ascertain correct container markings. Correct the container markings, if in error, and reroute container to input station and reinput data.
DUPE CONTAINERS - - ROUTED TO REJECT LINES	Probable Cause: A duplicate container number for this SU has been entered. This container will be routed to the reject line. Action: Ascertain the correct container number from the attached documentation or by researching containers already received for this SU. a. If the container is marked incorrectly, correct the marking. Reroute this container to the first operator station. b. If the container in error is located on a sort line, clear all container data from the SU record through $$UWFH25 (appendix E-234 P, part A) and reroute all containers through the first operator input station.
INVALID STATUS FOR THIS TERMINAL	Probable Cause: The SU entered has been matched to the SU file and found the status to be other than A, B, C, D, or E. Action: Operator must ensure that the as-packed condition of the SU is properly documented in the SU/LI record (program $$UWFQ45). If container and/or line item data is in error, clear container data per appendix E-234 P and reoffer. SUs which contain valid container data must be processed based upon Status Code criteria, appendix A-102.
MAX CONT ERROR	Probable Cause: A container number error has occurred. Input of container data with a final code establishes the maximum (high) container parameter for a given SU. a. The operator has entered a container number with a final code and the container number entered is less than a previously entered container number.

ERROR MESSAGE	CAUSE/ACTION
	b. The operator has entered a container number which exceeds the maximum container parameter which was established by a previous final code input. Action: Inquire through program $$UWFQ65 (appendix E-234 P, part H) to obtain container numbers previously entered. Determine which container number is in error. Corrective action is dependant upon the physical location of the invalid container(s). a. If the container in error is located on the reject line, reroute the container through the first operator input station. b. If the container in error is located on a sort line, clear all container data from the SU record through $$UWFH25 (appendix E-234 P, part A) and reroute all containers through the first operator input station.
ALL LINES FULL - MUST BE CLEARED - REENTER	Probable Cause: All of the sorter lines are occupied. No more SUs can be assigned sort lines. Action: Sort lines must be cleared by releasing any SUs in status F. If none are in status F coordinate with the second sorter operator to expedite exception entries. Reroute container to input station and reinput data.
RECORD AREA FOR SORT CONVEYORS EXHAUSTED	Probable Cause: The three sorter lines maximum alloted for a SU are full. Action: Inquire the SU through program $$UWFQ45 (appendix E-238 P, part D). In the SU display under the field SRT-CONV 1 will appear the last sort line assigned to this SU. Now initiate program $$UWFQ35 (appendix E-238 P, part B) and enter the sort line number obtained above with a B option (i.e., B-78) to clear the sorter record. Release the containers from this line to where they may be held until the remainder of the SU may be released. Continue processing.
CUBITRON DATA ERROR AAAA BBB CCC X-----X Where: A - Weight B - Cube C - Length X - Previous Entry	Probable Cause: The Cubitron has failed to assign a valid container weight, cube or length. Action: Reroute container to initial input station for Reinput.

ERROR MESSAGE	CAUSE/ACTION
BAD RETURN	Probable Cause: The above message indicates a problem in the system (not operator caused). Action: Copy the exact message that appears (each indicates which portion of the system has failed) and pass the information to the supervisor. The supervisor must contact local programming support to resolve the problem. Do not resume processing until the problem is corrected.

APPENDIX E-219 P

MOFAST PROCESSING FREIGHT USING MOFAST SORTER PROGRAMS
PART B
EXCEPTION INPUT

1. PURPOSE

To provide a means to input denials/cancellations and identify line items within containers for multiline item/multicontainer Shipment Units.

2. APPENDICES AND REFERENCES USED IN THIS PROCEDURE

a. Appendix A-104

b. Appendix B-198

c. Appendix D-141

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. General

This procedure provides for input of exception data for SUs accumulated on the sorter. These SUs have been previously identified in the first operator function (appendix E-219 P, part A) with an E final code. The following functions can be performed:

(1) Input cancellation/denial actions.

(2) Identify line items packed in each container.

(3) Partial a line item if it is to be shipped in more than one increment.

(4) Single-line any line item which is not accounted for in the shipment unit.

(5) Option is also provided to input missing line items only and/or line items which have quantity changes when entire shipment unit is packed in one container. This procedure will be utilized when a shipment reaches the sorter that has been marked for exception processing.

b. CRT Initialization.

(1) Key in program number $$UWFE10.

(2) Depress ENTER key. This entry will dedicate the CRT to the sorter exception data input process until another $$ program call is input. The following message will display:

UWFE10-XXX EXCEPT AND LINE ITEM INPUT
ENTER DATA

c. Exception Input Processing.

Operator will key in data following the ENTER DATA message utilizing one of the following formats:

(1) Single line exception input. This entry is used to identify a change in the quantity being shipped for a single line (single or multi-container) SU. The format is as follows:

Q,AAAAAAA,B,GGGG(HHHHH,JJ)

Where:

Q = Type (Constant Q)
A = Shipment Unit Number
B = Check Digit
G = Line Item Number
H = Quantity Exception (Quantity Shipped)
J = Quantity Action Code (Appendix A-42)
, = Field Separator (Comma or Semicolon)

(a) If the data is entered successfully, the following message will display:

DATA ENTERED SUCCESSFULLY
ENTER DATA

(b) If the entry is unsuccessful, one of the error messages in paragraph 5 of this procedure will appear.

(2) Multiline Exception Input.

(a) Multiline Single Container. This entry is used to identify a change in the quantity being shipped for one or more of the LIs in a multiline, single container SU. The format is:

AAAAAAA,B,DDDDC,GGGG(HHHHH,JJ),GGGG,GGGG,...,F

NOTE: Up to 480 positions of input can be entered with this format.

(b) Multiline, Multicontainer Exception Input. This input assigns LIs to containers in the computer and accomplishes quantity exception changes. The input requires multiple entries of one or more of the following formats until all containers and LIs have been accounted for. The number and type of entries

required is determined by the physical configuration of the SU. The following container/line item combinations are possible within the configuration of a multiline-multicontainer SU. The formats are as follows:

1. One line in a single container.

AAAAAAA,B,DDDDC,GGGG(HHHHH,JJ),F

2. One line in multicontainer.

AAAAAAA,B,DDDD-DDDDC,GGGG(HHHH,JJ),F

3. More than one line in a single container.

AAAAAAA,B,DDDDC,GGGG,GGGG(HHHHH,JJ),GGGG,GGGG,...,F

NOTE: Up to 480 positions of input can be entered with formats in subparagraphs 2 and 3 above.

A = Shipment Unit Number (7, 11, or 13 Position).
B = Check Digit
C = Container ID (Must be a C and must follow last container number in each entry.)
D = Container Number
F = Final Code (Must be F or M. F = Final Code, M = More LIs to be accounted for.)
G = Line Item Number (A LI is entered for each LI in the container.)
H = Quantity Exception (Needed only if quantity shipped is an exception to that ordered. Enter for all LIs with exception quantities shipped.)
J = Quantity Action Code (Must be P, DB, DC, DD, DE, DG, DJ, DK, DT (see appendix A-42).)
(-) = Container Separator (Used to separate the low and high container number when a LI is packed in consecutive containers.)
, = Field Separator - (Must be semicolon or comma.)

(c) When the above data has been entered successfully, the following messages will appear.

1. The following message will appear after each successful entry that contains an M Final Code.

ENTER DATA FOR REMAINING LINE ITEMS
AAAAAAA,B,

Where:

A = Shipment Unit Number
B = Check Digit

The program has processed all LIs previously entered and since a Final Code of M was entered, it is now expecting the remaining LIs to be entered. Position the cursor and enter data for the remaining LIs after the check digit in the above message.

2. The following message will appear after each successful entry that contains an F Final Code.

```
LINES ACCOUNTED FOR=NNNN
LINES THAT WILL BE SINGLE LINED=NNNN
IF CORRECT HIT ENTER
ZSSSSSSSSSSSSSXGGGGGGGN
```

Z through N in the above message is a computer generated key and must not be altered by the operator, except when the message (Z through N) required deletion for input of additional LIs as described below. The operator should review the counts (NNNN) in the above message. When the counts are correct, press the ENTER key and all lines that are not accounted for will be single lined. If the counts are out-of-balance, press the ERASE INPUT key which will clear the computer generated key (Z through N). Enter data for missing LIs. After successful input of the missing LIs, the above message will again be displayed.

3. The following message will appear if the computer generated key in message of subparagraph 2 above was altered.

```
INVALID ENTRY
ENTER DATA
```

Reenter the data for any LI in the SU under second operator and a Final Code of F following the enter data message. The previous message of subparagraph 2 above will again be displayed.

4. The following message will appear when the counts (NNNN) in message of subparagraph 2 above are correct.

```
DATA ENTERED SUCCESSFULLY
ENTER DATA
```

The operator is now ready to enter data for the next SU.

(3) Missing line items and/or quantity change input on a SU packed in one container. This input allows entry of missing line data only when this is considered more practical than entry of the lines present. The line item numbers entered will be converted to single line Shipment Units. Line item numbers entered with quantity exception data will be reported as such and will not be single lined by this process. The formats are as follows:

(a) Input of missing line items.

M,AAAAAAA,B,GGGG,GGGG,F

(b) Input of quantity changes.

M,AAAAAAA,B,GGGG(HHHHH,JJ),GGGG(HHHHH,JJ),F

(c) Missing line items and quantity changes.

M,AAAAAAA,B,GGGG,GGGG(HHHHH,JJ),GGGG,GGGG(HHHHH,JJ),F

Where:

M = Type (Constant M)
A = Shipment Unit Number
B = Check Digit
G = Line Item Number
H = Quantity Exception (Quantity Shipped)
J = Quantity Action Code (Appendix A-42)
F = Final Code

5. ERROR MESSAGES/ACTIONS

Each error message described below, when displayed on the CRT, will appear in the following format:

Title:	UWFE10-XXX EXCEPT AND LINE ITEM INPUT
Incorrect Entry:	XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX
Error Message:	XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX
Instruction:	ENTER DATA
Updatable Incorrect Entry:	XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX

Operator positions the cursor to the error on the updatable incorrect entry and makes the necessary corrections. Data can be overlayed and changed but if data is deleted the ERASE EOF key must be utilized in lieu of the space bar.

ERROR MESSAGE	CAUSE/ACTION
DATA FORMAT ERROR RE-ENTER DATA	Probable Cause: Data entered was not in the prescribed format. Also, attempt is being made to enter M as type input on a multicontainer shipment.

ERROR MESSAGE	CAUSE/ACTION
	Action: Reenter the data in the proper format following ENTER DATA.
SU-NUM NOT NUMERIC RE-ENTER DATA	Probable Cause: The SU number entered contained an alpha character.
	ACTION: Determine the correct SU number and reenter data following ENTER DATA.
NUM DATA FIELD NOT NUMERIC RE-ENTER DATA	Probable Cause: An alpha character has been entered in a numeric data field.
	Action: Review the previous entry to determine the incorrect data. Reenter correct data following ENTER DATA.
SU-NUM, CHECK DIGIT ERRPR RE-ENTER DATA	Probable Cause: The check digit does not match the SU number entered.
	Action: Determine the correct SU number and check digit from the documentation and reenter the data following ENTER DATA.
INVALID QTY ACTION CODE RE-ENTER DATA	Probable Cause: The quantity Action Code entered was not P, DB, DC, DD, DE, DG, DJ, DK, or DT.
	Action: Determine the correct Action Code for the process desired (appendix A-42) and reenter data with correct Action Code.
LINE ITEM RECORD NOT FOUND RE-ENTER DATA PERTAINING TO FIRST NN LI	Probable Cause: A line item number was entered for a number not on the SU/LI File.
	Action: The second line of the error message indicates the erroneous line item number entry (i.e.,if NN equals 03, the third line item number is not on the file). Determine why the line item number is incorrect, then reenter all line item numbers preceding the incorrect entry plus the corrected line item entry.

Example:

```
UWFE100-08 EXCEPT AND LINE ITEM INPUT
1234567,4,3C,1,3,55,2,4,F
LINE-ITEM RECORD NOT FOUND
RE-ENTER DATA PERTAINING TO FIRST 03 LI
ENTER DATA
1234567,4,3C,1,3,55
```

ERROR MESSAGE	CAUSE/ACTION
	In this example, line item number 55 is obviously in error. Line items 2 and 4 have been accepted by the program but the first three line items, since an error has been detected, must be reentered. The correct entry, following ENTER DATA, will be: 1234567,4,3C,1,3,5,F
INVALID SHIPMENT-UNIT STATUS	Probable Cause: The Shipment Unit status must be C or D to process entries through this program. Action: Reexamine the documentation to ensure the entry is being made to the correct SU and that exception entry is required. Inquire the SU status through program UWFQ45 (appendix E-238 P, part D). a. If status is A or B first operator input is required. b. If status is E a problem exists with the first operator input. Coordinate with the reject line function to resolve the problem. c. If status is other than A through E refer the problem to your supervisor for resolution.
CONTAINER NO NNNN LINE DATA NOT ENTERED FOR ALL CONTAINERS	Probable Cause: An exception input has not been entered for the containers identified by the NNNN noted above. Action: Inquire container data through program $$UWFQ65 (appendix 238 P, part H) option SR2 and reconcile the data displayed with the documentation. Correct the discrepancy if: a. Line item data for the container has been merely omitted the container data may be input by this program. b. Incorrect line items have been entered into erroneous containers the container data may be corrected by reinput through this program.
TOTAL CONTAINER NOT = TOTAL RECEIVED	Probable Cause: An error has been made in accounting for line items within containers. All container numbers have not been entered through exception input.

ERROR MESSAGE	CAUSE/ACTION
	Action: Inquire container data through program $$UWFQ65 (appendix 238 P, part H) option SR2 and reconcile the data displayed with the documentation. Correct the discrepancy if: a. If line item data for the container has been merely omitted the container data may be input by this program. b. If incorrect line items have been entered into erroneous containers the container data may be corrected by reinput through this program.
INVALID CONTAINER ENTERED IN LINE ITEM	Probable Cause: A container number has been entered that is greater than the highest container number entered by the first operator. Action: Inquire SU and line item records through program $$UWFQ45 (appendix E-238 P, part D) to determine the erroneous entry. Corrections may be made by reinput through this program.
MULTILINE, MULTI-CONTAINER INPUT INVLD	Probable Cause: The multicontainer entry (i.e., 2-7) was made with more than one line item indicated as contents. This type entry may be made for only one line item. Action: Research, correct and reinput the correct entry.
QTY-CHG, QTY-OPEN, QTY-CODE DO NOT AGREE RE-ENTER DATA PERTAINING TO FIRST NN LL	Probable Cause: A quantity shipped exception was entered and an error has been detected in the quantity and/or quantity Action Code. Action: The error display will appear as the following example: UWFE10-008 EXCEPT AND LINE ITEM INPUT 1234567,4,3C,1,2,7(5,DB),3,9,F QTY-CHG, QTY-OPEN, QTY-CODE DO NOT AGREE RE-ENTER DATA PERTAINING TO FIRST 03 LI ENTER DATA 1234567,4,3C,1,2,7(5,DB) Note that the error occurred on the third line item entered as indicated in the last line of the message.

ERROR MESSAGE	CAUSE/ACTION
	Obtain the MRO for line item #7 and verify the quantity shipped and action; correct if necessary. Add the final code and depress the ENTER key.
	Line items 3 and 9 above have been accepted from the previous entry and, therefore, do not require reinput.
LINE NO NNNN CONTAINER NO NNNN CONTAINER NUMBER NOT CONTINUOUS	Probable Cause: If a line item is packed in two or more containers the container numbers must be continuous (i.e., 1, 2, and 3).
	Action: In most cases an operator input has caused this error or erroneous container markings have been made on the MRO. Make the necessary corrections and reenter the data for the erroneous container/line item number indicated in the error message.
	If the line item has, in fact, been packed in noncontinuous container numbers, the Shipment Unit must have all container data removed from the record via program $$UWFH25 (appendix E-234 P, part A) and the SU routed to a packing area for repacking and marking as necessary.
INVALID Q-ENTRY	Probable Cause: An attempt has been made to enter a Q type entry (single-line exception) on a multiline shipment unit.
	Action: Reenter the data in the multiline SU format entry.
LINE NO NNNN HI-LO CONTAINER OUT OF BALANCE	Probable Cause: The line item record contains three container fields; high container, low container, and total containers. Entries in these fields have become out-of-balance through operator input.
	Action: Determine how the quantities are out of balance by inquiring the indicated line item through program $$UWFQ45 (appendix E-238 P, part D). Reconcile data contained in this record with container annotations on the MRO.
	The data may then be corrected by reentering correct container data through this program.

best copy available

ERROR MESSAGE	CAUSE/ACTION
CONTAINERS ENTERED NOT = TOTAL CONTAINERS	Probable Cause: One or more containers have not been accounted for in second operator entries. Action: Inquire container data through program $$UWFQ65 (appendix E-238 P, part H), option SR2 to determine missing containers. Reconcile data entered from this inquiry with container annotations on MROs, make appropriate corrections and enter data for missing containers.
SU NOT FOUND	Probable Cause: Since the entry has passed SU and check digit validation this SU has probably been single-lined and the basic SU number has already been processed. Action: Check the MRO to verify if this line item has been single-lined then reinput the data using the 11-digit SU number (SU number plus Line Item number).
LINE NOT ELIGIBLE FOR UPDATE RE-ENTER DATA PERTAINING TO FIRST NN LI	Probable Cause: A cancellation entry (Action Code DC) has been input on a line item which does not have a cancellation pending flag in the line item record. A denial action of DB or DD has been attempted on Army-owned stocks (MRO Ownership Code equals numeric), which is not allowed. Action: Refer the cancellation to the supervisor who will determine disposition of the MRO/Shipment. Refer the denial to the supervisor who must determine whether the shipment must be denied in total or repacked to contain the exact quantity ordered.
INVALID ENTRY DUE TO PENDING DEN/CAN REENTER DATA PERTAINING TO FIRST NN LI	Probable Cause: Input to cancel or deny the line item quantity has previously (during the current day) been accomplished. Action: Operator must inquire (appendix E-238 P, part D, $$UWFQ45) the line item record and review the quantities shown in the Quantity Denied/Cancelled and MOFAST Exception Quantity categories. If the MOFAST Exception Quantity is correct, the operator must reenter exception input for the LIs identified in the above message excluding reentry of the quantity and quantity action code for LI NN.

ERROR MESSAGE	CAUSE/ACTION
	If it is necessary to modify the quantity shown in the MOFAST Exception Quantity, the operator must: a. Clear all container data (appendix E-234 P, part A, $$UWFH25, CC type input). b. Clear MOFAST Exception Quantity for the LI that requires updating (appendix E-238 P, part A, $$UWFH25, CQ type input). c. Reroute containers through the initial input station and reenter all container data under initial input (appendix E-219 P, Part A, $$UWFE01). d. Reenter exception input (this procedure) for all line items. Enter quantity and quantity Action Codes only for the applicable LIs identified in the above message.
INVALID ENTRY DUE TO PREV DEN/CAN RE-ENTER DATA PERTAINING TO FIRST NN LI	Probable Cause: Quantity denied or canceled was entered on a previous day. The adjustment was reported to the ICP at that time. Action: Quantity adjustment to this record must now be accomplished manually. Place LI record in DP status (appendix E-216 P). Report remaining adjustments and status manually.
NO-LNS-SU NOT = 1 WHEN BEING PARTIAL	Probable Cause: More than one partial was attempted on a line item on a single input entry. The program will accept only one partial shipping action per entry. Action: Reenter data, entering one partial shipping action per input entry.
INVALID ENTRY FOR A PARTIAL	Probable Cause: A partial shipment has been attempted on a line item which has not been previously single-lined from the Shipment Unit. Program restrictions will not allow this action. Action: If this line item is included with a multiline Shipment Unit the line item must first be physically extracted from the SU and repacked as a single-lined SU. The line item will be single-lined by this program if it is merely not included as a line item entry during exception input or it may be single-lined through program $$UWFQ40 (appendix E-238 P, part C).

ERROR MESSAGE	CAUSE/ACTION
UWFE10 BAD RETURN FROM XXXXXX XXXXXXXX	Probable Cause: A system error has been encountered. Action: Copy the exact message from the display and relay it to your supervisor. Do not process until the problem has been corrected.
NO-LNS = 1 CANNOT SINGLE LINE REENTER DATA	Probable Cause: Type input M is attempting to single line the last open line item within the Shipment Unit. All other line items originally assigned to the SU have been single lined. Action: Reenter data using Q type input.
INVALID M-ENTRY, NOT A SINGLE CNTR SU REENTER DATA PERTAINING TO FIRST NN LI	Probable Cause: The operator is attempting to use type input M on a SU which has multiple containers previously assigned in the first operator input. Action: The operator must reenter data without using Option Code M. The M Option Code can only be used when the SU is contained entirely in only a single container.

APPENDIX E-219 P

MOFAST PROCESSING FREIGHT USING MOFAST SORTER PROGRAMS
PART C
SORTER INQUIRY/RELEASE SYSTEM

1. PURPOSE

To provide for sorter inquiries and to release shipments that have been completed.

2. APPENDICES AND REFERENCES USED IN THIS PROCEDURE

a. Appendix B-199

b. Appendix D-142

c. Appendix F-186

3. RESPONSIBLE ORGANIZATIONAL ELEMENTS

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. General.

This process will allow the operator to inquire the sorter using various option codes (inquiry options vary with the different types of sorter configurations). The process also provides a means to release shipments that are completed. SU data will automatically print on a sort release printer whenever a Shipment Unit is updated to complete status (Status Code F). Upon release of a shipment from the sorter a signal is passed to programs which produce the correct number of shipping labels to label printers and route slip data to the route slip printer.

b. CRT Initialization.

(1) Key in $$UWFE30.

(2) Press the ENTER key.

(3) If the entry is successful the following message will display:

UWFE30 XX SORT RACK RELEASE SYSTEM ENTER DATA

c. Sorter Release Processing:

To release a line from the sorter the operator will key in data following the ENTER DATA message utilizing one of the following formats:

AA or
AAN

Where:

A = Sort line number to be released.
N = Release Option Code. Enter when a SU is accumulated on more than one sort line. All but one of the sort lines released must contain the N Option Code.

d. Sorter Inquiries.

The contents of the sorter can be accessed by one of two options, consignee or destination AAC. Individual depots have the capability to select the option desired. Both options cannot be utilized simultaneously. A change from one option to the other will require coordination with the Office of Data Systems.

(1) The following inquiries are available under the consignee option:

(a) Inquire the complete contents of the sorter:

SS

See figure 1 below for response to successful input.

(b) Inquire a specific sorter line:

SL,AA

Where:

A = Sort line number to be inquired.

See figure 2 below for response to successful input.

(c) Inquire a specific priority, (1, 2 or 3):

SC

Where:

C = Issue Priority Group (IPG).

See figure 3 below for response to successful input.

(d) Inquire a specific consignee.

SC,BBBBBB

Where:

B = Consignee Address Code.

See figure 4 below for response to successful input.

(e) Inquire all lines in D status.

SD

See figure 5 below for response to successful input.

(f) Inquire a specific geographical area.

S, G, XXX

Where:

X - Geographical Area Code (input may be 1, 2 or 3 positions).

See figure 12 for response to a successful input.

(2) The following inquiries are available under the destination AAC option:

(a) Inquiry the complete contents of the sorter:

SS

See figure 6 below for response to successful input.

(b) Inquire a specific sorter line:

SL,AA

Where:

A = Sort line number to be inquired.

See figure 7 below for response to successful input.

(c) Inquire a specific priority (1, 2 or 3):

SC

Where:

C = Issue Priority Group (IPG).

See figure 8 below for response to successful input.

(d) Inquire all lines in F status for a specific destination AAC:

SP,DDDDDD

Where:

D = Destination AAC.

See figure 9 below for response to successful input.

(e) Inquire all lines for a specific destination AAC:

SR,DDDDDD

Where:

D = Destination AAC.

See figure 10 below for response to successful input.

(f) Inquire all lines in a D status.

SD

See figure 11 below for response to successful input.

(3) The following are definitions of abbreviations utilized in the sorter inquiries:

LN	= Sorter Line Number
SU NBR	= Shipment Unit Number
CD	= Check Digit
S	= Status Code
P	= Priority
GEO	= Geographical Area Code
CONS	= Consignee
WGT or WT	= Shipment Unit Weight
CT	= Container (identifies the number of containers accumulated on the sort line.)
CU	= Shipment Unit Cube
DEST	= Destination AAC

NOTE 1: The alpha C in the far right column of the inquiry displays indicates that all containers for the SU have been accounted for through first operator input (program UWFE01). A blank in this column indicates that all containers have not been accounted for.

NOTE 2: An asterisk to the right of the container field (CT) identifies the destination as a potential volume destination. The asterisk may appear in any destination AAC inquiry excluding the SR option.

e. When the desired entry is made, press the ENTER key.

(1) For a release request, if the entry was successful one of the following messages will display:

ROUTE CONTAINERS TO PAPER LABEL SPUR

LINE CLEARED
(N OPTION)

The CRT is then ready for another request.

(2) For an inquiry request, if entry was successful the requested data will display. When all requested data has been displayed, the CRT is ready for another entry.

NOTE 1: Large displays may require two or more displays to present all data requested. If so, press the ENTER key as indicated in the display format when successive displays are desired.

NOTE 2: With the SS inquiry option, the following message may appear in lieu of SU data:

FQ35 *E* ENTRY REQUIRED

This message means a Shipment Unit is in the sorter record but has cleared from the Shipment Unit record. Refer to locally established procedures to rectify the situation.

5. ERROR MESSAGE/ACTIONS

ERROR MESSAGE	CAUSE/ACTION
INVALID LINE NUMBER REENTER ENTER DATA	Probable Cause: Lines number was not numeric or exceeded two positions. Action: Enter correct line number.
STATUS NOT = F ERROR ENTER DATA	Probable Cause: Shipment Unit status must equal F before it can be released from the sorter. SU must remain on sort line until completed data is input by sorter input operator.

ERROR MESSAGE	CAUSE/ACTION
	Action: No action required. Go to next input.
BAD RETURN FROM XXXXXX XXXXXXXX ENTER DATA	Probable Cause: A system error has occurred. Action: Record the message and notify supervisor. Go to next input.
LINE REQUESTED IS EMPTY ENTER DATA	Probable Cause: Sorter line has been cleared. The incorrect sorter line number has been entered. Action: Inquire sorter/sorter line to determine lines to be cleared. Enter correct line(s).
BAD*INPUT ENTER DATA	Probable Cause: Input format error. Action: Ascertain the correct input format for the process/inquiry desired and reenter data.
SORRY RACK IS EMPTY ENTER DATA	Probable Cause: A Shipment Unit for the requested consignee, destination AAC or geographical area is not on the sorter. Action: If this is an input error, ascertain the correct consignee/destination AAC from the input source (SS inquiry, etc.) and reinput the correct data. If this is merely an informational inquiry, continue processing inquiries.

APPENDIX E-219 P

MOFAST PROCESSING FREIGHT USING MOFAST SORTER PROGRAMS
PART D
MOFAST SORT RACK STATUS-PRIORITY INQUIRY

1. PURPOSE

This procedure will provide sort rack status and priority information and will also display the number of lines occupied and empty.

2. APPENDICES USED IN THIS PROCEDURE

a. Appendix A-102

b. Appendix B-201, Part B

c. Appendix D-142

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. The Sort Rack Status-Priority Inquiry allows interrogation of a specific status for all priorities or a blanket display of status for all freight on the sort rack by priority. This procedure is initiated by typing $$UWFE45 and pressing the ENTER key.

b. The initial display will be as follows:

```
UWFE45-XX SORTER RACK TOTALS INQUIRY
ENTER STATUS CODE FOR UNIQUE INQUIRY
JUST PRESS ENTER FOR BLANKET INQUIRY
ENTER DATA
```

If a specific Status Code is to be inquired, type it and press ENTER. If all Status Codes are to be displayed, press ENTER. Reference appendix A-102 for a list of Status Codes.

c. The inquiry that results from a specific status action is as follows:

```
SORTER RACK *TOTALS* INQUIRY

STATUS NUMBER          PRIORITY
       LINES        *1*     *2*    *3*
 F      19           0       4      15

LINES OCCUPIED 19
```

d. The inquiry for all Status Codes is as follows:

SORTER RACK *TOTALS* INQUIRY

STATUS	NUMBER LINES	PRIORITY *1*	*2*	*3*
D	2	0	1	1
C	2	0	1	1
F	18	0	4	14

LINES OCCUPIED 22
LINES EMPTY 77

After the CRT has returned one of the above displays, it is ready for another Status Code or blank entry. Type in the desired code and press the ENTER key.

NOTE: Total sort lines (lines occupied plus lines empty) will vary depending on the sorter configuration at individual depots.

5. ERROR CONDITIONS/ACTIONS

Error conditions that can result from this processing and their respective corrective actions, if any, are listed below.

ERROR MESSAGE	CAUSE/ACTION
NO RECORD FOUND FOR STATUS ENTERED	Probable Cause: None of the SUs on the sorter are in the type of status entered. Action: No corrective action is required. Continue Processing.
**0101D* ERROR IN PGM UWFE45	Probable Cause: A system error has occurred. Action: Record the message and notify supervisor. Continue processing.

APPENDIX E-219 P

MOFAST PROCESSING FREIGHT USING MOFAST SORTER PROGRAMS
PART E
MOFAST SORTER LENGTH-STATUS INQUIRY

1. PURPOSE

This procedure provides sorter information concerning conveyor length or identifies occupied sorter lines.

2. APPENDICES AND REFERENCES USED IN THIS PROCEDURE

a. Appendix A-102

b. Appendix B-201, Part A

c. Appendix D-142

d. DLAM 4745.1

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. The MOFAST Sorter Length-Status Inquiry is initiated by typing $$UWFE60 and pressing the ENTER key. This action will dedicate the Cathode Ray Tube (CRT) until another $$ is entered.

b. The initial display is as follows:

```
UWFE60-XX MOFAST SORTRACK INQUIRY
ENTER A FOR CONVEYOR LENGTH DATA
ENTER B FOR SORTRACK STATUS DATA
ENTER DATA
```

c. Type an A and press the ENTER key to receive the conveyor length display.

Example:

UWFE-XX CONVEYOR LENGTH INQUIRY

01-165	02-1143	03-	04-	05-	06-	07-	08-	09	10-
11-	12-	13-	14-	15-	16-	17-	18-	19-	20-
21-	22-	23-	24-	25-	26-	27-	28-	29-	30-
31-	32-	33-	34-	35-	36-	37-	38-	39-	40-
41-	42-	43-	44-	45-	46-	47-	48-	49-	50-
51-	52-220	53-	54-243	55-	56-	57-	58-	59-	60-
61-	62-	63-	64-	65-	66-	67-	68-	69-	70-
71-	72-	73	74-	75-	76-165	77-185	78-	79-	80-

91-	92-	93-	94-	95-	96-	97-	98-	99-	00-

ENTER DATA

The length of freight accumulated on each sorter line is displayed in inches. The last digit of each display is implied tenths of inches (e.g. line 1 has 16.5 inches of freight and line 2 has 114.3 inches of freight and line 3 has no freight).

d. Type a B and press ENTER to receive the status display.

Example:

UWFE60-XX SORT RACK STATUS INQUIRY

```
01 02 03 04 05 06 07 08 09 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25
 X  X

51 52 53 54 55 56 57 58 59 60 61 62 63 64 65 66 67 68 69 70 71 72 73 74 75
 X  X  X  X

76 77 78 79 80 81 82 83 84 85 86 87 88 89 90 91 92 93 94 95 96 97 98 99 00
  X  X
```

ENTER DATA

Occupied sort lines are indicated by an X under the sort line numbers.

NOTE: Sort line numbers identified in the above display will vary depending on the sorter configuration at individual depots.

5. ERROR CONDITIONS/ACTIONS

Error conditions that can result from this processing and their respective corrective actions, if any, are listed below.

ERROR MESSAGE	CAUSE/ACTION
UWFE60-XX INVALID TYPE INQUIRY ENTER DATA	Probable Cause: Type Inquiry Code was other than A or B. Action: Determine type of inquiry desired and enter A or B.
**01240* UWFE60 BAD RETURN FROM UWFE65 ENTER DATA	Probable Cause: A system error has occurred. Action: Record the message and notify supervisor. Continue processing.

APPENDIX E-219 P

MOFAST PROCESSING FREIGHT USING MOFAST SORTER PROGRAMS
PART F
MOFAST SORT RACK LINE ASSIGNMENT

1. PURPOSE

This procedure provides operational instructions on establishing, inquiring and maintaining sort line to geographical area or sort line to SPLC relationships.

2. APPENDICES USED IN THIS PROCESS

Appendix E-219 P, Part A

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T

4. PROCEDURES/INSTRUCTIONS

a. General

(1) This process allows individual sort lines to be assigned to specific geographical areas (3 pos.) or to specific destination AACs (6 pos.). Individual depots have the capability to select the option desired. Both options cannot be utilized simultaneously. A change from one option to the other will require coordination with the Office of Data Systems.

(2) Not all sort lines require assignment. Any number of sort lines may remain unassigned. Also, any number of sort lines may be assigned to the same geographical area or destination AAC.

(3) Once sort line relationships have been established only shipment units with matching criteria (geographical areas or destination AACs) will be sorted to these lines. If all sort lines with matching criteria are occupied the SU will be routed to the reject line. If an SU does not match the criteria for any of the assigned sort lines, the SU will be routed to an unassigned line if one is available. If an unassigned sort line is not available the SU will be routed to the reject line.

b. CRT Initialization

(1) Key in $$UWFE05.

(2) Depress the ENTER key.

(3) If the entry is successful the following message will display:

```
UWFE05-00      SORT RACK LINE ASSIGNMENT
ENTRY
ENTER I TO INQUIRE, U TO UPDATE
```

Cursor will be prepositioned in the ENTRY field.

c. Line Assignment Inquiry

(1) To inquire the current sort line assignments enter an I in the ENTRY field of the above display.

(2) Successful input will result in the display identified in figure 1.

d. Line Assignment Update

(1) Enter a U in the ENTRY field of the above display.

(2) Successful input will result in the same display (figure 1) provided for the inquiry option however the cursor will be prepositioned at the input area for sort line #01.

(3) Move the cursor to the line requiring an update using one of the skip keys.

(4) Perform the desired update(s).

(a) Enter the applicable geographical area or destination AAC.

(b) Previously established data may be overlayed or blanked out using the space bar.

(5) Upon completion of all updates depress the ENTER key.

(6) Successful input will result in the cursor being prepositioned in the ENTRY field.

5. ERROR MESSAGE/ACTIONS

ERROR MESSAGE	CAUSE/ACTION
INVALID INPUT	Probable Cause: Input in ENTRY field was other than I or U. Action: Enter corrected data based on desired action I - inquiry or U - update.

Figure 1

APPENDIX E-220 P

MOFAST PROCESSING FREIGHT OUTSIDE MOFAST TERMINAL

1. PURPOSE

This procedure outlines the sequence of events necessary to process freight which is packed and held in warehouse areas outside the freight terminal.

2. APPENDICES USED IN THIS PROCEDURE

a. Appendix B-181

b. Appendix B-202

c. Appendix B-203

d. Appendix D-146

e. Appendix D-147

f. Appendix D-169

g. Appendix E-221 P

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURE/INSTRUCTIONS

a. Warehousing Division, DS/T will:

(1) Perform necessary stock picking and Shipment Unit (SU) assembly actions.

(2) Perform packing and marking operations.

(3) Properly annotate DD Form 1348-1 with container information (pieces, weight, cube), quantity changes and pertinent quantity Action Code (appendix A-104).

(4) Arrange DD Form 1348-1 in sequence by container number and forward original copy of DD Form 1348-1 to Transportation Division for "Date Offering" action.

b. Transportation Division will:

(1) Receive set of original MROs from Warehousing Division.

(2) Determine whether SU requires immediate assignment to a GBL or additional shipment planning action.

(3) Assign, if shipment planning action is needed, Process Code XX to the SU record (appendix B-181).

(4) Perform actions to offer the shipment to Transportation the same day as documents are received from Warehousing Division.

(5) Perform shipment planning actions and coordinate shipment with Warehousing Division.

(6) Prepare and forward GBL to Warehousing Division.

c. Warehousing Division will:

(1) Load shipment onto carrier equipment.

(2) Coordinate any changes relative to pieces, weight, and cube made on the GBL with Transportation Division.

APPENDIX E-221 P

MOFAST FREIGHT CONTAINER DATA
PART A
NON-SORTER INITIAL INPUT

1. PURPOSE

This procedure describes the method for initial input of a SU into MOFAST terminal processing for items not routed through the MOFAST sorter process.

2. APPENDICES USED IN THIS PROCEDURE

a. Appendix A-72

b. Appendix B-202

c. Appendix D-146

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. General.

The CRT operator uses this procedure to record the container type, weight, cube, oversize dimensions in the MOFAST SU/LI record. Single line capability is available when using the odd container or multiple container formats of this procedure. This process initially records the offer of the SU to the transportation element for shipment. Initial input requires that all containers comprising a particular SU must be accounted for. This may be accomplished by a single input or may require multiple inputs depending upon the configuration of the SU. When processing consolidated SUs, exception changes and/or multiline/multicontainer SUs, a second operator input will be required to complete the offering process.

b. CRT Initialization.

(1) Key in $$UWFF01.

(2) Press the ENTER key. This entry will result in following display:

```
UWFF01-01              CONTAINER PROCESSING

PROCESS CODE
ENTER ONE OF THE FOLLOWING PROCESS CODES

  CP = CONSOLIDATION PACK ENTRIES
  OS = OVERSIZE CONTAINER ENTRIES
  MO = MO/OC MULTIPLE AND ODD CONTAINER ENTRIES
```

c. Format Selection.

The CRT operator selects the appropriate type entry format based on the container(s) in which the SU is packed as described below. If the container is oversize, the dimensions must be entered prior to the shipment offer data; and if the container is a consolidated pack, this information must be entered after the SUs are offered. If the shipment is to be forced to be assigned to a specific GBL number, this data is added to the usual offer format.

(1) Oversize dimension containers must be identified using the Oversize Dimension (OS) format described below. This entry is used to enter data for containers which exceed 72 inches in length, width, or height, as indicated by the packer in the remarks block of the top MRO on the first container in the SU.

(2) Single container SUs are offered to transportation using the Odd Container (OC) format. Single container SUs are indicated to the CRT operator by the packer by marking the container 1/1, and writing 1 in MRO block 5 (Total Containers).

(3) Multiple container SUs may be offered to transportation using the multicontainer (MC) format if all the containers are the same size and weight. If containers have different sizes, the OC format above is used. If all containers are the same size, this information is noted by the packer in the remarks block on the lead MRO.

(4) Consolidated Pack (CP) container data is entered using the CP format after the SUs have been offered using sorter input, appendix E-219 P, or using the OC and MC format described in this procedure, and after the multiple SUs have been repacked in one container by the consolidation packer.

d. Input Processing.

(1) Successful input of the format process code will result in one of the CRT displays identified in figures 1 through 3 below. In response to the requested display, the operator will enter data under the applicable field headings. Each of the format displays will accept multiple inputs.

(2) The cursor will be prepositioned at the first input field of each format display. The cursor will also be automatically prepositioned at the beginning of the next input field when the entry in the previous field fills the entire field. To manually position the cursor from field to field, press one of the SKIP keys.

(3) Operator may be required to utilize more than one format display to complete entry of an SU. To change from one format display to another the operator must overlay the process code of the current display with the process code of the desired format.

(4) When a particular format display field calls for data that is not applicable to the SU being offered, leave that field blank and skip to the next

input field. Explanation of the format display field headings and data sources (container marking or MRO block) for data used in this procedure is made in subparagraph e below.

(5) Input Format Displays:

(a) OS = Oversize Container Entries

1. This entry is made to enter data for containers which exceed 72 inches in either length, width, or height. If there is more than one oversize container in the SU, enter the dimensions for the largest. See figure 4 below for an example. Data field headings are defined as follows:

SU = Shipment Unit Number
CD = Check Digit
LENGTH = Length in Inches
WIDTH = Width in Inches
HEIGHT = Height in Inches

2. Following successful entry of the OS input, the operator will make an OC or MC entry from the same MRO. Successful input will result in the following message:

PROCESS COMPLETE---ENTER DATA

3. If the data entry was unsuccessful, one of the error messages in paragraph 5 of this procedure will appear to the right of the unsuccessful input.

(b) MO = MC/OC Multiple and Odd Container Entries.

1. The OC entry is made to enter data for single container SU(s) and odd containers in a multiple container SU. See figure 5 below for an example. The MC can be made when one SU has multiple containers with the same size, weight and cube. One entry will enter data on all of the consecutive multiple containers. See figure 6 below for an example. The OC and MC inputs utilize the same format display, however, OC and MC inputs cannot be entered together on the same display. Data field headings are defined as follows:

SPEC CODE = Special GBL Code (S or X, see note 1 below.)
GBL = GBL Number (See note 1 below.)
SU = Shipment Unit Number
CD = Check Digit
LOW = Container Number for OC, Low Container Number for MC.
HIGH = Not required for OC, High Container Number for MC.
TYP = Container Type
WGHT = Container Weight (Includes Pallet/Skid Weight)
CUBE = Container Cube
FC = Final Code
P/S-WGT = Pallet/Skid Code and Weight (Total Pallet/Skid Weight)
P-CNT = Piece Count
S/L = Single Line Indicator (X)

2. Successful input will result in the following message:

PROCESS COMPLETE-ENTER DATA

3. If the input was unsuccessful, one of the error messages in paragraph 5 of this procedure will appear underneath the unsuccessful input.

NOTE 1: Entry of the Special GBL Code is made to force MRO(s) to be assigned a specific GBL number. Normally this includes freight which does not route through the sorter or other input station (e.g., freight kept in the warehouse, oversize dimensions, and so forth). Use only with initial input entries that do not require a second operator input. For SU(s) requiring multiple entries, use the special GBL entry input only with the last entry format. Entry of an S followed by a normal MC or OC entry will cause a unique GBL to be established for the SU. Entry of an X plus a GBL number followed by a normal OC or MC entry will cause the SU to be assigned to the GBL entered. Successful input of the entry will result in one of the following messages:

"NNNNNNNN ASSIGNED"

Where NNNNNNNN represents the GBL number assigned, or

"GBL NOT ASSIGNED"

NOTE 2: The computer will automatically record the current date as the date offered. Second operator input will be required (appendix E-221 P, part B, $$UWFF25) when processing exception changes and when the input is part of a multiline/multicontainer SU. Pallet and skid weight must be included as part of container weight for utilized shipments. However, pallet and skid weight for utilized shipments must also be entered separately for GBL preparation purposes.

NOTE 3: Line items being converted to a single line Shipment Unit (single line indicator of X) must contain an 11-position SU number.

(c) CP = Consolidated Pack Entries.

1. This entry can only be utilized when MRO(s) have previously been offered and it has been determined by the consolidation packer that multiple SU(s) are to be repacked in one container. Enter data from the master MRO (selected by the consolidation packer). See figure 7 below for an example. Data field headings are defined as follows:

SU	= Shipment Unit Number
CD	= Check Digit
TYP	= Container Type
WGHT	= Container Weight
CUBE	= Container Cube
P/S-WGT	= Pallet/Skid Code and Weight
NON-MILSTRIP TCN	= Self-Explanatory

2. Second operator input is always required (appendix E-222 P, $$UWFF55). After one of the above entries has been keyed in, press the ENTER key. If nonhazardous data has been successfully entered, the following message will display:

PROCESS COMPLETE---ENTER DATA

3. If consolidation-eligible hazardous (see note below) data has been entered successfully, the following message will display:

HAZARDOUS CONS INITIATED

NOTE: Hazardous consolidation eligibility is determined by the Shipment Unit type cargo and Special Requirements Codes (appendices A-34 and A-81). If the Type Cargo Code is OTHER THAN A, F, I, J or M, and the Special Requirements Code is OTHER THAN A, consolidation is allowed with Shipment Units having like Type Cargo Codes and stock numbers. It is the responsibility of the installation initiating the hazardous consolidation to assure that such consolidations are in compliance with the governing regulatory authority.

4. If the data entry was unsuccessful, one of the error messages in paragraph 5 of this procedure will appear.

e. The data field headings and data source documents used in this procedure are explained as follows:

SU = Shipment Unit number (7, 11, or 13 positions) from container marking or MRO block Y.

CD = Check Digit from container marking or MRO block R.

TYP = Container type from container marking or MRO block 2.

WGHT = Container weight from container marking, MRO block 3, or remarks block AA.

CUBE = Container Cube from container marking, MRO block 6, or remarks block AA.

FC = Final Code (C, E, or blank) from container marking.
- C - Final container of a single line Shipment Unit or a multiline Shipment Unit in a single container. Code C indicates no exceptions (all lines and full quantities shipped).
- E - Final container of a Shipment Unit which requires entry of exception of data to identify missing line items, quantity changes, and/or assign line items to containers.
- BLANK - Data entry for other than the final container of Shipment Unit.

P/S-WGT = Pallet/Skid Code (P or S, used only when container type is PT or PD) from container marking or MRO block 2) and Pallet/Skid weight (actual physical pallet or skid weight, excludes container weight) from MRO block 3.

LOW = Container number form container marking or MRO block 5 (for OC entry) or container number low from container marking or MRO block 5 (for MC entry).

HIGH	= Container number high (use only with MC option from container marking), MRO block 5.
P-CNT	= Piece count (individual number of containers on a pallet or skid) from MRO remarks block AA.
LENGTH	= Length in inches (use only with OS option) from MRO remarks block AA.
WIDTH	= Width in inches (use only with OS option) from MRO remarks block AA.
HEIGHT	= Height in inches (use only with OS option) from MRO remarks block AA.
GBL	= GBL number.
S/L	= Single Line Indicator. Enter X to establish a single line SU; otherwise, leave blank (use only with Option Codes MC and OC).
SPEC CODE	= Special GBL Code (S or X).
NON-MILSTRIP TCN	= Assigned by consolidation packer.

5. ERROR MESSAGES/ACTIONS

Error messages for OS entries will be displayed to the right of the invalid entry (see figure 8 below for an example). Error messages for OC, CP and MC entries will be displayed under the invalid entry (see figure 9 below for an example). When processing multiple inputs the program will accept valid entries and then only display erroneous entries with their associated error messages. Operator will only need to overlay invalid data and reenter.

ERROR MESSAGES	CAUSE/ACTION
CHECK DIGIT OR SU INVALID	Probable Cause: Transposed number in the SU or wrong check digit. Action: Verify the SU number, the check digit and reenter data.
CONTAINER WEIGHT IS INVALID	Probable Cause: Container weight entry is missing. Action: Verify weight and reenter data.
CONTAINER CUBE IS INVALID	Probable Cause: Nonnumeric cube, cube entry is missing, nonnumeric or does not contain a decimal. Action: Verify the cube and reenter data.
PLT/SKD WEIGHT IS INVALID	Probable Cause: Pallet or skid weight is not preceded by a P or S or the skid or pallet weight is missing when container type is SD or PT or pallet or skid weightexceeds total container weight. Action: Verify container type and weight fields. Reenter data.

ERROR MESSAGES	CAUSE/ACTION
NO SU RECORD FOUND	Probable Cause: SU does not exist on the In-Process File. Action: Inquire (appendix E-234 P, part B, $$UWFH55) to verify that SU record is not on file. Process manually.
CONTAINER TYPE IS INVALID	Probable Cause: Container type entered is invalid. Valid entries are PT, SD, SB, CT, BX, CO, CR, CS or MW. Action: Verify container type and reenter data.
PIECE COUNT IS INVALID	Probable Cause: This entry is missing for a container type PT or SD. Action: Verify piece count and reenter data.
CONTAINER NO IS INVALID	Probable Cause: Container number entry is missing. Action: Verify container number and reenter data.
FINAL CONTAINER IS INVALID	Probable Cause: A final code has been entered before the final entry and a container number has been entered that is greater than the final container expected. Action: Clear container data from file (appendix E-234 P, part A, $$UWFH25) and reenter data placing final container code on highest numbered container.
FINAL CODE IS INVALID	Probable Cause: Final code is other than blank, C, or E. Action: Verify final code and reenter.
CONT (CONT NO) IS A DUPLICATE	Probable Cause: Container data for this container has already been entered. Action: Reenter data with correct container information.
(CODE) BAD RETURN	Probable Cause: Systems error. Action: Contact program support for assistance. Supply program support with code on screen.
LEN, WTH OR HGT IS INVALID	Probable Cause: Length, width, or height is missing for an OS type entry. Action: Verify dimensions and reenter.

ERROR MESSAGES	CAUSE/ACTION
SU STATUS IS INVALID	Probable Cause: SU Status Code is invalid for update being attempted. Action: Inquire (appendix E-238 P, part D, $$UWFQ45) to determine SU status. If status is C through F, Y, or Z refer to supervisor. If status is J through N, initial input has already been completed.
SU NOT ELIGIBLE FOR CONS	Probable Cause: Input is attempting to establish a consolidated pack master SU. Type Cargo Codes A, F, I, J or M (appendix A-34), or Special Requirements Code A (appendix A-81) are not eligible for consolidation. The SU number entered contains one of the above codes, thus restricting the SU from being established as the consolidated pack master SU. Action: The SU must be extracted from the consolidated pack. Select another master SU.
SU ASSIGNED TO GBL	Probable Cause: Input is attempting to establish a consolidated pack master SU. The SU number entered has previously been assigned to a GBL. Action: Cancel the SU from the GBL utilizing program $$UWFJ20 (appendix E-225 P) and reenter through this program.
SU ALREADY CONSOLIDATED	Probable Cause: Input is attempting to establish a consolidated pack master SU. The SU number entered has previously been included in another consolidated pack. Action: Corrective action is dependant upon the physical location of the SU.
SGL-LINE IND IS INVALID	Probable Cause: Single line indicator is other than X or blank, or SU entered does not equal 11 positions. Action: Verify input and reenter correct data.
PROCESS CODE IS INVALID	Probable Cause: Process code is other than OS, CP, or MO. Action: Reenter valid process code.
CANNOT SGL-LINE ONE LINE SU	Probable Cause: Input is attempting to single line an SU that has previously been single lined. Action: Remove single line indicator and reenter data.

ERROR MESSAGES	CAUSE/ACTION
PIECE CNT TOO LARGE	Probable Cause: Input piece count exceeds acceptable input parameters. Input piece count times the input number of pallets/skids cannot exceed 99,999. Action: Verify piece count and reenter corrected data.
FNL PCE NNNNNNNNNN EXCEEDS MAX	Probable Cause: The total piece count (sum of all pieces on pallets/skids) entered for this SU exceeds 99,999. Action: Clear container data for this SU using program $$UWFH25 (appendix E-234 P, part A). Verify piece count(s) and reoffer the SU using corrected data.
NON-MILS TCN IS INVALID	Probable Cause: Non-MILS TCN entry is missing. Action: Verify the Non-MILS TCN and reenter data.

APPENDIX E-221 P

MOFAST FREIGHT CONTAINER DATA
PART B
NON-SORTER EXCEPTION INPUT

1. PURPOSE

This procedure describes the method that will be utilized when a shipment has been marked for exception processing and the shipment is not routed through the MOFAST sorter process. Exception (second operator) input is used to update the SU record for:

a. Reporting a difference between the quantity ordered and the quantity shipped on an MRO, or

b. Identifying line items to containers in a multiline, multicontainer shipment.

2. APPENDICES USED IN THIS PROCEDURE

a. Appendix B-203.

b. Appendix D-147.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. General.

(1) This process will make exception changes, allocate Line Items (LIs) to containers, create partial shipment when necessary, and establish a single line SU for all LIs in an SU that have not been accounted for. This process will also assign an SU to a predetermined GBL or assign an SU to a unique GBL. Option is also provided to input missing Line Items only and/or Line Items which have quantity changes when entire Shipment Unit is packed in one container. This procedure will be utilized when a shipment marked for exception processing reaches the nonsorter input station.

(2) This procedure will be utilized when a shipment is processed through other than sorter input and has been marked for exception processing.

b. CRT Initialization.

(1) Key in $$UWFF25.

(2) Depress the ENTER key. This entry will dedicate a CRT to OTHER INPUT exception data input with the following display:

UWFF25-XXX EXCEPTION AND LINE ITEM INPUT
ENTER DATA

NOTE: The CRT will remain dedicated to exception processing until another $$ prefix is entered.

c. The CRT operator will key in data following the ENTER DATA message utilizing one of the following formats:

(1) Single line exception input.

(a) This entry is used to identify a change in the quantity being shipped for a single line (single or multicontainer) SU. The format is as follows:

Q,AAAAAAA,B,GGGG(HHHHH,JJ)

Where:

Q = Type (constant Q)
A = Shipment Unit Number
B = Check Digit
G = Line Item Number
H = Quantity Exception (quantity shipped)
J = Quantity Action Code (Appendix A-42)
, = Field Separator (comma or semicolon)

(b) If the data is entered successfully, the following message will display:

DATA ENTERED SUCCESSFULLY
ENTER DATA

(c) If the entry is unsuccessful, one of the error messages in paragraph 5 of this procedure will appear.

(2) Multiline exception input.

(a) Multiline single container. This entry is used to identify a change in the quantity being shipped for one or more of the LIs in a multiline, single container SU. The format is:

AAAAAAA,B,DDDDC,GGGG,GGGG(HHHHH,JJ),GGGG,GGGG,...,F

Up to 480 positions of input can be entered with this format.

(b) Multiline, multicontainer exception input. This input assigns LIs to containers in the computer and accomplishes quantity exception changes. The input requires multiple entries of one or more of the following formats until all containers and LIs have been accounted for. The number and type of entries required is determined by the physical configuration of the SU. The following container/Line Item combinations are possible within the configuration of a multiline/multicontainer SU. The formats are as follows:

1. One line in a single container.

AAAAAAA,B,DDDDC,GGGG(HHHHH,JJ),F

2. One line in multicontainer.

AAAAAAA,B,DDDD-DDDDC,GGGG(HHHHH,JJ),F

3. More than one line in a single container.

AAAAAAA,B,DDDDC,GGGG,GGGG(HHHHH,JJ),GGGG,GGGG,...,F

4. Up to 480 positions of input can be entered with formats in subparagraphs 2 and 3 above.

Where:

A = Shipment Unit Number (7, 11, or 13 Positions)
B = Check Digit
C = Container ID (Must be a C and must follow last container number in each entry.)
D = Container Number
F = Final Code (Must be F or M. F = Final code, M = More LIs to be accounted for.)
G = Line Item Number (LI is entered for each LI in the container.)
H = Quantity Exception (Needed only if quantity shipped is an exception to that ordered. Entered for all LIs with exception quantities shipped.)
J = Quantity Action Code (Must be P, DB, DC, DD, DE, DG, DJ, DK, DT see appendix A-42.)
(-) = Container Separator (Used to separate the low and high container number when a LI is packed in consecutive containers.)
, = Field Separator (Must be semicolon or comma.)

(c) When the above data has been entered successfully, the following messages will appear.

1. The following message will appear after each successful entry that contains an M Final Code.

ENTER DATA FOR REMAINING LINE ITEMS
AAAAAAA,B,

Where:

A = Shipment Unit Number
B = Check Digit

The program has processed all LIs previously entered and since a Final Code of M was entered, it is now expecting the remaining LIs to be entered. Position the cursor and enter data for the remaining LIs after the check digit in the above message.

2. The following message will appear after each successful entry that contains an F Final Code.

LINES ACCOUNTED FOR=NNNN
LINES THAT WILL BE SINGLE LINED=NNNN
IF CORRECT HIT ENTER
ZSSSSSSSSSSSSSXGGGGGGGN

Z through N in the above message is a computer generated key and must not be altered by the operator, except when the message (Z through N) requires deletion for input of additional LIs as described below. The operator should review the counts (NNNN) in the above message. When the counts are correct, press the ENTER key and all lines that are not accounted for will be single lined. If the counts are out-of-balance, depress the ERASE INPUT key which will clear the computer generated key (Z through N). Enter data for missing LIs. After successful input of the missing LIs, the above message will again be displayed.

3. The following message will appear if the computer generated key in message in subparagraph 2 above, was altered.

INVALID ENTRY
ENTER DATA

Reenter the data for any LI in the SU under second operator and a Final Code of F following the enter data message. The previous message in subparagraph 2 above, will again be displayed.

4. The following message will appear when the counts (NNNN) in message is subparagraph 2 above, are correct.

DATA ENTERED SUCCESSFULLY
ENTER DATA

The operator is now ready to enter data for the next SU.

(3) Missing Line Items and/or quantity change input on SU packed in one container. This input allows entry of missing line data only when this is considered more practical than entry of the lines present. The formats are as follows:

(a) Input of missing Line Items:

M,AAAAAAA,B,GGGG,GGGG,GGGG,F

(b) Input of quantity changes:

M,AAAAAAA,B,GGGG(HHHHH,JJ),GGGG(HHHHH,JJ),F

(c) Missing Line Items and quantity changes:

M,AAAAAAA,B,GGGG,GGGG(HHHHH,JJ),GGGG,GGGG(HHHHH,JJ),F

Where:

M = Type (Constant M)
A = Shipment Unit Number
B = Check Digit
G = Line Item Number
H = Quantity Exception (Quantity Shipped)
J = Quantity Action Code (Appendix A-42)
F = Final Code

(4) Partial exception input. This input is used to divide or "partial" a single line SU into two or more SUs. Partialing is necessary due to various reasons, e.g., facilitate customer requirements (part of the LI by air mode and part by surface), tariff limitations on volume movements, or shippers loading limitations. The document must be a single line. Multiline SUs cannot be partial. The input is as follows:

(a) For the first partial, enter the first operator input (appendix E-221 P, part A, $$UWFF01) for the pieces, weight, and cube being shipped on the first partial. Use a 7- or 11-digit SU number. The final code should be E.

(b) Enter the exception input (second operator) under program $$UWFF25 (this procedure) as follows:

Q,AAAAAAA,B,GGGG(HHHHH,P)

Where:

Q = Type Entry (Constant Q)
A = SU Number (7, 11, or 13 Digits)
B = Check Digit
G = Line Item Number
H = Quantity Shipped (per Partial)
P = Quantity Action Code (Constant P)
, = Field Separator (Comma or Semicolon)

When the data has been successfully entered, the following message will display:

DATA ENTERED SUCCESSFULLY
PARTIAL-NO XXXXXXXXXXXXX
ENTER DATA

Where:

XXXXXXXXXXXXX = 13-digit SU Number

(c) Annotate the 13-digit SU number received in the above display as it will be used for the next partial. After the first partial entry, a 13-digit SU number must be used on all entries.

(d) Perform first and second operator inputs for the remaining partials (except the last partial) always use the 13-digit SU number displayed after the previous entry.

(e) For the last partial, perform first operator input using a C final code. No second operator input is required on the last partial.

(4) Special GBL entry (S or X). This entry is made to force MROs to be assigned to a special GBL number. Normally this includes shipments not routed through the sorter or other input station (e.g., freight kept in the warehouse, oversize dimensions). For SUs requiring multiple entries, use the special GBL entry input only with the last entry format. The format is as follows:

(a) Establish a unique GBL for MRO.

S, (Followed by normal exception input using a format selected from subparagraph (2)(b) above.)

(b) Add MRO to an existing GBL.

X,VVVVVVVV, (Followed by normal exception input using a format selected from subparagraph (2)(b) above.)

Where:

V = GBL Number

(c) After one of the entries have been keyed in, depress ENTER key. If the data has been entered successfully, one of the following messages will display:

DATA ENTERED SUCCESSFULLY
GBL VVVVVVVV ASSIGNED
ENTER DATA

or

DATA ENTERED SUCCESSFULLY
GBL NOT ASSIGNED
ENTER DATA

5. ERROR MESSAGES/ACTIONS

The following error messages will include the input that generated the error message as part of the display. The display also includes the invalid entry following the ENTER DATA message. Operator positions the cursor and makes the necessary corrections without reentering the entire input. Note: Data can be overlayed and changed but if data is deleted the ERASE EOF key must be utilized in lieu of the space bar. For example:

UWFF25-XXX EXCEPT AND LINE ITEM INPUT
1234567,1,1C,1,,2,M

NUMERIC DATA FIELD NOT NUMERIC RE-ENTER DATA
ENTER DATA
1234567,1,1C,1,,2,M

ERROR MESSAGE	CAUSE/ACTION
DATA-FORMAT ERROR RE-ENTER DATA	Probable Cause: Data does not confrom to specific formats. Also, attempt is being made to enter M as type input on a multicontainer shipment. Action: Review entered data for errors and reenter data following ENTER DATA message.
SU-NUM NOT NUMERIC RE-ENTER DATA	Probable Cause: Nonnumeric data in the SU field. Action: Review entered data for errors and reenter data following ENTER DATA message.
NUM DATA FIELD NOT NUMERIC RE-ENTER DATA	Probable Cause: Nonnumeric data in a numeric field. Action: Review entered data, validating numeric fields. Reenter data.
SU-NUM, CHECK-DIGIT ERROR RE-ENTER DATA	Probable Cause: Invalid SU or invalid check digit entered. Action: Verify SU number and check digit and reenter data.
MULTI-LINE, MULTI-CONTAINER INPUT INVLD	Probable Cause: Two container numbers were entered with more than one line number which does not conform to specified formats. Action: Verify container/LI configuration, correct and reenter data.
INVALID QTY ACTION CODE RE-ENTER DATA	Probable Cause: Quantity Action Code entered was not P, DB, DC, DD, DE, DG, DJ, DK, or DT.

ERROR MESSAGE	CAUSE/ACTION
	Action: Verify quantity Action Code with appendix A-42 and reenter data.
LINE-ITEM RECORD NOT FOUND RE-ENTER DATA PERTAINING TO FIRST NN LI	Probable Cause: Invalid LI was entered. The LI has previously been single lined or has completed processing or the operator has entered an erroneous LI. Action: Inquire (appendix E-234 P, part B, $$UWFH55) for invalid LI. If the inquiry reveals that the LI was single lined, reverse the single line indicator (appendix 238 P, part C, $$UWFQ40). Reenter data for LIs up to and including the LI number (NN). If the inquiry reveals that the LI has completed processing (Status Code Y or Z), reenter data for LIs up to the LI number (NN). Exclude entry of the completed LI. EXAMPLE: UWFF25-XXX EXCEPT AND LINE ITEM INPUT 1234567,4,3C,1,3,8,4,6,F LINE-ITEM RECORD NOT FOUND REENTER DATA PERTAINING TO FIRST 03 LI ENTER DATA 1234567,4,3C,1,3,8 In this example LI number 8 is in error. Lines 4 and 6 have been accounted for (processed). Lines 1, 3, and 8 have not been accounted for (not processed). Lines 1 and 3 should be reentered. Line 8, depending on the problem, may have to be reentered.
QTY-CHG, QTY-OPEN, QTY-CODE DO NOT AGREE REENTER DATA PERTAINING TO FIRST NN LI	Probable Cause: A quantity shipped exception was entered and an error has been detected in the quantity and/or Action Code that was entered. Action: Reenter data for LIs up to and including the displayed LI (NN). EXAMPLE: UWFF25 XXX EXCEPT AND LINE ITEM INPUT 1234567,4,3C,1,2,7(5,DB),3,9,F QTY-CHG, QTY-OPEN, QTY-CODE DO NOT AGREE REENTER DATA PERTAINING TO FIRST 03 LI ENTER DATA 1234567,4,3C,1,2,7(5,DB)

ERROR MESSAGE	CAUSE/ACTION
	In this example LI number 7 is in error. Line 3 and 9 have been accounted for (processed). Lines 1, 2, and 7 have not been accounted for (not processed). Line 7 has not had the exception processed (not processed). The quantity or the quantity Action Code is in error for line 7. Correct the quantity or quantity action code for line 7. Add the final code and depress the ENTER key. EXAMPLE: 1234567,4,3C,1,2,7(4,DB),F
SHIP-UNIT-STATUS ERROR	Probable Cause: The SU has not been cleared for Other Input exception processing (status is not G or H). Action: Inquire for SU status (appendix E-234 P, part B, $$UWFH55). Corrective action is dependent upon the current SU status. (G status is obtained by a successful initial input entry containing an E final code.)
CONTAINER NO NNNN LINE DATA NOT ENTERED FOR ALL CONTAINERS	Probable Cause: An error has been made in allocating LIs to containers. Containers exist for which LIs have not been entered. CONTAINER NO NNNN message will identify the container(s) for which LIs were not entered. Action: Research SU and LIs. When the research indicates that all container and LI input is correct except for the missing container(s), enter the missing container and LI data following the ENTER DATA message. When the research indicates that LIs have been assigned to the wrong containers, clear the container data (appendix E-234 P, part A, $$UWFH25) and reenter corrected container data under initial and exception operator input.
TOTAL CONTAINER NOT = TOTAL RECEIVED	Probable Cause: Initial operator input did not account for all containers, therefore, creating an imbalance between initial and exception input. Action: Research SU and LIs. Clear container data (appendix E-234 P, part A, $$UWFH25) and reenter the corrected container data under initial and exception operator input.

ERROR MESSAGE	CAUSE/ACTION
INVALID CONTAINER ENTERED IN LINE ITEM	Probable Cause: A container number has been entered that is greater than the highest container number in the Shipment Unit. Action: Research SU and LIs. Clear container data (appendix E-234 P, part A, $$UWFH25) and reenter corrected container data under intitial and exception operator input.
INVALID GBL	Probable Cause: This message will be displayed when trying to assign a SU to an established GBL when the GBL number entered is invalid. Action: Verify the GBL number (appendix E-238 P, part J, $$UWFJ10). If the GBL number is valid (not canceled), assign the SU to the GBL number (appendix E-225 P, $$UWFJ20). If the GBL number is invalid (canceled), assign the SU to a new unique GBL number (appendix E-225 P, $$UWFJ20).
LINE NO NNNN HI-CNT NOT EQUAL TO FINAL-COUNT	Probable Cause: An LI which is packed in more than one container has not been accounted for in consecutively numbered containers, or an LI has been assigned to an invalid container. Action: Research SU and LIs. Clear container data (appendix E-234 P, part A, $$UWFH25) and reenter corrected container data under initial and exception operator input.
LINE NO NNNN CONTAINER NO NNNN CONTAINER NUMBERS NOT CONTINUOUS	Probable Causes: An error has been made in assigning LIs to containers. Two multicontainer LIs have been assigned to overlapping container numbers. Action: Research SU and LIs. Clear container data (appendix E-234 P, part A, $$UWFH25) and reenter corrected container data under initial and exception operator input.
UWFF25 BAD-RETURN FROM XXXXXX YYYYYYYY	Probable Cause: Error caused by other than operator input. Action: Record error message and notify supervisor.
INVALID Q-ENTRY	Probable Cause: This message will be displayed when a Q type entry is attempted on a SU which is not single lined.

ERROR MESSAGE	CAUSE/ACTION
	Action: Check the SU and verify that a Q type entry is required. If the Q entry is not required, select proper format and reenter data. If the Q entry is required, single line the SU (appendix E-238 P, part C, $$UWFQ40). Enter single line container data under initial and exception operator input.
LINE NOT ELIGIBLE FOR UPDATE RE-ENTER DATA PERTAINING TO FIRST NN LI	Probable Causes: Operator has attempted a cancellation (DC) action and the request to cancel has not been received from the ICP. Operator has attempted to adjust the quantity using a DD or DB action and the Ownership Code in the MRO is not alpha. Operator has attempted a partial entry and the partial line sequence number (positions 12 and 13 of the SU number) is invalid. Action: Reenter data utilizing the applicable quantity Action Code. Operator should notify supervisor of this situation. Decision should be made to either ship exact quantity ordered or process a complete denial. Reenter data utilizing the proper partial line sequence number.
INVALID ENTRY DUE TO PENDING DEN/CAN REENTER DATA PERTAINING TO FIRST NN LI	Probable Cause: Input to cancel or deny the LI quantity has previously (during the current day) been accomlished. Action: Operator must inquire (appendix E-234 P, part B, $$UWFH55), the LI record and review the quantities shown in the Quantity Denied/Canceled and MOFAST Exception Quantity categories. If the MOFAST Exception Quantity is correct, the operator must reenter exception input for the LIs identified in the above message excluding reentry of the quantity and quantity Action Code for LI NN. If it is necessary to modify the quantity shown in the MOFAST Exception Quantity, the operator must; a. Clear all container data (appendix E-234 P, part A, $$UWFH25, CC type input).

ERROR MESSAGE	CAUSE/ACTION
	b. Clear MOFAST Exception Quantity for the LI that requires updating (appendix E-234 P, part A, $$UWFH25, CQ type input). c. Reenter all container data under initial input (appendix E-221 P, part A, $$UWFF01). d. Reenter exception input (this procedure) for all LIs. Enter quantity and quantity Action Codes only for the applicable LIs identified in the above message.
INVALID ENTRY DUE TO PREV DEN/CAN RE-ENTER DATA PERTAINING TO FIRST NN LI	Probable Cause: Quantity denied or canceled was entered on a previous day. The adjustment was reported to the ICP at that time. Action: Quantity adjustment to this record must now be accomplished manually. Place LI record in DP status (appendix E-216 P). Report remaining adjustments and status manually.
NUMBER OF LINE EQUAL 1 - CANNOT SINGLE LINE REENTER DATA	Probable Cause: Type input M is attempting to single line the last open Line Item within the Shipment Unit. All other Line Items originally assigned to the SU have been single lined. Action: Reenter data using Q type input.

APPENDIX E-222 P

MOFAST PROCESSING OF CONSOLIDATED PACK SHIPMENTS

1. PURPOSE

This procedure describes the process that will be used at the second operator station when consolidating SUs into a single container/packing unit. This process updates the master SU record with the container control number (assigned by the consolidation packer) and chains together all SUs in the consolidated pack. The process code in the master SU will be updated from CP to an applicable process code upon completion of this input.

2. APPENDICES USED IN THIS PROCEDURE

a. Appendix B-215, Part H

b. Appendix D-169

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. General.

This process provides the means to perform the following update actions:

(1) Normal Consolidation - Assign multiple Shipment Units to a consolidated pack shipment.

(2) Option A - Add a Shipment Unit(s) to an established consolidated pack chain, or complete a chain if the final SU Code has not been entered.

(3) Option D - Delete a SUB-SU from an established consolidated pack chain.

(4) Option U - Update container data in the Master SU File.

b. To initialize a CRT, key in $$UWFF55 and press the ENTER key. This entry will dedicate a CRT to consolidated data input with the display identified in figure 1 below.

c. Normal Consolidation.

(1) Operator will key in the following data when assigning SUB-SU numbers to a Master SU.

Container Control Number
Master SU and Check Digit
Sub-SU(s) and Check Digit(s)
Option Code (M or F; M equals more SUs to follow; F equals final SU entered)

(2) When the data has been entered successfully and the Option Code is M (see figure 2 below), the next display (figure 3) will show the Master SU number and the last SUB-SU number entered on the previous display. Operator will enter the remaining SUs in the SUB-SU input fields.

(3) When the data has been entered successfully and the Option Code is F, one of the messages identified in figure 4 below will appear.

d. Option A.

(1) To add a Shipment Unit(s) to a previously established chain, or to complete a chain when the final SU Code has not been entered, enter the master SU number, Check Digit and Option Code A in the appropriate fields (figure 1 below).

NOTE: The control number must be left blank and all SUB-SU fields must be zero filled, for options A and U.

(2) Successful entry will result in the display shown in figure 3 below. Proceed as follows:

(a) To add a Shipment Unit(s) to an established chain, enter the Shipment Unit number(s) and their respective check digit(s) in the SUB-SU field and an F or M in the Option Code field.

(b) To complete a chain, enter an F in the Option Code field and depress the ENTER key.

(3) Successful entry will result in one of the messages identified in figure 4 below.

NOTE: The MOFAST Shipment Unit record of the last Shipment Unit chained to a consolidated pack will contain all nines or zeros in the master SU field if the final SU Option Code has not been entered. If the final code has been entered, this field will reflect the master SU number.

e. Option D:

To delete a Shipment Unit(s) from an established chain, enter the master SU and check digit, the sub-SU(s) and check digit(s) to be deleted, and Option Code D (see figure 5 below).

NOTE: Container control number must be left blank.

f. Option U:

(1) To update the container data in the master SU file, enter the master SU number, check digit and Option Code U. This entry will result in the display identified in figure 6 below.

(2) Updates are accomplished by overlaying the previous data with the corrected data.

(3) If the container update is successful, the initial display (figure 1) will reappear (see note following paragraph 4d(3) above).

5. ERROR MESSAGES/ACTIONS

ERROR MESSAGE	CAUSE/ACTION
DUPLICATE INPUT	Probable Cause: A duplicate SU number has been previously entered. Action: Review MRO document associated with the data input to determine the cause of the error. Reenter corrected data.
GBL PREVIOUSLY ASSIGNED	Probable Cause: SU has been previously assigned to a GBL. Action: Notify supervisor for research.
INVALID CHECK DIGIT	Probable Cause: A transposed SU number or incorrect check digit. Action: Verify SU number and check digit with source document and reenter correct data.
INVALID CNT-TYPE	Probable Cause: The container type entered is other than BX, CC, CR, CS, CT, MW, PT, SB, or SD (Option U). Action: Verify input and reenter correct data.
INVALID OPTION CODE	Probable Cause: Option Code entered is other than A, D, F, M or U. Action: Reenter correct Option Code.
MANDATORY ENTRY	Probable Cause: Mandatory data was omitted from input or wrong Option Code was used. Action: Enter required data.

ERROR MESSAGE	CAUSE/ACTION
MASTER-SU NOT CONSOLIDATED	Probable Cause: Sub-SU being added to a consolidated pack whose master SU is no longer chained into the consolidated pack. This could happen if the consolidated pack was unchained through another CRT after the A option was entered. Action: Notify supervisor. Research reason for unchaining consolidated pack. Rechain if necessary.
MUST BE P, S OR BLANK	Probable Cause: Type Pallet/Skid Code is other than P, S or blank (Option U). Action: Verfiy input and resubmit correct code.
MUST BE SPACES	Probable Cause: Operator entered the container control number in conjunction with an Option Code A, D or U. Action: Omit the container control number.
MUST BE ZEROS	Probable Cause: Operator entered a Sub-SU number in conjunction with an Option Code A or U. Action: Zero fill Sub-SU field and reenter.
MUST NOT BE SPACES	Probable Cause: The container control number or the Non-MILS TCN was either omitted or contains spaces (U option, container data update). Action: Enter the correct container control number or Non-MILS TCN.
MUST NOT BE ZEROS	Probable Cause: The SU weight or the SU cube was omitted from the master SU container data update (Option U). Action: Enter the required data in the respective fields and reenter.
NOT ELIGIBLE FOR CONSOLIDATION	Probable Cause: The attempted consolidation violated the following Type Cargo (appendix A-34) and/or Special Requirement Code (appendix A-81) consolidation criteria. Shipment Units with Type Cargo Code A, F, I, J or M, or special Requirements Code A, are not eligible for consolidation. Shipment Units having Type Cargo Codes other than A, F, H, I, J, M, Q or Z may be consolidated only when the

ERROR MESSAGE	CAUSE/ACTION
	stock number of the sub-SUs matches the stock number of the master SU. (Note: Each installation bears the responsibility of assuring that consolidation so accomplished are in compliance with the governing regulatory authority.) Action: The SU must be extracted from the consolidated pack.
NOT PART OF CONSOLIDATED PACK	Probable Cause: The Master of sub-SU entered is part of a different consolidated pack chain (Option D). Action: Enter the correct master or sub-SU.
NOT PREVIOUSLY CONSOLIDATED	Probable Cause: The SU being deleted is not part of any consolidated pack chain (Master SU field of the SU record contains zeros). Action: Verify input and reenter correct data. If the SU entered is correct, no further action is required.
ONLY SUB-SU IN CONSOLIDATION	Probable Cause: The SU being deleted is the only sub-SU left in the consolidated pack chain. Action: If the last SU in a consolidated pack chain is to be deleted, disassemble the consolidated pack chain using the unchain process in program $$UWFF75, appendix E-224 P, part G.
PREVIOUS OFFER INVALID	Probable Cause: Unsuccessful completion of initial and exception input at sorter or other than sorter input stations. Action: Clear container data for the effected SU (appendix E-234 P, part A, $$UWFH25). Reenter the initial input through $$UWFF01, appendix E-221 P, part A and, if required, reenter exception input through $$UWFF25, appendix E-221 P, part B. If the SU in error is the master SU, reenter first operator consolidated pack using the CP format in appendix E-221 P, part A, $$UWFF01. Reenter all second operator consolidated pack input.
PREVIOUSLY CONSOLIDATED	Probable Cause: Duplicate paperwork. The SU was included in a previous consolidation. Action: Notify supervisor for research.

ERROR MESSAGE	CAUSE/ACTION
* STATUS INVALID * = MOFAST SU STATUS CODE, APPENDIX A-102	Probable Causes: Normal consolidation: Master SU status is other than L. Option A and D: Master SU status is other than K, L, M, N, P or Q. All options: Sub-SU status is other than J, K, M, N, P or Q. Action: Review paperwork. If correct SU was entered, refer to supervisor.
SU NOT FOUND	Probable Cause: The SU entered has completed processing (record has cleared the In-Process File). Action: Review input. If the correct SU was entered, verify completion of the SU by inquiring $$UWFH55, appendix E-224 P, part B. Annotate applicable MRO so that the billing section can update the microfiche files.
SU NOT MASTER SU	Probable Cause: One of the sub-SUs was entered in the master SU field or second operator consolidated pack input was omitted. Action: Verify input and reenter the correct master SU. If the correct master SU was entered, establish the Master SU under the normal consolidated pack process of this procedure.

APPENDIX E-223 P

MOFAST SPECIAL PROCESSING DATA BASE UPDATE

1. PURPOSE

Provide capability to update process, mode, status, and hold codes on the Shipment Unit (SU) Data Base by use of Cathode Ray Tubes (CRTs).

2. APPENDICES USED IN THIS PROCEDURE

a. Appendix A-17

b. Appendix A-21

c. Appendix A-100

d. Appendix A-102

e. Appendix B-181

f. Appendix D-162

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. This process provides shipment planners, billing clerks, and warehouse personnel with the capability to modify selected data elements within a Shipment Unit record by input of changed data under Shipment Unit number or GBL number. The following criteria should be considered when using this program:

(1) Process Code - This code should be modified when the planned type of shipment varies from the Process Code shown in the SU record. Example: A routine freight shipment (Process Code SA) is planned to go via SEAVAN (Process Code EA). (See appendix A-100.)

(2) Mode Code - This code must be changed when the planned mode of shipment varies from the mode shown in the SU record. (See appendix A-17.)

(3) Status Code - This program allows modification of Status Codes to K, M, N, P or Q status (see appendix A-102). Before using this option, CRT operators must ensure that proper container information (pieces, weight and cube) is noted in the SU record. (See appendix E-234, part B (UWFH55).)

(4) Hold Code - This code can be established or modified in the SU record as necessary. Reference appendix A-21 for applicable Hold Codes.

b. This process provides two methods of modifying data elements within a Shipment Unit record.

(1) Update by GBL/CBL number. This input will update Mode and/or Hold Codes for all SUs assigned to the GBL/CBL.

(2) Update by SU number. This input will update selected data elements (Mode, Hold, Status, or Process Codes) by individual SU number. The input format will allow update of multiple SUs with one entry.

(3) The two options described above cannot be performed simultaneously during the same entry.

c. To initialize the CRT, key in program call number $$UWFH05 and press the ENTER key. This entry will dedicate the CRT to the data base update process with the display identified in figure 1 below.

NOTE: The cursor will be prepositioned at the first SU number input field. The cursor will also be automatically prepositioned at the start of the next input field when the entry in the previous field fills the entire field. To manually move the cursor from field to field utilize one of the SKIP keys.

(1) To update Mode and/or Hold Codes for all Shipment Units assigned to a GBL/CBL, the following input will be required:

Enter: GBL/CBL Number
Mode and/or Hold Codes

NOTE 1: The input fields for the above data elements are located to the right of their respective field headings. See figure 2 below, for an example.

NOTE 2: If the update request is successful, the initial display, figure 1 below, will reappear. The above entry should be input by personnel in Shipment Planning Branch or Commercial Traffic Branch ONLY. Computer will update all Shipment Units assigned to a GBL in Shipment Unit file. This entry cannot be used for manually prepared GBLs.

(2) To update selected data elements (Mode, Hold, Status, or Process Codes) for individual or multiple Shipment Units, the following input will be required:

SU Number(s)
Check Digit(s)
Mode Code(s)
Hold Code(s)
Status Code(s)
Process Code(s)

NOTE: The input fields for the above data elements are located under their respective field headings.

(a) SU number(s) and check digit(s) are required entries. Any or all of the remaining data elements may be entered for each SU number depending on which elements require updating.

(b) See figure 3 below, for an example of an individual SU update and figure 4 below, for an example of a multiple SU update entry. If the update request(s) is successful, the initial display (figure 1 below) will reappear.

(c) Entry of a Hold Code D in master SU of a consolidated pack will update automatically all SUs in the consolidated pack with a Hold Code of D.

5. ERROR MESSAGES/ACTIONS

Error message will be displayed to the right of the invalid entry. When processing multiple SU updates, the program will accept valid entries and then only display erroneous entries with their associated error message. See figure 5 below for an example. Overlay the invalid portions of the input and reenter.

ERROR MESSAGE	CAUSE/ACTION
INVALID CHECK DIGIT	Probable Cause: Incorrect check digit for that specific SU. Action: Verify check digit displayed with DD Form 1348-1 and reenter.
S/U RECORD NOT ON FILE	Probable Cause: The SU number record has been completed or SU numbers have been transposed giving a nonexistent record. Action: Verify the SU number with the route slip and DD Form 1348-1 and reenter. If error persists, inquire by referencing appendix E-234, part B (UWFH55). If the SU has completed processing, notify supervisor. Additional processing must be done manually.
INVALID PROCESS CODE	Probable Cause: Process Code entered is invalid. Action: See appendix A-100. Reenter correct data.
INVALID MODE CODE	Probable Cause: Mode Code entered is invalid. Action: See appendix A-17. Reenter correct data.
INVALID STATUS (NOT K, M, N, P, Q)	Probable Cause: Status entered was not K, M, N, P, or Q. Action: Verify input data and reenter.

ERROR MESSAGE	CAUSE/ACTION
INV. UPDATE - SU STATUS Y OR Z	Probable Cause: The present status of the SU record is Y (complete cancellation or denial) or Z (process complete). Action: Inquire SU record by referencing appendix E-234, part B (UWFH55). If status is other than Y or Z, reenter data by update process. If status is Y or Z, update will be invalid. Notify supervisor.
INVALID-CON. PACK	Probable Cause: Shipment Unit record is part of a consolidated pack. Action: Determine whether or not the SU number is a part of the consolidated pack by inquiring (appendix E-238 P, part D (UWFQ45) and appendix E-224 P, part G (UWFF75). If the SU has been physically excluded from the consolidation, enter program $$UWFF75 per appendix E-224 P, part G and extract the pertinent SU from the chained consolidation structure. Update Process Code and status coding by dedicating CRT to update process (UWFH05). If it is determined that the SU should be a part of the consolidation, the status cannot be updated. The MOFAST billing process will automatically modify Status Codes pertinent to consolidated pack.
INVALID HOLD-CODE	Probable Cause: The Hold Code entered is invalid. Action: See appendix A-21. Reenter correct data.
BAD-RETURN XXXXXX	Probable Cause: A system error has been encountered. Action: Record the message, notify your supervisor, and continue process.
INVALID GBL	Probable Cause: GBL number entered is not formatted correctly or the GBL record is not on the file. Action: Reenter corrected GBL number. If message reoccurs, inquire short GBL record to determine whether GBL is still open.
GBL IN WRONG STATUS	Probable Cause: GBL status indicates the bill of lading record is either canceled or printed. Action: Update action cannot be accomplished since GBL record is closed.

ERROR MESSAGE	CAUSE/ACTION
INVALID INPUTS	Probable cause: Operator is attempting to perform an update utilizing both the GBL and SU update options. Only one option may be utilized per entry. Action: Exclude one of the options from the entry by clearing the input relative to that option from the input format.
NO DATA ENTERED	Probable Cause: Input data is incomplete. The entry contains a GBL or SU number but does not specify the type of update action desired. Action: Determine and enter applicable update action.
INVALID MODE CHANGE	Probable Cause: Input is requesting that a freight SU be converted to a parcel post mode but the SU has previously been assigned to a GBL. Action: Inquire through program UWFQ45 (appendix E-238 P, part D) to obtain the GBL number. Cancel the Shipment Unit from the GBL using program UWFJ20 (appendix E-225). Perform the desired mode change utilizing this program, UWFH05.

APPENDIX E-224 P

MOFAST PREPARATION AND CONTROL OF GOVERNMENT BILLS OF LADING
PART A
GBL PRINT PROCESS

1. PURPOSE

To provide a printed copy of the following documents:

a. GBL Cover Sheet (SF 1103).

b. GBL Continuation Sheet (SF 1109).

c. FMS Cover Sheet (DLA 1320).

2. APPENDICES USED IN THIS PROCEDURE

a. Appendix B-194

b. Appendix D-154

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. General.

(1) This process will produce copies of the following documents:

GBL Cover Sheet (SF 1103)
GBL Continuation Sheet (SF 1109)
TAC Summary Sheet (SF 1109)
Intransit Data Card (DIC TK4)
FMS Cover Sheet (DLA Form 1320)

(2) Capability is provided to produce TK4 cards as a result of the GBL print action. To obtain this capability the depot must enter a flag in the teleprocessing table and control register as noted in Data Systems documentation.

b. CRT Initialization:

(1) Key in $$UWFM05.

(2) Depress the ENTER key.

(3) Response.

PREPARATION OF GOVERNMENT BILL OF LADING
ENTER GBL NUMBER

c. Initial GBL Print Process:

(1) Operator will key in the required data following the message "ENTER GBL NUMBER" utilizing the following format:

X9999999, YYDDD,R

Where:

X9999999 = GBL Number
YYDDD = Julian date shipped when other than current date. Enter comma if date entry is not required.
R = Type Request Code for reprint actions (reference appendix B-194). Enter comma if code is not required.

(2) Depress the ENTER key. If the entry is successful, the following message will display:

GBL PREPARATION COMPLETE
ENTER GBL NUMBER

(3) The CRT is then ready for the next GBL number to be printed.

d. Reprint GBL Continuation Pages.

(1) Operator will key in data to request the reprint of GBL Continuation Pages as follows:

(a) Request reprint of all continuation pages for a specific GBL record.

X9999999,,A,

Where:

X9999999 = GBL Number
A = Type Request Code A per appendix B-194.

(b) Request reprint of specific continuation pages for pertinent GBL record.

X9999999,,S,1-3,6,10-12,15,20-25

Where:

X9999999 = GBL Number
S = Type Request Code S per appendix B-194.
1-3, 6 etc. = Specified pages to be reprinted not to exceed five requests. Example 1-3 will reprint page numbers 1, 2, and 3. Example 6 will reprint page number 6. Page numbers must be entered in numeric sequence.

(2) Request to reprint must be processed on the same day the initial printing is attempted.

e. Reprint GBL Cover Sheet.

(1) Operator will key in X9999999,,C to request a reprint of GBL Cover Sheet. A new GBL number will be automatically assigned; the old number retired to microfiche, and intransit data cards (TK4) will be prepared which identify the new GBL number provided the depot teleprocessing monitor table is flagged to automatically produce TK4s.

(2) Request to reprint must be processed on the same day the initial printing is accomplished.

(3) Operator must ensure the GBL number on the intransit data card matches the valid/signed GBL.

f. Reprint FMS/CBL Cover Sheet.

(1) Operator will key in X9999999,,C to request a reprint of FMS/CBL Cover Sheet. A new CBL number will not be assigned as the DLA Form 1320 is not an accountable form.

(2) Request to reprint must be processed on the same day the initial printing is accomplished.

g. Punch Intransit Data Cards (TK4) print hardcopy TK4 data or suspend TK4 data.

(1) Operator will key in data to request print punch, or suspense of the TK4 card as follows:

X9999999,YYDDD,H, or
X9999999,YYDDD,T, or
X9999999,YYDDD,P, or
X9999999,,T, or
X9999999,,P, or
X9999999,,H,

Where:

X9999999 = GBL Number
YYDDD = Julian date shipped. Entered only when date of shipment is other than current day.
P = Request to print TK4 data at remote printer.
T = Type Request Code which identifies action to punch TK4 card.
H = Request to suspend TK4 data.

(2) Request to print, punch or suspend must be entered on the same day the GBL is printed.

h. Restart GBL Print.

(1) There may be instances when teleprocessing is interrupted during GBL print by mechanical or electrical failure and restart is desired. For restart, enter the GBL number and the Type Request Code D, ie.,

X9999999,,D

Where:

X9999999 = GBL Number
D = Type Request Code restart action.

(2) Depress ENTER key. If entry is successful, the following message will display.

GBL PREPARATION IS COMPLETE
ENTER GBL NUMBER

(3) The CRT is then ready for the problem GBL to be reentered and printed.

5. ERROR CONDITIONS/ACTIONS

ERROR MESSAGE	CAUSE/ACTION
NO CARRIER CODE IN COVER SHEET	Probable Cause: Self-explanatory. Action: Update the file with correct Carrier Code, and try again.
INVALID REQUEST	Probable Cause: Self-explanatory. Action: Type Request Code is not equal to codes shown below. Reenter data using proper Type Request Code. A = Request reprint of all continuation pages. S = Request reprint of specific GBL continuation pages. Must be accompanied by specified page numbers.

ERROR MESSAGE	CAUSE/ACTION
	P = Request to print TK4 data at remote printer. H = Request to suspend TK4 data. T = Repunch TK4 card. C = Cover sheet reprint. D = Restart GBL print when print is interrupted by teleprocessing failure. F = Request FMS/CBL initial print. NOTE: When cover sheet reprint request is initiated a new GBL number will be assigned and revised TK4 card prepared. The original number will be retired to microfiche with appropriate cancellation reason and cross-reference to the new GBL number.
INVALID PAGE REQUEST	Probable Cause: Number of page requests entered exceeds five. Type Request Code S was entered without identification of page numbers. Reenter data to include page number identification per input format shown in subparagraph 4d above. Action: Reenter data keeping page requests within progam parameters.
BAD RETURN FROM XXXXXX YYYYYYYY	Probable Cause: The error was caused by other than operator input. Action: Record the error message and notify supervisor. If the message is: BAD RETURN from UWFM15 - **0631A*, the error was caused by teleprocessing interruption. Restart GBL print by entry of type Request Code D. D = Restart GBL print when print interrupted by TP failure.
COVER SHEET NOT ELIGIBLE FOR REPRINT	Probable Cause: Self-explanatory. Action: The requested cover sheet has not been initially printed. Print the entire GBL per paragraph 4c above.
INVALID DATE	Probable Cause: Julian date shipped not numeric, or shipping date entered is not equal to or greater than date shipped noted in GBL record. Action: Reenter correct data.

ERROR MESSAGE	CAUSE/ACTION
TOTALS OUT OF BALANCE	Probable Cause: This message notifies the operator that data content of the GBL has changed since the GBL assembly process was completed. Action: Notify supervisor who must, in turn, notify the Data Systems Office that records have been lost during the billing process.
INVALID DATA	Probable Cause: Request Code S was entered with page number fields containing nonnumeric data. Action: Reenter corrected data.
INVALID GBL NUMBER	Probable Cause: The GBL number entered contains nonnumeric data. Action: Reenter corrected data.
GBL NUMBER NOT FOUND	Probable Cause: The GBL number entered is not on the GBL File. The operator has entered an erroneous bill number or the operator is attempting a reprint action for a GBL that has completed processing on a previous day. Action: Request to reprint must be processed on the same day the initial printing is accomplished. Reenter corrected data.
NOT ELIGIBLE FOR REPRINT	Probable Cause: Input is requesting reprint of continuation sheets for a GBL which has not been initially printed. Action: Print the entire GBL per paragraph 4c above.
NOT ELIGIBLE FOR REPUNCH	Probable Cause: Input is requesting TK4 preparation for a GBL that has not completed the print process or the input is requesting TK4 processing for a GBL that has completed processing on a previous day. Action: Request to reprint/repunch TK4s must be accomplished on the same day the initial printing is accomplished.)
SHORT GBL STATUS ERROR STATUS =	Probable Cause: The current status of the GBL is not equal to B or O. Action: GBL must be reassembled using program $$UWFK05, appendix E-238 P, part K.

ERROR MESSAGE	CAUSE/ACTION
NOT ELIGIBLE FOR HISTORY UPDATE	Probable Cause: The error was caused by entry of Type Request Code D, when GBL not eligible for print. Action: Record error message and notify supervisor.
THERE ARE XXXXX SUS WITH CANCELLATIONS ON THIS GBL. THEY ARE LISTED BELOW	Probable Cause: This message identifies SUs on the GBL that contain LIs with pending cancellations. The cancellation requests were received after completion of the GBL assembly process (UWFK05). Action: Perform the cancellations and correct the GBL. Must be accomplished off-line.
THERE ARE XXXXX SUS WITH CANCELLATIONS ON THE GBL. THE FIRST 10 ARE LISTED BELOW	Probable Cause: This message is output when more than 10 SUs on the GBL contain LIs with pending cancellations. Action: Perform the cancellations and correct the GBL. Must be accomplished off-line.
NOT ELIGIBLE -- REPRINT COVERSHEET INSTEAD	Probable Cause: This message is output when an attempt is made to reprint a continuation page and there is only a cover sheet for that GBL number. Action: Request a reprint of the cover sheet.

APPENDIX E-224 P

MOFAST PREPARATION AND CONTROL OF GOVERNMENT BILLS OF LADING
PART C
GBL/SU ENTRY INQUIRY AND TRANSPORTATION APPROPRIATION UPDATE

1. PURPOSE

This procedure provides the information necessary to inquire Shipment unit (SU) entries on a GBL and, when necessary, update the transportation appropriation code key and citation.

2. APPENDIX USED IN THIS PROCEDURE

Appendix B-190

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. This process provides the two options described above: SU entry inquiries and transportation appropriation update. The appropriation codes are automatically assigned to GBL entries during GBL processing in program UWFK05 (appendix E-238 P, part K). If an incorrect appropriation has been assigned, as signaled by exception addresses or special projects on the route slip, the correct appropriation may be entered through this program. The update must be accomplished subsequent to UWFK05 processing and prior to actual printing of the GBL. Both the appropriation code key (2-digit indicator and the appropriation citation must be updated.

b. Processing is initiated by entering $$UWFL20 into the CRT and pressing the enter key. (Note: This entry will dedicate the CRT to this process until another program call in entered.)

c. The initial display will appear as:

```
UWFL20-02GBL SU ENTRY *INQUIRY*

ENTER 12 POSITION KEY

ENTER X IN POSITION 13 FOR GBL
TRANSPORTATION ACCOUNT CODE CHANGE
PLACE CURSOR BEYOND LAST POSITION IN
RECORD BEFORE ENTERING

ENTER DATA
```

d. To inquire an SU entry, the operator will enter the 12-position inquiry key as requested in the display. The entry consists of th GBL number, followed by a 4-position SU line record sequence number in the following format:

K71152250001

Press the ENTER key. (Note: The SU line record sequence number may be obtained by inquiring the short GBL record file, UWFJ10, assuring all canceled SU records preceding the requested SU number are subtracted from the indicated sequence number, or by physically counting the number of SU/route slip sets to the SU set to be inquired.) The following display will appear:

```
GBL NUM SEQ      SU NUMBER     PROJ SU+LI SEQ
K71152250001 3362701000000        00000000
PAL-WGT SKD-WGT DUN-WGT TOT-WGT PIECES
     60       0       0     990        2
CLAS-WT  GBL-CST  TOT-CBE CNT-CJL CCNFG
      0 00005.68     88.0
FB5004

TAC=97X4961 5107 01 22 2 S33 181-C2
                    TYPE COUNT=

ENTER DATA
```

Where:

GBL NUM	- GBL Number Inquired
SEQ	- SU Entry Line Sequence Number Inquired
SU NUMBER	- Shipment Unit Number
PRJ	- Special Project Code
SU+LI SEQ	- A Program Control Field
PAL-WGT	- Pallet Weight
SKD-WGT	- Skid Weight
DUN-WGT	- Dunnage Weight
TOT-WGT	- Total SU Weight
PIECES	- Total Containers/Pieces in the SU
CLAS-WT	- Class Weight Ascribed to the SU
GBL-CST	- Transportation Charges for the SU
TOT-CBE	- Total SU Cube
CNT-CTL	- Container Control Number for the Master SU in a Consolidation
CCNFG	- Consolidated Shipment Flag
FB5004	- "Mark For" Address (3 lines, DoDAAC only)
TAC	- Transportation Appropriation Citation
TYPE CONT	- A Program Control Field

e. To update the transportation appropriation code key and citation, enter the 13-position entry key described in the first display (GBL number, SU line record sequence number, and X to signify update process) as follows:

K71152250001X

(1) Press the ENTER key and the following display will appear:

```
 APPROPRIATION  CODE=C2
GBL NUM SEQ     SU NUMBER      PRJ SU+LI SEQ
K71152250001 3362701000000         00000000
PAL-WGT SKD-WGT DUN-WGT TOT-WGT PIECES
     60       0       0     990        2
CLAS-WT  GBL-CST  TOT-CBE CNT-CTL CCNFG
      0 00005.68     88.0
FB5004

TAC=97X4961 5107 01 22 2 S33 181-C2
                     TYPE CONT=
```

(2) See subparagraph c above for display legend. Move the cursor to the position immediately following "APPROPRIATION CODE=" and enter the desired appropriation code key, overlaying any existing code. Move the cursor to the position immediately following "TAC=" and enter the desired appropriation citation, overlaying any existing data. This field is 53 positions in length so be sure to blank any existing data beyond the desired entry. Move the cursor deyond the "TYPE CONT=" entry and press the enter key. If the entry is successful, the following will display:

```
ENTRY COMPLETE
ENTER DATA
```

(3) The CRT is ready for another entry. If the entry is unsuccessful, one of the error messages in paragraph 5 will display.

5. ERROR MESSAGES/ACTIONS

ERROR MESSAGE	CAUSE/ACTION
NOT ELIGIBLE FOR UPDATE AT THIS TIME ENTER DATA	Probable Cause: An update has been attempted on a GBL which has not been processed through UWFK05 (Status A) or has been previously printed (Status P). Updates may only be made to GBLs in B Status. Action: Ensure the correct GBL number was initially entered. If an update must be made and GBL Status is not B, refer the problem to supervisor.

ERROR MESSAGE	CAUSE/ACTION
FORMAT ERROR ENTER DATA	Probable Cause: Appropriation Code did not immediately follow the = sign or exceeded two positions. TAC entry did not immediately follow the = sign or exceeded 53 positions. The cursor was not moved beyond the "TYPE CONT=" field prior to depressing the ENTER key. Action: Reenter the data assuring the above format criteria is met.
**0115N* NOT FOUND ENTER DATA	Probable Cause: The GBL entered does not exist on the SU file record. Action: Ensure the correct GBL number is being input; reinput data. If the problem persists, refer to the supervisor for research and resolution.
NO ACCOMPANYING APPN CODE UPDATE ENTER DATA	Probable Cause: If the appropriation code is updated, an accompanying update must be made in the 53-position TAC field and vice-versa. Action: Reenter data assuring updates are being made to both fields.
**0251D* ERROR IN PGM UWFL20 ENTER DATA	Probable Cause: A system error has been encountered. Action: Immediately notify the supervisor and relay the exact contents of the error message.

APPENDIX E-224 P

MOFAST PREPARATION AND CONTROL OF GOVERNMENT BILLS OF LADING
PART D
GBL IN-PROCESS INQUIRY

1. PURPOSE

To inquire the contents of the Daily GBL Register.

2. APPENDIX USED IN THIS PROCEDURE

Appendix B-186

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. To initiate the Cathode Ray Tube (CRT), enter $$UWFG10 and press the ENTER key. If the entry was successful, the following will display:

UWFG1C GBL REGISTER INQUIRY
ENTER DATA

b. The CRT is now ready for an inquiry. Key in a 2-position code as follows (reference appendix B-186):

XY

Where:

X = Type Inquiry Code (C, G, R or T.)
Y = First Digit of the Series of Bills of Lading Desired (Either GBL or CBL.)
C = Displays all Canceled GBL Numbers
G = Displays all GBL Numbers and their Status Codes
R = Displays GBL Numbers Followed by all GBL Register Data
T = Displays Total Information of the GBL Register

c. When the entry has been made, press the ENTER key. If the entry was successful, the desired data will display. When there is more data to display than can fit within one display on the CRT, the following message will display:

PRESS ENTER TO VIEW MORE DATA XY9999

NOTE: The 9999 is a program key for the next display.

(1) Press the ENTER key to view more data for entry XY. When all data has displayed, the following message will display.

ALL DATA HAS BEEN DISPLAYED
ENTER DATA

(2) The CRT is then ready for another inquiry if desired.

NOTE: The operator can, at any time, change to a new entry simply by erasing the current entry and keying in a new entry.

5. ERROR MESSAGES/ACTIONS

ERROR MESSAGE	CAUSE/ACTION
INVALID INPUT DATA = (ENTRY)	Probable Cause: Operator made an error in entry format or altered reentry data. Action: Correct and reenter the data or format.
BAD RETURN CODE (CODES)	Probable Cause: A system error has occurred. Action: Contact supervisor, then continue process.

APPENDIX E-224 P

MOFAST PREPARATION AND CONTROL OF GOVERNMENT BILLS OF LADING
PART E
MOFAST TAC INQUIRY

1. PURPOSE

Display Transportation Account Code (TAC) data for a Government Bill of Lading (GBL).

2. APPENDICES AND REFERENCES USED IN THIS PROCEDURE

a. Appendix B-215, Part B

b. DLAM 4745.1

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. The MOFAST TAC Inquiry will be initiated by typing $$UWFL50 and pressing the ENTER key. This action will dedicate the Cathode Ray Tube (CRT) to TAC processing until another $$ is entered.

b. The initial display will appear as:

```
UWFL50-XX   GBL *TAC* INQUIRY

ENTER INQUIRY AS  GBL-NO SEQ-NO
NOTE** SEQUENCE CAN BE BLANK
EXAMPLE  A99999990001
ENTER DATA
```

c. The CRT operator, at this point, must type in the information requested above and press the ENTER key. If the sequence field is left blank the first sequence for that GBL will be supplied in the inquiry. The TAC inquiry format is:

```
TAC INQUIRY ROUTINE

GBL-NO  SEQ       COST        WEIGHT
K0000201  0001     $.81           12
C2

TO GET NEXT TAC HIT ENTER
 K00002010001
```

This inquiry can be repeated until all sequences for the GBL number have been displayed. This message will signify completion:

```
UWFL50-XX   GBL *TAC* INQUIRY
ALL SEQUENCES HAVE BEEN DISPLAYED
ENTER DATA
```

5. ERROR MESSAGES/ACTIONS

ERROR MESSAGE	CAUSE/ACTION
UWFL50-XX GBL *TAC* INQUIRY FORMAT ERROR ENTER DATA	Probable Cause: Self-explanatory. Action: Reenter correct data.
UWFL50-XX GBL *TAC* INQUIRY NON-NUMERIC DATA ENTERED ENTER DATA	Probable Cause: Self-explanatory. Action: Reenter correct data.
UWFL50-XX GBL *TAC* INQUIRY **0119N* NOT FOUND ENTER DATA	Probable Cause: The GBL/Sequence entered cannot be found. Action: Reenter correct data or a new transaction.
UWFL50-XX GBL *TAC* INQUIRY **02190* ERROR IN PGM UWFL50 ENTER DATA	Probable Cause: A system error has been encountered. Action: Record the message, notify your supervisor, then continue processing.

APPENDIX E-224 P

MOFAST PREPARATION AND CONTROL OF GOVERNMENT BILLS OF LADING
PART F
MOFAST GBL LINE ITEM INQUIRY

1. PURPOSE

This procedure provides the instructions necessary to inquiry the Government Bill of Lading (GBL) line entry, update the GBL line hazardous flag, and inquire and update the freight description of the line entry.

2. APPENDIX USED IN THIS PROCEDURE

Appendix B-189

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T

4. PROCEDURES/INSTRUCTIONS

a. The GBL Line entry inquiry/update can be initiated by typing $$UWFL30 and pressing the ENTER key. This action will dedicate the Cathode Ray Tube (CRT) until another $$ is entered.

b. The initial display will appear as follows:

```
UWFL30XX GBL LINE ENTRY *INQUIRY*
FIRST POSITION L, F, S, N, OR D
L = LINE PORTION  (LA9999999SSSSLLLL)
F = FRT DESCRIPT  (FA9999999SSSSLLLL)
N = NMFC MATCH    (NA9999999NNNNNNSS)
D = FRT DESC MATCH  (DA9999999DDDDDDDD)
S = LAST RECORD   (SA9999999SSSS)

PLACE U AFTER LAST CHARACTER OF KEY FOR
FREIGHT DESCRIPTION UPDATE (F ENTRY)

ENTER DATA
```

NOTE: Also place U after last character of key for hazardous flag field update (L Action - Code).

c. To inquire the line portion of the GBL record, the entry will be:

LA9999999SSSSLLLL

Where:

L	- Action Code
A9999999	- GBL Number
SSSS	- GBL SU Record Sequence Number
LLLL	- GBL NMFC Line Record Sequence Number

The following display will appear if the entry is successful (see error messages if unsuccessful):

GBL Line Entry (L request)

```
GBL LINE ENTRY *INQUIRY*
 KEY            SU NUMBER
AAAAAAAABBBBCCCC  DDDDDDDDDDDDD
PIECE KD PIECE KD PIECE KD PIECE KD
    1 CT     1 BX     1 RL     0
  UFC   PLT PCS  NMFC   NET-WGT NET-CUBE
U0000000     0 04172500      45     5.0
VAL-CL-AMT HZRD-FLG     TRANS WGT-FACT
    0.00       A                   0.0
A-DOL-COST   HZD-CHG  STAT R-TYP LTL MRI
  500.00       A                 77.5
ENTER DATA
```

Where:

A	- Government Bill of Lading
B	- Sequence of SU on the GBL
C	- GBl NMFC Line Record Sequence Number
D	- Shipment Unit Number
PIECE	- Number of Containers
KD	- Type of Containers
UFC	- Uniform Freight Classification Number
PLT PCS	- Total Palletized Containers for Line Record
NMFC	- National Motor Freight Classification Number
NET-WGT	- The Weight of the Record
NET-CUBE	- The Cube of the Record
VAL-CL-AMT	- Dollar Valuation Clause Amount that prints on the GBL.
HZRD-FLG	- An A equals cover sheet hazardous certification statement and the requirement to enter an X in the continuation sheet, HM column for print line. Blank equals no hazardous requirement established for print line.
TRANS	- Transit Code
WGT-FACT	- Used in rating the GBL (programer use).
A-DOL-CST	- GBL cost for this rating line for Rate A (programer use)
HZD-CHG	- Hazardous Flag Change Indicator. A equals hazardous flag added, D equals hazardous flag deleted, Blank equals no hazardous flag add or delete actions.

STAT - Status of this rating line.
- * - Deleted
- K - GBL Line entry printed on GBL continuation sheet.
- S - GBL Line entry not printed on GBL continuation sheet.
- Blank - Normal line and printed on GBL.

R-TYPE - Rating Type C or F or blank (programer use).
LTL - Less than truck load rating factor.
MRI - Multiple Records Indicator (Internal programing application.)

d. To update the HZRD-FLG field ascribed to a particular line entry on a GBL, the entry will be:

LA9999999SSSSLLLLU

Where:

L - Action Code
A9999999 - GBL Number
SSSS - GBL SU Record Sequence Number
LLLL - NMFC Line Record Sequence Number
U - Update Signal

Data display will appear in the same format as paragraph 4c above, with statement "Update Hazardous Indicator and press ENTER."

(1) To delete the Hazardous Flag Indicator, move the cursor to the position directly below the A or E in the HZRD-FLG field and blank the field. To add a Hazardous Flag Indicator, move the cursor to the position directly below the colon in the HZRD-FLG field and overlay the colon with an A or E.

(2) It is not necessary to delete the HZRD-FLG indicator and related code of Federal Regulations Hazardous Description/Label Statements when the line entry STAT field contains an S. The S indicates the related line information will not be printed on the GBL Continuation Sheet or be used to determine Cover Sheet Hazardous Certification Statement requirements.

(3) If the update is successful the following display will appear (see error messages if unsuccessful):

UPDATE COMPLETE
ENTER DATA

(4) This action updates the GBL Cover Sheet Hazardous Certification Statement and Continuation Sheet Hazardous Materiels Indicator (HM column) for the print line. To update the Supplemental Code of Federal Regulations Hazardous Description and Label Statements, follow the instructions for line freight description update outlined in paragraph 4g below, prior to GBL print or reprint.

(5) When the Hazardous Flag Indicator is updated after the GBL has been been printed, the following GBL print procedures will apply:

(a) If update action is to delete the Continuation Sheet Hazardous Indicator (X or RQ) and Cover Sheet Hazardous Statement:

1. Reprint affected GBL continuation sheets.

2. Reprint GBL cover sheet.

3. Reprint all GBL continuation sheets.

(b) If update action is to delete the Continuation Sheet Hazardous Indicator (X or RQ) only, reprint the affected continuation sheet.

(c) If update action is to add a Continuation Sheet Hazardous Indicator (X or RQ) and the Cover Sheet Hazardous Statement:

1. Reprint GBL cover sheet.

2. Reprint all GBL continuation sheets.

(d) If update action is to add the Continuation Sheet Hazardous Indicator (X or RQ) only, reprint the affected continuation sheets.

e. To obtain the key of the last GBL line (per shipment unit) that will print on a continuation sheet of the GBL, the entry will be:

SA9999999SSSS

Where:

S - Action Code
A9999999 - GBL Number
SSSS - GBL SU Record Sequence Number

(1) If the entry is successful, the last LI record assigned to the GBL will appear as follows (see error messages if unsuccessful):

```
UWFL30XX GBL LINE ENTRY *INQUIRY*
LAST SEQUENCE=K722522500030005
ENTER DATA
```

(2) The key data can now be utilized to inquire and/or update the freight description for this GBL line record.

f. To inquire the freight description ascribed to a particular line entry on a GBL, the entry will be:

FA9999999SSSSLLLL

Where:

F - Action Code
A9999999 - GBL Number
SSSS - GBL SU Record Sequence Number
LLLL - GBL NMFC Line Record Sequence Number

(1) The following is an example display which will appear if the entry is successful (see error messages if unsuccessful):

FREIGHT DESCRIPTIONS

CARTRIDGES OR ELEMENTS, OIL FILTER,

INTERNAL COMBUSTION ENGINE OR AIR COMPRESSOR

ENTER DATA

(2) Up to 10 lines of data will display.

g. To update the freight description ascribed to a particular line entry on a GBL, the entry will be:

FA9999999SSSSLLLLU

Where:

F - Action Code
A9999999 - GBL Number
SSSS - GBL SU Record Sequence Number
LLLL - GBL NMFC Line Record Sequence Number
U - Update Signal

(1) If the entry is successful, the following will appear (see error messages if unsuccessful):

K720640200010001
CARTRIDGES OR ELEMENTS OIL FILTER,
INTERNAL COMBUSTION ENGINE OR AIR
COMPRESSOR

(2) Update is accomplished by moving the CRT cursor to the first character of the freight description to be updated and entering data over the existing data in the display. If the data being input does not overlay the existing data completely, blank out old data by depressing the SPACE BAR. Press the ENTER key. If the update is successful, the following display will appear (if unsuccessful see error messages):

UPDATE COMPLETE
ENTER DATA

h. To update the freight descriptions for GBL line entries having a common NMFC, the entry will be:

NA9999999NNNNNNS

Where:

N - Action Code
A9999999 - GBL Number
NNNNNN - NMFC
S - Suffix (optional). Entry limits displays to GBL lines having a common NMFC and suffix.

(1) If the entry is successful the freight descriptions for all GBL line entries with a common NMFC or a common NMFC and suffix will appear in sequence in the following format:

K720640200010001
CARTRIDGES OR ELEMENTS, OIL FILTER,
INTERNAL COMBUSTION ENGINE OR AIR
COMPRESSOR

(2) Update to any of the displays is accomplished by moving the CRT cursor to the first character of the freight description to be updated and entering data over the existing data in the display. If the data being input does not overlay the existing data completely, blank out old data by depressing the space bar. Depress enter key. If the update is successful the freight description for the next GBL line sequence (with a common NMFC) will display. Update this display and continue to next line sequence. When all GLB line sequences have been displayed the following message will appear:

UWFL30XX GBL LINE ENTRY *INQUIRY*
ALL GBL-LI RECORDS HAVE BEEN DISPLAYED
ENTER DATA

i. To update the freight descriptions for GBL line entries having a common freight description, the entry will be:

DA9999999DDDDDDDD

Where:

D - Action Code
A9999999 - GBL Number
DDDDDDDD - 1st 8 positions of the freight description

If the entry is successful the freight descriptions for all GBL line entries with a common freight description will appear in sequence in the following format:

K720640200010001
CARTRIDES OR ELEMENTS, OIL FILTER,
INTERNAL COMBUSTION ENGINE OR AIR
COMPRESSOR

Update and access next GBL line displays following procedures identified in paragraph 4h.

j. Entry of special note information to be printed following the TCN SU data for a particular GBL line entry must be accomplished as follows:

(1) Obtain the freight description display for the applicable GBL line entry utilizing options D, F or N as described above.

(2) Enter the commercial at (@) symbol in the first position of the first blank line following the freight description.

(3) Enter the special note narrative immediately following the commercial at symbol.

(4) If the entry is successful, the following display will appear. If unsuccessful, see error messages.

UPDATE COMPLETE
ENTER DATA

5. ERROR MESSAGES/ACTIONS:

ERROR MESSAGE	CAUSE/ACTION
UWFL30 GBL LINE ENTRY *INQUIRY* FORMAT ERROR ENTER DATA	Probable Cause: Invalid data was entered. Action: Reenter the correct transaction.
UWFL30 GBL LINE ENTRY *INQUIRY* FIELD(S) ENTERED NOT NUMERIC ENTER DATA	
UWFL30 GBL LINE ENTRY *INQUIRY* **0116N* NOT FOUND ENTER DATA	Probable Cause: The GBL number that was entered cannot be found on data base. Action: Review and reenter the correct transaction, or another transaction.

ERROR MESSAGE	CAUSE/ACTION
UPDATE KEY INVALID ENTER DATA	Probable Cause: An attempt has been made to update other than the freight description narrative data or the GBL line item entry Hazardous Flag Indicator. Action: Reenter data as prescribed in the procedure instructions.
UWFL30 GBL LINE ENTRY *INQUIRY* **0216D** ERROR FROM PGM UWFL30 ENTER DATA	Probable Cause: A system error has been encountered. Action: Record the message, notify your supervisor, then continue processing.
UWFL30 GBL LINE ENTRY *INQUIRY* UPDATE NOT FORMATTED CORRECTLY * RETRY ENTER DATA	Probable Cause: Blank lines exist between the first and last line of the Freight Description entered. Action: Operator must reenter freight description data omitting blank lines between the first and last line of description. If blank lines are desired, the operator must key in "BLANK LINE" in the first ten positions of the description line to be left blank. The program will recognize this instruction and leave a blank line when the GBL is printed.

APPENDIX E-224 P

MOFAST PREPARATION AND CONTROL OF GOVERNMENT BILLS OF LADING
PART G
MOFAST INQUIRY/MAINTENANCE OF
CONSOLIDATED PACK SHIPMENT UNIT RECORDS

1. PURPOSE

To provide a visual display via CRT of all Shipment Unit (SU) numbers that are grouped in a consolidated pack unit, or to disassemble the consolidated pack SU grouping pertinent to a specified master SU.

2. REFERENCE

Appendix B-187

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. The MOFAST consolidated pack CRT inquiry/maintenance process is initiated by entering program call number $$UWFF75. This action will dedicate the CRT to this process until another program call number is entered.

b. The initial CRT display is as follows:

UWFF75 03 MOFAST INQUIRY

CONSOLIDATED PACK CHAIN STRUCTURE

THE LIST OF SUB SHIPMENT UNITS REVEALS
THEIR TRUE PHYSICAL CHAIN POSITION

TO UNCHAIN THE CONSOLIDATED PACK
TYPE UNCHAIN AFTER THE MASTER SU

ENTER MASTER SU

c. Operator Response.

(1) Inquiry of Consolidated SU Structure. Key in and enter any 7-, 11- or 13-position SU number pertinent to the consolidated pack.

Example: NNNNNNN or
NNNNNNNNNNN or
NNNNNNNNNNNNN

(2) Disassemble Consolidated Pack SU Grouping. Key in and enter the Consolidated Pack 7-, 11-, or 13-position master SU number followed by the UNCHAIN indicator.

Example: NNNNNNNUNCHAIN or
NNNNNNNNNNNUNCHAIN or
NNNNNNNNNNNNUNCHAIN

d. The display resulting from an inquiry from subparagraph c(1) will be as follows:

```
 1-0041589      2-0013846
 3-0021450      4-0041184
 5-0041127      6-0041130
 7-0041181      8-0021452
 9-0041156     10-0041144
11-0013505     12-0041197
13-0010629     14-0013547
15-0020466  ** 16-0013529
17-3653088     18-0013849

MASTER SU=0041194
ENTER MASTER SU
```

(1) If double asterisks appear opposite a SU number, as they do for item 15, it indicates that the GBL number of that SU number is not the same as the GBL number of the master SU number. Reference error message in paragraph 5 of this appendix.

(2) When the letters ZR appear to the right of the last SU number of the display it indicates that the SU grouping has been interrupted at that SU number and the remaining SUs in the consolidation must be reidentified to the master SU. This condition will also stimulate the display of the message CHAIN INCOMPLETE.

(3) The CHAIN INCOMPLETE message identifies the need to restructure the SU grouping pertinent to the consolidated shipment. This is accomplished as follows:

(a) Determine all SUs pertinent to the consolidation using existing DD Form 1348-1 (MRO) documentation and the inquiry capability of this program.

(b) Shipment Unit records not identified in the CRT display associated with the master SU inquiry, but still included as part of the consolidated shipment must be reassigned to the consolidated shipment via program $$UWFF55, A option, per appendix E-222 P.

(c) If all shipment unit records are identified in the CRT display, the consolidation has not been finalized (the final SU Code has not been entered). To finalize the consolidated shipment use program $$UWFF55, A option, per appendix E-222 P.

e. This display resulting from a successful UNCHAIN action (see subparagraph c(2)) above is as follows:

UPDATE COMPLETE
ENTER MASTER SU

5. ERROR CONDITIONS/ACTIONS

ERROR MESSAGE	CAUSE/ACTION
INVALID DATA REENTER ENTER MASTER SU	Probable Cause: Self-explanatory. Action: Manually verify the input and resubmit.
BILL COMPLETED CANNOT DISPLAY CHAIN ENTER MASTER SU	Probable Cause: An SU number has been entered that has been billed and printed. Action: No action is required.
GBL NOT CANCELLED CANNOT UNCHAIN ENTER MASTER SU	Probable Cause: Self-explanatory. Action: Cancel the master SU number from the GBL assigned to it and resubmit.
GBL NOT CANCELLED FOR 9999999999999	Probable Cause: Self-explanatory. Action: Cancel the subshipment unit number in the message from the GBL assigned to it and resubmit the master SU number.
SU ENTERED NOT MASTER CANNOT UNCHAIN ENTER MASTER SU	Probable Cause: Self-explanatory. Action: Obtain the master SU number by using the inquiry option of this process and then enter it with the update option.
GBL ERROR PRESENT-MSTR AND SUBS ENTER MASTER SU	Probable Cause: This message identifies a system error. Action: The offending SU number(s) will be flagged with double asterisks as in subparagraph d(1). CRT operator should initiate action to inform Data Systems of the problem.
STATUS OF MSTR SU Y OR Z CANNOT UNCHAIN ENTER MASTER SU	Probable Cause: Bill has been completed. Action: None required.
**0103D* ERROR IN PGM UWFF75 ENTER MASTER SU	Probable Cause: Self-explanatory. Action: Notify Data Systems of the exact contents of this message.

best copy available

APPENDIX E-225 P

MOFAST MAINTENANCE OF THE GBL NUMBER REGISTER

1. PURPOSE

To provide instructions and procedures for assignment of Government Bills of Lading (GBLs) and Commercial Bills of Lading (CBLs), and cancellation of GBL and CBL.

2. APPENDICES USED IN THIS PROCEDURE

a. Appendix B-186.

b. Appendix B-215, Part D.

c. Appendix D-149.

d. Appendix E-224 P, Part D.

e. Appendix E-234 P, Part B.

f. Appendix E-238 P, Part J.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. GBL numbers are issued to each user depot by General Services Administration. These numbers are established in a GBL Register (computer program) to be used at the respective depot.

b. Transactions against the GBL Register are monitored by the MOFAST GBL assignment process. GBL numbers are automatically assigned based upon the criteria noted in appendix D-149.

c. A manifest of shipments transported by Government truck and small parcel air may also be produced by this process. Follow the same procedure outlined for producing a Commercial Bill of Lading.

d. These procedures are used to accomplish the following actions to update the MOFAST GBL Number Register:

(1) Cancel an entire GBL or CBL.

(2) Cancel one Shipment Unit from a GBL or CBL.

(3) Cancel all Shipment Units associated with a consolidated pack shipment.

(4) Assign a Shipment Unit to a unique, new GBL or CBL.

(5) Assign one or multiple Shipment Units to an existing GBL or CBL.

d. Inquiry of Shipment Unit/Line Item and MRO status is accomplished by using the data entry formats and procedures noted in appendix E-234 P, part B. Inquiry of the GBL Register is accomplished by using the data entry formats and procedures noted in appendix E-224 P, part D. Inquiry of the MOFAST short GBL file may be accomplished by using data entry formats and procedures noted in appendix E-238 P, part J.

e. Actions to update the GBL Register may be accomplished as follows:

(1) CRT Initialization.

(a) Key in $$UWFJ20.

(b) Press ENTER key. This entry will dedicate the CRT input station and the following message will be displayed:

```
UWFJ20-XX GBL ASSIGNMENT AND CANCELLATION
ENTER DATA * A0000000
0000000 000000 0  A
0000000 000000 0  A
0000000 000000 0  A
0000000 000000 0  A
0000000 000000 0  A
```

(2) General Instructions.

(a) All data entries in this appendix are made as follows:

1. Enter Type Code and GBL or CBL number following the ENTER DATA message in the above display.

2. Overlay the zeros in the above display with applicable Shipment Unit number(s) and check digit(s).

NOTE 1: The column of alpha characters (represented by A's in the above display) are internal program keys that cannot be altered by the operator.

NOTE 2: The cursor will automatically be prepositioned at the beginning of the next input field when the entry in the previous field fills the entire field. To manually position the cursor from field to field, press one of the SKIP keys.

(b) Type Code must always be present and must be A, C, D, N, O, S, X, or Y. Shipment Unit and check digit are not required when canceling a GBL or CBL. GBL or CBL number must be left out when assigning a shipment unit to a unique new GBL or CBL. Multiple shipment unit numbers may be assigned to a preestablished GBL or CBL with one entry.

(c) Multiple Shipment Unit assignment or cancellation can be accomplished via single entry by overlaying the zeros in the display with the applicable Shipment Unit numbers and check digits.

(d) At any time during processing the operator can return to the initial display by keying in a Type Code A and pressing the ENTER key.

(3) Instructions for specific MOFAST GBL Number Register update actions:

(a) Cancel an entire GBL or CBL.

1. This process will delete canceled numbers from the MOFAST GBL Register, and it will also create a DIC ZEN GBL closeout, appendix B-128, with Action Code GR, to cancel the number from the MOWASP GBL Register. Enter:

Type Code C
GBL or CBL number to be canceled.

2. When the above entry has been keyed in, press ENTER key. If the entry is successful, the following message will appear:

GBL CANCELLED

Additional entries may then be input.

(b) Cancel one or more Shipment Units from a GBL or CBL. Enter:

Type Code S
GBL or CBL Number
SU Number(s) to be Canceled
Check Digit(s)

1. When the above entry has been keyed in, press ENTER key. If the entry is successful the following message will appear:

1 SU CANCELLED

2. If an entry containing multiple SUs is successful, the following message will appear adjacent to the GBL/CBL number entered:

ALL SU'S CANCELLED.

3. If one of the above entries is unsuccessful, one of the error messages (paragraph 5 below) will display adjacent to the SU in error. SU numbers that have been successfully canceled will appear with the following message adjacent to the SU number.

CANCELLED.

4. Additional entries may then be input.

(c) Cancel all Shipment Units associated with a consolidated pack Shipment Unit from a GBL or CBL. Enter:

Type Code D
GBL or CBL Number
Master SU Number
Check Digit

1. When the above entry has been keyed in, press ENTER key. If the entry is successful the following message will appear:

1 SU CANCELLED

2. Additional entries may then be input.

(d) Assign a Shipment Unit to a unique, new GBL or CBL. Enter:

Type Code N (GBL) or O (CBL)
Shipment Unit Number
Check Digit

1. When the above entry has been keyed in, press ENTER key. If the entry is successful, the following message will appear:

1 SU ASSIGNED

2. The new GBL/CBL number will appear in the GBL/CBL input field. Additional entries may then be made.

(e) Assign one or more SUs to an existing GBL or CBL. Enter

Type Code X (GBL) or Y (CBL)
CBL or CBL Number
Shipment Unit Number(s)
Check Digit(s)

1. When the above entry has been keyed in, press ENTER key. If the entry contains only one SU and is successful, the following message will appear:

1 SU ASSIGNED

2. If an entry containing multiple SUs is successful, the following message will appear adjacent to the GBL/CBL number entered:

ALL SUS ASSIGNED

3. If one of the above entries is unsuccessful, one of the error messages (identified in paragraph 5 below) will display adjacent to the SU in error. SU numbers that precede an invalid SU in a multiple SU entry may or may not be assigned to the GBL prior to correction of the invalid SU. SU numbers which have been assigned will be identified by the following message adjacent to the SU number.

ASSIGNED

Example:

```
UWFJ20-XX GBL ASSIGNMENT AND CANCELLATION
ENTER DATA X K0000168
3253056 000000 7  C    ASSIGNED
3253279 001100 9  C    ASSIGNED
3254210 002100 7  E    INVALID CHECK DIGIT OR SU NO
4365595 000000 9  A
0000000 000000 0  A
0000000 000000 0  A
0000000 000000 0  A
0000000 000000 0  A
```

4. In the above example SU numbers 1 and 2 have been assigned. SU number 3 will require corrective action. SU number 4 has not been accounted for. If the operator can correct SU number 3 without inquiry actions, etc., the operator need only to overlay the incorrect data for SU number 3 and depress ENTER key.

5. When inquiry actions are necessary to correct the invalid SU number, the operator will have to reenter data for all SU numbers that were not assigned in the previous entry.

NOTE 1: A consolidated pack master SU must be assigned individually and cannot be assigned to a GBL/CBL during a multiple SU assignment entry.

NOTE 2: Erroneous SUs encountered during a multiple SU assignment entry cannot be resolved by overlaying the SU number with zeros. The program will not process any SU entries following a zero-filled SU number.

5. ERROR MESSAGES/ACTIONS

Error conditions relative to Type Code and GBL or CBL numbers will appear adjacent to the GBL or CBL number in the input display. Error conditions relative to SU numbers will appear adjacent to the SU number in the input display.

ERROR MESSAGE	CAUSE/ACTION
INVALID TYPE CODE	Probable Cause: Type Code must be one position alpha A, C, D, N, O, S, X, or Y. Action: Determine correct Type Code and reenter.
INVALID CHECK DIGIT OR SU NO	Probable Cause: Either the check digit or the Shipment Unit number has been entered incorrectly. Action: Reenter data.
INVALID GBL NUMBER	Probable Cause: GBL is missing or not 1 alpha and 7 numeric. Action: Reenter data or inquire through $$UWFJ10.
NO RECORD FOUND ON SHORT GBL	Probable Cause: No record found on the short GBL File for the GBL number entered or trailer record not found if canceling a particular Shipment Unit number. Action: The short GBL File may be interrogated by using procedures outlined in appendix E-238 P. Key in $$UWFJ10.
GBL STAT INVALID TO CANCEL	Probable Cause: GBL Register status is P (has been printed), or short GBL status is already C (canceled). Action: File may be interrogated by using procedures outlined in appendix E-238 P. Key in $$UWFJ10 or inquire program $$UWFH55 to find out why record is in this status.
GBL NO. NOT SAME IN SU RECORD	Probable Cause: The GBL number entered and the GBL number in the SU record do not agree. Action: Interrogation of MRO status can be accomplished by program $$UWFH55.
GBL REGISTER IS FULL	Probable Cause: No room to assign new GBL/CBL numbers. Action: Notify supervisor as program support may need to be advised.
INVALID GEO OR MODE CODE	Probable Cause: Geographical Area or Mode Code is invalid. Action: Use procedures outlined in appendix E-223 P, program $$UWFH05 for correction.

ERROR MESSAGE	CAUSE/ACTION
UWFG01 BAD RETURN ********	Probable Cause: A system error has been encountered. Action: Record the message, notify your supervisor, then continue processing.
SU IS UNDER CONSOLIDATION	Probable Cause: Attempting to cancel or assign a consolidated Shipment Unit using the wrong Option Code or attempting to assign a consolidated Shipment Unit during a multiple SU assignment. Action: Cancellation must be accomplished using the D option format. Assignment must be accomplished using a single SU assignment entry.
SU WRONG STATUS OR CONT DATA MISSING	Probable Cause: Shipment Unit status is invalid, or container data missing from Shipment Unit. Action: Current status and container data may be obtained by program $$UWFH55.
GBL WRONG STATUS OR NOT FOUND	Probable Cause: The GBL number that was entered was not found on the file, or the status of it is such that SU records cannot be added to it. Operator may have entered a GBL number with a CBL Option Code or vice versa. Action: GBL number and status may be obtained by program $$UWFJ10.
SU RECORD NOT FOUND	Probable Cause: Shipment Unit number that was entered does not match any Shipment Unit on file. Action: Shipment Unit numbers may be interrogated by program $$UWFH55.
SU ALREADY ASSIGNED TO GBL	Probable Cause: The Shipment Unit number that was entered is already assigned to an existing GBL. Action: Interrogate with program $$UWFH55 then cancel or reassign.
SU PREVIOUSLY CANCELLED	Probable Cause: Operator may have keyed in wrong SU number. Action: Shipment Unit and status may be obtained by program $$UWFH55.

ERROR MESSAGE	CAUSE/ACTION
MSTR SU NOT ENTERED	Probable Cause: Attempt to cancel or assign consolidated pack SU without entering the master SU number. Action: Obtain master SU from route slip documentation and reenter corrected data.
MEDALOC SHIPMENT, GBL NOT ASSIGNED	Probable Cause: Shipment is flagged as MEDALOC eligible and the POE is other than 103 or 303 which indicates shipment to a collocated container consolidation point. Action: Reroute Shipment Unit through the container consolidation point or remove MEDALOC eligible indicator from the MOFAST Shipment Unit by using program $$UWFH25 CE type input (appendix E-234) or if the Shipment Unit record POE is invalid update the record with POE 103/303 as appropriate using program $$UWFQ45 (appendix E-231), this should only be done if the shipment is to be made to other than a collocated MEDALOC container consolidation point.

APPENDIX E-228 P

MOFAST PREPARATION OF TCMD CARDS AND TRANSCEIVER DATA

1. PURPOSE

To prepare TCMD cards and transceiver data.

2. APPENDICES USED IN THIS PROCEDURE

a. Appendix B-212.

b. Appendix D-158.

c. Appendix F-182.

d. Appendix F-183.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. To initiate the program, key in $$UWFM30 and press the ENTER key. The CRT will be dedicated to TCMD processing until another $$ entry is made.

b. The initial response from the CRT will display the following message:

PREPARATION OF TCMD DATA

OPTIONS:

L, SU, CD, LOC - TCMDS AND LOGAIR MANIFEST
Q, SU, CD, LOC - TCMDS AND QUICKTRANS MANIFEST
S, SU, CD - SURFACE EXPORT TCMD BY SU-NUMBER
A, SU, CD - AIR OFFER TCMD
T, GBL - SURFACE EXPORT TCMD BY GBL

ENTER-OPTION ENTRY-KEY 0000000000000 CHK-DGT LOCATION

c. Enter the data format pertinent to the type of format required.

(1) GBL SURFACE EXPORT SHIPMENT:

ENTER-OPTION T ENTRY-KEY GGGGGGGG00000 CHK-DGT LOCATION

Where:

T - Type Input Code for GBL
G - GBL Number

(2) NON GBL SURFACE EXPORT SHIPMENT:

ENTER-OPTION S ENTRY-KEY XXXXXXXXXXXXX CHK-DGT C LOCATION

Where:

S - Type Input Code for non-GBL Surface Export Shipment
X - Shipment Unit Number (7, 11, or 13 positions)
C - Shipment Unit Check Digit

(3) EXPORT AIR OFFER:

ENTER-OPTION A ENTRY-KEY SSSSSSS CHK-DGT C LOCATION

Where:

A - Type Input Code for Export Air Offer
S - Shipment Unit Number (7, 11, or 13 positions)
C - Shipment Unit Check Digit

(4) LOGAIR SHIPMENT:

ENTER-OPTION L ENTRY-KEY SSSSSSS CHK-DGT C LOCATION XXXXXXXXX

Where:

L - Type Input Code for LOGAIR
S - Shipment Unit Number (7, 11, or 13 positions)
C - Shipment Unit Check Digit
X - Terminal Location for Manifest 1-9 positions (optional) or the Word "No" if a Manifest is not Required

(5) QUICKTRANS SHIPMENT:

ENTER-OPTION Q ENTRY-KEY SSSSSSS CHK-DGT C LOCATION XXXXXXXXX

Where:

Q - Type Input Code for Quicktrans
S - Shipment Unit Number (7, 11, or 13 positions)
C - Shipment Unit Check Digit
X - Terminal Location for Manifest 1-9 positions (optional) or the Word "No" if a Manifest is not Required

d. Successful entry of the data input format will result in the display of TCMD data formats pertinent to the SU/GBL. See figures 1, 2, 3 and 4 below, for example. In figure 1 the 80-column Prime Shipment Unit Data is displayed in two lines with the fields headed and separated. Any of the contents of this card may be changed. Changes to mode, TAC, or POE will result in update of the Shipment Unit record to reflect the change for Type Inputs T, A and S. Entry of a GBL number in the GBL number field generates a GBL TCMD header card. Type Input L and Q will only update the mode. If the input is N or U the program will change the Process Code to AL and Status Code to K. Fields which contain asterisks require that data be entered or the asterisks blanked out. Positions 54-80 of the T-5 and T-6 card displayed. Data need only be entered in these cards if asterisks are present. Asterisks for L and S data field must be filled or blanked out. The CRT image contains room for nine T-9 miscellaneous information cards. The operator need only enter data if asterisks are indicated in a card. However, the operator may fill as many of the cards as required to provide information required in DoD 4500.32-R, MILSTAMP. If multiple T-5 cards are required the operator may change as many T-9 cards to T-5 as necessary and enter the outsize dimension information in the space provided, including the card sequence number position. The last line contains the TCMD status, output indicator, and next transaction. The program provides the next transaction for Type Input Code T transaction and whenever a container or SEAVAN shipment is encountered. The operator may enter the next transaction desired if it is not provided by the program. Review should be made of the Output indicator reference subparagraph f below and the TCMD status flag reference subparagraph h below. Both of these fields may be changed to generate the desired TCMD(s).

e. When desired data has been updated, press the ENTER key. If entry was successful, one of the following displays will be received.

(1) If the program had provided, or the operator had entered, the next transaction display of the next TCMD like the example in figure 1 below, will be displayed.

```
TCMD NOT REQUIRED FOR S,XXXXXXX,C
NEXT TRANSACTION
```

NOTE: Each of these signify successful transmission of TCMDs for previous transaction.

(2) If there was not a next transaction:

A 1700139000000 6
TCMD PREPARATION COMPLETED

NEXT-TRANS:
ENTER-OPTION ENTRY-KEY 0000000000000 CHK-DGT 0 LOCATION

f. Successful TCMD input will create a transceiver action and/or produce punched card formats based on the output indicator which was displayed. This output indicator can be altered by the operator prior to pressing ENTER key, reference subparagraph e above.

OUTPUT INDICATOR	PROGRAM ACTION
T	Transceive TCMD.
P	Punch TCMD.
B	Transceive and punch TCMD.
Blank	If Type Input Code L or Q, print on LOGAIR/Quicktrans Manifest only. On other transactions proceed to next transaction.

NOTE: In addition to the above, a LOGAIR or Quicktrans TCMD is punched whenever an Air Export Offer TCMD is prepared and contains mode of Shipment Code N or U respectively. Also when Type Input Code L or Q the Shipment Unit is listed on the LOGAIR/Quicktrans Manifest, F-183. Air shipments insert FSC in pos. 5 through 8 of the TCMD with pos. 4 blank instead of container number. Consolidated shipments select FSC with predominate weight.

g. This program also contains the capability to restart the TCMD process without duplicating previous transactions for a specific GBL. This action requires the CRT operator to indicate the desired GBL SU sequence number and remove the output indicator shown in the display format. The procedure for this action is as follows:

(1) Enter the data format for pertinent GBL record.

T,GGGGGGGG

(2) Display for the first GBL SU record will appear.

(3) The GBL SU sequence number will appear on 11-15 positions of the next transaction. Output indicator will appear in the last line of the display.

(4) The CRT operator must delete the output indicator from the display format.

(5) Update the GBL SU sequence number to indicate the record desired.

(6) Depress the ENTER key.

(7) The TCMD input format will appear.

(8) Perform necessary updates to the TCMD format according to paragraph 4e above.

(9) Depress the ENTER key.

(10) TCMD output will be generated and additional TCMD formats and/or messages will appear on the screen.

h. Corrections and cancellations to TCMDs can be accomplished using this program. Enter data pertinent to the type of format required, reference paragraph 4c above. Successful entry will result in the display of TCMD data formats pertinent to the SU/GBL.

(1) Corrections. If the TCMD status equals X (transceived) or C (corrected), update the data elements and press the ENTER key. The program will automatically generate a correction IAW DoD 4500.32-R.

(2) Cancellations. If TCMD status is X (transceived) or C (corrected), update required data elements, change the TCMD status to D (canceled), and press the ENTER key. The program will generate a cancellation IAW DoD 4500.32-R.

NOTE: If TCMD status is blank this indicates TCMDs have not been generated and the program will generate an original TCMD without the overpunch in the priority field.

5. ERROR MESSAGES/ACTIONS

ERROR MESSAGE	CAUSE/ACTION
GBL NUMBER IS NOT ON FILE CORRECT AND RE-ENTER DATA	Probable Cause: Self-explanatory. Action: Review input and correct as necessary. If the error message persists, notify the responsible programer.
INVALID SU NO OR CHK DIGIT CORRECT AND RE-ENTER DATA	Probable Cause: Shipment Unit number and/or check digit is invalid. Action: Reenter correct data according to specified entry format.
SU NUMBER NOT ON FILE CORRECT AND RE-ENTER DATA	Probable Cause: Self-explanatory. Action: Review and reenter SU Number. If the error message persists, notify the responsible programer.
RETURN DATA IS INCOMPLETE	Probable Cause: All asterisks in TCMD data fields have not been removed. Action: Input correct data or blank out asterisks and press reenter key.
CANNOT TRANSCEIVE THIS TCMD	Probable Cause: On surface export shipment this message is received if the first position of the POE is other than 1, 2, 3, or 4. On Air Export shipments this message is received if the Transportation Account Code (TAC) or Service Code (first position of TCN) is invalid, reference appendix D-158. Action: Correct and reenter data or change the output indicator to P (punch) and the TCMDs will be output on the card punch.
INVALID TYPE INPUT CODE CORRECT AND RE-ENTER DATA	Probable Cause: Self-explanatory. Action: Review and correct Type Input Code.

APPENDIX E-229 P

FREIGHT DESCRIPTION FILE MAINTENANCE

1. PURPOSE

This procedure outlines the actions necessary to establish and maintain complete, accurate freight description data. The file created as a result of these data entry actions provides freight description data for mechanized GBL/CBL and MOWASP shipping documentation processes.

2. APPENDICES USED IN THIS PROCEDURE

Appendices used in this process, in addition to chapter 80 of this volume, are as follows:

a. Appendix A-82, Violation Reason Codes.

b. Appendix B-66, Part G, Table and Control Cards.

c. Appendix B-205, Freight Description File - Teleprocessing Inquiry/Update Format.

d. Appendix D-29, Processing Table and Control Cards.

e. Appendix D-38, Processing of Freight Description Data Received via DAAS.

f. Appendix D-139, Freight Description File.

g. Appendix F-74, Freight Description File.

h. Appendix F-79, Shipment Planning Worksheet.

i. Appendix F-172, Freight Description File Maintenance Report.

3. RESPONSIBLE ORGANIZATION ELEMENTS

a. DLA Freight Description Manager (currently assigned is Defense Depot Ogden, Utah, Transportation and Shipping Division).

b. Other Users (Transportation and Shipping Division, DS/T).

4. PROCEDURES AND INSTRUCTIONS

a. General

(1) The processes documented in this procedure incorporate the use of a single Freight Description File (FDF) manager and satellited users. Communication of FDF data between these organizations is accomplished using the facilities of DAAS.

(2) The FDF provides the capability to establish description data for MTMC authorized NMFC and LTL Codes. Specific item descriptions will be used to supplement the basic NMFC description with additional descriptive detail required when shipping hazardous materiel or other specialized items for which the basic MTMC description does not suffice. Capability is provided to establish NMFC descriptions for specialized mode of shipment and/or tariff considerations.

(3) The FDF manager is responsible for ensuring the NMFC and LTL Code descriptions used within DLA are consistent with MTMC requirements. Therefore, entries to update the FDF are transceived from user depots to the FDF manager for review. The FDF manager will complete the file update approval process and transceive the change to all users within ten days of the initial receipt of the request. The requesting user will retain the update transaction in a suspense status pending approval by the FDF manager. Receipt of the approved description from the manager will remove the transaction from suspense and establish it in the main file. Failure of the FDF manager to complete the approval process by the tenth day will result in the automatic deletion of the transaction from the users suspense.

(4) User depots are responsible for identification of changes relative to NMFC/LTL descriptions which occur at their respective depots. All NMFC add, change and delete transactions are to be performed by locally authorized Freight Classification personnel only. NMFC data originated by user depots will be transceived to the FDF manager for coordination.

b. Teleprocessing Data Entry Procedures.

(1) To begin processing, key in $$UWFR01 and press ENTER key. The following message will display:

```
 UWFR01            FREIGHT DESCRIPTION
SECTION CODE

ENTER ONE OF THE FOLLOWING SECTION CODES:

SECTION CODES:

  NM = NMFC INQUIRY/ADD/CHANGE/DELETE
  RP = OPTIONAL REPORTS
  TM = NMFC OPTIONAL TRANSMISSION
```

NOTE 1: The CRT will remain in this program until another program with a $$ prefix is entered. The cursor is positioned at the first updateable field is this display, and the first updateable field following the Section Code in the following update/inquiry displays. The cursor repositions automatically to the next updateable field when the previous field is filled, or can be manually repositioned to other than the next field with the field skip keys. Key in one of the following Section Codes into the above display:

NM = NMFC INQUIRY/ADD/CHANGE/DELETE (see subparagraph b(2) below)
RP = OPTIONAL REPORTS (see subparagraph b(3) below)
TM = NMFC OPTIONAL TRANSMISSION (see subparagraph b(4) below (available at FDF Manager installation only)

NOTE 2: Entry of Section Code RP provides the display necessary to complete the report request action. Entry of the remaining Section Codes returns a display requiring entry of specific NMFC data to access or establish the specified NMFC record format for update or inquiry. The program will remain dedicated to the Section Code until the operator takes action to enter another Section Code.

(2) Section Code NM, NMFC Inquiry/Add/Change/Delete Display.

(a) Entry of Section Code NM generates the following display. This format is used to access or establish specific NMFC-LTL record formats for update or inquiry.

```
UWFR01          NMFC INQUIRY/ADD/CHANGE/DELETE
SECTION CODE NM

ACTION   NMFC 000000 LTL-KEY    REC-SEQ 00 MODE B TARIFF
```

ACTIONS:
A = ADD A RECORD
D = DELETE A RECORD
I = INQUIRE A RECORD
C = CHANGE A RECORD

1. Section Code - See Section Code instructions, paragraph 4b(1) above.

2. Action - The Action Code is a mandatory entry for all display request entries.

a. Entry of Action Code A in conjunction with other NMFC key requirements generates a display that allows the operator to establish an NMFC record. Where the depot initiating the add action is a user installation, the NMFC is established on the local Freight Description File (FDF) with an

automatic delete date equal to date of entry plus ten days, and the data is transceived to the FDF manager's FDF and F-74 report. Where the depot initiating the add action is the FDF Manager, NMFC is transceived directly into all user FDFs, with concurrent notification output to the users F-74 report. Failure of the FDF manager to confirm a user add action within the allotted suspense period will result in the description being deleted automatically from the origin depots FDF. Exception: See Tariff field description below.

b. Entry of Action Code C in conjunction with other NMFC key requirements provides a display of the description record to be changed. Change actions are transceived between user and FDF Manager installations as stated in subparagraph a above, with the exception that user changes transceive to the FDF Manager's F-74 report only.

c. Entry of Action Code D in conjunction with other NMFC key requirements puts the record in delete status and completes the action to delete the record. (See DEL-DTE field description below for more delete action instructions.) Delete actions are transceived between user and FDF Manager installations as stated in subparagraph b above. Successful entry of this action provides operator with a display of data successfully deleted. (Note: Once established a delete status is irreversible and the record is not accessible to further update actions.)

d. Entry of Action Code I in conjunction with other NMFC key requirements provides a display of the NMFC record requested.

3. NMFC - The National Motor Freight Classification Number. The NMFC number is a mandatory entry for all NMFC display requests. Enter the desired NMFC number.

4. LTL Key

a. Basic Mode B records mandatory entry. Enter the LTL Code applicable to the NMFC description. Density item exception: Where the LTL is determined by the cubic density of the packed item, use LTL key W, and enter the LTL Code applicable to the item in the field titled LTL in the display that results from this entry. See LTL field explanation in subparagraph (b) below, (Section Code NM, NMFC Add/Change Display).

b. Mode and/or tariff exception records, not a mandatory entry.

(1) Leave LTL key blank when one mode and/or tariff description will suffice for all exception-flagged records in the basic NMFC group.

(2) Use the LTL key of the basic NMFC-LTL record when more than one record in the basic NMFC group is flagged for exception, and the mode and/or tariff exception description applies to that basic NMFC-LTL record only.

5. REC-SEQ - Record Sequence Number. The record sequence number provides a means to create unique description records when there is more than one applicable description per LTL key.

a. If there is only one description required for a NMFC-LTL record, leave the record sequence number field filled with an X.

b. If the LTL key is other than W and there is more than one description required for a given NMFC-LTL record:

(1) Use Action Code A and the NMFC record key data with Record Sequence Code 00 to establish a dummy record for the NMFC-LTL. Update the NMFC add/change display that responds to this entry with a X in SEQ-FLG field and the words "Dummy Record" in the Description of Articles block.

(2) Once the dummy record is established, add the actual description records with Action Code A and the related NMFC record keys, with the item's NMFC-LTL suffix entered as the record sequence Number, i.e., if the item's NMFC-LTL suffix is 01, the record sequence number must be A. Update the NMFC add/change display that responds to this entry in accordance with subparagraph (b) below.

c. If the LTL Code is W, density descriptions are sequentially established, beginning with record sequence number A for the lowest density description, B for the second lowest, etc. Dummy records are not required for density descriptions.

6. Mode - Mode of Shipment Code (see appendix A-17). If Mode Code is not entered, the Mode B record displays. If the LTL key is blank, the mode field must be K or Q.

7. Tariff - Tariff Identification. Required entry when the description format requested relates to a description that is an exception to the NMFC tariff. Actions taken with tariff identification entered in this field are locally applicable and do not transceive between the FDF manager and user installations as stated in subparagraph 2 above.

8. DEL-DTE - Delete Date. Applies in conjunction with Action Code D (delete) only. When left blank, the program assigns a delete date equal to the date of entry plus ten days. To assign a date other than date of entry plus ten, enter the desired delete date. (Note: The program will not accept a delete date greater than the current date plus one year, or less than the current date.)

NOTE: When the NMFC action request format is updated in accordance with subparagraphs 1 and 2 above, press ENTER key. If successful, the NMFC add/change or inquiry/delete display corresponding to the Action Code entered will appear on the screen. If unsuccessful, see paragraph 5 below, for error messages.

(b) Section Code NM, NMFC Add/Change Display. Section Code NM, Action Code A or C action request entries (subparagraph (2)(a) above) generate the following display. Action Code A will display an NMFC add format for update with all fields other than those established by the display request blank.

Action Code C provides NMFC data as it exists currently on the FDF for change update processing. See field explanation and/or update instructions following display example.

```
 UWFR01        NMFC ADD/CHANGE
SECTION CODE NM

  NMFC   LTL-KEY  REC-SEQ  MODE    TARIFF    STATUS   DEL-DTE  ENT-DTE
 111111     A        00      B   0000000000     C      00000    81238

  UFC-SFX  COMMODITY  LTL  NIIN-SCAN  SEQ-FLG  DENSITY    VALUE
  1234567      T       A       G         X      000000   888888

       DESCRIPTION
 RUBBER DUCKS NOI
```

1. Section Code. See Section Code instructions, subparagraph b(1) above.

2. NMFC. The NMFC number entered in the display request. This is part of the record key and not an updateable field.

3. LTL KEY. LTL key entered in the display request. This is an updateable field when the code is other than W (density). To change the LTL key of a basic mode B record, overlay this field and the LTL field with the desired LTL Code. To change the LTL key of a tariff and/or mode exception record, overlay this field with the desired code. (Tariff/Mode exception record LTL key changes do not require update of the LTL field in conjuction with an LTL key change).

4. REC-SEQ - Record Sequence. The record sequence number entered in the action request format. This is part of the record key and not an updateable field.

5. Mode. Mode Code entered in action request format. This is part of the record key and not an updateable field.

6. Tariff - Tariff Identification. Tariff identification number entered in action request format. This is part of the record key and not an updateable field.

7. Status. When Action Code A or C is used in the action request format, this field contains the Action Code used to generate the display. This is not an updateable field.

8. DEL-DTE - Delete/Suspense Date. When the field is other than zero filled in the add/change display, the date represents the description suspense date. This will occur on user add and change actions, and FDF manager change actions against description records that are not yet confirmed. To post a delete date to this field, follow the instructions for Action Code D, subparagraph b(2)(a) above.

9. ENT-DTE - Entry Date. Entry date last action (add or change) was taken against the record. This is not an updateable field.

10. UFC-SFX - Uniform Freight Classification and Suffix. Enter uniform freight classification number and suffix as required. Entry does not require U prefix. The program automatically prefaces the number with a U on entry. Zero fill when not required.

11. Commodity. This field is used to indicate that mode and/or tariff exception descriptions exist for the NMFC/LTL record. Enter one of the following codes if required:

T = TARIFF DESCRIPTION
M = MODE DESCRIPTION
C = TARIFF/MODE DESCRIPTION

12. LTL Key - NMFC-LTL Code. An updateable field.

a. To change this field in a density record (LTL key W) or exception description record, enter the desired LTL Code.

b. To change this field in a basic mode B record overlay this field and the LTL key field with the desired LTL Code.

NOTE: Note that this field must match the LTL key field in a basic mode B record unless the LTL key is W. When the LTL key is W, or the record is a tariff and/or mode exception description, this field is not required to match the LTL key.

13. SEQ-FLG. Sequence Flag. Mandatory entry for dummy records only. Enter an X in this field when establishing a dummy record for items other than density that require more than one description per LTL; otherwise, leave blank. On entry, the X will generate the words DUMMY RECORD on the first line of the record's description block.

14. NIIN-SCAN. When it is necessary to indicate there are NIINs linked to the subject NMFC that require supplementary descriptive data, i.e., hazardous statements, label requirements, etc., enter one of the NIIN-SCAN Indicator Codes listed below. This field must be updated with a NIIN-SCAN Indicator Code before a supplementary NIIN description can be added to the FDF. (For NIIN description maintenance see appendix E-004 P Hazardous Materials Packaging and Transportation File.

NIIN-SCAN INDICATOR CODES:

G = NIIN descriptions that apply universally to all modes of shipment.
M = NIIN descriptions that apply to specific modes of shipment.

15. Density. This field is used to indicate the maximum weight (lbs.) per cubic foot for the subject description. Use in conjunction with LTL key W only; otherwise, leave zero filled.

16. Value. This field is used to indicate the released valuation amount. Use in conjunction with release valuation NMFC descriptions only; otherwise, leave zero filled.

17. Description. Ten lines are provided for entry of in-the-clear NMFC description data. Do not leave blank lines within the body of the description.

NOTE: Successful entry of NMFC add/change actions returns an NMFC inquiry format display of the updated NMFC data. (See the following paragraph titled Section Code NM, NMFC Inquiry/Delete display.) If action is unsuccessful, see related error message explanation in paragraph 5 below.

(c) Section Code NM, NMFC inquiry display.

1. The following NMFC inquiry display is generated by:

a. Successful NMFC add/change update actions, displaying updated NMFC data.

b. Successful NMFC delete actions displaying deleted NMFC data.

c. Successful NMFC inquiry action, with requested NMFC record displayed.

```
 UWFR01        NMFC INQUIRY
SECTION CODE NM

ACTION   NMFC 000000 LTL-KEY   REC-SEQ 00 MODE B TARIFF            DEL-DTE 00000

      DESCRIPTION
 RUBBER DUCKS NOI
```

2. The NMFC data is preceded in the display by the NMFC inquiry/add action format line (subparagraph b(2) above). The operator may continue NMFC processing by updating this line, or change to another processing section by overlaying the Section Code in the display.

3. Display field explanations are the same as those for the NMFC add display (subparagraph (b)(2)), with the following exceptions:

a. Status. The status field reflects the last update action against the record. An A indicates the last update action was to add the record, C to change, D to delete (FDF manager), or S to delete (unconfirmed user delete action).

b. DEL-DTE - Delete/Suspense Date. The contents of this field, when other than zero-filled, is determined by the display status field. When the display status field contains an A, C or S, the date displayed is a suspense date and the record is awaiting FDF Manager confirmation actions. When the display status contains a D, the date is a delete date.

(3) Section Code RP, Optional Reports display. Section Code RP entry generates the following Optional Reports display.

```
UWFR01        OPTIONAL REPORTS
SECTION CODE RP

REPORTS
     = UWF074  FREIGHT DESCRIPTION FILE PART 1  NMFC DESCRIPTION
```

This display is used to request the F-74, part 1, NMFC description. The cursor is positioned to the left of the report title. To request a report, enter X in the cursor position to the left of the report and press ENTER. (See appendices F-74 for detailed explanation of report.) To update Section Code, see Section Code instructions subparagraph b above.

(4) Section Code TM, NMFC Optional Transmission Display (FDF manager only).

(a) Section Code TM, NMFC Optional Transmission display request. The following display is generated by entry of Section Code TM (subparagraph b(1) above). This format provides the FDF manager a means to request NMFC record displays for transmission.

```
UWFR01        NMFC OPTIONAL TRANSMISSION
SECTION CODE TM

NMFC 000000 LTL-KEY   REC-SEQ 00 MODE B
```

1. Section Code. See Section Code instructions subparagraph b(1) above.

2. NMFC. Enter National Motor Freight Classification (NMFC) number to be transmitted. This is a mandatory entry.

3. LTL Key. Enter LTL key of NMFC to be transmitted. This is a mandatory entry when mode is B or blank.

4. REC-SEQ - Record Sequence. Enter Record Sequence Number of NMFC to be transmitted if other than X; otherwise, leave X filled.

5. Mode. Enter Mode of NMFC record to be transmitted. If left blank, the program will generate the Mode B record.

NOTE: When the action request update is complete, press ENTER. If the request is successful, the NMFC Optional Transmission display will appear. If unsuccessful, see paragraph 5 below, for related error message explanation.

(b) Section Code TM, NMFC Optional Transmission Display (FDF manager only). The following display is generated by the NMFC Optional Transmission display request, subparagraph (6)(a) above. This display is used by the FDF manager to confirm NMFC data transactions originated by user installations and broadcast the data to all user FDFs. This display can also be used to rebroadcast NMFC data when such data is lost in transmission or to reactivate a description previously deleted.

```

1. NMFC Data. See Section Code NM for NMFC display filed definitions.

2. Transmission To. To broadcast the displayed description to all depots, enter X in the cursor position to the left of "all of the following". To broadcast to at least one, but not more than four, of the depots enter X in the cursor positions to the left of the desired depots and press ENTER.

NOTE: Successful entry will return the NMFC Optional Transmission display request (subparagraph 4(a) above). If unsuccessful, see paragraph 5 below, for related error message explanation.

5. ERROR MESSAGES

Program validation processes will identify error conditions and return the entry display with the corresponding Error Message at the bottom of the display. The cursor will be positioned at the field containing the error. The Error Messages, with probable cause and corrective action information, are as follows:

ERROR MESSAGE	CAUSE/ACTION
UWFR01-01 INVALID ACTION	Probable Cause: Action Code entered was not A, C, D or I. Action: Reenter valid Action Code.

ERROR MESSAGE	CAUSE/ACTION
UWFR01-02 MANDATORY ENTRY	Probable Cause: The validation process has identified a required data element that has not been entered. CRT cursor will be positioned at the data field requiring entry. Action: Enter required data.
UWFR01-03 MODE MUST NOT BE R OR X OR 0 OR 1	Probable Cause: Mode R, X, 0 or 1 entered in mode field is not a valid Mode Code. Action: Reenter correct mode.
UWFR01-04 RECORD NOT FOUND	Probable Cause: No record was found for the record requested for change, delete or inquiry action. Action: Verify that record key (NMFC/LTL/Record Sequence, NIIN, MODE, TARIFF) entered is correct. If incorrect, reenter corrected input.
UWFR01-05 DELETE DATE EXCEEDED ONE YEAR	Probable Cause: Delete date exceeds one year from date of input. Action: Enter a delete date that does not exceed the current date by more than one year or is less than the current date.
UWFR01-06 RECORD IN SUSPENSE STATUS	Probable Cause: Users - An attempt was made by a user installation to update a record with an unconfirmed action against it (DEL-DTE other than 0, status A, C or S) in D status. FDF Manager - An attempt was made to update a record in D status. Action: Users - No update action can be taken until the FDF manager confirms or overrides previous update actions against the record. FDF Manager - The record cannot be updated while in D status. To override D status see Section Codes TM processing.
UWFR01-07 ALREADY ON MASTER	Probable Cause: An attempt was made to add a record that is already established on the FDF. Action: Review record entry key for accuracy. If not correct, reenter corrected data. If the record key is correct, no further action is required. The record has already been established.

ERROR MESSAGE	CAUSE/ACTION
UWFR01-08 COMMODITY MUST BE T OR M OR C SPACE	Probable Cause: An attempt was made to establish an NMFC record with an invalid commodity indicator. Action: Reenter using commodity T, M, C or SPACE. See Section Code NM, paragraph 4(b)(3) above for commodity indicator instructions/explanation.
UWFR01-09 NIIN-SCAN MUST BE G OR M OR SPACE	Probable Cause: The NIIN-SCAN Code entered in the NMFC NIIN-SCAN field was not G, M or SPACE. Action: Reenter NMFC update using SCAN code G or M or SPACE. See Section Code NM, paragraph 4(b)(3) above, for NIIN-SCAN instructions/explanation.
UWFR01-10 INVALID TARIFF	Probable Cause: The tariff number data entered in the NMFC tariff field does not match table 7 tariff data. Action: If the tariff number entered is valid, it will be necessary to add the number to table 7 before the NMFC data can be added successfully. If the tariff number entered is incorrect, correct and reenter.
UWFR01-11 INVALID LTL	Probable Cause: LTL field entry was not compatible with mode entered. Action: If mode is B or W, enter LTL Code other than I, O, Y or Z. If mode is Q, the LTL field must be blank.
UWFR01-12 SPACE BETWEEN LINES	Probable Cause: The freight description data in the displayed record contains one or more blank lines within the body of the description. Action: Reenter freight description. Start the description on the first line of the field and leave no lines.
UWFR01-13 INPUT DATA SAME AS RECORD DATA	Probable Cause: The change format entered contained no data changes. No data has been transceived. Action: If it is desired to change the FDF data, re-enter the format request with Action Code C (DICOMMS only).
UWFR01-14 MODE MUST BE B OR Q OR W	Probable Cause: An invalid Mode Code was entered. Action: Verify mode. Reenter Modes B, Q or W only. See paragraph 4(b)(3) above for Mode instructions.

ERROR MESSAGE	CAUSE/ACTION
UWFR01-18 DELETE DATE LESS THAN CURRENT DATE	Probable Cause: The delete date entered was less than the current day's processing date. Action: Reenter delete action with date not less than the current date, or greater than the current date plus one year.
UWFR01-19 INVALID LTL KEY OR DENSITY	Probable Cause: An attempt was made to update a record where: The LTL key was W and no density entered in the density field. The LTL key was other than W and the density field contained weight data. Action: For successful entry, the density field must contain weight data if the LTL key is W, or zero filled if the LTL key is other than W. Correct input data accordingly.
UWFR01-22 NMFC NOT IN SEQ	Probable Cause: The record sequence number in a density (LTL key W) NMFC add entry left a blank in the order of successively assigned record sequence numbers, i.e., the record sequence entered was D, and the program could not find a record for sequence number C. Action: Determine the highest existing record sequence number for the subject density NMFC and use the next higher number for successful add action. The first density description record sequence number must be 00.
UWFR01-23 SEQ-FLG NOT ON BASIC NMFC	Probable Cause: An attempt was made to add a nondensity NMFC record with a record sequence number other than X, without having set the sequence flag in the dummy record. Action: Enter X in the SEQ-FLG field in the dummy record and proceed with add action.
UWFR01-24 NO BASIC NMFC	Probable Cause: An attempt was made to add a nondensity NMFC record with a record sequence other than X, without first establishing a dummy record for the NMFC. Action: Establish a dummy record in accordance with paragraph 4b(2) above and proceed with add action.

ERROR MESSAGE	CAUSE/ACTION
UWFR01-25 LTL KEY MUST MATCH LTL	Probable Cause: The LTL key in the record is other than W and the code in the LTL field does not match the LTL key. Action: Update the record so that the LTL key and LTL fields contain matching data.
UWFR01-28 SEQ-FLG MUST BE BLANK	Probable Cause: The sequence flag (SEQ-FLG) field in the NMFC update is other than blank and the LTL key field is W, or the REC-SEQ field is other than X. Action: The sequence flag is a mandatory entry for dummy records only. Enter an X in this field when establishing a dummy record for items other than density (LTL key W) that require more than one description per LTL; otherwise, leave blank.
UWFR01-31 CANNOT USE SEQ-FLG WITH TARIFF	Probable Cause: An attempt was made to establish a dummy record for a tariff exception description. Action: No dummy record is required for tariff exception descriptions. Tariff exceptions are established under sequentially assigned record sequence numbers, beginning with A. See paragraph b(2)(b) above, Section Code NM, SEQ-FLG and tariff instructions.
UWFR01-32 CANNOT USE NIIN-SCAN WITH SEQ-FLG	Probable Cause: An attempt was made to X both the SEQ-FLG and NIIN-SCAN fields in an NMFC record. Action: The program will not accept a record update with both the SEQ-FLG and NIIN-SCAN fields flagged. The SEQ-FLG field is to be updated in the NMFC dummy record only. See paragraph b(2)(b) above, Section Code NM, for NIIN-SCAN and SEQ-FLG instructions.
UWFR01-33 LTL W CHANGE NOT ALLOWED	Probable Cause: An attempt was made to change the LTL key of an NMFC from LTL Code W to another LTL Code, or change the LTL key to W from another LTL Code. Action: LTL key changes involving LTL key W are not allowed. It will be necessary to establish a new record with the desired LTL key (Action Code A), and then delete the old record (Action Code D).

APPENDIX E-230 P

MOFAST CARRIER FILE MAINTENANCE

1. PURPOSE

To allow operations personnel to inquire and update the MOFAST Carrier File using CRT equipment.

2. APPENDICES USED IN THIS PROCEDURE

a. Appendix A-106

b. Appendix B-183

c. Appendix D-152

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. There are five types of entries allowed in the procedure:

Specific Inquiry
Update Existing Records
Delete Existing Records
Add New Records
General Inquiry

b. To initialize the CRT, key in $$UWFQ25 and press the ENTER key. If the entry is successful, the following message will display:

```
UWFQ25          CARRIER FILE INQUIRY AND UPDATE

ENTER ONE OF THE FOLLOWING REQUESTS:
                ACTION  CARR            CARRIER NAME
ADD\\\\\\\\\\\... A     ****    ****************************
UPDATE\\\\\\\\\\\ U     ****    ****************************
DELETE\\\\\\\\\\\ D     ****
SPECIFIC INQUIRY\ S     ****
GENERAL INQUIRY\\ G

ACTION    CARRIER       NAME
```

c. The last line of each display identifies the data elements required to access the Carrier File. The CRT cursor will be positioned in the area provided for the entry of the Action Code. Entry of a valid Action Code will cause the cursor to move to the carrier data field for entry of the Standard Alpha Carrier Code. Upon entry of this code the cursor will position itself in the area provided for entry of the in-the-clear carrier name. Access to the file is initiated when the opeator depresses the ENTER key after keying in the required data.

d. Data Entry Actions.

(1) Add - Carrier Record to File. To add a record to the Carrier File the operator must enter Action Code A, a valid Carrier Code, and the in-the-clear carrier name. Example:

```
ACTION A CARRIER UAAF NAME UNITED AIR LINES INC.
```

A successful entry will result in a display of the record data as follows:

```
UWFQ25    CARRIER FILE INQUIRY AND UPDATE

CARR      CARRIER NAME
UAAF  UNITED AIR LINES INC

CARRIER CODE ADDED

   ACTION    CARRIER       NAME
```

(2) Update - Carrier File Record. Modification of a Carrier Name contained in the file is accomplished by the operator entering an Action Code U, a valid Carrier Code, and the desired Carrier Name. Example:

```
ACTION U CARRIER GFLS NAME GARRETT FREIGHT LINES
```

A successful entry will result in the display of the updated record as follows:

```
UWFQ25          CARRIER FILE INQUIRY

CARR            CARRIER NAME
GFLS  GARRETT FRT LINES

CARRIER NAME UPDATED

   ACTION    CARRIER      NAME
```

(3) Delete - Record from File. To delete a Carrier record from the file the operator must enter an Action Code D and the Carrier Code of the record being deleted. Entry of the Carrier name is not required. Example:

```
ACTION D  CARRIER DON1  NAME
```

A successful entry will result in a display of the deleted record as follows:

```
UWFQ25          CARRIER FILE INQUIRY AND UPDATE

CARR            CARRIER NAME
CON1   DON TRUCKING INC

CARRIER CODE DELETED

   ACTION    CARRIER      NAME
```

(4) Specific Inquiry. Inquiry of a specific Carrier record is obtained by entry of Action Code S and the applicable Carrier Code. Entry of the Carrier name is not required. Example:

```
UWFQ25          CARRIER FILE INQUIRY AND UPDATE

CARR            CARRIER NAME
UAAF   UNITED AIR LINES INC

CARRIER NAME DISPLAYED

ACTION    CARRIER      NAME
```

(5) General Inquiry - The entire file. Display of the Carrier File content is obtained by entry of Action Code G. Entry of Carrier Code and/or Carrier name data is not required. Example:

```
ACTION G CARRIER       NAME
```

A successful entry will display the contents of the file. The message "PRESS ENTER TO CONTINUE" notifies the operator that additional records remain to be displayed. The last display of the file is identified by the message "CARRIER FILE LIST COMPLETE."

5. ERROR MESSAGES/ACTIONS

ERROR MESSAGE	CAUSE/ACTION
CARRIER ALREADY ESTABLISHED	Probable Cause: The operator attempted to add a Carrier record which was already on the file. Action: Review the Carrier Code displayed to determine if the code entered was correct. Reenter corrected input or perform a specific inquiry of the Carrier record on file to verify the name on the file. Enter any Carrier name changes using the update action (U).

ERROR MESSAGE	CAUSE/ACTION
CARRIER CODE NOT FOUND	Probable Cause: Carrier Code entered for other than an add action did not match a code on the Carrier File. Action: Review Carrier Code displayed to ensure proper code was entered. Reenter corrected input or establish data for unmatched code using an add action (A).
INVALID ACTION CODE	Probable Cause: Action Code entered was not A, U, D, S, or G. Action: Reenter data using a valid Action Code as stated in appendix B-183.
INVALID CARRIER CODE	Probable Cause: Carrier Code entered contained asterisks in positions one and two. Action: Reenter data using valid Carrier Code.
INVALID CARRIER NAME	Probable Cause: Carrier name data was blank for data entry using Action Codes A or U. Action: Enter in-the-clear Carrier name when Action Code A or U is used.
UWFQ25 BAD RETURN ********	Probable Cause: An error has occurred in the operating program. Action: The CRT operator must inform the supervisor of the message content. Data Systems must be notified of the error so that the program error can be corrected.

APPENDIX E-231 P

CONFIRMATION OF FREIGHT SHIPMENTS OTHER THAN GBL/CBL

1. PURPOSE

Confirm shipment of LOGAIR, Government Truck, Air Express, QUICKTRANS, SEAVAN, UPS, Local Delivery, and Intra-Depot Shipment Unit (SU) by use of a Cathode Ray Tube (CRT).

2. APPENDICES USED IN THIS PROCEDURE

a. Appendix B-182

b. Appendix D-161

c. Appendix E-223 P

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. To initialize a CRT, key in $$UWFH20 and press ENTER key. This entry will dedicate a CRT to shipment confirmation input with the display identified in figure 1 below. In response to the display enter the following elements under their applicable field heading, per appendix B-182.

Type Request Code (Mode)
SU Number (7, 11, or 13 positions)
Check Digit

b. For Type Request Codes 5 or J, Q, T the following additional data elements are required.

Shipment Identification Number
Shipment Cost
Shipment Weight
Date Shipped

The date shipped if other than current and the shipment identification number need only be entered on the first entry line of each display if all succeeding entries remain constant. These fields can be automatically duplicated by depressing one of the field SKIP keys. If the type request code is a 5, J, Q or T on the last entry, the shipment identification number will be automatically duplicated on the first input line of the next CRT display. Data entered in the cost and weight fields must begin at the first position, as these fields do not require leading zeros. Asterisks not overlayed with input data in the shipment identification number field will be treated as blanks.

c. Eligible Type Request Codes:

T = Air Freight
I = Government Trucks
J = Air Small Package Carrier
N = LOGAIR
U = QUICKTRANS
V = SEAVAN
X = Bearer, Walk-Thru (Customer pickup of material)
5 = Surface Small Package Carrier
9 = Local Delivery and Intra-Depot Movement (Local pickup, PDO)
Q = Commercial Air Freight

Multiple SU confirmations can be performed during the same entry by repeating the above input for each SU to be confirmed.

NOTE: The cursor will be prepositioned at the first input field. The cursor will also be automatically prepositioned at the start of the next required input field when the entry in the previous field fills the entire field. To manually position the cursor, utilize one of the SKIP keys.

d. If all confirmation action(s) are successful, the initial display (figure 1 below) will reappear.

e. Action to adjust quantities (denials/cancellations) or extract missing line items must be accomplished prior to using this confirmation process. These adjustments can be accomplished by using programs associated with one or a combination of the following references:

(1) Appendix E-216 P, Area Control Branch Process.

(2) Appendix E-221, Parts A and B, Initial/Exception Input.

(3) Appendix E-238, Part C, Single Line SU.

f. This process also provides the capability to single line a Shipment Unit in conjunction with the confirmation action for Type Request Codes I, J, 5 and 9. Entry of an 11-position SU number will cause the SU to be single lined providing:

(1) The SU has not previously been single lined.

(2) The basic (7-position) SU is in a status acceptable to the single line process.

5. ERROR MESSAGES/ACTIONS

Error messages will be displayed to the right of the invalid entry. When processing multiple SU confirmations the program will accept valid entries and then only display erroneous entries with their associated error messages.

ERROR MESSAGE	CAUSE/ACTION
INVALID CHECK-DIGIT	Probable Cause: The check digit entered is not the correct check digit for the specific SU entered. Action: Verify the SU number and check digit and reenter.
SU PREV ASSIGNED TO GBL	Probable Cause: The SU has previously been assigned to a GBL. Action: Inquire through program UWFQ45 (E-238P, part D) to obtain the GBL number. Cancel the SU from the GBL using program UWFJ20 (E-225 P). Perform the desired confirmation using this program, UWFH20.
S/U RECORD NOT ON FILE	Probable Cause: The SU record has been completed. Action: See appendix E-234 P, part B (UWFH55) and inquire the computer record to verify that the SU has been completed. The confirmation process cannot be completed. Notify supervisor.
INVALID-STATUS OF SU NOT=K	Probable Cause: SU status is other than K. Action: Update action using Type Request Codes N, U or V requires the SU be in K status. See appendix E-234 P, part B (UWFH55), for verification of the Status Code. If the Status Code is not K or final (Y or Z), update the SU record to Status K by referencing appendix E-223 P (UWFH05). After update, dedicate CRT to the confirmation process (UWFH20) and reenter data. If the inquiry shows a status of Y or Z, the confirmation cannot be accomplished. Notify supervisor.
INVALID TYPE REQUEST	Probable Cause: Type Request Code entered is not I, J, T, Q, N, V, X, 5 or 9. Action: The mode of shipment for the item being confirmed must equal one of the valid Type Request Codes for this process. Freight shipments for other modes of shipment must be confirmed using processes defined in either appendix E-235 or E-238 P, part K.

ERROR MESSAGE	CAUSE/ACTION
INV SU ASSIGNED TO CON PACK	Probable Cause: The SU number entered is part of a consolidated pack. Action: Verify that the SU is part of a consolidated pack by inquiring through programs UWFQ45 (E-238 P, part D) and UWFF75 (E-224 P, part G). If the SU has been physically excluded from the consolidation, utilize, Option D, program UWFF55 (E-222 P) to extract the pertinent SU from the chained consolidation structure. Perform desired confirmation action using this program, UWFH20. If it is determined that the SU should be part of the consolidation, the SU should not require a separate confirmation action. Notify your supervisor.
BAD RETURN XXXXXX	Probable Cause: A system error has been encountered. Action: Record the message, notify your supervisor, and continue processing.
INVALID STATUS CODE	Probable Cause: Action to update an SU record using Type Request Code 5, J, T or Q requires that the SU Status Code be A, B, J, K, M or N. Action: Inquire SU record per appendix E-234 P, part B (UWFH55) for verification of the Status Code. Status Code Y or Z indicates the record has been confirmed and no additional processing can be accomplished. SUs with invalid Status Codes other than Y or Z must be updated to a valid status condition using MOFAST freight offering or Status Code update process prior to shipment confirmation action via this method.
INVALID SHIP-ID NR	Probable Cause: Entry using Type Request Code 5, T, J or Q contains a SHIP-ID Number which is zero filled or all blanks or other than alphanumeric data. Action: Reenter data using a valid UPS or Small Package Carrier of Air Express shipment number.
INVALID COST DATA	Probable Cause: Entry using Type Request Code 5, T, J or Q contains alpha characters. Action: Reenter cost data using numeric shipment cost (cents).

ERROR MESSAGE	CAUSE/ACTION
INVALID WEIGHT DATA	Probable Cause: Entry using Type Request Code 5, T, J or Q contains alpha characters in weight data or entry for Type Request Code 5 exceeds 70 pounds. Action: Reenter weight data using accurate numeric data (nearest whole pounds).
INVALID DATE SHIPPED	Probable Cause: Entry using Type Request Code 5, T, J or Q contains alpha characters in the date shipped (DTSHP) field. Also, date shipped entered is less than the date offered to transportation shown in the SU record. Action: Reenter Julian date shipped. Date shipped must be equal to or less than the current date and equal to or greater than the offered date indicated in the SU record.
INVALID CONTAINER DATA	Probable Cause: Update action using Type Request Codes 5, T, J or Q requires the SU to be a single container shipment. Container data in the SU record (input from a previous offer through UWFF01 or UWFE01) indicates the SU has more than one container. Action: Notify supervisor. Verify the actual physical configuration of the SU. If the SU is a single container, clear the erroneous container data (UWFH25, cc option) and reenter data through this program. If the SU has multiple containers, it cannot be confirmed using Type Request Code 5 or J.
SU-LINE NOT FOUND - CANNOT SL	Probable cause: Entry using Type Request Code I, J, T, Q, 5 or 9 with an 11-position SU number is attempting to single line the SU in conjunction with the confirmation action. The basic (7-position) SU and or the line item are not on the In-Process File. Action: Verify SU and LI numbers and reenter data.
SU STATUS INVALID - CANNOT SL	Probable Cause: Entry using Type Request Code I, J, T, Q, 5 or 9 with an 11-position SU number is attempting to single line the SU in conjunction with the confirmation action. The basic (7-position) SU must be in status A, B, C, D, E, G or H. Action: Operator must process a valid Type Code position entry through program UWFH25 to return the basic SU to status A. Reenter data through this process to single line and confirm the line item.

APPENDIX E-232 P

MOFAST SPECIAL PROCESSING RELEASE REQUEST

1. PURPOSE

This procedure will provide the information necessary to generate Release Request Cards (R71, R74, R81, R84, R82, R83, R11, R14, R21, R24, R22, R23) using a computer system. These cards are explained in detail in DLAM 4500.3, Chapter 202.

2. APPENDICES USED IN THIS PROCEDURE

a. Appendix B-219

b. Appendix D-160

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. The MOFAST Release Request Card processing will be initiated by typing $$UWFH10 and pressing the ENTER key. This will dedicate the CRT until another $$ is entered.

b. The initial display will appear as:

```
UWFH10 RELEASE REQUEST PROCESSING
ENTER TYPE REQUEST, LM1 LM2 LM3 ETC,
AND REQUIRED DATA
LM_
```

This display will also appear after each LM entry has been completed.

c. The operator has the option of typing a 1, 2, 3, 4, 5, 6, 7, or 0 and entering the required data. These transactions and their associated data are explained in the following:

(1) LM1 ENTRY

```
ENTER TYPE REQUEST, LM1 LM2 LM3 ETC,
AND REQUIRED DATA
LM1_
```

This entry is used to produce General Data Release Transceiving Cards (R11, R71, R14, and R74). The data that must be entered with an LM1 action and its source is explained in appendix B-219. From one to five Shipment Unit (SU) numbers can be entered here. A comma must be entered for each SU number less than five. The Uniform Freight Classification (UFC) data element is related to the SU number data element in that one UFC must be entered for each SU number,

and commas will substitute for each one less than five. Four cards of remarks are possible with 58 digits per card. The LM1 remarks must be separated by commas, and commas must be substituted for each set of remarks under four not entered. When the LM1 entry is completed, press the ENTER key.

(2) LM2 ENTRY

```
ENTER TYPE REQUEST, LM1 LM2 LM3 ETC,
AND REQUIRED DATA
LM2_
```

This entry is used to produce SU Header Cards (R21 or R84). The data that must be entered with an LM2 action and its source is explained in appendix B-219. The number of transit references, type pack, and Transportation Control Number (TCN) partial fields must correspond to the SU number(s) in LM1 entry, i.e., there must be one of each for each SU number entered, and commas must be substituted for any less than five not entered. Commas must separate data elements in LM2 actions. When the LM2 entry is completed, press the ENTER key.

(3) LM3 ENTRY

```
ENTER TYPE REQUEST, L M1 LM2 LM3 ETC,
AND REQUIRED DATA
LM3_
```

This entry is used to produce SU Remarks Cards (R24 or R84), with a maximum of ten cards possible. Sixty digits per card may be used. When the remarks are finished for a card, a comma will be entered and the remarks for the next card begun. If more than one type fact is needed, an asterisk (*) will be typed and the ENTER key pressed. The LM3 option is typed again, followed by the remaining remarks as LM3 entry continues. An asterisk must be used as the last character of the LM3 action.

(4) LM4 ENTRY

```
ENTER TYPE REQUEST, LM1 LM2 LM3 ETC,
AND REQUIRED DATA
LM4_
```

This action produces Transit Credit Cards (R22 or R82), with a maximum of seven cards possible. The data elements required for this part of the processing, and their source, are documented in appendix B-219. The Inbound Routing Remarks can be 28 digits each and there can be one set of remarks per display. When the card is completed depress the ENTER key. If additional cards are needed, the LM4 action can be typed and reentered. Commas must separate each field.

(5) LM5 ENTRY

ENTER TYPE REQUEST, LM1 LM2 LM3 ETC,
AND REQUIRED DATA
LM5_

This entry is used to produce the Transit Credit Remarks Cards (R24 and R84). A maximum of 15 cards can be requested. Sixty digits per card can be used, and when the remarks are completed for a card, a comma is entered and the remarks for the next card are begun. If more than one tube face is required, type an asterisk (*) and press the ENTER key, then retype the LM5 ID and continue the remarks. An asterisk must be used as the last character of the LM5 action.

(6) LM6 ENTRY

ENTER TYPE REQUEST, LM1 LM2 LM3 ETC,
AND REQUIRED DATA
LM6_

This action generates an individual Outsize Specification Card (R23 and R83) and a possible three Remarks Cards (R24 and R84) of up to 60 digits each. Data elements that are used in this card, and their sources, are explained in appendix B-219. Commas must be substituted for cards not used. All data elements must be separated by commas.

(7) LM7 ENTRY

ENTER TYPE REQUEST, LM1 LM2 LM3 ETC,
AND REQUIRED DATA
LM7_

This entry will generate up to two Address Cards (R24 and R84) which can have a maximum of 60 digits each. Commas must separate elements and must be entered for each card less than two.

(8) LM ENTRY

ENTRY COMPLETE, IF TRANSACTION
COMPLETE ENTER 0 (ZERO) OTHERWISE
ENTER TYPE REQUEST LM1 LM2 LM3 ETC.
AND REQUIRED DATA
LM0_

This action conveys to the system that all entries have been completed. No data is entered with the LM0 action. When the CRT operator types a 0 after the LM display and presses the ENTER key, the Release Request Cards will be generated by the computer.

d. This processing can be used to produce more than one set of release request cards. Return to subparagraph c and enter next request.

5. ERROR MESSAGES/ACTIONS

ERROR MESSAGE	CAUSE/ACTION
INVALIDXXXXXXXXXXXXXXXXXX***RETRY UWF10 RELEASE REQUEST PROCESSING. ENTER TYPE REQUEST LM1 LM2 LM3 ETC. APPENDIX E-233 P

MOFAST SPECIAL PROCESSING FMS SHIPMENT

1. PURPOSE

Shipments of Foreign Military Sales (FMS) materiel are processed differently than MOFAST routine shipments. This procedure defines the actions necessary to process FMS shipments through the MOFAST system.

2. APPENDICES USED IN THIS PROCEDURE

a. Appendix B-206

b. Appendix B-215, Part D

c. Appendix D-165

d. Appendix E-217 P

e. Appendix E-225 P

f. Appendix E-223 P

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. FMS Parcel Post

(1) Shipment Unit (SU) records in this category contain a parcel post automatic clear date. Should the entry of a parcel post, registered, insured number, or NOA number be required, the action must be accompanied prior to the record being cleared from the In-Process File.

(2) The actions required to accomplish the above input are noted in appendices B-206 and E-217 P.

b. FMS Freight

(1) These SUs will not be automatically assigned to a Government Bill of Lading (GBL) number when they are offered for shipment. Instead they will be routed to the Special Processing Area where a shipment planning routing action will be performed.

(2) FMS clerical personnel will review each SU as to the need for shipping instructions, pack and hold criteria, and notice of availability information, and so forth. These clerks will also assemble FMS SUs into meaningful transportation units and make necessary changes to mode, process, and hold codes as noted in appendix E-223 P.

(3) When the transportation unit is defined, the clerk will forward the pertinent documentation to a CRT operator responsible for assigning SUs to a GBL or Commercial Bill of Lading (CBL) record.

(4) The CRT operator will assign GBL/CBL numbers using the procedure defined in appendices B-214, part D and E-225 P.

(5) Once the GBL/CBL number assignment is accomplished the documentation can enter the MOFAST GBL/CBL preparation process. The GBL will be prepared and the pertinent SUs will be processed to the MOWASP System as completed.

APPENDIX E-234 P

MOFAST SPECIAL PROCESSING MOWASP UPDATE
PART A
SPECIAL INPUT PROCESS

1. PURPOSE

To process special ZBM, ZBN, ZVW, TK4 Processing and generate ZCT inquiries.

2. APPENDICES USED IN THIS PROCEDURE

a. Appendix B-1

b. Appendix B-207

c. Appendix D-163

d. Appendix F-85

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. General. This procedure provides for the following types of input:

(1) Entry Code SC. Generates MOWASP DIC ZCT inquiry.

(2) Entry Code UA. Allows input of DIC ZBM or ZEN entries to MOWASP to correct Validation Reject Report (appendix F-85) errors, and DIC TK4 entries to request or modify the Carrier Performance Intransit Analysis Report (appendix F-220) and MRO Depot Processing Time Analysis Report (appendix F-61).

b. Initialize the CRT

(1) Enter $$UWFH30.

(2) Press the ENTER key.

(3) If the entry is successful, the following menu panel will display:

```
UWFH30   SPECIAL INPUT PROCESS

      ENTRY CODE        FUNCTION
         UA          SPECIAL ZBM, ZEN, ZVW, TK4 PROCESSING
         SC          GENERATE ZCT INQUIRIES

     ENTER ENTRY CODE
```

c. Successful input of the Entry Code will cause the appropriate entry formats to display.

(1) Entry Code SC display example:

```
ENTER DATA

 ENTRY CODE SC    ZT INQUIRY    FRC
DOCUMENT NUMBER                        ERROR MESSAGES
```

Up to 20 document numbers may be input.

(2) Entry Code UA display example:

```
ENTRY CODE UA
        1         2         3         4         5         6         7         8
12345678901234567890123456789012345678901234567890123456789012345678901234567890123456789
12345678901234567890123456789012345678901234567890123456789012345678901234567890123456789
```

Up to 9 transactions may be input under the field position indicators.

d. The CRT will remain dedicated to exception MRO processing until another $$ entry is made.

e. Enter data according to appendix B-207 and appendix B-1 as follows:

(1) SC Entry: Cursor will position under Entry Code SC. Press skip key to position cursor under FRC. Entry of the FRC will position cursor for entry of the first document number. Input of a 15 position document number will position cursor on the next line for another input. When document number is 14 positions, the SPACE BAR or SKIP key must be depressed after entry to move the cursor. When inputs are completed, press the ENTER key for input of inquiries into the system. Inquiries which fail validation will be displayed with the error message on the right of the document number.

Example:

```
ENTRY CODE SC    ZCT INQUIRY    FR___
DOCUMENT NUMBER                        ERROR MESSAGES
999999999999999                        XXXXXXXXXXXXX
999999999999999                        XXXXXXXXXXXX
ETC.
```

(2) UA Entry: Cursor will position under the Entry Code. Press the SKIP key to move cursor under the field position indicators. After entry of the 80-position ZBM, ZEN, ZVW or TK4 transaction, the cursor will skip one line into position for the next input. When all inputs are completed, press ENTRY key for input of transactions into the system. Transactions which fail validation will be displayed with the appropriate error message under the transaction.

Example:

```
ENTRY CODE UA
         1         2         3         4         5         6         7         8
12345678901234567890123456789012345678901234567890123456789012345678901234567890123456789
(80 positions of MRO data)
    XXX ERROR MESSAGE XXX
(80 positions of MRO data)
    XXX ERROR MESSAGE XXX
ETC.
```

f. If an entry has been entered successfully (including reentry of all rejected transactions) the message "PROCESS COMPLETED --- ENTER DATA" will display under the input format and the cursor will return to the Entry Code. Input of new Entry Code will cause corresponding format to display without returning to the menu display.

5. ERROR MESSAGES/ACTIONS

The following error messages will be used to identify cause of invalid inputs.

ERROR MESSAGE	CAUSE/ACTION
BAD RETURN (CODE)	Probable Cause: Unusual error condition has been encountered. Action: Notify supervisor.
DUPE MRO ON FILE	Probable Cause: Document number for MRO entered is already on the Cross-Reference File. Action: Correct and reenter.
INVALID DOCUMENT NUMBER	Probable Cause: Document number missing or invalid. Action: Correct and reenter.
INVALID SU	Probable Cause: Shipment Unit number is not numeric or is the wrong length. Action: Correct and reenter.

ERROR MESSAGE	CAUSE/ACTION
INVALID TRANSACTION	Probable Cause: Not acceptable DIC or if DIC is ZEN, must have an acceptable Action Code. Action: Correct and reenter.
INVALID MOFAST SU	Probable Cause: ZEN or ZBM action is for a MOFAST SU. Action: Correct and reenter.
INVALID ENTRY CODE	Probable Cause: Not UA or SC. Action: Correct and reenter.
INVALID MRO DATA	Probable Cause: Incorrect DIC or no document number entered. Action: Correct and reenter.
FUNCTION NOT AVAILABLE AT THIS TERM	Probable Cause: Security violation, type entry not allowed at this terminal. Action: Notify supervisor.
INVALID FRC	Probable Cause: FRC not entered for SC entry. Action: Enter FRC.

APPENDIX E-234 P

MOFAST SPECIAL PROCESSING MOWASP UPDATE
PART B
LINE ITEM, DOCUMENT NUMBER MRO STATUS INQUIRY

1. PURPOSE

To allow the operator access to computer files on completed or in-process MROs to obtain shipment status as an aid in research for continued processing or to provide timely customer information.

2. APPENDICES USED IN THIS PROCEDURE

a. Appendix B-208

b. Appendix D-163

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. General.

This process allows the CRT operator to directly inquire in-process and completed MRO computer file by two methods.

(1) Inquiry by document number.

(2) Inquiry by Shipment Unit and line item number.

b. To initialize the CRT, key in the call characters for MRO status inquiry:

(1) Enter $$UWFH55.

(2) Press the ENTER key. The following is the return display:

UWFH55-01 LI/DOC NO MRO STATUS INQUIRY
ENTER TYPE-CODE, INPUT DATA

NOTE: The CRT will remain dedicated to MRO status inquiry until another Program Call Number is entered.

c. The following steps will be taken to inquire by document number.

(1) Enter Type Code (SB), document number, and suffix, if known, separated by commas as follows:

SB,XXXXXXXXXXXXXX

Where:

SB = Type Code (Constant SB)
X = Document Number
Y = Suffix

(2) If the computer MRO record is completed, the following will display:

```
 COMPLETED MRO              DATE 85317     TIME 1049

                                   DATE-SHIP/
    DOC-NO  GBL-ID  GBL-NO         FORCE CLOSE   DATE CANC   DATE-DENY   QTY-CANC
N65580932432832                      80080        00000       00000       00000

QTY-DENIED      QTY-SHIP   MGT-CODE   MODE    DENIAL-CODE   RCRD-DATE
  00000                                            X          80081

PROCESSING COMPLETED
ENTER TYPE-CODE, INPUT DATA
```

Where:

DATE = Current Date
TIME = Current Time
DOC-NO = Document Number
GBL-ID = GBL Identification Code
GBL-NO = GBL/CBL or Other Shipment Number
DATE-SHIP = Date Shipped/Force Closed
DATE-CANC = Date Canceled
DATE-DENY = Date Denied
QTY-CANC = Quantity Canceled
QTY-DENIED = Quantity Denied
QTY-SHIP = Quantity Shipped
MGT-CODE = Cancel/Deny Management Code (appendix A-13).
MODE = Mode of Shipment will be blank on a Force Close Action.
DENIAL CODE = Denial Code reflects the last position of the Action Code (appendix A-42).
RCRD-DATE = Date Record Established in Completed History File

(3) If the record is in-process, the data will be displayed as follows:

```
 MRO STATUS                    DATE 85317     TIME 1050
A5ESUE059500062078440 0EA00027SC090000540004 Y00000M   15   S9EAL   0010

EXCPT-QTY ACTN DT-FR-CLS
 00000     X     81117

PROCESSING COMPLETED
ENTER TYPE-CODE, INPUT DATA
```

Where:

DATE	= Current Date
TIME	= Current Time
SU-NO	= Shipment Unit Number and Line Item Number
SLI	= Single Line Indicator
LINES	= Shipment Unit Lines
PROC	= Process Code
STAT	= Status Code
PDT	= Planned Delivery to Transportation
LOC	= Warehouse Location
GEO	= Geographic Area Code
AIR	= Air Commodity Code
WATER	= Water Commodity Code
NMFC	= National Motor Freight Classification
SUF	= National Motor Freight Classification Suffix
PP-DAY	= Automatic Clear Date
HOLD	= Hold Code
D-RSN	= Delay Reason Code
OFFER	= Date Offered
LO-CNT	= Low Container
HI-CNT	= High Container
TOT-CNT	= Container Total
PALLET	= Pallet Weight
SKID	= Skid Weight
OFF-E	= Offer Entry Date
TOT-WGT	= Total Weight
TOT-CUBE	= Total Cube
TCN	= Transportation Control Number
GBL-NO	= Government Bill of Lading
GBL-ID	= Government Bill of Lading Identification Code
MODE	= Mode Code
QTY-SHIP	= Shipped Quantity

DATE-SHIP = Shipped Date
PART = Partial Indicator
QTY-DENY = Denial Quantity
QTY-CANCEL = Cancel quantity
EXCPT-QTY = Exception Quantity
ACTN = Exception Quantity or Cancel/Deny Action Code
DT-FR-CLS = Date Force Closed

d. The following steps will be taken to inquire by SU when a suffix search is required:

(1) Enter Type Code SC and document number separated by commas as follows:

SC,XXXXXXXXXXXXXX

(2) If the entry was successful, all matching document numbers and suffixes will be displayed in one of the formats in paragraph c of this procedure.

e. The following steps will be taken to inquire by SU and LI number:

(1) Enter Type Code SA, SU/LI number, separated by commas as follows:

SA,XXXXXXXXXXX or SA,XXXXXXXXXXXXX (for 13-position SU)

(2) Press the ENTER key.

(3) If the entry is successful, the CRT will display the record in the same formats as document number inquiry.

(4) If an inquiry is made on a Shipment Unit or document number that has been partialed, the basic Shipment Unit record will display in the same two-part format with the following message on the second display:

THERE ARE ADDITIONAL RECORDS TO DISPLAY,
PRESS ENTER TO VIEW

(5) After the ENTER key is pressed, the CRT will respond with displays of the partialed Shipment Unit records. After all the records are accessed, the second display of the last record will show the following:

PROCESSING COMPLETED
ENTER TYPE-CODE, INPUT DATA

(6) The CRT is then ready for another inquiry.

5. ERROR MESSAGES/ACTIONS

ERROR MESSAGE	CAUSE/ACTION
INVALID TRANSACTION, REENTER ENTER TYPE-CODE, INPUT DATA	Probable Cause: Type code entered was other than SA, SC or SB. Action: Reenter correct Type Code (SB for document inquiry, SC for document suffix search or SA for SU and line.
NO DOC-NO RECORD FOUND ENTER TYPE-CODE, INPUT DATA	Probable Cause: Document number record could not be found on MOFAST Files. The document number record is held on file for a limited period only. This message indicates this period has expired. Action: Verify document number and reenter. If error persists, inquire by SU and lineitem number if available.
INVALID DOCUMENT NUMBER, REENTER ENTER TYPE-CODE, INPUT DATA	Probable Cause: Document number was incorrect length or comma was left out. Action: Verify document number and reenter.
NO LINE-ITEM RECORD FOUND, REENTER ENTER TYPE-CODE, INPUT DATA	Probable Cause: Line item has been closed from file or line item is nonexistent. Action: Verify SU and line item number with source document. Reenter. If error persists, inquire by document number if available.
INVALID SU, REENTER ENTER TYPE-CODE, INPUT DATA	Probable Cause: Shipment Unit was not numeric or was not 11 digits. Action: Verify SU and line item. Reenter.
NO SU RECORD FOUND, REENTER ENTER TYPE-CODE, INPUT DATA	Probable Cause: Shipment Unit record could not be found on MOFAST files. It has cleared the files or is nonexistent. Action: Verify SU number and line item number. Reenter. If error persists, inquire by document number.

ERROR MESSAGE	CAUSE/ACTION
BAD RETURN UWFA100E, REENTER BAD RETURN READMFOB, REENTER BAD RETURN UWFA400A, REENTER BAD RETURN UWFA400B, REENTER BAD RETURN UWFP300E, REENTER ENTER TYPE-CODE, INPUT DATA	Probable Cause: Process was unable to be completed due to internal program problem. Action: One of these displays indicates that access method returned a bad code to calling program. If condition persists, notify responsible supervisor. To retry, enter original request again.

APPENDIX E-234 P

MOFAST SPECIAL PROCESSING MOWASP UPDATE
PART C
MOFAST SHIPMENT UNIT SPECIAL PROCESSING

1. PURPOSE

To inquire, update status and process cancellations for MROs and Shipment Units in the MOFAST process.

2. APPENDICES USED IN THIS PROCEDURE

a. Appendix A-100

b. Appendix A-102

c. Appendix A-104

d. Appendix B-207

e. Appendix D-163

f. Appendix F-69

g. Appendix F-85

h. Appendix F-184

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. General.

This procedure provides for the following types of input:

(1) Entry Code CA. Consignee inquiry shows which Shipment Units (SUs) are in-process by consignee.

(2) Entry Code CB. Changes SU Processing Code to XX for exception processing. Prevents the assignment of the SU to a GBL.

(3) Entry Code CC. Clears container data for SU in preparation for reentry.

(4) Entry Code CD. Processes partial or complete cancellation of an MRO.

(5) Entry Code CE. Clears MEDALOC Indicator.

(6) Entry Code CF. Sets MEDALOC Indicator.

(7) Entry Code CL. Clears container data for a single Line Item (LI) of an SU in preparation for reentry.

(8) Entry Code CO. Sets Cancellation Override Indicator to O.

(9) Entry Code CQ. Deletes erroneous data from the Exception Quantity field of the LI record. Cannot be used for partial MROs.

(10) Entry Code CZ. Allows Shipment Units in status Y or Z to be returned to status A provided no GBL/CBL is noted in the SU record.

b. Initialize the CRT

(1) Enter $$UWFH25.

(2) Press the ENTER key.

(3) If the entry is successful, the following message will display:

```
UWFH25-12 SPEC  MRO + EXCEPTION PROCESS     ENTER DATA

         1         2         3         4         5         6         7         8
12345678901234567890123456789012345678901234567890123456789012345678901234567890
```

c. All entries will be made above the field position indicators on the line identified by the starting cursor position.

d. The CRT will remain dedicated to exception MRO processing until another $$ entry is made.

e. Enter data according to appendix B-207 as follows:

(1) CA entry: Enter CA and consignee, separated by a comma, and press the ENTER key. Example:

CA,999999

If the entry is successful, the Consignee/Shipment Unit Listing (appendix F-184) will be printed at the special processing remote printer.

(2) CB, CC, CO or CZ entry. Enter CB, CC, CO or CZ, SU number (7, 11, or 13 positions), and check digit, each followed by a comma, and press the ENTER key. Examples:

CB,9999999,9,
or
CC,9999999,9,
or
CO,9999999,9,
or
CZ,9999999,9,

NOTE: Consolidated pack SUs which have a Status Code of K, M, or N must be processed through the UNCHAIN option in program $$UWFF75 (appendix E-224 P, part G) prior to Code CC entry.

(3) CD entry. Enter CD, SU number (7, 11, or 13 positions), check digit, LI number, and quantity canceled (1 to 5 positions), separated by commas, and press the ENTER key.

(a) Example of 7-position SU:

CD,9999999,9,9999,99999,

(b) Example of 11-position SU:

CD,99999999999,9,9999,99999,

(c) Example of 13-position SU:

CD,9999999999999,9,9999,99999,

(4) CE or CF Entry. Enter CE or CF, SU Number (7, 11 or 13 positions), each followed by a coma; then enter check digit, two comas and press the ENTER key.

(a) Example of 7-position SU:

CE,9999999,9,,

(b) Example of 11-position SU:

CE,99999999999,9,,

(c) Example of 13-position SU:

CF,9999999999999,9,,

(5) CL entry. Enter CL and SU/Line Number (11 or 13 positions), each followed by a comma; then enter check digit, two commas, and press the ENTER key. Example:

CL,9999999999999,9,,

(6) CQ entry. Enter CQ, SU number, check digit, and LI number, each followed by a comma, and press the ENTER key. Example:

CQ,9999999,9,9999,

f. If an entry has been entered successfully, one of the following messages will display for all entries except CB:

```
 UWFH25-12 SPEC  MRO + EXCEPTION PROCESS     ENTER DATA
                                            PROCESS COMPLETED
         1         2         3         4         5         6         7         8

BAD RETURN (CODE)	Probable Cause: Unusual error condition has been encountered. Action: Notify supervisor.
CHK DIGIT OR SU NO. INVALID	Probable Cause: Shipment Unit check digit is invalid. Action: Correct and reenter.

ERROR MESSAGE	CAUSE/ACTION
CONSIGNEE NOT ON FILE	Probable Cause: Consignee entered was not found on the Cross-Reference File. Action: Correct and reenter.
EXCEPTION ENTRY PRESENT	Probable Cause: Denial or cancelation entry was attempted on a record for which a prior denial or cancellation was entered on the same day. Action: If adjustment cannot be delayed one day, the prior quantity adjustment must be removed and a new adjustment, including the prior quantity, must be entered. To accomplish this: a. Inquire to determine the previous quantity adjustment. b. Remove exception quantity from the record UWFH80. c. Enter new adjusted quantity shipped through normal input programs.
INVALID SU REENTER	Probable Cause: Shipment Unit number is not numeric or is the wrong length. Action: Correct and reenter.
INVALID TRANSACTION REENTER	Probable Cause: Entry Code is incorrect or entry is in error. Action: Correct and reenter.
LI NOT FLAGGED FOR CANC REENTER ENTER DATA	Probable Cause: Cancelation was attempted on a record for which an AC6 cancellation has not been received (not applicable to FMS), or the Ownership Code, MRO pos. 70, is not alpha for a type DB action. Action: Review the MRO to ensure that the correct SU/LI number is entered with the correct quantity adjustment, or await receipt of the cancellation notice (appendix F-69).

ERROR MESSAGE	CAUSE/ACTION
LI NUMBER INVALID REENTER	Probable Cause: Line Item number is not numeric or is missing when required. Action: Correct and reenter.
LINE ITEM IS PARTIALLED ENTER DATA	Probable Cause: Type CQ entry was attempted for a partialled Line Item, which cannot be accomplished by CRT. Action: Notify supervisor. Line Item must be placed in DP Status and the quantity reported off-line.
QTY PREVIOUSLY DENIED	Probable Cause: Operator attempted to enter a denial to a record for which a cancellation was already sent to the ICP, or to enter a cancellation for which a denial was already sent to the ICP. Note that a denial/cancellation quantity must exceed any previous denial/cancellation quantity existing on the record. Action: Investigative action required by Special Processing to place the MRO in DP Status.
QUANTITY ERROR REENTER	Probable Cause: Quantity canceled conflicts with data in the record, is non-numeric, or is the wrong length. Action: Correct and reenter.
SU UNDER CONSOLIDATION, CORRECT AND REENTER	Probable Cause: Operator attempted to enter a type CC input on a consolidated pack shipment which is still assigned to a GBL. Action: Shipment must be canceled from GBL prior to reentering type CC format.
THIS LINE IS SINGLE-LINED REENTER ENTER DATA	Probable Cause: Operator entered a Type CD format using a 7-position SU number. Input violated because the pertinent LI was already established as an 11-position SU number. Action: Reenter type CD format using valid 11-position SU number.

APPENDIX E-235 P

SHIPMENTS PROCESSED ON MANUAL BILLS OF LADING

1. PURPOSE

This program is used to assign an open Shipment Unit to a manual GBL or CBL. It can be used to clear a shipment assigned to a mechanized GBL previously processed through program $$UWFK05 and printed and no longer in process which would allow inclusion of this Shipment Unit with the GBL for regular processing.

2. APPENDICES USED IN THIS PROCEDURE

a. Appendix B-196

b. Appendix D-167

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. CRT Initialization.

(1) Key in $$UWFG40.

(2) Press the ENTER key.

(3) If the entry is successful, the following message will display:

UWFG40-XX MOFAST MANUAL GBL PROCESSING
ENTER DATA

(a) To assign a single open Shipment Unit to a manual GBL or CBL, enter SU number, check digit, GBL number, GBL cost, carrier code and date shipped separated by commas. Example:

AAAAAAA,B,CCCCCCCC,DDD,EEEE,FFFFF,

Where:

A - Shipment Unit Number
B - Check Digit
C - GBL Number
D - GBL Cost
E - Carrier Code
F - Julian Date

NOTE: The GBL cost does not require leading zeros. Only enter the actual digits up to 7 total. SU number may be 7, 11, or 13 positions.

(b) If the entry is for a consolidated pack shipment make the following entry for the Master SU: Enter CP, SU number, check digit, GBL number, GBL cost, carrier code, date shipped (all data separated by commas). Example:

CP,1234567,3,A7654321,8.64,IMLF,77148,

NOTE: The GBL cost entered must be an average cost per SU, i.e., if ten SUs are in the consolidation, the entry is 1/10 of the total SU cost.

(4) A successful entry will result in confirmation of all Shipment Units within the consolidation.

(5) If the entry is successful, the following message will display:

UPDATE SUCCESSFUL
ENTER DATA

The CRT is then ready for another entry.

5. ERROR MESSAGES/ACTIONS

ERROR MESSAGE	CAUSE/ACTION
INVALID FORMAT 1234567,4,K1234567,12.50.DRGW, 80136, RE-ENTER DATA ENTER DATA	Probable Cause: Self-explanatory. Action: Correct entry format and reenter data.
NO SU RECORD FOUND SU IN-ERROR = 1234567000000 RE-ENTER DATA ENTER DATA	Probable Causes: (1) Shipment Unit number entered was not numeric; (2) Shipment Unit numbers could have been transposed incorrectly and (3) Shipment Unit entered is no longer an open file. Action: (1), (2) and (3) review, correct and reenter; Retry entry to make sure it was was entered correctly. If message persists inquire $$UWFH55 for possible single line status for Shipment Unit being cleared. This program will also indicate mode, GBL number and clear date of SU if it has been processed within the last 10 days. If this inquiry indicates SU in single line status, reenter this program and process as an 11-digit SU. If inquiry indicates SU cleared, or no record found, SU has already been

ERROR MESSAGE	CAUSE/ACTION
	processed and is no longer accessible for processing through this program. Refer the shipment to the supervisor.
INVALID CHECK DIGIT 1234567,3,K1234567,12.50, DRGW,80136, RE-ENTER DATA ENTER DATA	Probable Cause: Check digit does not match Shipment Unit number entered. Action: Reenter with corrected SU number or check digit.
INVALID GBL NUMBER 1234567,4,12.50,DRGW, 80136, RE-ENTER DATA ENTER DATA	Probable Cause: GBL number is missing or incorrectly entered. Action: Review, correct and reenter.
SU ALREADY ASSIGNED TO GBL K7194986 SU IN-ERROR = 1234567000000 RE-ENTER DATA ENTER DATA	Probable Cause: The GBL field in the Shipment Unit record already contains a GBL number. The Shipment Unit record may have been incorrectly updated, or operator may be trying to update the wrong Shipment Unit record. Action: Review, correct and reenter.
INVALID CARRIER 1234567,4,K1234567,12.50,1111, 80136, RE-ENTER DATA ENTER DATA	Probable Cause: Carrier Code is missing or does not match Carrier Code on the carrier file. Action: Review, correct and reenter.
CONTAINER DATA IS IN ERROR SU IN-ERROR = 1234567000000 RE-ENTER DATA ENTER DATA	Probable Cause: No container information has been entered in the Shipment Unit record. Action: Research and correct this situation and reenter data.
INVALID DATE SHIPPED SU IN-ERROR = 1234567000000 RE-ENTER DATA	Probable Cause: Date shipped is less than date offered in the SU record. Action: Correct and reenter valid Julian date.
INVALID DATE SHIPPED 1234567,4,K1234567,12.50.DRGW, ENTER DATA	Probable Cause: Date shipped is not numeric. Action: Correct and reenter valid Julian date.

ERROR MESSAGE	CAUSE/ACTION
INVALID SU NUMBER 1234567001,5,K1234567, 12.50.DRGW,80136, RE-ENTER DATA ENTER DATA	Probable Cause: The SU number was not all numeric or was not 7, 11, or 13 characters in length. Action: Ascertain the correct SU number from documents and reenter correct data.
INVALID GBL COST 1234567,4,K1234567,12.5A, DRGW,80136, RE-ENTER DATA ENTER DATA	Probable Cause: The GBL cost entry was not numeric, other than zeros or did not contain two decimal places. Action: Ascertain the correct GBL cost entry from documentation and reenter correct data.
SU UNDER CONSOLIDATION SU IN-ERROR = 1234567000000 RE-ENTER DATA ENTER DATA	Probable Cause: The SU number entered is included as a part of a consolidated pack shipment. Action: If the SU should not be included as a part of a consolidated pack shipment correct the records through program UWFF75 (appendix E-234 P, part G). If the SU is to be included in a consolidated pack, reenter the SU under the CP option of this procedure.
MASTER SU NOT ENTERED FOR CP SU IN-ERROR=1234567000000 RE-ENTER DATA ENTER DATA	Probable Cause: The SU number entered on the CP option is not the SU number designated as the Master SU of the consolidation. Action: Determine the Master SU of the consolidation using program $$UWFF75. Reenter the data using the correct SU number.
BAD RETURN CODE XXXXXXX SU IN-ERROR = 1234567000000	Probable Cause: System error has occurred. Action: Notify supervisor, continue processing.
INVALID STATUS SU IN-ERROR = 1234567000000 RE-ENTER DATA ENTER DATA	Probable Cause: Shipment Unit status precludes the use of this program to clear the Shipment Unit. Action: Inquire the Shipment Unit record, (appendix E-238-D) to determine the Shipment Unit status and corrective action required.

ERROR MESSAGE	CAUSE/ACTION
INVALID SU-MEDALOC ITEM SU IN-ERROR = 1234567000000 RE-ENTER DATA ENTER DATA	Probable Cause: Shipment is flagged as MEDALOC eligible and the POE is other than 103 or 303 which indicates shipment to a colocated container consolidation point. Action: Reroute Shipment Unit through the container consolidation point or remove MEDALOC eligible indicator from the MOFAST Shipment Unit by using program $$UWFH25 CE type input (appendix E-234) or if the Shipment Unit record POE is invalid update the record with POE 103/303 as appropriate using program $$UWFQ45 (appendix E-231); this should only be done if the shipment is to be made to other than a colocated MEDALOC container consolidation point.

APPENDIX E-236 P

MOFAST RATE BASE FILE MAINTENANCE

1. PURPOSE

The MOFAST Freight Rating Process uses an interrelated network of data files known collectively as the MOFAST Rate Base Files. These files contain a variety of freight rate information which is used by the computer to automatically compute and assign transportation costs to freight shipments on bills of lading. This appendix describes the procedures for maintenance of the MOFAST Rate Base Files.

2. APPENDICES USED IN THIS PROCEDURE

a. Appendix B-185

b. Appendix D-156

c. Appendix F-194, Parts 1 through 9

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. This procedure will be used to update the various MOFAST Rate Base Files using Cathode Ray Tube (CRT) input. These files are listed below with a brief description of the purpose and content of each file.

(1) SPLC/Rate Base/Tariff Tender Cross-Reference File.

(a) This file provides the capability to cross-reference GBL SPLC and mode code data to either a class rate tariff, freight tender identification number, or Government Rate Tender. The identification number is used by the rating process to locate detailed rate information contained in other MOFAST Rate Files.

(b) A record must be established for each SPLC served by the depot. Mode of Shipment Codes are used to identify the type of shipment pertinent to the tariff identification number.

(c) The SPLC and Mode Code contained in the MOFAST bill of lading record provide the source information used to access this file.

(2) Rate Base File.

(a) This file contains detailed class rate data. The tariff identification number obtained from the SPLC/Rate Base/Cross-Reference File (subparagraph (1) above) is used to obtain rate information for the bill of lading being rated.

(b) A Rate Base File record is established for each tariff identification number noted in the SPLC/Rate Base/Cross-Reference File.

(3) Beyond Indicator Record.

This file is established to provide the capability to compute distribution costs associated with either class or freight all kinds tariffs. Data is entered into this file when the tariff indicates that distribution and/or arbitrary charges over and above the basic rate will be assigned to the total transportation charges.

(4) Tariff Tender File.

This file contains detailed FAK rate data specified in carrier tender addendums to established tariffs. A record of this type is established for each tariff tender identification number noted in the SPLC/Rate Base/Tariff Tender Cross-Reference File.

(5) Special Tariff File.

(a) This file is established to allow various types of FAK tariffs to be available in the GBL rating process. Detail rate information for FAK tariffs which cannot be included in the tariff tender file format is established in this file.

(b) The use of special tariffs is predetermined by shipment planning personnel. Pertinent rate data for a specific bill of lading is obtained from this file when the applicable tariff number is keyed into the MOFAST GBL preparation program. Detailed rate information is made available to the billing process when a match of tariff numbers occurs.

(6) Spur File.

(a) The data entered into this file format represents valid Freight Terminal outloading or staging locations. This file is used to validate "Spur Numbers" entered in the MOFAST Terminal Routing and Carrier Assignment Table.

(b) Prior to updating this file, depots should review their Transportation Distribution pattern and organize their freight outloading terminal so that materiel compatible to each specific load can be routed to a common location in the freight terminal. Spur numbers (locations) should be assigned to each load or materiel holding area. This code would then be entered in the Spur File.

(7) Contraband List Table.

This table is used to identify contraband items specified in various tariffs. Each grouping of contraband items is identified by a 2-digit, locally developed, code. This code provides a cross-reference identification number which is used to access this file from the detailed rate information.

(8) GBL Carrier Exception Table.

This is a table of carriers (4-digit code) that do not participate in a specific tariff/tender. The capability is provided mainly for Government Rate Tenders (GRT).

(9) Multiple Amount Record.

This file will only exist when there is a requirement to incorporate multiple charges applicable to a specific tariff. The minimum amount field in the particular type record (subparagraphs (2)-(5) above) will contain the key to this record which will contain multiple amounts.

b. Processing Procedure.

(1) To begin processing, enter $$UWFK60 (this is a one time entry) and press the ENTER key. The following message will be displayed:

```
UWFK60        R A T E   B A S E   F I L E

     SELECT A "SF" KEY FOR INPUT FORMAT
         SF1 = (A) SPLC/RATE BASE/TARIFF TENDER RECORD
         SF2 = (B) RATE BASE RECORD
         SF3 = (C) BEYOND INDICATOR RECORD
         SF4 = (D) TARIFF TENDER RECORD
         SF5 = (E) SPECIAL TARIFF RECORD
         SF6 = (F) SPUR RECORD
         SF7 = (G) CONTRABAND RECORD
         SF8 = (H) GBL EXCEPTION CARRIER RECORD
         SF9 = (I) MULTIPLE AMOUNT RECORD
SF_
```

(2) Enter the number corresponding to the record desired or press the SF_ key corresponding to the record desired.

(a) Action Codes:

A - Add
C - Change
D - Delete
R - Reestablish
S - Return input on add
I - Inquire

(b) Type Record Codes:

A - SPLC/Rate Base/Tariff Tender Record
B - Rate Base File Record
C - Beyond Indicator Record
D - Tariff Tender File
E - Special Tariff File
F - Spur Record
G - Contraband List Table
H - GBL Exception Carriers
I - Multiple Amount Record

(c) SF_ Keys Entered To Update Various Records:

1. SPLC/Rate Base/Tariff Tender Record.

SF1 - The following record will be displayed:

SPLC/RATE BASE/TARIFF TENDER RECORD
ACTION X SPLC YYYYYYYYY MODE Z GRT-IND G

Where:

X - Action Code (From subparagraph (a) above.)
Y - SPLC Code
Z - Mode Code
G - Government Rate Base Indicator or Blank

2. Rate Base File Record.

SF2 - The following record will be displayed:

RATE BASE FILE RECORD
ACTION X RATE-BASE YYYYYY TARIFF ZZZZZZZZZZ

Where:

X - Action Code (From subparagraph (a) above.)
Y - Rate Base Number
Z - Tariff Number

3. Beyond Indicator Record.

SF3 - The following record will be displayed:

BEYOND INDICATOR RECORD
ACTION X BEYOND-CODE YY SPLC ZZZZZZZZZ

Where:

X - Action Code (From subparagraph (a) above.)
Y - Beyond Code
Z - SPLC

4. Tariff Tender File.

SF4 - The following record will be displayed:

TARIFF TENDER FILE
ACTION X CARRIER VVVV TENDER WWWW RATE-BASE YYYYYY TYPE Z

Where:

X - Action Code (From subparagraph (a) above.)
V - Carrier (SCAC) Code
W - Tender Number
Y - Rate Base Number
Z - Type Rate

5. Special Tariff File.

SF5 - The following record will be displayed.

SPECIAL TARIFF FILE
ACTION X TARIFF YYYYYYYYYY DISTRIBUTION Z

Where:

X - Action Code (From subparagraph (a) above.)
Y - Tariff Number
Z - Distribution Area

6. Spur Record.

SF6 - The following record will be displayed:

SPUR RECORD
ACTION X SEQUENCE 1

Where:

X - Action Code (From subparagraph (a) above.)
1 - Program Constant Record Sequence

7. Contraband List Table.

SF7 - The following record will be displayed:

CONTRABAND LIST TABLE
ACTION X CONTRABAND YY SEQUENCE 01

Where:

X - Action Code (From subparagraph (a) above.)
Y - Contraband List Code
1 - Record Sequence (Program Constant)

8. GBL Exception Carriers.

SF8 - The following record will be displayed:

GBL EXCEPTION CARRIERS
ACTION X EXCEPTION YY SEQUENCE 01

Where:

X - Action Code (From subparagraph (a) above.)
Y - Carrier Exception
1 - Record Sequence (Program Constant)

9. Multiple Amount Record:

SF9 - The following record will be displayed.

MULTIPLE AMOUNT RECORD
ACTION X MULTI-KEY ZZZ

Where:

X - Action Code (From subparagraph (a) above.)
Z - Minimum Amount (from B Record)
or
Minimum, Maximum or Arbitrary Amount (from C Record)
or
Minimum Cost (from D Record)
or
Stop charge, maximum charge, or minimum cost (from E Record)

Press ENTER key and the appropriate record will be displayed.

(3) Add entries (Action Code A) will generate the following display:

(a) SPLC/Rate Base/Tariff Tender Record.

```
SPLC/RATE BASE/TARIFF TENDER RECORD
ACTION A SPLC XXXXXXXXX MODE X

RATE-BASE   TARIFF  FAK-FLAG CARR TNDR RATE-BASE TYPE CONTRBD
ALT-CDE PRIME
```

DISPLAY HEADING	EXPLANATION
RATE BASE	Rate Base Number.
TARIFF	Tariff Number.
FAK-FLAG	FAK Flag.

NOTE: Reposition the cursor and enter the desired data. The SKIP key will take the cursor to the next updatable field. If other than numeric data is entered in a numeric field, the display will be returned with the words "INVALID DATA" in the bottom left corner. The cursor will be positioned at the field in error. Reenter the correct data. The following message will be returned when the transaction is complete:

ACTION COMPLETE

SF1...SPLC/RATE BASE	SF4...TARIFF TENDER	SF7...CONTRABAND
SF2...RATE BASE	SF5...SPECIAL TARIFF	SF8...CARRIER EXCEPTION
SF3...BEYOND RATES	SF6...SPUR FILE	SF9...MULTIPLE AMOUNT

(4) Change Procedure (Action Code C). The procedure for change processing will be the same as for ADD processing, with the exception that data from existing files will appear on the display. Overlay the desired field with the corrected data.

(5) Delete Procedure (Action Code D). If a delete request is successful, the following message will be displayed:

RECORD FLAGGED FOR DELETE

SF1...SPLC/RATE BASE	SF4...TARIFF TENDER	SF7...CONTRABAND
SF2...RATE BASE	SF5...SPECIAL TARIFF	SF8...CARRIER EXCEPTION
SF3...BEYOND RATES	SF6...SPUR FILE	SF9...MULTIPLE AMOUNT

(6) Reestablish Procedure (Action Code R). If a record has been logically deleted, but the physical record remains on the file with a delete status, an R transaction will reestablish the record. If the reestablishment is successful, the following message will be displayed:

RE-ESTABLISH COMPLETE

SF1...SPLC/RATE BASE	SF4...TARIFF TENDER	SF7...CONTRABAND
SF2...RATE BASE	SF5...SPECIAL TARIFF	SF8...CARRIER EXCEPTION
SF3...BEYOND RATES	SF6...SPUR FILE	SF9...MULTIPLE AMOUNT

(7) Return Input on Add (Action Code S). When the initial display is returned on an add, change the A Action Code to S, then update pertinent data. Upon completion, the entry made will return with the words "ACTION COMPLETE" in the lower left corner. If another entry is desired, update the pertinent fields in the display and press ENTER.

(8) Inquire (Action Code I). To Inquire a rate base record, enter an I Action Code and the required data to identify the specific record format. Data will be displayed according to the formats shown in paragraph 4b(3) of this procedure.

5. ERROR MESSAGES/ACTIONS

On each error condition, the display will be whatever data was keyed in and the message in the lower left will be one of the following:

ERROR MESSAGE	CAUSE/ACTION
RECORD FLAGGED FOR DELETE	
SF1...SPLC/RATE BASE SF2...RATE BASE SF3...BEYOND RATES SF4...TARIFF TENDER SF5...SPECIAL TARIFF SF6...SPUR FILE SF7...CONTRABAND SF8...CARRIER EXCEPTION SF9...MULTIPLE AMOUNT	Probable Cause: Trying to accomplish some type of action upon a record which has been flagged with a delete status. Action: If the correct record has been keyed in, an R transaction will reestablish the record.
INVALID ACTION CODE	
SF1...SPLC/RATE BASE SF2...RATE BASE SF3...BEYOND RATES SF4...TARIFF TENDER SF5...SPECIAL TARIFF SF6...SPUR FILE SF7...CONTRABAND SF8...CARRIER EXCEPTION SF9...MULTIPLE AMOUNT	Probable Cause: An Action Code of other than A, C, D, R or S has been entered. Action: Reenter with correct action code.

ERROR MESSAGE	CAUSE/ACTION
RECORD NOT ON FILE SF1...SPLC/RATE BASE SF2...RATE BASE SF3...BEYOND RATES SF4...TARIFF TENDER SF5...SPECIAL TARIFF SF6...SPUR FILE SF7...CONTRABAND SF8...CARRIER EXCEPTION SF9...MULTIPLE AMOUNT	Probable Cause: The data entered does not match any record on the file requested. Action: Reenter data.
RECORD ALREADY ON FILE SF1...SPLC/RATE BASE SF2...RATE BASE SF3...BEYOND RATES SF4...TARIFF TENDER SF5...SPECIAL TARIFF SF6...SPUR FILE SF7...CONTRABAND SF8...CARRRIER EXCEPTION SF9...MULTIPLE AMOUNT	Probable Cause: The record that was keyed in with an A Action Code has already been established. Action: Changes may be made to the record or reenter data.
UWFK60 BAD RETURN FROM UWFXXX XXXXXXXX SF1...SPLC/RATE BASE SF2...RATE BASE SF3...BEYOND RATES SF4...TARIFF TENDER SF5...SPECIAL TARIFF SF6...SPUR FILE SF7...CONTRABAND SF8...CARRIER EXCEPTION SF9...MULTIPLE AMOUNT	Probable Cause: A system error has been encountered. Action: Record the message, notify your supervisor, then continue processing.

APPENDIX E-237 P

MOFAST PROCESSING OF TRANSACTIONS TO MOWASP

1. PURPOSE

The MOFAST Systems automatically create B-99 (DIC ZBM) and B-128 (DIC ZEN) data necessary to update the MOWASP System. The procedure explains the actions to be taken to properly clear items rejected by the MOWASP System or items otherwise not properly processed through the MOFAST System.

2. APPENDICES USED IN THIS PROCEDURE

a. Appendix B-99

b. Appendix B-128

c. Appendix B-207

d. Appendix D-168

e. Appendix E-234 P

f. Appendix F-085

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. The MOFAST In-Process File operates independently from the MOWASP System. Therefore, transactions accomplished during the daily operation of the teleprocessing system must be reported to MOWASP on a timely basis. The MOFAST System prepares DICs ZBM and ZEN record formats to achieve this requirement.

b. The DICs ZBM and ZEN records configured by the MOFAST System are passed to the MOWASP System during the file maintenance process which occurs at the end of each day's business. Shipment Unit/Line Item (SU/LI) records in the MOFAST System which contain a Y or Z Status Code will be deleted from the MOFAST In-Process File at this time.

c. Violations of DICs ZBM and ZEN input will appear on the appendix F-85, Violation Reject Listing. Individuals responsible for monitoring and processing transactions related to the F-85 report must initiate the proper MOWSAP entry, per appendix B-207. Use of input to clear the MOWASP In-Process File is made to ensure that the record is no longer in the teleprocessing system.

d. Records still in the teleprocessing system must be processed using the established MOFAST procedure to correct the data base, offer the shipment to transportation, and confirm the shipment. Properly updated records will process to the MOWASP System during the daily file maintenance routine.

APPENDIX E-238 P

MOFAST UTILITY PROGRAMS
PART A
GBL COVER SHEET INQUIRY AND UPDATE

1. PURPOSE

This process provides final edit and correction of the MOFAST Government Bill of Lading (GBL) cover sheet. It provides the capability of reviewing the GBL cover sheet and making corrections to selected fields before final printing.

2. APPENDICES USED IN THIS PROCEDURE

a. Appendix B-188

b. Appendix D-150

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. General.

This program operates in an on-line environment and can perform two functions:

(1) Make an inquiry of the GBL cover sheet file.

(2) Update certain fields in the GBL cover sheet records.

b. CRT Initialization:

(1) Key in the call characters for GBL cover sheet final edit; enter $$UWFL10.

(2) Press the ENTER key. (This is a one-time entry.) Following is the return display:

UWFL10-AA-10 GBL COVER SHEET INQ / UPDT I=INQUIRY ENTER GBL AND PART-NO. U=UPDATE ENTER (U) ON FIRST LINE PRESS ENTER KEY TO DISPLAY NEXT PART ENTER REQUEST

The CRT will remain dedicated to GBL cover sheet input until another $$ prefix is entered.

c. The following steps will be taken to inquire or make updates to the GBL cover sheet file.

(1) Inquiry.

(a) Key in the following: I, GBL number, and part number separated by commas as shown in the following example:

I,M3935387,1

Where:

M3935387 = GBL Number 1 = GBL part number to be displayed

NOTE: The GBL cover sheet display will be in two parts. An inquiry of any one of the displays can be made by entering the part number desired.

(b) Press ENTER key.

If the part number entered is 1 and the entry is successful, the first part will display as shown in figure 1 below:

NOTE 1: The GBL cover sheet record requires two parts or CRT images to display one complete cover sheet record. Blank fields will be filled with asterisks (*). Numeric fields will be displayed with zeros or numeric data.

NOTE 2: To display the second part, press the ENTER key. The format shown in figure 2 below, will appear.

NOTE 3: The second display can be displayed directly by entering part number 2 in the inquiry request.

(2) Update.

The first display can be updated by entering a U in the top left hand corner of the display. Then change the display by entering the desired changes, and overlaying the old data. Those data fields which cannot be changed are as follows:

(a) First Display:

GBL Number
Manual Rate Flag
Manual Cost
Tariff Flag
Special Tariff
Mode
GRT Indicator
Batch Processing Indicator
Pool Weight
GBL Weight
Pieces
Cube
Pallet Weight
Skid Weight
Air Certification Code

Rmrks
Priority
RIN - Statement

(b) Second Display - None of the data elements shown on the second display can be updated.

1. When all desired changes have been made to a display, press the ENTER key. If the entry was successful, the following will display:

```
      GBL-NO      PART-NO
    M3935387        X
UPDATE COMPLETED SUCCESSFULLY
ENTER REQUEST
```

The CRT is then ready for another inquiry.

2. When all parts have been displayed, the following message will display:

LAST PART OF GBL AAAAAAAA DISPLAYED ENTER REQUEST

The CRT is then ready for another inquiry.

5. ERROR MESSAGES/ACTIONS

ERROR MESSAGE	CAUSE/ACTION
GBL-NO NOT FOUND ON COVERSHEET FILE ENTER REQUEST	Probable Cause: The GBL number cannot be found on the GBL cover sheet file. Action: Ensure the GBL number input was correct. If not, enter the correct number. If the number was correct, the GBL has probably been printed. Go on to next inquiry/update.
INVALID REQUEST = XXXXXXXXXXXX ENTER REQUEST	Probable Cause: The inquiry format is in error. Action: Review and reenter data in correct format.
INVALID DATA UPDATED, UPDATE CANCELLED ENTER REQUEST	Probable Cause: Alpha data was entered in an update of a numeric field or an attempt was made to update restricted data, reference paragraph 4c(2) above. Action: Review, correct, and reenter original inquiry and update actions.

ERROR MESSAGE	CAUSE/ACTION
GBL-NO OR PART-NO FORMAT ERROR ENTER REQUEST	Probable Cause: GBL number and/or part number have been changed and are not the same as displayed. Action: Review and reenter original inquiry and update actions.
BAD RETURN ACCESS METHOD X ENTER REQUEST	Probable Cause: This message is caused by reasons other than operator input. Action: Review and reenter original request. If the message persists, notify responsible supervisor.
CHECK DIGITS NOT EQUAL, ENTER REQUEST RE-ENTER	Probable Cause: GBL number has been altered through update. Action: Review and reenter original request.

APPENDIX E-238 P

MOFAST UTILITY PROGRAMS
PART B
MOFAST GENERAL UTILITY

1. PURPOSE

This process will be used for correcting cases such as power failure, abnormal program end, and errors in entering data, by regeneration of shipping labels or route slips.

2. APPENDIX USED IN THIS PROCEDURE

Appendix B-215, Part E

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. General.

This process is used as a general utility for the MOFAST System.

b. CRT Initialization.

(1) Key in $$UWFQ35.

(2) Press the ENTER key.

(3) Response:

UWFQ35-XX MOFAST UTILITY ENTER TYPE REQUEST AND REQUIRED DATA

c. General Utility Input.

(1) Operator will key in data following the above message utilizing one of the following formats:

(a) Regenerate shipment labels, DD Form 1387-1, enter:

```
        B
C,9999999 - Duplicate of original entry.
F,9999999 - Shipment Label with WPOE/WPOD Addresses.
M,9999999 - Shipment Label with APOE/APOD Addresses.
```

(b) Regenerate route slip, enter:

```
        B    D
D,9999999,XX
```

(c) Generate shipment labels (stencils) in the area control branches, enter:

```
E   B
9,9999999
```

(d) Zero a sort line conveyor length on the sorter file, enter:

```
    A
B,99
```

(e) Delete complete data for a sort line, from the sorter file, enter:

```
    A
E,99
```

(f) Block a sort line (sets occupied flag) on the sorter file, enter:

```
    A
K,99
```

(g) Remove the occupied flag for a sort line from the sorter file, enter:

```
    A
A,99
```

(h) Update Shipment Unit Find Container Codes for shipments processed on the MOFAST sorter, enter:

```
        B   F  G  H
U,9999999,9,999,X
```

NOTE: SU status must equal C and the container number must be the highest container number recorded in the SU record.

b. The following options and input formats are used primarily for testing sorter application programs:

(1) Update a sort line to status F, enter:

```
    A
G,99
```

(2) Add a shipment to the sorter file, enter:

```
     C      B      A
H,XXXXXX,9999999,99
```

(3) Force a sort line conveyor length to overflow, enter:

```
    A
W,99
```

(4) Clears the three sort line indicators (SU record) to zero, enter:

B
J,9999999

Where:

A = Sort Rack Line Number (1-99 Ogden; 1-71 Memphis; 12-97 Richmond)
B = Shipment Unit Number (7, 11 or 13 positions)
C = Consignee
D = Spur
E = Requesting Area Control Branch Number (1 through 5)
F = Check Digit
G = Container Number H = Final Code (Core)

(5) When the desired input data has been entered, press the ENTER key. If the data was entered successfully the following will display:

UPDATE REQUESTED HAS BEEN COMPLETED

The CRT is then ready for the next entry.

5. ERROR MESSAGES/ACTIONS

ERROR MESSAGE	CAUSE/ACTION
INVALID INPUT RE-ENTER	Probable Cause: Data entered does not meet the prescribed format. Action: Correct the data in error and reenter using the proper format.
CONTAINER DATA HAS NOT BEEN ENTERED	Probable Cause: Action to force a route slip cannot be completed because container information is not included in the Shipment Unit record. Action: Operator must complete initial and exception input, per appendix E-219, parts A and B, or E-221, parts A and B.
BAD RETURN XXXXXX YYYYYYYY Where: XXXXXX = Program Number YYYYYYYY = Error Code	Probable Cause: A system error has occured. Action: The error was caused by other than operator input. Record the error message and notify supervisor.

ERROR MESSAGE	CAUSE/ACTION
INVALID REQUEST TYPE	Probable Cause: The entry contains an invalid Type Request Code. Action: Determine Type Request Code desired and reenter data.
RECORD NOT FOUND	Probable Cause: Action to force route slip or labels cannot be completed because the SU number entered has been closed, from the In-Process File or is nonexistent. The SU may have been single lined and requires input of an 11-position SU number. Action: Ascertain correct SU number from the source document and reenter data.
INVALID CONTROL CENTER TERMINAL	Probable Cause: Input is requesting a label image (stencil) from an unauthorized CRT. Action: Reenter data utilizing an authorized CRT terminal.
INVALID SU STATUS	Probable Cause: Action to enter a sorter SU Final Container Code cannot be accomplished because the SU status is other than C. Action: Corrective action is dependent upon the current SU status. Inquire the SU record (UWFQ45) to determine the current SU status.
INVALID CTN NUMBER	Probable Cause: Action to enter a sorter SU Final Container Code cannot be accomplished because the container number entered is not the highest container number recorded in the SU record. Action: Inquire SU container data (UWFQ45) to obtain the highest container number and reenter data.

APPENDIX E-238 P

MOFAST UTILITY PROGRAMS
PART C
SINGLE LINE SHIPMENT UNIT PROGRAM

1. PURPOSE

To provide a means to single line a Shipment Unit and if needed, reverse the process of creating a single line Shipment Unit.

2. APPENDIX USED IN THIS PROCEDURE

Appendix B-215, Part J

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. General.

This process will "single line" a line item in a multiline Shipment Unit. For this single lined line item a Shipment Unit will be created. If necessary, this process can be also used to reverse the single lined line item and destroy the Shipment Unit created for it.

b. CRT Initialization.

(1) Key in $$UWFQ40.

(2) Press the ENTER key.

(3) This entry will dedicate a CRT for single line action with the following display:

```
UWFQ40-00  SINGLE LINE PROGRAM
SU        CD REV            MESSAGES
00000000000 0
00000000000 0
00000000000 0
00000000000 0
00000000000 0
00000000000 0
00000000000 0
00000000000 0
00000000000 0
00000000000 0
```

best copy available

NOTE: The cursor will be prepositioned at the first SU number input field. The cursor will also be automatically prepositioned at the start of the next input field when the previous field has been filled. The SKIP keys can be used to manually move the cursor from field to field.

c. Creating and/or reversing single line processing.

(1) To single line a line item enter the 11-digit SU number(s) and check digit(s).

(2) To reverse a single line action enter an R in the reversal field of the respective SU number.

NOTE: Removal or deletion of erroneous data from the screen format must be accomplished using the SPACE BAR on the CRT keyboard. Use of DELETE or ERASE keys will create an error condition which will result in reentry of all data.

d. When data has been entered successfully the initial display will reappear.

NOTE: Reversal actions, subparagraph c(2) above, that were single lined on the previous day will receive the following message:

WAIT 1 DAY TO PROCESS CORRECTED DATA.

5. ERROR MESSAGES/ACTIONS

Error messages will be displayed to the right of the invalid entry. When multiple SUs are single lined, the program will accept valid entries and redisplay invalid entries with an appropriate error message.

ERROR MESSAGE	CAUSE/ACTION
INVALID CHECK DIGIT	Probable Cause: Self-explanatory. Action: Verify check digit with source document and reenter.
SU LINE NOT FOUND	Probable Cause: Requested line item not found. Action: Reenter new data.
LINE ITEM ALREADY SINGLE LINED	Probable Cause: Requested line item has previously been single lined. Action: Reenter new data.
ONE LINE SU - CANNOT SINGLE LINE	Probable Cause: Requested line item belongs to a single line shipment unit. Action: Reenter new data.

ERROR MESSAGE	CAUSE/ACTION
SU STATUS INVALID FOR THIS CHG	Probable Cause: Shipment Unit status is not equal to A, B, C, D, E, G, or H. Action: CRT operator must process a valid Type Code CC field position entry through program $$UWFH25 to return the Shipment Unit status to A. The operator may then use program $$UWFQ40 to single line the Shipment Unit line item. After the single line action is performed the restructured Shipment Unit must be processed through $$UWFF01 and $$UWFF25 in order to reestablish container and line item audit trails.
LINE ITEM NOT SINGLE LINED	Probable Cause: Requested line item to reverse has not been single lined. Action: Reenter new data.
NO ACTION TAKEN, LI IS PARTIALED	Probable Cause: Requested line item to reverse has been partialed. Action: This type action cannot be reversed. Reenter new data.
ORIGINAL SU NOT FOUND	Probable Cause: Original Shipment Unit for the single lined line item has been completed and dropped from data base. Action: Reversal action cannot take place. Reenter new data.
ORIGINAL SU STATUS INVALID	Probable Cause: Original Shipment Unit status is not equal to A. Action: CRT operator must process a valid type CC entry through program $$UWFH25 to return Shipment Unit status to A.
SINGLE-LINED SU STATUS INVALID	Probable Cause: Shipment Unit status for single lined line item is not equal to A. Action: CRT operator must process a valid type field position entry through program $$UWFH25 to return Shipment Unit status to A.
SINGLE LINED SU NOT FOUND	Probable Cause: Shipment Unit for the single line item not found. Action: Reenter new data.

ERROR MESSAGE	CAUSE/ACTION
UWFQ40 BAD-RETURN FROM UWFQ40 YYYYYYYY	Probable Cause: Error caused by other than operator input. Action: Record error and notify supervisor.
INVALID REV CODE-MUST BE R	Probable Cause: Self-explanatory. Action: Verify input and reenter.
REQUEST LI CANNOT BE REVERSED	Probable Cause: Only one line item remains in the original SU. This line item has been partialed. Action: The singled line item cannot be reversed until the partialed line item is reconstructed using the procedures explained in appendix E-169.

APPENDIX E-238 P

MOFAST UTILITY PROGRAMS
PART D
SHIPMENT UNIT AND LINE ITEM FILE INQUIRY

1. PURPOSE

Provide the capability to inquire or update the MOFAST Shipping Unit (SU) or Line Item (LI) Files.

2. APPENDIX USED IN THIS PROCEDURE

Appendix B-215, Part K

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. General.

This process will perform any of the following tasks:

(1) Display a SU record.

(2) Update a SU record.

(3) Display a LI record.

(4) Update a LI record.

(5) Display the line numbers of LIs single lined in a SU.

(6) Display the containers within a SU and their weight and cube.

(7) Display the line numbers of LIs to be single lined in a SU.

(8) Display the line numbers of LIs that have container counts greater than 1 in a SU.

(9) Display the line numbers and cancellation information for LIs within an SU that have pending cancellations.

b. CRT Initialization.

(1) Key in $$UWFQ45.

(2) Depress ENTER key. This entry will dedicate the CRT to SU/LI inquiries and display the following message:

```
UWFQ45-00 INQUIRY THE SU OR LI FILE
     FILE
        S = INQUIRY SU-FILE
        L = INQUIRY LI-FILE OPTION
        A = CONTAINERS INFORMATION
        B = LINES WITH CONTAINER DATA
        C = LINES THAT ARE SINGLE-LINED
        D = LINES WITHOUT CONTAINER DATA
        U = UPDATE NMFC OR LTL OR GEO OR WATER-COMM OR POE OR W-POD OR DEN
        E = CANCELLATION INFORMATION
  ENTER-FILE      ENTER-KEY 0000000000000   ENTRY-OPTION
```

(3) To access file data for inquiry or update actions, input will be required in the fields located on the last line of the above display as follows:

(a) ENTER-FILE - Enter the file desired (S = SU File, L = Line Item File, 1 = SEAVAN SU, 2 = SEAVAN Line Item).

(b) ENTER-KEY 0000000000000 - Overlay the zeros with the SU number (7, 11 or 13 digits).

(c) ENTRY-OPTION - Enter the option desired (A, B, C, D, U, E or blank).

NOTE: The cursor will automatically be prepositioned at the beginning of the next input field when the entry in the previous field fills the entire field. To manually position the cursor from field to field, depress one of the SKIP keys.

c. Shipment Unit Inquiry.

(1) To access an SU File record, the following entry is required:

S or 1 in the ENTER-FILE field.
SU Number (7, 11 or 13 positions) in the ENTRY-KEY field.

Depress ENTER Key.

(2) Successful entry of the data will result in the display of the applicable SU record. See figure 1, for example.

(3) If the entry is unsuccessful, one of the error messages in paragraph 5 of this procedure will appear.

(4) The following are definitions of abbreviations used in the SU display.

ABBREVIATIONS	DEFINITIONS
SU NUMBER	Shipment Unit number (7, 11 or 13 positions) and check digit.

ABBREVIATIONS	DEFINITIONS
STATS	Status Code.
TOT-LNS	Total Line Items comprising the Shipment Unit.
MODE	Mode Code.
DEST	Destination.
CONSGN	Consignee Activity Address Code.
CARR	Carrier Code.
GBL-NUMBER	GBL Number.
COST	Transportation charges applicable to this Shipment Unit.
ID	GBL Identification Code.
SEQ	GBL Line Sequence Number
MASTER-SU	Master Shipment Unit Number (Consolidated Pack).
TCN	Transportation Control Number.
S	Document Number Suffix Code.
P	TCN Partial Indicator.
DATES-OFFRD	Julian Date Offered
SHIP	Julian Date Shipped.
CLEAR	Parcel Post Automatic Clear Date.
OFF-E	Offer Entry Date.
DRD	Document Release Date.
RDD	Required Delivery Date
WEIGHT-PLLT	Pallet Weight.
SKID	Skid Weight.
ACC-WGT	Accumulated Weight.
ACC-CBE	Accumulated Cube.
CONTAINERS-CONTRL	Container Control Number (Consolidated Pack).
TOTAL	Running Total of Containers Offered.
FINAL	Container Offered with Final Code.
MAX	Highest Container Number Offered.
OVSZ	Oversize Container Indicator.
SRT-CONV	Sorter Conveyors.
1, 2, or 3	Sorter Line Numbers.
DM	DEPMED Flag.
LM	LOGMARS Flag.
OVFL	Overflow of Sorter Line Numbers.
	NOTE: When Oversize Dimension Indicator is present, fields 1, 2 and 3 above will display the oversize dimensions in inches.
COMM-AIR	Air Commodity Code.
WATER	Water Commodity Code.
CO	Cancellation Override Indicator.
C	Cancellation Pending.
O	Cancellation Overridden.
BLANK	Cancellation Accomplished or No Cancellation Pending.
FLG OR IND-PROS	Processing Code.
APPN	Appropriation Indicator Code.
PP	Parcel Post Code.
POE	Port of Embarkation.
BP	Break Bulk Flag (Address File).

ABBREVIATIONS	DEFINITIONS
REL	Release Indicator.
PPZ	Parcel Post Zone Code.
*CCL	Carriage Control Line.
ACT	Active Destination Flag.
CNR	Container Consolidated Shipment Flag.
CS	Combined Shipment Unit Flag.
TAC	Transportation Account Code.
FLG OR=IND-PRT	Priority.
TCMD	Transportation Control Movement Document Status.
CHG	TCMD Change Indicator.
LD	Load Indicator.
HD	Hold Code.
*ACC	Access Flag.
CRT	CRT used for Offer Process.
*TRACE	Trace Indicator.
T-T	Transit Time Code.
*RPT	Report Flag.
*RM-LN	Remaining Line.

*Programmers use.

d. Line Item Inquiry.

(1) To access an LI File record, the following entry is required:

L or 2 in the ENTER-FILE field.
SU/LI Number (11 or 13 positions) in the ENTER-KEY field.

(2) Successful entry of the data will result in the display of the applicable LI record.

(3) If the entry is unsuccessful, one of the error messages in paragraph 5 of this procedure will appear.

(4) The following are definitions of abbreviations used in the LI display:

ABBREVIATIONS	DEFINITIONS
LI-NUMBER	Shipment Unit/Line Item Number (11 or 13 positions) and Check Digit.
STAT	MOWASP LI Status.
SLI	Single Line Indicator.
NMFC	National Motor Freight Classification.
SF	National Motor Freight Classification Suffix.
GEO	Geographical Area Code.
MGMT	Management Code.
DEN	Density.

ABBREVIATIONS	DEFINITIONS
QUANTITIES	MOWASP Quantity Fields.
OPEN	Quantity not yet shipped or denied.
SHIP	Quantity shipped.
CANCEL	Quantity canceled.
ORDER	Quantity ordered.
OFFRD	Quantity offered.
DENED	Quantity denied.
PENDING	Quantity pending.
MOF-QTY	MOFAST Quantities.
OPEN	Quantity Open.
SHIP	Quantity Shipped.
EXCEPT	Quantity which will be denied or canceled. (When exception quantity is present, the last position of the quantity Action Code will also be identified.)
CONTAINER-LO	Low Container Number.
HI	High Container Number.
COUNT	Number of containers for this line item.
RATE-LTL	Less than Truckload Rates.
PACK LOC	Pack Location.
DATES-RCVD	Date MRO was received.
DENIED	Date of denial action.
CANCL	Date of cancellation action.
INV	Inventory Cutoff Date.
PDT	Planned Date to Transportation.
MDT	Mandatory Date to Transportation.
LOC-EST	Locator Estimates.
WGT	Weight.
CUBE	Cube.
MRO	80 positions MRO Image.
FLG OR IND	
WHSE-LOC	Warehouse Location.
C	Area Control Branch.
P	Partial Indicator.
W-POD	Water Port of Debarkation.
SER	Service Code.
AIR	Air Dimension Code.
DC	DICOMSS Flag.
BIN	Bin Bulk Indicator.
INV	Inventory Flag.
DLY	Delay Reason Code.
PHYS	Physical Security Code.
REQ	Special Requirements Code.
GRP	Warehouse Location Code.
FRC	Functional Routing Code.
MODE	Mode Code.
*ACC	Access Code.
F69	Cancellation Flag.
LOC	Lot Date Code (JAN Class S).
CAGE	Commercial and Government Entity (JAN Class S).

e. Shipment Unit Update.

The Water Commodity Code (COMM-WATER) and the Port of Embarkation (POE) can be updated via this program.

(1) To update one or more of the data elements identified above enter the following:

S or 1 in the ENTER-FILE field.
SU Number (7, 11 or 13 positions) in the ENTRY-KEY field.
U in the ENTRY-OPTION field.

(2) Successful entry of the data will result in the display identified in figure 8.

(3) Perform updates by overlaying the desired data. Depress ENTER key. If the entry was successful, the updated Shipment Unit record (same format as figure 1) will appear.

NOTE: The cursor will automatically be prepositioned at the beginning of each updatable field when an entry was made to the preceding field. To manually position the cursor from field to field, depress one of the SKIP keys.

(4) If the entry is unsuccessful, one of the error messages listed in paragraph 5 of this procedure will appear.

f. Line Item Update.

The National Motor Freight Classification (NMFC), the NMFC Suffix (SF), the Geographical Area Code (GEO), the Less Than Truckload Rate (LTL), the Water Port of Debarkation (W-POD) and the Density (DEN) can be updated via this program.

(1) To update one or more of the data elements identified above enter the following:

L or 2 in the ENTER-FILE field.
SU/LI Number (11 or 13 positions) in the ENTRY-KEY field.
U in the ENTRY-OPTION field.

(2) Successful entry of the data will result in the display identified in figure 3.

(3) Perform updates by overlaying the desired data. Depress ENTER key. If the entry was successful, the updated Line Item record (same format as figure 2) will appear.

NOTE: The cursor will automatically be prepositioned at the beginning of each updatable field when an entry was made to the preceding field. To manually position the cursor from field to field, depress one of the SKIP keys.

(4) If the entry is unsuccessful, one of the error messages listed in paragraph 5 of this procedure will appear.

g. SU Container Information.

(1) To display the containers within an SU enter:

"S" in the ENTER-FILE field.
"SU Number" (7, 11 or 13 positions) in the ENTRY-KEY field.
"A" in the ENTRY-OPTION field.

(2) Successful entry of the data will result in the display identified in figure 4.

(3) The following are definitions of the data displayed in the container inquiry.

0001 thru 0010	- Container Numbers
CT	- Container Type
00012	- Container Weight
00034	- Container Cube (decimal between fourth and fifth positions.)
00000	- Piece Count (Data present when container type is SK or PT.)

(4) If entry is unsuccessful, one of the error messages listed in paragraph 5 of this procedure will appear.

h. Single-Lined Line Items:

(1) To display line numbers of line items that have been single lined from the basic SU, enter the following:

"S" in the ENTER-FILE field.
"SU Number" (7 positions) in the ENTRY-KEY field.
"C" in the ENTRY-OPTION field.

(2) Successful entry of the data will result in the display identified in figure 5 below.

(3) If the entry is unsuccessful, one of the error messages in paragraph 5 of this procedure will appear.

i. Line Items with Container Data.

(1) To display the line numbers of line items within a SU that have been accounted for (container data present in the LI record) enter the following:

"S" in the ENTER-FILE field.
"SU Number" (7, 11 or 13 positions) in the ENTRY-KEY field.
"B" in the ENTRY-OPTION field.

(2) Successful entry of the data will result in the display identified in figure 6 below.

(3) If the entry is unsuccessful, one of the error messages in paragraph 5 of this procedure will appear.

j. Line Items without Container Data.

(1) To display line numbers of line items within an SU that have not been accounted for (no container data present in the LI record) enter the following:

"S" in the ENTER-FILE field.
"SU Number" (7, 11 or 13 positions) in the ENTRY-KEY field.
"D" in the ENTRY-OPTION field.

(2) Successful entry of the data will result in the display identified in figure 7 below.

(3) If the entry is unsuccessful, one of the error messages in paragraph 5 of this procedure will appear.

k. Line Items with Cancellation Data.

(1) To display line numbers and cancellation information for line items within a SU that have pending cancellations enter the following:

"S" in the ENTER-FILE field.
"SU Number (7, 11 or 13 positions)" in the ENTRY-KEY field.
"E" in the ENTRY-OPTION field.

(2) Successful entry of the data will result in the display identified in figure 9.

(3) The following are definitions of the data in the cancellation inquiry.

LINE	- Line Item Number
P-CAN	- Quantity Pending Cancellation
Q-CAN	- Quantity Previously Canceled
M-EXP	- MOFAST Exception Quantity (Quantity previously canceled during current day
EXT-DOL-COST	- Extended Dollar Cost (Value of P-CAN minus M-EXP)

(4) If the entry is unsuccessful, one of the error messages in paragraph 5 of this procedure will appear.

5. ERROR MESSAGES/ACTION

When an error is encountered the input that generated the error condition and the error message will be displayed as follows:

```
UWFQ45-00 INQUIRY THE SU OR LI FILE
FILE
        S = INQUIRY SU-FILE
        L = INQUIRY LI-FILE OPTION
        A = CONTAINERS INFORMATION
        B = LINES WITH CONTAINER DATA
        C = LINES THAT ARE SINGLE LINED
        D = LINES WITHOUT CONTAINER DATA
        U = UPDATE NMFC OR LTL OR GEO, WATER COMMODITY, POE, OR W-POD OR DEN
        E = CANCELLATION INFORMATION
ENTER-FILE LENTRY-KEY 33942380000000      ENTER-OPTION U
NO RECORD FOUND
```

Corrections are made by overlaying the previous entry with corrected data. Depress ENTER key.

ERROR MESSAGE	CAUSE/ACTION
NO RECORD FOUND	Probable Cause: The SU/LI record has been closed from the file or is nonexistent. The type file entered does not coincide with the SU/LI number entered. An S or 1 type file requires a 7-position SU number (exception: An 11- or 13-position SU/LI has been single lined or partialed. An L or 2 type file requires input of an 11- or 13-position SU/LI number. Action: Verify the SU/LI number and type file desired and reenter data.
INVALID FILE	Probable Cause: The type file entered is other than S, L, 1 or 2. Action: Reenter correct type file.
INVALID OPTION	Probable Cause: The type option entered is other than A, B, C, D, E or U. Action: Reenter data utilizing proper Option Code.
KEY NOT NUMERIC	Probable Cause: The SU/LI number entered contains nonnumeric data. Action: Reenter correct data.

ERROR MESSAGE	CAUSE/ACTION
UWFQ45 BAD RETURN FROM XXXXXXXX	Probable Cause: A system error has been encountered. Action: Record message, notify supervisor, and then continue processing.

APPENDIX E-238 P

MOFAST UTILITY PROGRAMS
PART E
SHORT GBL CARRIER CODE UPDATE

1. PURPOSE

To enable the operator to include the Carrier Code in the short GBL File, or to change the Carrier Code already established in the short GBL File. This program is used to establish correct carrier information for the billing process (appendix E-238 P, part K).

2. APPENDICES AND REFERENCES USED IN THIS PROCEDURE

a. Appendix B-214

b. Appendix D-152

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. General.

This process allows Carrier Code updates to the short GBL File. It will be necessary to update the Carrier Code when:

(1) Carrier Code in short GBL file is missing.

(2) When Carrier Code in short GBL File does not correspond to Carrier Code required for shipment.

b. CRT Initialization.

(1) Key in $$UWFQ50.

(2) Press ENTER key.

(3) Response:

SHORT GBL CARRIER CODE UPDATE UWFQ50-XX ENTER GBL NUMBER AND CARRIER CODE

c. Entry Format.

(1) The operator will key in the GBL number and Carrier Code, separated by a comma, beginning in the first position right of the character as follows:

AAAAAAAA,BBBB

Where:

A = GBL Number
B = Carrier Code

(2) Press the ENTER key. If the entry is successful, the following message will display:

TRANSACTION COMPLETE ENTER GBL NUMBER AND CARRIER CODE

(3) The Carrier Code has been updated. The CRT is now ready for the next update.

5. ERROR CONDITIONS/ACTIONS

ERROR MESSAGE	CAUSE/ACTION
NO INPUT *** RETRY ENTER GBL NUMBER AND CARRIER CODE	Probable Cause: ENTER key was pressed with no information keyed in. Action: Enter correct data.
GBL HAS BEEN PRINTED, NO ACTION ENTER GBL NUMBER AND CARRIER CODE	Probable Cause: GBL number entered has been printed through program $$UWFM05. Action: CRT Carrier Code update is not possible. Carrier information will have to be manually corrected on printed GBL.
INVALID ENTRY XXX RETRY ENTER GBL NUMBER AND CARRIER CODE	Probable Cause: An error has been made in the entry format. Action: Refer to paragraph 4c for correct entry format and reenter data.
CARRIER CODE INVALID XX RETRY ENTER GBL NUMBER AND CARRIER CODE	Probable Cause: Carrier Code has been keyed incorrectly. Invalid Carrier Code entered. Action: Reenter data with properly keyed Carrier Code. If message persists, an invalid Carrier Code is indicated. Proceed to 2; determine correct Carrier Code and retry entry.

ERROR MESSAGE	CAUSE/ACTION
GBL CANCELLED ** NO ACTION	Probable Cause: GBL number entered has previously been canceled through program $$UWFJ20. Action: Retry data entry. If message persists, inquire GBL Status Code through program $$UWFJ10 (appendix E-238 P, part J). If GBL Status Code indicates GBL canceled, all Shipment Units must be assigned to new GBL number through program $$UWFJ20 procedure (appendix E-225 P). Carrier Code can then be updated through this program.
YYYYYYYY BAD READ UWFN300B	Probable Cause: System error. Action: Caused by other than operator input record error. Notify supervisor.
YYYYYYYY BAD WRITE UWFN300B	Probable Cause: System error. Action: Caused by other than operator input record error. Notify supervisor.

APPENDIX E-238 P

MOFAST UTILITY PROGRAMS
PART G
MOFAST CHECK DIGIT PROGRAM

1. PURPOSE

To find the correct check digit for a Shipping Unit (SU) number.

2. APPENDIX USED IN THIS PROCEDURE

Appendix B-215, Part G

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. General.

This process will display a digit that is used as the check digit for SU number. Both computer resident data and Cathode Ray Tube (CRT) data are used to create this check digit.

b. CRT Initialization.

(1) Key in $$UWFQ60.

(2) Press the ENTER key.

(3) This entry will dedicate a CRT to the check digit program with the following display:

FQ60-00 CHECK-DIGIT INQUIRY ENTER SEVEN A/N CHARACTERS ENTER HERE

NOTE: The CRT will remain dedicated to check digit input until another $$ prefix is entered.

c. Enter the SU number as follows:

(1) XXXXXXX

(2) Press the ENTER key. If the entry is successful the following message will be displayed:

NUMBER ENTERED XXXXXXX CHECK-DIGIT X ENTER HERE

(3) The CRT is then ready for another SU number entry.

5. ERROR MESSAGE/ACTION

ERROR MESSAGE	CAUSE/ACTION
NUMBER ENTERED XXXXXXX INVALID ENTRY	Probable Cause: Self-explanatory. Action: Enter orrect number.

APPENDIX E-238 P

MOFAST UTILITY PROGRAMS
PART H
MOFAST CONTAINER INQUIRY

1. PURPOSE

This procedure will allow container inquiries of three types:

a. Type container, weight, and cube data for all containers in a Shipment Unit (SU).

b. Line Items (LIs) by container for each LI in a SU.

c. A specific LI by container(s) with weight and cube data.

2. APPENDIX USED IN THIS PROCEDURE

Appendix B-215, Part C

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. The MOFAST Container Inquiry can be initiated by keying $$UWF065 on the CRT and then pressing the ENTER key. This action will dedicate the CRT to Container Inquiry until another $$ is entered.

b. The initial display will appear as:

```
UWFQ65        SORTER REJECT PROC INPUT
ENTER TYPE INPUT REQUEST _
```

c. At this point the CRT operator can request a SR1, SR2, or SR3 inquiry. Their explanations follow:

(1) The SR1 entry will produce a display that lists each container of an SU, it's weight, cube, and type pack. If more than nine containers are part of the SU, additional CRT displays will be required to display all containers. To obtain this inquiry type, enter:

```
SR1,XXXXXXXXXXXXX,Y  or
SR1,XXXXXXXXXXX,Y  or
SR1,XXXXXXX,Y
```

Where:

X = Shipment Unit Number (7, 11, or 13 Position)
Y = Check Digit

(a) The display will appear as follows:

```
SR1,XXXXXXX      ,K,001-002-003
AAA-BB-CCCCC-DDDD.D,002-CT-00006-0000.9
003-CT-00009-0000.6,004-CT-00012-0000.8
005-CT-00010-0000.9,006-CT-00015-0002.2
007-CT-00009-0001.6,008-CT
009-CT-00009-0000.6
MORE CONTAINER DATA AVAILABLE HIT ENTER
 R1R,XXXXXXXXXXXXXXXXXXXXXX
```

Where:

K	=	Status
001-002-003	=	Conveyor Lines where Shipment is Located
AAA	=	Container Number
BB	=	Type Container
CCCC	=	Weight
DDDD.D	=	Cube

(b) The message MORE CONTAINER DATA AVAILABLE appears, press the ENTER key to generate the second part.

```
010-CT-00007-0000.9,011-CT-00008-0001.3
012-CT-00008-0001.3,013-CT-00015-0001.3
014-CT-00009-0000.6,015-CT-00010-0000.9
018-  -00000-0000.0,019-  -00000-0000.0
ENTER TYPE INPUT REQUEST
```

(2) The SR2 entry will produce an inquiry that lists LIs by container. To obtain this inquiry enter:

```
SR2,XXXXXXXXXXXXX,Y  or
SR2,XXXXXXXXXXX,Y  or
SR2,XXXXXXX,Y
```

(a) A sample display appears as follows:

```
SR2,XXXXXXX     ,00001
0001,0002,0004
SSR2,XXXXXXX     ,00002  0003
SR2,XXXXXXX     ,00003 THRU 00005
0004
SR2,XXXXXXX     ,006  0005,0006,0007,0008,0009,0010,0011,0012
SR2,XXXXXXX     ,000006  0013,0014,0015,0016,0017,0018
MORE CONTAINER DATA AVAILABLE, HIT ENTER
R2RXXXXXXXXXXXXXXXXXXXXXX
```

(b) The SR2 Inquiry consists of a header line that contains Type of Inquiry SU number, and container number; and a detail line that reflects the LI numbers that are in the container appearing on the header line.

(c) If the header line has 2 containers separated by the word "THRU", it indicates that the LI numbers in the detail line are in those containers.

(3) The SR3 entry will produce an inquiry that lists the container(s) for a specific LI that must be specified in the request. To obtain this inquiry, enter:

```
SR3,XXXXXXXXXXXXX,Y,ZZZZ  or
SR3,XXXXXXXXXXX,Y,ZZZZ  or
SR3,XXXXXXX,Y,ZZZZ
```

Where:

Z = Line Item Number

(a) The display will appear as follows:

```
SR3,XXXXXXXXXXXXX,K,001-002-003
000 THRU 000,CCCCCCC,DDDDDD.D
ENTER TYPE INPUT REQUEST  _
```

Where:

K	= Status
001-002-003	= Conveyor lines where LI is Located
000 THRU 000	= Containers holding LI
CCCCCCC	= Weight of LI
DDDDDD.D	= Cube of LI

(b) When an ENTER TYPE INPUT REQUEST - message displays the CRT is ready to receive another container inquiry.

5. ERROR MESSAGES/ACTIONS

ERROR MESSAGE	CAUSE/ACTION
REQUEST FORMATED IMPROPERLY ENTER TYPE INPUT REQUEST	Probable Cause: Invalid data was entered. Action: Reenter the transaction correctly.
SHIPMENT UNIT NUMBER IS INVALID ENTER TYPE INPUT REQUEST	Probable Cause: Invalid data was entered. Action: Reenter the transaction correctly.
LINE ITEM NUMBER IS INVALID ENTER TYPE INPUT REQUEST	Probable Cause: Invalid data was entered. Action: Reenter the transaction correctly.

ERROR MESSAGE	CAUSE/ACTION
CHECK DIGIT IS INVALID ENTER TYPE INPUT REQUEST	Probable Cause: Invalid data was entered. Action: Reenter the transaction correctly.
0101N NOT FOUND ENTER TYPE INPUT REQUEST	Probable Cause: The SU cannot be found on the data base. Action: Verify the SU Number, then reenter the transaction.
0103D ERROR IN PGM UWFG65 ENTER TYPE INPUT REQUEST	Probable Cause: A system error has been encountered. Action: Record the message, notify your supervisor, and then continue processing.

APPENDIX E-238 P

MOFAST UTILITY PROGRAMS
PART I
TERMINAL ROUTING AND CARRIER ASSIGNMENT PROCESS

1. PURPOSE

a. Set up terminal internal routing for daily activity.

b. Assign carrier code for specific geographical area.

c. Close out a Government Bill of Lading (GBL) for a specific GBL number or geographical area.

2. APPENDIX USED IN THIS PROCEDURE

Appendix B-184

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

This system is a teleprocessing process using the CRT.

a. To initiate the program, key in $$UWFG50 and press the ENTER key. The following response will appear:

UWFG50 GEO, SPUR AND CARRIER INQUIRY/UPDATE

NOTE: IF YOU WANT TO "REVIEW" KEEP PRESSING ENTER

IF YOU WANT TO "UPDATE" PRESS ENTER UNTIL YOU FIND THE DATA YOU WANT TO CHANGE; THEN CHANGE "INQUIRY" IN THE HEADING TO "UPDATE", MODIFY THE DATA AND PRESS ENTER

IF YOU WANT TO STOP A BILL OR BILLS MAKE THE FOLLOWING SELECTION

STOP OPTIONS:

GEO	ENTER DESIRED GEO CODE
GBL	ENTER DESIRED GBL NUMBER

b. To inquire:

(1) Press the ENTER key.

(2) The following screen will appear:

UWFG50 GEO, SPUR AND CARRIER INQUIRY

GEO	SPUR	CARR	STAT	GEO	SPUR	CARR	STAT	GEO	SPUR	CARR	STAT	GEO	SPUR	CARR	STAT
ACH	A1	IMLF		ADV	A2	IMLF		ASL	A3	IMLF	1	BLA	S1	MILN	1

***	**	****		***	**	****		***	**	****		***	**	****	

(3) Overlay the work "INQUIRY" in the heading to "UPDATE" or "UPD".

(4) Change existing data or add new geographic area codes.

(5) Press ENTER.

(6) When multiple screens are required, repeat steps 4.c.(3) through 4.c.(5). When all the data has been displayed, the following screen will appear:

UWFG50 GEO, SPUR AND CARRIER INQUIRY/UPDATE

INQUIRY / UPDATE COMPLETE

OPTIONS:
PRESS ENTER FOR "INQUIRY" OR "UPDATE"
GEO ENTER DESIRED GEO CODE
GBL ENTER DESIRED GBL NUMBER

NOTE: To change or delete a geographic area code with a one in the status column, a status override code must be entered over the one:

@ = Change status to blank
8 = Bypass status check

d. To stop or close GBL records established for a specific geographical area/areas:

(1) Enter a one position geographic code to stop multiple GBL records for a major geographic area, or a three position geographic code to stop a geographic sub-area as shown below:

```
UWFG50      GEO, SPUR AND CARRIER INQUIRY/UPDATE

INQUIRY / UPDATE COMPLETE

       OPTIONS:
           PRESS ENTER FOR "INQUIRY" OR "UPDATE"
           GEO ASL         ENTER DESIRED GEO CODE
           GBL             ENTER DESIRED GBL NUMBER
```

(2) Upon successful completion, the following display will appear:

```
UWFG50      GEO, SPUR AND CARRIER INQUIRY/UPDATE

GEO "ASL" STOPPED

       OPTIONS:
           PRESS ENTER FOR "INQUIRY" OR "UPDATE"
           GEO             ENTER DESIRED GEO CODE
           GBL             ENTER DESIRED GBL NUMBER
```

e. To close or stop a specific GBL:

(1) Enter the GBL number as shown below:

```
UWFG50      GEO, SPUR AND CARRIER INQUIRY/UPDATE

INQUIRY / UPDATE COMPLETE

       OPTIONS:
           PRESS ENTER FOR "INQUIRY" OR "UPDATE"
           GEO             ENTER DESIRED GEO CODE
           GBL K0000333    ENTER DESIRED GBL NUMBER
```

(2) Upon a successful entry, the following display will appear:

```
UWFG50     GEO, SPUR AND CARRIER INQUIRY/UPDATE

GBL "K0000333" STOPPED

      OPTIONS:
          PRESS ENTER FOR "INQUIRY" OR "UPDATE"
          GEO              ENTER DESIRED GEO CODE
          GBL              ENTER DESIRED GBL NUMBER
```

ERROR MESSAGE	CAUSE/ACTION
INVALID SPUR, CARRIER, OR STATUS	Probable Cause: The spur is not a valid spur on the spur file (UWFK60), or the carrier code is not valid on the carrier file (UWFQ25). Action: The cursor will be positioned on the field in error. Verify data and reenter.
GEO AREA ALREADY ASSIGNED	Probable Cause: An update was attempted to a spur or carrier code and a one (1) status code was present. Action: Reenter the data and use an override option (@ or $) in the status column.
EXCEEDED PROGRAM SPUR TABLE	Probable Cause: The program will only handle 44 spurs and an attempt was made to input more. Action: Notify the supervisor.
GEO AREA NOT MATCHED	Probable Cause: There is not an open GBL on the GBL Register with the GEO area entered. Action: No action required.
GBL NOT NUMBERIC	Probable Cause: The last seven numbers of the GBL must be numeric. Action: Verify the GBL number and reenter.

ERROR MESSAGE	CAUSE/ACTION
GBL NUMBER NOT FOUND	Probable Cause: There is not GBL on the GBL Register with that number. Action: Verify the GBL number and reenter.
GBL STATUS NOT EQUAL SPACE	Probable Cause: The status on the GBL Register is not equal to a space indicating action has already been taken against the GBL number entered. Action: Inquire the register to determine the status of the GBL.
UWFG50 BAD RETURN **1420N*	Probable Cause: A program error was encountered. Action: Notify the supervisor. Give the complete error message to be relayed to the programer.

APPENDIX E-238 P

MOFAST UTILITY PROGRAMS
PART J
MOFAST SHORT GBL INQUIRY

1. PURPOSE

This procedure is used primarily to reconcile and verify Shipment Units assigned to a particular GBL during the preliminary GBL content edit routines. It describes the information necessary to display the MOFAST Short GBL File and resultant information.

2. APPENDIX AND REFERENCE USED IN THIS PROCEDURE

Appendix B-213

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. The MOFAST Short GBL Inquiry can be initiated by typing $$UWFJ10 and pressing the ENTER key. This action will dedicate the CRT to this processing until another program call number is entered.

b. The initial display will appear as:

UWFJ10-07 SHORT GBL INQUIRY ENTER GBL NUMBER AS A9999999

DISPLAY SU NUMBERS ONLY ENTER GBL NR & N: A9999999N

ENTER DATA

c. Entry Format: Enter the GBL in the format displayed above.

(1) Following the required entry, with or without the N suffix, the Short GBL Header Records will be formatted and displayed as: See figure 1 for example.

(a) The following are definitions of abbreviations used on the display.

GBL-NO	= Government Bill of Lading inquired.
BILL TO	= Shipment consignee DoDAAC.
M	= Mode to be shipped.
GEO	= Geographical area/sub-area to which this shipment will be made.
SPLC	= Standard Point Location Code assigned to this destination.
CARR	= Standard Carrier Alpha/Code of the carrier to which this GBL will be tendered.

STATUS = Short GBL Status:
- A - Status when $$UWFK05 starts preparing GBL.
- B - Status when $$UWFK05 finishes preparing GBL.
- C - Cancellation status (C in header record if complete GBL canceled).
- D - Status if GBL cover sheet has been reprinted and a new GBL number assigned.
- H - Header record status when created.
- O - Status when $$UWFM05 starts printing GBL.
- P - Status when $$UWFM05 finishes printing GBL.
- Q - Status GBL must be in to restart GBL if program $$UWFK05 had abnormal completion and GBL after status equals A.
- X - Status if shipment unit added to GBL after GBL was prepared.
- Y - Status if shipment unit canceled from GBL after GBL was prepared.

TOT PCS = Total number of containers or pieces loaded on the trailer for this GBL.
WEIGHT = Total weight of shipments on this GBL.
CUBE = Total cube of shipments on this GBL.
PALLET = Total pallet weight of any pallets being attached to containers and shipped as a part of this load (utilized shipments).
SKID = Total weight of skids being attached to containers and being shipped as a part of this load.
NEXT SEQ = An internal program key.
NO SUS = Total number of shipment units assigned to this GBL.
LOAD IND = Programer use.
NEW GBL = Programers use.
GBL RECORD TOTALS = Data categories represent GBL record totals as they pertain to shipment unit and NMFCs included in computer data files at the completion of GBL assembly process and (UWFK05) GBL print process (UWFM05).

(b) When the totals for corresponding type record categories (GBL RECORD TOTALS) do not balance after completion of GBL assembly and print processes a loss of data has occurred. The Office of Data Systems should be contacted immediately so that the problem can be corrected.

(2) If the N option is not exercised all trailer records identifying Shipment Units for the specified GBL will be displayed, two at a time, until all have been processed. Operator action to accomplish this will merely be to press ENTER. The tube image will appear as identified in figure 2 below.

(a) The following are definitions of abbreviations used on the display.

SU NBR & CD = Shipment Unit Number and Check Digit.
STAT = Trailer record status:
- T - Trailer record established (SU assigned to the GBL).
- C - SU canceled from the GBL.

PIECES	= Number of containers or pieces for this SU.
WEIGHT	= Total weight of this SU.
CUBE	= Total cube of this SU.
PALLET	= Total pallet weight of any pallets attached to containers for this SU.
SKID	= Total skid weight of any skids attached to containers for this SU.
MASTER SU	= Master shipment unit number. Applicable only when the SU is part of a consolidated pack.
CONT CTL NR	= Container control number. Applicable only when the SU is part of a consolidated pack.
MDE	= Mode.
CNS	= Consignee.
PROC	= Processing Code.
PP	= Parcel post zone code.
INT	= Intransit code.
BBP	= Break Bulk Point.
TP	= Type pack (consolidation shipment).
TCN & SUF	= Transportation Control Number and Suffix.
PRTV	= Priority.
RI	= Routing Identifier Code.
CNTRY	= Country code.
PRJ	= Project code.
REQR	= Requisitioner.
SUPP-ADDR	= Supplementary address.
SIGNAL	= Signal Code.

(b) The operator can selectively inquire any trailer record desired by altering the GBL sequence key that is located on the last line of the displays discussed above (figures 1 and 2 below). Operator actions to access a particular trailer record are as follows.

1. Obtain GBL sequence number of the trailer record desired.

2. Subtract 1 from the sequence number obtained.

3. Overlay positions 9-13 of the GBL sequence number currently displayed on the CRT with the new trailer record sequence number obtained from steps 1 and 2 above.

4. Depress ENTER key.

NOTE: The desired trailer record will appear in the display format identified in figure 2.

(3) The N display will show only the GBL sequence number, the shipment number, check digit and Status Code. Up to 20 Shipment Units per tube image will be displayed. All Shipment Units pertaining to the GBL entered can be viewed by continuing to press the ENTER key. The display will appear as follows:

```
 SU NBR & CD STATUS SU NBR & CD STATUS
2-3072634-1     T   3-3074102-1     T
4-3100546-9     T   5-3214579-5     T
6-3340372-1     T   7-32625080004-8 T
8-33243780022-2 T
ENTER DATA
```

NOTE: Status equals trailer record status. "T" indicates that the SU is assigned to the GBL, "C" indicates that the SU was canceled from the GBL.

d. To continue processing, return to subparagraph c and enter another GBL number.

5. ERROR MESSAGES/ACTIONS

ERROR MESSAGE	CAUSE/ACTION
UWFJ10 SHORT GBL INQUIRY FORMAT ERROR ENTER DATA	Probable Cause: The data entered was invalid for the indicated format, i.e., A9999999N. Action: Ensure data is input in the correct format.
UWFJ10 SHORT GBL INQUIRY **0221N NOT FOUND ENTER DATA	Probable Cause: The GBL number entered cannot be found in the MOFAST Short GBL File. Either an erroneous number has been entered or the number entered has already been processed. Action: Ensure the correct GBL number is being entered and reenter the data. If the number cannot be found, refer the problem to the supervisor.
UWFJ10 SHORT GBL INQUIRY **0121D* ERROR IN UWFJ10 ENTER DATA	Probable Cause: A system error has been encountered. Action: Refer the problem to the supervisor who, in turn, will notify the Data Systems Manager.

APPENDIX E-238 P

MOFAST UTILITY PROGRAMS
PART K
MOFAST GBL PREPARATION

1. PURPOSE

a. Program $$UWFK05 performs the final assembly and processing of Shipment Unit data and computation of freight rates for the MOFAST GBL. It enables the operator to edit and verify the cover sheet of the GBL for correct billing and rating information. This process identifies possible error conditions generated by preceding MOFAST Shipment Unit processing and allows supplemental input by the operator to correct erroneous or incomplete information found in the Rate Base File, MRO/Shipment Unit Record, Address File, or any other file pertinent to the billing process.

b. This program provides an option for MOFAST compilation of CBLs (Commercial Bills of Lading) used to cover movement of FMS (Foreign Military Sales) shipments to a CONUS freight forwarder prior to final movement to an overseas destination. The MOFAST billing procedure for CBLs is the same as for GBL processing outlined in this appendix. Processing difference occurs in program $$UWFM05, procedure appendix E-224 P, part A, the GBL print process. The print process produces a DLA Form 1320 for the cover sheet.

c. This program is a prerequisite for programs:

(1) $$UWFL10, MOFAST GBL Cover Sheet Inquiry/Update.

(2) $$UWFL20, MOFAST Shipment Unit Entry Inquiry/Update.

(3) $$UWFL30, MOFAST GBL Line Item Inquiry/Update.

(4) $$UWFM05, MOFAST GBL Print Process.

(5) $$UWFM30, MOFAST Preparation of TCMD Cards.

2. APPENDIX USED IN THIS PROCEDURE

Appendix B-193

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. GENERAL

Prerequisite Shipment Unit processing and assembly procedures for MOFAST GBL preparation are as follows:

a. The Shipment Unit processed through initial and exception data input program $$UWFF01 (appendix E-221 P, part A) and $$UWFF25 (appendix E-221 P, part B) respectively, or sorter input, $$UWFE01 (appendix E-219 P, part A) and $$UWFE10 (appendix E-219 P, part B) respectively, and related processes.

b. The freight is labeled and the route slip is stapled to the Shipment Unit paperwork; freight and paperwork are forwarded to the outloading area.

c. As the freight is assembled for loading, the paperwork is gathered and stamped with the carriers name, load number, trailer number, date loaded, and driver's initials.

d. When responsible outloading personnel determine enough materiel is present to constitute a load, the Shipment Unit paperwork is turned into the outbound billing section with notification the load is ready to "cut".

e. "Cutting" a load is accomplished by billing personnel through program $$UWFG50, appendix E-238 P, part I. The cut process closes all GBL numbers assigned to the load to further shipment unit accumulation, and under a carrier rotation system allows entry of a new carrier for the next load build.

f. The paperwork (Shipment Unit paperwork with route slip attached) is searched by the billing operator for Shipment Units with no GBL number assigned. These Shipment Units are processed through program $$UWFH05, appendix E-223 P, to update the Processing Code to SA, the Mode Code to the mode applicable to the shipment, and the Status Code to M. With this procedure accomplished, the Shipment Units are ready to be assigned to a bill number. The operator then sorts paperwork by CONUS destination.

g. The billing operator must verify that the paperwork received from the outloading section represents all Shipment Units assigned to the GBL. To accomplish this the operator inquires program $$UWFJ10, appendix E-238 P, part J, which lists all Shipment Units assigned to the GBL.

(1) The operator assembles the paperwork in the same order the Shipment Units appear in the display. The Shipment Unit sequence shown in the display is the sequence in which the Shipment Units will bill and print.

(2) The operator verifies the piece, weight, and cube of each Shipment Unit displayed for correspondence to piece, weight, and cube information on the route slip. If a discrepancy is noted, it is the operator's responsibility to determine the correct piece, weight, and cube information and take corrective action. If the information is displayed in program $$UWFJ10 is incorrect, the Shipment Unit will require deletion of container data as described in appendix E-234 P, part A and corrected data input via appendix E-221 P, parts A and B.

(3) The operator annotates any Shipment Unit numbers for which there is no paperwork. These Shipment Units must be canceled from the GBL.

h. The operator cancels the unwanted Shipment Units from the GBLs and assigns unassigned Shipment Units to the GBL through program $$UWFJ20, appendix E-225 P.

i. When the Shipment Unit cancellation or assignment process is completed, the operator must recall program $$UWFJ10, appendix E-238 P, part J to verify that the inquiry displays only the Shipment Units for which paperwork has been received from the outloading section for that destination. The operator then annotates the total GBL piece, weight, and cube on the paperwork for rate research and future verification processes.

j. At this point LTL shipments are ready for GBL processing. Volume and pool distribution shipment paperwork is forwarded to the freight rate specialist. The freight rate specialist determines the tariff authority and or manifest requirements for the shipment and returns the paperwork to the operator for processing.

k. The Shipment Units are now consolidated by destination under one GBL number and are ready for program $$UWFK05, appendix E-238 P, part K, GBL processing.

5. PROCEDURES/INSTRUCTIONS

a. To begin processing key in $$UWFK05 and press ENTER key. The following message will display:

UWFK05 GBL-ASSEMBLY

ENTER GBL ACTION DEST

NOTE: The CRT will remain in this program until another program with a $$ prefix is entered.

b. Key GBL data into the format as follows. The cursor is positioned at the first input field and will reposition to the next field when the previous field is filled. Type data in the following sample format is as follows:

A - GBL or CBL Number
B - Action Code
C - Destination

(1) Regular GBL Start Format:

UWFK05 GBL ASSEMBLY

ENTER GBL AAAAAAAA ACTION DEST

(2) GBL start input with option to specify destination which includes a 3-position APOE/WPOE. This will key correct APOE/WPOE or destination address and digit markings for GBL. See note in subparagraph (3) below.

UWFK05 GBL ASSEMBLY

ENTER GBL AAAAAAAA ACTION DEST CCC

(3) This option format is required to restart a GBL that has been previously started but processing not completed. The Action Code designated by C in sample are as follows:

S - Restart GBL, retaining all previous processing.
R - Restart GBL, erasing all previous processing.
Q - Restart GBL, according to process noted in paragraph (5)(h) below.

UWFK05 GBL ASSEMBLY

ENTER GBL AAAAAAAA ACTION B DEST

NOTE: Whenever an incorrect destination address is encountered, restart the GBL with Action Code R and the correct destination. The incorrect displayed data cannot be overlayed. If the Destination is correct but the address for that destination is incorrect, the Address File must be corrected.

(4) This option format combines the GBL restart option with APOE/WPOE designation as discussed in paragraphs (2) and (3) above. The program response to successful initial input will be the first cover sheet display. The operator may proceed in accordance with cover sheet instructions, paragraphs 6a through d below.

UWFK05 GBL ASSEMBLY

ENTER GBL AAAAAAAA ACTION B DEST CCC

(5) The following are possible error messages generated by initial input.

ERROR MESSAGE	CAUSE/ACTION
FORMAT ERROR ENTRY GBL ACTION DEST	Probable Cause: Error in data format entry. Action: Refer to paragraph 5b above, for correct entry format and reenter data.

ERROR MESSAGE	CAUSE/ACTION
INVALID GBL ENTER GBL ACTION DEST	Probable Cause: The GBL number entered was not found on the MOFAST GBL register, program $$UWFG10. It is a number that has not yet been assigned by MOFAST Shipment Unit processing, or has already been processed through the MOFAST System and has been cleared from the GBL register. Action: Reenter correctly keyed data. If the message persists, the GBL number entered is not found on the open GBL register. Proceed to notes below.
GBL FORMAT ERROR ENTER GBL ACTION DEST	Probable Cause: The GBL number entered was not in the correct format. Action: Reenter GBL number as: First position - Alpha Second position - Alphanumeric Third through eighth position - Numeric
INVALID ACTION ENTER GBL ACTION DEST	Probable Cause: The Action Code entered was not S, R, Q or blank. Action: Reenter Action Code
INVALID DESTINATION ENTER GBL ACTION DEST	Probable Cause: Destination entered was 101, 201 or 301, or another 3-position destination that was not preceded by blanks. Action: Reenter 6-position destination or precede the 3-position destination with blanks. (See notes below.)

NOTE 1: Inquire through program $$UWFH55 to determine whether the Shipment Units are still on file.

NOTE 2: If the Shipment Units are still on file in an open status, assign the Shipment Units to a new GBL number through program $$UWFJ20 and $$UWFJ10 procedures, and process through this program with the new GBL number.

NOTE 3: If the Shipment Units are still on file but in a cleared status, annotate the mode cleared and GBL number, if any. Refer the shipment unit paperwork to the supervisor to determine whether non-MOFAST (manual) GBL processing is required.

NOTE 4: If the Shipment Units are no longer on file, refer the paperwork to the supervisor to determine whether non-MOFAST (manual) GBL processing is required.

ERROR MESSAGE	CAUSE/ACTION
GBL PREVIOUSLY CANCELED ENTER GBL ACTION DEST	Probable Causes: (1) GBL number has been miskeyed; (2) GBL has been canceled through program $$UWFJ20. Action: (1) Reenter correctly keyed GBL number. If message persists; (2) Reenter correctly keyed data. The GBL number entered is not found on the open GBL register. Proceed to notes above.
GBL NOT STOPPED ENTER DATA ENTER GBL ACTION DEST	Probable Cause: GBL number entered is from the current days processing and is still open and receiving additional Shipment Units by program $$UWFF01 input. Action: Enter program $$UWFG50 and follow procedure to close a bill. GBL will then have to follow program $$UWFJ10 and $$UWFJ20 procedures before reprocessing through this program.
GBL PREVIOUSLY COMPLETED ENTER GBL ACTION DEST	Probable Cause: The GBL entered has been billed and printed. Action: (1) Verify that the correct GBL number was entered by reentry of data. If message persists, proceed to; (2) Inquire program $$UWFH55. If this inquiry indicates shipment units assigned to GBL number entered are in completed status, refer paperwork to supervisor in order to reconcile paperwork with printed GBL; (3) If $$UWFH55 inquiry indicates Shipment Units not assigned to GBL number entered, and Shipment Units are in an open status, it will be necessary to assign the Shipment Units to a new GBL number following program procedures $$UWFJ20 and $$UWFJ10 before reprocessing through this program.

ERROR MESSAGE	CAUSE/ACTION
GBL PREV BUILD RESTART WITH ACTION CODE ENTER GBL ACTION DEST	Probable Causes: (1) This messsage indicates GBL was previously started and processing stopped for an error condition; (2) GBL has been completely processed and billed successfully. Action: (1) If error condition has been corrected, reenter data with the applicable Action Code as indicated in paragraph 5b above; (2) If GBL has previously been processed successfully and this message is the result of erroneous entry, enter next GBL number to be processed.
SHORT GBL STATUS ERROR STATUS = * ENTER GBL ACTION DEST	Probable Cause: This message will be displayed when an input is attempted for a GBL that is status A or O. Action: Status A in the above message indicates that the GBL entered has previously started processing and not completed or the GBL is currently being processed. Operator should verify that other billing operators are not processing the same bill. If it is determined that a restart action is required, the operator must utilize a Q type input prior to input of the restart action. Status O indicates that the GBL entered has completed the billing process and has started the printed process. Verify GBL number and reenter. If message persists, coordinate with other operators to determine cause for duplicate input.

6. PROCESS GBL COVER SHEET DATA

The display of data associated with the GBL cover sheet will appear upon the successful input of the GBL start format documented in paragraph 5b of this procedure. This display allows the operator to update and edit cover sheet data to assure compliance with governing DLAR 4500.3 and DLAM 4510 regulations, and to input and edit data to establish a correct information base for the rating segment of GBL processing. Figure 1 is a sample of the data displayed on the CRT. The asterisk-filled fields will accept alpha and numeric entries. The zero-filled fields will accept numeric entries only. (Note: Exceptions - the name of shipper and issuing officer's signature block are programed for printing but do not display. Also hazardous certification, when required, is keyed by the shipment unit file for printing but does not display.)

a. Display - See figure 1 below.

b. Data Definition.

(1) GBL number with one additional digit following which is a check digit (digit K12345678). This is not an updated field. Cross check this number against GBL number on paperwork to assure the correct GBL is being processed.

(2) A one position alpha or numeric code provided by the freight rate specialist relative to the code in the guaranteed traffic rate base file. This will also cause a "freight all kinds" description on the shipping papers.

(3) MAN - Manual Rate Field.

(a) If bill is to be manually rated an M should be keyed in place of the asterisk. Manual rate determination will be the responsibility of the freight rate specialist.

(b) "C" keyed in place of the asterisk will cause the rating process to bypass the special rate tariff class rate comparison and cause the bill to rate out at class rate. This decision will be the responsibility of the freight rate specialist.

(c) An A keyed in place of the asterisk in this data field will allow a "Freight All Kinds" freight description to be printed on the Bill of Lading or Government Truck Manifest. This will be input only if a nonalternating rate tender is published to the shipment destination.

(d) An alpha O in the place of the asterisk will bypass the guaranteed traffic rate base file.

(4) MAN-CST - Manual Rate Cost. If bill is to be manually rated, the total GBL cost will be entered in the zeroed field, observing the decimal point position. The field will be zero filled to the left of cost. The total cost will be provided by the freight rate specialist. (Note: Manual rate process requires input in both MAN and MAN-CST fields.)

(5) T - Tariff Distribution Area Code. A one character alpha or numeric code provided by the freight rate specialist for all shipments other than class rate. If no Tariff Code is entered here, bill will be rated as class rate.

(6) SPEC-TARIF - Special Tariff Field. Operator will update this field with the proper tariff number for all shipments other than class rate. This information will be provided by freight rate specialist. It updates the tariff or special rate authorities area of the GBL.

(7) M - Carrier Mode Code. Update this field to reflect the mode of shipment to be used for the GBL. The Mode Code is used by the rating segment of processing to determine the applicable rate tariff file. Applicable modes are listed in appendix A-17 of this volume. This field does not update the Shipment Unit File. It is a rating reference only.

(8) DLC - Destination SPLC. This is the Destination Address Standard Point Location Code (SPLC). If one is not found, asterisks will appear in the field and the operator must enter the SPLC, (Reference SPLC Continental Directory, NMF 102A). It is essential to the rating process that the SPLC entered is correct.

(9) GRT - Government Rate Tariff. To specify Government Rate Tariff rate processing, overlay the asterisk with a "Y". This will cause the bill to rate out according to Government Rate Tariff specifications.

(10) B - Process in batch.

(a) By overlaying the asterisk with a "Y" the operator can delay the bills rating until daily MOFAST file maintenance batch processing is run. This is a useful option for GBLs with a large number of lines that require excessive computer time to process. The result of batch processing is recorded on the F-181 report (furnished by data processing the following morning) which will indicate whether the GBL was completed successfully or contains errors or missing data that require correction. If the bill is completed successfully it will be ready for print ($$UWFM05). If an error or missing data is noted on the F-181 report the GBL must be reprocessed with the appropriate Action Code and corrective action taken as indicated by error message.

(b) The program will acknowledge a "Process in Batch" option update with the following message:

BILL AAAAAAAA READY FOR BATCH PROCESSING

ENTER GBL ACTION DEST

Where:

A - GBL Number

(11) CARR - Carrier Code. This is the SCAC (Standard Carrier Alpha Code NMF101). It verifies that the Carrier Code displayed is the carrier desired for the bill. If not, update with the correct carrier information.

(12) CARRIER NAME - This field contains the full name of the carrier abbreviated as necessary. Update to this field is accomplished automatically when the Carrier Code subparagraph (10) above, is updated.

NOTE: Activities operating under a prime carrier system must leave CARR and CARRIER fields blank unless other than the designated prime carrier is desired for shipment.

(13) POOL-WT - Pool Distribution Weight. This field will be updated by the operator with the total manifest weight of the pool load. Update for pool distribution shipment only.

(14) GBL-WGT PIECE CUBE - Total GBL weight, piece and cube information. These fields are not updatable. It is necessary to verify these information fields against the total annotated on the paperwork during program $$UWFJ10 verification of shipment units, to assure that no shipment units have been added to or deleted from the GBL in the interim period between the $$UWFJ10 verification and the $$UWFK05 billing initialization procedure. If a discrepancy is noted in the weight, piece or cube amounts, the operator must discontinue the billing process, recall the $$UWFJ10 inquiry to determine the cause, then follow corrective program procedures dictated by the type of discrepancy. When the problem is resolved, return to program $$UWFK05 and restart GBL with action codes Q and R.

(15) DUN-W - Dunnage Weight. This field will be updated by the operator with the total weight of additional bracing or blocking materials added to the conveyance to protect the load (normally only used for rail cars).

(16) PT-WT - Pallet Weight. Same as subparagraph (14) above.

(17) SD-WT - Skid Weight. Same as subparagraph (14) above.

(18) BL-DT - Bill Processing Date. The date displayed here represents the date the GBL is being processed. This field is for information only.

(19) DDD - Desired Delivery Date. Date computation is based on the GBL processing date plus the number of days considered reasonable for transit time from origin to destination, as determined by the shipper. If this field appears zero filled, compute the destination date as outlined above and overlay the zeros with the appropriate Julian date.

(20) P - Priority Field. At this point in GBL processing the field will indicate the Issue Priority Group of the first shipment unit assigned to the GBL; however, as processing continues the program will poll the IPGs of all shipment units assigned to the GBL and, when printed ($$UWFM05), this field will represent the highest Issue Priority Group. No update required.

(21) EX - Export Indicator. If the shipment is for export movement, an X is required in place of the asterisk. Failure to place an X in this position will cause the GBL to print without digit markings. This field applies to export shipments only.

(22) RTE/RLSE-NO - Route Release Number. This field updates the route order number area of the GBL. The route order number or release number will be provided by the freight rate specialist. This information is necessary for volume or pool load shipments only. Export shipments requiring booking numbers may have booking number input here. The field provides space for input of one booking number only. For input of more than one booking number, operator must first complete $$UWFK05 processing of the GBL then proceed to update each booking number through the GBL Line Item Inquiry process, program $$UWFL30. See appendix E-238 P, part F for instruction for this procedure.

(23) W-BILL AIR-BILL - Waybill and Airbill fields. Provides an update field for waybill and airbill numbers. This field requires update for all air shipments only.

(24) S - Transportation Protective Service Code. Enter the Transportation Protective Service Code when required. Reference MTMR DLAR 4500.3, Paragraph 226005.

(25) REAS - Reason Code. Enter the Reason Code an transportation cost difference when required. Reference MTMR DLAR 4500.3, Paragraph 214036b(12).

(26) T - Type Rate Code. This field requires update on MTMC routed traffic. The Type Rate Code is a single numeric code as defined in DLAR 4500.3, Paragraph 214036B(11).

(27) FULL - Entry of this code is required when a vehicle has been loaded to capacity. Entry of a Y will cause an X to be printed in the block at the bottom of the remarks section for this purpose.

(28) MODE - Car, Truck, Container Type. This field is used to update the "Mode" block of the GBL. When this field is left blank in the display, "AX" prints automatically as the kind of trailer. Update this field only when other than "AX" trailer kind is required.

(29) PRO - PRO Identification Number. This field is used to update the applicable manifest PRO number for pool distribution shipments. Two positions are provided for the manifest PRO number. If not a pool distribution shipment, leave blank.

(30) TRP - Trip Identification Number. This field is used to update the applicable manifest number for pool distribution shipments. There are three positions in the field for the manifest trip number. If not a pool distribution shipment, leave blank.

(31) BULK-DIST - Bulk Distribution Area. The field is used to update the bulk distribution point as indicated by the manifest for pool distribution shipments. Enter the name of the break bulk point.

(32) CLASSF - Classification Number. Leave blank.

(33) GEO - Geographical Area Code. This is a locally assigned code used for the carrier assignment process followed in earlier shipment unit processing. This field is for information only.

(34) DEST - Destination Activity Address Code. The key for GBL consolidating and billing addresses.

(35) SPI - Shipping Point Indicator. This is a key used to provide a shipping point address for the GBL if different from the depot location. Enter one of the following codes to obtain desired address when different from the

primary origin address. Alternate billing city addresses are maintained in the MOFAST Table and Control Monitor File in addition to the primary depot origin address according to the codes shown below.

Code A - Identifies the first alternate billing city (shipping point) address record.
Code B - Identifies the second alternate billing city address record.
Code C - Identifies the third alternate billing city address record.
Code D - Identifies the fourth alternate billing city address record.

NOTE: The code structure illustrated above is provided only as a guide. Users can develop their own locally developed alpha or numeric code structure, the only restriction being that the primary depot origin address must be included in the Monitor File ahead of the alternate billing city addresses.

(36) AC - Air Certification Code. Entry of this code is required when the Mode of Shipment code for the GBL is Q, R, S or T. This code will cause an Air-Certification Statement to print on the GBL cover sheet. Valid codes for this data element are C or P. Code C indicates the shipment is within the limitations prescribed for cargo aircraft. Code P indicates the shipment is with the limitations prescribed for passenger aircraft. Failure to enter the Air Certification Code when the GBL Mode of Shipment is Q, R, S or T will create an error condition which will stop GBL assembly until the proper Mode/Air Certification Code relationship is established in the GBL cover sheet display.

(37) TRAILER NUMBER - Car, truck or container initials and number fields. Three fields are provided for car/trailer number information input. This area requires update only for volume or pool shipments. If the GBL is processed with no container data in this field, "None" will print in the corresponding block of the GBL cover sheet.

(38) SEAL NUMBER - Seal Number. These fields are used to update the seal numbers block of the GBL. Seal information for three trailers can be accommodated. This field is applicable for volume truckload or carload shipments only.

(39) CLS/TLS - Carloads or Truckloads Furnished. Enter the number of vehicles that were furnished for the shipment. It will print in the corresponding block of the GBL cover sheet.

(40) LNG/CUBE ORD FURN - Length of Truck Ordered and Truck Furnished. Update the length of trucks ordered and furnished.

(41) MARK ORDER FURN - Marked Capacity Ordered and Furnished. These fields are used to update the marked capacity of the GBL. The cubic capacity of the rail car ordered and furnished is entered here. These fields require update for rail shipments only.

(42) DATE FURN - Date Furnished. This field applies to rail shipments only. The operator will key in the five-digit Julian date the rail car is furnished by the railroad for loading.

(43) RMRK - Entry of a Y in this block will bring up ten additional lines to enter data such as flight instructions, etc., as shown in figure 2.

(44) CAR STATEMENTS - This is a key used to provide a carrier statement to be printed on the bill of lading. The corresponding key and statement must be loaded in MOFAST Rate Table Listing using appendix E-196 P, Carrier/RIN Statement Maintenance.

(45) RIN STATEMENTS - These are keys to provide up to four Routing Instruction Notes (RIN) to be printed on the GBL. The corresponding keys and statements must be loaded in MOFAST Rate Table Listing using appendix E-196 P, Carrier/RIN Statement Maintenance.

(46) DESTINATION - This field contains the type A, B, C or last two lines of the bill address depending on availability. The destination address comes from the same activity address record as the CONSIGNEE. If no A, B or C address is found, the last two lines of the CONSIGNEE are displayed.

(47) BILL-CHARGES-TO - Finance Center Address. The Finance Center Address is keyed automatically. This is an updateable field. If the address must be changed due to special processing requirements, overlay field with the corrected data. The Finance Center Address source is DLAR 4500.3.

(48) CONSIGNEE - This field contains the type G of the activity address record depending on availability.

(49) GBLOC - Government Bill of Lading Office Code. This code comes from the address record. If no GBLOC is found, this field will contain asterisks and must be entered by the operator (Reference appendix W, DLAR 4500.3).

(50) MARKS - This field updates the "Marks" area of the GBL cover sheet. Information displayed in this field is generated by the same address key as the destination address. If the destination address requires DLAM 4510 research, it will be necessary to consult DLAM 4510 for possible delivery instruction requirements for this field. Exception: The export declaration statement for Canadian export shipments is programmed to print on the GBL but will not appear in this field of the display. Any updates the operator attempts in this field will not print on the GBL. In this instance, the special notes field is not updateable.

(51) VIA OR ROUTING DATA - This field corresponds to the via carrier area of the GBL. Via carrier, if any, must be updated by the operator.

(52) STOP AT - Three lines are provided for identification of the stopping in transit point for loading or unloading. This field requires update for all part-unloaded or part-load volume shipments.

c. Message is as follows:

```
ENTER DATA FOR TARIFF = AAAAAAAAAAA B
FAK WEIGHT = XXXXXXX
CCCCCCCC

STOP-WGT DEL-WGTI DEL-WGT2
:0000000 :0000000 :0000000
```

(1) Legend:

A - Special Tariff
B - Tariff Code (Area)
C - GBL Number

(2) This message is keyed by Tariff Code and special tariff information provided in cover sheet display. It is generated to accommodate the additional weight breakdown information required for pool distribution and volume shipments, unless manually rated.

(3) Action:

(a) Pool Distribution Shipments.

1. Enter total weight for stop in zeroed field under STOP-WGT.

2. Enter weight displayed in FAK-WEIGHT = Field in zeroed field under DEL-WGT1.

3. There is no input in zeroed field under DEL-WGT2.

4. Press ENTER to begin rating segment of processing (paragraph 7 below).

(b) Volume Shipment.

1. No weight input required for volume shipments.

2. Press ENTER to begin rating segment of processing (paragraph 7 below).

(c) Split Delivery.

1. Enter the total weight for the stop in the zeroed field under STOP-WGT (for Pool Distribution Split Deliveries only).

2. Enter weight for the first stop of split delivery in zeroed field under DEL-WGT1.

3. Enter weight for the second (final distribution) stop in zeroed field under DEL-WGT2.

4. Press ENTER to begin rating segment of processing (paragraph 7 below).

NOTE: The Stop Weight cannot be greater than the Pool Weight entered, and the combined delivery weights cannot be greater than the FAK Weight shown in this message.

(d) Error Messages.

1. If the same display reappears with the word "ERROR" following the $, an input error has been made. The word ERROR indicates that a numeric field was updated with alpha data. Reedit and update display and press ENTER. If entry is successful, the program will begin the rating segment of processing (paragraph 7 below).

2. If the same message reappears with updated fields returned to original display status, the stop weight entered was greater than the pool weight, or the combined delivery weights entered were greater than the freight all kinds weight. Enter corrected data and press ENTER. If enter is successful, the program will begin the rating segment of processing (paragraph 7 below).

7. PROCESSING

At this point, the program moves into the rating segment of GBL processing. During this segment the $$UWFK05 program checks all shipment units for missing or incorrect data found in the Rate Base File the shipment unit record or the address file. If no error conditions are encountered the program will compute the shipping cost for the GBL, and generate one of the following messages:

```
GBLK1234567 BUILT SUCCESSFULLY

ENTER GBL          ACTION    DEST

              or

GBL K1234567 BUILT SUCCESSFULLY
TOBYHANNA FUNDS ON BILL

ENTER GBL          ACTION    DEST
```

The messages indicate the GBL has been completed successfully and is now ready for printing and TK4 or TCMD card preparation, and optional inquiry/update procedures outlined in paragraph 1 of this appendix. The operator may now enter the next GBL number to be processed. The following are error messages it is possible to encounter during the rating segment of processing.

a. Error Message - ENTER MARK FOR ADDRESSES

```
ENTER MARK FOR ADDRESSES AAAAAAAAAAAAA
BBBBBBBBCCCDDD
MARK FOR ******
```

Where:

A - Shipment Unit Number (13 positions)
B - GBL number
C - Shipment units GBL sequence number as listed in short GBL inquiry program $$UWFJ10
D - Shipment unit index

(1) Probable Cause: If process is equal to XA a "mark for" address is needed for the Shipment Unit number indicated by As in display.

(2) Action:

(a) Reference the Shipment Unit paperwork indicated by A's in the message. The Shipment Unit's sequence position on the GBL is indicated by C's in message.

(b) If mark for address is required, enter Activity Address Code from the "ship to" block of the MRO overlaying the first six asterisks in the message. Press ENTER to continue processing.

(c) If no mark for address is required, press ENTER to continue processing.

d. Message - TRANS-ACCT CODE

TRANS-ACCT CODE AAAAAAAAAAAAA
BBBBBBBBCCCCCC
APPROPRIATION**
T C-CODE*****(53 asterisks)*****

Where:

A - Shipment Unit and Line Number
B - GBL Number
C - Shipment Units GBL Sequence number as listed in short GBL inquiry program $$UWFJ10.
D - Shipment Unit Index

(1) Probable Cause: The Appropriation Code key and Transportation Appropriation Code is needed for the Shipment Unit designated by A's in message.

(2) Action:

(a) Reference the SU paperwork indicated by A's in message. The Shipment Units sequence on the GBL is indicated by C's in message.

(b) Paperwork should be annotated with correct appropriation key and Transportation Appropriation Code information. If not, refer paperwork to supervisor for appropriation information.

(c) Enter the Appropriation Code key overlaying the two asterisks following appropriation field. Enter the Transportation Appropriation Code by overlaying the asterisks following the TAC Code field. Both fields must be updated or both left blank in order for the program to accept the entry.

NOTE: If the Appropriation field displays 08 it will be necessary to update the "TAC-CODE=" field with NMF-X-YYYY. The X field of the sample will be updated with the last digit of the current fiscal year. The Y field will be updated with Account Code information noted in DLAR 4500.32R, Volume II, under Navy cognizant using the two-digit alpha code, positions 55 and 56 of the applicable Shipment Unit line (MRO) as the key.

e. Message - ERROR. Where message in subparagraph d above reappears with the word ERROR in the right of the display, the following applies:

(1) Probable Cause: One of the fields in message in subparagraph d above, did not contain an entry.

(2) Action: Reenter Transportation Account Code data as outlined in message subparagraph d above. Press ENTER to continue processing.

f. Message - FRT DESCRPT NOT FOUND NMFC

```
FRT DESCRPT NOT FOUND NMFC IIIIII LTL J SEQKK
ENTER NMFC FOR SU-LI=AAAAAAABBBBCC
DDDDDDDDEEEEEEFFFFFHHHHHHHHHHHH
HHHHHHHHHHHHHHHHHHHHHHHHHHHHHH
NMFC=:LTL SEQ
```

Where:

A - Shipment Unit Number
B - Line number of Shipment Unit
C- Shipment Unit line partialing information, if any; blank if not a partialed shipment.
D - GBL Number
E - Shipment Unit's GBL sequence number short GBL inquiry, program $$UWFJ10.
F - SU Index
H - Programing Index
I - NMFC from Shipment Unit line data.
J - NMFC LTL Code from Shipment Unit line data.
K - NMFC suffix from Shipment Unit line data.

(1) Probable Causes:

(a) The NMFC, LTL and/or suffix shown in message (I, J and K positions) was not found in the freight description file.

(b) The NMFC suffix and class rating in the Shipment Unit record does not correspond to the sequence listed for the NMFC class rating in the freight description file.

(2) Action: Reference the Shipment Unit paperwork indicated by A's in message; the GBL sequence identified by E's in message. Locate the Shipment Unit line number as indicated by B's in message. The NMFC number and suffix must be reviewed by the freight classification or rate specialist.

(a) If the NMFC number and suffix are valid, the freight classification specialist must update the freight description file, program $$UWFR10, appendix E-229 P. The bill may then be restarted through this program with Action Code S.

(b) If the NMFC and/or suffix is invalid, an alternative NMFC and suffix will be furnished by the specialist. The operator will input the correct NMFC,and SEQ LTL information in the blank NMFC, LTL and SEQ fields.

NOTE 1: This update will accept any valid NMFC/suffix input and bill accordingly ("valid" here indicates NMFC/suffix data that is found in freight description file). If the operator enters a valid NMFC and suffix, but one that is incorrect for the Shipment Unit being processed, the R Option Code will not wipe out the erroneous entry. Operator must correct by entering $$UWFQ45 and updating the incorrect NMFC/suffix/LTL rate. The operator will overlay the incorrect NMFC, suffix, and LTL rate data fields with correct data and press ENTER. When the NMFC data is corrected, the bill must be restarted in program $$UWFK05 with Action Code R.

g. Message - ERROR. Where message in subparagraph f above reappears with the word ERROR in the lower right of the display, the following applies:

(1) Probable Cause: The NMFC and suffix entered in message in subparagraph f above, contained an alpha character. This field will accept numeric data only.

(2) Action: Enter correctly keyed NMFC and suffix data as indicated in message in subparagraph f above, and press ENTER.

h. Message - HAZARDOUS NIIN DESCRIPTION NOT FOUND FOR NIIN

```
HAZARDOUS NIIN DESCRIPTION NOT FOUND
NIIN = XXXXXXXXX    SU-LI = AAAAAAABBBBCC
ENTER GBL            ACTION    DEST
```

Where:

Same as in message subparagraph f above.

(1) Probable Cause: No NIIN description was found in the Hazardous Materials Packaging and Transportation. Type Cargo Code for NIIN is other than D, H, M, N, Q or Z.

(2) Action: The freight classification specialists must update the Hazardous Materials Packaging and Transportation with a NIIN description using program $$UWFR85, reference appendix E-004 P. The bill may then be restarted through this program with Action Code S.

i. Message - LTL EQUAL ZERO

```
LTL EQUAL ZERO
ENTER LTL FOR SU-LI=AAAAAAABBBBCC
DDDDDDDDEEEFFFHHHHHHHHHHHHHHHH
HHHHHHHHHHHHHHHHHHHHH
LTL=:000.0
```

Where:

Same as in message subparagraph f above.

(1) Probable Cause: There is no LTL rate in Shipment Unit indicated by A's for the Shipment Unit line indicated by B's in message.

(2) Action:

(a) Reference the shipment unit paperwork indicated by A's in message; the GBL sequence identified by E's in message. Locate the shipment unit line indicated by B's in message.

(b) The applicable class rating information will be furnished by the freight rate specialist. The operator will overlay the zero filled LTL field with the correct LTL rating observing the decimal place. Position cursor in the first position right of rating input and press ENTER.

j. Message - ERROR. Where message in subparagraph i above, format reappears with the word ERROR in the lower right of the display, the following applies:

(1) Probable Cause: The zero filled LTL field was overlayed with other than numeric data or the field decimal place was overlayed.

(2) Action: Enter corrected LTL data as stated in message in subparagraph i above, observing the decimal place.

k. Message - SPLC-RATE-BASE RECORD NOT FOUND

```
SPLC-RATE-BASE RECORD NOT FOUND
DEST-XXXXXXXXX   MODE=X
ENTER GBL        ACTION    DEST
```

(1) Probable Cause: SPLC rate base record was not found; or Mode Code entered in cover sheet display not found in Rate Base File.

(2) Action: Verify that the SPLC and mode displayed are correct for the destination and mode of shipment indicated by Shipment Unit paperwork.

(a) If SPLC or mode displayed is incorrect, restart GBL with Action Code S as outlined in paragraph 5a and correct mode and SPLC input in messages paragraph 6a and b above, respectively.

(b) If SPLC and mode displayed is correct, it will be necessary for the freight rate specialist to update the Rate Base File, program $$UWFK60, for the SPLC and mode shown in message. When the Rate Base File has been updated, restart GBL in this program with Action Code S.

(c) An alternative to the $$UWFK60 update is the manual rate process, outlined as follows:

1. Obtain the total GBL shipping cost from the freight rate specialist.

2. Restart bill with Action Code S.

3. Update the cover sheet display, MRATE field with an "M", and MCOST field with the total GBL shipping cost provided by freight rate specialist. This will cause the rating segment of GBL processing to pro-rate the total shipping cost by weight.

1. Message - NO PRIME CARRIER IN SPLC-RATE-BASE RCD

```
NO PRIME CARRIER IN SPLC-RATE-BASE RCD
DEST=XXXXXXXXX   MODE=X
ENTER GBL        ACTION    DEST
```

(1) Probable Cause: By leaving the Carrier Code field blank the operator has instructed the program to determine the prime carrier for the SPLC and message displayed. This message indicates that there is no prime carrier flagged for the SPLC and mode displayed.

(2) Action:

(a) The operator must notify the freight rate specialist to update the Rate Base File, program $$UWFK60, with a prime carrier flag. When this update is completed the operator may restart the GBL with Action Code S.

(b) An alternate corrective action would be to restart the GBL with Action Code S, and update the Carrier Code field and carrier name field. This action would key the program to look for the specified carrier tender file for the SPLC and mode designated in message. If no tariff tender file is found, the bill will rate at class rate.

(c) Corrective actions in subparagraphs (a) and (b) above may be bypassed by the following instructions for manual rate as outlined in paragraph 7k(c) above.

m. Message - TARIFF-TENDER RECORD NOT FOUND

```
TARIFF-TENDER RECORD NOT FOUND
CARR=XXXX TNDR=XXXX R-BSE=XXXXXX TYPE=X
ENTER GBL        ACTION    DEST
```

(1) Probable Cause: Tariff tender record was not found for carrier, tender, rate base and type displayed.

(2) Action:

(a) Freight rate specialist must update the tariff tender file, program $$UWFK60, with carrier, tender, rate base, and type as shown in message. Bill may then be restarted this program with Action Code S.

(b) Program $$UWFK60 update may be bypassed by following instructions for manual rate as outlined in paragraph 7k(c) above.

n. Message - CONTRABAND RECORD NOT FOUND

```
CONTRABAND RECORD NOT FOUND
CONTRABAND LIST=XX
ENTER GBL        ACTION    DEST
```

(1) Probable Cause: The displayed contraband list not found in the contraband record file.

(2) Action:

(a) Freight rate specialist must update the contraband file for the contraband list program $$UWFK60, shown in message. GBL may then be restarted through this program with Action Code S.

(b) Contraband file update may be bypassed by following the instructions for manual rate as outlined in paragraph 7k(c) above.

o. Message - RATE BASE RECORD NOT FOUND

```
RATE BASE RECORD NOT FOUND
RTE BASE=XXXXXX TARIFF=XXXXXXXXXX
ENTER GBL        ACTION    DEST
```

(1) Probable Cause: Rate base number was not found in the Rate Base File.

(2) Action:

(a) Freight rate specialist must update the Rate Base File with the rate base record, program $$UWFK60. Bill may then be restarted through this program with Action Code S.

(b) Program $$UWFK60 update may be bypassed by following manual rate instructions as outlined in paragraph 7k(c) above.

p. Message - SPECIAL TARIFF RECORD NOT FOUND

```
SPECIAL TARIFF RECORD NOT FOUND
TARIFF=XXXXXXXXXXX  DIST-AREA=X
ENTER GBL        ACTION    DEST
```

(1) Probable Cause: Special tariff record not found in the Rate Base File.

(2) Action:

(a) Freight rate specialist must update special tariff file, program $$UWFK60, for tariff and distribution area shown in message. Bill may then be restarted through this program with Action Code S.

(b) Program $$UWFK60 update may be bypassed by following instructions for manual rate as outlined in paragraph 7k(c) above.

q. Message - INVALID DATA ON SPEC TARIFF FILE

```
INVALID DATA ON SPEC TARIFF FILE
TARIFF=XXXXXXXXXX DIST-AREA=X
ENTER GBL        ACTION    DEST
```

(1) Probable Cause: Invalid data was found on the special tariff record for tariff and distribution area shown.

(2) Action:

(a) It is the responsibility of the freight rate specialist to correct and update the special tariff file through program $$UWFK60.

(b) After data is corrected by freight rate specialist, bill may be restarted through this program with Action Code S.

(c) Program $$UWFK60 update may be bypassed by following instructions for manual rate as outlined in paragraph 7k(c) above.

r. Message - BEYOND CODE XX UNMATCHED

```
BEYOND CODE XX UNMATCHED
TARIFF-XXXXXXXXXX DEST=XXXXXXXXXX
                ENTER BEYOND COST
AAAAAAAA          :00000.00
```

Where:

A - GBL number

(1) Probable Cause: No record was found in the beyond indicator file for the beyond code shown.

(2) Action: Obtain total GBL beyond cost from freight rate specialist. Enter beyond cost in zeroed field below "BEYOND=COST", observing decimal place. Press ENTER key.

s. Message - ERROR. Where message in subparagraph r above format reappears with the word ERROR in the lower right of the display, the following applies:

(1) Probable Cause: An alpha character has been entered in the numeric Beyond Cost field in message subparagraph r above.

(2) Action: Enter numeric Beyond Cost in zero filled field observing the decimal place and press ENTER key.

t. Message - INVALID DATA ON BEYOND IND FILE

```
INVALID DATA ON BEYOND IND FILE
BEY-CDE=XX DEST=XXXXXXXXX
ENTER GBL        ACTION    DEST
```

(1) Probable Cause: Invalid data was found in the beyond indicator record for beyond code and SPLC shown.

(2) Action:

(a) Freight rate specialist must correct and update beyond indicator record (program $$UWFK60). GBL may then be restarted through this program with Action Code S.

(b) Program $$UWFK60 update may be bypassed with manual rate process as described in paragraph 7k(c) above.

u. Message - INVALID DATA ON TARRIF-TENDER FILE

```
INVALID DATA ON TARIFF-TENDER FILE
CARRIER=XXXX TENDER=XXXX R-BSE=XXXXXX TYPE=X
ENTER GBL        ACTION    DEST
```

(1) Probable Cause: Invalid data was found in the tariff tender record for the carrier, tender and type shown in message.

(2) Action:

(a) Freight rate specialist must correct and update the tariff tender record through program $$UWFK60. GBL may then be restarted through this program with Action Code S.

(b) Program $$UWFK60 update may be bypassed with manual rate process as outlined in paragraph 7k(c) above.

v. Message INVALID DATA ON RATE BASE FILE

```
INVALID DATA ON RATE BASE FILE
RTE-BSE=XXXXXX  TARIFF=XXXXXXXXX
ENTER GBL        ACTION    DEST
```

(1) Probable Cause: Invalid data was found in rate base record.

(2) Action:

(a) Freight rate specialist must correct and update the rate base record through program $$UWFK60.

(b) Rate base record update may be bypassed with manual rate process as outlined in paragraph 7k(c) above.

w. Message - MULTIPLE AMOUNT RECORD NOT FOUND

```
MULTIPLE AMOUNT RECORD NOT FOUND
MULTIPLE KEY=XXXXXXXXXX
ENTER GBL        ACTION    DEST
```

(1) Probable Cause: Multiple amount key in minimum amount field. Program $$UWFK60, references a nonexistent multiple amount record.

(2) Action:

(a) Requires correction through program $$UWFK60 by freight rate specialist. The GBL can then be restarted through this program with Action Code S.

(b) $$UWFK60 update may be bypassed by the manual rate option as outlined in paragraph 7k(c) above.

x. Message - GRT TARIFF RECORD NOT FOUND

```
GRT TARIFF RECORD NOT FOUND
DEST=XXXXXXXX MODE=X
ENTER GBL        ACTION    DEST
```

(1) Probable Cause: The mode code or SPLC entered in paragraph 6 above, messages in subparagraphs a and b respectively, was not found in the Government Rate Tariff File.

(2) Action: Verify the SPLC and mode in display for correctness.

(a) If SPLC and mode indicated in display is incorrect, restart GBL with Action Code S and enter correct mode and SPLC information in messages in subparagraphs a and b respectively of paragraph 6 above.

(b) If SPLC and mode indicated in display are correct, it will be necessary for the freight rate specialist to update Government Rate Tariff File through program $$UWFK60 with mode and SPLC information. Bill may then be restarted in this program with Action Code S.

(c) $$UWFK60 update may be bypassed by following the procedure for manual rate as outlined in paragraph 7k(c) above.

y. Message - GBL EXCEPTION CARRIER RECORD NOT FOUND

```
GBL EXCEPTION CARRIER RECORD NOT FOUND
GBL EXCEPTION CARRIER=XX
ENTER GBL        ACTION    DEST
```

(1) Probable Cause: The rate base file program $$UWFK60 does not find data for the GBL exception Carrier Code indicated in display.

(2) Action:

(a) The freight rate specialist must update the rate base file through program $$UWFK60 with the GBL exception carrier information indicated in the display. The bill may then be restarted through this program with Action Code S.

(b) The $$UWFK60 update may be bypassed by following the manual rate procedure outlined in paragraph 7k(c) above.

z. Message - GRT RATE BASE RECORD NOT FOUND

```
GRT RATE BASE RECORD NOT FOUND
RTE BASE=XXXXXX  TARIFF=XXXXXX
ENTER GBL        ACTION    DEST
```

(1) Probable Cause: The rate base and tariff information indicated by display was not found in the Rate Base File.

(2) Action:

(a) The freight rate specialist must update the Rate Base File, program $$UWFK60, with the information for the rate base and tariff indicated in the display. Bill may then be restarted through this program with Action Code S.

(b) The $$UWFK60 update may be bypassed by following the manual rate procedure outlined in paragraph 7k(c) above.

aa. Message - CAN NOT BE RATED ON GRT-TARIFF

```
CAN NOT BE RATED ON GRT-TARIFF
WEIGHT GREATER THAN 10,000 LBS
ENTER GBL        ACTION    DEST
```

(1) Probable Cause: The total GBL weight is greater than 10,000 lbs.

(2) Action: GBLs greater than 10,000 lbs. must be processed through freight rate specialist to determine special rate and tariff authority for the shipment. The specialist will annotate the paperwork with the correct tariff authority and return the paperwork to the operator. The operator may then restart the bill with the corrected authority through this program with Action Code S.

ab. Message - GBL-LI BUILD OUT OF BALANCE

```
GBL-LI BUILD OUT OF BALANCE
ENTER GBL        ACTION    DEST
```

(1) Probable Cause: The GBL was previously started and not restarted with Action Code S or R.

(2) Action: Restart GBL with the applicable action code as outlined in paragraph 5a(3) above.

ac. Message - INVALID FIRST OPERATOR INPUT

```
INVALID FIRST OPERATOR INPUT
SU-LI IN ERROR-XXXXXXXXXXXXX
ENTER GBL        ACTION    DEST
```

(1) Probable Cause: Processing through program $$UWFE01 or $$UWFF01 has not been completed (initial container input). The final container count in Shipment Unit is invalid.

(2) Action:

(a) "X" option format to reassign the Shipment Unit to the GBL.

(b) When $$UWFF01 has been corrected, verify that the Shipment Unit has been reassigned to the GBL by program $$UWFJ10 short GBL inquiry. GBL may then be restarted in this program with Action Code R.

NOTE: The process of cancelling and reassigning a Shipment Unit to a GBL will cause it to lose the sequence position established by the original GBL assignment process, and will move the Shipment Unit to the last position on the GBL. For billing situations where Shipment Units must be billed in a specific sequence (i.e., part unloads or consolidating like mark-for's) it will be necessary to cancel the GBL and reassign all Shipment Units to a new GBL through program $$UWFJ20 to reestablish desired Shipment Unit sequence.

ad. Message - CONTAINER TOTALS ERROR

```
CONTAINER TOTALS ERROR
SU-LI ERROR=XXXXXXXXXXXXXXXXXX
ENTER GBL        ACTION    DEST
```

(1) Probable Cause: Program procedure $$UWFF01 or $$UWFE01 initial input has not been completed. The total container count is invalid.

(2) Action:

(a) Initial container data input must be corrected by program $$UWFF01 procedures following "X" option format to reassign the Shipment Unit to the GBL.

(b) When $$UWFF01 input has been corrected, verify that the Shipment Unit has been reassigned to the GBL by program $$UWFJ10 short GBL inquiry. GBL may then be restarted through this program with Action Code R.

NOTE: See note following paragraph 7ac(2)(b) above.

ae. Message - INVALID SECOND OPERATOR INPUT

```
INVALID SECOND OPERATOR INPUT
SU-LI ERROR=XXXXXXXXXXXXXX
ENTER GBL        ACTION    DEST
```

(1) Probable Cause: In order for a line item to be represented in more than one container, it must:

(a) Involve not more than one line item to be represented in more than one container.

(b) The line item must be represented in consecutively numbered containers.

NOTE: This error message indicates that exception data input through program $$UWFF25 has not met these requirements, and one line has been represented in containers not consecutively numbered, or in container involving more than one line item.

(2) Action: Shipment Unit must be canceled from bill through program $$UWFJ20 and error corrected through program $$UWFF01 and $$UWFF25 and related procedures. Shipment Unit can then be reassigned to GBL through $$UWFJ20. The GBL can then be restarted through this program with Action Code S.

NOTE: See note following paragraph 7ac(2)(b) above.

af. Message - GBL SU RCDS NOT FOUND

```
GBL SU RCDS NOT FOUND
ENTER GBL          ACTION DEST
```

(1) Probable Cause: Possible program error.

(2) Action: Restart bill with Action Code S. If the message persists, record the error message and GBL number and have the supervisor notify the data systems manager.

ag. Message - GBL LI RCDS NOT FOUND

```
GBL LI RCDS NOT FOUND
ENTER GBL          ACTION    DEST
```

(1) Probable Cause: Same as message in subparagraph af above.

(2) Action: Same as message in subparagraph af above.

ah. Message - UWFK05 BAD RETURN FROM XXXXXX YYYYYYYY

```
UWFK05 BAD RETURN FROM XXXXXX YYYYYYYY
ENTER GBL          ACTION    DEST
```

(1) Probable Cause: Same as message in subparagraph af above.

(2) Action: Same as message in subparagraph af above.

ai. Message - INVALID CONSOLIDATED PACK

```
INVALID CONSOLIDATED PACK
MASTER SU=3394831000000
ENTER GBL          ACTION    DEST
```

(1) Probable Cause: This message indicates one or more of the following error conditions for the consolidated pack identified by the Master SU number in the display.

(a) The consolidated pack contains a line(s) with missing NMFC and/or LTL data.

(b) Where the GBL is being processed as FAK, all NMFCs assigned to the Master SU are density NMFCs.

(c) Where the GBL is being processed as class rate, all NMFCs assigned to the consolidated pack are density NMFCs.

(2) Action: Research the consolidated pack documentation to determine which error condition generated the message. Resolve as follows:

(a) Missing NMFC and/or LTL data must be updated through program $$UWFQ45, appendix E-238 P, part D and the GBL restarted using Action Code S. If the GBL processing is class rate, update all missing NMFC/LTL data for the Master SU only.

(b) If the GBL is being processed as FAK and all NMFCs associated with the master Shipment Unit are density NMFCs, rechain the consolidated pack Shipment Units to establish a master Shipment Unit with nondensity NMFCs (program $$UWFF75, appendix A-224 P part G). Restart the GBL with Action Code R.

(c) If the GBL is being processed as class rate and all NMFCs associated with the consolidated pack are density NMFCs, the consolidated pack must be unchained (program $$UWFF75, appendix E-224 P, part G) and processed as individual Shipments Units. Restart GBL with Action Code R.

aj. Message - HAZARDOUS MODE DATA MISSING

```
HAZARDOUS MODE DATA MISSING
NIIN = 123456789  FSCM =        VAR =       MODE = DOT
ENTER GBL            ACTION      DEST
```

(1) Probable Cause: No hazardous description was found for the mode shown in the error message.

(2) Action: The freight classification specialists must update the Hazardous Materials Packaging and Transportation File with a description for the mode shown in the message using program $$UWFR85, reference appendix E-109 P. The bill may be restarted through this program with Action Code S.

ak. Message - NEED FSCM AND/OR VAR # FOR HAZARDOUS FREIGHT DESCRIPTION

```
NEED FSCM AND/OR VAR # FOR HAZARDOUS FREIGHT DESCRIPTION
NIIN = 123456789  SU-LI = 17001610001

K00003060000100001N000010000100000
17001610001001000010017001610000 00

ENTER FSCM        VAR #
```

(1) Probable Cause: This is more than one description for the NIIN in the message with separate FSCM codes and/or variation codes.

(2) Action: The freight classification specialist must indicate the proper FSCM code or variation code for the NIIN in question. Enter the FSCM and/or variation code as indicated in the message and depress the ENTER key.

al. Message - SMALL CARRIER ZONE TABLE NOT FOUND

```
SMALL CARRIER ZONE TABLE NOT FOUND
CARRIER = GFLS
ENTER GBL            ACTION    DEST
```

(1) Probable Cause: A small carrier zone table was not found for the carrier displayed.

(2) Action:

(a) The freight rate specialist must update the small carrier zone table with program $$UWFK71 for the carrier shown in this message. The bill may then be restarted with Action Code S.

(b) Program $$UWFK71 update may be bypassed by following instructions for manual rate as outlined in paragraph 7k(c) above.

am. Message - GUARANTEED TRAFFIC CHARGES

GUARANTEED TRAFFIC CHARGES

GBL K0000325 DEST 874465 CARRIER PIEC COST 00060.00

ENTER ADDITIONAL CHARGES 00000.00

(1) Probable Cause: The GBL was rated under the guaranteed traffic rate base file and has stopped for the operator to enter any assessorial charges that may be necessary as determined by a freight rate specialist.

(2) Action: Enter any additional charges or if no charges are applicable other than the basic cost, hit the enter to complete the billing process.

an. Message - SPLC RATE GROUP TABLE NOT FOUND

SPLC RATE GROUP TABLE NOT FOUND
CARRIER = GFLS
ENTER GBL ACTION DEST

(1) Probable Cause: A rate group table was not found for the carrier in the message and was not found in the Guaranteed Traffic Rate Base File.

(2) Action:

(a) The Guaranteed Traffic Rate Base File must be updated through program $$UWFK71. The GBL can then be restarted through this program with Action Code S.

(b) $$UWFK71 update may be bypassed by the manual rate option as outlined in paragraph 7k(c) above.

ao. Message - GUARANTEED RATES PER HUNDRED RECORD NOT FOUND

GUARANTEED RATES PER HUNDRED RECORD NOT FOUND
CARRIER = PIEC TYPE-SERVICE = A RATE-GROUP = ZZZ
ENTER GBL ACTION DEST

(1) Probable Cause: The rates per hundred were not found on the Guaranteed Traffic Rate Base File for the carrier, type service or rate group shown in the message.

(2) Action: The Guaranteed Rate Base File must be updated by the freight rate specialist through program $$UWFK71. The GBL can then be restarted through this program with Action Code S.

ap. Message - GUARANTEED/SMALL CARRIER RATES RECORD NOT FOUND

```
GUARANTEED / SMALL CARRIER RATES RECORD NOT FOUND
CARRIER = PIEC  TYPE-SERVICE = 3  WEIGHT = 025
ENTER GBL           ACTION     DEST
```

(1) Probable Cause: The small carrier rates were not found in the Guaranteed Traffic Rate Base File for the carrier, type service or weight group shown in the message.

(2) Action:

(a) The small carrier rates in the Guaranteed Traffic Rate Base File must be updated by the freight rate specialist through program $$UWFK71. The GBL can then be restarted through this program with Action Code S.

(b) $$UWFK71 update may be bypassed by following the procedure for manual rate as outlined in paragraph 7k(c) above.

aq. Message - INVALID RATE DATE FOR SMALL CARRIER RATES

```
INVALID RATE DATA FOR SMALL CARRIER RATES
CARRIER = PIEC  WEIGHT = 100  TYPE-SERVICE = 1
ENTER GBL           ACTION    DEST
```

(1) Probable Cause: The mode code, weight or type service shown in the message was not found in the Guaranteed Traffic Rate Base File.

(2) Action:

(a) The small carrier rates in the Guaranteed Traffic Rate Base File must be updated by the freight rate specialist through program $$UWFK71. The GBL can then be restarted through this program with Action Code S.

(b) $$UWFK71 update may be bypassed by following the procedure for manual rate option as outlined in paragraph 7k(c) above.

ar. Message - INVALID RATE DATA FOR GUARANTEED RATES PER HUNDRED

```
INVALID RATE DATA FOR GUARANTEED RATES PER HUNDRED
CARRIER = PIEC  RATE-GROUP = AAA  TYPE=SERVICE = A
ENTER GBL           ACTION    DEST
```

(1) Probable Cause: There were no rates per hundred in the Guaranteed Traffic Rate Base File for either the carrier, the rate group or the type service code shown in the message.

(2) Action:

(a) The rates per hundred rates in the Guaranteed Traffic Rate Base File must be updated by the freight rate specialist through program $$UWFK71. The GBL can then be restarted in this program using Action Code S.

(b) $$UWFK71 update may be bypassed bv the manual rate option as outlined in paragraph 7k(c) above.

APPENDIX E-240 P

MOFAST RATE BASE CHANGE CARD

1. PURPOSE

This procedure will be used to make flat rate increases by tariff number on the rate base and special tariff file. It will provide an error report of invalid card input and a listing of the rate base file, page ejected on a change of tables.

2. APPENDICES USED IN THIS PROCEDURE

a. Appendix B-180

b. Appendix F-194

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Divisions, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. Whenever the rate increases or decreases by tariff number a card will be prepared IAW appendix B-180 and forwarded to the computer processing facility.

b. The output will consist of:

(1) Appendix F-194, MOFAST Rate Table Listing, which will be formatted differently for each part printed (see appendix F-194).

(2) F-85 error report (see appendix E-240 V).

APPENDIX E-240 V

MOFAST RATE BASE CHANGE CARD VIOLATIONS

1. INPUT DOCUMENT

Appendix B-180, MOFAST Rating File Card, format violation DIC ZVH.

2. INPUT TO PROCEDURE DECISION CHART

Appendix D-156

3. PURPOSE, CONTENTS AND RESPONSIBILITIES

This appendix provides instructions for the correction and reentry of rate base rate increase cards which have been rejected because data did not pass the computer edit criteria. The reasons for rejection are as follows:

VIOLATION REASON CODE	DEFINITION
AA	Must be ZVH.
I7	Must match an existing record.
CE	Must be D for decrease, blank for increase.
E5	Field contains blanks.
IA	Field contains an invalid rate.

4. PROCESSING/RESEARCH INSTRUCTIONS

a. VIOLATION REASON CODE AA.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Indicates that the DIC in pos. 1-3 is not ZVH.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Review the printout, appendix F-85, to determine error.

(b) Process correct data IAW paragraph 5.

b. VIOLATION REASON CODE I7.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Indicates pos. 5-14 (tariff number) do not match an existing record on file.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Review the printout, appendix F-85, against the appendix F-194 printout to determine why a match was not made.

(b) Process correct data IAW paragraph 5 below.

c. VIOLATION REASON CODE CE.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Indicates pos. 16 contains a character other than a blank or D.

(2) PROCESSSING/RESEARCH REQUIRED:

(a) Review the printout, appendix F-85, to determine error.

(b) Process correct data IAW paragraph 5 below.

d. VIOLATION REASON CODE E5.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Indicates that pos. 17-21 contain blanks; or that either the high weight parameter (pos. 29-33) contains numeric data and the low weight parameter (pos. 23-27) contains blanks, or vice versa.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Review the printout, appendix F-85, to determine error.

(b) Process correct data IAW paragraph 5 below.

e. VIOLATION REASON CODE IA.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Indicates that an invalid rate, pos. 17-21, has been input. This field must not contain blanks.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Review the printout, appendix F-85, to determine error.

(b) Process correct data IAW paragraph 5 below.

5. REENTRY INSTRUCTIONS

a. When the correct data has been determined, annotate the correction on the violation printout, appendix F-85, directly below the erroneous entry using ink or a distinctive colored pencil.

b. Forward the annotated listing to keypunch services for reentry into the applicable process.

APPENDIX E-252 P

MOFAST FORCE CLOSURE

1. PURPOSE

To provide instructions and procedures to force close MROs in the MOFAST teleprocessing environment.

2. APPENDICES USED IN THIS PROCEDURE

a. Appendix B-222

b. Appendix D-167

c. Appendix E-238 P, Part C

d. Appendix E-238 P, Part G

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Directorate of Storage and Transportation.

4. PROCEDURES/INSTRUCTIONS

a. This procedure is to be used when a management decision has been made to close a Line Item (LI) record without knowledge of the actual shipping status.

b. The process outlined in this procedure will create the "Force Closure" notification to the ICP.

c. Line Item records being force closed must be processed through the single line process, see appendix E-238 P, part C, before the force closure action is input.

d. The Status Code in the LI record must be equal to A. If SU/LI status is not A, it is necessary to process the LI through the Exception MRO process, appendix E-234 P, part A, in order to delete container data and return the item status to A.

e. Force closure actions are accomplished as follows:

(1) CRT Initialization.

(a) Key in $$UWFH80.

(b) Press ENTER key. This entry will dedicate the CRT input station to processing the force closure program. The following message will be displayed:

```
UWFH80-XX
MOFAST FORCED CLOSURE PROCESS

ENTER:

LINE ITEM NUMBER (11 or 13 POSITIONS)
CHECK DIGIT
ACTION CODE (GC OR GX)
DOCUMENT CONTROL CODE (1 OR 2)
SEPARATE FIELDS WITH COMMAS

ENTER DATA
```

(2) Force Closure Entry.

(a) Data entry input format is:

SSSSSSSSSSS,C,AA,D

Where:
S - Eleven-Position Shipment Unit Number.
C - Check Digit
A - Action Code
D - Document Control Code

(b) Shipment Unit number must be 11 or 13 positions.

(c) Action Code must be either GX or GC. GX is used to force close all other LI records. GC is used only for items eligible for cancellation.

(d) Document Control Code must be either 1 or 2. One indicates input was made by storage. Two indicates input was made by transportation.

(e) Successful completion of the entry will result in the following message:

```
PROCESS COMPLETE
ENTER DATA
```

5. ERROR MESSAGES/ACTIONS

ERROR MESSAGE	CAUSE/ACTION
SHIPMENT UNIT RECORD NOT FOUND ENTER DATA	Probable Cause: SU number entered did not match a record in the In-Process File. Action: Reenter format with correct 11- or 13-position SU number. If same error message returns, the force closure action should be processed using punched card format (DIC ZEN, appendix B-128) since the record is apparently not established for use in the teleprocessing environment.
INVALID LINE ITEM NUMBER CORRECT AND REENTER	Probable Cause: LI portion of 11- or 13-position SU number was entered in error. Input did not match available records in the In-Process File. Action: Reenter format with correct 11- or 13-position SU number. If same error message returns, the force closure action should be processed using punched card format since the record is apparently not established for use in the teleprocessing environment.
LINE ITEM RECORD NOT ELIGIBLE FOR UPDATE CORRECT AND REENTER	Probable Causes: GC action entered without item being eligible for cancellation. GX action entered when LI has pending cancellation. Action: Enter force close input using correct Action Code. Example (1) - Reenter using GX action. Example (2) - Reenter using GC action.
SU RECORD NOT ELIGIBLE FOR UPDATE CORRECT AND REENTER	Probable Cause: Single line action not processed for LI entered or item is not in A status. Action: Process LI using single line SU program, appendix E-238 P, part C. To return the item to A status, enter Exception MRO Process, appendix E-234 P, part A, Type Input Code CC. Reenter force closure program after this process.
INVALID CHECK DIGIT CORRECT AND REENTER	Probable Cause: Check digit not numeric or check digit omitted from input format. Action: Reenter data using proper format. Correct check digit can be located in block R of the MRO or can be calculated using the check digit program, appendix E-238 P, part G.

ERROR MESSAGE	CAUSE/ACTION
INVALID ACTION CODE CORRECT AND REENTER	Probable Cause: Action Code entered is not GX or GC. Action: Reenter data using valid Action Code.
INVALID CONTROL NUMBER CORRECT AND REENTER	Probable Cause: Document control number entered is not 1 or 2. Action: Reenter data using correct document control number.
INVALID ENTRY CORRECT AND REENTER	Probable Cause: All required data elements not entered in entry format. Action: Entry format requires input of SU Number (11- or 13-position), check digit, Action Code (GC or GX) and document control code (1 and 2) separated by commas. Reenter required input ensuring all data elements are present.

APPENDIX E-258 P

RECONCILIATION - LOCATIONS NO DSC BALANCE, CONDITION CODES A AND B (NSN SEQ)

1. PURPOSE

Provided as a control listing for action required as a result of processing the appendix F-260, Reconciliation Locations No DSC Balance, Condition Codes A and B (LOC SEQ), including control of the B-26 (DIC DJA) Physical Inventory Request Card(s).

2. APPENDICES USED IN THIS PROCESS

a. Appendix B-26, Physical Inventory Request Card, DIC DJA

b. Appendix B-71, Item Locator Subrecord Addition, Deletion, and Change Card, DIC ZBA

c. Appendix F-258, Reconciliation Locations No DSC Balance Condition Codes A and B (NSN SEQ)

d. Appendix F-260, Reconciliation Locations No DSC Balance Condition Codes A and B (LOC SEQ)

3. RESPONSIBLE ORGANIZATIONAL ELEMENTS

a. Operations Control Office

b. Warehousing Division

4. PROCEDURE/INSTRUCTIONS

a. Operations Control Office, utilizing the F-260 listing previously posted as a result of checking each warehouse location reflected thereon, take action as follows:

(1) If NSN is in the location indicated, annotate listing to initiate inventory by input of DIC ZJA.

(2) If NSN is not in the location indicated, inform the Warehousing Division by means of an annotated copy of the F-260 listing that the warehouse location should be deleted.

b. Warehousing Division - On receipt of annotated copy of the F-260 listing, prepare a DIC ZBA, Action Code FY, Location Delete Card for each location annotated on the listing as being vacant.

5. FLOW CHART

Flow chart not required.

APPENDIX E-259 P

PROCEDURES FOR MRO DEPOT PROCESSING TIME ANALYSIS

1. PURPOSE

a. This procedure provides a detailed analysis of how long it takes the local depot to process Materiel Release Orders, DIC A5_ (EXCEPT DIC A5J and C5_), from the time of the MRO receipt at the depot to the time shipment is completed. This is done for each Government Bill of Lading (GBL) by: Geographic Area, Destination (POE, Consignee, Break Bulk Point, or DCR), Issue Priority Group (IPG), Mode of Shipment, Standard Carrier Alpha Code (SCAC), and in terms of local depot standards (hold times in Storage and in Transportation, and/or transit time) as applied to the above variable factors.

b. This report provides management a means of determining how accurate local depot standards really are and how depot performance measures up to those standards. Based on the facts developed by this report, management can take appropriate action(s) to correct existing problems, so as to ensure depot performance will comply with existing DLA/DoD requirements.

c. This analysis of MRO processing performance DOES NOT INCLUDE the following MROs:

(1) FMS: Those MROs with B, D, K, P, or T in pos. 30.

(2) GRANT AID: same as FMS plus a Y in pos. 45.

(3) SEAVAN: Those MROs with Mode of Shipment Code V.

(4) COPADS: Those MROs with Routing Identifier Code - From S9J.

(5) Extended RDDs: Those MROs with A, S, or X in pos. 62.

(6) Those with Mode of Shipment Codes W, X, Y, Z, 2, 3 and 9.

(7) DROS - DIC A5J.

(8) IPE MROs - DIC C5_.

2. REFERENCES

a. Appendix D-33, MRO Depot Processing Time Analysis.

b. Appendix F-61, MRO Depot Processing Time Analysis.

3. RESPONSIBLE ORGANIZATIONAL ELEMENTS

a. Directorate of Storage and Transportation

(1) Traffic Management function.

(2) Workload Planning function.

b. Management Support Office

(1) Management Information/Analysis function.

(2) Systems and Procedures function.

4. PROCEDURES/INSTRUCTIONS

a. Part 1: Invalid TK4 List

(1) The sole purpose of this listing is to provide visibility of the invalid DIC TK4 transactions received and why they were rejected. The list is used for followup, correction, and re-input. Appendices B-1 and E-234, Part A, provide the correction format and input details. The reasons for being rejected are:

(a) INVALID MODE (Modes V, W, X, Z, 2, 3, 9 or blank).

(b) INVALID DLVY DATE (blank, ship date is greater than DLVY Date, or alpha).

(c) INVALID SHIP DATE (blank or alpha).

(d) INVALID GBL (other than 8 position field).

(e) INVALID DESTINATION/SHIP TO (other than a 6-, 4-, or 3-position field).

(f) INVALID O/S SHIPMENT (PP Zone Code is 9 or MRO DIC, third position is numeric).

(g) NOT WITHIN REPORT PERIOD (ship date less than 45-day reporting period).

(h) DoDAAC NOT ON ADDRESS FILE (update DoDAAC File, if applicable, appendix E-129 P; then reenter TK4 Record).

(i) SCAC NOT ON FILE (update SCAC File, if applicable, appendix E-230 P; then reenter TK4 Record).

(2) If a TK4 Record rejects for reasons identified above and not corrected/reentered, it will not appear on next report cycle.

(3) If a TK4 Record is considered invalid for more than one reason, each field will be asterisked and each in-the-clear reject message will print on a separate line.

(4) If a TK4 Record passes all the validity checks except for DoDAAC not on file, SCAC not on file or O/S shipment; no field is asterisked.

(5) TK4 records with a ship date greater than the reporting period go to a recycle file for processing during the next reporting period (see appendix D-33).

b. Part 2: TK4s Not Received

(1) This is a list of the GBLs shipped during the 45-day reporting period that have no matching DIC TK4s (IPG I, II, and III) on file. These transactions should be reviewed and followed up on same as in part 1. It will eventually lead to improved voluntary customer response.

(2) The destination in-the-clear address comes from the last two lines of the TAC G, 2, or 1 address record, respectively, depending on availability.

c. Part 3: TK4s Received

(1) This is a list of GBLs for which matching DIC TK4s were received (IPG I, II, and III). The listing is in destination and GBL sequence. Review of the report will provide an opportunity to check the Address File for completeness.

(2) If the GEO Area Code is blank on the address file for a particular destination, the TK4 Record and associated lines will drop at this point from further processing.

d. Part 4: TK4s Received - IPG I Review.

(1) This is a listing of all IPG I shipments made in the period noted in the report header. The depot's Mode Group Table is displayed as part of the report header. There are totals by:

(a) Mode Group within Destination.

(b) Destination within Sub Area.

(c) Geographic Area.

NOTE: There is a page eject on each new Geographic Area.

(2) This report should be reviewed carefully to see if the Geographic Area and Mode Group codes are in consonance with the depot's processing standards and the on-time performance.

(3) If no mode group assignment is established for a particular mode of shipment, parts 4, 5 or 6, if applicable, will indicate 0 Mode Group. At this point, the TK4 Record will drop from any further processing.

(4) Air Modes are mode of Shipment Codes F, H, N, J, O, Q, T, U, 6 or 7. These codes will determine whether an IPG 1 or 2 is late or on time.

e. Part 5: TK4s Received - IPG II Review.

Same as part 4, except all data is for IPG II, not IPG I.

f. Part 6: TK4s Received - IPG III Review.

Same as part 4, except all data is for IPG III, not IPG I.

g. Part 7: Review of Late Shipments - IPG I, II and III.

(1) This is a list of every shipment that was late in any category, and uses Late Codes to indicate the categories. Listing sequence is: IPG, Geographic Area, Sub Area, destination and GBL.

(2) This listing contains much detailed data and is a source of the following information:

(a) The number of GBLs per carrier (Late Code D only) by Geographic Area.

(b) The Average Transit time per carrier.

(3) The Late Codes are listed below and on page 1, part 7, F-61 report data.

(a) Late code A - Bank hold time exceeded the standard.

(b) Late code B - Storage processing time exceeded the standard.

(c) Late code C - Transportation hold time exceeded the standard.

(d) Late code D - In-Transit time exceeded the standard.

(4) The transit, bank, storage and transportation standards established for each GEO Area on table 19, part 2 determines the late codes that apply for each shipment. The same criteria apply for IPG 1, 2 or 3.

h. Part 8: Percent of Lines on Time Summary - TK4s Received.

(1) This is a summary report showing the following data broken out by Geographic Area within IPG.

(a) Total lines.

(b) Total on time lines.

(c) Percent on time lines.

(2) The report simply totals the number of lines on time by IPG within a Geographic Area, and then divides the total on time by the total number of shipments meeting the same criteria, thus establishing the percent of lines on time.

(3) This report makes it easy to highlight all performance under 90% for functional review/attention.

i. Part 9: IPG III Average Processing Time by Geographic Area.

(1) This is a summary report of all IPG III MROs broken out by Geographic Area in which the following hold times have been averaged:

(a) Bank time.

(b) Storage time.

(c) Transportation time.

(d) In-transit time.

(e) Total Processing time.

(2) This report gives a quick, ready comparison of depot performance to depot standards.

j. Part 10: IPG III MRO Processing Performance Analysis.

(1) This report is for a 45-day period, and the ending date is noted in the report header.

(2) The report is a summary report of all IPG III MROs broken out by Geographic Area, showing the number of lines in the various "hold" conditions:

(a) Bank time.

(b) Depot Processing time.

(c) Depot Transportation time.

(d) Average Transportation time.

(e) Total Processing time (days).

(3) Beneath each "lines" entry, subparagraphs (a)-(e), above, is shown the percentage of those lines that were processed within the time frame of the locally established time standard.

k. Part 11: IPG III, Late Line Summary.

(1) This report displays the average transit time for each Geographic Area broken out by Mode Group code. It should be noted that this report deals only with IPG III Late Lines.

(2) This report displays the following items by Geographic Area:

(a) Average storage hold time.

(b) Average transportation hold time.

l. Part 12: Summary of IPG III Late Lines by days over 21.

(1) This report simply displays all IPG III Late Lines broken out by the number that were late over 21 days or more. The report literally shows fifteen separate days with the line count for each below the day.

m. Part 13: Summary of IPG III Late by Depot Standards.

(1) Part 13A: The depot's standard table data is displayed in this part of the report. That involves the following data broken out by Geographic Area:

(a) Bank hold time.

(b) Storage processing time.

(c) Transportation processing time.

(d) Transit time.

(2) Part 13B: Summary of IPG III late by depot standards within processing categories. This part of the report displays the number of lines.

(a) Exceeding depot standards.

(b) Bank time.

(c) Storage processing time.

(d) Transportation processing time.

(e) Transit time.

(f) Total lines involved.

(3) The Percent Late entry/column reflects the number of lines which exceeded one or more of the processing standards, but does not necessarily reflect late total processing performance.

n. Mode of Shipment: It should be noted that all Mode of Shipment codes are included in this program EXCEPT V, W, X, Y, Z, 2, 3 and 9, which are excluded.

o. Table 19 Part I (Report Options and Mode Groupings).

(1) The beginning and ending report date is established when the F-61 Report is scheduled.

(a) When UWSXHIST is scheduled - New 45-day history data is selected, i.e., current date minus 45 days equals new beginning and ending report date.

(b) When UWSXVALD is scheduled - New TK4 Records received since report period and corrected TK4 Records are validated will produce parts 1, 2 and 3.

(c) When UWSXPRNT is scheduled - F-61 will be printed unless report option for a particular part indicates no part required (blank). Parts 1, 2 and 3 are mandatory.

p. Table 19 Part II. (GEO Area Trans-TM (GATT)).

(1) The GATT is the transportation hold time and intransit time for each geographic area. Depending on the number of days entered in this field, determines the PDT or MDT assigned each IPG 3 MRO, i.e., MDT equals DSC transmission date plus 21 days (standard) minus Geographic Area Transportation Time (GATT). If no GEO Area Trans-TM (GATT) is loaded, the program defaults to 8 days (see appendix D-41 for further guidance).

(2) By utilizing the GEO Area Trans-TM (GATT) in Table 19, the depots can determine which MDT will be assigned, thus reducing the number of late shipments.

APPENDIX E-260 P

RECONCILIATION - LOCATIONS NO DSC
BALANCE CONDITION CODES A AND B (LOC SEQ)

1. PURPOSE

To provide for review and corrective action, a listing of locations for NSNs for which there were no matching NSNs with assets on the DSC(s) asset tapes. Listing to be utilized to determine if NSN(s) and locations listed actually exist.

2. APPENDIX USED IN THIS PROCESS

Appendix F-260, Reconciliation - Locations No Center Balance Condition A/B Only in Location Sequence.

3. RESPONSIBLE ORGANIZATIONAL ELEMENTS

Inventory Control Office.

4. PROCEDURE/INSTRUCTIONS

Inventory Control Office - Proceed to warehouse locations(s) reflected on the listing and verify NSN and location. Annotate listing for each entry with data including whether or not the NSN and location are good or that the location is vacant. See appendix E-258 P for completion of process.

5. FLOW CHART

Flow chart not required.

best copy available

APPENDIX E-262 P

RECONCILIATION - CENTER BALANCE NO LOCATION CONDITION A AND B

1. PURPOSE

To provide, for review and corrective action, a listing of National Stock Numbers (NSNs) for which the DSC has an asset balance and the depot has no locator record.

2. APPENDICES USED IN THIS PROCESS

a. Appendix B-26, Physical Inventory Request Card, DIC DJA.

b. Appendix B-71, Item Locator Sub-Record, Addition, Deletion, and Change Card, DIC ZBA.

c. Appendix F-51, Emergency Item Location Record Listing.

d. Appendix F-52, Item Locator Transaction Record.

e. Appendix F-262, Reconciliation - Center Balance No Location Condition A and B.

f. Appendix F-267, Reconciliation - Center Balance and Deleted Location Report.

3. RESPONSIBLE ORGANIZATIONAL ELEMENTS

a. Management Support Office.

b. Inventory Office.

c. Warehousing Division.

4. PROCEDURE/INSTRUCTIONS

a. Management Support Office - Review listing for information and use for monitoring purposes.

b. Inventory Office - Research the NSNs reflected on the F-262 listing by review of the F-51, F-52, F-267, previous locator update listings, and Receipt History for warehouse location data. Accomplish the following:

(1) If location data is found, proceed to the location to check for stock. If stock is still in the location, inform the Warehousing Division that the location involved must be picked up on the locator file. Information will be supplied by an annotated copy of the F-262 listing.

(2) When location data cannot be found or when a found location is vacant, annotate listing to initiate inventory by input of DIC ZJA.

(3) All items coded E or U in the Inventory Category field will be processed first and will be subject to a complete research of DJA card(s) to the center.

c. Warehousing Division - On receipt of an annotated copy of the F-262 report, prepare a DIC ZBA, Action Code FX, Location Update Card, for each location found.

5. FLOW CHART

Flow Chart not required.

APPENDIX E-266 P

RECONCILIATION - PILFERABLE ITEM LISTING

1. PURPOSE

To provide a listing "DSC Balance No Location" and denied National Stock Numbers that are classified as pilferable items.

2. APPENDIX USED IN THIS PROCESS

Appendix F-266, Reconciliation Pilferable Item Listing.

3. RESPONSIBLE ORGANIZATIONAL ELEMENTS

a. Command.

b. Directorate of Storage and Transportation (DS/T).

4. PROCEDURE/INSTRUCTIONS

a. Command - Review report for entries that may require command action.

b. DS/T - Listing will be reviewed to determine if items have been stored in accordance with security regulations.

5. FLOW CHART

Flow chart not required.

APPENDIX E-267 P

RECONCILIATION - DSC BALANCE AND DELETED LOCATION LISTING

1. PURPOSE

To provide a listing of "DSC Balance No Location" NSNs that have had stock locations deleted.

2. APPENDICES USED IN THIS PROCESS

a. Appendix B-26, Physical Inventory Request Card, DIC DJA.

b. Appendix B-71, Item Locator Subrecord Addition, Deletion, and Change Card, DIC ZBA.

c. Appendix F-267, Reconciliation DSC Balance and Deleted Location Listing.

3. RESPONSIBLE ORGANIZATIONAL ELEMENTS

a. Command.

b. Directorate of Storage and Transportation (DS/T).

c. Inventory Control Office.

d. Warehousing Division.

4. PROCEDURE/INSTRUCTIONS

a. Command - Review listing for entries that may require command action.

b. DS/T.

c. Inventory Control Office - Review listing and investigate to determine if the locations have been deleted correctly. If locations have been deleted erroneously, notify the Warehousing Division by forwarding an annotated copy of the F-267 listing. Prepare a DIC DJA card for each NSN in error and forward to the ODS for transceiving to the applicable DSC. (Forward as administrative message.)

d. Warehousing Division - On receipt of the annotated copy of the F-267 listing prepare a DIC ZBA, Action Code FX, Locator Update Card for each NSN indicated. Forward ZBA cards to the ODS for updating the locator file.

5. FLOW CHART

Flow chart not required.

APPENDIX E-268 P

RECONCILIATION - DSC BALANCE OR DENIAL AND NEW LOCATION ADD

1. PURPOSE

To provide, for review and corrective action, a listing of National Stock Numbers of "DSC Balance No Location" records or denials for which there has been a new location add as a result of locator survey action.

2. APPENDICES USED IN THIS PROCESS

a. Appendix B-26, Physical Inventory Request Card, DIC DJA.

b. Appendix F-268, Reconciliation DSC Balance or Denial and New Location Add.

3. RESPONSIBLE ORGANIZATIONAL ELEMENTS

a. Command.

b. Directorate of Storage and Transportation (DS/T).

c. Inventory Control Office.

4. PROCEDURE/INSTRUCTIONS

a. Command - Review listing for entries that may require command action.

b. DS/T - Review listing for management purposes and determine if corrective actions are required.

c. Inventory Control Office - Review listing and accomplish the following:

(1) Match data of last inventory against date added. If date of last inventory is later than date added, no further action is required.

(2) When date of last inventory is prior to date added, prepare a DIC DJA Physical Inventory Request Card for each NSN. Forward DJA card(s) to the ODS for transceiving to the applicable DSC. (Forward by administrative message.)

5. FLOW CHART

Flow chart not required.

APPENDIX E-269 P

DENIALS AND DELETED LOCATIONS LISTING

1. PURPOSE

To provide a listing of deleted locations that can be checked to determine if denials were correctly processed.

2. APPENDICES USED IN THIS PROCESS

a. Appendix B-26, Physical Inventory Request Card, DIC DJA.

b. Appendix B-71, Item Locator Subrecord Addition, Deletion, and Change Card, DIC ZBA.

c. Appendix B-158, Reconciliation Deleted Location Inquiry Card, DIC ZAF.

d. Appendix F-269, Denials and Deleted Locations Listing.

3. RESPONSIBLE ORGANIZATIONAL ELEMENTS

a. Warehousing Division.

b. Management Support Office (MSO).

c. Inventory Control Office.

4. PROCEDURE/INSTRUCTIONS

a. Warehousing Division.

(1) Review listing and research location(s) for each NSN listed to determine if locations were deleted correctly. If the location(s) still contain stock of the NSN listed, prepare DIC ZBA, Action Code FX, Locator Update Card(s) to reestablish the location on the locator file. Forward ZBA cards to the ODS.

(2) If it is desired that the F-269 listing be prepared for research purposes prior to the processing of a denial, prepare a DIC ZAF, Deleted Location Inquiry Card, for each NSN required in accordance with appendix E-158 P.

(3) Prepare a Report of Locations Found, listing each location for which a ZBA Locator Update Card was prepared. Forward the report to MSO.

b. MSO - Review the listing for management purposes and annotate the NSN on which an inventory is desired. Forward listing to the Operations Control Office.

c. Inventory Control Office - On receipt of the annotated F-269 listing, prepare DIC DJA Inventory Request Cards for each NSN indicated. Forward to the ODS for transceiving to the applicable DSC. (Forward by administrative message.)

5. FLOW CHART

Flow chart not required.

APPENDIX E-270 P

DUPLICATE DELETED LOCATION LISTING

1. PURPOSE

To provide a listing of National Stock Numbers on which more than one delete transaction for the same location has been processed.

2. APPENDIX USED IN THIS PROCESS

Appendix F-270, Duplicate Deleted Location Listing

3. RESPONSIBLE ORGANIZATIONAL ELEMENTS

a. Command

b. Management Support Office

4. PROCEDURE/INSTRUCTIONS

a. Command - Review report for entries that may require command action.

b. Management Support Office Review listing for erroneous delete actions and determine requirements needed to prevent future multiple deletions of a single location.

5. FLOW CHART

Flow chart not required.

APPENDIX E-271 P

DJA REJECT LISTING

1. PURPOSE

This procedure provides instructions for the processing of DIC DJA Reject Listing(s) received at the depot from the DSC(s). The Reject Listing is prepared by the DSC(s) for those Physical Inventory Request Cards received which for various reasons the DSC(s) have determined that a physical inventory will not or cannot be conducted.

2. APPENDICES USED IN THIS PROCESS

a. Appendix B-71, Item Locator Subrecord Addition, Deletion, and Change Card.

b. Appendix B-76, Deleted Item Inventory Count Card.

c. Appendix B-79, Item Locator Record Inquiry Card.

d. Appendix C-5, Storage Quality Control Report (DD Form 1225).

e. Appendix F-37, Locator Record Print Reply to Action Code.

f. DJA Reject Listing.

3. RESPONSIBLE ORGANIZATIONAL ELEMENTS

a. Management Support Office (MSO).

b. Inventory Control Office.

c. MOWASP Data Control Branch.

d. Warehousing Division.

e. Quality Control Branch.

4. PROCEDURE/INSTRUCTIONS

a. MSO - Review listing for management purposes and forward to the Operations Control Office.

b. Inventory Control Office.

(1) Review listing and line off those entries that are rejected for the following reasons:

(a) Duplicate inventory request (inventory in process).

(b) Inventory requested and reply received within last 90 days.

(c) Inventory request rejected, NSN in process of catalog action.

(2) Forward listing to the MOWASP Data Control Branch for action on remaining NSNs listed.

c. MOWASP Data Control Branch.

(1) Review listing and research remaining NSNs which should be unidentified NSNs in-so-far as the DSC records are concerned. Check catalog records, previous SICC changes, logistic transfer records, and inquire DLSC and/or MDB as required to properly identify NSNs.

(2) Prepare a DIC ZBJ, Action Code FE, Locator Inquiry Card on each old NSN that has been reidentified to a good NSN. Forward to ODS for inquiry into the locator file.

(3) When the inquiry answer listing F-37 is received, annotate each NSN and location listed with the new reidentified NSN. Forward to the Warehousing Division with a request that the locator file be updated with the new NSN.

(4) Identify by annotation on the reject listing those NSNs that have been determined to be local purchase items or prior SICC deletes.

(5) Line off the reject listing those NSNs that have been reidentified to a good NSN. Forward the listing to the Quality Control Branch for action on the remaining unidentified NSNs.

d. Quality Control Branch.

(1) Check Stock Catalogs, Part Number Files, and inspect items to assist in identifying remaining NSNs.

(2) NSNs reidentified to a good NSN by the inspectors will be lined off the reject listing and the inspectors will contact the warehouseman and will furnish data required to correct the locator file.

(3) Prepare DD Form 1225 for each of the remaining unidentified NSNs. Forward to the applicable DSC(s). Line the NSNs off the listing and return the listing to the Operations Control Office.

e. Inventory Control Office.

(1) On return of listing from the Quality Control Branch, review listing and obtain warehouse locations on those items identified as local purchase, previous SICC deletes. Proceed to the locations and conduct an inventory count.

(2) On completion of count, prepare ZAF Deleted Item Report and Reply cards entering quantity counted for each NSN identified as local purchase and previous SICC deletes. Forward ZAF cards to the ODS for entry into MOWASP. MOWASP will create CK8 cards to applicable DSC.

f. Warehousing Division.

(1) On receipt of the annotated F-37 listing and on receipt of data supplied by the inspectors, proceed to the locations involved, remark stock with the correct NSN and prepare DIC ZBA, Action Codes FY and FX, to delete the old NSN and add the new NSN to the locator file.

(2) Forward ZBA cards to the ODS for processing to the locator file.

5. FLOW CHART

Flow chart not required.

APPENDIX E-272 P

DELETED LOCATIONS REPORT

1. PURPOSE

To provide a microfiche report of deleted locations that can be reviewed and to assist in processing and researching of potential denials.

2. APPENDICES USED IN THIS PROCESS

a. Appendix B-71, Item Locator Subrecord Addition, Deletion, and Change Card, DIC ZBA.

b. Appendix B-158, Reconciliation Deleted Location Inquiry Card, DIC ZAF.

c. Appendix F-269, Denials and Deleted Locations Listing.

d. Appendix F-272, Deleted Locations Report.

3. RESPONSIBLE ORGANIZATIONAL ELEMENTS

a. Warehousing Division.

b. Management Support Office (MSO).

c. Inventory Control Office.

4. PROCEDURE/INSTRUCTIONS

a. The Deleted Locations Report (F-272) will be provided only on an as required basis and must be scheduled through the Office of Data Systems.

b. Review microfiche and research location(s) for each NSN listed to determine if locations were deleted correctly. If the location(s) still contain stock of the NSN listed, prepare DIC ZBA, Action Code FX, Locator Update Card(s) to reestablish the location on the locator file. Forward ZBA cards to the ODS.

c. If it is desired that a F-269 listing be prepared for research purposes prior to the processing of a denial, prepare a DIC ZAF, Deleted Location Inquiry Card for each NSN required in accordance with appendix E-158 P.

d. Prepare a Report of Locations found, listing each location for which a ZBA, Locator Update Card was prepared. Forward the report to MSO.

5. FLOW CHART

Flow Chart not required.

APPENDIX E-275 P

COPAD PROCESSING PROCEDURES
PART A
INITIAL TELEPROCESSING INPUT

1. PURPOSE

This procedure provides the capability of initiating the Contractor Operated Parts Depot (COPAD) teleprocessing program.

2. APPENDICES USED IN THIS PROCEDURE

Reference subsequent parts for appropriate appendices.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. This procedure provides instructions for accomplishing all COPAD maintenance.

b. CRT Initialization.

(1) To initiate the program, key in $$UWSB00 and press the ENTER key. The CRT will be dedicated to this program until another $$ entry is made.

(2) This input will result in a display of COPAD Processing Section Codes (see figure 1 below).

c. Select the appropriate Section Code, key it in, and press the ENTER key. If an incorrect entry is made, the panel will be brought back so that reentry of a valid code can be made. A correct input will result in one of the following displays:

(1) PR - Inquiry and Update Process, reference appendix E-275 P, part B. This format is used to accomplish inquiry/update and release of COPAD MROs (appendix B-290).

(2) PN - Part Number Process, reference appendix E-275 P, part C. This format is used to accomplish all Part Number File maintenance (appendix B-291).

5. ERROR MESSAGE/ACTION

ERROR MESSAGE	CAUSE/ACTION
WRONG CRT XXX SEE SUPERVISOR ***	Probable Cause: CRT Station is not on CRT Table Action: Use the CRT designated for COPAD processing.

Figure 1

PR = 1938 INQUIRY/UPDATE/RELEASE

APPENDIX E-275 P

COPAD PROCESSING PROCEDURES
PART B
MRO INQUIRY AND UPDATE PROCESS

1. PURPOSE

This procedure describes the maintenance activities necessary to update and inquire MROs within the COPAD Bank.

2. APPENDICES USED IN THIS PROCESS

a. Appendix B-290

b. Appendix D-212

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. General

This procedure provides instructions for accomplishing MRO inquiry or update of needed shipping data.

b. CRT Initialization.

(1) Refer to appendix E-275 P, part A, to initialize the program.

(2) Key in Section Code PR and depress the ENTER key.

(3) The panel for inquiry/update/release of COPAD MRO will be displayed. See figure 1.

(4) Enter the desired contract call number (the four position call number must be preceded by the first position of the document date; e.g., a 1982 document will require a 2 in the first position of the call number field) and the last 4 positions of the document number. See figure 2.

(a) If any data is to be changed or updated enter the change before releasing the document to MOFAST.

(b) If a COPAD MRO is packed in a packing area other than J23 (high priority, small chute items), enter correct pack location; otherwise, no action is required.

(c) Enter an R in the RELEASE-IND field to release the MRO to the MOFAST In-Process File.

5. ERROR MESSAGE/ACTIONS

Messages will be displayed at the bottom of the panel. If an error is made, the cursor will return to the field where the invalid data was entered.

ERROR MESSAGE	CAUSE/ACTION
COPADS BANK RECORD NOT FOUND	Probable Cause: Record is not in COPAD Bank. Action: Determine the error and reenter correct data.
WRONG CRT XXX SEE SUPERVISOR ***	Probable Cause: CRT Station is not on CRT Table. Action: Use the CRT designated for COPAD processing.
BAD RETURN FROM UWSB15 XXXXX	Probable Cause: A system error has been encountered. Action: Record the message and notify Supervisor.
INVALID DATA	Probable Cause: Data is either not present or invalid. Action: Enter correct data.

APPENDIX E-275 P

COPAD PROCESSING PROCEDURES
PART C
PART NUMBER PROCESS

1. PURPOSE

This procedure describes the maintenance activities necessary to add, update, inquire and delete part number data in the Part Number File.

2. APPENDICES USED IN THIS PROCESS

a. Appendix B-271

b. Appendix D-212

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. General

This procedure provides instruction for accomplishing file maintenance to the COPAD Part Number File.

b. CRT Initialization

(1) Refer to appendix E-275 P, part A, to initialize the program.

(2) Key in Section Code PN and depress the ENTER key.

(3) The panel for the part number program will be displayed. See figure 1.

(4) Part Number Inquiry

(a) Enter I in Action Code, key in the desired part number, and depress the ENTER key.

(b) A successful entry will display the part number data. See figure 2.

(5) Add Part Number

(a) Enter A in Action Code, key in the desired part number, and depress the ENTER key.

(b) A successful entry will display the input panel. See figure 2. Key in the part number data and depress the ENTER key.

(6) Update Part Number

(a) Enter Action Code U, key in the desired part number, and depress the ENTER key.

(b) A successful entry will display the part number data. See figure 2. Make the desired changes and depress the ENTER key.

(c) Blank or unknown part number data element fields will be automatically updated with the following constant:

WEIGHT	---	00000.01
CUBE	---	0000.001
PRICE	---	00000.01
WATER COMMODITY	---	586Z9
SPECIAL REQUIREMENTS	---	Z
PHYSICAL SECURITY	---	U
AIR DIMENSION	---	A
AIR COMMODITY	---	VZ
NOMENCLATURE	---	REPAIR PART
NMFC/SFX	---	019120/0
LTL	---	K

(7) Delete Part Number

(a) Enter Action Code D, key in the desired part number, and depress the ENTER key.

(b) A successful entry will display the part number data with a message deleted. See figure 2.

5. ERROR MESSAGES/ACTIONS

Messages will be displayed at the bottom of the panel. If an error is made, the cursor will return to the field where the invalid data was entered.

ERROR MESSAGE	CAUSE/ACTION
RECORD NOT FOUND	Probable Cause: Record is not on Part Number File.
	Action: Determine the error and correct data.
WRONG CRT XXX SEE SUPERVISOR ***	Probable Cause: CRT Station is not on CRT Table.
	Action: Use the CRT designated for COPAD processing.
INVALID ACTION CODE	Probable Cause: Action Code is not I,A,U, or D.
	Action: Correct Action Code.

ERROR MESSAGE	CAUSE/ACTION
INVALID PART-NUMBER	Probable Cause: Part number is less than six characters. Action: Determine error and reenter correct part number.
DUPLICATE RECOPD ON FILE	Probable Cause: Part number is already on file. Action: None.
MANDATORY ENTRY	Probable Cause: Data must be entered. Action: Cursor will appear under filed in error. Correct and enter data.
BAD RETURN FROM UWSB20 XXXXX	Probable Cause: A system error has been encountered. Action: Record message and notify supervisor.

APPENDIX E-275 P

COPAD PROCESSING PROCEDURES
PART D
ORDER/RESPONSE FORM (DCSC FM 1938)

1. FORM USED

Order/Response Form (DCSC Form 1938) Appendix C-12, output form appendix D-213.

2. CRITERIA FOR PROCESSING

DCSC Form 1938 is prepared for each COPADS materiel release order processed for shipment documentation. The COPAD document is a reformatted DD Form 1348-1 shipment documentation. The COPAD document is a reformatted DD Form 1348-1 which allows for procurement data to be printed in blocks AA through GG with specific contract and item data provided for on the shipping label portion of the form.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES AND INSTRUCTIONS

a. COPAD Record Data Transmittal.

The office of Data Systems located at the depot will receive COPAD record data from the Defense Supply Centers in a series of AUTODIN card image records (appendix B-294). This information is to be transmitted prior to 2400 hours and stored on tape unit MOWASP entry begins. COPAD Shipment Unit numbers are assigned in MOWASP entry, and together with the data transmitted from the supply center, are printed on the COPAD DCSC Form 1938 and passed to the Contract Administration office located at the depot by 0630 hours. The form is then passed to the commercial contractor by 0800 hours and remains with the contractor until delivery of the materiel. Upon delivery of the materiel to the depot, DS/T personnel will check the materiel, access the COPAD data bank via CRT (program $$UWSB00, part B of this appendix) and update any missing data. After update, the inquired COPADS document will be released to the in-process file for normal MOFAST processing. A notification of COPAD vendor delivery of materiel (appendix B-295, DIC CJV) will be transmitted back to the ICP.

b. Validation.

In the event that COPAD record data fails to pass validation, the procurement information, along with MRO data passing validation, will be printed on the COPAD document and passed to the contractor for processing. Additionally, the instructions "DO NOT SHIP" will be printed on the address

label in lieu of the mark-for address. Invalid data will be identified on the F-85 reject report. Corrections may be reentered via DIC CJW, appendix B-294. Invalid data which inhibits vendor processing will require manual communication between the depot and vendor. Once the requisition data has been corrected the document will be reprinted to include the mark-for address and will be flagged with the note "CORRECTED" appearing on the upper right side of address label. This will alert DS/T personnel that the order has already been passed to the contractor for processing and that the reprinted correction should be held in suspense until vendor delivery of the order. Upon materiel delivery the corrected COPAD document is matched to, and will be shipped with the materiel, and the original incomplete document is destroyed.

c. Distribution of Copies.

(1) Copy 1 - Contract administrator copy.

(2) Copy 2 - Vendor copy.

(3) Copy 3 - Customer copy (packing list).

(4) Copy 4 - Materiel receipt copy, sent to vendor upon receipt of materiel at the depot.

(5) Copy 5 - Depot receipt copy.

(6) Copy 6 - GBL carrier copy.

APPENDIX E-277 P

PROCEDURES FOR DEPMEDS PLANNING AND PROCESSING
PART A
DEPLOYABLE MEDICAL SYSTEMS MENU

1. PURPOSE

This procedure provides the capability to display the menu panel which will be used for accessing the DEPMEDS planning and processing programs.

2. APPENDICES USED IN THIS PROCEDURE

a. Parts B through X of this procedure.

b. The related B appendices are listed in each part.

c. Chapter 73.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

The assembly activity.

4. PROCEDURES/INSTRUCTIONS

a. To initiate the program, key in $$UWMH70 and depress ENTER key. The CRT will be dedicated to this program until another $$ entry is made.

b. This input will result in the display of the DEPMEDS menu panel. See figure 1 below. Report request, inquiry and update programs will be accessed from the menu panel.

c. Key in the applicable processing section code and depress ENTER key. If an incorrect entry is made, the panel will be returned for reentry of a valid code. A correct input will result in one of the following displays:

(1) IA - Function and Subfunction Inquiry, reference appendix E-277 P, part B. This format is used to obtain a display or hard copy report of function and subfunction data (appendix B-324).

(2) IB - Component/Packing Data Inquiry, reference appendix E-277 P, part C. This format is used to obtain a display of the component/packing data (appendix B-330).

(3) IC - Stock Number/Receipt Document Number Inquiry, reference appendix E-277 P, part D. This format is used to display receipt document numbers associated with a stock number (appendix B-315).

(4) ID - Stock Number/Component Control Number Inquiry, reference appendix E-277 P, part E. This format is used to obtain a display of the component control numbers associated with a stock number (appendix B-331).

(5) UA - Component Location Update, reference appendix E-277 P, part F. This format is used to assign and maintain component storage locations (appendix B-307).

(6) UB - Packing Completion Input, reference appendix E-277 P, part G. This format is used to provide packing completion notification (appendix B-309).

(7) UD - Container Packing List Request, reference appendix E-277 P, part H. This format is used to request a container packing list (appendix B-310).

(8) UE - Container Location Update, reference appendix E-277 P, part I. This format is used to assign and maintain container locations (appendix B-311).

(9) UF - Assembly Packing List Narrative, reference appendix E-277 P, part J. This format is used to input and maintain assembly narrative data (appendix B-312).

(10) UG - Container Palletization Input, reference appendix E-277 P, part K. This format is used to assign containers to a pallet (appendix B-314).

(11) UH - Component Planning Data Update, reference appendix E-277 P, part L. This format is used to review and update component data (appendix B-317).

(12) UI - Assembly Receipt Input, reference appendix E-277 P, part M. This format is used to confirm receipt of materiel to the assembly manager (appendix B-320).

(13) UJ - End Item and Assemblage Data Inquiry, reference appendix E-277 P, part N. This format is used to obtain a display of end item and assemblage data for a build directive number (appendix B-323).

(14) UK - Container Data Request, reference appendix E-277 P, part O. This format is used to obtain a display or a hard copy report of container data (appendix B-325).

(15) RA - Component Picking/Packing Request, reference appendix E-277 P, part P. This format is used to request component picking documents (appendix B-308).

(16) RB - Reprint Request, reference appendix E-277 P, part Q. This format is used to obtain reprints of receipt movement documents (appendix B-313).

(17) RC - Assembly Component Shortage Request, reference appendix E-277 P, part R. This format is used to request the Assembly Component Shortage Report (appendix B-316).

(18) RD - Unit Assembly Planning List Request, reference appendix E-277 P, part S. This format is used to request the Unit Assembly Planning List (appendix B-319).

(19) RE - Assembly Completion Notification, reference appendix E-277 P, part T. This format is used to provide notification to the system that an assemblage is ready for shipment (appendix B-321).

(20) RF - Build Directive Deletion Notice, reference appendix E-277 P, part U. This format is used to notify the system that a build directive has been completed (appendix B-322).

(21) RG - Component Availability Status Request, reference appendix E-277 P, part V. This format is used to obtain the Component Availability Status Report (appendix B-326).

(22) RH - Assembly Control Packing Data Request, reference appendix E-277 P, part W. This format is used to obtain the Assemblage Control Packing Data Report (appendix B-327).

(23) RI - Packing Status Request, reference appendix E-277 P, part X. This format is used to obtain the Packing Status Report (appendix B-328).

d. To return from a processing section to the menu panel, depress the PROGRAM FUNCTION 1 key.

APPENDIX E-277 P

PROCEDURES FOR DEPMEDS PLANNING AND PROCESSING
PART B
FUNCTION AND SUBFUNCTION INQUIRY

1. PURPOSE

This procedure describes the method used to:

a. Obtain a CRT display of a Function/Group Name or a Subjunction Name for the specific Function/Group or Subfunction Code requested.

b. Obtain a Function and Subfunction Report, F-337.

2. APPENDICES USED IN THIS PROCESS

a. Chapter 73.

b. Appendix B-324.

c. Appendix F-337.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

The assembly activity.

4. PROCEDURES/INSTRUCTIONS

CRT initialization:

a. Refer to appendix E-277 P, part A, to initialize the program.

b. Key in Section Code IA and depress the ENTER key.

c. The function and subfunction request panel will be displayed. See figure 1 below.

d. To obtain a Function/Group or Subfunction Name:

(1) Enter the build directive number and the Function/Group Code or the Subfunction Code in accordance with appendix B-324.

(2) Depress the ENTER key to obtain the display.

(3) A successful entry will provide a display of the requested function or subfunction name as shown in figure 2.

e. To obtain the F-337, Function and Subfunction Report:

(1) Enter the build directive number and requester identification number (if desired) and depress the ENTER key.

(2) A successful entry will return the message, PROCESS COMPLETE.

(3) Up to twenty report requests will be accepted for each processing cycle. Report requests in excess of this limit will be rejected to the F-85 Validation Reject Report with a 9IA Document Identifier Code. The data elements will be in the same sequence as the appendix B-324 input format.

(4) To access another processing section, move the cursor to the section code field, enter the desired code and depress the ENTER key. To return to the menu panel, depress the PROGRAM FUNCTION 1 key.

5. ERROR MESSAGE/ACTIONS

Error messages resulting from screen format validation will be displayed at the bottom of the panel. The cursor will return to the field where the invalid data was entered.

ERROR MESSAGE	CAUSE/ACTION
INVALID SECTION CODE	Probable Cause: No matching section code on menu panel. Action: Enter section code from menu panel.
INVALID BUILD DIRECTIVE NUMBER	Probable Cause: First position is other than 7 or 8. Action: Research and reenter correct data.
INVALID FUNCTION/ GROUP CODE	Probable Cause: Entry other alpha or blank. Action: Research and reenter correct data.
INVALID SUBFUNCTION CODE	Probable Cause: Entry other than alpha/numeric or blank. Action: Research and reenter correct data.
MANDATORY ENTRY	Probable Cause: Entry required in field indicated by cursor. Action: Enter applicable data.
ENTER ONE CODE ONLY, FUNCTION OR SUBFUNCTION	Probable Cause: Both function and subfunction were included in the same entry. Action: Remove function or subfunction.

ERROR MESSAGE	CAUSE/ACTION
RECORD NOT FOUND	Probable Cause: BDN, function or subfunction entered incorrectly. Action: Research and reenter correct data.
INVALID REQUESTER ID	Probable Cause: Entry other than alpha/numeric or blank. Action: Research and reenter correct data.

6. VIOLATION REASON CODE/ACTIONS:

a. Error conditions discovered during the batch process will result in the rejection of the transaction to the F-85 Validation Reject Report.

b. Violation reason codes and applicable definitions are as follows:

VRC	DEFINITION
RI	Exceeds report request/input limits.
XJ	No matching record/overlapping request.

c. Violation Reason Code RI.

(1) Reason for violation/error condition:

More than twenty report requests have been entered.

(2) Processing/research required:

Reenter for processing in the next batch cycle.

d. Violation Reason Code XJ.

(1) Reason for violation/error condition:

No matching record is available for the parameters requested or record has been previously processed during the same cycle.

(2) Processing/research required:

Research and reenter required data.

APPENDIX E-277 P

PROCEDURES FOR DEPMEDS PLANNING AND PROCESSING
PART C
INQUIRY FOR COMPONENT/PACKING DATA

1. PURPOSE

This procedure describes the method used to obtain a display of component, packing and inprocess data for a component control number.

2. APPENDICES USED IN THIS PROCESS

a. Chapter 73.

b. Appendix B-330.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

The assembly activity.

4. PROCEDURES/INSTRUCTIONS

a. General.

Displayed data will be used for review and research purposes. No updating of data can be accomplished in this program.

b. CRT initialization:

(1) Refer to appendix E-277 P, part A, to initialize the program.

(2) Key in Section Code IB and depress the ENTER key.

(3) The component packing data panel will be displayed as shown in figure 1.

(4) To obtain display of component data at the build directive level, enter the build directive number, the component control number and depress the ENTER key.

(5) To obtain display of component/packing data at the assemblage level, enter the build directive number, the component control number and the desired assemblage identification number. To obtain the packing information for a minor assembly, 01 must be entered in the assemblage identification number field. Depress the ENTER key to process input.

(6) A successful entry will display data as shown in figure 2.

(7) To access another processing section, move the cursor to the section code field, enter the desired code and depress the ENTER key. To return to the menu panel, depress the PROGRAM FUNCTION 1 key.

5. ERROR MESSAGE/ACTIONS

When entries fail validation, the cursor will be positioned under the invalid field and an error message will be displayed at the bottom of the screen.

ERROR MESSAGE	CAUSE/ACTION
INVALID BUILD DIRECTIVE NUMBER	Probable Cause: Entry has other than 7 or 8 in the first position. Action: Research and reenter correct BDN.
FIELD INCOMPLETE	Probable Cause: Less than required positions in a mandatory field. Action: Research and enter the correct data.
INVALID ASSEMBLAGE ID NO.	Probable Cause: Entry is other than 1-20. Action: Research and reenter the correct assemblage ID No.
MANDATORY ENTRY	Probable Cause: Component control number or BDN not entered. Action: Research and reenter correct data.
INVALID SECTION CODE	Probable Cause: No matching section code on menu panel. Action: Enter section code from menu panel.
AIN NOT FOUND	Probable Cause: Incorrect entry. Action: Research and reenter correct data.
RECORD NOT FOUND	Probable Cause: Incorrect input, no matching data in records or failed to enter 01 in the AIN field for a minor assembly. Action: Research and reenter correct data.

APPENDIX E-277 P

PROCEDURES FOR DEPMEDS PLANNING AND PROCESSING
PART D
STOCK NUMBER/RECEIPT DOCUMENT NUMBER INQUIRY

1. PURPOSE

This procedure describes the method used to obtain a display of the receipt document numbers to which the materiel received for a stock number will be posted.

2. APPENDICES USED IN THE PROCESS

a. Chapter 73.

b. Appendix B-315.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

The assembly activity.

4. PROCEDURES/INSTRUCTIONS

a. General.

Displayed data is for review only and cannot be updated in this program.

b. CRT initialization:

(1) Refer to appendix E-277 P, part A, to initialize the program.

(2) Key in Section Code IC and depress the ENTER key.

(3) The stock number/receipt document number inquiry screen will be displayed as shown in figure 1.

(4) Enter the desired receipt stock number and depress the ENTER key to obtain a display of the receipt document numbers, suffix codes and build directive numbers associated with the stock number entered.

(5) A successful entry will display data as shown in figure 2.

(6) If more data exists than can be displayed, a message ADDITIONAL DATA ON RECORD will appear at the bottom of the screen. Depress the ENTER key for display of additional data.

(7) To access another processing section, move the cursor to the section code field, enter the desired code and depress the ENTER key. To return to the menu panel, depress the PROGRAM FUNCTION 1 key.

5. ERROR MESSAGES/ACTIONS

When entries fail validation the cursor will be positioned under the invalid field and an error message will displayed at the bottom of the screen.

ERROR MESSAGE	CAUSE/ACTION
RECORD NOT FOUND	Probable Cause: Incorrect entry, stock number is not on record or advance receipt data has not been received.
	Action: Research and reenter correct data.
MANDATORY ENTRY	Probable Cause: Stock Number not entered.
	Action: Enter desired receipt stock number.
INVALID SECTION CODE	Probable Cause: No matching section code on menu panel.
	Action: Enter section code from menu panel.

APPENDIX E-277 P

PROCEDURES FOR DEPMEDS PLANNING AND PROCESSING
PART E
STOCK NUMBER/COMPONENT CONTROL NUMBER INQUIRY

1. PURPOSE

This procedure describes the method used to obtain a display of the component control numbers assigned to a stock number within a build directive number.

2. APPENDICES USED IN THIS PROCESS

a. Chapter 73.

b. Appendix B-331.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

The assembly activity.

4. PROCEDURES/INSTRUCTIONS

a. General.

Display data is for review only and cannot be updated in this process.

b. CRT initialization:

(1) Refer to appendix E-277 P, part A, to initialize the program.

(2) Key in Section Code ID and depress the ENTER key.

(3) The stock number/component control number inquiry panel will be displayed as shown in figure 1.

(4) To obtain the component control number display enter the desired build directive number and desired stock number and depress the ENTER key.

(5) A successful entry will display data as shown in figure 2.

(6) If more data exists than can be displayed, a message ADDITIONAL DATA ON RECORD will appear at the bottom of the screen. Depress the ENTER key to obtain display of additional data.

(7) To access another processing section, move the cursor to the section code field, enter the desired code and depress the ENTER key. To return to the menu panel depress the PROGRAM FUNCTION 1 key.

5. ERROR MESSAGES/ACTIONS

When entries fail validation, the cursor will be positioned under the invalid field and an error message will be displayed at the bottom of the screen.

ERROR MESSAGE	CAUSE/ACTION
RECORD NOT FOUND	Probable Cause: Incorrect entry or no matching data on record. Action: Research and reenter correct data.
INVALID SECTION CODE	Probable Cause: No matching section code on menu panel. Action: Enter Section Code from menu panel.
INVALID BUILD DIRECTIVE NUMBER	Probable Cause: First position is other than 7 or 8. Action: Research and reenter correct data.
FIELD INCOMPLETE	Probable Cause: Fewer than required positions are entered in a mandatory field. Action: Research and reenter correct data.
MANDATORY ENTRY:	Probable Cause: BDN or stock number not entered. Action: Research and enter required data.

APPENDIX E-277 P

PROCEDURES FOR DEPMEDS PLANNING AND PROCESSING
PART F
COMPONENT LOCATION UPDATE

1. PURPOSE

This procedure describes the method used to establish, change or delete assembly storage locations for component stock.

2. APPENDICES USED IN THIS PROCESS

a. Chapter 73.

b. Appendix B-307.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

The assembly activity.

4. PROCEDURES/INSTRUCTIONS

CRT initialization.

a. Refer to appendix E-277 P, part A, to initialize the program.

b. Key in Section Code UA and depress the ENTER key.

c. The component location update panel will be displayed with the cursor positioned under the process indicator. See figure 1 below.

d. To obtain a display of established locations:

(1) Enter I in the process indicator field, enter the desired stock number and depress the ENTER key.

(2) Up to five established storage locations will be displayed under the storage location field. See figure 2 below. Date of pack, expiration date, stock quantity and residual quantity will be displayed.

(3) If more locations are recorded than can be displayed, a message ADDITIONAL DATA ON RECORD will appear at the bottom of the panel. For display of the additional locations, depress the ENTER key.

e. Storage locations may be added, changed or deleted following an inquiry by changing the process indicator from an I to a U and entering the data as follows:

(1) To change materiel from one storage location to another, enter the new storage location in the storage location new field on the same line as the storage location to be deleted and enter a C in the action code field.

(2) To delete storage locations enter a D in the action code field on the same line as the displayed storage location to be deleted.

(3) To add storage locations enter the storage location in the storage location new field on an unfilled line and enter an A in the action code field.

(4) Date of pack, expiration date, and quantity changes may be accomplished independent of location changes by leaving the action code blank or they may be made in conjunction with any location update.

(5) To change either the stock quantity or residual quantity to zero, fill the field with 9s.

f. All of the updates described above may be made without first performing an inquiry by directly keying the data. Up to five inputs may be entered per screen. If there are multiple inputs for the same stock number, the stock number need only be entered on the first line and left blank on subsequent lines.

g. A successful entry will display a PROCESS COMPLETE message at the bottom of the panel.

h. To access another processing section, move the cursor to the section code field, enter the desired code and depress the ENTER key. To return to the menu panel depress the PROGRAM FUNCTION 1 key.

i. To refresh screen, blank process indicator and depress the ENTER key.

5. ERROR MESSAGES/ACTIONS

Entries which fail validation will remain on the input screen with the error message displayed on the line below each invalid input.

ERROR MESSAGE	CAUSE/ACTION
INVALID SECTION CODE	Probable Cause: Section code other than those on the menu panel. Action: Enter code from menu panel.
INVALID PROCESS INDICATOR	Probable Cause: Entry other than I, U or blank. Action: Determine error and reenter.
INVALID STOCK NUMBER	Probable Cause: Blanks in positions 1-6, fewer than 6 positions entered or stock number entered on line with data displayed from inquiry. Action: Determine the error and reenter the correct data or remove stock number which does not match displayed data.
INVALID ACTION CODE	Probable Cause: Entry other than A, C or D. Action: Research and reenter correct code.
RECORD NOT FOUND	Probable Cause: Incorrect stock number entered. Action: Research and reenter correct stock number.
LOC OLD REQD IF ACTN CODE C OR D	Probable Cause: Storage Location Code not entered with Action Code C or D. Action: Review and enter location code or correct action code.
LOC NEW REQD IF ACTN CODE A	Probable Cause: Storage Location new not entered with Action Code A. Action: Review and enter location code or correct action code.
OLD LOCATION NOT FOUND	Probable Cause: A delete or change action was attempted using a storage location other than a recorded location. Action: Inquire to find established location reenter data using current location.
RECORD FULL - CANNOT ADD NEW LOC	Probable Cause: More than 99 locations have been entered. Action: Locations must be deleted or consolidated before new locations can be added.

ERROR MESSAGE	CAUSE/ACTION
DATA COLLECT ACCESS ERROR	Probable Cause: Data collect is full. Action: Call supervisor and have data collected dumped.
LOCATION ALREADY EXISTS	Probable Cause: The location is already on record for that stock number. Action: No action required.
INVALID STOCK QUANTITY	Probable Cause: A quantity greater than 9999999.99 has been entered. Action: Correct and reenter.
INVALID RESIDUAL QUANTITY	Probable Cause: A quantity greater than 99999.99 has been entered. Action: Correct and reenter.
NEW STOCK NUMBER	Probable Cause: The input stock number has been changed to the stock number displayed in the output message. Action: Change the input to the new stock number and reenter.

APPENDIX E-277 P

PROCEDURES FOR DEPMEDS PLANNING AND PROCESSING
PART G
PACKING COMPLETION INPUT

1. PURPOSE

This procedure describes the method used to enter the quantity which has been packed for a component control number and to enter the required data for shelf-life (potency) items. It may also be used to delete quantity from the records, which was previously entered as packed.

2. APPENDICES USED IN THIS PROCESS

a. Chapter 73.

b. Appendix B-309.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

The assembly activity.

4. PROCEDURES/INSTRUCTIONS

a. General.

This procedure provides instructions for displaying previously entered data for a component control number. Displayed data may be changed, deleted or new data may be added.

b. CRT initialization.

(1) Refer to appendix E-277 P, part A, to initialize the program.

(2) Key in Section Code UB and depress the ENTER key.

(3) The packing completion data panel will be displayed (see figure 1) with the cursor positioned under the process indicator field.

(4) To inquire previously entered data:

(a) Enter I in the process indicator field.

(b) Enter the build directive number, assemblage identification number and the component control number in accordance with appendix B-309 and depress the ENTER key.

(c) Data on record for the requested component control number will be displayed under the applicable headings. Only one component control number may be inquired per entry.

(5) To change, delete or add to displayed data:

(a) Displayed data, no longer required, may be spaced out.

(b) New data may be entered in blank fields or displayed data may be typed over.

(c) To input displayed data as modified, enter a C in the process indicator field and depress the ENTER key.

(d) Packing quantities entered in error may be removed using this process. If quantity packed is zeroed out, all associated data will also be deleted. To increase the quantity packed, Process Indicator U must be used.

(e) Container assignment cannot be changed using Process Indicator C. To accomplish a container change, quantity packed must first be changed to zero using Process Indicator C, then the quantity packed can be reentered using Process Indicator U and the Y override to assign the new container.

(6) To initiate packing completion and/or input shelf-life data elements:

(a) Enter U in the process indicator field.

(b) Enter data in accordance with appendix B-309. Up to four entries can be made per input screen.

(c) If the Build Directive Number begins with 7, enter the number of assemblages packed in the ASSEMB ID OR NO OF ASSEMB field and the number of items packed in each assemblage in the QTY PACKED FIELD.

(d) If the Build Directive Number begins with 8, enter the assemblage identification number in the ASSEMB ID OR NO OF ASSEMB field or enter ZZ if the quantity packed applies to all assemblages.

(e) Since quantities may be packed incrementally, on entry in the QTY PACKED field will always be considered as an addition to quantities previously packed. System controls will prevent the total quantity packed from exceeding the basic quantity minus the authorized short minus the quantity substituted. If a specific assemblage is being updated, the system will reject the erroneous quantity with the message INVALID QUANTITY PACKED; if the update applies to all assemblages (ZZ entered in ASSEMB ID OR NO OF ASSEMB field), then each assemblage will be updated, but not to exceed the required quantity. Also, if ZZ is used, only those assemblages having an assigned container matching the input container will be updated; unless the container override feature is used, in which case, the assigned containers in assemblage will be changed to the input container and the quantity packed will be updated.

(f) To input data depress the ENTER key.

(7) A successful entry will clear the data from the input screen and display a PROCESS COMPLETE message at the bottom of the panel.

(8) To access another processing section, move the cursor to the section code field, enter the desired code and depress the ENTER key. To return to the menu panel depress the PROGRAM FUNCTION 1 key.

(9) To refresh the screen, blank the process indicator and depress the ENTER key.

5. ERROR MESSAGES/ACTIONS

Entries which fail validation will remain on the input screen with the applicable error message displayed on the line below the invalid input.

ERROR MESSAGE	CAUSE/ACTION
INVALID SECTION CODE	Probable Cause: No matching section code on menu panel. Action: Enter section code from menu panel.
INVALID BUILD DIRECTIVE NUMBER	Probable Cause: First position other than 7 or 8. Action: Research and reenter the correct data.
INVALID ASSEMBLAGE ID NO.	Probable Cause: Entry other than 01-20, or AIN not entered. Action: Correct and reenter.
INVALID CONTAINER NUMBER LOW	Probable Cause: a. Entry other than numeric or blank. b. Must have entry if container number high is entered. Action: Research and reenter correct data.
CONTAINER HIGH NOT GREATER THAN LOW	Probable Cause: Entry in container number low field is lower than the entry in the container high field. Action: Research and reenter correct data.
INVALID COMPONENT CONTROL NO.	Probable Cause: Entry other than numeric or blank. Action: Research and reenter correct data.
CHECK FOR VALID CONTAINER RANGE	Probable Cause: A container high has been entered which is significantly larger than the container low and may be in error. The check will be invoked if container high minus container low is greater than 25.

ERROR MESSAGE	CAUSE/ACTION
	Action: Correct entry or enter a Y in the range override field and reenter.
INVALID UNIT OF MEASURE	Probable Cause: a. Entry other than alpha. b. Mandatory when quantity packed is entered. Action: Research and reenter correct data.
INVALID QUANTITY PACKED	Probable Cause: Entry other than numeric or blank, quantity packed greater than quantity required or attempted to enter more than seven whole numbers without a decimal. Action: Research and reenter correct data.
INVALID DATE OF PACK	Probable Cause: Other than numeric data entered. Action: Research and reenter correct data.
INVALID EXPIRATION DATE	Probable Cause: Other than numeric data entered. Action: Research and reenter correct data.
CONTAINER ALREADY ESTABLISHED	Probable Cause: CCN planned for packing in a different container. Action: Enter a Y in the Assigned Container Override field and reenter or reassign CCN to desired container using Section Code UH, Component Planning Data Update.
INVALID PROCESS INDICATOR	Probable Cause: Process indicator other than I, C, U or blank. Action: Research and enter correct indicator or leave blank to clear input from screen.
RECORD NOT FOUND	Probable Cause: Incorrect entry or input data does not match data on file. Action: Research and reenter correct data.
INVALID DECIMAL IN QUANTITY PACKED	Probable Cause: More than one decimal has been entered in the quantity packed field. Action: Correct and reinput.

APPENDIX E-277 P

PROCEDURES FOR DEPMEDS PLANNING AND PROCESSING
PART H
CONTAINER PACKING LIST REQUEST

1. PURPOSE

This procedure describes the method used to request a container packing list.

2. APPENDICES USED IN THIS PROCESS

a. Chapter 73.

b. Appendix B-310.

c. Appendix F-331.

d. Appendix F-333.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

The assembly activity.

4. PROCEDURES/INSTRUCTIONS

a. General.

(1) This procedure provides the ability to input container weight and container cube as a part of the packing list request.

(2) Up to five packing list requests may be entered per input screen.

b. CRT initialization.

(1) Refer to appendix E-277 P, part A, to initialize the program.

(2) Key in Section Code UD and depress the ENTER key.

(3) The container packing list request panel will be displayed with the cursor positioned under the build directive number field. See figure 1 below.

(4) To request packing lists for major assemblies:

(a) Key in applicable data in accordance with appendix B-310.

(b) This procedure will provide for the output of a packing list for the container number entered in the container number low field.

(c) When entries are in both the container number low and high fields (which indicates one component is packed in multiple containers), a packing list will be produced for each container number included in range.

(d) The packing lists may be requested in smaller ranges rather than the total range of containers in which one component has been packed.

(e) If some of the components in the container, for which the packing list is requested, are not recorded as packed; the container packing list will not be produced. An incomplete component list (F-333) will be produced instead, identifying the components which have not been packed. The container packing list must be requested again after the components identified on the incomplete list have been packed.

(f) If a component (or components) planned for a container has not been received or only partially received and the assembly activity is going to close the container, input an alpha Y in the container close indicator (CONT IND) field of the container packing list request screen (UD), then the completion check will be bypassed and a container packing list will be output for that container.

(5) To request packing lists for minor assemblies:

(a) Key in applicable data in accordance with appendix B-310.

(b) Only one container packing list will be produced per request regardless of the number of assemblages entered in the Assemblage Identification or Number of Assemblages field. Additional copies must be reproduced locally.

(c) The container packing list for minor assemblies can be requested prior to packing and will be produced regardless of the packing status. An incomplete component list will not be produced for minor assemblies.

(6) To access another processing section, move the cursor to the section code field, enter the desired code and depress the ENTER key. To return to the menu panel depress the PROGRAM FUNCTION 1 key.

5. ERROR MESSAGES/ACTIONS

Entries which fail validation will remain on the input screen with the error message displayed on the line below each invalid input. The cursor will return to the line where the invalid data was entered.

ERROR MESSAGE	CAUSE/ACTION
INVALID SECTION CODE	Probable Cause: No matching section code on menu panel.
	Action: Enter section code from menu panel.

ERROR MESSAGE	CAUSE/ACTION
INVALID BUILD DIRECTIVE NUMBER	Probable Cause: First position is other than 7 or 8. Action: Reenter correct data.
INVALID ASSEMBLAGE ID NO.	Probable Cause: Entry is other than 01-20. Action: Reenter correct data.
ENTRY REQUIRED WITH CONT HIGH	Probable Cause: Container high entered without a container low. Action: Research and enter desired container numbers high and low to define range.
CONT NUMBER HI NOT GREATER THAN LOW	Probable Cause: Container number low is greater than container number high. Action: Research and reenter correct data.
MANDATORY ENTRY (TYPE PKG)	Probable Cause: Type package was included in the container packing list request. Action: Enter type package code.
MANDATORY ENTRY (CONTAINER WT)	Probable Cause: Container weight was not included in the container packing list request. Action: Enter the container weight.
MANDATORY ENTRY (CONTAINER CUBE)	Probable Cause: Container cube was not included in the container packing list request. Action: Enter the container cube.
MANDATORY ENTRY (WT OF PALLET)	Probable Cause: Type package code is PT or SD and weight of the pallet has not been entered. Action: Enter weight of the pallet.
CONTS WITH MULTIPLE CCNs IN RANGE	Probable Cause: Container with more than one component control number assigned has been included in the input range. Action: Correct input ensuring that range is for one component control number packed in multiple containers.
INVALID CONTAINER CUBE	Probable Cause: Entered more than six whole numbers without entering a decimal. Action: Correct input and reenter.

APPENDIX E-277 P

PROCEDURES FOR DEPMEDS PLANNING AND PROCESSING
PART I
CONTAINER LOCATION UPDATE

1. PURPOSE

This procedure describes the method used to establish, change or delete storage locations for completed containers and pallets which must be stored until shipment.

2. APPENDICES USED IN THIS PROCESS

a. Chapter 73.

b. Appendix B-311.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

The assembly activity.

4. PROCEDURES/INSTRUCTIONS

a. General.

Location inquiry is not available in this program. Use the Container Data Input program (Section Code UK) to obtain a display of assigned container locations or the Container Palletization program (Section Code UG) to obtain pallet locations.

b. CRT initialization.

(1) Refer to appendix E-277 P, part A to initialize the program.

(2) Key in Section Code UE and depress the ENTER key.

(3) The container location update panel will be displayed as shown in figure 1.

(4) To add, change or delete storage locations:

(a) Enter data under applicable headings in accordance with appendix B-311.

(b) To delete storage locations, enter the applicable build directive number, assemblage identification number, container or pallet number, the location code in the storage location field and D in the action code field.

(c) To change locations for containers or pallets enter the mandatory entries along with the current location in the storage location field, the new location in the storage location new field and a C in the action code field.

(d) To add storage locations, enter the applicable build directive number, assemblage identification number, pallet or container number, storage location in the storage location new field and an A in the action code field.

(5) Depress the ENTER key to process the input data.

(6) Up to five entries can be made per input screen.

c. A successful entry will display a PROCESS COMPLETE message at the bottom of the panel.

d. To access another processing section, move the cursor to the section code field, enter the desired code and depress the ENTER key. To return to the menu panel, depress the PROGRAM FUNCTION 1 key.

5. ERROR MESSAGES/ACTIONS

a. Entries which fail validation will remain on the input screen with the error message displayed on the line below the invalid input.

b. Only one error message will be provided when a range of containers is entered which has more than one error condition. The first container which rejected and stopped processing for the range will be displayed in the container low field. When the error condition is corrected and the data reinput, any further errors in the container range entered will be treated in the same manner.

c. Validation error messages will appear on the screen before processing error messages.

d. If it is not necessary to reinput the rejected entries, the screen may be cleared by depressing the PF2 key.

ERROR MESSAGES	CAUSE/ACTION
INVALID SECTION CODE	Probable Cause: Section code other than those on the menu panel. Action: Enter code from menu panel.
INVALID BUILD DIRECTIVE NUMBER	Probable Cause: First position other than 8. Action: Research and reenter correct data.
INVALID ASSEMBLAGE ID NO	Probable Cause: Entry other than 1-20. Action: Reenter correct data.
CANNOT ENTER BOTH PALLET AND CONTAINER	Probable Cause: Entry includes both pallet and container numbers. Action: Research and reenter.

ERROR MESSAGES	CAUSE/ACTION
PALLET OR CONTAINER MANDATORY ENTRY	Probable Cause: Neither pallet nor container numbers were entered. Action: Research and reenter.
CONT NO HI NOT GREATER THAN LO	Probable Cause: Container number high is not greater than container number low in entry. Action: Research and reenter.
FIELD INCOMPLETE	Probable Cause: Positions missing when element requires a filled input. Action: Research and reenter.
MISSING CONTAINER NUMBER	Probable Cause: Entry mandatory when container high is present. Action: Research and reenter correct data.
LOC OLD REQUIRED IF ACTION CODE C OR D	Probable Cause: Must be present when action code is C or D. Action: Research and reenter applicable action code or location.
LOC NEW REQUIRED IF ACTION CODE A OR C	Probable Cause: Must be present when action code is A or C. Action: Research and reenter applicable action code or location.
INVALID ACTION CODE	Probable Cause: Entry is other than A, C or D. Action: Reenter correct action code.
RECORD NOT FOUND	Probable Cause: No record on file which matches input. Action: Research and reenter.
LOC PRESENT ON FILE	Probable Cause: A location is already on file for the pallet or containers for which the location action is attempted. Action: Inquire to find established location and use delete or change action as desired.

ERROR MESSAGES	CAUSE/ACTION
PALLET # IN CONT FILE	Probable Cause: The container is already assigned to a pallet. Action: Inquire UK (B-325) to find the pallet number for the container and use the pallet number instead of the container number.
LOC DOES NOT MATCH LOCATION ON FILE	Probable Cause: A delete or change action was attempted using a storage location other than the location on record for the pallet or container(s) entered. Action: Inquire to find established location and reenter.

PROCEDURES FOR DEPMEDS PLANNING AND PROCESSING
PART J
ASSEMBLY PACKING LIST NARRATIVE

1. PURPOSE

This procedure describes the method used to input, display and update assembly packing list narrative data.

2. APPENDICES USED IN THIS PROCESS

a. Chapter 73.

b. Appendix B-312.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

The assembly activity.

4. PROCEDURES/INSTRUCTIONS

a. General.

The narrative data maintained in this process will be printed on the first page of the Assembly Packing List.

b. CRT initialization.

(1) Refer to appendix E-277 P, part A, to initialize the program.

(2) Key in Section Code UF and depress the ENTER key.

(3) The assembly packing list narrative panel (see figure 1) will be displayed with the cursor positioned under the process indicator field.

(4) To input packing list narrative data, enter a U in the process indicator field, input the applicable build directive number, the associated narrative data and depress the ENTER key.

(5) A successful entry will clear the input data from the screen and display a PROCESS COMPLETE message at the bottom of the panel.

(6) To inquire previously input narrative data, enter an I in the process indicator field, the applicable build directive number and depress the ENTER key. Displayed data may be spaced out, typed over or new data added. When changes or additions have been completed, enter a U in the process indicator field and depress the ENTER key.

(7) To access another processing section, move the cursor to the Section Code field, enter the desired code and depress the ENTER key. To return to the menu panel, depress the PROGRAM FUNCTION 1 key.

(8) To refresh the screen, blank the process indicator and depress the ENTER key.

5. ERROR MESSAGES/ACTIONS

When entries fail validation, the cursor will be positioned under the invalid field and an error message will be displayed at the bottom of the screen.

ERROR MESSAGE	CAUSE/ACTION
INVALID SECTION CODE	Probable Cause: Section code other than those on the menu panel. Action: Enter code from menu panel.
INVALID PROCESS INDICATOR	Probable Cause: Entry other than I, U or blank. Action: Reenter I, U or leave blank to clear input data from screen.
INVALID BUILD DIRECTIVE NUMBER	Probable Cause: Entry other than 7 or 8 in the first position. Action: Research and reenter correct data.
INVALID PROCESS INDICATOR AND INVALID BDN	Probable Cause: Both fields fail to meet validation criteria in appendix B-312. Action: Research and reenter correct data.
FIELD INCOMPLETE	Probable Cause: Required positions missing in field. Action: Research and reenter correct data.
MANDATORY ENTRY	Probable Cause: Data was not entered in a mandatory field. Action: Research and enter data.
NARRATIVE NOT PREVIOUSLY ENTERED	Probable Cause: No assembly narrative data has been entered for the build directive number inquired. Action: Enter data using a U process indicator.

ERROR MESSAGE	CAUSE/ACTION
BDN NOT IN PROCESS	Probable Cause: The Build Directive Number entered is not recorded in the assembly activity files. Action: Research and reenter correct build directive number.

APPENDIX E-277 P

PROCEDURES FOR DEPMEDS PLANNING AND PROCESSING
PART K
CONTAINER PALLETIZATION INPUT

1. PURPOSE

This procedure describes the method used to assign containers to a pallet and input associated pallet data.

2. APPENDICES USED IN THIS PROCESS

a. Chapter 73.

b. Appendix B-314.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

The assembly activity.

4. PROCEDURES/INSTRUCTIONS

a. General.

This procedure describes the methods used to display previously input data and make necessary additions, changes or deletions.

b. CRT initialization.

(1) Refer to appendix E-277 P, part A, to initialize the program.

(2) Key in Section Code UG and depress the ENTER key.

(3) The container palletization panel will be displayed. See figure 1 below.

(4) Enter data in accordance with appendix B-314 and in coordination with the applicable process indicator to accomplish the desired actions.

(5) To assign containers and enter associated pallet data, enter a U in the process indicator field and enter the applicable build directive number. Enter a specific assemblage identification number if desired or ZZ if input is applicable to all assemblage identification numbers. Enter the desired pallet number and associated container numbers in the container number high low range fields or the container number fields or a combination of fields. Available pallet information may be entered in any of the displayed fields with the exception of the pallet location field. Enter an A in the action code field and depress the ENTER key. When the container low and container high fields are used to assign a range of containers to a pallet, and unused containers or

containers which have been assigned to a different pallet are included in the range, they will be ignored in the update process and no error messages will be displayed to identify these containers.

(6) To display previously entered data:

(a) Enter an I in the process indicator field and the build directive number, assemblage identification number and pallet number in the applicable fields. Depress the ENTER key to obtain the display of data as shown in figure 2.

(b) If more than one screen is required to display the assigned containers, the message ADDITIONAL DATA ON RECORD will be displayed at the bottom of the screen.

(c) Depress the ENTER key to display additional records.

(7) To update container palletization assignments following an inquiry:

(a) Enter an N in the process indicator field and depress the ENTER key.

(b) This will blank the displayed container numbers in preparation for new information to be entered.

(c) Enter a U in the process indicator field.

(d) Enter container numbers to be deleted with an Action Code of D or the container numbers to be added with an Action Code of A and depress the ENTER key.

(e) Delete actions may also be accomplished following an inquiry without entering an N in the process indicator field to clear the displayed container numbers from the screen. To accomplish this, enter a U in the process indicator field, a D in the action code field and depress the ENTER key. This will delete all container numbers displayed from the inquiry. To protect individual container numbers from deletion in this process, type over the container number(s) with zeros.

(8) To input or update shipping document sequence number and pallet data following an inquiry:

(a) Enter a U in the process indicator field and leave the action code field blank.

(b) Enter the data to be added in the desired fields. To change data displayed in the shipping document sequence number, weight of pallet, gross pallet weight, gross pallet cube, type of package code or pallet description fields, type the desired data over the displayed fields.

(c) Displayed data may be deleted by balancing the desired fields and depressing the ENTER key.

(9) The shipping document sequence number and pallet data may be entered without doing the inquiry first. To accomplish this, enter a U in the process indicator field and the desired data in the applicable fields. The action code field should be left blank unless containers are being added or deleted with the same entry.

ERROR MESSAGE	CAUSE/ACTION
INVALID ASSEMBLAGE ID NO.	Probable Cause: Entry other than 1-20 or ZZ. Action: Research and reenter correct assemblage identification number.
INVALID PALLET NUMBER	Probable Cause: Entry other than numeric. Action: Review and reenter correct data.

c. Depress the ENTER key to process input.

(10) A successful entry will clear the display screen and a PROCESS COMPLETE message will be displayed at the bottom of the panel.

(11) To access another processing section, move the cursor to the section code field, enter the desired code and depress the ENTER key. To return to the menu panel depress the PROGRAM FUNCTION 1 key.

(12) To refresh the screen, blank the process indicator and depress the ENTER key.

5. ERROR MESSAGES/ACTIONS

Error messages resulting from screen input validation will be displayed at the bottom of the screen and the cursor will be moved to the invalid field.

ERROR MESSAGE	CAUSE/ACTION
INVALID SECTION CODE	Probable Cause: Section code other than those on the menu panel. Action: Enter code from panel.
INVALID PROCESS INDICATOR	Probable Cause: Entry other than I, U, N or blank. Action: Enter desired code or leave blank to clear displayed data from the screen.
RECORD NOT FOUND	Probable Cause: Input does not match data on record. Action: Research and reenter correct data.

ERROR MESSAGE	CAUSE/ACTION
INVALID BUILD DIRECTIVE NUMBER	Probable Cause: First position is other than 7 or 8. If 8, less than four positions were entered. If 7, less than three positions were entered. Action: Research and reenter correct BDN.
INVALID GROSS PALLET CUBE	Probable Cause: More than one decimal entered in field or more than 6 whole numbers were entered without a decimal. Action: Review and correct input.
INVALID TYPE PACKAGE CODE	Probable Cause: Entry of special characters. Action: Review and correct input.
INVALID ACTION CODE	Probable Cause: Entry is other than A, D or blank. Action: Review and enter correct data.
BDN NOT FOUND ON END ITEM FILE	Probable Cause: BDN not recorded as inprocess. Action: Research and reenter correct BDN.
CONT NO. HI NOT GREATER THAN LOW	Probable Cause: Container number low is greater than container number high. Action: Research and correct entry.
ENTRY REQUIRED WITH CONTAINER HIGH	Probable Cause: Container high entered without a container low. Action: Research and enter desired container numbers high and low to define range.
ENTRY REQUIRED WITH CONTAINER LOW	Probable Cause: Entry in container number low field without entry in container high. Action: Research and enter the desired containers numbers high and low to define the range.
BAD RETURN CODE A BB CCCCCCCC	Probable Cause: System error cause by other than operator input. Action: Record error message and notify supervisor, where A = return code, B = program location and C = file name.

ERROR MESSAGE	CAUSE/ACTION
XXXX CNTNR NO. NOT ASSIGNED TO PALLET	Probable Cause: Displayed container number is not assigned to pallet number entered and cannot be deleted. Action: Research and reenter correct data.
PALLET RECORD NOT FOUND	Probable Cause: No record is available for the pallet number to be deleted. Action: Research and reenter correct pallet number.
XXXX NO CONTAINER NUMBER TO DELETE	Probable Cause: Container number entered has not been assigned. Action: Research and reenter correct container number.
XXXX CONTAINER HAS NO PALLET NO. ASSIGNED	Probable Cause: Container number is not assigned to the pallet number entered and cannot be deleted. Action: Research and reenter correct data.
XXX CONTAINER HAS A NON-MATCH PLT	Probable Cause: Container number entered is assigned to a different pallet than the one entered and cannot be deleted. Action: Research and reenter correct data.
MUST HAVE ACTION CODE TO ADD OR DELETE CONTAINERS	Probable Cause: Addition or deletion of containers attempted without an action code. Action: Enter Action Code A or D.
INQUIRY REQUIRED PRIOR TO UPDATE	Probable Cause: Attempt was made to assign containers to a pallet using a U process indicator when the pallet already has containers assigned. Action: Enter an I in the process indicator display the containers assigned to the pallet number entered.
ENTER PROCESS IND "N" TO CLEAR CONTAINER NUMBERS	Probable Cause: An attempt was made to add containers to a pallet following an inquiry without clearing the displayed containers. Action: Clear displayed containers using an N process indicator.
ENTER PROCESS IND "U" FOR UPDATE	Probable Cause: Message provided after displayed containers are removed from display using an N process indicator.

ERROR MESSAGE	CAUSE/ACTION
	Action: Enter U in process indicator and continue update action.
XXXX NO CONTAINER RECORD FOR SPECIFIED ADD	Probable Cause: Attempted to add an unassigned container number to a pallet.
	Action: Research and reenter correct container number.
XXXX MAX CONTAINERS EXCEEDED	Probable Cause: More than 500 containers were assigned to a pallet.
	Action: Reassign containers to avoid exceeding limit.
XXXX CNTNR NO. ALREADY ASSIGNED TO PALLET	Probable Cause: Container number has already been assigned to a pallet.
	Action: Research and reenter correct container number or delete container number from previously assigned pallet so it can be reassigned to a new pallet.

APPENDIX E-277 P

PROCEDURES FOR DEPMEDS PLANNING AND PROCESSING
PART L
COMPONENT PLANNING/UPDATE DATA

1. PURPOSE

This procedure describes the method used to review and update component stock number data to assign stock numbers to a planned container for packing.

2. APPENDICES USED IN THIS PROCESS

a. Chapter 73.

b. Appendix B-317.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

The assembly activity.

4. PROCEDURES/INSTRUCTIONS

a. General.

Item data entered in this process will be used by the DEPMEDS system but will not be used to update MOWASP records.

b. CRT initialization.

(1) Refer to appendix E-277 P, part A, to initialize the program.

(2) Key in Section Code UH and depress the ENTER key.

(3) The component planning/update panel will be displayed as shown in figure 1.

(4) To review and update item data:

(a) Enter an I in the process indicator field, the desired build directive number and a specific assemblage identification number if desired.

(b) Enter the component control number in the component control number low field and depress the ENTER key.

(c) The requested component control number will be displayed in the component control number field with the currently assigned data displayed in the applicable fields, as shown in figure 2.

(d) Displayed data, with the exception of the component control number, component stock number, unit of issue, basic quantity, container numbers high and low, may be spaced out for deletions, typed over for changes; or new data may be added in blank fields.

(e) If item data has been added, changed or deleted enter a U in the process indicator and depress the ENTER key.

(f) To display a series of component control numbers for review and update, enter the lowest component control number in the component control number low field, the highest component control number in the component control number high field and depress the ENTER key to display data for the first component control number. After the review or update has been accomplished and the ENTER key has been depressed, the next component control number in the series entered will be displayed. To change displayed data, enter a U in the process indicator field and make the desired changes. When the entry key is depressed, the changed data will be displayed for review and the process indicator will be changed to an I, depress the ENTER key to continue reviewing the component control numbers entered in the series. The message ADDITIONAL DATA ON RECORD will be displayed until all components in the range have been reviewed.

(g) Additions, changes and deletions of item data should be made following an inquiry to display current data applicable to the component control number. If updates are made without displaying current item data, all fields left blank will overlay current item data on file with blanks.

(5) To assign components to a planned container for packing:

(a) Enter a U in the process indicator field and the applicable build directive number and assemblage identification number.

(b) To assign a single component control number to a container for packing, enter the component control number in the component control number low field and the container number in the container number low field.

(c) To assign one component to more than one container, enter the component control number in the component control number low field, the lowest container number in the series in the container number low field and the highest container number in the container number high field.

(d) To assign a series of CCNs to one container, enter the lowest component control number in the component control number low field, the highest component control number in the component control number high field and the container number in the container number low field.

(e) To change a component control number from a previously assigned container to a new container, enter the component control number in the component control number low field and the new container in the container number low field. Replanning of container assignments will not affect the records on component control numbers which have already been packed.

(f) Entry of a ZZ in the assemblage identification number field indicates the component control number assignments are for all assemblages on record.

(g) Entry of a specific assemblage identification number will override the container assignments made for that assemblage identification number by a ZZ entry. However, a ZZ assemblage identification number entry will not override a specific assemblage identification number entry that was previously entered.

(h) Entry of 9999 in the container number low field will delete the component control number or range of numbers from the container to which they were previously assigned. This may be accomplished for all AINs for which containers were assigned by entering a ZZ in the AIN field. If containers were assigned using a specific AIN, then a specific AIN must be used to remove the container assignment.

(i) No additions, changes or deletions can be made to the item data fields during the same entry which assigns component control numbers to containers.

(j) Depress the ENTER key to process input.

(6) A successful entry will display the message PROCESS COMPLETE at the bottom of the screen.

(7) To access another processing section, move the cursor to the section code field, enter the desired code and depress the ENTER key. To return to the menu panel, depress the PROGRAM FUNCTION 1 key.

(8) To refresh the screen, blank the process indicator and depress the ENTER key.

5. ERROR MESSAGES/ACTIONS

When entries fail validation the cursor will be positioned under the invalid key and an error message will be displayed at the bottom of the screen.

ERROR MESSAGE	CAUSE/ACTION
INVALID SECTION CODE	Probable Cause: Section code other than those on the menu panel. Action: Enter code from menu panel.
INVALID BUILD DIRECTIVE NUMBER	Probable Cause: First position other than 7 or 8. Action: Research and reenter correct data.
INVALID ASSEMBLAGE ID NO	Probable Cause: Entry other than 01-20 or ZZ. Action: Research and reenter correct data.

ERROR MESSAGE	CAUSE/ACTION
FIELD INCOMPLETE	Probable Cause: Required positions missing in field. Action: Research and reenter correct data.
MANDATORY ENTRY	Probable Cause: Data not entered in a mandatory field. Action: Enter required data.
CCN HI NOT GREATER THAN LOW	Probable Cause: Entry in CCN low is greater than entry in CCN high. Action: Research and reenter correct data.
CONT NO HI NOT GREATER THAN LOW	Probable Cause: Entry in container number low is greater than entry in container number high. Action: Research and reenter correct data.
CCN HIGH WITH CONT NO HI	Probable Cause: CCN high and container number high are included in the same entry. Action: CCN high or container number high must be removed.
CCN NOT FOUND	Probable Cause: Incorrect entry or record not on file. Action: Research and reenter correct data.
AIN NOT FOUND	Probable Cause: Incorrect entry or data not on file. Action: Research and reenter correct data.
INVALID UNIT OF MEASURE	Probable Cause: Entry is other than alpha or blank. Action: Research and reenter correct data.
INVALID INSP REQD IND	Probable Cause: Entry is other than Y, R or blank. Action: Research and reenter correct data.
INVALID PHYSICAL SECURITY	Probable Cause: Entry is other than alpha or blank. Action: Research and reenter correct data.
INVALID SHELF-LIFE	Probable Cause: Entry is other than alpha, numeric or blank. Action: Research and reenter correct data.

ERROR MESSAGE	CAUSE/ACTION
INVALID SRC	Probable Cause: Entry is other than alpha, numeric or blank. Action: Research and reenter correct data.
INVALID HAZ STOR COMP	Probable Cause: Entry is other than alpha, numeric or blank. Action: Research and reenter correct data.
INVALID WATER COM CODE	Probable Cause: Entry is other than alpha, numeric or blank. Action: Research and reenter correct data.
INVALID AIR COM CODE	Probable Cause: Entry is other than alpha, numeric or blank. Action: Research and reenter correct data.
INVALID PROCESS INDICATOR	Probable Cause: Entry is other than I, U or blank. Action: Enter I, U or blank.
INVALID ENTRY	Probable Cause: More than one decimal is entered in a field which is eligible for a decimal. Action: Research and reenter correct data.
ENTRY REQUIRED WITH CONT HIGH	Probable Cause: Container high was entered without a container low. Action: Research and enter desired container numbers high and low to define range.
A BB CCCCCCCC BAD RETURN CODE	Probable Cause: A system error has been encountered. Action: Record error message and notify supervisor, where: A = return code, B = program location and C = file name.
RECORD NOT FOUND	Probable Cause: Incorrect entry or no matching data on record. Action: Research and reenter correct data.

ERROR MESSAGE	CAUSE/ACTION
CHECK FOR VALID CONTAINER RANGE	Probable Cause: A container high has been entered which is significantly larger than the container low and may be in error. The check will be invoked if container high minus container low is greater than 25. Action: Correct entry or enter a Y in the range check override field and reenter.

APPENDIX E-277 P

PROCEDURES FOR DEPMEDS PLANNING AND PROCESSING
PART M
ASSEMBLY RECEIPT INPUT

1. PURPOSE

This procedure describes the method used to input the quantity received at the assembly activity and initiate the assembly component receipt confirmation to the assembly manager.

2. APPENDICES USED IN THIS PROCESS

a. Chapter 73.

b. Appendix B-320.

c. Appendix F-326.

d. Appendix F-334.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

The assembly activity.

4. PROCEDURES/INSTRUCTIONS

a. General.

This procedure also describes the method used to accomplish receipt when advance receipt data has not been received.

b. CRT initialization.

(1) Refer to appendix E-277 P, part A, to initialize the program.

(2) Key in Section Code UI and depress the ENTER key.

(3) The assembly receipt data panel will be displayed as shown in figure 1.

(4) Enter the receipt document number and suffix code if applicable in the component document number field and suffix code field and depress the ENTER key to display advance receipt data.

(5) To confirm receipts with matching advance receipt data:

(a) Enter quantity received in the received quantity field.

(b) Review displayed advance receipt data and make corrections if necessary to the unit of issue or component stock number.

(c) If quantity received is greater than due-in quantity, input will reject unless a Y is entered in the quantity reject override field.

(d) Unit of measure and measurement quantity fields will only be displayed when the basic quantity in the DEPMEDS component records contains a decimal.

1. If fields contain data, review and enter corrections if necessary.

2. If fields are displayed without data, enter the applicable data. If data cannot be determined, complete receipt input without the data and the receipt movement documents will be produced with a decimal quantity.

(6) To confirm a receipt with no matching advance receipt data:

(a) The data fields which display advance receipt data will be blank when no matching advance receipt data is found for the document number and suffix code entered and the error message ADV RECEIPT RECORD NOT FOUND DATA MAY BE ENTERED will be displayed.

(b) If the input document number is valid with no advance receipt data on record, or is constructed locally, the following data elements must be entered to accomplish receipt.

1. Component Stock Number.

2. Unit of Issue.

3. Condition Code.

4. Received Quantity.

5. Build Directive Number.

6. Function Code (if applicable).

7. Subfunction code (if applicable).

(c) The stock/component control number inquiry (program UWMH70, Section Code ID) may be used to obtain the function and subfunction codes for input. The Build Directive Number and Stock Number may be obtained for the inquiry from the receipt document.

(d) If the component is for a major assembly, then the last 3 positions of the BDN will be in positions 54-56 of the receipt document with the first position of the BDN a constant 8. If the component is for a minor assembly, then the first 3 positions of the BDN will be in positions 54-56 of the receipt document with the last position of the BDN a constant 0. The appropriate quantity to be received by function and subfunction can be determined by reviewing the unit assembly planning data (F-324) for the BDN.

(e) Depress the ENTER key to process receipt.

(7) A successful entry will clear the display screen and a PROCESS COMPLETE message will be displayed at the bottom of the panel.

(8) To access another processing section, move the cursor to the section code field, enter the desired code and depress the ENTER key. To return to the menu panel depress the PROGRAM FUNCTION 1 key.

(9) If receipt movement documents are lost or destroyed, they can be reprinted using Section Code RB. Reprint documents will be identified by a ***REPRINT*** message on the document.

Depress the ENTER key to process input.

5. ERROR MESSAGE/ACTIONS

Error messages will be displayed at the bottom of the screen and the cursor will move to the invalid field.

ERROR MESSAGE	CAUSE/ACTION
INVALID SECTION CODE	Probable Cause: Section code other than those on the menu panel. Action: Enter code from the menu panel.
INVALID ENTRY	Probable Cause: Data entered is invalid per appendix B-320. Action: Research and reenter correct data.
UNIT OF ISSUE MISMATCH	Probable Cause: Entered unit of issue does not match unit of issue new on record. Action: Research and reenter correct data or correct record using Z2D input.
STOCK NUMBER MISMATCH	Probable Cause: Entered stock number does not match new stock number on record. Action: Research and reenter correct stock number or change record using Z2D input.
ENTER Y TO EXCEED DUE IN QTY	Probable Cause: Incorrect entry or excess quantity received. Action: Enter quantity matching due-in quantity or enter a Y in the quantity reject override field.

best copy available

ERROR MESSAGE	CAUSE/ACTION
MANDATORY ENTRY	Probable Cause: Required entry was not included in input. Action: Enter missing data.
A BB CCCCCCCC BAD RETURN CODE	Probable Cause: System error caused by other than operator input. Action: Record error where: A = Return Code, B = Program Location and C = File Name.
ADV RECEIPT RECORD NOT FOUND DATA MAY BE ENTERED	Probable Cause: Entered document number not on file. Action: Research and reenter correct document number, or enter advance receipt using a Z2G or Z2H transaction.
END ITEM RECORD NOT FOUND	Probable Cause: BDN input data does not match end item data record. Action: Research and reenter correct or missing data.
COMPONENT RECORD NOT FOUND	Probable Cause: Function of subfunction input does not have a matching component data record. Action: Research and reenter correct data.
AAAAAAAA BB CCCCCCCC - CCCCCCCCCCCCC NOT FOUND	Where: A = File Name, B = Program Location and C = Key Data not found. a. If advance receipt data is available: Probable Cause: System error cause by other than operator input. Action: Record error message and notify supervisor. b. If no matching advance receipt data: Probable Cause: Incorrect data entered. Action: Research and reenter correct data.
NO MATCHING FUNC/ SUB FUNC	Probable Cause: Receipt was attempted without advance receipt data and entry failed to match recorded function/subfunction. Action: Determine recorded function/subfunction and include in entry.

APPENDIX E-277 P

PROCEDURES FOR DEPMEDS PLANNING AND PROCESSING
PART N
END ITEM AND ASSEMBLAGE DATA INQUIRY

1. PURPOSE

This procedure describes the method used to obtain a CRT display of assembly end item data and the associated assemblages for a build directive number.

2. APPENDICES USED IN THIS PROCESS

a. Chapter 73.

b. Appendix B-323.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

The assembly activity.

4. PROCEDURES/INSTRUCTIONS

a. General.

This procedure describes the method used to update end item data.

b. CRT initialization.

(1) Refer to appendix E-277 P, part A, to initialize the program.

(2) Key in Section Code UJ and depress the ENTER key.

(3) The end item and assemblage data inquiry will be displayed as shown in figure 1.

(4) To obtain a display of end item and assemblage data (as shown in figure 2) enter an I in the process indicator field, the desired build directive number in the build directive number field and depress the ENTER key.

(5) To update displayed data:

(a) Enter a U in the process indicator field and the desired data in accordance with appendix B-323.

(b) Data may be spaced out for deletions, typed over for changes or typed in blank fields for additions.

(c) Depress the ENTER key to process input.

(6) A successful entry will clear the display screen and a PROCESS COMPLETE message will appear at the bottom of the screen.

(7) To access another processing section, move the cursor to the section code field, enter the desired code and depress the ENTER key. To return to the menu panel depress the PROGRAM FUNCTION 1 key.

(8) To refresh the screen, blank the process indicator and depress the ENTER key.

5. ERROR MESSAGES/ACTIONS

Error messages resulting from input validation will appear at the bottom of the screen and the cursor will move to the invalid field.

ERROR MESSAGE	CAUSE/ACTION
INVALID SECTION CODE	Probable Cause: Section code other than those on the menu panel. Action: Enter code from menu panel.
INVALID PROCESS INDICATOR	Probable Cause: Entry other than I, U or blank. Action: Enter I, U or blank.
INVALID BUILD DIRECTIVE NUMBER	Probable Cause: Entry other than 7 or 8 in the first position. Action: Research and reenter correct data.
FIELD INCOMPLETE	Probable Cause: Required positions missing in field. Action: Research and reenter correct data.
BDN NOT FOUND	Probable Cause: Incorrect entry or BDN not on record. Action: Research and reenter correct data.
INVALID SHIP TO AAC	Probable Cause: Entry other than alpha/numeric or blank. Action: Research and reenter correct data.
INVALID DOCUMENT NUMBER	Probable Cause: Entry other than alpha/numeric in positions 1-6, numeric in positions 7-10, alpha/numeric in positions 11-14 or has blanks or all zeros. Action: Research and reenter correct data.

ERROR MESSAGE	CAUSE/ACTION
CCN____NOT FOUND	Probable Cause: Component control number previously deleted. Action: The CCN range was processed up to the CCN listed in the error message. If it is necessary to assign the remaining CCNS to a container, omit the CCN not found and enter a new CCN range to include the unprocessed CCNs.
INVALID END ITEM DOCUMENT RECEIPT NUMBER	Probable Cause: Entry other than alpha/numeric in positions 1-6, numeric in positions 7-10, alpha/numeric in positions 11-14, or has blanks or all zeros. Action: Research and reenter correct data.

APPENDIX E-277 P

PROCEDURES FOR DEPMEDS PLANNING AND PROCESSING
PART O
CONTAINER DATA REQUEST

1. PURPOSE

This procedure describes the method used to request the F-338, Container Data Report. It is also used to assign containers to a shipping document sequence number and to inquire, input and update data associated with a container.

2. APPENDICES USED IN THIS PROCESS

a. Chapter 73.

b. Appendix B-325.

c. Appendix F-338.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

The assembly activity.

4. PROCEDURES/INSTRUCTIONS

a. General.

The F-338 container data report will be produced during the daily batch processing.

b. CRT initialization.

(1) Refer to appendix E-277 P, part A, to initialize the program.

(2) Key in Section Code UK and depress the ENTER key.

(3) The container data request panel will be displayed as shown in figure 1, with the cursor positioned under the process indicator field.

(4) Enter data in the displayed fields in accordance with appendix B-325 to accomplish the following actions.

(5) To request the F-338, Container Data Report:

(a) Enter an I in the process indicator field.

(b) Enter the applicable build directive number, assemblage identification number and the lowest container in the container number low field and the highest container number in the container number high field. If four or fewer containers are included in the series, input will result in a CRT display rather than a hard copy report. Entry of ZZ in the assemblage identification number field will provide a hard copy report regardless of the number of containers included in the series.

(c) Depress the ENTER key to process input.

(6) To assign containers to a shipping document sequence number or enter container data:

(a) Enter a U in the process indicator field.

(b) Enter the applicable build directive number and either a specific assemblage identification number or ZZ in the assemblage identification number field.

(c) Enter the desired container number in the container number low field. If data entered will apply to a series of containers, enter the highest container number desired in the container number high field in addition to the number in the container number low field.

(d) Enter the desired shipping document sequence number and other desired data on the following two input lines, and depress the ENTER key.

(e) Type of package code, container description and container label data fields may be deleted for the range of containers entered, by deleting the data from the desired fields using the EOF key and depressing ENTER.

(7) To display previously entered data and make necessary additions, deletions or changes:

(a) Enter an I in the process indicator field, the desired build directive number and a specific assemblage identification number in the applicable fields.

(b) Enter the desired container number in the container number low field and depress ENTER to display data as shown in figure 2.

(c) To obtain a display of up to four containers, enter the container numbers defining the series in the container low and high fields. If the series entered includes more than four containers, the F-338 Report will be produced in lieu of the CRT display.

(d) Displayed data may be spaced out for deletions, typed over for changes or new data may be added in blank fields. Container weight and cube fields will be displayed as zero filled if weight and cube were not previously entered.

(e) Enter a C in the process indicator field and depress the ENTER key.

(8) A successful entry will clear the data from the input screen and display a PROCESS COMPLETE message at the bottom of the panel.

(9) To access another processing section, move the cursor to the section code field, enter the desired code and depress the ENTER key. To return to the menu panel depress the PROGRAM FUNCTION 1 key.

(10) To refresh the screen, blank the process indicator and depress the ENTER key.

5. ERROR MESSAGES/ACTIONS

Entries which fail validation will remain on the input screen with the error message displayed on the line below each invalid input.

ERROR MESSAGE	CAUSE/ACTION
INVALID SECTION CODE	Probable Cause: Entry does not match section code on menu. Action: Enter code from menu panel.
INVALID PROCESS INDICATOR	Probable Cause: Entry other than I, C, U or blank. Action: Enter desired code or leave blank to clear displayed data from the screen.
INVALID BUILD DIRECTIVE NUMBER	Probable Cause: First position other than 7 or 8 or positions left blank. Action: Research and reenter correct data.
INVALID ASSEMBLAGE ID NO.	Probable Cause: Entry other than 01-20 or ZZ. Action: Research and reenter correct data.
ENTRY REQUIRED WITH CONT HIGH	Probable Cause: Entry of container high without container low. Action: Enter container low.
CONTAINER NO HI NOT GREATER THAN LO	Probable Cause: Container number low is greater than container number high. Action: Research and reenter correct data.
ZZ NOT VALID WITH CHANGE	Probable Cause: Process indicator entry is other than C.

ERROR MESSAGE	CAUSE/ACTION
	Action: Research and reenter correct data.
MANDATORY ENTRY	Probable Cause: Required data was not entered in a mandatory field.
	Action: Enter required data.
RECORD NOT FOUND	Probable Cause: Input does not match a BDN, AIN, or container number on the records.
	Action: Research and enter correct data.
INVALID ENTRY	Probable Cause: Data entered does not pass validation or more than 6 whole numbers were entered in the container cube field without a decimal.
	Action: Correct and reenter.

6. VIOLATION REASON CODE/ACTIONS

a. Error conditions discovered during the batch processing will result in rejection of the transaction to the F-85 Validation Reject Report. Transactions will be rejected with a Document Identifier Code of 9UK, followed by the data elements in the same sequence as the appendix B-325 input format.

b. Violation Reason Codes and definitions which apply are as follows:

VRC	DEFINITION
XJ	No matching record/overlapping request.

c. VIOLATION REASON CODE XJ.

(1) REASON FOR VIOLATION/ERROR CONDITION

No record exists for the BDN, AIN and containers requested.

(2) PROCESS/RESEARCH REQUIRED

Research and reenter correct data for processing in the next cycle.

APPENDIX E-277 P

PROCEDURES FOR DEPMEDS PLANNING AND PROCESSING
PART P
COMPONENT PICKING/PACKING REQUEST

1. PURPOSE

This procedure describes the method used to request Component Pick/Movement Documents (F-328) for materiel to be assembled. The Assemblage Control Packing Data Listing (F-329) will also be produced for the input parameters.

2. APPENDICES USED IN THIS PROCESS

a. Chapter 73.

b. Appendix B-308.

c. Appendix F-328.

d. Appendix F-329.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

The assembly activity.

4. PROCEDURES/INSTRUCTIONS

a. General.

If a component picking/packing request is processed for materiel which has not been received at the assembly activity, a due-in suspense will be established to ensure that when the materiel is received it will be routed to the assembly area designated in the request.

b. CRT initialization.

(1) Refer to appendix E-277 P, part A, to initialize the program.

(2) Key in Section Code RA and depress the ENTER key.

(3) The component picking/packing request screen will be displayed as shown in figure 1.

(4) Enter applicable data in accordance with appendix B-308.

(5) To request component picking/movement documents for minor assemblies.

(a) Enter the desired build directive number and assembly area. Enter the desired location sequence and the number of assemblages for which materiel is to be picked in the number of assemblages field. This entry will provide picking/movement documents for components in all containers associated with the build directive number input.

(b) When the assembly has multiple containers assigned, picking/movement documents can be obtained for components in only a portion of the containers by entering the above information and the desired container numbers in the container number fields or a range of containers, defined by the entries in the container number low and container number high fields.

(c) Depress the ENTER key to process input.

(6) To request component picking/movement documents for a major assembly:

(a) To obtain picking/movement documents for components in all containers in the build directive, enter the desired build directive number, the assembly area and the location sequence option. Enter ZZ in the assemblage identification number field to obtain picking/movement documents for all assemblages in the build directive or enter specific assemblage identification number to obtain picking/movement documents for one assemblage.

(b) To restrict the input to obtain picking/movement documents for components in all containers in a function/group, enter the Function/Group Code in addition to the above entries. Individual containers or ranges of containers cannot be entered in conjunction with a Function/Group Code.

(c) To obtain picking/movement documents for components in specific containers or a range of container; in addition to the entries in subparagraph (6)(a) above, enter the range in the container number low and high fields and up to 40 individual container numbers in the container number field.

(d) Depress the ENTER key to process input.

(7) Duplicate Component picking/movement documents can be requested by the assembly activity, using the reprint request in program UWMH70 Section Code RB. Duplicate documents will be printed with a ***REPRINT*** message on them.

(8) In order to provide versatility of input, it is necessary that inputs be limited to the following maximums per batch run:

(a) Twenty entries by build directive number when ZZ is entered in the assemblage identification number field.

(b) Twenty entries by build directive number when a specific assemblage identification number is entered.

(c) Twenty entries by build directive number when function when ZZ entered in the assemblage identification number field.

(d) Twenty entries by build directive number and function when a specific assemblage identification number is entered.

(e) Ten entries by build directive number and container low, high range when ZZ is entered in the assemblage identification number field.

(f) Ten entries by build directive number and container low, high range when a specific assemblage identification number is entered.

(g) Forty individual containers may be requested when entries are by build directive number with ZZ in the assemblage identification number field.

(h) Forty individual containers may be requested when entries are by build directive number and a specific assemblage identification number is entered.

(9) A successful entry will clear the screen and display a PROCESS COMPLETE message at the bottom of the panel.

(10) To access another processing section, move the cursor to the section code field, enter the desired code and depress the ENTER key. To return to the menu panel depress the PROGRAM FUNCTION 1 key.

5. ERROR MESSAGE/ACTIONS

Error messages resulting from input validation will be displayed at the bottom of the screen. The cursor will be positioned under the invalid entry.

ERROR MESSAGE	CAUSE/ACTION
INVALID SECTION CODE	Probable Cause: No matching section code on menu panel.
	Action: Enter section code from menu panel.
FIELD INCOMPLETE	Probable Cause: Fewer than required positions entered for a mandatory field.
	Action: Research and reenter correct data.
INVALID BUILD DIRECTIVE NUMBER	Probable Cause: First position is other than 7 or 8.
	Action: Research and reenter correct data.
INVALID ASSEMBLY AREA	Probable Cause: Entry other than alpha/numeric.
	Action: Research and reenter correct data.

ERROR MESSAGE	CAUSE/ACTION
INVALID ASEMBLAGE ID NUMBER	Probable Cause: Entry other than 01-20 or ZZ. Action: Research and reenter correct data.
INVALID TOTAL NUMBER OF ASSEMBLAGES	Probable Cause: Entry other than numeric. Action: Research and reenter correct data.
INVALID FUNCTION/GROUP CODE	Probable Cause: Entry other than alpha or blank. Action: Research and reenter correct data.
INVALID CONTAINER NUMBER LOW	Probable Cause: Container number entered in same entry as Function/Group Code. Action: Determine desired entry and leave one of the two fields blank.
ENTRY REQUIRED WITH CONTAINER HIGH	Probable Cause: Entry in container high without entry in container number low. Action: Research and enter desired container numbers in container high and low fields to define range.
ENTRY REQUIRED WITH CONTAINER LOW	Probable Cause: Entry in container number low field without entry in container number high. Action: Research and enter the desired container number in the container number high field to define the range.
CONTAINER NUMBER HIGH NOT GREATER THAN LOW	Probable Cause: Container number low is greater than container number high. Action: Research and reenter correct data.

6. VIOLATION REASON CODE/ACTIONS

a. Error conditions discovered during the batch processing will result in rejection of the transaction to the F-85 Validation Reject Report. Transactions will be rejected with a Document Identifier Code of 9RA, followed by the data elements in the same sequence as the appendix B-308 input format.

b. Violation Reason Codes and definitions which apply are as follows:

VRC	DEFINITION
XJ	No matching record/overlapping request.
R1	Exceeds report request limits.

c. VIOLATION REASON CODE XJ.

(1) REASON FOR VIOLATION/ERROR CONDITION

No matching record is available for the input parameters or record has been previously processed for the same cycle.

(2) PROCESSING/RESEARCH REQUIRED

Research and reenter required data.

d. VIOLATION REASON CODE R1

(1) REASON FOR VIOLATION/ERROR CONDITION

Requests entered exceed the input limits defined in paragraph 4.b.(8) above.

(2) PROCESSING/RESEARCH REQUIRED

If inputs are still required, reenter for the next processing cycle.

REPRINT REQUEST

1. PURPOSE

This procedure describes the method used to obtain reprints of receipt movement documents which were originally generated during the receipt process.

2. APPENDICES USED IN THIS PROCESS

a. Chapter 73.

b. Appendix B-313.

c. Appendix F-326.

d. Appendix F-334.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

The assembly activity.

4. PROCEDURES/INSTRUCTIONS

a. General.

This procedure will provide for the reprint of all receipt movement documents for the component document number entered.

b. CRT initialization.

(1) Refer to appendix E-277 P part A, to initialize the program.

(2) Key in Section Code RB and depress the ENTER key.

(3) The reprint request screen will be displayed as shown in figure 1.

(4) To initiate reprint of receipt movement documents, enter the desired component document number and suffix code in accordance with appendix B-313.

(5) Depress the ENTER key to initiate processing.

(6) A successful entry will clear the screen and display a PROCESS COMPLETE message at the bottom of the screen. The receipt movement documents will begin printing or will be queued.

(7) To access another processing section, move the cursor to the section code field, enter the desired code and depress the ENTER key. To return to the menu panel depress the PROGRAM FUNCTION 1 key.

5. ERROR MESSAGE/ACTIONS

Error messages will be displayed at the bottom of the screen.

ERROR MESSAGE	CAUSE/ACTION
RECORD NOT FOUND	Probable Cause: Incorrect entry of document number or suffix code. Action: Research and reenter correct data.

PROCEDURES FOR DEPMEDS PLANNING AND PROCESSING
PART R
ASSEMBLY COMPONENT SHORTAGE REQUEST

1. PURPOSE

This procedure describes the method used to request an Assembly Component Shortage Report for major assemblies.

2. APPENDICES USED IN THIS PROCESS

a. Chapter 73.

b. Appendix B-316.

c. Appendix F-335.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

The assembly activity.

4. PROCEDURES/INSTRUCTIONS

a. General.

(1) Report requests will be processed during the daily batch run and output listings will be produced for delivery to the assembly area.

(2) This report is not available for minor assemblies.

b. CRT initialization.

(1) Refer to appendix E-277 P, part A, to initialize the program.

(2) Enter Section Code RC and depress the ENTER key.

(3) The assembly component shortage request screen will be displayed as shown in figure 1.

(4) Enter data in accordance with appendix B-316. Up to 5 requests may be entered per input screen. Reports may be requested for various parameters as follows:

(a) Enter the desired build directive number to obtain component shortages for all containers in the build directive.

(b) Enter the desired build directive number and Function/Group Code to obtain component shortages for all containers in the function/group.

(c) Enter the desired build directive number and the container number in the container number low field or series of containers defined by entries in both container low and high fields.

(d) Enter the number of assemblages, for which the component shortages are desired, in the assemblage build capability field. Leave field blank to obtain shortage information for all assemblages.

(5) Depress the ENTER key to initiate processing.

(6) A successful entry will clear the screen and display a PROCESS COMPLETE message at the bottom of the screen.

(7) Report requests are limited for each batch run as follows:

(a) Ten requests by build directive number and requester identification number.

(b) Ten requests by build directive number, requester identification number and Function/Group Code.

(c) Ten requests by build directive number, requester identification number and a range of containers defined by entries in the container number low and high fields.

(d) Forty requests by build directive number, requester identification number and individual container numbers entered in the container number low field.

(8) To access another processing section, move the cursor to the section code field, enter the desired code and depress the ENTER key. To return to the menu panel depress the PROGRAM FUNCTION 1 key.

5. ERROR MESSAGE/ACTIONS

Error messages resulting from input validation will be displayed at the bottom of the screen and the cursor positioned under the invalid field.

ERROR MESSAGE	CAUSE/ACTION
INVALID SECTION CODE	Probable Cause: Entered section code other than those on the menu panel. Action: Enter code from menu panel.
INVALID BUILD DIRECTIVE NUMBER	Probable Cause: Entry other than 8 in the first position. Action: Research and reenter correct data.

ERROR MESSAGE	CAUSE/ACTION
INVALID FUNCTION/GROUP CODE	Probable Cause: Entry other than alpha or blank. Action: Research and reenter correct data.
ENTRY REQUIRED WITH CONT HIGH	Probable Cause: Container high entered without a container low. Action: Research and enter desired container numbers high and low to define range.
CONT NUMBER HIGH NOT GREATER THAN LOW	Probable Cause: Container number low is greater than container number high. Action: Research and reenter correct data.
INVALID REQUESTER ID	Probable Cause: Entry other than alpha/numeric or blank. Action: Research and reenter correct data.

6. VIOLATION REASON CODE/ACTIONS

a. Error conditions discovered during the batch processing will result in rejection of the transaction to the F-85 Validation Reject Report. Transactions will be rejected with a Document Identifier Code of 9RC followed by the data elements in the same sequence as the appendix B-316 input format.

b. Violation Reason Codes and definitions which apply are as follows:

VRC	DEFINITION
XJ	No Matching record/overlapping request.
X5	Assemblage build capability exceeds number of assemblages on file.
R1	Exceeds report request limits.

c. VIOLATION REASON CODE XJ.

(1) REASON FOR VIOLATION/ERROR CONDITION

No matching record is available for the input parameters or record has been previously processed during the same cycle.

(2) PROCESS/RESEARCH REQUIRED

Research and reenter required data.

d. VIOLATION REASON CODE R1.

(1) REASON FOR VIOLATION/ERROR CONDITION

Number of requests exceeds the limits defined in paragraph 4b(7) above.

(2) PROCESSING/RESEARCH REQUIRED

If inputs are still required, reenter for the next processing cycle.

e. VIOLATION REASON CODE R5.

(1) REASON FOR VIOLATION/ERROR CONDITION

The number of assemblages entered in the assemblage build capability field is greater than the number of assemblages required for the build directive number.

(2) PROCESSING/RESEARCH REQUIRED

Reenter the report request leaving the assembly build capability field blank (which will use the total number of assemblages required) or enter a number which is less than the total number of assemblages required.

PROCEDURES FOR DEPMEDS PLANNING AND PROCESSING
PART S
UNIT ASSEMBLY PLANNING LIST REQUEST

1. PURPOSE

This procedure describes the method used to request the Unit Assembly Planning Data Listing.

2. APPENDICES USED IN THIS PROCESS

a. Chapter 73.

b. Appendix B-319.

c. Appendix F-324.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

The assembly activity.

4. PROCEDURES/INSTRUCTIONS

a. General

Report requests input using this procedure will be processed during the daily batch run and reports will be output daily for delivery to the assembly activity. Up to seven report requests may be entered per input screen.

b. CRT initialization.

(1) Refer to appendix E-277 P, part A, to initialize the program.

(2) Key in Section Code RD and depress the ENTER key.

(3) The unit assembly planning list request screen will be displayed as shown in figure 1.

(4) Enter data in accordance with appendix B-319. Reports may be requested for various parameters as follows:

(a) Enter the desired build directive number to obtain planning information for all components in the build directive.

(b) Enter the desired build directive number and Function/Group Code to obtain planning data for all components in the function or group entered.

(c) To obtain the planning data for components which have been previously assigned to containers, enter the desired build directive number and the container number in the container number low field or a range of containers may be defined by entering container numbers in the container number low and high fields.

(5) Depress the ENTER key to initiate processing.

(6) A successful entry will clear the screen and display a PROCESS COMPLETE message at the bottom of the screen.

(7) Report requests are limited to 20 per batch processing cycle. Requests in excess of 20 will be rejected to the F-85 Validation Reject Report.

(8) To access another processing section, move the cursor to the section code field, enter the desired code and depress the ENTER key. To return to the menu panel depress the PROGRAM FUNCTION 1 key.

5. ERROR MESSAGES/ACTIONS

Error messages resulting from input validation will be displayed on the line below the invalid input.

ERROR MESSAGE	CAUSE/ACTION
INVALID BUILD DIRECTIVE	Probable Cause: First position other than 7 or 8 or positions left blank. Action: Research and reenter correct data.
INVALID FUNCTION/ GROUP CODE	Probable Cause: Entry other than alpha or blank. Action: Research and reenter correct data.
INVALID SECTION CODE	Probable Cause: Section code other than those on the menu panel. Action: Enter code from menu panel.
ENTRY REQUIRED WITH CONT HIGH	Probable Cause: Container high entered without a container low. Action: Research and enter desired container numbers high and low to define range.
CONT NUMBER HI NOT GREATER THAN LOW	Probable Cause: Container number low is greater than container number high. Action: Research and reenter correct data.

ERROR MESSAGE	CAUSE/ACTION
INVALID REQUESTER ID	Probable Cause: Entry other than alpha/numeric or blank. Action: Research and reenter correct data.

6. VIOLATION REASON CODE/ACTIONS

a. Error conditions discovered during the batch processing will cause the transaction to be rejected to the F-85 Validation Reject Report. Transactions will be rejected with a Document Identifier Code of 9RD, followed by the data elements in the same sequence as the appendix B-319 input format.

b. Violation Reason Codes and definitions which apply are as follows:

VRC	DEFINITION
XJ	No matching record/overlapping request.
R1	Exceeds report request limits.

c. VIOLATION REASON CODE XJ.

(1) REASON FOR VIOLATION/ERROR CONDITION

No matching record is available for the input parameters or record has been previously processed for the same cycle.

(2) PROCESSING/RESEARCH REQUIRED

Research and reenter required data.

d. VIOLATION REASON CODE R1.

(1) REASON FOR VIOLATION/ERROR CONDITION

More than 20 requests submitted in processing cycle.

(2) PROCESSING/RESEARCH REQUIRED

If requests are still required, reenter for the next processing cycle.

APPENDIX E-277 P

PROCEDURES FOR DEPMEDS PLANNING AND PROCESSING
PART T
ASSEMBLAGE COMPLETION NOTIFICATION

1. PURPOSE

This procedure describes the method used to provide notice to the system that an assemblage for a major build directive has been completed and is ready for shipment. This input will initiate the sending of the receipt confirmation to the assembly manager and generate the Assembly Packing List.

2. APPENDICES USED IN THIS PROCESS

a. Chapter 73.

b. Appendix B-321.

c. Appendix F-332.

d. Appendix F-339.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

The assembly activity.

4. PROCEDURES/INSTRUCTIONS

a. General.

(1) An assembly packing list may be obtained for a minor assembly using this process, however, receipt confirmation must be accomplished using the MOWASP receiving procedure.

(2) When an assembly packing list is requested for a major assemblage, the system will verify that each component in the assemblage is complete and that each container has container weight and cube recorded. If the assemblage is complete, then the assembly packing list (F-332) will be generated and the receipt confirmation will be initiated. If the assemblage is not complete, then an incomplete assemblage report (F-339) will be generated.

(3) This procedure can also be used to force the completion of incomplete components, provided that prior approval has been obtained from the assembly manager. This capability is executed by entry of a Z in the major Assembly Reprint/Completion Indicator field. Any incomplete quantity will be automatically updated as authorized short.

(4) This procedure may also be used to obtain a reprinted packing list for a major assembly without initiating a receipt confirmation.

b. CRT initialization.

(1) Refer to appendix E-277 P, part A, to initialize the program.

(2) Enter Section Code RE and depress the ENTER key.

(3) The assembly completion notice panel will be displayed as shown in figure 1.

(4) To input completion notification for a major assembly, enter the build directive number and assemblage identification number of the completed assemblage.

(5) To initiate printing of the assembly packing list after receipt has been confirmed, enter the applicable build directive number, assemblage identification number and a Y in the major assembly Reprint/Completion Indicator field.

(6) To force completion of incomplete components at the direction of the assembly manager, enter a Z in the major Assembly Reprint/Completion Indicator.

(7) Enter the above data in accordance with appendix B-321 and depress the ENTER key.

(8) A successful entry will clear the screen and display the message PROCESS COMPLETE at the bottom of the panel.

(9) Report requests are limited to 40 per batch processing cycle.

(10) To access another processing section, move the cursor to the section code field, enter the desired code and depress the ENTER key. To return to the menu panel depress the PROGRAM FUNCTION 1 key.

5. ERROR MESSAGE/ACTIONS

Error messages resulting from input validation will be displayed at the bottom of the screen. The cursor will be positioned under the invalid field.

ERROR MESSAGE	CAUSE/ACTION
INVALID SECTION CODE	Probable Cause: Entry does not match section code on menu. Action: Enter section code from menu panel.
INVALID BUILD DIRECTIVE NUMBER	Probable Cause: First position other than 7 or 8. Action: Research and reenter correct data.
INVALID TOTAL NO OF ASSEMBLAGES	Probable Cause: Entry other than numeric. Action: Research and reenter correct data.

ERROR MESSAGE	CAUSE/ACTION
INVALID ASSEMBLAGE ID NUMBER	Probable Cause: Entry other than 01-20. Action: Research and reenter correct data.
INVALID REPRINT INDICATOR	Probable Cause: Entry other than Y, Z or blank. Action: Enter Y, Z or leave blank.

6. VIOLATION REASON CODE/ACTIONS

a. Error conditions discovered during the batch processing will cause the transaction to be rejected to the F-85 Validation Reject Report. Transactions will be rejected with a Document Identifier Code of 9RE, followed by the data elements in the same sequence as the appendix B-321 input format.

b. Violation Reason Codes and definitions which apply are as follows:

VRC	DEFINITION
XJ	No matching record/overlapping request.
R1	Exceeds report request limit.

c. VIOLATION REASON CODE XJ.

(1) REASON FOR VIOLATION/ERROR CONDITION

No record is on file for the build directive number or build directive number and assemblage identification number entered.

(2) PROCESSING/RESEARCH REQUIRED

Research and reenter correct data.

d. VIOLATION REASON CODE R1.

(1) REASON FOR VIOLATION/ERROR CONDITION

More than 40 requests were submitted in the same processing cycle.

(2) PROCESSING/RESEARCH REQUIRED

If requests are still required, reenter for the next processing cycle.

PROCEDURES FOR DEPMEDS PLANNING AND PROCESSING
PART U
BUILD DIRECTIVE DELETION NOTICE

1. PURPOSE

This procedure describes the method used to provide notification to the system that a build directive number has been completed. This input will initiate the deletion of all records associated with the build directive number.

2. APPENDICES USED IN THIS PROCESS

a. Chapter 73.

b. Appendix B-322.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

The assembly activity.

4. PROCEDURES/INSTRUCTIONS

CRT initialization.

a. Refer to appendix E-277 P, part A, to initialize the program.

b. Key in Section Code RF and depress the ENTER key.

c. The build directive completion notice input screen will be displayed as shown in figure 1.

d. To initiate the deletion of records, enter the desired build directive number and depress the ENTER key.

(1) If all records for the build directive number are not indicated as complete, the input will be rejected to the F-85 Validation Reject Report.

(2) The completion notices for build directive numbers which are not indicated as complete, can be reinput with a Y in the mandatory deletion indicator field to ensure processing.

e. A successful entry will clear the screen and display a PROCESS COMPLETE message at the bottom of the screen.

f. Completion notices are limited to 10 per batch processing cycle. Notices in excess of 10 will be rejected to the F-85 Validation Reject Report.

g. To access another processing section, move the cursor to the section code field, enter the desired code and depress the ENTER key. To return to the menu panel depress the PROGRAM FUNCTION 1 key.

5. ERROR MESSAGE/ACTIONS

Error messages resulting from input validation will be displayed at the bottom of the input screen and the cursor will be positioned under the invalid field.

ERROR MESSAGE	CAUSE/ACTION
INVALID SECTION CODE	Probable Cause: Entry does not match section code on menu. Action: Enter section code from menu panel.
INVALID BUILD DIRECTIVE NUMBER	Probable Cause: First position is other than 7 or 8. Action: Research and reenter correct data.
MANDATORY ENTRY	Probable Cause: Build directive number was not entered. Action: Enter correct data.
INVALID MANDATORY DELETION IND	Probable Cause: Entry other than Y or blank. Action: Research and enter Y if required.

6. VIOLATION REASON CODE/ACTIONS

a. Error conditions discovered during the batch processing will cause the transaction to be rejected to the F-85 Validation Reject Report. Transactions will be rejected with a Document Identifier Code of 9RF, followed by the data elements in the same sequence as the appendix B-322 input format.

b. Violation Reason Codes and definitions which apply are as follows:

VRC	DEFINITION
R4	No matching build directive number.
X1	BDN not recorded as complete.
R1	Exceeds report request limits.

c. VIOLATION REASON CODE R4.

(1) REASON FOR VIOLATION/ERROR CONDITION

BDN entered incorrectly.

(2) PROCESSING/RESEARCH REQUIRED

Research and reenter correct data.

d. VIOLATION REASON CODE X1.

(1) REASON FOR VIOLATION/ERROR CONDITION

Records do not indicate BDN has been completed.

(2) PROCESSING/RESEARCH REQUIRED

Ensure all processing actions have been completed or reenter the BDN in the next processing cycle with a Y in the mandatory deletion indicator.

e. VIOLATION REASON CODE R1.

More than ten completion notices were input in the batch processing cycle. Reenter rejected inputs in the next processing cycle.

PROCEDURES FOR DEPMEDS PLANNING AND PROCESSING
PART V
COMPONENT AVAILABILITY STATUS REQUEST

1. PURPOSE

This procedure describes the method used to request the Component Availability Status Report (appendix F-327).

2. APPENDICES USED IN THIS PROCESS

a. Chapter 73.

b. Appendix B-326.

c. Appendix F-327.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

The assembly activity.

4. PROCEDURES/INSTRUCTIONS

a. General.

(1) Report requests will be processed during the daily batch run and output reports produced for delivery to the assembly activity.

(2) This report will include availability status for all assemblages in the requested build directive number.

b. CRT initialization.

(1) Refer to appendix E-277 P, part A to initialize the program.

(2) Enter Section Code RG and depress the ENTER key.

(3) The component availability status request input screen will be displayed as shown in figure 1.

(4) Enter the build directive number for which the report is desired and depress the ENTER key.

(5) A successful entry will clear the input data and display a PROCESS COMPLETE message at the bottom of the screen.

(6) Report requests are limited to 40 per processing cycle. Requests in excess of 40 will be rejected to the F-85 Validation Reject Report.

(7) To access another processing section, move the cursor to the section code field, enter the desired code and depress the ENTER key. To return to the menu panel depress the PROGRAM FUNCTION 1 key.

5. ERROR MESSAGE/ACTIONS

Error messages resulting from input validation will be displayed at the bottom of the screen and the cursor positioned under the invalid field.

ERROR MESSAGE	CAUSE/ACTION
INVALID SECTION CODE	Probable Cause: Entry does not match section code on menu. Action: Enter section code from menu panel.
INVALID BUILD DIRECTIVE NUMBER	Probable Cause: First position is other than 8. Action: Research and reenter correct data.

6. VIOLATION REASON CODE/ACTIONS

a. Error conditions discovered during the batch processing will result in rejection of the transaction to the F-85 Reject Report. Transactions will be rejected with a Document Identifier Code 9RG, followed by the data elements in the same sequence as the appendix B-326 input format.

b. Violation Reason Codes and definitions which apply are as follows:

VRC	DEFINITION
XJ	No matching record/overlapping request.
R1	Report exceeds request limits.

c. VIOLATION REASON CODE XJ.

(1) REASON FOR VIOLATION/ERROR CONDITION

No matching record is available for the input parameters, or record has been previously processed during the same cycle.

(2) PROCESSING/RESEARCH REQUIRED

Research and reenter required data.

d. VIOLATION REASON CODE R1.

(1) REASON FOR VIOLATION/ERROR CONDITION

Number of requests exceeds 40.

(2) PROCESSING/RESEARCH REQUIRED

If inputs are still required, reenter for next processing cycle.

PROCEDURES FOR DEPMEDS PLANNING AND PROCESSING
PART W
ASSEMBLAGE CONTROL PACKING DATA REQUEST

1. PURPOSE

This procedure describes the method used to request an Assemblage Control Packing Data Report.

2. APPENDICES USED IN THIS PROCEDURE

a. Chapter 73.

b. Appendix B-327.

c. Appendix F-329.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

The assembly activity.

4. PROCEDURES/INSTRUCTIONS

a. General.

(1) Report requests will be processed during the daily batch run and output listings will be produced for delivery to the assembly activity.

(2) This report will not be produced for minor assemblies.

b. CRT initialization.

(1) Refer to appendix E-277 P, part A, to initialize program.

(2) Enter Section Code RH and depress the ENTER key.

(3) The assemblage control packing data request screen will be displayed as shown in figure 1.

(4) Enter data in accordance with appendix B-327. Reports may be requested for the following parameters:

(a) Enter the desired build directive number and ZZ in the assemblage identification number field to obtain packing information for all components in the requested build directive.

(b) Enter the desired build directive number and a specific assemblage identification number to obtain packing information for all components in the specific assemblage identification number requested.

(c) Enter the desired build directive number, assemblage identification number and Function/Group Code to obtain packing information for all components in the Function/Group Code requested.

(d) Enter the desired build directive number, assemblage identification number and container number(s) in the container number fields to obtain packing information for all components in the desired containers. Entries in the container number low and high fields will provide component availability status for all containers included in the range. Status for one or more containers, which are not in numerical sequence, must be requested by entering container number(s) in the individual container number fields.

(5) Depress the ENTER key to initiate processing.

(6) A successful entry will clear the input screen and display a PROCESS COMPLETE message at the bottom of the screen.

(7) Report requests are limited to the following maximums per batch run:

(a) Twenty entries by build directive number when ZZ is entered in the assemblage identification number field.

(b) Twenty entries by build directive number when a specific assemblage identification number is entered.

(c) Twenty entries by build directive number and function when ZZ is entered in the assemblage identification number field.

(d) Twenty entries by build directive and function when a specific assemblage identification number is entered.

(e) Ten entries by build directive number and container low, high range when ZZ is entered in the assemblage identification number field.

(f) Ten entries by build directive number and container low, high range when a specific assemblage identification number is entered.

(g) Forty individual containers may be requested when entries are by build directive number when a ZZ in the assemblage identification number field.

(h) Forty individual containers may be requested when entries are by build directive number and a specific assemblage identification number is entered.

(8) To access another processing section, move the cursor to the section code field, enter the desired code and depress the ENTER key. To return to the menu panel depress the PROGRAM FUNCTION 1 key.

5. ERROR MESSAGE/ACTIONS

Error messages resulting from input validation will be displayed at the bottom of the screen and the cursor positioned under the invalid field.

ERROR MESSAGE	CAUSE/ACTION
INVALID SECTION CODE	Probable Cause: Entry does not match section code on menu. Action: Enter section code from menu panel.
INVALID BUILD DIRECTIVE NUMBER	Probable Cause: First position is other than 8. Action: Research and reenter correct data.
INVALID ASSEMBLAGE ID NO	Probable Cause: Entry is other than ZZ or 01-20. Action: Research and reenter correct data.
INVALID FUNCTION/ GROUP CODE	Probable Cause: Entry other than alpha or blank. Action: Research and reenter correct data.
ENTRY REQUIRED WITH CONT HIGH	Probable Cause: Container high entered without a container low. Action: Research and enter desired container numbers high and low to define range.
ENTRY REQUIRED WITH CONT LOW	Probable Cause: Entry in container number low field without entry in container high. Action Code: Research and enter the desired container number in the container number high field to define the range.
CONT NUMBER HI NOT GREATER THAN LOW	Probable Cause: Container number low is not greater than container number high. Action: Research and reenter correct data.
INVALID REQUESTER ID	Probable Cause: Entry other than alpha/numeric or blank. Action: Research and reenter correct data.

6. VIOLATION REASON CODE/ACTIONS

a. Error conditions discovered during the batch processing will result in rejection of the transaction to the F-85 Validation Reject Report.

Transactions will be rejected with a Document Identifier Code of 9RH, followed by the data elements in the same sequence as the appendix B-327 input format.

b. Violation Reason Codes and definitions which apply are as follows:

VRC	DEFINITION
XJ	No matching record/overlapping request.
R1	Report exceeds request limits.

c. VIOLATION REASON CODE XJ.

(1) REASON FOR VIOLATION/ERROR CONDITION

No matching record is available for the parameters requested or record has been previously processed during the same cycle.

(2) PROCESSING/RESEARCH REQUIRED

Research and reenter required data.

d. VIOLATION REASON CODE R1.

(1) REASON FOR VIOLATION/ERROR CONDITION

Requests exceeds 40.

(2) PROCESSING/RESEARCH REQUIRED

If inputs are still required, reenter for the next processing cycle.

PACKING STATUS REQUEST

1. PURPOSE

This procedure describes the method used to request a Packing Status Report.

2. APPENDICES USED IN THIS PROCESS

a. Chapter 73.

b. Appendix B-328.

c. Appendix F-330.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

The assembly activity.

4. PROCEDURES/INSTRUCTIONS

a. General.

(1) Report requests will be processed during the daily batch run and output listings will be produced for delivery to the assembly activity.

(2) This report will not be produced for minor assemblies.

b. CRT initialization.

(1) Refer to appendix E-277 P, part A, to initialize program.

(2) Enter Section Code RI and depress the ENTER key.

(3) The packing status request screen will be displayed as shown in figure 1.

(4) Enter data in accordance with appendix B-328. Reports may be requested for the following parameters.

(a) Enter the desired build directive number and ZZ in the assemblage identification field to obtain packing status for all components in the requested build directive.

(b) Enter the desired build directive number and a specific assemblage identification number to obtain packing status for all components in the requested assemblage identification number.

(c) Enter the desired build directive number, assemblage identification number and Function/Group Code to obtain packing status for the requested Function/Group Code.

(d) Enter the desired build directive number, assemblage identification number and container number(s) to obtain packing status for all components in the desired containers. Entries in the container number low and high fields will provide component availability status for all containers in the range. Status for one or more containers, which are not in numerical sequence, must be requested by entering the container number(s) in the individual container number fields.

(5) Depress the ENTER key to initiate processing.

(6) A successful entry will clear the input screen and display a PROCESS COMPLETE message at the bottom of the screen.

(7) Report requests are limited to 40 per processing cycle. Requests in excess of 40 will be rejected to the F-85 Validation Reject Report.

(8) To access another processing section, move the cursor to the section code field, enter the desired code and depress the ENTER key. To return to the menu panel depress the PROGRAM FUNCTION 1 key.

5. ERROR MESSAGE/ACTIONS

Error messages resulting from input validation will be displayed at the bottom of the screen and the cursor positioned under the invalid field.

ERROR MESSAGE	CAUSE/ACTION
INVALID SECTION CODE	Probable Cause: Entry does not match section code on menu. Action: Enter section code from menu panel.
INVALID BUILD DIRECTIVE NUMBER	Probable Cause: First position is other than 8. Action: Research and reenter correct data.
INVALID ASSEMBLAGE ID NUMBER	Probable Cause: Entry is other than ZZ or 01-20. Action: Research and reenter correct data.
INVALID FUNCTION/GROUP CODE	Probable Cause: Entry other than alpha or blank. Action: Research and reenter correct data.

ERROR MESSAGE	CAUSE/ACTION
ENTRY REQUIRED WITH CONT HIGH	Probable Cause: Container high entered without a container low. Action: Research and enter desired container numbers high and low to define range.
ENTRY REQUIRED WITH CONT LOW	Probable Cause: Entry in container number low field without entry in container high. Action: Research and enter the desired container numbers in the container number high and low fields to define the range.
CONTAINER NUMBER HI NOT GREATER THAN LOW	Probable Cause: Container number low is greater than container number high. Action: Research and reenter correct data.
INVALID REQUESTER ID	Probable Cause: Entry other than alpha/numeric or blank. Action: Research and reenter correct data.

6. VIOLATION REASON CODE/ACTIONS

a. Error conditions discovered during the batch processing will result in rejection of the transaction to the F-85 Validation Reject Report. Transactions will be rejected with a Document Identifier Code of 9RI, followed by the data elements in the same sequence as the appendix B-328 input format.

b. Violation Reason Codes and definitions which apply are as follows:

VRC	DEFINITIONS
XJ	No matching record/overlapping request.
R1	Report exceeds request limits.

c. VIOLATION REASON CODE XJ.

(1) REASON FOR VIOLATION/ERROR CONDITION

No matching record is available for the parameters requested or record has been previously processed during the same cycle.

(2) PROCESSING/RESEARCH REQUIRED

Research and reenter required data.

d. VIOLATION REASON CODE R1.

(1) REASON FOR VIOLATION/ERROR

Condition number of report requests exceeds 40.

(2) PROCESSING/RESEARCH REQUIRED

If inputs are still required, reenter for the next processing cycle.

APPENDIX F-1

PREPOSITIONED MATERIEL RECEIPT (PMR) FILE INQUIRY RESPONSE

1. PURPOSE

To provide information on each due-in, to assist in reply to nonmechanical inquiries and in preparation of local management studies.

2. ORIGIN

Produced as a result of processing an inquiry DIC ZBO as depicted in appendix D-46.

3. FREQUENCY

Upon submission of an inquiry card, DIC ZBO (appendix B-61).

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-1)

(2) Report Title

(3) Functional Routing Code

(4) Section Number

(5) Date - Month, day, year, and Julian date

(6) Page Number

b. First Header Line:

(1) TYPE REQ - Type Request (Action Code contained in Request)

(a) FM - For a specific PIIN or Document Number

(b) FN - For a specific NSN as related to a specific PIIN or Document Number

(c) FP - For a specific NSN

(2) DIC - Document Identifier Code of Document in the file

(3) RIC - Routing Identifier Code of the DSC furnishing the PMRC

(4) NAT STOCK NUMBER - National Stock Number

(5) PIIN or DOC NR - PIIN or Document Number

(6) SUPP PIIN - Supplementary PIIN

(7) CLIN or SUPADD - Line Item Number or Supplementary Address

(8) EDD - Date Materiel Due

(9) CND - Condition Code

(10) MGT - Management Code

(11) QUANTITY - Quantity remaining

(12) UI - Unit of Issue

(13) OP - Ownership/Purpose Code

(14) DIS - Distribution Code

(15) PRJ - Project Code

(16) SIG - Signal Code

(17) FND - Fund Code

(18) L/I FLAG - Flag indicating at least one suffixed MRC processed against this record.

(19) DCM CYC - DICOMSS Cycle Code

(20) NUM INQ - Number of Inquiries (Number of receipts in process)

5. DATA ORGANIZATION

a. Report header data on 1st line, detail column heading on 2nd line.

b. Sequence

(1) FRC - Major

(2) Action Code

c. Page break on FRC

6. NUMBER OF COPIES AND DISTRIBUTION

Two copies. Original in inquiry initiator as indicated by FRC, copy to Receiving Division, Receipt Documentation Branch.

7. PROCEDURE

a. Prepare inquiry as detailed in appendix E-061 P to obtain report.

b. Used for purpose which necessitated the inquiry, then destroyed.

APPENDIX F-2

MRO INVENTORY TRANSACTION (DD FORM 1348-1)

1. PURPOSE

To provide a control document to Directorate of Storage and Transportation (DS/T) for all shipments generated by the computer when an inventory has been scheduled.

2. ORIGIN

This report is produced during the processing depicted by appendix D-98.

3. FREQUENCY

Cyclical, continuing through to the close of the inventory.

4. DATA ELEMENTS

a. ZUE

b. STK NUMBER

c. T/P - Type Pack Code

d. UI - Unit of Issue

e. COND - Condition

f. QTY - Quantity

g. DOC NUMBER

h. SU NBR - Shipment Unit Number

i. LINE - Shipment Unit Line Item Number

j. MNGT - Management Code

k. DATE -

l. SEC - Computer Generated Control Number

m. PRIME LOC - Prime Location

n. ICOF - Inventory Cutoff Date

5. DATA ORGANIZATION

a. Data is printed on a blank DD Form 1348-1 starting in block AA.

b. DD Form 1348-1 is sequenced directly behind the applicable MRO.

c. In the right hand margin the print control number will be followed by an N to indicate a ZUE transaction.

d. MRO Inventory Document Control File update data is printed in the label area.

6. NUMBER OF COPIES AND DISTRIBUTION

One set to DS/T, Warehousing Division

7. PROCEDURE FOR REVIEW AND PROCESSING

This DD Form 1348-1 will be matched with the preceding MRO and forwarded to the warehouse personnel for expedite picking of items to be inventoried and as a control document and processed as depicted by appendix E-064 P, and E-190 P and will be utilized as a source document for updating of the IDC File, through the 2265 teleprocessing unit.

APPENDIX F-3

SHIPMENT STATUS MESSAGE LISTING

1. PURPOSE

To provide source document for preparation of MILSTRIP Shipment Status messages. Listing is not prepared under normal processing conditions. The mechanical system will output the status message to the DAAS.

2. FREQUENCY

Daily

3. SEQUENCE

Activity Address Code

4. DATA ELEMENTS

a. Activity Address Code of recipient of status

b. Operating signal

c. Communications Precedence Code, Date Time Group, month, and year

d. Activity originating the message

e. TAC Type 1 address of recipient of status

5. DISTRIBUTION AND RETENTION

Two copies. Original to Communications Division, Directorate of Installation Services, copy to Shipping Division, Directorate of Storage and Transportation. Retain for 45 days then destroy.

6. DATA ORGANIZATION

See format. Page break by TAC Type 1 address.

7. PROCEDURES FOR REVIEW AND PROCESSING

a. Normal processing will be for the mechanical system to output the status message to the DAAS. No appendix F-3 will be received.

b. Under emergency processing conditions:

(1) Communications Division personnel will receive and process for wire transmission.

(2) Shipping Division personnel will review for errors and/or omissions. Notify Communication Division personnel when such are found.

8. REFERENCES

a. Appendix D-28.

b. Appendix D-30.

APPENDIX F-4

SPECIAL PROJECT AND FMS CASE CONTROL LISTING

1. PURPOSE

a. Provides Directorate of Storage and Transportation with media to maintain in-process controls, identify, and monitor status of open Foreign Military Sales MROs, and to respond to status reporting requirements and inquiries pertaining to DLA designated special projects.

b. The F-4 will be prepared in two parts.

(1) Part 1 lists all FMS Case Numbers in Shipment Unit Number sequence.

(2) Part 2 lists special projects in Shipment Unit sequence within Project Name.

2. ORIGIN

Produced as a result of MRO processing, shipment unit configuration, and documentation as depicted in appendix D-98. Part 1 will be prepared on the presence of a FMS Case Number in pos. 48-50 of FMS MROs. Part 2 will be prepared based on the presence of a Control List Indicator in the Special Project Table (Control and Constants Table 02).

3. FREQUENCY

Daily as shipping documentation is prepared.

4. DATA ELEMENTS: (Parts 1 and 2)

a. Report Header Line which includes:

(1) Report Number (F-4, part 1 or 2)

(2) Title

(3) Function Routing Code

(4) Section

(5) Date: Month, day, year (08.15.67) and Julian date

(6) Page Number

b. Data Elements:

(1) SU NO - Shipment Unit Number

(2) SU LI - Shipment Unit Line Item Number

(3) PROJ - Project Code or FMS Case Number

(4) PROJECT NAME - If available in the Special Project Table or FMS as applicable.

(5) DOC NUMBER - Document Number

(6) SFX - Suffix Code

(7) STOCK NUMBER

(8) QTY ORD - Quantity Ordered shipped on the MRO.

(9) SHIP TO - Activity Address Code of consignee of the materiel. When the Special Project Table indicates special addresses, this field will contain the Service Code plus the Project Code, right-justified. This is the AAC value for address selection.

(10) PDT - Planned Date to Transportation

(11) PRIME LOC - First storage location from which stock is to be picked for shipment.

(12) MD - Computer recommended mode of shipment.

(13) SUPP ADD - Supplementary Address

(14) SIG - Signal Code

(15) IPG - Issue Priority Group

5. DATA ORGANIZATION

a. Report Header Data on 1st line; Detail data (paragraph 4b) on second and subsequent lines.

(1) Part 1 sort lines in Shipment Unit Number (major) and Shipment Unit Line Item Number (minor) sequence.

(2) Part 2 list by special project and sequence with Shipment Unit Number (major) and Shipment Unit Line Item Number (minor) within each special project.

b. Page break at end of page

c. Double spaced.

6. DISTRIBUTION AND RETENTION

Two copies to preassigned Functional Routing Code of special processing and control personnel of the Shipping Division, Directorate of Storage and Transportation. Retain the listing 90 days after completion of all line item entries then destroy.

7. PROCEDURES FOR REVIEW AND PROCESSING

Shipping Documentation Branch will:

a. Special Projects documents

(1) Notification of special projects requiring detailed control, special reporting, or special instructions printed on project MROs will arrive from DLA via TWX, letter, or DoD 4140.17-M. Upon receipt, a request for an F-4 printout will be initiated. (See appendices E-138 P, paragraph 4, B-129, paragraphs 7 and 8, and B-66, part B.)

(2) MROs are processed routinely by Storage strictly in accordance with the assigned Priority Designator as prescribed in the UMMIPS and inferred/requested preferential treatment to the contrary will be disregarded. Upon processing completion, Number 1 copy of MRO is sent to Shipping Documentation Branch. Documents are matched against the F-4 listing and listing is annotated with information according to instructions. Special reporting instructions will be followed as required.

(3) When completed MROs are not received by Shipping Documentation Branch, inquire MRO history to ascertain if document has cleared. Annotate the corresponding F-4 entry accordingly.

b. FMS documents

(1) Sequence F-4 listing by shipment unit number. File by document date.

(2) Record shipped date of MRO on corresponding entry of listing. When MRO data differs from listing data (i.e., mode of shipment, and so on), annotate "pack and hold" or "request shipping instructions" (MROs requiring NOAs), annotate listing accordingly.

(3) Review listing weekly to determine if MROs have cleared. When an MRO has not cleared and is not in NOA status, inquire history to ascertain if shipment has cleared and documents have not been received. Annotate listing with inquiry results.

(4) When inquiry indicates shipment has been completed and no documentation has been received by Shipping Documentation Branch, prepare duplicate documents for mailing to freight forwarder.

(5) Use annotated F-4 listing to assist in resolving MROs late in depot processing.

APPENDIX F-5

AUTOMATIC DP ACTIONS OF MROs IN SU FILE 355 DAYS

1. PURPOSE

This record provides information of line items removed from the Shipment Unit File after they have been recorded for 355 days. This action is necessary to prevent duplicate of Shipment Unit numbers in the system.

2. ORIGIN

This listing is produced during the daily review of the Shipment Unit File as depicted in appendix D-50.

3. FREQUENCY

Daily, if records are removed from Shipment Unit File.

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number - F-5

(2) Title

(3) FRC - Functional Routing Code

(4) SECTION - Section Number

(5) DATE - Month, day, year, and Julian date

(6) PAGE - Page number

b. Data Elements - first line:

(1) D/I - Document Identifier Code

(2) R/I TO - Routing Identifier Code To

(3) M/S - Media and Status Code

(4) NSN - National Stock Number

(5) SBM TME - Submission Time

(6) UI - Unit of Issue

(7) QTY ORDRD - Quantity ordered

(8) DOCUMENT NO. - Document number

(9) SFX - Suffix

(10) SUPPL ADDR - Supplementary Address

(11) SIG - Signal Code

(12) FND - Fund Code

(13) DIS - Distribution Code

(14) PRJ - Project Code

(15) PRI - Priority Code

(16) RDD - Required Delivery Date

(17) ADV - Advice Code

(18) R/I FRM - Routing Identifier Code From

(19) MGMT DATA - Management Data

(a) O/P - Ownership or Purpose Code

(b) C - Condition Code

(c) M - Management Code

(20) NR - New Receipt indicator.

(21) UNIT PRICE

(22) STATUS - Julian date when placed in DP status

c. Data Elements - third line:

(1) SU NO - Shipment Unit Number

(2) LINE ITEM - Shipment Unit Line Item

(3) DATE RECVD - Date MRO was received

(4) MDT - Mandatory Date to Transportation

(5) PDT - Planned Date to Transportation

(6) WEIGHT

(7) CUBE

(8) NBR PCS - Number of pieces for line

(9) QUANTITIES:

(a) OPEN - Quantity open

(b) OFFRD - Quantity offered to TC

(c) SHIPD - Quantity shipped

(d) DENIED - Quantity denied

(e) CANC - Quantity canceled

(10) TCN - Transportation Control Number

(11) TCN PTL - TCN Partial Indicator

(12) POE - Port of Embarkation Code

(13) HOLD CODE - Transportation Hold Code

(14) DTT - Date offered to transportation

(15) ACTN CODE - Should always be DP

(16) HIST SUPPL

5. DATA ORGANIZATION

a. Report header on first line, detail column headings on lines two and four. Data from file is entered on lines three and five.

b. Sequence by document number major and routing identifier from minor.

c. Page break on each shipment unit line.

6. NUMBER OF COPIES AND DISTRIBUTION

One copy to DS/T, Shipping Documentation Branch.

7. PROCEDURES

This listing is used by DS/T to investigate the reason for a line item to be in the Shipment Unit File for 355 days. Refer to appendix F-107 for detailed procedures.

APPENDIX F-6

LOCATOR RECONCILIATION SUMMARY
(FOR OTHER THAN DLA ACTIVITIES)

1. PURPOSE

To provide the Directorate of Storage and Transportation with the results of reconciliation between ICPs National Inventory Records and Storage Locator Records. This is a summary of CKB, CKC, CKD and DJA documents received from ICPs plus the number of CKA documents forwarded to the ICPs.

2. ORIGIN

Produced as a result of processing as depicted in appendix D-101

3. FREQUENCY

a. Upon input of Location Reconciliation Request, Inquiry DIC ZBY

b. Upon receipt of DIC ZBZ at completion of a location reconciliation

4. DATA ELEMENTS

a. Report Header line which includes:

(1) Report Number (F-6)

(2) Report Title

(3) FRC - Functional Routing Code

(4) Section Number

(5) Date - Month, day, year and Julian date

(6) Page Number

b. Data Elements

(1) MGR - Commodity Manager Code (non-DLA)

(2) FSC - Federal Supply Class

(3) CKA SUBMITTED

(4) CKB EXCEPT

(5) CKC EXCEPT

(6) CKD EXCEPT

(7) DJA MGMT A - DJAs with Management Code A

(8) DJA MGMT B - DJAs with Management Code B

5. DATA ORGANIZATION

a. See format F-6-3

b. Sequence by FSC

6. NUMBER OF COPIES

Two

7. DISTRIBUTION

Original to Physical Inventory Branch, Operations Control Office, copy to Management Support Office, Directorate of Storage and Transportation.

8. PROCEDURE FOR REVIEW AND PROCESSING

a. A Location Reconciliation Completion Card, DIC ZBZ, appendix B-83, is prepared by the Physical Inventory Branch to close the Location Reconciliation Card, DIC CKA, suspense file and create the Location Reconciliation Summary (appendix F-6). The Location Reconciliation Completion Card, DIC ZBZ, is submitted to the Data Processing Element upon completion of a location reconciliation.

b. One copy of Location Reconciliation Summary is received by Physical Inventory Branch and will be reviewed to determine the results of each reconciliation.

c. The summary will also be used to followup on the CKB, CKC and CKD cards received to assure that action has been taken to correct locator file and remark stocks as necessary.

d. A Location Reconciliation Inquiry Card, DIC ZBY, appendix B-83, is prepared by the Physical Inventory Branch to obtain a printout (appendix F-6) of the number of CKAs forwarded to the DSC and a summary of DJAs (with Mgt Code A and B) and CKB, CKC, CKDs received from the DSC. As information is required, card will be submitted to the Data Processing Element.

e. One copy is received by the Management Support Office and is reviewed to identify data and/or quality controls needed.

9. DISPOSITION OF REPORT

Retain for thirty days, then destroy.

P006 V-1 LOCATOR RECONCILIATION SUMMARY 01.24.68.024 PG. 1

APPENDIX F-7

DISCREPANCY EVALUATION LISTING

1. PURPOSE

To provide a listing for research when the Inventory Adjustment Program reveals a variance in count and DSC strike balances.

2. ORIGIN

Produced, when the following conditions exist, after all count cards for an NSN have been processed to the Inventory Adjustment Program as shown in appendix D-88.

a. A discrepancy exists between the DSC adjusted strike balance and the adjusted count quantity, or

b. A variance exists between the DSC adjusted strike balance and the depot adjusted strike balance, or

c. The DSC strike balance was missing when the Inventory Adjustment Program was run a second time.

3. FREQUENCY

Daily when the Inventory Adjustment Program is run.

4. DATA ELEMENTS

a. Report header which includes:

(1) Report Number

(2) Report Title

(3) Date: Month, day, year, and Julian date

(4) Page Number

b. First heading line data:

(1) NSN - National Stock Number

(2) COND - Condition Code

(3) TYPK - Type Pack Code (subsistence only)

(4) CUTOFF DATE - Cutoff Date

(5) MGR - Commodity Manager

best copy available

(6) INV CAT - Inventory Category Code

(7) MGMT - Management Code

(8) TYPE INV - Type of Inventory Code

(9) LOT NUMBER - Sample Lot Control Number

(10) UI - Unit of Issue

(11) UNIT PRICE - Unit Price

(12) PREV. CUTOFF - Previous Inventory Cutoff Date

c. Second heading line data:

(1) LOCATION - Warehouse Location

(2) SERIAL NO. - Count Card Serial Number

(3) 1ST-COUNT - First count information

(4) 2ND-COUNT - Second count information

(5) 3RD-COUNT - Third count information

(6) CTR. BALANCE - DSC strike balance

(7) ADJ-BALANCE - Adjusted DSC strike balance

(8) QTY-VARIANCE - Variance between the adjusted DSC strike balance and the depot adjusted count.

(9) DOLLAR-VARIANCE - Dollar variance, Unit Price multiplied by subparagraph c(8) above.

d. Third heading line data:

(1) Title: TRANSACTION LINES FROM INVENTORY DOCUMENT CONTROL FILE

(2) DIC - Document Identifier Code

NOTE: When DIC ZUF appears, the entry represents a receipt in-process being controlled on the IDC File.

(3) DOC/PIIN - Document Number or Procurement Instrument Identification Number

(4) SFX - Document Number Suffix

(5) PRI - MRO Priority Code

(6) RCVD - Date the MRO was received at the depot. Date of receipt at Receiving.

(7) TO INV - Date transaction was processed into the IDC File.

(8) RLSD/RCC - Date MRO released from bank. Date receipt completed processing at Receiving.

(9) PDT/STO - MRO PDT date. Date receipt was stored.

(10) MDT/MRC - MRO MDT date. Date receipt was reported to the DSC.

(11) SU/TP NUMBER - MRO Shipment Unit Number. Receipt Teleprocessing Control Number.

(12) SU LINE - MRO Shipment Unit Line Number

(13) WHSE LOCATION - MRO Prime Location. Location or area receipt was stored.

(14) RCVD/ORD - Quantity received/Quantity ordered

(15) SHP - MRO quantity shipped

(16) CAN - MRO quantity canceled

(17) DEN - MRO quantity denied

(18) O/U - MRO quantity either overshipped or undershipped.

NOTE: MRO quantities shipped, canceled, denied, overshipped, or undershipped must equal quantity ordered.

(19) MC - Management Code (appendix A-13)

(20) SC - IDC Status Code (appendix A-85)

(21) TR - Type Record Code (appendix A-87)

(22) AC - Adjustment Code (appendix A-88)

(a) STRIKE - Adjustments to the DSC strike balance as received at the depot.

(b) COUNT - Adjustments to the physical count.

(23) MULTI OWNED: MGR - Adjustment to physical count for materiel owned by another manager.

(24) ADJUSTMENT TOTALS - Net totals of adjustments to the DSC strike balance or the depot physical count.

NOTE 1: Adjustments which are subtracted from the quantities will be indicated by a "-" sign. Quantities added will not be indicated by a sign.

NOTE 2: An asterisk will appear at the far right of the transaction if the transaction has not been updated with a status code.

e. Fourth heading line data:

(1) Title: DELETED LOCATIONS

(2) DATE - Date location deleted

(3) LOCATION - Warehouse location

(4) CODE - Delete Code

ZUN - delete
ZBA - delete
9BA - (Internal) delete

5. ORGANIZATION

Report header on first line and detail data on subsequent lines arranged in columns under data element headings identified in paragraph 4.

6. SEQUENCE

Major sequence by Commodity Manager; minor sequence by NSN. Page break on change of NSN.

7. DISTRIBUTION

Two copies to Inventory Office, DS/T.

8. PROCEDURES

a. The degree and depth of research required will normally be related to the difference indicated after mechanical adjustment action has been accomplished. Recounts will not be made until a cursory examination has been made of the documents controlled during the inventory and an evaluation of the deleted locations is made. If the examination and evaluation reveal that the discrepant quantity is contained on a document, action will be immediately initiated to process correction to the applicable documents and/or consider the quantity in the physical count in accordance with appendix E-190 P or E-186 P.

b. All reports received as a result of first, second or third counts with a quantity reflected under the "Balance to DSC" column are discrepant and require subsequent research to resolve the discrepancy. Reports containing shortages will be reviewed before those containing overages. Results of research will be documented and filed with report for use in responding to the DSC in the event a request for information on the shortages or overage is received.

c. History data will be provided from last inventory if still recorded on retrievable record; otherwise, HISTORY part of record will be blank and research will require use of microfilm data from last inventory.

APPENDIX F-8

LOCATOR INVENTORY ANALYSIS REPORT

1. PURPOSE

To provide D/D with a management tool for scheduling inventories, showing number of NSNs, and locations for various ICCs. A part 2 report for ICC U is provided to accommodate quarterly inventory requirements.

2. AUTHORITY: Chapter 7

3. FREQUENCY: As requested

4. DATA ELEMENTS

a. Report Titles:

(1) F-8 Part 1, Locator Inventory Analysis

(2) F-8 Part 2, Locator Inventory Analysis (ICC U only)

b. NSNs without Manager Code

c. NSNs without ICC

d. Manager

e. Within each FSC, the beginning and ending NIIN will be shown.

f. Number of H coded NSNs

g. Number of H coded Locations

h. Number of U coded NSNs

i. Number of U coded Locations

j. Number of T coded NSNs

k. Number of T coded Locations

l. Number of E coded NSNs

m. Number of E coded Locations

n. Number of L coded NSNs

o. Number of L coded Locations

p. Number of 0 coded NSNs

q. Number of 0 coded Locations

r. Number of non-DLA NSNs

s. Number of Locations of non-DLA NSNs

t. Total NSNs and Locations within each FSC by ICC

u. Total number of NSNs for Manager

v. Total number of Locations for Manager

5. NUMBER OF COPIES: Two

6. DISTRIBUTION

Original to Inventory Office, copy to MOWASP Data Control Branch.

7. DATA ORGANIZATION

a. See format

b. NSNs with missing Manager Codes or ICCs will be shown first.

8. PROCEDURE FOR REVIEW AND PROCESSING

This report will be utilized by D/D for preparing annual and quarterly schedules of inventories and determination of workload, and to update Locator File with missing Manager Codes or ICCs. See appendix E-133 P for related procedures.

APPENDIX F-9

MANAGEMENT INFORMATION SYSTEM (MIS) FEEDER DATA

1. PURPOSE

To provide statistical data required for depot management review.

2. FREQUENCY

Daily and cumulative to date. Totals (except for Data Element 0300) will be cleared only at the end of each month after printing of the F-9 Report. The monthend total for Data Element 0300 will be retained and serve as the initial total for the next month.

3. DATA ELEMENTS

a. Report Header Line:

(1) Report Number and Title

(2) Product Control Number

(3) Section Number

(4) Report Date

(5) Page Number

b. Data Elements - Part 1:

(1) Element Number

(2) Element Description

(3) Commodity Manager

(4) DAILY - Element Count

(a) IPG I, II and III Issue Priority Group

(b) TOTAL - Daily Total

(5) CUM - Cumulative Daily

(6) DAILY ADJ - Daily Adjustment

(7) CUM ADJ - Cumulative Adjustment

(8) Totals

(a) TOT NON DLA - Total non-DLA

(b) TOT DLA - Total DLA

(c) TOT ALL - Grand Total

c. Data Elements - Part 2:

(1) ELEMENT NUMBER

(2) DESCRIPTION - Element Description

(3) DAILY - Daily Total

(4) CUMULATIVE - Cumulative Total

(5) DAILY ADJ. - Daily Adjustment

(6) CUMULATIVE ADJ. - Cumulative Adjustment

4. DATA ORGANIZATION

a. The report is prepared in two parts.

(1) Part 1 contains RCS DLA(M)232(O)MIN Data.

(2) Part 2 contains RCS DLA(M)26(C)MIN Data.

b. The report contains those data elements which can be automatically accumulated by the program and displayed in accordance with the formats on the following pages.

5. SEQUENCE

All parts are structured with data element numbers listed in each part in ascending order. Sequence of all elements can be seen in appendix A-83.

6. NUMBER OF COPIES AND DISTRIBUTION

Six copies: Original and one copy to Comptroller, two copies to MSO, and two copies to Operation Control Office, DS/T.

7. PROCEDURE FOR REVIEW AND PROCESSING

Used by DS/T to evaluate local depot operations and to facilitate management analysis and decisions. Adjustments or corrections can be made by entry of ZUM cards (appendix B-135). A listing of B-135 entries affecting this report is contained in appendix F-99.

8. REFERENCES

a. Appendix A-83

b. Appendix B-135

c. Appendix D-80

d. Appendix D-102

APPENDIX F-10

CHANGED RECEIPT DATE LISTING

1. PURPOSE

To provide a listing documenting those specific Suspended Receipt Records for which a date of receipt change has been processed.

2. ORIGIN

Records from the Suspended Receipt File (SRF) which have had a date of receipt change action input via Type R inquiry or DIC ZZR (Action Code HX).

3. FREQUENCY

As required

4. DATA ELEMENTS

a. Report Header Line:

(1) Report Number

(2) Report Title

(3) Section

(4) Date

(5) Page Number

b. Data Element Identifiers:

(1) TP Number - The Teleprocessing Control Number assigned to the suspended record.

(2) NSN - National Stock Number.

(3) PIIN or DOCUMENT NO. - The Procurement Instrument Identification Number or Document Number of the changed receipt record.

(4) SUPP PIIN - A supplementary PIIN associated with the suspended record.

(5) CLIN-SUP ADD - The Contract Line Item Number of the recorded PIIN or the Supplementary Address of the document number.

(6) CD - Condition Code of the receipt record.

(7) DATE INQUIRED - The date on which the receipt was first inquired (Type A or DIC ZB6) and recorded on the SRF.

(8) FROM DATE RECEIVED - The original date of receipt before the change as input in the Type A or DIC ZB6 inquiry action.

(9) TO DATE RECEIVED - The date now recorded on the SRF as the correct day of receipt.

5. DATA ORGANIZATION

The report will be produced only when date of receipt changes are processed. Corrected SRF records will be sequenced by TP number within original date of receipt, oldest date first.

6. DISTRIBUTION

One copy of the report will be delivered to the Receipt Documentation Branch, Receiving Division, DS/T.

7. PROCEDURE

Review to ensure that the date of receipt change is correct and that this change agrees with current receipt documentation.

UKF010

APPENDIX F-11

SUMMARY ANALYSIS OF INVENTORY COUNT CARDS BATCH SYSTEM

1. PURPOSE

To provide a listing allowing daily monitoring of forthcoming workload; permitting advance scheduling to concentrate counter resources on highest priority actions thereby reducing inventory completion time.

2. ORIGIN

Scan of Locator File for records with cutoff date matching current date as depicted in appendix D-12.

3. FREQUENCY

As required on release of ZKA Count Cards.

4. DATA ELEMENT

a. Report header consisting of:

(1) Report Number

(2) Report Title

(3) Date

(4) Page Number

b. Data Elements:

(1) Part 1.

(a) Title - DETAIL ANALYSIS OF INVENTORY COUNT CARD BATCH SYSTEM.

(b) Data Elements - Image of physical inventory count card ZKA (appendix B-25).

(2) Part 2 (format if batching is requested).

(a) Title - SUMMARY ANALYSIS OF INVENTORY COUNT CARD BATCH SYSTEM.

(b) Data Elements:

1. BATCH - Number designation

2. Batch identification titles

a. NO LOC COUNT CARDS

b. OTHER THAN CONDITION A, B, C, F COUNT CARDS

c. COUNT CARDS OTHER THAN MATRIX X WITH SUSPENDED MRO(S)

d. ALL OTHER COUNTS LESS MATRIX X

e. MECHANIZED AREA MATRIX X

f. ALL SECOND/THIRD COUNT CARDS

3. MATRIX - Identification

4. TOTAL:

a. Cards per batch number

b. Cards excluding mechanized area Matrix X

c. Second and third counts

5. TOTAL COUNT CARDS

5. ORGANIZATION

a. Part 1:

Image of physical inventory count card ZKA (appendix B-25), when generated on COB of inventory cutoff day.

b. Part 2:

(1) Total count cards presented for each batch with breakout totals for count cards produced by matrix/table.

(2) Total for all count cards all batches.

6. DISTRIBUTION

Two copies to Inventory Control Office.

7. PROCEDURE

Prepared for use in preplanning count efforts to reduce completion time of inventories and to monitor/control/manage adverse situations occurring with a given count card output. See appendix E-013 P for related procedure.

```

APPENDIX F-12

TRANSACTIONS REJECTED TO DSC

1. PURPOSE

To provide a printout of all transactions rejected to the Defense Supply Centers.

2. ORIGIN

Produced as a result of processing as depicted in appendix D-57.

3. FREQUENCY

As required.

4. FORMAT

a. This listing is included in the Reports Format File (RFF) as follows:

(1) Report Header Line which includes:

(a) Report Number (F-012)

(b) Title (Transactions Rejected to DSC)

(c) Functional Routing Code

(d) Section Number

(e) Date: Month, day, year, and Julian date

(f) Page Number

(2) Data Elements:

80 position printout of rejected transaction

b. Data organization:

(1) Report Header Line

(2) 80-position image. Asterisks - an asterisk will appear under the field position of the input image to indicate reason for rejection.

(3) Double space

5. DISTRIBUTION AND RETENTION

Two copies to Shipping Documentation Branch, Shipping Division, Directorate of Storage and Transportation. Retained 30 days and then destroyed.

6. PROCEDURE

This listing will be used:

a. As a basis for answering inquiries from a DSC concerning a transaction rejected from processing by the MOWASP System.

b. As a source of data on A55/A5E, A5J with Z in pos. 72, and C55/C5E Materiel Release Orders rejected to the DSC by the MOWASP System.

APPENDIX F-13

KEY ESSENTIAL ITEM/DAMAGE ASSESSMENT LISTING

1. PURPOSE

To provide the Logistics Readiness Center (LRC) with an item listing by location to be used in reporting damage assessment during emergencies.

2. AUTHORITY: Chapter 19

3. FREQUENCY

As required upon submission of input cards, DIC CZW.

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-13)

(2) Report Title

(3) FRC - Functional Routing Code

(4) Section Number

(5) Date: Month, day, year and Julian date

b. Data Elements (first heading line):

(1) NSN - National Stock Number

(2) UI - Unit of Issue

(3) DESCRIPTION - Item description

(4) QUANTITY - Quantity as recorded in DSC Cutoff Date of the Key Essential Item Report.

(5) RIC OF DSC - Manager of the item

(6) S-R CODE - Survival - Recovery Item Code

(a) Code A - indicates an essential item which is also a post attack, survival and recovery item.

(b) Otherwise, leave blank.

(7) Substitute Code - Essentiality

(a) Code A for automatic substitute

(b) Code B for practical substitute

(c) Code C for extreme emergency substitute

(d) Leave blank for standard item

(8) PREFERRED NSN

c. Data Element (second heading line):

WHSE LOCATION - Warehouse Location

5. NUMBER OF COPIES AND DISTRIBUTION

Four copies to LRC, Office of Planning and Management.

6. DATA ORGANIZATION

a. Report header data on first line, detail column heading on second and third lines.

b. Sequence by NSN (Major)

c. Location sequence within NSN (Minor)

7. PROCEDURES FOR REVIEW AND PROCESSING

a. The stored cards will be listed and furnished to the LRC as provided by the field activity WESP.

b. The listing will be used by LRC damage assessment personnel as prescribed in DLA WESP, Annex N, Section II.

APPENDIX F-14

MOWASP TRANSACTIONS RECEIVED VIA AUTODIN

1. PURPOSE

To provide management with a consolidated report of the number of external transactions which are received by the depot via AUTODIN during an established reporting period.

2. FREQUENCY

Daily and cumulative to date. The option to clear cumulative totals over an established reporting period belongs to DS/T. However, it is recommended that cumulative totals be cleared at the end of each monthly reporting period after printing of the F-14 report.

3. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number

(2) Report Title

(3) Section

(4) Date: Month, day, year, and Julian date

(5) Page Number

b. Captions of Data Elements:

(1) ELEMENT NUMBER - MIS Element Number

(2) DIC AND DESCRIPTION - Document Identifier Code and title of document received.

(3) DAILY - Number of transactions received

(4) CUMULATIVE - Number of transactions received

4. DATA ORGANIZATION

The structure of this report is similar to Reporting Category VI which is contained in appendix A-83 and relates to the Y Element Number Series. The report portrays the Daily and Cumulative number of incoming transactions of appropriate element numbers printed only when data is accumulated for a specific element number, otherwise, they will not appear on this report.

5. SEQUENCE

Major to Minor sequence is by printed Description of the Element Number (DIC Description), Daily, and Cumulative.

6. NUMBER OF COPIES AND DISTRIBUTION

Four copies. Original and one copy to MSO, DS/T. Two copies to Performance Analysis and Reports Division, Office of Comptroller.

7. PROCEDURE FOR REVIEW AND PROCESSING

Data is used by DS/T to evaluate the incoming workload and its impact on depot operations. It is also used to project long range management plans and objectives. See appendix E-045 P for related procedures.

APPENDIX F-15

MOWASP TRANSACTIONS FORWARDED BY DEPOT

1. PURPOSE

To provide management with a consolidated report of the number of external transactions which are transmitted by the depot to DSCs and Customers during an established reporting period.

2. FREQUENCY

Daily and Cumulative to date. The option to clear cumulative totals over an established reporting period belongs to the Directorate of Storage and Transportation (DS/T). However, it is recommended that cumulative totals be cleared at the end of each monthly reporting period after printing of this report.

3. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number

(2) Report Title

(3) Section

(4) Date: Month, day, year and Julian date

(5) Page Number

b. Data Elements:

(1) ELEMENT NUMBER - MIS Element Number

(2) DIC AND DESCRIPTION - Document Identifier Code and title of document transmitted.

(3) DAILY - Number of transactions transmitted

(4) CUMULATIVE - Number of transactions transmitted

4. DATA ORGANIZATION

The structure of this report is similar to Reporting Category VI which is contained in appendix A-83 and relates to the Z Element Number Series. The report portrays the Daily and Cumulative number of outgoing transactions transmitted to all activities during a reporting period. Line descriptions of appropriate element numbers are printed only when data is accumulated for a specific element number; otherwise, they will not appear on the F-15 report.

5. SEQUENCE

Major to Minor sequence is by printed Description of the Element Number (Document Identifier and Description), Daily and Cumulative.

6. NUMBER OF COPIES AND DISTRIBUTION

Original and one copy to Management Support Office, DS/T. Two copies to Performance Analysis and Reports Division, Office of Comptroller.

7. PROCEDURE FOR REVIEW AND PROCESSING

Data is used by the DS/T to evaluate the outgoing workload and its impact on depot operations. See appendix E-045 P for related procedures.

APPENDIX F-16

INVENTORY FORECAST

1. PURPOSE

a. To provide a listing of the workload remaining in the Inventory Workload Bank (IWB) which will be reviewed by the Inventory Office, Directorate of Distribution to request inventory workload for a specific subsequent date and to determine resource requirements to accomplish the workload.

b. To provide a listing of a specific NSN or parameter of NSNs currently established in the Inventory Workload Bank.

2. ORIGIN

a. Produced as a result of the process depicted in appendix D-7.

b. Produced as a result of input of DIC ZAX, appendix B-90.

c. Produced as a result of receipt of Location Reconciliation DJAs from DSCs.

3. FREQUENCY

a. Daily upon merging of new workload input from the locator files and after update of files for workload requested.

b. As required to identify specific NSNs in the IWB.

4. DATA ELEMENTS

a. Report Header which includes:

(1) Report Number

(2) Report Title

(3) Date: Month, day, year, and Julian date

(4) Page Number

b. Heading Line Data for Parts 1 and 5:

(1) Beginning NSN - Indicates the first NSN in the Federal Stock Class.

(2) Ending NSN - Indicates the last NSN in the Federal Stock Class.

(3) MGR - Commodity Manager

(4) TIC - Type of Physical Inventory Code

(5) MGT - This will reflect the reason for the inventory as shown in appendix A-13, paragraph 10. Blank in this field indicates either a manager established inventory or depot initiated inventory.

(6) ICC - Inventory Category Code

(7) DATE EST - Reflects the date that the NSN or the FSC for the line entry was established in the Inventory Workload Bank.

(8) ACTN DATE - Mandatory Action Date. This date is computer assigned, which is 30 days after the record is established in the IWB. This field reflects the date by which the inventory control office should initiate action to establish a cutoff day, or the record will be deleted from the IWB.

(9) CUTOFF DATE - Inventory cutoff date established by inventory control office for depot initiated inventories. Cutoff date will be established by the DSC for DSC initiated inventories.

(10) TOTAL NSNS - Total number of NSNs for this FSC which are loaded in the IWB.

(11) NSNS REMAINING - Number of NSNs in this FSC which are remaining in the IWB awaiting an inventory cutoff date to be established.

(12) SINGLE LOCS - Reflects the number of locations for line entry wherein the locator reflects that total assets for an NSN are stored in only one location.

(13) MULTIPLE LOCS - Reflects the number of locations for the line entry wherein the locator reflects that total assets for a NSN are stored in more than one location.

(14) TOTAL LOCS - Reflects the total of multiple and single locations for the line entry. (Item (13) + (14).)

(15) TOTAL MAN-HOURS - Reflects the total man-hours required to accomplish the inventory for all locations for the line entry shown. (Item (15) X man-hour standard established for IWB type storage codes (in the Table and Control File, appendix B-66, table 10).)

(16) TOTALS - Reflects totals indicated by FSC (last line for each manager).

c. Heading line data for Part 2:

(1) Title of Part 2

(2) INVENTORY CUTOFF DAY - Reflects those NSNs in the IWB which have an established cutoff date. These NSNs will remain in the IWB until six days before the established cutoff date.

(3) TOTAL NSNS - Indicates number of NSNs recorded in the IWB for the cutoff date.

(4) The remaining data is reflected as outlined in subparagraph b(13) through b(16).

d. Heading Line Data for Part 3:

(1) Title of Part 3

(2) INVENTORY CUTOFF DATE - Reflects those NSNs in the IWB which have an established cutoff date. These NSNs will remain in the IWB until six days before the established cutoff date.

(3) COMM MGR - Commodity Manager.

(4) TOTAL LOCS - Reflects the total of multiple and single locations for the line entry (items (4) + (5)).

(5) SINGLE LOCS - Reflects the number of locations for line entry wherein the locator reflects that total assets for an NSN are stored in only one location.

(6) MULTIPLE LOCS - Reflects the number of locations for the line entry wherein the locator reflects that total assets for an NSN are stored in more than one location.

(7) TOTAL NSNS - Indicates number of NSNs recorded in the IWB for the cutoff date by Priority whole number.

(8) TOTAL MANHOURS - Reflects the total manhours required to accomplish the inventory for all locations for the line entry shown (item (3) X manhours standard established for IWB type storage codes (in the Table and Control File, appendix B-66, table 10)).

(9) PRIORITY HIGH - Six position number established by the DSC formatted as two whole numbers and four position percent with an understood decimal between positions three and four representing the highest priority resident in the prioritized IWB for the cutoff date shown.

(10) PRIORITY LOW - Six position number established by the DSC formatted as two whole numbers and four position percent with an understood decimal between positions three and four representing the lowest priority resident in the prioritized IWB for the cutoff date shown.

5. ORGANIZATION

Report header on first line and detail data on subsequent lines arranged in columns under data element headings identified in paragraph 4.

6. SEQUENCE

a. Parts 1 and 5 - Sequence by Commodity Manager, FSC, Inventory Category Code, Type Inventory Code, Management Code, Cutoff Date and NSN.

b. Part 2 - Sequence by Inventory Cutoff Date.

c. Part 3 - Sequence by Inventory Cutoff Date; page break by Inventory Cutoff Date.

7. DISTRIBUTION

Three copies to the Inventory Control Office, DS/T.

8. PROCEDURES

a. The report will be reviewed daily by the Inventory Office in order to pull workload which will establish a specific cutoff date. The analysis and determination of workload to be pulled will be equated to the planned resources available on date inventory is to be conducted.

(1) Special inventories resulting from location reconciliation should be initiated by the depot within five days from date record was established in the IWB.

(2) All other inventories should be activated by the depot within 30 days from date established.

b. The F-16 part 5 will be used to indicate specific NSNs which are currently in the IWB. They may or may not have an inventory cutoff date established.

c. Workload pull will be accomplished IAW the format outlined in appendices B-90, B-91 and B-170 and IAW instructions contained in appendix E-170 P.

d. Report will be retained until receipt of next distribution and then destroyed.

APPENDIX F-17

OPEN COUNT CARDS ON INVENTORY SUSPENSE FILE

1. PURPOSE

To provide a listing of outstanding count cards on the count card inventory suspense file for which a count card has not been returned for processing.

2. ORIGIN

Report is produced when count card is in open status three days after inventory cutoff date. Second and third count cards which are produced three days or more after cutoff date will appear on this report one day after they are produced if still in open status.

3. FREQUENCY

Will be produced daily after criteria in paragraph 2 has been met.

4. DATA ELEMENTS

a. Report Header consisting of:

(1) Report Number

(2) Report Title

(3) Report Date: Month, day, year, and Julian date

(4) Page Number

b. Image of ZKA (appendix B-25)

5. SEQUENCE

Serial Number (of count card) sequence

6. DISTRIBUTION

Two copies to Physical Inventory Office, DS/T

7. PROCEDURE

Inventory Managers will screen the listing daily and initiate action immediately to locate missing count card(s) or prepare duplicate count card to expedite closing of outstanding inventory actions.

APPENDIX F-18

STATUS CARDS REQUIRING POE IN POSITIONS 78-80

1. PURPOSE

To provide DS/T a listing of Shipment Status Cards for overseas freight shipment that were rejected from process for lack of a POE in pos. 78-80.

2. ORIGIN

Produced as a result of processes depicted in appendices D-28, D-30 or D-31.

3. FREQUENCY

Daily, if Shipment Status Cards (appendix B-24) were output for completion.

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number - F-18

(2) Title

(3) Functional Routing Code

(4) Section Number

(5) Date: Month, day, year, and Julian date

(6) Page Number

b. Data Elements:

An 80/80 image of the Shipment Status Card requiring POE in pos. 78-80.

5. DATA ORGANIZATION

a. Data Header: Numbers 1 through 8 denoting pos. 1-80

b. Data Line: An 80/80 image of AS_ cards on second and subsequent lines.

6. DISTRIBUTION AND RETENTION

Original and one copy with cards to Shipping Documentation Branch, Shipping Division, DS/T. Retain F-18 report for two workdays as a source document for correcting any violations.

7. PROCEDURES FOR REVIEW AND PROCESSING

During the processing of Materiel Release Order confirmation (depicted in appendices D-28, D-30 and D-31, Shipment Status Cards (DIC AS_) are produced in the format of appendix B-24. When a shipment has been recorded to an overseas activity by a freight mode of shipment and the POE Code is not available for placing in pos. 78-80 of the status card, an F-18 report will be produced, along with a punched output of the status card. The Shipping Documentation Branch will:

a. Screen DoD 4500.32-R (MILSTAMP) appendix B-13 B and determine the applicable POE Code of the account to update the DoDAAD File (except for Navy Ships, see paragraph 7d). Screen the GBL covering the shipment for the applicable port used.

b. Annotate the POE Code on the F-18 report and on the applicable Shipment Status Card.

c. Forward status cards to Keypunch for keypunching of the POE Code in pos. 78-80, prior to forwarding to ODS for input into the communications network.

d. Establish the applicable POE in the DoDAAD File for the account IAW appendix E-126 P. If the account applies to a Navy ship and a POE was not used, the status card in the communications network with pos. 78-80 blank.

APPENDIX F-19

CUSTOMER COMPLAINT LISTINGS

1. PURPOSE

To provide current and one year historical record to aid in the investigation and reporting of customer complaints and to identify problem areas for corrective action.

2. ORIGIN (All Parts)

Generated as a result of customer complaint input data to the Harris or Four-Phase System.

3. FREQUENCY

Parts 1, 2, 3, 4, 5, 6, 7, 8 = Monthly Part 2 (premonthly) = On Request

4. DATA ELEMENTS

a. Report Header Line: All Parts

(1) Report Number Parts 1-8

(2) Report Title

(3) Date

(4) Page Number

b. Data Elements: (Part 1) Customer Complaint Listing by Warehouse

(1) WHS LOC - Warehouse Location Code

(2) Over - The Number of Complaints Received for Overshipment

(3) Short - The Number of Complaints Received for Shortages

(4) Wrong - The Number of Complaints Received for Wrong Item Shipped

(5) MISDIR - The Number of Complaints Received for Misdirected Shipments

(6) UNSERV - The Number of Complaints Received for Receipt of Unserviceable Items

(7) Total - Total Complaints by Warehouse Location Code

(8) Total Cost - Total Cost by Warehouse Location Code

c. Data Elements: (Part 2) Monthly Customer Complaints Update Edit

(1) DOC-NUM - Document Number

(2) ENTERED - Computer-Assigned Date Record was Established

(3) LAST-CHG - Computer-Assigned Date the Record was Last Changed

(4) REPORT - Indicates the Date the Record Appeared on a Monthly Report

(5) STAT - Code Indicating the Validity or Invalidity of the Complaint (appendix A-57)

(6) STOCK-NUM - The Stock Number Documented as Shipped

(7) NIIN-ERROR - NIIN of the Item Actually Shipped, when the Item Shipped does not match the Stock Number Documented as Shipped

(8) CTL - Locally Assigned Control Number

(9) VALUE - Total Dollar Value of Discrepant Item

(10) SEN - Physical Security Code (appendix A-28)

(11) DISC - Discrepancy Code (appendix A-3)

(12) TY - Type Document Code (appendix A-6)

(13) AV - Availability of Supporting DD Form 1348-1-Y = Yes, N = No

(14) DD - Identifies Customer's Military Service/Federal Agency Code, when Customer is In-CONUS (appendix A-5)

(15) OS - Identifies Customer's Military Service/Federal Agency Code, when Customer is Outside-CONUS (appendix A-5)

(16) HZ - Hazardous Characteristics-Y = Hazardous, N = Nonhazardous, Blank = Characteristics Unknown

(17) PP - Parcel Post-P = Parcel Post Shipment, Blank = Nonparcel Post Shipment

(18) LOC - Location Code

(19) FRC - Functional Routing Code (appendix A-77), Entered to Request MRO History

(20) COM - Commodity Manager (appendix A-44)

(21) 1348 - Date of DD Form 1348-1 (Block O)

(22) PERSL - Personnel Code of Person Responsible for Discrepancy

d. Data Elements: (Part 3 page 1) Invalid Customer Complaints (month and year).

(1) Complaint/Manager

(2) Number Invalid

(3) Remarks

e. Data Elements: (Part 3, page 2) Customer Complaints for (Report Month and Year)

(1) Column One - Type of Complaint

(2) Column Two:

DPSC - Defense Personnel Support Center

(a) Med - Medical

(b) Sub - Subsistence

(c) DICOMSS - Direct Commissary Support System

(d) C&T - Clothing and Textile

(3) Column Three:

(a) DGSC - Defense General Supply Center

(b) DISC - Defense Industrial Supply Center

(c) DCSC - Defense Construction Supply Center

(d) DESC - Defense Electronic Supply Center

(e) OTH - Other

(f) %* - Percent of Total Complaints

(g) TOTAL - Total Number of Complaints by Type

(h) FY AVE - Fiscal Year Average

f. Data Elements: (Part 3, Page 2) Complaints Received to Lines Shipped Comparison.

(1) LINES SHIPPED - The total lines shipped (all modes) for the report period designated by the column title.

(2) COMPLAINTS RECEIVED - The total valid complaints received for the designated report period.

(3) PERCENT DEFECTIVE - Indicates the number of valid complaints received for every hundred lines shipped during the report period.

(4) PERCENT DEFECTIVE YTD - Indicates the number of valid complaints received for every hundred lines shipped for the fiscal year to date.

g. Data Elements: (Part 3, page 3), Valid Parcel Post Complaints for (Report Month and Year.)

(1) DAMAGED ENROUTE - Carrier Damage

(2) UNSERVICEABLE SHELF & OTHER - Unserviceable Shelf-Life or other unserviceable discrepancies.

(3) WRONG ITEM - Wrong Item Received

(4) IMPROPER LOAD/PPP - (PPP-Packing, Preservation and Packaging)

(5) IMPROPER MARKING - (Marking Discrepancy(s))

(6) SHORTAGE ALL/PAR - Shortage all/Partial

(7) OVERAGE - Overage

(8) DUPLICATE SHIPMENT - Duplicate Shipment

(9) MISDIRECTED SHIPMENT - Material Shipped to Wrong Activity

(10) DOCUMENT MISSING - No Documentation Received with Shipment

h. Data Elements: (Part 4) Monthly Customer Complaints History List. Same as part 2 (subparagraph c) above.

i. Data Elements: (Part 5) Customer Complaints by Commodity Manager

(1) COM MGR - Commodity Manager (appendix A-44)

(2) TYPE - Type Discrepancy Code (appendix A-3)

(3) COMPLAINT DATE - Year/Month Complaint Processed

(4) NUM - Control Number Assigned to Complaint

(5) ACTIVITY - Activity Code within Document Number

(6) DOCUMENT NUMBER - Document Number

(7) DOC - Type Document Code (appendix A-6)

(8) MRO - Indicates if copy of DD Form 1348-1, Single Line Item Release/ Receipt Document (appendix C-11), was received with complaint. (Y = Yes, N = No)

(9) NATL STOCK NR CLASS NIN/GBL - National Stock Number, Class, NIIN or GBL

(10) DOLLAR VALUE - Total Dollar Value of Complaint

(11) CONUS CODE - If domestic shipment, identifies customer by Military Service/Fed Agency (appendix A-5)

(12) OVSEAS CODE - If Overseas shipment, identifies customer by Military Service/Fed Agency (appendix A-5)

(13) SEN CODE - Sensitive Code, Physical Security and Pilferage Codes (appendix A-28)

(14) STAT CODE - Invalid/Valid Code (appendix A-57)

(15) PP - Parcel Post Indicator: P = Parcel Post Shipment, Blank = Non-Parcel Post Shipment.

(16) LOC - Location Code

(17) HZ CD - Hazardous Characteristics Code: Y = Hazardous, N = Non-Hazardous, Blank = Hazardous Characteristics Unknown.

(18) FRC - Functional Routing Code (appendix A-77), Entered to Request MRO History.

(19) SHIPPED IN ERR NIN/GBL - National Item Identification Number (NIIN) of item shipped in error

(20) PERSL - Personnel Code of Person Responsible for Discrepancy

j. Data Elements: (Part 6) Customer Complaints Listing by Class

(1) NSN CLASS NIN/GBL - National Stock Number, Class, NIIN or GBL

(2) COMPLAINT DATE - Year/Month Complaint processed

(3) NUM - Number assigned to Complaint

(4) DOCUMENT NUMBER - Document Number

(5) ACTIVITY - Activity Code within Document Number

(6) TYPE - Type Discrepancy Code (appendix A-3)

(7) DOC - Type Document Code (appendix A-6)

(8) MRO - Indicates if copy of DD Form 1348-1 was received with Complaint (Y = Yes, N = No)

(9) COM MGR - Commodity Manager Code (appendix A-44)

(10) CONUS CODE - If domestic, identifies customer by Military Service/Fed Agency (appendix A-5)

(11) O/SEAS CODE - If overseas, identifies customer by Military Service/Fed Agency (appendix A-5)

(12) SEN CODE - Sensitive Code, (Physical Security and Pilferage Codes, appendix A-28)

(13) STATUS CODE - Invalid/Valid Code. Indicates Validity of Complaint (appendix A-57)

(14) 1348 DATE - DD Form 1348-1 date, document date from block 0 of DD Form 1348-1

(15) DOLLAR VALUE - Total Dollar Value of Discrepancy

(16) PP - Parcel Post designator: P = Parcel Post Shipment, Blank = Non-Parcel Post Shipment

(17) LOC - Location Code

(18) HZ CD - Hazardous Characteristics Code: Y = Hazardous, N = Non-Hazardous, Blank = Hazardous Characteristics Unknown

(19) FRC - Functional Routing Code, Entered to Request MRO History

(20) SHIPPED IN ERR NIN/GBL - NIIN shipped in error

(21) PERSL - The Personnel Code of the Person Responsible for the Discrepancy

k. Data Elements: (Part 7) Customer Complaints Listing by Activity

(1) ACTIVITY - Activity Code within Document Number

(2) DOCUMENT NUMBER - Document Number

(3) TYPE - Type Discrepancy Code (appendix A-3)

(4) DOC - Type Document Code, (appendix A-6)

(5) MRO - Indicates if copy of MRO was received with complaint (Y = Yes, N = No)

(6) COM MGR - Commodity Manager Code (appendix A-44)

(7) NSN, CLASS NIN/GBL - National Stock Number, Class, NIIN or GBL

(8) CONUS CODE - If Domestic, Identifies Customer by Military Service/Fed Agency (appendix A-5)

(9) OVSEAS CODE - If Overseas, Identifies Customer by Military Service/ Fed Agency (appendix A-5)

(10) SEN CODE - Sensitive Code (Controlled Inventory Item Code appendix A-28)

(11) STAT CODE - Invalid/Valid Code (appendix A-57)

(12) DOLLAR VALUE - Total Dollar Value

(13) COMPLAINT DATE - Year/Month Complaint processed

(14) NUM - Number (Control Number assigned to complaint)

(15) PP - Parcel Post Indicator: P = Parcel Post Shipment, Blank = Non-Parcel Post Shipment

(16) LOC - Location Code

(17) HZ CD - Hazardous Characteristic Code: Y = Hazardous, N = Non-Hazardous, Blank = Hazardous Characteristics Unknown

(18) FRC - Functional Routing Code

(19) SHIPPED IN ERR NIN/GBL - National Item Identification Number (NIIN) of item shipped in error

(20) PERSL - Personnel Code of Person Responsible for Discrepancy

1. Data Elements: (Part 8) Customer Complaints Listing by Personnel Code

(1) PRSL - Personnel Code of Person Responsible for Discrepancy

(2) WHS-LOC - Warehouse Location Code

(3) OVER - Number of complaints received for overshipments

(4) SHORT - Number of complaints received for shortages

(5) WRONG - Number of complaints received for wrong items shipped

(6) MISDIR - Number of complaints received for misdirected shipments

(7) UNSERV - Number of complaints received for receipt of unserviceable items

(8) PKG-DISC - Number of complaints received for packing discrepancies

(9) TOTAL - Total number of discrepancies

(10) TOTAL-COST - Total dollar value of discrepancies

m. The yearly report provides customer Complaint Data recorded for the previous 12 months. The reports produced are in the same formats as part 5, 6, 7 and 8. Only these records which a monthly report has been run will appear on the yearly report.

5. DATA ORGANIZATION

This report is prepared in eight parts (1 through 8) and lists Customer Complaints.

6. SEQUENCE

a. Part 1: Warehouse Location

b. Part 2: National Stock Number

c. Part 3: Major sort: Complaint Type
Minor sort: Commodity Manager

d. Part 4: NIIN, (accrued monthly, dropping the oldest month and picking up the latest month, in order to maintain a one year history record).

e. Part 5: Commodity Manager

f. Part 6: Federal Supply Class

g. Part 7: Activity

h. Part 8: Personnel Code

7. DISTRIBUTION AND RETENTION

a. Part 1: One copy to Quality Control Division/Branch; destroy 45 days after printout.

b. Part 2: One copy to Quality Control Division/Branch; destroy 45 days after printout.

c. Part 3: Two copies

(1) One copy to Quality Control Division/Branch; destroy 45 days after printout.

(2) One copy to Management Information and Analysis Division, Office of Comptroller, maintain for six months.

d. Part 4: One copy to Quality Control Division/Branch; destroy 45 days after printout.

e. Part 5: One copy to Quality Division/Branch, retain for three months.

f. Part 6: Four copies

(1) Original and one copy to Quality Control Division/Branch; retain for three months.

(2) One copy to Inventory Control Office, destroy when superseded or upon completion of usage.

(3) One copy to Warehousing Division, destroy when superseded or upon completion of usage.

g. Part 7: One copy to Quality Control Division/Branch, retain hard copy for three months and microfiche for two years.

h. Part 8: One copy to Quality Control Division/Branch, destroy when superseded, or on completion of usage.

8. PROCEDURES FOR REVIEW AND PROCESSING

Used by Quality Control Division/Branch for research, analysis and monthly statistical summary reports of customer complaints received, error rates, trends etc. Listings also serve as management tools for the identification of problem areas for subsequent managerial review of corrective actions required.

APPENDIX F-20

INSPECTION SCHEDULES SHELF-LIFE ITEMS

1. PURPOSE

To provide inspection personnel with a schedule outlining the storage inspection activity due during the report month, and those stock surveillance actions output during the past or previous months in a delinquent status.

2. ORIGIN

a. Part 1 produced simultaneous with Surveillance Inspection Operational Test Notice Cards, appendix B-116, as a result of the process depicted by appendix D-2.

b. Part 2 produced as a result of input of the next Inspection Data at the time of receipt or at the time of an in-storage inspection.

c. Part 3 - Local Purchase (subsistence Y coded) items produced as a result of input of the next inspection date at the time of receipt or at the time of an in-storage inspection.

3. FREQUENCY

Monthly on the first day of each month

4. FORMAT (same for all parts)

a. Report Header Line which includes:

(1) Report Number (F-20)

(2) Title

(3) FRC - Functional Routing Code

(4) Section Number

(5) Date - Month, day, and year (08.13.67) and Julian date (225)

(6) Page Number

b. Data Elements:

(1) NSN - National Stock Number

(2) MGR - Commodity Manager Code (appendix A-44)

(3) UI - Unit of Issue (appendix A-48)

(4) NOMEN - Abbreviated nomenclature of the item represented by the NSN.

(5) SSLIND - Short Shelf-Life Indicator (appendix A-47 and all 0 coded records associated with an NSN and location which are identified with a valid date of next inspection).

(6) DMILCODE - Demilitarization Code (appendix A-35)

(7) CD - Condition of materiel as recorded on the item locator record (appendix A-16).

(8) NCD - The new condition code to be assigned upon completion of the automatic downgrade action. Applicable to ZC9 - Type I shelf-life items.

(9) TP - Type of Pack of materiel (appendix A-4)

(10) DG DT - The date (month and year) on which the next condition downgrade will occur (new date of inspection).

(11) DATEPK - Date of Pack/Expiration Date (month and year or date of record establishment (when there is no assigned Date of Pack).

(12) WHSLOC - Warehouse Location (appendix A-59)

(13) INSPDATE - Inspection Date (month and year)

(14) IND - Lot/Contract Indicator

(15) LCNO - Lot/Contract Number

(16) DEL - Delinquent records scheduled on a previous report edition for which no update action has been processed. Record is identified by the DIC ZCO/ZC9 required to complete the action.

5. DATA ORGANIZATION

a. Report header data on first line; detail data (paragraph 4b) on second and subsequent lines.

b. Page break on change of Commodity Manager Code

c. Sequence by Commodity Manager Code (Major) and Warehouse Locations (minor).

d. Double spaced

6. NUMBER OF COPIES AND DISTRIBUTION

Six copies. Original to Quality Control Office, five copies to Stock Readiness Branch, Warehousing Division, DS/T.

7. PROCEDURE

a. The listing will be used to plan, schedule and control surveillance inspections and operational testing during the period covered by the report.

b. Inspection/Surveillance personnel will review and screen the report to ensure that all records (especially those records in a delinquent status) are resolved/cleared by:

(1) Recovering or manually preparing the appropriate Inspection Text Card -ZC0 for Type II shelf-life coded items or ZC9 for Type I shelf-life items to accomplish outstanding or late inspections or reclassifications IAW appendix E-116 P.

(2) Deleting the applicable subrecords for Type 1 shelf-life items IAW the provisions outlined in appendix E-116 P.

c. Quality Control Office should examine the SSLIND field of the F-20 report to identify and correct when possible:

(1) Invalid shelf-life codes which are no longer valid per appendix A-47.

(2) Items identified as being nonshelf-life stock (0SSLIND) appearing on a regular inspection basis.

NOTE: Coordination with the applicable item manager (DSC) may develop a more applicable or meaningful SSLIND than 0.

APPENDIX F-22

CLASSIFICATION SUSPENSE REPORT

1. PURPOSE

This report is provided in two parts. Part 1, lists all stock numbers on which action has been suspended due to their classification in Condition Codes D, E, F, G, J, K or L. Part 2, lists all stock numbers suspended in Condition Codes D, E, F, G, J, K and L over 75 days from their suspense date. It provides a means to followup to ensure that reclassification is accomplished appropriately.

2. AUTHORITY: Chapter 5

3. FREQUENCY

a. Report will be produced weekly and contain all items in the Classification Suspense File (CSF).

b. Partially complete materiel adjustment document DIC ZAC, DD Form 1487 (appendix B-22) or Surveillance Inspection Operational Test Notice Card, DIC ZCO, DLA Form 540 (appendix B-116) will be produced upon entry of a newly suspended item to the suspense file.

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-022) - Part 1

(2) Report Number (F-022) - Part 2

(3) Title

(a) Part 1 - Classification Suspense Report

(b) Part 2 - Classification Suspense Items Exceeding 75 Days

(4) Functional Routing Code

(5) Section

(6) Date: Month, day, year, and Julian date

(7) Page Number

b. Data Elements:

(1) FSC - Federal Supply Class

(2) NIIN

(3) UI - Unit of Issue

(4) QTY - Quantity

(5) CONTRACT NUMBER

(6) CLIN/SUP - Contract Line Item Number - Supplement

(7) SUPP PIIN - Supplementary Procurement Instrument Identification Number

(8) DOCUMENT NUMBER

(9) SUF - Suffix

(10) TO COND - To Condition

(11) FR COND - From Condition

(12) WHSE LOC - Warehouse Location

(13) SL - Shelf-Life Code

(14) SUSP DATE - Suspense Date

(15) MGR - Manager

5. SEQUENCE

a. Part 1

Major - Manager; 1st Intermediate - NSN, 2nd Intermediate - To Condition, and Minor - Suspense Date, with page break at Manager.

b. Part 2

Major - Manager; 1st intermediate sequence by age (oldest first), represented by suspense date; and intermediate sequence by condition code.

6. NUMBER OF COPIES AND DISTRIBUTION

Distribution of this report will be made in accordance with local instructions. Commodity Managers will not be provided a copy of the appropriate page(s) unless they specifically request one.

7. PROCEDURE FOR REVIEW AND PROCESSING

a. This report will be reviewed to assure that all required depot actions have been completed. When reclassification action is completed the punched card will be used as the reinput to update the computer files.

b. A record line may undergo modification from a rewarehousing action, SIC Card processing, or by a DSC originated Materiel Adjustment, DIC DAC. Location adds/changes may also be processed to the record, reference appendix B-22, Action Code RB. If a location update is processed to a CSF record, that record will be output and identified on the next F-22.

(1) A single asterisk will indicate that the location data has undergone change through a rewarehousing or DIC ZAC update action. This will occur on a single (one) report cycle only and will not be perpetuated.

(2) When a record line is identified by multiple asterisks, the record was extracted and established from a DSC originated DAC input with blank management code and Condition Code L, reference appendix E-022 P.

(3) SICs affecting NSN, NSN and Manager, UI or shelf-life will be processed to matching file records monthly. The file record element, NSN UI, or shelf-life will be changed and identified by an asterisk. If a manager change in conjunction with NSN change has occurred, the new manager will be indicated and identified by an asterisk. If the change involves a manager other than that shown in appendix A-44 or Conversion Table, appendix D-5, the manager will be left blank and identified by an asterisk. The DIC ZAC/ZCO will also contain a blank manager (third position of RIC To). The proper manager will be manually entered to the card when reinput. (This action is required as the manager code in the SIC card is a 2-position manager indicator as outlined in the FMSC, M1-7, chapter 6 , paragraph 366411.)

(4) To assist in the manual maintenance of the pending Classification Suspense File (suspended DIC ZAC/ZCO cards), the old record will be printed on the last page of the report, identified by the heading "Records Corrected by SICC Action". This function will appear monthly after SICC processing has been accomplished in the Item Locator Record.

c. The report may be destroyed as soon as a new report is produced.

APPENDIX F-23

REWAREHOUSING DATA INQUIRY

1. PURPOSE

To provide location data from locator record for rewarehousing of stock.

2. ORIGIN

Produced during the processing depicted by appendix D-86.

3. FREQUENCY

Daily, when data is requested by input of ZUK card, with appropriate action code.

4. DATA ELEMENTS

a. Header Line includes:

(1) REPORT TITLE

(a) PART 1 - REWAREHOUSING CARDS IN LOCATION SEQUENCE

(b) PART 2 - REWAREHOUSING CARDS IN NSN SEQUENCE

(2) FRC - Functional Routing Code

(3) SECTION NUMBER

(4) DATE - Month, day, year, and Julian date

(5) PAGE NUMBER

b. Data Elements:

(1) DIC - Document Identifier Code

(2) NSN - National Stock Number

(3) MGR - Commodity Manager

(4) ITEM DESC - Item Description

(5) UI - Unit of Issue

(6) POP GRP - Popularity Group Code

(7) AVG DEM - Average Monthly Demand

(8) COND - Condition Code

(9) TYP LOC - Type Location Code

(10) TYP STG - Type Storage Code

(11) WHS LOC - Warehouse Location

(12) NEW TYPSTG - New Type Storage

(13) NEW WHSLOC - New Location

(14) POUNDS REWHSD - Pounds Rewarehoused

(15) CUBIC FT REWHSD - Cubic feet Rewarehoused

NOTE: Items (1) through (11) will be printed by computer. Items (12) through (15) can be entered manually during rewarehousing.

5. DATA ORGANIZATION

a. Report Header data on first line; detail lines of each ZUN Card on subsequent lines.

b. Sequence:

(1) Action Code FQ - Location sequence, page break by three digit warehouse location.

(2) Action Code FR - Stock number sequence page break by class.

c. Single spaced

6. NUMBER OF COPIES AND DISTRIBUTION

Five copies to Warehousing Division and one copy to Management Support Office, Directorate of Storage and Transportation.

7. PROCEDURE

This list will represent the number of Rewarehousing Cards prepared and will be utilized as a management tool to plan and control planned rewarehousing.

APPENDIX F-24

POPULARITY GROUP REPORT

1. PURPOSE

To provide a listing of those items which have changed popularity group in the last month.

2. ORIGIN

Produced as a result of processing as depicted in appendix D-64.

3. FREQUENCY

Monthly

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-24)

(2) Title

(3) Functional Routing Code

(4) Section Number

(5) Date: Month, day, year, and Julian date

(6) Page Number

b. Heading Line data:

(1) STOCK NUMBER

(2) PREVIOUS:

(a) POP - Popularity Group Code

(b) MOS - Months Demand

(c) AVG - Average Demand

(3) CURRENT MONTH DMD - Demands

(4) UPDATED:

(a) POP - Popularity Group Code

(b) MOS - Months Demand

(c) AVG - Average Demand

5. DATA ORGANIZATION

a. Report Header line in first line, detail column heading on second line, detail data on third and subsequent lines.

b. Sequence - NSN

6. NUMBER OF COPIES AND DISTRIBUTION

Three copies. Original and one copy to Warehousing Division, one copy to MSO, DS/T.

7. PROCEDURE

a. Used to plan the relocation of stocks with the highest demands in the most readily accessible warehouse areas.

b. Analyze the listing in relation to correct location of materiel within a warehouse area.

c. Accomplish rewarehousing as necessary.

d. Retain listing for 60 days then destroy.

APPENDIX F-25

POPULARITY GROUP EXCEPTION REPORT

1. PURPOSE

To provide knowledge of rate of turnover of items by selected popularity group codes in order to position fast moving items in close proximity to Assembly Areas, Conveyor lines, and so on. Report and input is restricted to NSNs within FSC parameters or Warehouse Location (1st three positions) within Location Code parameters.

2. ORIGIN

Produced as a result of processing as depicted in appendix D-23.

3. FREQUENCY

a. Upon processing a DIC ZBJ with Action Code FK or FL.

b. Input is possible after six computer updates, normally after a six month period for accumulation of frequency count and recording of popularity group made in the Item Locator Record.

4. DATA ELEMENTS - Part 1:

a. Report Header line which includes:

(1) Report Number

(2) Report Title

(3) Functional Routing Code

(4) Section Number

(5) Date (Month, Day, Year and Julian date)

(6) Page Number

b. First Header line:

(1) NSN - National Stock Number

(2) UI - Unit of Issue

(3) NOMEN - Nomenclature/Item Description

(4) NMFC - National Motor Freight Classification Code

(5) PHY SEC - Physical Security Code

(6) NMF SFX - National Motor Freight Classification Code Suffix

(7) WATER COM - Water Commodity Code

(8) AIR COM - Air Commodity Code

(9) AIR CRGO - Air Cargo Dimension Code

(10) UNIT WEIGHT - Unit Weight

(11) UNIT CUBE - Unit Cube

(12) SSL - Shelf-Life Indicator Code

(13) POP GRP - Popularity Group Code

(14) LCNO - Lot Contract Number

(15) SP RQT - Special Requirements Code

(16) MGR - Commodity Manager Code

(17) INVENTORY - Inventory

(a) FLG - Inventory Flag

(b) OFF - Cutoff Date

(18) DEMANDS - Demands

(a) MO - Months of demand Data

(b) AVG - Average Monthly Demand

c. Second Header Line:

(1) COND - Condition

(2) TYPK - Type Pack

(3) LTL - Freight Rate LTL Code

(4) LCL - Freight Rate LCL Code

(5) DML - Demilitarization Code

(6) DTPK - Date Pack

(7) TYPSTG - Type Storage

(8) SIT - Storage in Transit Privilege Code

(9) WHSLOC - Warehouse Location

(10) INSPDATE - Inspection Date

(11) INEX - Inventory Category Exception Code

(12) HSCC - Hazardous Storage Compatibility Code

(13) LCIND - Lot Contract Indicator

(14) PREDOC - Predocumentation Interval

5. DATA ELEMENTS (Part 2, Section 1)

a. Report Header Line:

(1) Report Number - UWF025P2

(2) Report Title - Popularity Storage by Warehouse Location - Section 1

(3) Functional Routing Code

(4) Date - Month, day, year and Julian date

(5) Page Number

b. First Header Line:

(1) POPULARITY GROUP CODE - See appendix A-52.

(2) OTHER - Any but those in appendix A-52.

(3) TOTAL - Total quantity for all codes in given location.

c. Second Header Line:

(1) LOCATION - First three positions of Warehouse Location.

(2) TOTALS - Total quantity for each Popularity Group Code.

6. DATA ELEMENTS (Part 2, Section 2)

a. Report Header Line:

REPORT TITLE - Percentage of Total (By Location) Section 2.

b. First Header Line:

(1) POPULARITY GROUP CODES - See appendix A-52.

(2) OTHER - Any but those in appendix A-52.

c. Second Header Line:

(1) LOCATION - First three positions of Warehouse Location

(2) TOT PCT - Total percent for each Popularity Group Code Column

7. DATA ORGANIZATION

a. Part 1

(1) See Format

(2) Major Sequence, Location Code; Secondary, Popularity Group Code

b. Part 2

(1) See Format

(2) Major Sequence, Popularity Group Code; Secondary, Location Code

8. NUMBER OF COPIES AND DISTRIBUTION

a. Number - Three copies

b. Distribution

(1) Original plus one to the Warehousing Division

(2) One copy to the Management Support Office, Directorate of S/T

9. PROCEDURE

a. Analyze the reports in relation to the correct positioning of materiel. Are the most popular items in the most effective locations?

b. Rewarehouse Materiel as required.

APPENDIX F-26

ITEM ANALYSIS EXCEPTION REPORT - CONDITION CODE

1. PURPOSE

a. Provide a means of verifying condition codes of items in storage other than Condition Code A.

b. Provide a means of monitoring stocks stored in hold areas and/or unclassified stocks in storage.

c. Provide a means of reconciling suspense files of DD Form 1225.

d. Provide knowledge of condition of stocks in storage.

2. ORIGIN

This report is produced as a result of processing as depicted in appendix D-23.

3. FREQUENCY

As required upon submission of input card ZBJ with Action Code FH.

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-26)

(2) Report Title

(3) Functional Routing Code

(4) Section Number

(5) Date - Month, day, year, and Julian date

(6) Page Number

b. Data Elements: (First Heading Line)

(1) NSN - National Stock Number

(2) UI - Unit of Issue

(3) NOMEN - Nomenclature/Item Description

(4) NMFC - National Motor Freight Classification Code

best copy available

(5) LTL - Freight Rate LTL Code

(6) PHY SEC - Physical Security Code

(7) NMFC SFX - National Motor Freight Classification Code Suffix

(8) LCL - Freight Rate LCL Code

(9) DE-MIL - Demilitarization Code

(10) WATER COM - Water Commodity Code

(11) AIR COM - Air Commodity Code

(12) AIR CRGO - Air Cargo Dimension Code

(13) SIT - Storage-In-Transit Privilege Code

(14) UNIT WEIGHT - Unit Weight

(15) UNIT CUBE - Unit Cube

(16) SSL - Shelf-Life Indicator Code

(17) POP GRP - Popularity Group Code

(18) INV EX - Inventory Category Exception Code

(19) HSCC - Hazardous Storage Compatibility Code

(20) SPR - Special Requirements Code

(21) MGR - Commodity Manager Code

(22) INVENTORY - Inventory

(a) FG - Inventory Flag

(b) COFF - Cutoff Date

(23) DEMANDS - Demands

(a) Months of Demand Data

(b) AVG - Average Monthly Demand

c. Data Elements (Second heading line)

(1) COND - Condition Code

(2) TYPK - Type Pack Code

(3) TYPLOC - Type Location Code

(4) DATEPK - Date of Pack (or date of record establishment)

(5) TYPSTG - Type of Storage Location Code

(6) WHSLOC - Warehouse Location Code

(7) INSPDATE - Date of Next Inspection

(8) UPK - Unit Pack

(9) LCNO - Lot/Contract Number

(10) LCIND - Lot/Contract Indicator

(11) PREDOC - Storage Item Change Card Predocumentation Interval

(12) CAGE - Contractor and Government Entity Code

(13) LDC - Lot Date Code

5. DATA ORGANIZATION

a. Report heading data on the first line, detailed column heading on the second and third lines.

b. Sequence by Condition Code, then Commodity Manager.

c. Page break on Functional Routing Code.

6. NUMBER OF COPIES AND DISTRIBUTION

Two copies. Original to organizational element initiating the request, as indicated by FRC. Copy to Management Support Office, Directorate of Storage and Transportation.

7. PROCEDURE

The organizational element which initiated the request for this report will accomplish necessary actions to verify condition of stocks in storage and audit suspense file of DD Form 1225 as outlined in appendix E-121 P.

APPENDIX F-27

ITEM ANALYSIS REPORT - COMMODITY MANAGER

1. PURPOSE

The Commodity Manager Code in the Item Locator Record is the basis for preparation of reports to HQ DLA; preparation and routing of adjustments; reconciliation of inventories and location audits. This report provided the media for:

a. Review and audit to correct erroneous assignment of codes.

b. Review of dual ownership.

c. Rollowup to Service managers where applicable to obtain disposition.

2. ORIGIN

This report is produced as a result of processing as depicted in appendix D-23.

3. FREQUENCY

As requested by input ZBJ with Action Code FJ.

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-27)

(2) Report Title

(3) FRC - Functional Routing Code

(4) Section Number

(5) Date - Month, day, year, and Julian day

(6) Page Number

b. Data Elements (First heading line):

(1) NSN - National Stock Number

(2) UI - Unit of Issue

(3) NOMEN - Nomenclature/Item Description

(4) NMFC - National Motor Freight Classification Code

(5) LTL - Freight Rate LTL Code

(6) PHY SEC - Physical Security Code

(7) NMFC SFX - National Motor Freight Classification Code Suffix

(8) LCL - Freight Rate LCL Code

(9) DE-MIL - Demilitarization Code

(10) WATER COM - Water Commodity Code

(11) AIR COM - Air Commodity Code

(12) AIR CRGO - Air Cargo Dimension Code

(13) SIT - Storage-In-Transit Privilege Code

(14) UNIT WEIGHT - Unit Weight

(15) UNIT CUBE - Unit Cube

(16) SSL - Shelf Life Indicator Code

(17) POP GRP - Popularity Group Code

(18) INV EX - Inventory Category Exception Code

(19) HSCC - Hazardous Storage Compatibility Code

(20) SPR - Special Requirements Code

(21) MGR - Commodity Manager Code

(22) INVENTORY - Inventory

(a) FG - Inventory Flag

(b) COFF - Cutoff Date

(23) DEMANDS - Demands

(a) MOS - Months of Demand Data

(b) AVG - Average Monthly Demand

c. Data Elements (Second heading line):

(1) COND - Condition Code

(2) TYPK - Type Pack Code

(3) TYPLOC - Type Location Code

(4) DATEPK - Date of Pack (or date of record establishment)

(5) TYPSTG - Type of Storage Location Code

(6) WHSLOC - Warehouse Location Code

(7) INSPDATE - Date of Next Inspection

(8) UPK - Unit Pack

(9) LCNO - Lot/Contract Number

(10) LCIND - Lot/Contract Indicator

(11) PREDOC - Storage Item Change Card Predocumentation Interval

(12) CAGE - Contractor and Government Entity Code

(13) LDC - Lot Date Code

5. DATA ORGANIZATION

a. Report heading data on the first line, detailed column heading on the second and third lines.

b. Sequence by NSN.

c. Page break on Functional Routing Code.

6. NUMBER OF COPIES AND DISTRIBUTION

Two copies. Original to organizational element initiating the request, as indicated by FRC. Copy to Management Support Office, Directorate of Storage and Transportation.

7. PROCEDURE

Review data for erroneous Commodity Manager in relation to stock number, dual ownership and followup to managers to obtain disposition of stock as outlined in appendix E-122 P.

APPENDIX F-28

DELINQUENT DELETED ITEM REPORT

1. PURPOSE

To provide a means of followup on locations previously identified as deleted items and still active after 90 days. This report is used for items previously reported to DSCs on Deleted Item Report Cards, DIC CK8 for which no disposition has been received. This report is output 90 days subsequent to effective date and monthly thereafter.

2. FREQUENCY

Monthly

3. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-28)

(2) Report Title

(3) FRC - Functional Routing Code

(4) Section Number

(5) Date - Month, day, year and Julian date

(6) Page Number

b. Data Elements:

(1) COMM MGR - Commodity Manager Code

(2) EFF DATE - Date which indicates when item was identified as a deleted item.

(3) NSN - National Stock Number

(4) TYPACK - Type of Pack Code

(5) COND CODE - Condition Code

(6) WHSE LOCATION - Warehouse Location

(7) QUANTITY

4. DATA ORGANIZATION

a. See format

b. Separate page(s) for each Commodity Manager Code.

5. NUMBER OF COPIES AND DISTRIBUTION

Three copies. Original and one copy to Inventory Control Office, one copy to MSO, DS/T.

6. PROCEDURE FOR REVIEW AND PROCESSING

a. The Inventory Control Office will perform physical count of item(s) in storage.

b. Enter physical count on F-28 listing under "Quantity" column.

c. MSO will review and assist in resolving trouble areas as required.

d. Forward one copy of the F-28 listing with quantity annotated on listing with letter of transmittal to the managing DSC.

e. Retain one copy of the F-28 listing with quantity annotated on listing in reference file for thirty days after disposition of the item(s) has been received from DSC, then destroy listing.

APPENDIX F-29

COMPLETED RECEIPT FILE INQUIRY RESPONSE

1. PURPOSE

This printout is prepared in response to a Completed Receipt File Inquiry Card, DIC ZB1 and a Automatic ZB1 Inquiry generated as a result of a "No Location" condition in the stock selection process (appendix D-184). This printout furnishes information on each receipt processed to assist in reply to nonmechanical inquiries or in preparation of local management studies. Also to assist in the preparation of a Completed Receipt File Change Card (ZEW).

2. ORIGIN

Produced during the process depicted by appendix D-47 for printout of completed receipts.

3. FREQUENCY: As requested

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-29)

(2) Title

(3) FRC - Functional Routing Code

(4) Section

(5) Date - Month, day, year and Julian date

(6) Page Number

b. Data Elements:

(1) DIC - Document Identifier Code of the receipt transaction

(2) RIC - Identifies the Routing Identifier Code of the DSC to which the receipt involved was reported.

(3) NAT STOCK NUMBER FSC NIIN - National Stock Number for which the inquiry was initiated.

(4) PIIN OR DOC NO - The Procurement Instrument Identification Number or Document Number for which the inquiry was initiated. When the inquiry was made against a NSN only (Action Code FP) the document number field for the inquiry line will be blank. The inquiry answer line(s) will always reflect the

Document Number recorded in the file queried. When the inquiry is by NSN and Document Number (Action Code FN), information will be reflected in both fields in the inquiry line.

(5) SUPP PIIN - Supplementary Procurement Instruction Identification Number

(6) CLIN or SUPADR - Contract Line Item Number or Supplementary Address extracted from the Completed Receipt File.

(7) UI - Unit of Issue

(8) QUANT - Quantity received

(9) CND - Condition Code

(10) MGT - Management Code

(11) OP - Ownership/Purpose Code

(12) TP - Type Pack

(13) SFX - Suffix Code

(14) DIS - Distribution Code

(15) PRJ - Project Code

(16) S/F - Signal or Fund Code

NOTE: SHIP NMBR - Shipment Number and Shipment Number Suffix will appear in (14) through (16) when appropriate.

(17) WHS - Warehouse Location (1st three positions)

(18) UNIT PR OR WGHT - Unit Price of a DICOMSS receipt or weight in pounds of a non-DICOMSS receipt.

(19) DATE RCV - The materiel was received.

(20) DATE RCC - Date receipt confirmation was processed.

(21) DATE STOW - Date of notification from Storage Division that materiel was stowed.

(22) DATE MRC - Date the Materiel Receipt Card was processed to the DLA.

(23) PRC DAY - The number of workdays between date of receipt and date the MRC was forwarded to the DSC.

(24) CYC - DICOMSS Cycle Code.

(25) AVL - DICOMSS Indicator D for DICOMSS Receipt Activity

(26) TP NUMBER - Teleprocessing Control Number

(27) CHG IND - Change indicator showing DIC ZEW activity against the record. Indicator will be last position of applicable action code which reflects the nature of the history change.

5. DATA ORGANIZATION

a. Report header data on first line, detail data on the second, and subsequent lines arranged in columns under the data element headings identified in paragraph 4b.

b. Reports for history inquiries will be sequenced as follows:

(1) NSN - Prime sequence element

(2) DOCUMENT NUMBER - 2nd element sequence

(3) Date of Receipt - 3rd element sequence

c. Page break by Functional Routing Code (FRC)

d. Sequence by FRC - Major and Action Code - Minor

e. Double spaced

6. NUMBER OF COPIES AND DISTRIBUTION

Three copies. Original to inquiry initiator as indicated by FRC, copy to Receipt Documentation Branch, Receiving Division, DS/T, and one copy to Warehousing Division, DS/T.

7. PROCEDURE

a. Prepare inquiry as detailed in appendix E-061 P to obtain printout.

b. Printouts will be used for purpose which necessitated the inquiry, then destroyed. When two or more inquires are submitted for the same record in the same cycle, the action code is changed to FP and only one reply is furnished for this record.

APPENDIX F-30

LOCATOR RECORD PRINT - REPLY TO REWAREHOUSING REQUEST

1. PURPOSE

Provide all item locator data from the basic and subrecords for special reviews, and rewarehousing, of stock numbers identified in card input.

2. ORIGIN

Produced as a result of processing an inquiry card, Item Locator Record, appendix B-89, with Action Code FS and output of part 1 or FT and output part 2 as depicted in appendix D-86.

3. FREQUENCY

Upon submission of an inquiry card, Item Locator Record.

4. DATA ELEMENT

a. Report Header Line:

(1) Report Number(F-30)

(2) Report Title

(3) Functional Routing Code

(4) Section Number

(5) Date - Month, day, year and Julian date

(6) Page Number

b. Data Elements (First Heading Line):

(1) NSN - National Stock Number

(2) MGR - Commodity Manager Code

(3) UI - Unit of Issue

(4) NOMEN - Nomenclature

(5) AIR CRGO - Air Cargo Dimension Code

(6) AIR COM - Air Commodity Code

(7) WATER COM - Water Commodity Code

(8) SPEC RQMT - Special Requirement Code

(9) MH STD - Man-hour Standard Application

(10) NMFC - National Motor Freight Classification Code

(11) SFX - National Motor Freight Classification Code Suffix

(12) LTL - Freight Rate LTL Code

(13) LCL - Freight Rate LCL Code

(14) SIT - Storage Intransit Privilege Code

(15) UCUBE - Unit Cube

(16) UWT - Unit Weight

(17) S L - Shelf-Life Code

(18) DE-MIL - Demilitarization Code

(19) PHY SEC - Physical Security Code

(20) POP GRP - Popularity Group Code

(21) DEMANDS

(a) MOS - Months Demand

(b) AVG - Average Demand

(22) INVENTORY

(a) EXC - Inventory Category Code

(b) FLG - Inventory Flag

(c) COFF - Inventory Cutoff Date

c. Data Elements (Second Heading Line):

(1) COND - Condition Code

(2) TYPK - Type Pack Code

(3) TYPLOC - Type Location Code

(4) DATEPK - Date of Pack (or date of record establishment)

(5) TYPSTG - Type of Storage Location Code

(6) WHSLOC - Warehouse Location Code

(7) INSPDATE - Date of Next Inspection

(8) UPK - Unit Pack

(9) LCNO - Lot/Contract Number

(10) LCIND - Lot/Contract Indicator

(11) PREDOC - Storage Item Change Card Predocumentation Interval

(12) CAGE - Contractor and Government Entity Code

(13) LDC - Lot Date Code

5. DATA ORGANIZATION

a. Report heading data on the first line, detailed column heading on the second and third lines.

b. Sequence

(1) Part 1 - Action Code FS - Location requested in the input.

(2) Part 2 - Action Code FT - NSN.

(3) Location causing the output will have an asterisk beneath nomenclature field.

6. NUMBER OF COPIES AND DISTRIBUTION

Two copies will be distributed to the organization element initiating the request (FRC).

7. PROCEDURE

The organizational element which initiated the request for this data will accomplish necessary actions and then destroy the report.

APPENDIX F-31

ITEM ANALYSIS REPORT - SHELF-LIFE CODE

1. PURPOSE

Provide all item locator data from the basic and subrecords for special reviews and surveys, for stock numbers identified in card input with a Shelf-Life Code other than 0.

2. ORIGIN

This report is produced as a result of processing as depicted in appendix D-23.

3. FREQUENCY

As requested by input ZBJ with Action Codes FA for all Shelf-Life Codes other than 0 and FB for specific Shelf-Life Code.

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-31)

(2) Report Title

(3) FRC - Functional Routing Code

(4) Section Number

(5) Date - Month, day, year and Julian date

(6) Page Number

b. Data Elements: (First heading line)

(1) NSN - Stock Number

(2) UI - Unit of Issue

(3) NOMEN - Nomenclature/Item Description

(4) NMFC - National Motor Freight Classification Code

(5) LTL - Freight Rate LTL Code

(6) PHY SEC - Physical Security Code

(7) NMFC SFX - National Motor Freight Classification Code Suffix

(8) LCL - Freight Rate LCL Code

(9) DE-MIL - Demilitarization Code

(10) WATER COM - Water Commodity Code

(11) AIR COM - Air Commodity Code

(12) AIR CRGO - Air Cargo Dimension Code

(13) SIT - Storage-In-Transit Privilege Code

(14) UNIT WEIGHT - Unit Weight

(15) UNIT CUBE - Unit Cube

(16) SSL - Shelf-Life Indicator Code

(17) POP GRP - Popularity Group Code

(18) INV EX - Inventory Category Exception Code

(19) HSCC - Hazardous Storage Compatibility Code

(20) SPR - Special Requirements Code

(21) MGR - Commodity Manager Code

(22) INVENTORY - Inventory

(a) FG - Inventory Flag

(b) COFF - Cutoff Date

(23) DEMANDS - Demands

(a) MOS - Months of Demand Data

(b) AVG - Average Monthly Demand

c. Data Elements (Second heading line):

(1) COND - Condition Code

(2) TYPK - Type Pack Code

(3) TYPLOC - Type Location Code

(4) DATEPK - Date of Pack (or date of record establishment)

(5) TYPSTG - Type of Storage Location Code

(6) WHSLOC - Warehouse Location Code

(7) INSPDATE - Date of Next Inspection

(8) UPK - Unit Pack

(9) LCNO - Lot/Contract Number

(10) LCIND - Lot/Contract Indicator

(11) PREDOC - Storage Item Change Card Predocumentation Interval

(12) CAGE - Contractor and Government Entity Code

(13) LDC - Lot Date Code

5. DATA ORGANIZATION

a. Report heading data on the first line, detailed column heading on the second and third lines.

b. Sequence by Stock Number.

c. Page break on Functional Routing Code.

6. NUMBER OF COPIES AND DISTRIBUTION

Two copies. Original to organizational element initiating the request, as indicated by FRC. Copy to MSO, MOWASP Data Control Branch, DS/T.

7. PROCEDURE

a. Review data for Shelf-Life Code in relation to stock number, to permit research and accomplishment of projects related to Shelf-Life Codes.

b. Investigate items under research for correct code.

c. Destroy after corrective action and/or project is completed.

APPENDIX F-32

LOST STOCK REPORT

1. PURPOSE

To provide a listing to indicate significant inventory adjustments resulting in net losses. The listing will also provide any inventory adjustments resulting in net losses for sensitive and/or pilferage items (Inventory Category Code U or E respectively).

2. ORIGIN

Output as depicted in appendix D-124.

3. FREQUENCY

As required upon communication with Office of Data Systems, but not less than quarterly.

4. FORMAT

This listing is printed in four parts. The format/listing organization of each of the parts is identical, only the report title is changed. The report title for each of the parts is as follows:

a. Part 1, Lost Stock Report - Sensitive/pilferable items

b. Part 2, Lost Stock Report - Greatest Dollar Loss

c. Part 3, Lost Stock Report - Greatest Quantity Loss

d. Part 4, Lost Stock Report - NSNs appearing on more than one part

5. DATA ELEMENTS

a. Report header which includes:

(1) Report Number

(2) Report Title

(3) Report Period: Julian dates

(4) Date: Day, month, year and Julian date

(5) Page Number

b. Heading line data:

(1) NSN - National Stock Number

(2) MANAGER - Commodity Manager

(3) CONDITION - Condition Code

(4) INVN CAT CODE - Inventory Category Code

(5) NET QUANTITY LOST - This field represents the net quantity loss after considering all inventory adjustments.

(6) DOLLAR VALUE OF LOSS - Net dollar loss after considering all inventory adjustments.

(7) MULT FLAG - Indicates this NSN appears on both part 2 and part 3 of the report (part 4 only).

(8) MANAGER TOTALS - Totals of quantity loss and dollar loss fields, by commodity manager.

(9) DEPOT TOTALS - Totals of quantity loss and dollar loss fields, for the entire depot.

6. DATA ORGANIZATION

a. Sequence:

(1) Parts 1 and 4: Manager-major, NSN-minor

(2) Part 2: Descending dollar loss

(3) Part 3: Descending quantity loss

b. Single space reports

7. DISTRIBUTION

a. One copy to Management Support Office, Directorate of Storage and Transportation

b. One copy to Warehousing Division, Directorate of Storage and Transportation

c. One copy to the Command Security Officer

8. PROCEDURE

The listing will be reviewed to determine if there are trends in lost stock and if manual or mechanical procedures need be reviewed in order that corrective action be taken.

UWF032 PERIOD 79177 TO 79204

LOST STOCK REPORT (PERIOD 79091 to 79181) SECTION 004 DATE 03.09.79.068

NSN	MANAGER	CONDITION	INV CAT CODE	NET QUANTITY LOST	DOLLAR VALUE OF LOSS
2920-00-555-5981	C	A	E	882-	$ 687.96-
5960-00-272-9182	E	A	E	001-	$ .81-
5960-00-615-9972	E	A	F	004-	$ 35.72-
		MGR-C-TOTALS		882-	$ 687.96-
		MGR-E-TOTALS		005-	$ 36.53-
		MGR-G-TOTALS		000+	$ .00+
		MGR-I-TOTALS		000+	$ .00+
		MGR-M-TOTALS		000+	$ .00+
		MGR-S-TOTALS		000+	$ .00+

		DEPOT-E/U-TOTALS		887-	$ 724.49-

APPENDIX F-33

MULTIPLE BIN LOCATION LISTING

1. PURPOSE

To provide a means of consolidating stocks when multiple bin locations are established.

2. FREQUENCY

During daily update of Item Locator Record.

3. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-33)

(2) Report Title

(3) FRC - Functional Routing Code

(4) Section Number

(5) Date - Month, day, year, and Julian date

(6) Page Number

b. Data Elements (First Heading Line):

(1) NSN - Stock Number

(2) UI - Unit of Issue

(3) NOMEN - Nomenclature/Item Description

(4) NMFC - National Motor Freight Classification Code

(5) LTL - Freight Rate LTL Code

(6) PHY SEC - Physical Security Code

(7) NMFC SFX - National Motor Freight Classification Suffix Code

(8) LCL - Freight Rate LCL Code

(9) DE-MIL - Demilitarization Code

(10) WATER COM - Water Commodity Code

(11) AIR COM - Air Commodity Code

(12) AIR CRGO - Air Cargo Dimension Code

(13) SIT - Storage-In-Transit Privilege Code

(14) UNIT WEIGHT - Unit Weight

(15) UNIT CUBE - Unit Cube

(16) SSL - Shelf-Life Indicator Code

(17) POP GRP - Popularity Group Code

(18) INV EX - Inventory Category Exception Code

(19) HSCC - Hazardous Storage Compatibility Code

(20) SPR - Special Requirements Code

(21) MGR - Commodity Manager Code

(22) INVENTORY - Inventory

(a) FG - Inventory Flag

(b) COFF - Cutoff Date

(23) DEMANDS - Demands

(a) MOS - Months of Demand Data

(b) AVG - Average Monthly Demand

c. Data Elements (Second Heading Line):

(1) COND - Condition Code

(2) TYPK - Type Pack Code

(3) TYPLOC - Type Location Code

(4) DATEPK - Date of Pack

(5) TYPSTG - Type of Storage Location Code

(6) WHSLOC - Warehouse Location Code

(7) INSPDATE - Date of Next Inspection

(8) UPK - Unit Pack

(9) LCNO - Lot/Contract Number

(10) LCIND - Lot/Contract Number

(11) PREDOC - Storage Item Change Card Predocumentation Interval

(12) CAGE - Contractor and Government Entity Code

(13) LDC - Lot Date Code

4. DATA ORGANIZATION

See Format.

5. NUMBER OF COPIES AND DISTRIBUTION

Two copies to Warehousing Division, Directorate of Storage and Transportation.

6. PROCEDURE FOR REVIEW AND PROCESSING

Bin Operations Branch and Area Control Branch(es) will:

a. Review list and determine preferred location.

b. Consolidate material into one location.

c. Determine if error has been made in processing new location data.

d. Process consolidation actions as appropriate in accordance with appendix E-072 P.

e. Destroy listing upon completion of action.

```

APPENDIX F-34

INCOMPLETE ITEM LOCATOR DATA REPORT

1. PURPOSE

To provide the Directorate of Storage and Transportation with data for research in those instances wherein a basic or sublocation is established with incomplete data. Used for all non-DLA items and DLA items for which no appendix F-86 has been produced within the past 30 days.

2. ORIGIN

This report is produced during the process depicted by appendix D-83.

3. FREQUENCY

Each cycle when:

a. A PMRC has been received, the basic locator data is incomplete and a reply has been received from the Central Data Bank.

b. Location is established with incomplete data and a reply has been received from the Central Data Bank.

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-34)

(2) Title

(3) Functional Routing Code

(4) Section number

(5) Date: Month, day, year, and Julian date

(6) Page Number

b. Data Elements:

(1) NSN - National Stock Number

(2) UI - Unit of Issue

(3) NOMEN - Nomenclature/Item Description of the item

(4) NMFC - National Motor Freight Classification

(5) LTL - Freight Rate LTL Code

(6) PHY SEC - Physical Security Code

(7) NMFC SUFX - NMFX Suffix Code

(8) LCL - Freight Rate LCL Code

(9) DE-MIL - Demilitarization Code

(10) WATER COM - Water Commodity Code

(11) AIR COM - Air Commodity Code

(12) AIR CRGO - Air Cargo Dimension Code

(13) STR IN-TRN - Storage In-Transit Code

(14) UNIT WEIGHT - Unit Weight

(15) UNIT CUBE - Unit Cube

(16) SSL IND - Short Shelf-Life Indicator

(17) POP GRP - Popularity Group Code

(18) INV EX - Inventory Category Exception Code

(19) HSCC - Hazardous Storage Compatibility Code

(20) SPC REQ - Special Requirements Code

(21) MGR - Commodity Manager Code

(22) LOC 1 - Location 1 (bin)

(23) LOC 2 - Location 2 (bulk)

5. DATA ORGANIZATION

a. Report header data on the first line, detailed column heading on the second line.

b. Sequence: By NSN - Major.

c. Location: First current record.

d. Page break on FSC, part 1.

e. Page break on location, part 2.

6. NUMBERS OF COPIES AND DISTRIBUTION

Two copies to MOWASP Data Control Branch, MSO, DS/T.

7. PROCEDURE

a. MOWASP Data Control Branch personnel receive Incomplete Item Locator Data Report, appendix F-34.

b. Research blank data elements to determine which data elements are necessary to complete the basic record of that particular NSN.

c. Complete appendix B-73 input with those data elements required as a result of subparagraph b above.

d. Report will be destroyed upon completion of research and input of data to ODS.

APPENDIX F-35

SHIPMENT TRACER REQUEST LISTING

1. PURPOSE

To provide DS/T with a listing of Shipment Tracer Requests initiated by consignees via AUTODIN for shipments made via Registered, Insured or Certified Parcel Post.

2. ORIGIN

List is generated upon receipt and processing of DIC AFT, Request for Shipment Tracing Transactions, appendix D-182.

3. FREQUENCY

Each cycle when processing identifies valid AFT transactions.

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-35)

(2) Title

(3) Functional Routing Code

(4) Date

(5) Time

(6) Page Number

b. First Header Line:

Numbers 05 through 80 denoting field positions 1 through 80.

5. DATA ORGANIZATION

a. Report header data on first line, detail column heading on second line. Eighty field position printout on subsequent lines.

b. Sequence by pos. 62-76.

c. Double spaced.

6. NUMBER OF COPIES AND DISTRIBUTION

One copy to Transportation and Shipping Division, DS/T.

7. PROCEDURE

Recipients will review the tracer request listing and take action in accordance with appendix E-034 P.

```

APPENDIX F-36

LOCATOR SUBRECORD PRINT - REPLY TO ACTION CODES

1. PURPOSE

To provide location data from the locator subrecord for special reviews, audits, inspections.

2. ORIGIN

Produced during the processing depicted by appendix D-23.

3. FREQUENCY

Daily when data is requested by input of a ZBJ card with appropriate action code.

4. DATA ELEMENTS

a. Report header line which includes:

(1) Report Number (F-36)

(2) Title

(3) FRC - Functional Routing Code

(4) Section Number

(5) Date - Month, day, year, and Julian date

(6) Page Number

b. Data Elements:

(1) NSN - Stock Number

(2) COND - Condition Code

(3) TYPK - Type Pack Code

(4) TYPLOC - Type Location Code

(5) DATEPK - Date of pack or date of establishment

(6) TYPSTG - Type of Storage Code

(7) WHSLOC - Warehouse Location

(8) INSPDATE - Date of Next Inspection

(9) UPK - Unit Pack

(10) LCNO - Lot/Contract number

(11) LCIND - Lot/Contract number indicator

(12) PREDOC - Predocumentation Flag

(13) CAGE - Contractor and Government Entity Code

(14) LDC - Lot Date Code

5. DATA ORGANIZATION

a. Report header data on first line, detail data on second, and subsequent lines.

b. Report is sequenced by stock number. Multiple locations per page for Action Code FF or single location per page for Action Code FG.

6. NUMBER OF COPIES AND DISTRIBUTION

Two copies. Original to inquiry initiator as indicated by Functional Routing Code (FRC), copy to MOWASP Data Control Branch, Management Support Office, Directorate of Storage and Transportation.

7. PROCEDURE FOR REVIEW AND PROCESSING

a. Conduct Inventory or Inspection contingent upon purpose for which inquiry was made.

b. Initiate desired correction if applicable.

APPENDIX F-37

LOCATOR RECORD PRINT

1. PURPOSE

Provide all item locator data from the basic and subrecords for special reviews, surveys, and so forth, of stock numbers identified in card input.

2. ORIGIN

Produced as a result of processing an inquiry card, Item Locator Record, appendix B-79, with Action Code FE to FC as depicted in appendix D-23.

3. FREQUENCY

Upon submission of an inquiry card, Item Locator Record.

4. DATA ELEMENT

a. Part 1 Locator Record Print - Reply to Action Code FE

b. Part 2 Item Analysis Report - FSC

c. Report Header Line which includes:

(1) Report Number (F-37)

(2) Report Title

(3) Functional Routing Code

(4) Section Number

(5) Date: Month, day, year, and Julian date

(6) Page Number

d. Data Elements (First heading line):

(1) NSN - National Stock Number

(2) UI - Unit of Issue

(3) NOMEN - Nomenclature/Item Description

(4) NMFC - National Motor Freight Classification Code

(5) LTL - Freight Rate LTL Code

(6) PHY SEC - Physical Security Code

(7) NMFC SFX - National Motor Freight Classification Code Suffix

(8) LCL - Freight Rate LCL Code

(9) DE-MIL - Demilitarization Code

(10) WATER COM - Water Commodity Code

(11) Air COM - Air Commodity Code

(12) AIR CRGO - Air Cargo Dimension Code

(13) SIT - Storage-In-Transit Privilege Code

(14) UNIT WEIGHT - Unit Weight

(15) UNIT CUBE - Unit Cube

(16) SSL - Shelf-Life Indicator Code

(17) POP GRP - Popularity Group Code

(18) INV EX - Inventory Category Exception Code

(19) HSCC - Hazardous Storage Compatibility Code

(20) SPR - Special Requirements Code

(21) MGR - Commodity Manager Code

(22) INVENTORY - Inventory

(a) FG - Inventory Flag

(b) COFF - Cutoff Date

(23) DEMANDS - Demands

(a) MOS - Months of Demand Data

(b) AVG - Average Monthly Demand

c. Data Elements (Second heading line):

(1) COND - Condition Code

(2) TYPK - Type Pack Code

(3) TYPLOC - Type Location Code

(4) DATEPK - Date of Pack (or date of record establishment)

(5) TYPSTG - Type of Storage Location Code

(6) WHSLOC - Warehouse Location Code

(7) INSPDATE - Date of Next Inspection

(8) UPK - Unit Pack

(9) LCNO - Lot/Contract Number

(10) LCIND - Lot/Contract Indicator

(11) PREDOC - Storage Item Change Card Predocumentation Interval.

(12) CAGE - Contractor and Government Entity Code

(13) LDC - Lot Date Code

5. DATA ORGANIZATION

a. Report heading data on the first line, detailed column heading on the second and third lines.

b. Sequence: Stock Number; Multiple Stock Numbers per page for Action Code FE; multiple lines per page for Action Code FC.

c. Page break on Functional Routing Code.

d. Part 1 will reflect all inquiries by Stock Number.

e. Part 2 will reflect all inquiries by Supply Class.

6. NUMBER OF COPIES AND DISTRIBUTION

Two copies. Original to inquiry initiator as indicated by Functional Routing Code (FRC), copy to MOWASP Data Control Branch, Management Support Office, Directorate of Storage and Transportation.

7. PROCEDURE

The organizational element which initiated the request for this data will accomplish necessary actions and then destroy the report.

```

APPENDIX F-38

WORKLOAD FORECAST

1. PURPOSE

To provide a listing of the workload released and remaining in the workload bank which will be reviewed by the DS/T to request workload for the next scheduled document release date, and to determine resource requirements to accomplish workload.

2. ORIGIN

Produced as a result of the process depicted in appendix D-26.

3. FREQUENCY

Daily upon the merging of new input with the previous workload already contained on the Consolidation File.

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-38)

(2) Title

(3) Functional Routing Code

(4) Section

(5) Date - Month, day, year, and Julian date

(6) Page number

NOTE: If workload pull cards are not used during a workload pull or they are invalid, a message will appear on the first page of the Workload Forecast (F-38) Reading "No Workload Pull Cards were considered during this Workload Pull". If used, the ZBL image appears on the first page with the following Data Elements.

b. Data Elements, ZBL IMAGE

(1) DIC - Represents the Document Identifier Code ZBL of the Workload Forecast Card, appendix B-98.

(2) DRO CODE - Indicates if additional workload is to be pulled from Disposal Release Orders only.

(3) LI - Indicates the additional line items to be pulled in addition to the normal release workload, i.e., 00006.

(4) WHSE AREA - Indicates the affected warehouse areas from which the additional workload is to be pulled, i.e, F.

(5) PDT - Indicates the Planned Date to transportation from which the additional workload is to be pulled, i.e., 329.

(6) GEO AREA - Indicates the affected Geographical Area Code from which the additional workload is to be pulled.

(7) CONSIGNEE - Indicates the customer for which the workload is to be pulled.

(8) PROJECT - Indicates the Special Project Code for which workload is to be pulled.

(9) DEST - Indicates the Common Destination AAC for which workload is to be pulled.

(10) FRC - Indicates the Functional Routing Code of the Originator.

(11) NSN - Indicates the stock number under inventory for which the MROs are to be released.

(12) ICOF - Inventory Cutoff Date MROs (passed DRD) for this cutoff date are to be released.

(13) ACT CDE - Indicates the appropriate workload Request Action Code contained in appendix A-42, i.e., CQ.

c. Data Elements Part 1

WAREHOUSE

(1) Same data elements as paragraph 4a (Header Line).

(2) TODAY - Julian date

(3) PDT (Julian date)

(4) RELEASED

(5) PDT (Julian date) 9 columns

(6) AREA TOTAL indicates the total for the PDT, line items and weight. (Since current dates workload will show as released on report, it will not be included in totals.)

(7) Warehouse Area

(8) Geographic Area

WAREHOUSE SUMMARY

(1) Same data elements as paragraph 4a (Header Line)

(2) TODAY - Julian Day

(3) PDT - Julian Date

(4) RELEASED

(5) PDT - (Julian Date) 9 columns

(6) AREA TOTAL - Indicates the total for the PDT, line items and weight.

(7) WAREHOUSE SUBTOTALS

(8) WAREHOUSE AREA

(9) SHIPMENT UNIT DATA - Indicates the number of line items and weight for each PDT for all MROs and DROs.

(10) WAREHOUSE TOTALS - Indicates the total line items and weight for all warehouse areas.

GEO AREA AND DEST TOTALS

(1) Same data elements as paragraph 4a (Header Line).

(2) TODAY - Julian date

(3) PDT (Julian date)

(4) RELEASED

(5) PDT (Julian date) 9 columns

(6) BANK TOTAL: Represents the total workload for the next 9 PDTs.

(7) Geographic Area indicates the geographic area from which workload will be pulled.

(8) DEST indicates the Common Destination AAC from which workload will be pulled.

(9) Shipment Unit Data indicates the line items and weight for each SPLC in a geographical area for each PDT.

(10) Total indicates the total line items and weight for all PDTs applicable to a specific geographic area.

SUMMARY DESTINATION

(1) Same data elements as paragraph 4a (Header Line)

(2) TODAY - Julian Day

(3) PDT - Julian Date

(4) RELEASED

(5) PDT - (Julian Date) 9 columns

(6) BANK TOTAL - Represents the total workload for the next 9 PDTs

(7) DESTINATION AND AREA SUBTOTALS

(8) GEOGRAPHIC AREA

(9) SHIPMENT UNIT DATA - Indicates the number of line items and weight for each PDT for all MROs and DROs.

(10) DESTINATION AND AREA TOTALS - Indicates the total line items and weight for all geographic areas.

IPG 3 TOTALS

MROs 4 days or less to MDT indicates data which includes the workload by PDT remaining in the Workload Bank, by number of line items and weight for which four days or less of supply system time remain before the MDT. This includes data released in current cycle.

d. Data Elements Part 2

Part 2 is the same as part 1 except MROs is replaced by DROs, and there is no reference to DROs 4 days or less to MDT.

5. DATA ORGANIZATION

a. Prepared with a cover page which contains the valid ZBL card(s) used to effect the workload pull or a message that no workload pull cards were considered in the preparation of this report. Following the cover page, the report is prepared in three sections to provide a good indicator of the workload from three perspectives. Warehouse contains a Workload Forecast of released MROs and for the next 9 PDTs by geographic and warehouse areas and a total workload picture for all PDTs and warehouse areas broken down by line items and weight. GEO area and Dest totals contain Workload Forecast for the same PDTs by Destination and Geographic Area broken down by line items and weight and totaled by PDT and Geographic Area. Section 3 contains a Workload Forecast for the same PDTs broken down by line items and weight totaled for all PDTs at depot level.

b. Warehouse has a summary which will display for each warehouse area the quantity of line items and weight released that day and those retained in the bank for the next nine PDTs, and also the total number of line items and weight available for that warehouse area. In addition, a grand total line of all warehouse areas is shown.

c. Geo Area and Dest Totals also has a summary which will display for each geographic area the same type of information described in paragraph 5b above.

d. IPG 3 totals - MROs 4 days or less to MDT contains a resume of the total number of IPG III line items remaining in the bank with four days or less of supply system time remaining before MDT processing occurs:

e. All Warehouse and Geo Area and Dest Totals shows the same type of Header Line.

f. Page break on end of each Warehouse and Geo Area and Dest Totals and summary.

g. Sequence: Workload and summary Pull (first page) by DIC, Warehouse Area and Geographic Area, Warehouse and summary by Warehouse Area, Geographic Area and PDT. Geo Area and Dest Totals and summary by Geographic Area Destination and PDT.

h. Single space for detail data, double space upon change of detail accumulation.

6. DISTRIBUTION AND RETENTION

Six copies. Original to the Workload Control Branch, Operations Control Office, copies to Warehousing Division, Shipping Division, Transportation and Traffic Management Office and other organizational elements of the Directorate of Storage and Transportation. Retain for two days and then destroy.

7. PROCEDURES FOR REVIEW AND PROCESSING

a. Workload Control Branch has the major responsibility for review of the F-38 report and taking necessary actions as a result of the review.

(1) Reviewed each day for the purpose of workload management within the depot capability. If it is determined that additional workload can be moved forward, workload Pull Cards DIC ZBL, appendix B-98 are prepared and forwarded to Data Systems for processing the additional workload along with the normally scheduled workload. In order to meet processing times, particular attention to weekend and holiday workload management is most important. (See appendix E-098 P, which outlines detail procedures for processing the Workload Request Card (appendix B-98).)

(2) Report will also be used to review advance workload in the bank and to plan manpower and materiel requirements in advance of Planned Date to Transportation (PDT).

b. Other organizational elements outlined in paragraph 6 above will receive a daily Workload Forecast Report, appendix F-38.

(1) Review will be made of the report, and determination made as to the impact of workload report on their operations.

(2) Necessary planning for manpower, equipment and materiel requirements will be accomplished in coordination with other appropriate organizational elements.

8. EXTENDED BANKING OF MROS

a. When a depot elects to invoke the extended banking of MROs the Workload Forecast, F-38 part 2, will be prepared in addition to the F-38 part 1.

b. When the option to extend banking is initiated, a conversion process within the banking program will be run which will change the PDT to the MDT for MROs remaining in the MRO bank. Therefore, the F-38 parts 1 and 2 will reflect a PDT that is equal to the MDT. New MROs entering the banking process will also be assigned a PDT equal to the MDT.

c. Data elements on the two reports will be identical except part 2 will reflect daily entries by PDT for the current day minus 1 through 9. MROs that remain in the bank longer than 9 days will be accumulated and totaled in the last PDT column of the report. The F-38 part 2 should be retained daily if MROs are held beyond 10 days if workload pull options associated with PDT will be used to release workload.

APPENDIX F-39

TRANSPORTATION UNIT SUMMARY LISTING

1. PURPOSE

To provide DS/T with a listing of Transportation Units (TUs) which have been released to storage operations but are not ready to be offered to the transportation element. This listing does not include computer determined Parcel Post Units.

2. ORIGIN

Produced as a result of each Materiel Release Order processing cycle as depicted in appendix D-98.

3. FREQUENCY

Cyclic

4. DATA ELEMENTS

a. Report header line which includes:

(1) Report Number (F-39)

(2) Title

(3) FRC - Functional Routing Code

(4) Section

(5) Date: Month, day, and year (01.02.75) and Julian date

(6) Pages numbered sequentially when the report contains more than one page for a TU.

b. Data Elements:

(1) DEST - Destination Cross-Reference from Activity Address File.

(2) TU NUMBER - Transportation Unit number consisting of the SPLC and a 5-digit, computer assigned, serial number.

(3) TOTAL SU - Total number of Shipment Units consolidated into this TU.

(4) TOTALS LINES - Total number of MRO Line Items in this TU.

(5) TOTAL WEIGHT - Total estimated weight of all MROs in this TU, to the nearest pound rounded to the next higher whole number.

(6) TOTAL CUBE - Total estimated cube of all MROs in this TU, to the nearest foot rounded to the next higher whole number.

(7) TU ASSY PT - Assembly Point

(8) SU NR. - Shipment Unit Number(s) assigned to this TU and listed in ascending sequence.

(9) CONSIGNEE - The Activity Address Code of the recipient of the materiel contained in the corresponding SU.

(10) IPG - Issue Priority Group assigned to the corresponding SU.

(11) WATER COMMODITY - Water Commodity Code for the materiel in the corresponding SU.

(12) SPEC RQMT - Special Requirement Code (appendix A-81) for the materiel in the corresponding SU.

(13) PROJECT - MILSTRIP Project Code assigned to the corresponding SU.

(14) MED - MEDALOC Eligible.

(15) SIT - Storage In-Transit Privilege Code (appendix A-51) applicable to the materiel in the corresponding SU.

(16) W.H. AREA - Warehouse Area (or Stock Location Group) Code (appendix A-56) for the materiel in the corresponding SU.

(17) PDT - Planned Date to Transportation

(18) MDT - Mandatory Date to Transportation

(19) NR LINES - Number of MRO Line Items in the corresponding SU.

(20) WEIGHT - Estimated weight of the corresponding SU.

(21) CUBE - Estimated cube of the corresponding SU.

(22) S/U ASSY PT.

(23) ALTERNATE SHIPMENT UNIT ASSEMBLY AREA - This field is printed when all lines in the SU have a prime location with the first two digits equal; otherwise, left blank.

(24) NMFC-SFX - NMFC and the NMFC Suffix Code for the highest rated line item in the Shipment Unit (appendix A-49).

5. DATA ORGANIZATION

a. Report Header data on first line; TU Summary Data/paragraph 4b(1) through 4b(7) on second line; SU detail data (paragraph 4b(8) through 4b(12) on third and subsequent lines).

b. Page break - on change of TU Number.

c. Report will be double spaced.

6. NUMBER OF COPIES AND DISTRIBUTION

Three copies. Original and one copy to Shipment Planning Branch, Transportation and Traffic Management Office; copy to Shipping Documentation Branch, Shipping Division, DS/T.

7. PROCEDURES FOR REVIEW AND PROCESSING

The TU Summary Listing will be reviewed for possible transportation release requirements, in conjunction with the Shipment Planning and Movement Support Documents (appendix F-79, DLA Form 674). Refer to appendices E-016 P and E-039 P.

APPENDIX F-40

SHIPMENT UNIT LINE ITEM INQUIRY ANSWER

1. PURPOSE

To provide, on an exception basis, shipping data for individual lines of a shipment unit or for an entire shipment unit. Also used to exercise total control of single line item during picking, packing, and assembly.

2. ORIGIN

Produced as a result of input of a ZBM card (appendix B-99) with Action Code DN and processed as depicted in appendix D-28.

3. FREQUENCY

Daily, as required.

4. DATA ELEMENTS

a. Report header line which includes:

(1) Report Number (F-40)

(2) Title

(3) FRC - Functional Routing Code

(4) Section Number

(5) Date - Month, day, year, Julian date

(6) Page Number

b. Data Elements:

(1) DOCUMENT NO. -

(2) SFX - Suffix Code

(3) SHIPMENT UNIT NO - Shipment Unit Number

(4) LINE ITEM - Line Item Number

(5) S - Status of Line Item

(6) MDE SHP - Mode of Shipment

(7) NSN - National Stock Number

(8) CND - Condition Code

(9) QUANTITIES

(a) ORDARD - Quantity Ordered

(b) OPEN - Quantity Remaining Open (Not Offered)

(c) OFFRD - Quantity Offered (Not Shipped)

(d) SHIPD - Quantity Shipped

(e) DENID - Quantity Denied

(f) CANCL - Quantity Canceled

(10) ACT - Action Code

(11) WEIGHT - Weight of Shipment Unit Line Item

(12) CUBE - Cube of Shipment Unit Line Item

(13) PRIME LOCATION - Warehouse Location

(14) IPG - Issue Priority Group

(15) PDT - Planned Date to Transportation

(16) MDT - Mandatory Date to Transportation

(17) CLR - Parcel Post Automatic Clear Date

(18) HLD - MILSTAMP or Local Hold Code

5. DATA ORGANIZATION

a. Report header data on first line, column headings on second and third line, detail data on subsequent lines.

b. Sequenced by FRC, Shipment Unit Number and Line Item Number.

c. Page break by FRC.

6. NUMBER OF COPIES AND DISTRIBUTION

One copy to inquiry initiator as indicated by FRC.

7. PROCEDURE FOR REVIEW AND PROCESSING

a. Data will be obtained to control single lines of a shipment unit during picking, packing, and assembly operations or provide shipment status. This

detail is to be obtained on an exception basis only when control cannot be exercised through the "Summary Analysis of Released Workload" Reports.

b. This report provides information on the current status of a shipment unit or single line item. The information may be used to correct and reenter an MRO Control/Status Request Card, appendix B-99, a Shipment Unit Completion Card, appendix B-101, or a Government Bill of Lading Closeout Card, appendix B-128 IAW appendices E-099 P, E-101 P or E-128 P.

c. The report may be destroyed by the applicable FRC upon completion of the action which initiated the requirement for the Shipment Status Inquiry.

APPENDIX F-41

SUMMARY ANALYSIS OF RELEASED WORKLOAD
PART 1 (WAREHOUSE)

1. PURPOSE

To provide a listing of all MRO/DRO Shipment Units within a warehouse area for control purposes during picking, packing and assembly operations.

2. ORIGIN

This listing is produced during the process depicted by appendix D-98 for generation of shipment documentation.

3. FREQUENCY

With each release of materiel.

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-41)

(2) Title

(3) FRC - Functional Routing Code

(4) Section Number

(5) Date - Month, day, year and Julian date

(6) Page Number

b. Data Elements, Part 1 - MROs:

(1) SHIPMENT UNIT KEY DOCUMENT NO - Document number with earliest RDD or lowest document number (if no RDD) in the Shipment Unit. (If a suffix code is not contained in the last position of the key document number, an X will appear in that position.)

(2) SHIPMENT UNIT NO - Computer assigned serial number to each Shipment Unit for sequential control during processing and file update.

(3) WHSE - Warehouse - Three digit warehouse area where stock is located. (Not printed for line items with no locations.)

(4) SUB GEO AREA or LOGAIR Subgeographical Area or LOGAIR - From consignee address file.

(5) MODE OF SHIP - Mode of Shipment - G, H, 6, and 7 (parcel post) J and 5 (Small Package Carrier) all other (freight).

(6) LINE ITEMS - Total lines on the Shipment Unit for this warehouse area.

(7) WEIGHT - Total estimated weight on the Shipment Unit for this warehouse area.

(8) CUBE - Total estimated cube on the Shipment Unit for this warehouse area.

(9) IPG - Issue Priority Group - From key document.

(10) PDT - Planned Date to Transportation - From key document.

(11) MDT - Mandatory Date to Transportation - From key document.

(12) CLR - Automatic Parcel Post Clear Date - From key document.

(13) PARTIAL OR COMPLETE - Indicates whether this warehouse area has the total lines of the Shipment Unit (complete) or other warehouse areas are involved (partial).

(14) SUB TOTALS - Subtotals by 3-digit warehouse area (total report line entries, line items, weight and cube).

(15) TOTALS - Totals, all warehouse areas.

(16) If extended weight or cube exceeds field, an asterisk will appear adjacent to the appropriate weight or cube entry.

c. Data Elements, Part 2 - DROs.

Same as listed for part 1.

5. DATA ORGANIZATION

a. Report Header data on first line, detail data on the second and subsequent lines arranged in 13 columns under the data element headings identified in paragraph 4b for both parts.

b. Page break after each 3-digit warehouse area.

c. Sequence by warehouse area, Major, based on first; first and second; or first, second, and third digit of Physical Location Codes from Warehouse Selection Options (table 04 appendix B-66, part D) for Reports and Shipment Unit Number.

6. DISTRIBUTION AND RETENTION

Five copies. Original to Workload Control Branch, Operations Control Office, copies to Area Control Branch(s), Warehousing Division, DS/T. Utilized for purposes detailed in paragraph 7, then destroyed.

7. PROCEDURES FOR REVIEW AND PROCESSING

The Workload Control Branch and the Area Control Branch(s) will utilize this listing as outlined below. Other elements not indicated may use this listing as a management tool as applicable to their operations.

a. Workload Control Branch will:

(1) Review report to determine workload released to warehouse area(s).

(2) Based on review of report, utilize the information in conjunction with preparation of the Workload Request Card (appendix E-098 P).

(3) Extract pertinent statistical data from listing as required for reports.

(4) Coordinate additional manpower and equipment requirements with Area Control Branches.

b. Area Control Branch will:

(1) Review listing of released workload and determine impact of workload on the warehouse areas.

(2) Determine, based on review, if additional manpower and equipment is required or whether it is necessary to move personnel and equipment within warehouse areas to accomplish workload in required timeframes.

(3) Determine assembly point for those shipment units indicated on the report as being partially assigned for processing to multiple warehouse areas. This action will normally be accomplished only when, due to weight and cube criteria, it is determined that shipment will be outloaded directly from the assembly point.

(4) Utilize listing for control purposes during picking, packing, and assembly operations.

APPENDIX F-42

SUMMARY ANALYSIS OF RELEASED WORKLOAD - PART 2 (TOTAL)

1. PURPOSE

To provide overall control of shipping units being assembled in various warehouses, access manpower and equipment requirements and designate final assembly area prior to release to transportation.

2. ORIGIN

Prepared during the MRO documentation process as depicted in appendix D-98.

3. FREQUENCY

With each release of MROs.

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number

(2) Title

(3) Functional Routing Code

(4) Section Number

(5) Date: Month, day, year, and Julian date

(6) Page Number

b. Data Elements:

(1) SHIPPING UNIT KEY DOCUMENT NO - Document number with earliest RDD within shipping unit. (If an actual suffix is not contained in the last position of the document number, an X will be printed in that position.)

(2) SHIPMENT UNIT NO -

(3) WHSE - Three digit code where stock will be picked. This code is left blank to identify those lines with no locations.

(4) SUB GEO AREA OR LOGAIR - Subgeographic area or Logair Flight number.

(5) MODE OF SHIP - G, H, 6, and 7 (Parcel Post) J and 5 (Small Package Carrier) all other (freight).

(6) LINE ITEMS - Total lines in the SU for this warehouse.

(7) WEIGHT - Total estimated weight for this warehouse.

(8) CUBE - Total estimated cube for this warehouse.

(9) IPG - Issue Priority Code

(10) PDT - Planned Date to Transportation

(11) MDT - Mandatory Date to Transportation

(12) CLR - Automatic Parcel Post Clear Date

(13) SPP REQM - Special Requirement Code

(14) W/H AREA - Warehouse Area Code

(15) MED - MEDALOC Eligible

(16) TOTALS - Total line entries reported, line items, weight and cube for each warehouse area.

5. DATA ORGANIZATION

a. Report Header data on 1st line, detail column headings on second and third lines, detail data on subsequent lines arranged in columns under the data element headings identified in paragraph 4b.

b. Sequence by Warehouse Area (Major) and mode of Ship, SU Number, and Warehouse (Minor).

c. Page break on Warehouse Area Code.

6. DISTRIBUTION AND RETENTION

Five copies. Original to Workload Control Branch, Operations Control Office, copies to Area Control Branch(s), Warehousing Division, DS/T. Utilized for purposes detailed in paragraph 7 and then destroyed.

7. PROCEDURES FOR REVIEW AND PROCESSING

a. Utilized by DS/T personnel to maintain control of actions accomplished on all lines of a shipping unit and to control the assembly of shipping units. It is also utilized to determine manhour and equipment requirements for a specific assembly area.

b. Area Control Branch(s) of Warehousing Division and Operations Branch, Shipping Division, are responsible for review of the report; however, other organizational elements may utilize this report as a management tool for planning purposes or statistical data accumulation.

c. Area Control Branch(s) and the Operations Branch will coordinate actions relative to shipping unit(s) assembly points.

(1) Area Control Branch(s):

(a) Review report and determine, based on consignee, weight, cube, and mode of shipment, accumulation, and final assembly area when shipment is to be outloaded on carrier direct from warehouse area(s).

(b) Utilize report to control shipment units being assembled for direct outloading from warehouse area.

(c) Utilize report to ensure action is accomplished on all lines of the shipment unit.

(d) Utilize report to ensure shipment units are completed by the PDT.

(2) Operations Branch:

(a) Review report and determine assembly area for shipment units forwarded from Area Control Branch.

(b) Utilize report to control shipment units as received and assembled.

(c) Utilize report to ensure receipt and assembly of shipment units within allowable timeframes.

(d) Utilize report to ensure all lines of a shipment unit are received.

(e) Utilize report to followup on shipment units not received by PDT.

(f) Utilize report to coordinate actions with Area Control Branch(s) relative to shipment units selected for direct outloading to carrier from warehouse area.

8. DISPOSITION OF REPORT

Listing will be destroyed after all actions have been completed for shipment units listed.

APPENDIX F-43

TRANSPORTATION CONTROL NUMBER/GOVERNMENT BILL OF LADING/COMMERCIAL BILL OF LADING (TCN/GBL/CBL) CROSS-REFERENCE LISTING

1. PURPOSE

To provide a cross-reference from TCN to GBL/CBL/Parcel Post Numbers.

2. ORIGIN

Produced during the processing as depicted by appendix D-87. No input is required.

3. FREQUENCY

Monthly

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-43)

(2) Title

(3) FRC - Functional Routing Code

(4) Section

(5) Date - Month, day, year, and Julian date

(6) Page Number

b. Data Elements:

(1) TRANSPORTATION CONTROL NUMBER

(2) GBL NUMBER - GBL/CBL or Parcel Post Register Number

5. NUMBER OF COPIES AND DISTRIBUTION

Two copies. Original to Shipping Documentation Branch, Shipping Division, copy to Commercial Traffic Branch, Transportation and Traffic Management Office, DS/T.

6. DATA ORGANIZATION

a. See format.

b. TCN - Major sequence

c. GBL/CBL/Parcel Number - Minor sequence

7. REFERENCES

a. Appendix D-87, Monthly MRO History File Analysis.

b. Appendix E-043 P, Processing the TCN/GBL Cross-Reference Listing.

APPENDIX F-44

MRO STATUS SUMMARY LISTING

1. PURPOSE

To provide a daily summary of open line items in DS/T. DS/T will utilize this listing to determine which operational area requires special attention because of the buildup of late or potentially late, line items.

2. ORIGIN

Produced as a result of processing as depicted in appendix D-50.

3. FREQUENCY

Daily

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number

(2) Title

(3) FRC - Functional Routing Code

(4) Section Number

(5) Date (month, day, year and Julian date)

(6) Page Number

b. Data Elements for Part 1 - Warehouse PDT Control:

(1) RIC/DIC - RIC From or DIC if MRO is Disposal Release Order (DIC A5J).

(2) WHSE AREA - Warehouse Area

(3) IPG - Issue Priority Group

(4) DELAY REASON - Delay Reason Code

(5) TRANS HOLD - Transportation Hold Code

(6) Age Categories:

(a) 01 PDT OVER 2 - Line item count with PDT more than 2 days in future.

(b) 02 PDT IN 2 - Line item count with PDT 2 days in future.

(c) 03 PDT IN 1 - Line item count with PDT equal to tomorrow.

(d) 04 PDT TODAY - Line item count with PDT of today.

(e) 05 PAST 01-03 - Line item count 1-3 days past PDT.

(f) 06 PAST 04-10 - Line item count 4-10 days past PDT.

(g) 07 PAST 11-20 - Line item count 11-20 days past PDT.

(h) 08 PAST 21-30 - Line item count 21-30 days past PDT.

(i) 09 PAST 31-45 - Line item count 31-45 days past PDT.

(j) 10 PAST OVER 45 - Line item count over 45 days past PDT.

(7) LINE TOTALS - By IPG and Warehouse Area

(8) TOTALS - All Warehouse Areas

c. Data Elements for Part 2 - Transportation DTT Control:

(1) IPG - Issue Priority Group

(2) DELAY REASON - Delay Reason Code

(3) TRANS HOLD - Transportation Hold Code

(4) Age Categories:

(a) 01-03 - (Reserved for future use).

(b) 04 DTT TODAY - Date to transportation today.

(c) 05 HELD 01-03 - Held 1-3 days.

(d) 06 HELD 04-10 - Held 4-10 days.

(e) 07 HELD 11-20 - Held 11-20 days.

(f) 08 HELD 21-30 - Held 21-30 days.

(g) 09 HELD 31-45 - Held 31-45 days.

(h) 10 HELD OVER 45 - Held over 45 days.

(5) LINE TOTALS - By IPG

(6) TOTALS - All IPGs

5. DATA ORGANIZATION

a. Part 1 - Warehouse PDT Control is based on relationship of line items to the PDT for items not yet offered to Transportation Division.

b. Part 2 - Transportation DDT Control is based on relationship of offered lines to the "Date to Transportation".

c. Page break on Change from Part 1 to Part 2.

d. Page break on RIC/DIC change in part 1.

e. Sequence:

(1) Part 1: RIC/DIC Major, Warehouse Area Intermediate, IPG - Minor.

(2) Part 2: IPG.

f. Totals:

(1) Part 1:

(a) Line totals for all categories requested (horizontal).

(b) Warehouse Area totals by IPG for each category.

(c) Grand totals of each category and line totals.

(2) Part 2:

(a) Line totals for all categories requested (horizontal).

(b) Totals for each IPG and category.

(c) Grand totals of each category and line totals.

6. DISTRIBUTION AND RETENTION

Six copies. Original to shipping Documentation Branch, Shipping Division, copies to Commercial Traffic Branch, Transportation and Traffic management Office; and to Area Control Branch(s), Warehousing Division, DS/T. Listing can be destroyed when action has been completed on all line items listed.

7. PROCEDURE FOR REVIEW AND PROCESSING

The Shipping Documentation Branch, Shipping Division; Commercial Traffic Branch, Transportation and Traffic Management Office; and each Area Control Branch within Warehousing Division, DS/T will review this report for their activity.

a. The shipping Documentation Branch will review appendix F-44 in conjunction with personnel representing the Commercial Traffic Branch and the Warehousing Division to determine the status of the overall late line item situation. Determination will be made as to which detail information is required to be printed out on appendices F-78 and F-87.

b. Shipping Documentation Branch will:

(1) Upon receipt of the MRO Late In-Process Report, appendix F-44, select by action (PDT) for research as follows:

IPG	NUMBER DAYS LATE PAST PDT*
I	3 or more
II	5 or more
III	10 or more

(2) Input an interrogation, appendix B-58 to obtain a MRO Status Detail Listing, part 1, Warehouse PDT Control Listing, appendix F-78 by IPB for the designated ranges subparagraph (1) above.

c. Commercial Traffic Branch will:

(1) Upon receipt of the MRO Late In-Process Report, appendix F-44, select by IPG the lines held in transportation an extended period past the Date to Transportation (DTT) for research as follows:

IPG	NUMBER DAYS HELD PAST DTT*
I	3 or more
II	5 or more
III	10 or more

(2) Input an interrogation, DIC ZUG, appendix B-58 to obtain a MRO Status Detail Listing, part 2, Transportation DTT Control Listing, appendix F-87 by IPG for the designated ranges in subparagraph (1) above.

d. See appendix E-137 P for additional use of report.

*The depot at its discretion may better these timeframes; as they are nominal until exceeded, whereon they are mandatory.

APPENDIX F-45

MONTHLY GBL COST/PAYMENT VARIANCE REPORT

1. PURPOSE

To provide the depots a report of commercial carrier overcharges by dollar amount, GBL number and carrier to allow the depot to identify the overcharges for recoupment.

2. ORIGIN

A comparison of charges paid by the U.S. Army Finance Accounting Center (USAFAC) against charges on GBLs for shipments moving under guaranteed traffic arrangements.

3. FREQUENCY

Monthly upon receipt of the USAFAC data.

4. DATA ELEMENTS

a. Report header line which includes:

(1) Report Number (F-45)

(2) Consignor

(3) Title

(4) Part Number

(5) Date; Month, Day and Year

b. DATA ELEMENTS

(1) Part I, Listing by Dollar Variance by Carrier in GBL Number Sequence.

(a) Dollar Category

(b) SCAC - Standard Carrier Alpha Code

(c) GBL NO - Government Bill of Lading Number

(d) DT SHPD - Julian Date of Shipment

(e) WGT - Weight

(f) MODE - Mode of Shipment Code

(g) DEST - Destination

(h) DT PAID - Date Paid by USAFAC

(i) VOUCHER - Disbursing Voucher Number

(j) STATION - Fiscal Station Number

(k) GT COST - Guaranteed Traffic Cost

(l) USAFAC COST - U.S. Army Finance Accounting Center Cost

(m) AMT - Amount of Variance

(n) TOTALS - Total GBL Numbers and Total Dollar Variance

(2) Part II, Listing by Carrier by Dollar Variance in GBL Number Sequence.

(a) SCAC - Standard Carrier Alpha Code

(b) VARIANCE - Dollar Variance Category (*** indicate assessorial charge)

(c) GBL NO - Government Bill of Lading Number

(d) TOTALS - Total GBL Numbers and Total Dollar Variance for Carrier

(3) Part III, Listing of Supplemental Payments.

(a) GBL NO - Government Bill of Lading Number

(b) DT PAID - Accounting Date Paid

(c) USAFAC COST - U.S. Army Finance Accounting Office Charges Paid

(d) VOUCHER - Disbursing Voucher Number

(e) CARR - Carrier Name

5. DATA ORGANIZATION

a. Header followed by detail data arranged in columns under data element headings, all parts.

b. Page break by part number.

c. Sequence:

(1) Part one by dollar variance amount, carrier within dollar variance and GBL number within carrier.

(2) Part two sequenced by carrier, dollar variance in descending order within carrier and GBL number within carrier.

(3) Part three sequenced by GBL number.

6. DISTRIBUTION

Two copies to the Transportation Division, DS/T.

7. PROCEDURE FOR REVIEW AND PROCESSING

The report provides visibility of carrier overcharges, thereby facilitating collection efforts.

APPENDIX F-46

DISPOSAL SHIPMENT CONFIRMATION FOLLOWUPS

1. PURPOSE

To provide DS/T with a listing of incoming Disposal Shipment Confirmation Followups (AFX, AFZ) from the Defense Reutilization and Marketing Service and related history information.

2. ORIGIN

Produced during the process as depicted in appendix D-51.

3. FREQUENCY

With each production cycle.

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-46)

(2) Report Title

(3) FRC - Functional Routing Code

(4) Section Number

(5) Date - Month, day, year and Julian date

(6) Page Number

b. First Header Line (data elements from AFX/AFZ):

(1) DIC - Document Identifier Code

(2) RIC - Routing Identifier Code

(3) M/S - Media and Status Code

(4) NSN - National Stock Number

(5) UI - Unit of Issue

(6) QTY - Quantity

(7) DOCUMENT NO - Document Number

(8) SFX - Suffix Code

(9) SUP-ADD - Supplementary Address

(10) HOLD-CD - Hold Code

(11) FUND-CD - Fund Code

(12) DISTR-CD - Distribution Code

(13) DT-SH - Date Shipped

(14) PRI-DES - Priority Designator

(15) ADVICE-CD - DRMS Intransit Control Advice Code

c. Second Header Line (history data):

(1) SU - Shipment Unit Number

(2) GBL - Government Bill of Lading

(3) GBL-ID - Government Bill of Lading Identification Code

(4) TCN - Transportation Control Number

(5) DT-SH - Date Shipped

5. DATA ORGANIZATION

a. Data from the DIC AFX/AFZ will appear under the first header line.

b. Related history data will appear under the second header line.

c. Sequence by Document Number.

6. NUMBER OF COPIES AND DISTRIBUTION

One copy to Directorate of Storage and Transportation.

7. PROCEDURE

Recipients will process the Disposal Shipment Confirmation Followups listing in accordance with appendix E-046 P and provide Disposal Shipment Confirmation to the Defense Reutilization and Marketing Service.

APPENDIX F-47

OPEN MRO RECONCILIATION REPORT

1. PURPOSE

This report provides information of open MRO records and is produced in four parts. Part 1, Open History File report lists MRO records open in MRO History File only, not matching open record in MRO Bank, SEAVAN MRO File, Shipment Unit Add-On File or the Shipment Unit File. Part 2, MRO Bank File report lists MRO records in MOWASP MRO Bank or SEAVAN MRO File with no MRO history or out-of-balance record, quantity records unbalanced. Part 3, Shipment Unit Add-On File report lists MRO records open in that file with no MRO history or out-of-balance record, unmatched to History File, History File record closed, document in history has different Shipment Unit Number, quantity unshipped record unbalanced. Part 4, Shipment Unit File report lists MRO records open in that file with no MRO history or out-of-balance record (as part 3).

2. ORIGIN

This report is produced during the run of the Open MRO Reconciliation Section as depicted in appendix D-14.

3. FREQUENCY

Upon request to the Data System Manager.

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-47)

(2) Title

(3) FRC - Functional Routing Code

(4) Section Number

(5) Date - Month, day, year and Julian date

(6) PAGE - Page Number

b. Data Elements:

(1) First Header line

(a) DOCUMENT - Document number

(b) RIC FROM - Routing Identifier Code From

(c) In-the-clear message - i.e., OPEN IN HISTORY ONLY

(2) Second and subsequent line

(a) MRO IMAGE

1. Part 1, 80 pos. replicas of input A5_ to History File.

2. Part 2, 80 pos. replicas of input A5_ to MRO Bank File and History File.

3. Part 3, 80 pos. replicas of input to Shipment Unit File and History File.

4. Part 4, 80 pos. replicas of input to Shipment Unit File and History File.

(b) SU/NO - Shipment Unit Number

(c) SU LI - Shipment Unit Line Item Number

(d) TCN - Transportation Control Number

(e) GBL - Government Bill of Lading Number

(f) PAR - Partial Indicator

(g) HLD - Hold Code

(h) MOD - Mode of Shipment Code

(i) Dates:

1. RECVD - Date MRO received

2. CLOSD - Date MRO closed

3. MDT - Mandatory Date to Transportation

4. OFFRD - Date offered to Transportation

5. SHIPD - Date shipped

6. CN/DN - Date of cancellation/denial action

(j) MGT - Management Code

(k) Quantity:

1. QSHIP - Quantity shipped

2. Q C/D - Quantity canceled/denied

3. QOPEN - Quantity open

(3) S - Status of File

5. DATA ORGANIZATION

a. Part 1, see format

b. Part 2, see format

c. Part 3, see format

d. Part 4, see format

6. NUMBER OF COPIES AND DISTRIBUTION

Two copies. Original to MSO; copy to Shipping Documentation Branch, Shipping Division, DS/T.

7. PROCEDURE FOR REVIEW AND PROCESSING

This report is used by the DS/T to investigate the reason for open MRO line items on MOWASP records, and as an indicator for corrective action to close the record. Refer to appendix E-177 P for related procedures.

APPENDIX F-48

TELEPROCESSING TERMINAL SECURITY VIOLATIONS

1. PURPOSE

To provide a report of security violations on the Harris teleprocessing terminals.

2. ORIGIN

Produced automatically when security on the Harris teleprocessing terminals has been violated.

3. FREQUENCY

Not more often than daily.

4. FORMAT

a. This printout is included in the Report Format File (RFF) as follows:

(1) Header line which is printed at the top of each page.

(a) Report Number (F-48)

(b) Report Title - Teleprocessing Terminal Security Violations

(c) Date - Month, day and year plus Julian date - XX.XX.XX.XXX

(d) Page number

(2) Number of Lines per page (locally assigned)

(3) Spacing (locally assigned)

(4) Captions of data elements

b. Page break - none required

5. SEQUENCE

Entries not identified to operator name will appear at the first of the listing, earliest time first.

a. Major sequence: Organization

b. 1st Intermediate sequence: Operator name

c. 2nd Intermediate sequence: Terminal

d. Minor sequence: Program name

best copy available

6. DATA ELEMENTS

a. ORGN - Organization code of the operator

b. OPERATOR NAME - Self-explanatory

c. TERMINAL - Terminal used at time of violation

d. PROGRAM - Program name used at time of violation

e. PASSWORD - The password the operator attempted to use (will only print when password is not identified to an operator).

f. TIME - Time of day the entry was made

7. DISTRIBUTION AND RETENTION

One copy to the Teleprocessing Security Officer. The listing will be retained as long as determined necessary by the Teleprocessing Security Officer.

8. PROCEDURES FOR REVIEW AND PROCESSING

This listing will be used by the Teleprocessing Security Officer to determine if specific violation trends develop, either by operator or organization. Corrective action may be required, such as additional training for the operator, the organization or for all teleprocessing users.

APPENDIX F-49

TELEPROCESSING TERMINAL ENTRY LOG

1. PURPOSE

To provide a list of teleprocessing entries identified by operator, organization, terminal, program and time by hour of day.

2. ORIGIN

Automatically generated as a result of input by a Harris teleprocessing terminal operator.

3. FREQUENCY

Monthly

4. FORMAT

a. This printout is included in the Reports Format File (RFF) as follows:

(1) Header Line which is printed at top of each sheet.

(a) Report Number (F-49)

(b) Title - Teleprocessing Terminal Entry Log

(c) Date - Month, day and year plus Julian date - XX.XX.XX.XXX

(2) Number of Lines per page (locally assigned)

(3) Spacing (locally assigned)

(4) Captions of data elements

b. In addition, the following is prescribed:

(1) Page break on organization

(2) Required totals are by Terminal, Program, Operator, Time of Day and Grand Total.

5. SEQUENCE

a. Major sequence: Organization

b. 1st Intermediate sequence: Operator

c. 2nd Intermediate sequence: Terminal

d. Minor sequence: Program

6. DATA ELEMENTS

a. ORGN - Organization of the operator

b. OPERATOR NAME - Self-explanatory

c. TRML - Teleprocessing terminal where operator is working

d. PROGRAM - Program name of program being used

e. OPERATOR TOTAL - Total transactions for operator

f. 6-7 - Time of Day

g. 7-8 - Time of Day

h. 8-9 - Time of Day

i. 9-10 - Time of Day

j. 10-11 - Time of Day

k. 11-12 - Time of Day

l. 12-13 - Time of Day

m. 13-14 - Time of Day

n. 14-15 - Time of Day

o. 15-16 - Time of Day

p. 16-17 - Time of Day

q. 17-18 - Time of Day

r. 18-19 - Time of Day

s. 19-20 - Time of Day

t. 20-21 - Time of Day

u. 21-22 - Time of Day

v. 22-23 - Time of Day

w. 23-24 - Time of Day

x. TOTAL - Totals by Program, Terminal and Operator

y. GRAND TOTAL - Totals by Time of Day and Total Entries

7. DISTRIBUTION AND RETENTION

One copy to the Teleprocessing Security Officer. The listing will be retained as long as determined necessary by the Teleprocessing Security Officer.

8. PROCEDURE FOR REVIEW AND PROCESSING

This listing will be used by the Teleprocessing Security Officer for determining trends and identifying usage.

APPENDIX F-50

MANUAL CANCELLATION/FOLLOWUP LIST

1. PURPOSE

To provide a manual review of incomplete MROs/DROs with DP Status Code which have been placed in History and on which a followup or cancellation action is to be processed.

2. FREQUENCY

a. Daily

b. Produced during the processing as depicted by appendix D-57.

3. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-50)

(2) Title

(3) FRC - Functional Routing Code

(4) Section Number

(5) Date - Month, day, year and Julian date

(6) Page number

b. Data Elements:

(1) SU NR - Shipment Unit Number

(2) LI - Line Item Number

(3) DIC - Document Identifier Code

(4) RIC - Routing Identifier Code

(5) M/S - Media Status Code

(6) NSN - National Stock Number

(7) T - Type of Pack

(8) SUB - Submission Time

(9) UI - Unit of Issue

(10) QTY - Quantity

(11) DOCUMENT NO - Document Number

(12) SFX - Suffix Code

(13) SUP/ADR - Supplementary address

(14) SIG - Signal Code

(15) FD - Fund Code

(16) DISB - Distribution Code

(17) PRJ - Project Code

(18) PRI - Priority

(19) RDD - Required Delivery Date

(20) ADV - Advice Code

(21) RIC/F - Routing Identifier From

(22) P - Purpose Code

(23) CD - Condition Code

(24) MGT - Management Code

(25) PRICE - Unit Price

4. DATA ORGANIZATION

The data is organized to reflect the original input of the MRO/DRO received from the DSC and reflects its Shipment Unit and Line Item Numbers.

5. DATA SEQUENCE

Major to Minor is by Shipment Unit Number, Line Item Number, and DIC of appropriate MRO.

6. DISTRIBUTION AND RETENTION

Four copies. To Shipping Documentation Branch, Shipping Division; Shipment Planning Branch, and to Area Control Branch(s). Retain listing for 45 days, then destroy.

7. PROCEDURES FOR REVIEW AND PROCESSING

Used by the Directorate of Storage and Transportation to effect the manual preparation of appropriate Followup and Cancellation Replies which cannot be mechanically generated by the computer.

a. Shipping Document Branch will receive F-50, Manual Cancellation/Followup list, and process as follows:

(1) Match DICs AC6/AC7/ACJ and AF6/AFJ transaction document numbers (pos. 30-44) on the F-50 report with Manual Materiel Release Order Control File documents.

(2) Determine current status of MRO.

(3) If quantity reflected in AC6/AC7/ACJ or AF6/AFJ transaction exceeds original MRO/DRO quantity, prepare "No Record" reply for excess quantity as outlined in appendices E-008 P and E-063 P respectively.

(4) If any quantity of the AC6/AC7/ACJ or AF6/AFJ has been shipped, prepare shipping information as outlined in appendices E-080 P and E-063 P respectively.

(5) If a quantity of an AF6/AFJ transaction is scheduled to be shipped, prepare DIC AE6/AEJ transactions as outlined in appendix E-063 P.

(6) If a quantity of an AC6/AC7/ACJ or AF6/AFJ has been previously canceled or denied, prepare DIC transaction as outlined in appendices E-008 P and E-063 P respectively.

(7) When an AC6/AC7/ACJ transaction is received on a manually controlled MRO document and the manual MRO Control File indicates an open quantity in the shipment process cycle, take action as follows:

(a) Forward a copy of the F-50 report to the applicable element for processing (transactions with a DTT date will be forwarded to shipment Planning Branch and all others will be forwarded to the responsible Warehouse Area Control Branch).

(b) Annotate suspense copy of F-50 report with action taken and date and hold pending receipt of action taken by the responsible element.

(c) If a coded copy of a DD Form 1348-1 (flimsy) is received in indicating shipment and/or denial action on an F-50 cancellation suspensed MRO document, process as follows:

1. Annotate F-50 report with action taken as indicated on DD Form 1348-1 (flimsy).

2. Notify the responsible Storage/Transportation element to discontinue action on the F-50 report for this MRO.

3. Prepare manual confirmation/denial and/or shipment status cards for transceiving.

4. File annotated F-50 report in the manual MRO file.

(d) Receive annotated F-50 reports from the processing elements and take action as follows:

1. Match with suspense copy of F-50 report.

2. Destroy suspense copy.

3. If MRO is canceled (DD Form 1348-1 flimsy attached), prepare local coding data sheet entry in appendix B-81 format, DIC AG6/AGJ, with Status Code BQ in pos. 65-66 (see appendix E-083 P).

4. If MRO could not be canceled (F-50 annotated "unable to stop shipment"), prepare local coding data sheet entry in appendix B-80 format, DIC AU_, with ESD in pos. 57-59. Determine ESD by adding 2 days to current date for IPG I and II MROs and 5 days to current date for IPG III MROs.

5. Annotate F-50 action taken and file in manual MRO file.

b. Shipment Planning Branch will:

(1) Receive F-50 report when DP coded MRO has been offered for shipment.

(2) Research and locate DD Form 1348-1 (flimsy) listed on the F-50 report.

(3) If the MRO has an extended line item value under $25.00, and DIC is AC6 or AC7 every effort will be made to cancel the MRO shipment.

(4) If the MRO has an extended line item value under $200.00 and DIC is AC6 and is being processed for freight shipment, and has been consolidated with other shipments in a module, connex, shipping unit, or other consolidated container or packed in a carrier owned conveyance, process as follows:

(a) Discontinue cancellation action.

(b) Annotate F-50 "Unable to Stop Shipment".

(c) Return annotated F-50 report to Shipping Documentation Branch.

(5) If action outlined in subparagraph b(4) has been taken, or if the MRO line item value is over $25.00, process as follows:

(a) Stop shipment action, withdraw materiel from shipment, if applicable, annotate DD Form 1348-1 (flimsy) "Canceled".

(b) Attach one copy of annotated DD Form 1348-1 to materiel and return to applicable warehouse.

(c) Attach balance of DD Form 1348-1 copies to F-50 report and return to Shipment Planning Branch.

c. Warehouse Area Control Branch will:

(1) Receive the F-50 cancellation request when materiel has not been offered to the Transportation Officer.

(2) Research and locate DD Form 1348-1 listed on the F-50 report.

(3) If the MRO to be canceled has a line item value under $25.00, the DIC is AC6, and has been entered into the parcel post line, take action as outlined in subparagraphs b(4)(a), (b), and (c).

(4) If action outlined in subparagraph c(3) has not been taken or if the MRO line item value is over $25.00, or is DIC AC7 process IAW subparagraphs b(5)(a), (b), and (c).

(5) Receive any materiel with copy of DD Form 1348-1 marked "canceled," place materiel in stock and destroy copy of DD Form 1348-1.

d. See appendix E-123 P for related procedures.

APPENDIX F-51

EMERGENCY ITEM LOCATOR RECORD LISTING

1. PURPOSE

To provide emergency capability for processing Material Release Orders and Receipts.

2. ORIGIN

Generated during processing depicted by appendix D-64.

3. FREQUENCY

As required for operational purposes; as specified in Field Activity War and Emergency Support Plans, Annexes N and P. CPO tapes, if prepared, may be stored until circumstances warrant printout of the listing.

4. DATA ELEMENTS

a. Report header line which includes:

(1) Report Number (F-51)

(2) Title

(3) Section Number

(4) Date - Month, day, year, and Julian date

(5) Page Number

b. Data Elements (First heading line):

(1) NSN - National Stock Number

(a) FSC - Federal Stock Class

(b) NIIN - National Item Identification Number

(2) MGR - Commodity Manager Code

(3) UI - Unit of Issue

(4) ICD

(a) Type of Item Code

(b) Transportation Compatibility Code

(c) Transportation Density Code

(5) NOMEN - Nomenclature

(6) A CAR - Air Cargo Dimension Code

(7) AIR COM - Air Commodity Code

(8) WATER COM - Water Commodity Code

(9) SPEC RQMT - Special Requirement Code

(10) MH STD - Manhour Standard Application

(11) NMFC - National Motor Freight Classification Code

(12) SFX - National Motor Freight Classification Code Suffix

(13) LTL - Freight Rate LTL Code

(14) LCL - Freight Rate LCL Code

(15) SIT - Storage In-Transit Privilege Code

(16) UCUBE - Unit Cube

(17) UWT - Unit Weight

(18) SSL IND - Shelf-Life Code

(19) DM CD - Demilitarization Code

(20) PHSEC - Physical Security Code

(21) POP GP - Popularity Group Code

(22) MOS DEM - Months Demand

(23) AVG DEM - Average Demand

(24) INV EX - Sample Inventory Category Code

(25) INV FLG - Inventory Flag

(26) INV COFF - Inventory Cutoff

c. Data Elements (Second heading Line):

(1) COND - Condition Code

(2) TYPK - Type Pack Code

(3) TYLOC - Type Location

(4) DATEPK - Date of Pack (or date of record establishment)

(5) TYSTG - Type of Storage Location Code

(6) WHSLOC - Warehouse Location

(7) INSPDTE - Date of Next Inspection

(8) UPK - Unit Pack

(9) LCNO - Lot/Contract Number

(10) LCIND - Lot/Contract Number

(11) PREDOC - Storage Item Change Card Predocumentation Interval

(12) CAGE - Contractor and Government Entity Code

(13) LOC - Lot Date Code

5. DATA ORGANIZATION

a. Report header data on the first line, detail column heading on the second and third lines.

b. Sequence by NSN

c. Page break on FSC

6. NUMBER OF COPIES AND DISTRIBUTION

Four copies. Original to security area. Copies to MOWASP Data Control Branch, MSO; and Warehousing Division, DS/T.

7. PROCEDURE

a. CPO tapes, microfilm, and/or listings of the Emergency Item Locator Record will be retained for emergency use, to assign location data for Materiel Release Orders and to locate receipts.

b. The indicator for "computer out to microfilm" (COM) may be added to the Reports Format File (RFF) if microfilm mode of ouput is desired. MOWASP will produce a CPO tape that may be input to COM equipment.

APPENDIX F-52

ITEM LOCATOR TRANSACTION RECORD

1. PURPOSE

Provide current item locator data for emergency conditions and enable research of transactions.

2. ORIGIN

Produced during processing depicted in D-64.

3. FREQUENCY

Biweekly (Cumulative to date)

4. DATA ELEMENTS

a. Report header line which includes:

(1) Report Number (F-52)

(2) Title

(3) Section Number

(4) Date - Month, day, year, and Julian date

(5) Page Number

b. Data Element (First header line):

(1) NAT STOCK NUMBER - National Stock Number

(a) FSC - Federal Supply Class

(b) NIIN - National Item Identification Number

(2) MGR - Commodity Manager Code

(3) UI - Unit of Issue

(4) ICD

(a) Type of Item Code

(b) Transportation Compatibility Code

(c) Transportation Density Code

(5) NOMEN - Nomenclature

(6) A CAR - Air Cargo Dimension Code

(7) A COM - Air Commodity Code

(8) WCOM - Water Commodity Code

(9) SP RQMT - Special Requirement Code

(10) MH STD - Manhour Standard Application Code

(11) NMFC - National Motor Freight Classification Code

(12) SFX - National Motor Freight Classification Code Suffix

(13) LTL - Freight Rate LTL Code

(14) LCL - Freight Rate LCL Code

(15) SIT - Storage In-Transit Privilege Code

(16) UCUBE - Unit Cube

(17) UWT - Unit Weight

(18) SSL IND - Shelf-Life Code

(19) DM CD - Demilitarization Code

(20) PH SEC - Physical Security Code

(21) POP GP - Popularity Group Code

(22) MOS DEM - Months Demand

(23) AVG DEM - Average Demand

(24) INV EX - Sample Inventory Category Code

(25) INV FLG - Inventory Flag

(26) INV COFF - Inventory Cutoff

c. Data Elements (Second heading line):

(1) COND - Condition Code

(2) TYPK - Type Pack Code

(3) TYLOC - Type Location Code

(4) DATEPK - Date of Pack (or date of record establishment)

(5) TYSTG - Type of Storage Code

(6) WHSLOC - Warehouse Location

(7) INSPDTE - Date of Next Inspection

(8) UPK - Unit Pack

(9) LCNO - Lot/Contract Number

(10) LCIND - Lot/Contract Indicator

(11) PREDOC - Storage Item Change Card Predocumentation Interval

(12) CAGE - Contractor and Government Entity Code

(13) LOC - Lot Date Code

5. DATA ORGANIZATION

a. Report header data on the first line, detail column heading on the second and third lines.

b. Sequence by NSN.

c. Page break on FSC.

6. Only changes in the following elements will cause printout of F-52 Transaction Record, since these are the only elements considered essential for the intended purpose of this report.

a. First header line elements:

(1) National Stock Number

(2) Unit of Issue

(3) Air Commodity Code

(4) Water Commodity Code

(5) Special Requirements Code

(6) National Motor Freight Classification Code

(7) NMFC Suffix Code

(8) Storage In-Transit Privilege Code

(9) Physical Security Code

b. Second header line elements:

(1) Condition Code

(2) Type Pack Code

(3) Date of Pack/Expiration

(4) Warehouse Location

7. NUMBER OF COPIES AND DISTRIBUTION

Four copies. Original to security area. Copies to MOWASP Data Control Branch, MSO; and Warehousing Division, DS/T.

8. PROCEDURE

Copies will be retained for emergency use. Under emergency conditions, Materiel Release Orders will be screened against the emergency listing to obtain necessary data. Listings would also be utilized to locate receipts.

```

APPENDIX F-53

LOCATION SURVEY ANALYSIS REPORT

1. PURPOSE

Analyze the results of location survey by computer and furnish to management.

2. ORIGIN

Prepared as a result of input of DIC ZEV IAW appendix D-35.

3. FREQUENCY

Upon completion of each survey of item locator record.

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-53)

(2) Title

(3) Product Control Number

(4) Functional Routing Code

(5) Section Number

(6) Date - Month, day, year and Julian date

(7) Page Number

b. First header line:

(1) SRV NO - Survey Number.

(2) WHSE - Warehouse - This may be the warehouse or building number or warehouse section or area.

(3) TOTAL LOCATIONS - Total locations surveyed

(4) NO STOCK IN LOC - No stock in location

(5) LOCATIONS ADDED

(6) Errors or changes in each of the following data elements (totals only):

(a) STOCK NO - Stock Number

(b) COND CODE - Condition Code

(c) UNIT OF ISSUE

(d) UNIT OF PACK

(e) TYPE OF PACK

(7) TOTAL ERRORS - Total number of errors (all types)

(8) TOTAL LOC W/ERRORS - Total locations with errors

(9) ERROR PERCENT - Total number of errors divided by total number of locations surveyed.

5. DATA ORGANIZATION

Major sequence location (building, warehouse and section or area if desired). Double spaced, page break by survey number.

6. NUMBER OF COPIES AND DISTRIBUTION

Four copies. Original and one copy to Operations Control Office; two copies to MSO, DS/T.

7. PROCEDURE FOR REVIEW AND PROCESSING

a. Analyze to determine point(s) of greatest error rate or trends from previous reports.

b. Initiate corrective action.

c. See appendix E-089 P for related procedures.

NOTE: This report format will also be utilized for preparation when sample surveys are performed from materiel and location and compared to item locator record.

8. RETENTION PERIOD

Output will be reviewed and utilized for purposes expressed above and then destroyed.

APPENDIX F-54

NO LOCATOR RECORD ON INQUIRY

1. PURPOSE

To provide a listing of Locator Inquiries for specific stock numbers (with Action Codes FE, FF, and FG) which are not on the Locator File.

2. FREQUENCY

Cyclic upon input of ZBJ Card, appendix B-79.

3. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-54)

(2) Report Title

(3) FRC - Functional Routing Code

(4) Section Number

(5) Date - Month, day, year, and Julian date

(6) Page Number

b. Data Elements:

(1) Information Message

(2) Data from Inquiry Card

(a) Document Identifier Code

(b) Stock Number

(c) Functional Routing Code

(d) Action Code

4. DATA ORGANIZATION

The report will be a message and printout of the basic inquiry. Page break upon change of FRC. Printout is double spaced.

5. DATA SEQUENCE

See format.

6. NUMBER OF COPIES AND DISTRIBUTION

Two copies. Original to organizational element initiating the request, as indicated by FRC, copy to MRO, DS/T.

7. PROCEDURE FOR REVIEW AND PROCESSING

The listing will be reviewed to initiate Locator Actions as necessary.

APPENDIX F-55

ITEM ANALYSIS REPORT - PHYSICAL SECURITY CODE

1. PURPOSE

Provide all item locator data from the basic and subrecord for special reviews, surveys, and followups for stock numbers identified in card input with a Physical Security Code other than U and provides the media for research of projects related to physical security codes.

2. ORIGIN

This report is produced as a result of processing as depicted in appendix D-23.

3. FREQUENCY

As requested by input ZBJ with Action Code FD.

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-55)

(2) Report Title

(3) FRC - Functional Routing Code

(4) Section Number

(5) Date - Month, day, year, and Julian date

(6) Page Number

b. Data Elements (first heading line):

(1) NSN - Stock Number

(2) UI - Unit of Issue

(3) NOMEN - Nomenclature/Item Description

(4) NMFC - National Motor Freight Classification Code

(5) LTL - Freight Rate LTL Code

(6) PHY SEC - Physical Security Code

(7) NMFC SFX - National Motor Freight Classification Code Suffix

(8) LCL - Freight Rate LCL Code

(9) DE-MIL - Demilitarization Code

(10) WATER COM - Water Commodity Code

(11) AIR COM - Air Commodity Code

(12) AIR CRGO - Air Cargo Dimension Code

(13) SIT - Storage-In-Transit Privilege Code

(14) UNIT WEIGHT - Unit Weight

(15) UNIT CUBE - Unit Cube

(16) SSL - Shelf-Life Indicator Code

(17) POP GRP - Popularity Group Code

(18) INV EX - Inventory Category Exception Code

(19) HSCC - Hazardous Storage Compatibility Code

(20) SPR - Special Requirements Code

(21) MGR - Commodity Manager Code

(22) INVENTORY - Inventory

(a) FG - Inventory Flag

(b) COFF - Cutoff Date

(23) DEMANDS - Demands

(a) MOS - Months of Demand Data

(b) AVG - Average Monthly Demand

c. Data Elements (second heading line):

(1) COND - Condition Code

(2) TYPK - Type Pack Code

(3) TYPLOC - Type Location Code

(4) DATEPK - Date of Pack (or date of record establishment)

(5) TYPSTG - Type of Storage Location Code

(6) WHSLOC - Warehouse Location Code

(7) INSPDATE - Date of Next Inspection

(8) UPK - Unit Pack

(9) LCNO - Lot/Contract Number

(10) LCIND - Lot/Contract Indicator

(11) PREDOC - Storage Item Change Card Predocumentation Interval

(12) CAGE - Contractor and Government Entity Code

(13) LDC - Lot Date Code

5. DATA ORGANIZATION

a. Report heading data on the first line, detailed column heading on the second and third lines.

b. Sequence by NSN.

c. Page break on FRC.

6. NUMBER OF COPIES AND DISTRIBUTION

Two copies. Original to organizational element initiating the request, as indicated by FRC. Copy to MSO, MOWASP Data Control Branch, DS/T.

7. PROCEDURE

Review and process the F-55 report as follows:

a. Review data for Physical Security Code in relation to stock number, to permit research and accomplishment of projects related to Physical Security Codes.

b. Investigate item under research for correct code.

c. Initiate corrective action, as necessary.

d. Destroy report after corrective action and/or project is completed.

APPENDIX F-56

SUMMARY STORAGE LOCATION ANALYSIS REPORT

1. PURPOSE

a. Provide media for analysis of obligated, reserved, and unobligated storage locations by warehouse, building, and area.

b. Provide a means of establishing lot sizes for conduct of location surveys.

2. AUTHORITY

Chapter 66

3. FREQUENCY

Every 3 months, but need not coincide with end of calendar quarter, the ODS will process report as outlined in appendix D-82.

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-56)

(2) Report Title

(3) FRC - Functional Routing Code

(4) Section Number

(5) Date - Month, day, year and Julian date

(6) Page Number

b. Data Elements:

(1) WHSE LOCATION - Warehouse Locations

(2) TYPE STOR - Type Storage Code

(3) NO OF OBL LOCATIONS - Number of Obligated Locations

(4) NO OF RES LOCATIONS - Number of Reserved Locations

(5) NR OR UNOBL LOCATIONS - Number of Unobligated Locations (Bin Only)

(6) TOTALS - By Warehouse Location Group Codes

(7) GRAND TOTALS - All Locations

5. DATA ORGANIZATION

a. See format

b. Major sequence: Warehouse Location

c. Double spaced

6. NUMBER OF COPIES AND DISTRIBUTION

Four copies. Original and two copies to Warehousing Division; one copy to Physical Inventory Branch, Operations Control Office, DS/T.

7. PROCEDURE FOR REVIEW AND PROCESSING

a. Warehousing Division, DS/T will utilize this report to analyze obligated locations, reserved locations, and unobligated locations by warehouse, building, and area. This review will enable storage personnel to more effectively plan the storage of incoming receipts.

b. The Physical Inventory Branch, Operations control Office, DS/T will utilize this report to determine the lot sizes for location surveys and survey workloads.

c. See appendix E-089 P for related procedures.

APPENDIX F-57

MEDALOC MANAGEMENT INFORMATION

1. PURPOSE

This report provides a listing or completed shipment information on a monthly basis by MEDALOC Consignee and POD and number or shipment units received by consignor. On line inquiry for month to data totals is available daily.

2. ORIGIN

This report is produced during CDP/CDR batch update function.

3. FREQUENCY

Listing monthly, on line daily.

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number parts 1-3

(2) Report Title

(3) Data - Month, day, year and Julian date

(4) Page Number

b. Data Elements: (Part 1) MEDALOC Completed Shipments

(1) CONSIGNEE - Consignee DoDAAC

(2) BBCs - Consolidated Shipment Status

(3) SUs - Shipment Units

(4) PIECES

(5) WEIGHT

(6) CUBE

(7) Consolidated Pack SUs

(8) SUs in Consolidation

c. Data Elements: (Part 2) MEDALOC Completed Pallets

(1) POD - Point of Debarkation

(2) PALLETS

(3) WEIGHT

(4) CUBE

(5) TOT - Total

d. Data Elements: (Part 3) MEDALOC Shipments Received

(1) CONSIGNOR

(2) SW3100 O/L

(a) SUs - Shipment Units

(b) MROs - Material Release Orders

(3) SW3100 BATCH

(a) SUs - Shipment Units

(b) MROs - Material Release Orders

(4) SW3200

(5) SW3500

(6) OTHER

(7) PREV DAY - Previous Days Total

(8) MNTH TO DTE - Total to this Date for the Month

NOTE: For DDTC Headings SW3100 and SW3200 would switch.

5. DATA ORGANIZATION

This report is prepared in three parts (1 through 3) and lists MEDALOC Management Information.

6. SEQUENCE

a. Part 1 - CONSIGNEE

b. Part 2 - POD

c. Part 3 - CONSIGNOR

7. DISTRIBUTION AND RETENTION

a. Two copies to the MEDALOC function.

b. All copies are for research purposes. One copy retained for 90 days, the other destroyed upon completion.

APPENDIX F-58

WORKLOAD DATA (MECHANIZED AREAS)

1. PURPOSE

To provide a listing to DS/T, reflection workload data for the Mechanized Complex (Stock Location Group Code X) and for MMHS (Numeric Codes).

2. FREQUENCY

With each MRO cycle.

3. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-58)

(2) Report Title

(3) Functional Routing Code (FRC)

(4) Section

(5) Date - Month, day, year, and Julian date

(6) Page Number

b. Data Elements (first heading line):

(1) LGC - Location Group Code

(2) BATCH NUMBER

(3) TOTAL SU - Total Shipment Units

(4) SINGLE LINES

(5) TOTAL LINES

c. Data Elements (second heading line):

(1) SU SIZE - Size of Shipment Unit

(2) NUMBER - Number of Shipment Units

d. Repeat Heading for each LGC.

e. Page Eject on Change of LGC.

4. DISTRIBUTION AND RETENTION

Four Copies. Original to Workload Control Branch, MSO; one copy to Area Control Complex, Warehousing; one copy to Pack Unit Complex, Warehousing Division; and one copy to Operations Branch, Warehousing Division, DS/T. Retain for two days then destroy.

5. PROCEDURES FOR REVIEW AND PROCESSING

This procedure describes the actions to be taken to analyze and schedule work-load in the mechanized areas under the MRO "batching" concept, and in bulk stock areas for work management.

a. In determining the timeframe to be allocated for stock selection and packing, the following factors will be used as a basis for scheduling:

(1) The average number of lines actually selected or packed during a previous 60 day period, or engineered standards when available.

(2) The number of individuals normally available for selection and packing, less the percent normally expected to be on leave (sick and annual).

(3) In each area the number of multilines scheduled for packing in the chutes will be based on the percent of lines expected to be multiline shipments adjusted by the percent normally delayed due to reroute action or held for bin replenishment.

(4) The maximum time allocated to selection will be based on the total lines and manhours available without regard to the volume within each subarea.

(5) Workload carried over from previous day, if any.

b. Excluded from batching schedule control are the following documents:

(1) Reroutes received from other areas, including documents computer printed as "no location" for which a location was subsequently determined. Such documents will be processed as single line.

(2) Shipments to the PDO.

c. Workload Control Branch

(1) Develop and distribute a schedule daily (use local form) for picking and packing in the mechanized and bulk areas. Designate the required number of personnel to Warehousing and Shipping Divisions to accomplish scheduled workload.

(2) Monitor stock selection and packing under scheduled operations. Revise published schedule when necessary and distribute to Warehousing and Shipping Division Areas for implementation.

(3) Coordinated with other organizational elements when workload forecast or output requires the revision of batching parameters/geographical areas.

(4) Develop and distribute a forecast of the following days work schedule, based upon average workload personnel availability and other factors that normally would affect work accomplishment.

(5) Control distribution of DD Form 1348-1; release documents to areas in time for scheduled stock selection.

d. Warehousing/Shipping Divisions

(1) Pick and pack according to published schedule.

(2) Advise Workload Control Branch at earliest possible time when change to schedule should be made.

APPENDIX F-59

ITEM CODED DLA MANAGER - NOT IN DATA BANK

1. PURPOSE

To provide DS/T with data for research when a change to Manager Code in the Locator File is coded as a DLA-managed item but FSC class is not in Data Bank Table.

2. ORIGIN

This report is produced during the process depicted by appendix D-83.

3. FREQUENCY

Each cycle if location data is being changed either by local change or from the Control Data Bank.

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-59)

(2) Title

(3) FRC - Functional Routing Code

(4) Section

(5) Date - Month, day, year, and Julian date

(6) Page Number

b. Data Elements:

(1) NSN - National Stock Number

(2) UI - Unit of Issue

(3) NOMEN - Nomenclature/Item Description

(4) NMFC - National Motor Freight Classification Code

(5) LTL - Freight Rate LTL Code

(6) PHY SEC - Physical Security Code

(7) NMFC SFX - National Motor Freight Classification Code Suffix

(8) LCL - Freight Rate LCL Code

(9) DE-MIL - Demilitarization Code

(10) WATER COM - Water Commodity Code

(11) AIR COM - Air Commodity Code

(12) AIR CRGO - Air Cargo Dimension Code

(13) SIT - Storage-In-Transit Privilege Code

(14) UNIT WEIGHT - Unit Weight

(15) UNIT CUBE - Unit Cube

(16) SSL - Shelf Life Indicator Code

(17) POP GRP - Popularity Group Code

(18) INV EX - Inventory Category Exception Code

(19) HSCC - Hazardous Storage Compatibility Code

(20) SPR - Special Requirements Code

(21) MGR - Commodity Manager Code

(22) INVENTORY - Inventory

(a) FG - Inventory Flag

(b) COFF - Cutoff Date

(23) DEMANDS - Demands

(a) MOS - Months of Demand Data

(b) AVG - Average Monthly Demand

5. DATA ORGANIZATION

a. See format

b. Data shown in the Locator File will be reflected. Input will have rejected on the F-85 report.

6. NUMBER OF COPIES AND DISTRIBUTION

Two copies to MOWASP Data Control Branch, MSO, DS/T.

7. PROCEDURE FOR REVIEW AND PROCESSING

Report should be reviewed for the correct manager code. If item is correctly coded DLA manager, then FSC Class Table must be updated by input of a ZVA card, appendix B-66, to add FSC to table. If class is correct, then manager code must be changed on input to reflect a non-DLA manager.

APPENDIX F-60

DATA BANK DELETE CODE INCOMPATIBLE WITH LOCATOR REMOVE TAG

1. PURPOSE

To provide DS/T with data to indicate that a conflict exist between Data Bank and Depot Locator Records and may require a delete action.

2. ORIGIN

This report is produced during the process depicted by appendix D-173.

3. FREQUENCY

Each cycle, if CBC cards with delete code, is received for processing and locator record contains subrecords.

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-60)

(2) Title

(3) FRC - Functional Routing Code

(4) Date - Month, day, year and Julian date

(5) Page Number

b. Data Elements (first heading line):

(1) NSN - National Stock Number

(2) UI - Unit of Issue

(3) NOMEN - Nomenclature/Item Description

(4) NMFC - National Motor Freight Classification Code

(5) LTL - Freight Rate LTL Code

(6) PHY SEC - Physical Security Code

(7) NMFC SFX - National Motor Freight Classification Code Suffix

(8) LCL - Freight Rate LCL Code

(9) DE-MIL - Demilitarization Code

(10) WATER COM - Water Commodity Code

(11) AIR COM - Air Commodity Code

(12) AIR CRGO - Air Cargo Dimension Code

(13) SIT - Storage-In-Transit Privilege Code

(14) UNIT WEIGHT - Unit Weight

(15) UNIT CUBE - Unit Cube

(16) SSL - Shelf-Life Indicator Code

(17) POP GRP - Popularity Group Code

(18) INV EX - Inventory Category Exception Code

(19) HSCC - Hazardous Storage Compatibility Code

(20) SPR - Special Requirements Code

(21) MGR - Commodity Manager Code

(22) INVENTORY - Inventory

(a) FG - Inventory Flag

(b) COFF - Cutoff Date

(23) DEMANDS - Demands

(a) MOS - Months of Demand Data

(b) AVG - Average Monthly Demand

5. DATA ORGANIZATION

a. Report header data on the first line, detail column heading on the second and third lines. Basic locator and subrecord data will appear on the fourth and fifth lines. An 80-position print of the CBC card will appear on the next line.

b. Sequence by NSN.

c. Multiple NSNs per page.

6. NUMBER OF COPIES AND DISTRIBUTION

Two copies to MOWASP Data Control Branch, MSO, DS/T.

7. PROCEDURE

Action should be taken to determine if locations reflected on F-60 are still valid. If locations are valid, DSC and prime depot should be contacted to determine the reason for the delete action being generated by the Data Bank. If locations are not valid, action should be taken to delete locations, so file can be updated with locator remove tag and then actions will be compatible.

APPENDIX F-61

MRO DEPOT PROCESSING TIME ANALYSIS

1. PURPOSE

a. To provide an analysis of MRO processing performance, excluding FMS, SEAVAN, COPADS, and extended RDD MROs, using MRO History and Intransit Data Cards (DIC TK4).

b. Identifying excluded transactions:

(1) FMS - Those MROs with B, D, K, P or T in pos. 30.

(2) Grant AID - Same as FMS plus a Y in cc-45.

(3) SEAVAN - Those MROs with Mode of Shipment Code V.

(4) COPADS - Those MROs with Routing Identifier Code - From S9J.

(5) Extended RDDs - Those MROs with A, S or X in pos. 62.

(6) Those with Mode of Shipment Codes W, X, Z, Y, 2, 3 and 9.

(7) DROs - DIC A5J.

(8) IPE MROs - DIC C5_.

c. The Depots have the option of selecting one or more parts of this report UIA appendix B-66, Table 19.

2. ORIGIN

Generated by matching DIC TK4s received from consignees against the MRO History as described in appendices D-33 and E-259.

3. FREQUENCY

Biweekly and monthly for previous 45 day period.

4. DATA ELEMENTS

a. Report Header line includes:

(1) Report Number (UWF061).

(2) Report Part Number (1, 2, 3, 4....13).

(3) Report Title.

(4) Report Date (i.e., 02.29.84.060)

(5) Page Number (i.e., 001, 002...XXX).

(6) Report Period.

b. Part 1 - INVALID TK4 LIST

This is a listing of DIC TK4s received, edited, and declared invalid for one or more reasons as indicated in Data Element subparagraph (10) below.

(1) DIC - Document Identifier Code.

(2) SCAC - Standard Carrier Alpha Code.

(3) CONSIGNOR - DoDAAC of Activity making the Shipment.

(4) DLVY DATE - Julian Day that Shipment was received by Consignee.

(5) MODE - Mode of Shipment Code (appendix A-17).

(6) CONTROL NUMBER - Multiple use field, depending on the Service.

(a) NON-AIR FORCE: Consignor DoDAAC and GBL.

(b) AIR FORCE: TCN (Shipment Transportation Control Number).

(7) SHIP TO - Consignee DoDAAC or Air/Water Terminal Code (Ref: DoD 4500.32-R).

(8) TPC - Transportation Priority Code covered in GBL (1, 2, 3).

(9) SHIP DATE - Julian Day Shipment actually occurred.

(10) REJECT REASON - The reason the transaction is considered invalid.

(a) Ship Date/Delivery Date field entry is not numeric.

(b) Ship Date/Delivery Date field is blank.

(c) Delivery Date is greater than Ship Date by more than 45 days.

(d) DoD Activity Address Code not on file.

(e) Standard Carrier Alpha Code not in SCAC file.

c. Part 2 - TK4s NOT RECEIVED

(1) DEST - Destination (Consignee, POE, DCR, or break bulk point).

(2) IN-THE-CLEAR ADDRESS - Self Explanatory.

(3) IPG - Issue Priority Group.

APPENDIX F-61

MRO DEPOT PROCESSING TIME ANALYSIS

1. PURPOSE

a. To provide an analysis of MRO processing performance, excluding FMS, SEAVAN, COPADS, and extended RDD MROs, using MRO History and Intransit Data Cards (DIC TK4).

b. Identifying excluded transactions:

(1) FMS - Those MROs with B, D, K, P or T in pos. 30.

(2) Grant AID - Same as FMS plus a Y in cc-45.

(3) SEAVAN - Those MROs with Mode of Shipment Code V.

(4) COPADS - Those MROs with Routing Identifier Code - From S9J.

(5) Extended RDDs - Those MROs with A, S or X in pos. 62.

(6) Those with Mode of Shipment Codes W, X, Z, Y, 2, 3 and 9.

(7) DROs - DIC A5J.

(8) IPE MROs - DIC C5_.

c. The Depots have the option of selecting one or more parts of this report via appendix B-66, Table 19.

2. ORIGIN

Generated by matching DIC TK4s received from consignees against the MRO History as described in appendices D-33 and E-259.

3. FREQUENCY

Biweekly and monthly for previous 45 day period.

4. DATA ELEMENTS

a. Report Header line includes:

(1) Report Number (UWF061).

(2) Report Part Number (1, 2, 3, 4....13).

(3) Report Title.

(4) Report Date (i.e., 02.29.84.060)

(5) Page Number (i.e., 001, 002...XXX).

(6) Report Period.

b. Part 1 - INVALID TK4 LIST

This is a listing of DIC TK4s received, edited, and declared invalid for one or more reasons as indicated in Data Element subparagraph (10) below.

(1) DIC - Document Identifier Code.

(2) SCAC - Standard Carrier Alpha Code.

(3) CONSIGNOR - DoDAAC of Activity making the Shipment.

(4) DLVY DATE - Julian Day that Shipment was received by Consignee.

(5) MODE - Mode of Shipment Code (appendix A-17).

(6) CONTROL NUMBER - Multiple use field, depending on the Service.

(a) NON-AIR FORCE: Consignor DoDAAC and GBL.

(b) AIR FORCE: TCN (Shipment Transportation Control Number).

(7) SHIP TO - Consignee DoDAAC or Air/Water Terminal Code (Ref: DoD 4500.32-R).

(8) TPC - Transportation Priority Code covered in GBL (1, 2, 3).

(9) SHIP DATE - Julian Day Shipment actually occurred.

(10) REJECT REASON - The reason the transaction is considered invalid.

(a) Invalid Mode (Modes V, W, X, Z, 2, 3, 9 or blank).

(b) Invalid Dlvy Date (Blank ship date is greater than delivery date or alpha).

(c) Invalid Ship Date (blank or alpha).

(d) Invalid GBL (other than 8-position field).

(e) Invalid Destination/Ship To (other than 6-, 4- or 3-position field).

(f) Invalid O/S Shipment (PP Zone Code is 9 or MRO DIC, third position is numeric).

(g) Not Within Report Period (ship date less than 45-day reporting period).

(h) DoDAAC not on Address File (update DoDAAC file, if applicable, appendix E-129 P, then reenter TK4 record).

(i) SCAC not on File (update SCAC file, if applicable, appendix E-230 P, then reenter TK4 record).

c. Part 2 - TK4s NOT RECEIVED

(1) DEST - Destination (Consignee, POE, DCR, or break bulk point).

(2) IN-THE-CLEAR ADDRESS - Self Explanatory.

(3) IPG - Issue Priority Group.

(4) GBL - Government Bill of Lading Number.

(5) Consignee DoD Activity Address Code for Consignee.

(6) MODE - Mode of Shipment Code (appendix A-17).

(7) SCAC - Standard Carrier Alpha Code.

(8) SHIP DATE - Julian Date Materiel was actually shippped.

d. Part 3: TK4s RECEIVED

(1) DEST - Destination (Consignee, POE, DCR, or break bulk point).

(2) IN-THE-CLEAR ADDRESS - Self Explanatory.

(3) TPC - Transportation Priority Code covered in GBL (1,2, 3).

(4) GBL - Government Bill of Lading Number.

(5) CONSIGNEE - DoD Activity Address Code for Consignee.

(6) MODE - Mode of Shipment Code (appendix A-17).

(7) SCAC - Standard Carrier Alpha Code.

(8) SHIP DATE - Julian date materiel was shipped.

(9) DLVY DATE - Julian date materiel was received by Consignee.

e. Part 4: TK4s RECEIVED - IPG I REVIEW

(1) MODE GROUP TABLE - Mode of Shipment Groups as established by the Transportation function at each depot (appendix B-66, table 19).

(2) GEO AREA - Geographic Area Code.

(3) SUB AREA - Sub area within a geographic area.

(4) DEST - Destination (consignee, POE, DCR, or break bulk point).

(5) IN-THE-CLEAR ADDRESS - Self Explanatory.

(6) MODE GROUP - Mode Group Code as established by the Transportation function at the local depot.

(7) TOTAL LINES - Total lines of shipments for which DIC TK4s were received within mode group.

(8) PCT ON TIME - Percent of total lines delivered on time.

(9) AVG TRANSP HOLD - Time difference between date offered and date shipped.

(10) AVG TRANSIT TIME - Time difference between date shipped and delivery date.

(11) AVG TOTAL TIME - Time difference between date received and delivery date.

(12) Summary of part 4 (last page) - Total lines and percent on time by geographic area.

f. Part 5: TK4s RECEIVED - IPG II REVIEW

Same as part 4, except that these transactions are IPG II instead of IPG 1.

g. Part 6: TK4s RECEIVED - IPG III REVIEW

(1) MODE GROUP TABLE - Mode of Shipment Groups as established by the Transportation function at each depot (appendix B-66, Table 19).

(2) GEO AREA - GEOGRAPHIC AREA CODE.

(3) SUB AREA - Sub area within a geographic area.

(4) DEST - Destination (Consignee, POE, DCR, or break bulk point).

(5) IN-THE-CLEAR ADDRESS - Self Explanatory.

(6) TOTAL GBLS - Total number of GBLs within a Mode Group.

(7) MODE GROUP - Mode of Shipment Group as established by the Transportation function at the local depot.

(8) TOTAL LINES - Total lines of shipments for which DIC TK4s were received within the Mode Group.

(9) PCT ON TIME - Percent of total lines delivered on time.

(10) AVG BANK TIME - Time difference between date received and date released.

(11) AVG PROC TIME - Time difference between date released and date offered.

(12) AVG TRNSP TIME - Time difference between date offered and date shipped.

(13) AVG TOTAL TIME - Time difference between date received and delivery date.

(14) Summary of Part 6 (Last Page) - Total lines and percent on time (by Geographic Area).

h. Part 7: REVIEW OF LATE SHIPMENTS IPG I, II, and III.

NOTE: This report contains only those shipments reported in parts 4, 5, and 6 (above). This report page ejects on change of IPG.

(1) LATE CODE - See sample report LEGEND and subparagraph (20) below.

(2) GEO AREA - Geographic Area Code.

(3) SUB AREA - Smaller area within a geographic area.

(4) DEST - Destination (Consignee, POE, DCR, or break bulk point).

(5) IPG - Issue Priority Group Code.

(6) GBL - Government Bill of Lading number.

(7) MODE - Mode of Shipment Code (appendix A-17).

(8) SCAC - Standard Carrier Alpha Code.

(9) DOC NR - MILSTRIP Document Number.

(10) SU NR - Shipment Unit Number.

(11) SU LINE NR - Shipment Unit Line Item Number.

(12) RCVD DATE - Julian Date of MRO receipt at the Depot.

(13) RLSE DATE - Julian Date MRO released from the bank/computer.

(14) OFFER DATE - Julian Date MRO offered to Transportation.

(15) MDT DATE - Mandatory Julian Date MRO goes to Transportation.

(16) HOLD CODE - Hold Code (appendix A-21).

(17) SHIP DATE - Julian Date Materiel is actually shipped.

(18) DLVY DATE - Julian Date Materiel is delivered (data from DIC TK4).

(19) DAYS OVER STD - Number of days in excess of UMMIPS times standards.

EXAMPLE: AIR:
IPG I - 4 days
IPG II - 8 days

OTHER THAN AIR:
IPG I - 14 days
IPG II - 15 days
IPG III - 21 days

(20) CODE LATE - These codes appear as the LEGEND on the first page of part 7, see subparagraph (1) above.

Late Code A - Bank hold time exceeded standard.
B - Storage processing time exceeded standard.
C - Transportation hold time exceeded standard.
D - In-transit time exceeded standard.

i. Part 8: PERCENT OF LINES ON TIME SUMMARY - TK4 RECEIVED

(1) GEO AREA - Geographic Area Code.

(2) IPG - Issue Priority Group Code.

(3) GRAND TOTAL LINES - Grand total of lines with matching DIC TK4s received (by priority within Geographic Area).

(4) ON TIME TOTAL LINES - Total number of lines on time from DIC TK4s received (by priority within Geographic Area).

(5) PCT ON TIME TOTAL LINES - Percent of total lines on time from DIC TK4s received (by priority within Geographic Area).

(6) Summary Line - Grand totals of above elements.

j. Part 9: IPG III AVERAGE PROCESSING TIME BY GEOGRAPHIC AREA

(1) GEO AREA - Geographic Area Code.

(2) BANK TIME - Average time in days that MROs were held in the bank/computer prior to release to storage.

(3) STORAGE TIME - Average time in days to process MROs through Storage.

(4) TRANSP HOLD TIME - Average time in days to process MROs through Transportation.

(5) IN-TRANSIT TIME - Average time in days for shipments to reach consignees in specified Geographic Areas.

(6) TOT PROC TIME - Time difference from date received to delivery date.

(7) TOTAL - Average processing times in days for all MROs in each of the above categories/columns.

k. Part 10: IPG III MRO PROCESSING PERFORMANCE ANALYSIS BY NUMBER AND PERCENT OF LINES

(1) GEO AREA - Geographic Area Code.

(2) ELAPSED DAYS - Number of days from receipt of MRO to delivery date.

(3) BANK - Number of lines (first line) and percent of total lines (second line) released from the bank/computer within the elapsed day(s).

(4) DEPOT STORAGE - Number of lines (first line) and percent of total lines (second line) offered to Transportation within the elapsed day(s).

(5) DEPOT TRANSP - Number of lines (first line) and percent of total lines (second line) shipped within the elapsed day(s).

(6) TRANSIT - Number of lines (first line) and percent of total lines (second) received by the consignee within the elapsed day(s).

(7) TOTAL PROCESSED - Number of lines (first line) and percent of total lines (second line) processed from MRO receipt to delivery to consignee within the elapsed day(s).

l. Part 11: IPG III LATE LINE SUMMARY

(1) GEO AREA - Geographic Area.

(2) AVG TRANSIT TIME BY MODE GROUP - Average transit time by Mode Group: Provides 1-9 columns of Mode Group averages for late lines. Mode Group nomenclature is determined by the Mode Group. See paragraph 4e(1) above.

(3) STORAGE TIME - Average depot storage processing time for late lines by Geo. Area.

(4) TRANSP HOLD TIME - Average Transportation hold time for late lines by Geo. Area.

m. Part 12: SUMMARY IPG III LATE LINES by days over 21

(1) DAYS - Number of days in excess of 21 day standard.

(2) NUMBER OF LINES - Number of lines in each category, i.e., in excess of the 21 day standard.

n. Part 13A: DEPOT STANDARDS TABLE

(1) GEO AREA - Geographic Area Code.

(2) MD GP - Mode Group, as established by the depot.

(3) STD - Transit time standard established by the depot.

NOTE: The table allows for as many as nine standards per Mode Group per Geographic Area (appendix B-66, Table 19).

(4) BANK - Number of days MROs are held in the bank/computer prior to release to storage for processing.

(5) STORAGE - Number of days MROs are held in the Storage process.

(6) TRANSPORTATION - Number of days MROs are held in the Transportation process.

o. Part 13B: SUMMARY OF IPG III LATE BY DEPOT STANDARD WITHIN PROCESSING CATEGORIES

(1) GEO AREA - Geographic Area Code.

(2) NR LINES EXCEEDING DEPOT STANDARDS - Total number of lines exceeding one or more standards for processing within a Geographic Area.

(3) BANK TIME - Total number of lines exceeding bank time standard within a Geographic Area.

(4) STORAGE PROCESS TIME - Total number of lines exceeding the Storage processing time standard within a Geographic Area.

(5) TRANSPORATATION HOLD TIME - Total number of lines exceeding the Transportation hold time standard within a Geographic Area.

(6) TRANSIT TIME - Total number of lines exceeding the average transit time standard within a Geographic Area.

(7) TOTAL LINES - Total number of lines exceeding depot standards for processing.

(8) PERCENT LATE - Percent of lines exceeding depot standards for processing.

5. DATA ORGANIZATION

a. Part 1: INVALID TK4 LIST.

b. Part 2: TK'4s NOT RECEIVED.

c. Part 3: TK'4s RECEIVED.

d. Part 4: TK'4s RECEIVED - IPG I Review.

e. Part 5: TK'4s RECEIVED - IPG II Review.

f. Part 6: TK4 RECEIVED - IPG III Review.

NOTE: Parts 4, 5 and 6 depict totals by Mode Group within Destination by Destination within Subarea; by Subarea within Geographic Area; by Geographic Area with page eject on a new Geographic Area.

g. Part 7: REVIEW OF LATE SHIPMENTS - IPG I, II, III.

h. Part 8: PERCENT OF LINES ON TIME SUMMARY - TK'4s RECEIVED.

i. Part 9: Average processing time by Geographic Area.

j. Part 10: IPG III MRO processing performance analysis by number and percent of lines.

k. Part 11: IPG III LATE LINE SUMMARY.

l. Part 12: SUMMARY IPG III LATE LINES BY DAYS OVER 15.

m. Part 13A: DEPOT STANDARDS TABLE.

n. Part 13B: SUMMARY IPG III LATE BY DEPOT STANDARD WITHIN PROCESSING CATEGORIES.

NOTE: It should be pointed out that wherever Mode of Shipment data is mentioned, only Mode of Shipment Codes V, W, X, Y, Z, 2, 3 and 9 are excluded from the program.

6. SEQUENCE

The sequence of data elements below are listed in declining order of importance (i.e., primary, secondary, tertiary .....etc.).

a. Part 1: DIC TK4 format (see III-7-F-61-2) in ship to, control number and SCAC sequence.

b. Part 2: Destination, GBL.

c. Part 3: Destination, GBL.

d. Part 4: IPG, Geographic Area, Subarea, Destination and Mode Group.

e. Part 5: IPG, Geographic Area, Subarea, Destination and Mode Group.

f. Part 6: IPG, Geographic Area, Subarea, Destination and Mode Group.

g. Part 7: Geographic Area, Subarea, Destination and GBL.

h. Part 8: Geographic Area, IPG.

i. Part 9: Geographic Area.

j. Part 10: Geographic Area.

k. Part 11: Geographic Area.

l. Part 12: None.

m. Part 13A: Geographic Area, Mode Group.

n. Part 13B: Geographic Area, Bank Time.

7. NUMBER OF COPIES AND DISTRIBUTION

a. Directorate of Storage and Transportation.

(1) Two (2) copies to the Traffic Management function.

(2) One (1) copy to the Workload Planning function.

b. Management Support area.

(1) One (1) copy to the Management Information/Analysis function.

(2) One (1) copy to the Systems and Procedures function.

c. Other distribution is at the discretion of local depot management.

8. PROCEDURES FOR REVIEW AND PROCESSING

a. Transportation Division will analyze the data contained in the F-61 Report to determine any problem areas and improve the overall processing time of MROs.

b. Management Information/Analysis functions will:

(1) Compile biweekly and monthly performance data measured in Percent On Time.

(2) Present the analyses during Management Review briefings.

(3) Provide monthly summary of performance statistics by IPG to DLA-OW and DLA-OT.

UMP061 PART 11 IPG 3 LATE LINE SUMMARY REPORT DATE 01.31.85.031 PAGE 00001

FOR THE 45 DAY PERIOD ENDING 31 JAN 85

LEGEND: THIS TABULAR DISPLAY OF MODE OF SHIPMENT CODES SHOWS HOW SIMILAR MODES HAVE BEEN GROUPED TOGETHER AND ASSIGNED A GROUP CODE BY THE LOCAL DEPOT. THE STRUCTURE IS AT THE DISCRETION OF THE LOCAL DEPOT AND HAS ONLY ONE RESTRICTION: A MODE OF SHIPMENT CODE CAN BE ASSIGNED TO ONLY ONE MODE GROUP.

MODE GROUP 1 - AIR MODE - MODES N, Q, R, S, T, U
2 - RAIL MODE - MODE K
3 - LTL MODE - MODES B, E, I
4 - FRT FWDR - MODE M
5 - DRIVEAWAY - MODE D
6 - TRUCKLOAD - MODE A

NOTE: THIS GROUP CODE TABLE IS GIVEN ONLY AS AN EXAMPLE, AND IS NOT PRESCRIBED. THE CODE GROUPS ARE STRICTLY UP TO THE LOCAL DEPOT FOR ASSIGNMENT, AND THE LOCAL STRUCTURE SHOULD BE DISPLAYED IN THIS SPACE.

APPENDIX F-62

SEAVAN CONSIST

1. PURPOSE

This report is produced to identify the contents of a SEAVAN container packed in support of commissaries.

2. ORIGIN

Report is produced as a result of processing appendix B-274, SEAVAN Consist/TCMD Update Print Request. Data is obtained from the SEAVAN Load Control File.

3. FREQUENCY

Randomly upon input of appendix B-274 Transaction Code DV.

4. DATA ELEMENTS

a. Standard Headings

b. LOAD NO - Load Number

c. VAN # - Van Number

d. VAN-OWNR - Van Owner

e. VN-SZ - Size of Van

f. CMDTY-CD - Water Commodity Code

g. POE - Water Port of Embarkation

h. POD - Water Port of Debarkation

i. M - Mode of Shipment

j. TP - Type Pack

k. SEAVAN TCN - From SEAVAN In-Process Record

l. CONSIGNE - Consignee

m. PRI - Transportation Priority

n. SDD - Supply Delivery Date, (majority RDD)

o. CD - Contents/Distribution Code

p. DT-SHP - Date Shipped

q. IN-CU - Inside Cube of Van

r. PCS - Number of cases for all lines on the SEAVAN CONSIST - computer generated.

s. WGHT - Numbers of pounds for all lines on SEAVAN CONSIST - computer generated - five whole numbers.

t. CUBE - Number of cubic feet for all lines on SEAVAN CONSIST - computer generated - four whole numbers.

u. SEAL # - Seal number

v. REQSTN # - Computer generated from MRO - document number and two Xs.

w. NATIONAL STOCK # - From MRO.

x. PCS - Computer generated from MRO amd locator file. Number of Pieces (cases).

y. UPK - Unit Pack - From locator

z. SHP-Q - Quantity shipped

aa. ORD-Q - Quantity ordered from MRO, if different than shipped quantity.

ab. U/PRICE - Unit price (A5_ only) from MRO, five whole numbers, two numbers to right of assumed decimal for other than Brand Name. For Brand Name, two whole numbers, four numbers to the right of assumed decimal.

ac. VPR - Variable Price Reduction, appendix A-111.

ad. EXTD-PRI - Extended Price (A5_ only) - Computer generated.

ae. RDD - From MRO.

af. WT - Extended Line Item Weight.

ag. CU - Extended Line Item Cube.

ah. ITEM DESCRIPTION - From MOWASP Item Identification File.

ai. * - Asterisk by item description to indicate a troop issue item as a Resale Item.

aj. TOTAL - Total price of all items on CONSIST, computer generated.

APPENDIX F-63

FEEDER STORAGE SPACE REPORT

1. PURPOSE

To provide the number of line items and locations in storage.

2. ORIGIN

Prepared as a result of the process depicted in appendix D-64.

3. FREQUENCY

Biweekly

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-63)

(2) Title

(3) FRC - Functional Routing Code

(4) Section Number

(5) Date - Month, day, year and Julian date

(6) Page Number

b. Data Elements

(1) DLA COMMODITY MANAGERS

(a) MANAGER - See appendix A-44

(b) NSNs - Number of NSNs

(c) LOCATIONS - Number of storage locations

(d) TOTAL - Total for all DLA Managers

(2) NON-DLA COMMODITY MANAGERS

(a) MANAGER - See appendix A-44

(b) NSNs - Number of NSNs

(c) LOCATIONS - Number of non-DLA Managers

(d) TOTAL - Totals for all non-DLA Managers

(3) NO MGR - No manager code assigned

(a) NSNs - Number of NSNs

(b) LOCATIONS - Number of storage locations

5. DATA ORGANIZATION

a. Report Header data on first line; detail data (paragraph 4b) on second and subsequent lines.

b. Contained on one page.

c. Sequence: Commodity Manager Code.

d. Double spaced.

6. NUMBER OF COPIES AND DISTRIBUTION

Three copies. Two copies to MSO, DS/T copy to Performance Analysis and Reports Division, Office of Comptroller.

7. PROCEDURE

Used by the Office of the Comptroller in the preparation of the DLA(M)26(C)MIN Report as required by appendix E-114 P.

APPENDIX F-64

NOTICE OF AVAILABILITY STATUS LISTING

1. PURPOSE

To provide a summary of NOAs mechanically prepared, their disposition, and their subsequent status pending a response from the CR/FF.

2. ORIGIN

Produced as a result of batch and on-line data entry processes depicted in appendices D-28, D-30 and D-143.

3. FREQUENCY

Daily

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (UWF064)

(2) Report Title

(3) NOA Status and Definition (appendix A-98)

(4) Date - Month, day, year and Julian date

(5) Page Number

b. Header Line data:

(1) SU NO - Shipment Unit Number

(2) TOT LINES - Total Lines

(3) TCN/DOC NO - Transportation Control Number/Document Number

(4) SUPL ADRS - Supplemental Address

(5) DIST CD - Distribution Code

(6) TY PK - Type Pack

(7) PCS - Shipment Unit Pieces

(8) WT - Shipment Unit Weight

(9) CU - Shipment Unit Cube

(10) NOA DATE - Notice of Availability Date

(11) FOL-UP DATE - NOA Followup Date

(12) PDT DATE - Planned Date to Transportation

(13) IPG - Issue Priority Group

(14) DOC-NUMBER - Document Number

(15) SRC - Special Requirements Code

(16) TYPE CARGO - Type Cargo Code

(17) REMARKS - Indicating Actions

5. DATA ORGANIZATION

a. Print report header to start each report page.

b. Sequence Data:

(1) Major - NOA Status Code.

(2) Intermediate - Shipment Unit Number.

(3) Minor - Document Number.

c. Page break on change of NOA Status Code.

d. Double space between detail lines.

6. DISTRIBUTION

One copy to Transportation and Shipping Division, DS/T.

7. PROCEDURE FOR REVIEW AND PROCESSING

This listing is prepared for use by FMS clerks in controlling and monitoring all FMS Notices of Availability and will alert the clerks of the following information:

a. Status Code 0:

(1) All daily transceived NOAs (AD1/AD2).

(2) DD Forms 1348-5 mechanically prepared for mailing.

b. Status Code 1:

(1) All transceived followups (AD3/AD4).

(2) DD Forms 1348-5 mechanically prepared for followup.

c. Status Code 2:

Followup with the applicable Requisition Control Office is required.

d. Status Code C:

Shipment hold time has elapsed (75 days) and the shipment is eligible for cancellation.

e. Status Code S:

Shipment hold time has elapsed and may be released.

f. Status Code E:

An export release is required. An ADR has been prepared.

g. Status Code F:

A followup with MTMC is required.

h. Status Code G:

A second followup required with MTMC.

APPENDIX F-65

RECEIPTS PERFORMANCE

1. PURPOSE

To provide a daily indication of number of line items, units, and tons received and processing time required, for each Commodity Manager (DSC/ICP) by type of receipt. In addition, to reflect percentages of line items and tons processed on time or late.

2. ORIGIN

Produced during the process depicted by appendix D-58.

3. FREQUENCY

Daily

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number

(2) Report Title

(3) Product Control Number

(4) Functional Routing Code

(5) Section Producing Report

(6) Report Date - Date applicable to statistics portrayed (month, day, year and Julian date).

(7) Page Number

b. Data Elements:

(1) PROC DAYS - Number of processing days 1-10, 11-20 and over 20.

(2) Type of Receipt:

(a) VENDOR - Procurement

(b) REDIST - Redistribution

(c) RETURN - Returns from post, camp, station and so on.

(d) OTHER - Returns from maintenance, frustrated cargo and so on.

(3) LI, %, UN, TONS, % - Line Item and Percent, Units, Tons and Percent for each type receipt.

(4) DSC/ICP - Commodity Manager identified by RIC of the managing DSC/ICP.

(5) TOTALS - For Elements of subparagraph b(1) through (4) on time or processed late. Percentages by ICP and 4- or 7-day standard.

(6) GR TOTALS - Depot totals for all DSCs/ICPs.

(7) GR TOT OT - Depot totals on time for all DSCs/ICPs.

NOTE: Allowable receipts processing time is the first 4 workdays (for procurement receipts) or the first 7 workdays (for nonprocurement receipts) which begin on the date received and includes the date receipt was processed by the computer. Workdays are designated on the area shipping cycle table (see appendix F-45). Saturdays, Sundays, and holidays, if reflected on the table as workdays, will be counted.

5. DISTRIBUTION

Four copies to Receiving Division, Operations Control. Original to MSO, copies Office, DS/T, and to the Office of Comptroller.

6. DATA ORGANIZATION

See format

7. PROCEDURES

a. MSO, in conjunction with Receiving Division, DS/T, will review and analyze this report to evaluate receipt processing performance in terms of days required to process completed receipt actions and to initiate corrective actions as required.

b. Receiving Division, will, upon receipt of report, take the following actions.

(1) Determine abnormal receipt processing time required during the previous day's business or during the current month as reflected for each time increment.

(2) Initiate corrective actions to expedite processing action, and continue followup and maintenance of current status through completion of documentation.

(3) Contact Plans and Programs Branch, MSO for assistance in resolving trouble areas as required.

(4) Prepare narrative in support of abnormally late processed receipts (which will also be evident in month ending RCS reports) at the time of processing, without exhaustive research.

c. Plans and Programs Branch will review report, of local reports, and utilize reports as required in performance of functions assigned.

d. Daily reports will be retained on a monthly basis until month ending RCS reports have been finalized and submitted to DLA/DSC/ICP; then completed reports will be destroyed.

APPENDIX F-66

LOCATIONS SELECTED FOR AUDIT REVIEW

1. PURPOSE

Provide a listing containing a random sample of locations for special review or audit action.

2. ORIGIN

Produced through scan of locator records via input format containing program and file identification and sample interval, reference appendix E-009 P.

3. FREQUENCY

As requested under control of the Data Systems Manager.

4. DATA ELEMENTS

a. Report Header Line:

(1) Report Number (F-66)

(2) Report Title

(3) Functional Routine Code

(4) Report Section

(5) Report Date

(6) Page

b. Data Elements:

(1) Sample Interval Selection Number

(2) Location

(3) National Stock Number (NSN)

(4) Total of Trailer Records

(5) Total of Locations Selected (based upon available locator records and sample interval).

5. DATA ORGANIZATION

a. Report header followed by a detailed data line.

b. Sequenced by Sample Interval Selection Number. Reserved type locations will not appear on the report.

6. NUMBER OF COPIES AND DISTRIBUTION

Two copies with original and copy forwarded to originator of request.

7. PROCEDURE

The organizational element initiating the request will coordinate this action with the ODS. After review is completed and objective necessitating the report request accomplished, the report will be destroyed.

APPENDIX F-67

MATERIEL RELEASE ORDER (MRO/DRO) INQUIRY ANSWER

1. PURPOSE

This listing, in answer to MRO Register/History Inquiry (DIC ZCT, appendix B-115), provides status of MRO/DRO as reflected in Shipment Unit Files.

2. AUTHORITY

Chapter 4

3. FREQUENCY

As requested. Produced during the processing as depicted by appendix D-57.

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-67)

(2) Report Title

(3) FRC - Functional Routing Code

(4) Section Number

(5) Date - Month, day, year, and Julian date

(6) Page Number

b. Data Elements from MRO/DRO:

(1) D/I - Document Identifier

(2) R/I TO - Routing Identifier

(3) M/S - Media and Status Code

(4) NSN - National Stock Number

(5) TYP PK - Type of Pack Code

(6) SBM TME - Submission Time

(7) UI - Unit of Issue

(8) DOCUMENT NO - Document Number

(9) SFX - Suffix Code

(10) SUPPL ADDR - Supplementary Address

(11) SIG - Signal Code

(12) FND - Fund Code

(13) DIS - Distribution Code

(14) PRJ - Project Code

(15) PRI - Priority Designator Code

(16) RDD - Required Delivery Date

(17) ADV - Advice Code

(18) R/I FRM - Routing Identifier Code, From

(19) MGMT DATA - Management Data

(a) O/P - Ownership of Purpose Code

(b) C - Condition Code

(c) M - Management Code

(d) NR - New Receipt Indicator

(20) UNIT PRICE

(21) STATUS - Julian date when closed.

c. Data Elements from SU File:

(1) SU NO. - Shipment Unit Number

(2) LINE ITEM - Line Item Number

(3) DATE RECVD - Date MRO Received

(4) MDT - Mandatory Date to Transportation

(5) PDT - Planned Date to Transportation

(6) WEIGHT

(7) CUBE - One position assumed decimal

(8) NR PCS - Number of Pieces

(9) QUANTITIES

(a) OPEN - Quantity not offered to Transportation

(b) OFFRD - Quantity offered to Transportation

(c) SHIPD - Quantity shipped

(d) DENIED - Quantity denied

(e) CANC - Quantity canceled

(10) TCN - Transportation Control Number

(11) TCN - Transportation Control Number partial indicator

(12) POE - Port of Embarkation

(13) HOLD CODE

(14) DTT - Date to Transportation

(15) ACTN CODE - Last Action Code

(16) HIST SUPPL - Supplement (Record) to the Shipment Unit (Record) from History

d. Data Elements from MRO History File:

(1) DRO - Document Release Date. (The DRO for COPADS MROs will reflect the date the records is entered into the shipment unit fill.)

(2) SU NO. - Shipment Unit Number

(3) LINE ITEM - Line Item Number

(4) DATE RECVD - Date received

(5) MDT - Mandatory Date to Transportation

(6) PDT - Planned Date to Transportation

(7) WEIGHT - Total Weight

(8) CUBE - Total Cube - One position assumed decimal

(9) NO PCS - Total number of pieces

(10) SHIPPED

(a) QTY - Quantity shipped

(b) DATE - Date shipped

(11) GBL/REG NUMBER - Government Bill of Lading Number/USPS Registered Parcel Number

(12) MODE SHIP - Mode of Shipment Code

(13) TCN - Transportation Control Number

(14) TCN PTL - Transportation Control Number Partial Indicator

(15) POE - Port of Embarkation

(16) HOLD CODE

(17) DTT - Date to Transportation

(18) SUPPL TO SU - Supplement to the Shipment Unit Record

(19) CANC/DENIED:

(a) QTY - Quantity canceled/denied

(b) DATE - Date denied or canceled

(20) ACTN CODE - Action Code

5. DATA ORGANIZATION:

See Format

a. Data as shown in the Shipment Unit File or History File will be reflected. If more than one action has been taken each transaction will be recorded.

b. Action Code (paragraph 4c(15) or 4d(19)) listed on the F-67 report indicates the following transaction has been processed.

CODE	FROM
1	A6_ Denial (Management Code 1, Stock exhausted)
2	A6_ Denial (Management Code 2, Stock not in requested condition)
3	A6_ Denial (Management Code 3, not enough Shelf remaining)
4	A6_ Denial (Management Code 4, Stock not available in type pack requested)
5	A6_ Denial (Management Code 5, Stock in location misidentified)

CODE	FROM
6	A6_ Denial (Management Code 6, No Record of NSN at Storage Activity)
8	A6_ Denial (Management Code 8, Medical Controlled Substance requiring Export Permit not available in exact quantity, FMS only)
9	A6_ Denial (Management Code 9, Materiel not available in one continuous length as requested by 2N Advice Code)
B	ARA/ARK - Adjustment, Materiel overshipment due to unit pack
C	AG6/AGJ - Cancellation accomplished at requisitioners request
D	ARB/ARL - Adjustment, Materiel undershipment due to unit pack
U	DP Status, Depot closed record and took manual action to comfirm/ deny
W	A6A Management Code C, Cancellation of FMS MRO when no AC6 has been received
X	DQ Action, rejected because RDD cannot be met
Y	AE6/AEJ Status Code B9, Cancellation request received and attempt to cancel is being taken
Z	AG6/AGJ Status Code B6, Manual action taken to divert shipment to another storage site after confirmation

6. NUMBER OF COPIES AND DISTRIBUTION

Two copies. Original to requester as indicated by the FRC, copy to Shipping Documentation Branch, Shipping Division, DS/T.

7. PROCEDURE FOR REVIEW AND PROCESSING

Based on data received, the requester will complete action for which data was requested. If "yes" appears under HIST SUPPL, another F-67 reflecting data from the MRO History File will be produced, showing data outlined in paragraph 4d.

NOTE: When an MRO is closed, the date closed will print in the column headed "STATUS". In addition, when a MRO has been force-closed, the letters FC will print to the right of the date closed. When as MRO has been placed in manual status, the letters DP will print to the right of the date closed.

APPENDIX F-68

DELETED SUSPENSE RECORD LISTING

1. PURPOSE

To provide a list of all Suspended Receipt Records deleted by Type D reversal or DIC ZZN activity during the previous days receipt processing activity.

2. ORIGIN

Records removed from the Suspended Receipts File via specific delete/reversal activity. Records will not be displayed if cleared by RCC/Stow Notice activity.

3. FREQUENCY

Daily

4. DATA ELEMENTS

a. Report header line:

(1) Report Number

(2) Report Title

(3) Section

(4) Date

(5) Page Number

b. Data Element Identification:

(1) TP NUMBER - The teleprocessing control number assigned to the now deleted Suspended Receipt record.

(2) NSN - National Stock Number recorded for the deleted receipt record.

(3) PIIN/DOCUMENT NO - Procurement Instrument Identification Number or document number recorded in the deleted suspense file record.

(4) SUPP PIIN - Supplementary PIIN associated with the deleted record.

(5) CLIN/SUP ADD - Contract line item number or supplementary address.

(6) CD - Condition Code

(7) U/I - Unit of Issue

(8) DATE RCVD - Date Received

(9) DATE INQD - Date Inquired

(10) SOURCE ID - Terminal Identification Number if input document is Type D reversal inquiry; "Batch" if input document is DIC ZZN.

5. DATA ORGANIZATION

Records will be sequenced by date received, oldest date first and document number, the minor sequence. The report will be delivered to Receipt Documentation Branch, Receiving Division.

6. PROCEDURE

Report will be used to review the past days deletion activity to ensure that all records represent valid deletions/reversal actions.

APPENDIX F-69

NOTICE OF CANCELLATION REQUEST REPORT

1. PURPOSE

To advise that a Notice of Cancellation Request has been received on a Materiel Release Order (MRO) or Disposal Release Order (DRO).

a. Part One: Provided in instances when MRO/DRO is in the Shipment Unit File. Produced during the processing as depicted by appendix D-43.

b. Part Two: Provided in instances when MRO/DRO is in History and has been shipped via freight to an overseas consignee less than 36 days prior to date of report if shipped surface mode or 10 days if shipped by air mode and extended line item value is more than $200.00 or more than $1000.00 and the line item is in a SEAVAN. Produced during the processing as depicted by appendix D-57.

c. Part Three:

(1) Section A. Provided whenever MRO(s) which have been documented, not shipped and have been flagged for mass cancellation processing. Produced during processing as depicted in appendix D-210.

(2) Section B. Provided whenever MRO(s) have been flagged for mass cancellation processing and have been suspended in the MRO workload bank 7 days past the cancellation flag date. Produced during processing as depicted in appendices D-210 and D-211.

d. Part Four: Provided whenever a DIC AM_ has been received which contains 555 in the RDD field (pos. 62-64) for documented MROs flagged for mass cancellation or if a documented MRO previously flagged for mass cancellation has the cancellation flag removed by deleted criteria in the mass cancellation table. The report consists of the AM_ image output as depicted in appendix D-90 and MRO images output as depicted in appendices D-210 and D-211.

4. DATA ELEMENTS

a. Header Line:

(1) Report Number and Title

(2) FRC - Functional Routing Code

(3) Section

(4) Date - Month, day, year, and Julian date

(5) Page number

b. Data Elements:

(1) PART 1

(a) D/I - Document Identifier Code (AC6)

(b) R/I - Routing Identifier Code, To

(c) M/S - Media and Status Code

(d) NSN - National Stock Number

(e) TYP PK - Type Pack Code

(f) UI - Unit of Issue

(g) QTY ORDRD - Quantity ordered

(h) DOCUMENT NO. - Document Number

(i) SFX - Suffix Code

(j) SUPPL ADDR. - Supplementary Address

(k) SIG - Signal Code

(l) FND Fund Code

(m) DIS - Distribution Code

(n) PRJ - Project Code

(o) PRI - Priority

(p) RDD - Required Delivery Date

(q) ADV - Advice Code

(r) R/I FRM - Routing Identifier Code, From

(s) MGT - Management Code

(t) UNIT PRICE - Unit Price

(u) EXT PRICE - Extended Price

(v) MODE - Mode of Shipment Code. (Asterisk filled if ZBM Action Code DX has been entered.)

(w) SU NO. - Shipment Unit Number to which original MRO has been assigned.

(x) LINE ITEM - Shipment Unit Line Item Number representing original MRO.

(y) RECVD - Date MRO/DRO being canceled was received.

(z) DRD - Document Release Date for original MRO/DRO.

(aa) PDT - Planned Date to Transportation for original MRO/DRO.

(ab) MDT - Mandatory Date to Transportation for original MRO.

(ac) D/MDT - Deadline or Mandatory Transfer Data for original MRO.

(ad) DTT - Date Offered to Transportation.

(ae) OPEN - Quantity Open

(af) OFFRD - Quantity Offered

(ag) SHIPD - Quantity Shipped

(ah) DENID - Quantity Denied

(ai) CANCL - Quantity Canceled

(aj) ACTN CODE - Second position of ZBM Action Code.

(ak) TCN - Transportation Control Number assigned to original MRO. Control Number assigned to original MRO.

(al) TCN PTL - TCN Partial Indication.

(am) HOLD CODE - Hold Code applicable to original MRO.

(an) PRIME WHSE LOCATION - Same as Prime Warehouse Location of original MRO/DRO.

(ao) TAC 1 - In-the-Clear Address

(ap) TAC 2 - In-the-Clear Address

(aq) GEO - Geographic Area Code

(ar) SUB - Geographic Subarea Code

(2) PART 2

(a) D/I - Document Identifier Code (AC6)

(b) R/I TO - Routing Identifier Code, To

(c) M/S - Media and Status Code

(d) NSN - National Stock Number

(e) TYP PK - Type Pack Code

(f) UI - Unit of Issue

(g) QTY ORDRD - Quantity ordered canceled

(h) DOCUMENT NO. - Document Number

(i) SFX - Suffix Code

(j) NEW ADDR - New Address

(k) SIG - Signal Code

(l) FND - Fund Code

(m) DIS - Distribution Code

(n) PRJ - Project Code

(o) PRI - Priority

(p) R/I FRM - Routing Identifier Code, From

(q) UNIT PRICE - Unit Price

(r) EXT PRICE - Extended Price

(s) MODE - Mode of Shipment Code

(t) D/I - Document Identifier Code

(u) R/I to - Routing Identifier Code, To

(v) M/S - Media and Status Code

(w) NSN - National Stock Number

(x) TYP PK - Type Pack Code

(y) SBM TME - Submission Time

(z) UI - Unit of Issue

(aa) QTY ORDRD - Quantity Ordered

(ab) DOCUMENT NO. - Document Number

(ac) SFX - Suffix Code

(ad) SUPPL ADDR. - Supplementary Address

(ae) SIG - Signal Code

(af) FND - Fund Code

(ag) DIS - Distribution Code

(ah) PRJ - Project Code

(ai) PRI - Priority Designator Code

(aj) RDD - Required Delivery Date

(ak) ADV - Advice Code

(al) R/I FRM - Routing Identifier Code, From

(am) MGMT DATA - Management Data:

1. O/P - Ownership/Purpose Code
2. C - Condition Code
3. M - Management Code
4. NR - New Receipt Indicator

(an) UNIT PRICE - Unit Price

(ao) STATUS - (Julian date, when closed)

(ap) SU NO - Shipment Unit Number

(aq) LINE ITEM - Line Item Number

(ar) DATE RECVD - Date received

(as) MDT - Mandatory Date to Transportation

(at) PDT - Planned Date to Transportation

(au) WEIGHT - Total Weight

(av) CUBE - Total Cube

(aw) NBR PCS - Total number of pieces

(ax) SHIPPED:

1. QTY - Quantity Shipped

2. DATE - Date Shipped

(ay) GBL/REG NUMBER - Government Bill of Lading Number/USPS Registered Number.

(az) MODE SHIP - Mode of Shipment Code

(ba) TCN - Transportation Control Number

(bb) TCN PTL - Transportation Control Number Partial Indicator

(bc) POE - Port of Embarkation

(bd) HOLD CODE - Hold Code applicable to original MRO.

(be) DTT - Date to Transportation

(3) PART 3, SECTION A

Same Data Elements as part 1 except element (a) is DIC A5_.

(4) PART 3, SECTION B

(a) D/I - Document Identifier

(b) R/I - Routing Identifier From

(c) M/S - Media/Status Code

(d) NSN - National Stock Number

(e) UI - Unit of Issue

(f) QUANT - Quantity

(g) DOCUMENT NO. - Document Number

(h) SFX - Suffix

(i) SUP AD - Supplementary Address

(j) SIG - Signal Code

(k) FND - Fund Code

(l) DIS - Distribution Code

(m) PRJ - Priority Code

(n) PRI - Priority Code

(o) RDD - Required Delivery Date

(p) ADV - Advice Code

(q) R/I - Routing Identifier To

(r) P - Purpose Code

(s) C - Condition Code

(t) M - Management Code

(u) TP - Type Pack/Cycle Code

(v) PRICE - Unit Price

(5) PART 4

(a) DIC - Document Identifier Code, AM_ or A5_.

(b) RIC - Routing Identifier From

(c) MS - Media/Status Code

(d) NSN - National Stock Number

(e) UI - Unit of Issue

(f) QUANT - Quantity

(g) DOCUMENT NO. - Document Number

(h) SFX - Suffix

(i) SUP AD - Supplementary Address

(j) SIG - Signal Code

(k) FND - Fund Code

(l) DIS - Distribution Code

(m) PRJ - Project Code

(n) PRI - Priority Code

(o) RDD - Required Delivery Date

(p) ADV - Advice Code

(q) R/I - Routing Identifier To

(r) P - Purpose Code

(s) C - Condition Code

(t) M - Management Code

(u) TP - Type Pack/Cycle Code

(v) PRICE - Unit Price

5. DATA ORGANIZATION

a. Part 1

This report is a four-line entry. The first line applies to the original input document and the second line represents data extracted from the Shipment Unit File. Lines three and four will consist of in-the-clear addresses and POD/POE Codes.

b. Part 2

This report is a three-line entry. The first line applies to the original input document, the second and third lines represent data extracted from the MRO History File.

c. Part 3, Section A

This report is a nine-line entry for MRO mass cancellation candidates. The first line is the MRO image in-process and the second line represents data extracted from the Shipment Unit File. Lines 3 through 9 will consist of the in-the-clear address and POD/POE Codes.

d. Part 3, Section B

This report is a single line entry which is the image of MRO mass cancellation candidates suspended in the MRO workload bank.

e. Part 4

This report is a single line entry which is the image of:

(1) A DIC AM_, Document Modifier Card, modifying the Required Delivery Date of any MRO to 555. These documents are input by the consignee/ICP to exempt specific MROs from mass cancellation processing.

(2) Documented MRO(s) previously flagged for mass cancellation which has had the cancellation flag removed by deleted criteria in the mass cancellation table.

6. SEQUENCE

a. Part 1

Major to Minor sequence is by Warehouse Group Code (first three positions of the Prime Warehouse Location), Shipment Unit Number, and Line Item Number.

b. Part 2

Major to Minor sequence is by GBL and TCN. Page break on GBL.

c. Part 3, Section A

Major to Minor sequence is by Warehouse Group Code (first three positions of the prime warehouse location), and Line Item Number.

d. Part 3, Section B

Consignee, pos. 30-35.

e. Part 4

Consignee, pos. 30-35.

7. NUMBER OF COPIES AND DISTRIBUTION

a. Part 1, part 3, sections A and B and part 4

Original and one copy to Shipping Documentation Branch, Shipping Division, DS/T. One copy to Shipment Planning Branch, Transportation and Traffic Management Office.

b. Part 2

Original and one copy to Shipping Documentation Branch, Shipping Division. One copy to Commercial Traffic Branch, Transportation and Traffic Management Office, DS/T.

8. PROCEDURE FOR REVIEW AND PROCESSING

a. Part 1

This data will be used by DS/T to effect possible cancellation actions for MROs/DROs in-process in Storage or offered to Transportation. Action will be taken to process MRO Control and Status Request Card (appendix B-99) with the applicable action code (appendix A-42) or via remote input device (program $$UWFH30, appendix E-234 part A) in order to update the Shipment Unit File and Generate Cancellation Action.

b. Part 2

This data will be used by DS/T to effect possible interception of shipments at terminals, and diversion to a new consignee as directed by the request for cancellation.

c. Part 3, Section A

(1) This data will be used by DS/T to identify and suspend from processing MROs, which have been released from the MRO Workload Bank but not shipped, are mass cancellation candidates and are pending receipt of cancellation cards (DIC AC7) from the ICP.

(2) Incoming AC7 transactions, documented on the F-69 part 1, must be matched against corresponding MROs on this report. If the match is succussful and the shipment physically intercepted and suspended, action may then be taken to report the successful cancellation. This is accomplished with the MRO Control and Status Request Card (appendix B-99) with the applicable action (appendix A-42) or via remote input device (program $$UWFH30, appendix E-234 part A) to update the Shipment Unit File and generate cancellation action.

d. Part 3, Section B

This data on MRO candidates for mass cancellation processing and suspended in the Workload Bank is furnished for information only. If no corresponding AC7 is received within 7 days DS/T personnel should contact the initiating ICP to ascertain AC7 status.

e. Part 4

AM_ documents with 555 in the RDD field (pos. 62-64) are printed on this section of the F-69 to identify to operating personnel a modification to a cancellation (AC7) of a MRO documented but not shipped. MROs which have been documented, previously flagged for mass cancellation and the flag subsequently removed by deletion of table data are also printed on this section in the 80 position MRO format. Operators will daily screen the F-69 part 4 against the F-69 part 2. If a corresponding match is found on the part 2. If a corresponding match is found on the part 2, delete (scratch through) the AC7 entry and allow the MRO to process without any further attempt to cancel the shipment.

APPENDIX F-70

MEDALOC DELETED ADVANCED RECEIPT DATA REPORT

1. PURPOSE

This report provides a listing of all advance CDP/CDF data deleted from the system because materiel was not received within 30 days of receipt, of data or materiel received and not recorded as shipped within 30 days and material received and not shipped when received date plus two is equal to or less than current date.

2. ORIGIN

This report is produced during CDP/CDF Batch Update Function.

3. FREQUENCY

Daily

4. DATA ELEMENTS

a. Report header line which includes:

(1) Report Number (F-70)

(2) Title - MEDALOC Deleted Advanced Receipt Data Report

(3) FRC - Functional Routing Code

(4) Date - Month, day, year and Julian date

(5) Page Number

b. Deleted Records: (Part 1)

(1) CDP Data

(a) CNSNOR - Consignor Code

(b) TCN - Transportation Control Number

(c) PIECES - S/U Pieces

(d) WEIGHT - S/U Weight

(e) CUBE - S/U Cube

(f) CNSNEE - Consignee DoDAAC

(g) TP-PK - Type Pack Code

(h) RDD - Required Delivery Date

(i) DT SHP - Date Shipped from Consignor

(j) RIC-FR - Routing Identifier of Consigning Activity

(k) GBL NO - Government Bill of Lading Number

(l) A/C - Air Commodity Code

(m) TAC - Transportation Account Code

(n) DMR - Date Materiel Received

(o) S/U-TC - Shipment Unit/Transshipment Control Number

(2) CDF Data

(a) DOC NO - Document Number and Suffix

(b) NSN - National Stock Number

(c) PRI - MILSTRIP Priority

(d) U/I - Unit of Issue

(e) QTY - Quantity Shipped

(f) FC - Fund Code

(g) PRJ - Project Code

(h) DC - Distribution Code

(i) SUP-ADD - Supplementary Address

(j) MD - Mode of Shipment

(k) MGR - Routing Identifier of Commodity Manager

c. Data Elements: (Part 2)

(1) DMR - Date Material Received

(2) PRI - Priority

(3) SU - Shipment Unit Control Number

(4) TCN - Transportation Control Number

(5) PCS - Pieces

(6) WEIGHT

(7) CUBE

(8) CNSNOR - Consignor DoDAAC

(9) CNSNEE - Consignee DoDAAC

(10) CONS-SU - Consolidation Shipment Unit Number

5. DATA ORGANIZATION

a. Report Header: Print report header, first line to start each page.

b. Deleted Records

(1) CDP Data header print once for each CDP data printed. Print all deleted CDP data followed by associated CDF deleted data.

(2) CDF Data header print once for each group of CDF data printed.

c. MEDALOC Overaged Receipt Data

6. DISTRIBUTION AND RETENTION

a. Two copies to the MEDALOC Function.

b. All copies are for research purposes. Destroy upon completion.

7. PROCEDURES FOR REVIEW

Attempt to determine with shipping activity why shipment was not received or determine why shipment was not confirmed after received.

APPENDIX F-71

LATE RECEIPT REPORT

1. PURPOSE

To provide a means to followup on late or potentially late receipts for which a Type A or ZB6 Inquiry (appendix B-41 or B-102) has been processed but no Receipt Confirmation Card (appendix B-108 or B-109) and/or no Receipt Stow Notice (appendix B-46 or B-144) has been processed.

2. ORIGIN

This report is automatically produced in three parts as depicted in appendix D-54.

3. FREQUENCY

Daily

4. DATA ELEMENTS

a. Report Header Line includes:

(1) Report Number (F-71)

(2) Version Number (part 1, part 2, or part 3)

(3) Title (Part 1 - Late Receipts Not Confirmed, Part 2 - Late Receipt Not Stowed, or Part 3 - Receipts Awaiting Stow Listing).

(4) Functional Routing Code

(5) Section Number

(6) Date - Month, day, year, and Julian date

(7) Page Number

b. Data Elements:

(1) DIC - Document Identifier Code of the PMR record (DU_ or DW_). Blank if no record in the PMR file. On part 2 of the report the DIC of the Receipt Confirmation Card (RCC) will be printed if the receipt has been confirmed.

(2) RIT - Routing Identifier To - If available from the PMR record or RCC input the three position RIC of the DSC will be printed. If obtained from the locator file the single position Manager Code will be printed.

(3) NAT STOCK NUMBER - National Stock Number. Both the Federal Supply Classification (FSC) and the National Item Identification Number (NIIN) will be identified. The FSC will be obtained from the Locator File or the PMR File if no locator record is available. On part 2 of the report the FSC will be printed from the RCC input if the receipt is confirmed. The FSC will be 0000 if no PMR and locator record were available and the RCC has not been processed. NIIN is obtained from the Type A or ZB6 Inquiry input.

(4) PIIN OR DOC NR - Procurement Instrument Identification Number or Document Number will be printed from the PMR record or RCC input as appropriate. If only five positions are printed, obtained from the Type A or ZB6 Inquiry input.

(5) SUPP PIIN - Supplementary Procurement Instrument Identification Number from the inquiry or RCC input.

(6) CLIN OR SUPADR - Contract Line Item Number or Supplemental Address from the PMR record or RCC input.

(7) CND - Condition Code from the inquiry or RCC input.

(8) MGT - Management Code from the PMR record or RCC input.

(9) OP - Ownership/Purpose Code from the PRM record or RCC input.

(10) SFX - Suffix Code from the RCC input.

(11) TP - Type Pack from the PMR record or the RCC input.

(12) UI - Unit of Issue from the locator or the RCC input.

c. Part 1 - The following elements will appear after Unit of Issue on part 1 of the report.

(1) S/F - Signal/Fund Code from the PMR record or RCC input.

(2) PRJ - Project Code from the PMR record or RCC input.

(3) DIS - Distribution Code from the PMR record.

(4) DATE RECVD - Date Received from the Type A or ZB6 Inquiry input.

(5) INQ DATE - Inquiry Date. The date the Type A or ZB6 Inquiry was processed as determined by the computer and recorded in the Suspended Receipt File.

(6) DATE STOWD - The date the Receipt Stow Notice was processed as determined by the computer and recorded in the Suspended Receipt File.

(7) LOCATION - Warehouse Location(s) from the Receipt Stow Notice input, when applicable, to indicate the actual location in which the materiel was stowed.

(8) DAYS LATE - The number of days between the current date and date on which the receipt would have been on time if the action had been completed. For those receipt lines printed as potential late receipts this element will be blank. The amount of allowable depot processing time is as follows:

(a) Receipts from Procurement - 4 workdays.

(b) Receipts from other sources - 7 workdays.

(9) TP NUMBER - Teleprocessing Control Number assigned to the Type A or ZB6 Inquiry by the computer and recorded in the Suspended Receipt File.

(10) INV DATE - Inventory Date. The cutoff of the inventory established for the materiel received from the locator file.

(11) TIC - Type Inventory Code from the locator file, when applicable.

(12) EXPEDITE - See note 2.

d. Part 2 - The following elements will appear after Unit of Issue on part 2 of the report.

(1) QUANT - Quantity Received. Seven position element from the RCC input.

(2) WHSE AREA - Warehouse Area from RCC input.

(3) DATE RECVD - Date Received from the Type A or ZB6 Inquiry input.

(4) DATE CONFM - Date Confirmed. The date the Receipt Confirmation Card was processed as determined by the computer and recorded in the Suspended Receipt File.

(5) INQ DATE - Inquiry Date. Same as part 1.

(6) DAYS LATE - Same as part 1.

(7) TP NUMBER - Teleprocessing Control Number. Same as part 1.

(8) INV DATE - Inventory Date. Same as part 1.

(9) TIC - Type Inventory Code. Same as part 1.

(10) EXPEDITE - See note 2.

NOTE 1: All of the above elements are obtained directly from the Suspended Receipt File. Although the original sources of the data elements are as described above it would be possible to have revised data resulting from the processing of a Suspended Receipt File Maintenance Card (appendix B-145) appear on the report.

NOTE 2: Receipts identified in this manner are not necessarily late; however, appropriate investigation should be conducted to complete, as rapidly as possible, the receipt action.

e. Part 3 - The following elements will appear after Unit of Issue on part 3 of the report.

(1) DAYS IN PROCESS - Numeric indicators 1 through 7, 1-7 total, and greater than 7 days in process.

(2) PROC - Procurement identified receipts.

(3) R/R - Returns and Redistribution (other than procurement) receipts.

(4) AREA TOTAL - A total of all receipt awaiting storage action for those stations within the area, divided into the two receipt classes - procurement and other than procurement.

(5) NO RCC NO STOW NOTICE - Totals of the remainder of receipts on the Suspended Receipts File which evidence no confirmation and no storage activity.

(6) TOT REC AWAIT STOW ALL AREAS - A total of those Suspended Receipt actions in all areas awaiting a storage update - DIC ZZS.

5. DATA ORGANIZATION

a. Part 1

(1) Sequence: PIIN/Document Number (minor) within Date Received (major).

(2) Page Break on Date Received.

(3) Page Break after last Date Received and print summary of F-71, part 1.

b. Part 2

(1) Sequence: TP Control Number (minor) within Date Received (minor) within Warehouse Area (major).

(2) Page Break on Warehouse Area.

c. Part 3

(1) Sequence: Warehouse Area and Stations within the Area.

(2) Page break by Area.

6. NUMBER OF COPIES AND DISTRIBUTION

a. Part 1 - Two copies to Receipt Documentation Branch, Receiving Division one copy to MSO, DS/T.

b. Part 2 - One copy of applicable portions to each Warehouse Area Control Office, one copy to Receipt Documentation Branch, Receiving Division, one copy to MSO, DS/T.

c. Part 3 - Same number of copies and distribution as in part 2.

7. PROCEDURE

a. Part 1 - To be used as a tool for expediting receipts which may have exceeded the authorized processing time. Reports will also include those incomplete receipts that require action on the date of the report to avoid being charged as late on the MIS reports. This listing will also be used as a management tool for identification and correction of trouble areas in receipt processing. Further instructions are provided in appendix E-020 P.

b. Part 2 - To be used as a tool by Storage Division for expediting stowage of receipts which may have exceeded the authorized processing time. Reports will also include those receipts that require stowage action to avoid being charged as late on the MIS reports. This listing will also be used as a management tool for identifying and correcting problems in specific warehouse areas, when necessary. Further instructions are provided in appendix E-020 P.

c. Part 3 - The report will display the outstanding receipts in all storage areas which require only a storage notification (DIC ZZS) update to complete the receipt action. This report can be used to identify potential problem areas where workload, relative to stowing new receipts, is concentrated. The report is a total overview of the new receipt workload within Warehousing Division.

APPENDIX F-72

OPEN MRO FLAGGED FOR INVENTORY

1. PURPOSE

To provide a listing of all open preflag MROs with a Document Release Date of 4 days, or more, prior to the current date.

2. ORIGIN

Scan of Shipment Unit History File when NSN is flagged as being under inventory as shown in appendix D-12.

3. FREQUENCY

Daily on day NSN is flagged as being under inventory.

4. DATA ELEMENTS

a. Report Header Line:

(1) Report Number (F-72)

(2) Title - Open MRO Flagged for Inventory

(3) FRC - Functional Routing Code

(4) Section Number

(5) Date - Month, day, year, and Julian date

(6) Page Number

b. First Line:

(1) D/I - Document Identifier Code

(2) R/I TO - Routing Identifier Code (To)

(3) M/S - Media and Status

(4) NSN - National Stock Number

(5) TYP PK - Type Pack

(6) CC - Condition Code

(7) UI - Unit of Issue

(8) QTY - Quantity

(9) DOCUMENT NO. -

(10) SFX - Suffix

(11) SUPPL ADDR. - Supplementary Address

(12) SIG - Signal Code

(13) FND - Fund Code

(14) DIS - Distribution Code

(15) PRJ - Project Code

(16) PRI - Priority

(17) RDD - Required Delivery Date

(18) ADV - Advice Code

(19) R/I FRM - Routing Identifier Code (From)

(20) MGT - Management Code

(21) UNIT PRICE -

c. Second Line:

(1) SU NO - Shipment Unit Number to which MRO has been assigned.

(2) LINE ITEM - Shipment Unit Line Item Number representing MRO.

(3) DATES

(a) RCVD - Date MRO was received.

(b) PDT - Planned Date to Transportation for MRO.

(c) MDT - Mandatory Date to Transportation for MRO.

(4) QUANTITIES

(a) OPEN - Quantity Open

(b) OFFERED - Quantity Offered

(c) SHPD - Quantity Shipped

(d) DENIED - Quantity Denied

(e) CANCEL - Quantity Canceled

(f) PCANCL - Partial Cancellation Quantity

(5) ACTN CODE - Second position of ZBM Action Code.

(6) TCN - Transportation Control Number assigned to MRO.

(7) TCN PTL - TCN Partial Indication

(8) HOLD CODE - Hold Code

(9) PRIME WHSE LOCATION - Prime Warehouse Location

(10) COD - Cutoff Date

(11) TYP INV - Type Inventory

5. DATA ORGANIZATION

a. Sequence

(1) Warehouse Location - (first three digits) - major.

(2) Cutoff Date - intermediate.

(3) Document Number - minor.

b. Page break by Warehouse Location (first three digits).

6. NUMBER OF COPIES AND DISTRIBUTION

Two copies to Warehousing Division. One copy to Inventory Office.

7. PROCEDURE FOR REVIEW AND PROCESSING

a. Warehouse Division will:

(1) Take accelerated action to ensure that stock is selected for each MRO indicated and that Shipment Unit File is updated before cutoff date contained on the printout.

(2) If stock has been selected but there appears to be a delay in updating the Shipment Unit File, thus causing the document to be included on the printout, take action to resubmit update action to Shipment Unit File.

(3) After accomplishment of actions in subparagraphs (1) and (2), action will be taken to submit document clearance to the Inventory Document Control File (IDC) as prescribed in appendix E-055 P.

APPENDIX F-73

COMMISSARY SUPPORT CYCLE PLANNING REPORT

1. PURPOSE

To provide the defense depot a summary report of expected workload for a particular requisition/shipment cycle for Commissary Support items.

2. ORIGIN

Input of CKJ cards from DSC.

3. FREQUENCY

Upon receipt of CKJ cards from DSC.

4. DATA ELEMENTS

a. Part 1

(1) Report Number (F-73, Part 1)

(2) Title

(3) FRC

(4) Section Number

(5) Date - Month, day, year, and Julian date

(6) Page Number

b. Part 2

(1) Report Number (F-73, Part 2)

(2) Title

(3) FRC

(4) Section Number

(5) Date - Month, day, year, and Julian date

(6) Page Number

c. Data Elements (same for both parts)

(1) CONSIGNEE - From CKJ card.

(2) CYCLE CODE - From CKJ card.

(3) RDD - From CKJ card.

(4) TYPE ITEM - Type Item Code.

(5) COMPAT CODE - Compatibility Code - From CKJ card.

(6) TOTAL LINES - From CKJ card - number of requisition received from consignee.

(7) TOTAL PIECES - From CKJ card - number of cases required to fill subparagraph (4) above.

(8) TOTAL WEIGHT - From CKJ card - number of pounds involved in subparagraph (4) above.

(9) TOTAL CUBE - From CKJ card - number of cubic feet involved in subparagraph (4) above.

(10) DENSITY - Computed by dividing the number of pounds in the CKJ card by the number of cubic feet in the CKJ card.

(11) TONS - From CKJ card.

(12) TOTALS -

(a) SUB TOTALS - By consignee - Totals for subparagraphs (4) through (8) above.

(b) GRAND TOTALS - Each part - All Consignees - For subparagraphs (6) through (12) above.

5. DATA ORGANIZATIONS

a. Part 1, Brand Name Items.

b. Part 2, Local Purchase Items.

c. Sequence: Consignee major, Compatibility Code, minor.

d. Item data as follows:

(1) Part 1 contains data related to Brand Name (Code B) items.

(2) Part 2 contains data related to Local Purchase (Code L) items.

6. NUMBER OF COPIES AND DISTRIBUTION

Three copies. Original to Transportation and Traffic Management Office, one copy to Shipping Division, one copy to Receiving Division. One copy to DSC via mail.

7. PROCEDURES

The DS/T will review the projected workload as depicted on report and take action necessary to ensure that sufficient carrier equipment is available to move materiel to the port. Appropriate action will also be taken to ensure that sea bookings are arranged for movement from the port to the consignee.

APPENDIX F-74

FREIGHT DESCRIPTION FILE

1. PURPOSE

Provide Directorate of Storage and Transportation a printed copy of NMFC Freight Description information contained in the file.

2. ORIGIN

Produced as a result of on-line data entry processes in depicted appendix D-139.

3. FREQUENCY

a. Part 1 is produced when requested through program $$UWFR01, Section RP entry, as noted in appendix E-229 P.

b. Part 2 is produced as a result of on-line update actions to the Freight Description File.

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-74)

(2) Report Title

(3) Report Part Number

(a) Part 1, NMFC Description

(b) Part 2, NMFC Activity

(4) Date: Month, day, year and Julian date

(5) Page Number

b. Data Elements, Part 1, NMFC Description

(1) NMFC/KEY - National Motor Freight Classification Code (6 positions), LTL-KEY (1 position) and Record Sequence (1 position).

(2) Mode of Shipment

(3) TARIFF

(4) UFC/SFX - Uniform Freight Classification Code and Suffix

(5) COMD - Commodity Indicator

(6) LTL - Less than Truck Load Amount Code

(7) SCAN - NIIN Scan Indicator

(8) DENSITY - (lbs/cubic feet)

(9) VALUE - Valuation Amount

(10) STATUS - Record Status Code

(11) RIC - Routing Identifier Code (From)

(12) DELDTE - Record Deletion Date

(13) ACTDTE - Date of Last Action

(14) TRANSDTE - Date Transceived

(15) TRANSTIME - Time Transceived

(16) In-the-Clear Freight Description

d. Data Elements, Part 2, NMFC Activity. Same as those shown for part 1 of this report.

5. DATA ORGANIZATION

a. Report is produced in separate parts as follows:

(1) Part 1, NMFC Descriptions - Total File.

(2) Part 2, NMFC Activity - Current File Update Actions.

b. Report header data appears on the first line of each page. Freight Description detail information begins on the second line of each page with coded data relative to each NMFC or NIIN description shown on the first line of the record followed by up to ten 40 position lines of in-the-clear descriptions.

c. Data will be sequenced within each report part number as follows:

NMFC/LTL/REC-SEQ, major; Mode/Tariff, minor.

d. Double space between each NMFC record.

6. NUMBER OF COPIES AND DISTRIBUTION

Two copies. Original to Transportation and Traffic Management Office, information copy to Management Support Office, DS/T.

7. PROCEDURE

a. Report is used for general reference and file maintenance actions.

b. Report part 2 is retained as a record of file update actions.

APPENDIX F-75

MEDALOC TRANSSHIPMENT ROUTE SLIP

1. PURPOSE

Provide Transshipment Control Number and information necessary to process MEDALOC Transshipments.

2. ORIGIN

Produce as a result of recording receipt of materiel at the MEDALOC transshipment activity.

3. FREQUENCY

Randomly generated as receipts are processed.

4. DATA ELEMENTS

a. First Line

(1) Date - Julian date

(2) CRT NO - Terminal Number from which Route Slip was initiated

(3) DTR - Received date of Transshipment

(4) Clear Text - MEDALOC Transshipment

b. Second Line

(1) CHECK DIGIT - Transshipment Clerk Digit

(2) DEST - APOE from Address File

(3) LOCATION - Manually annotate the location materiel is held

c. Third Line

(1) Leave Blank

d. Fourth Line

(1) Seven Digit Transshipment Control Number

(2) Number of Pieces in Transshipment

(3) Weight of Transshipment

(4) Cube of Transshipment

(5) MEDALOC (Space Number)

e. Fifth Line

(1) TCN - Transportation Control Number of Transshipment

(2) CNSGNE - On Throughout Pallets (one consignee) enter Consignee Code if POD is not DSN, HOW, PLA, EIL or HIK on other single consignee and on Breakbulk Pallets (multiple consignees) enter as follows:

POD=RMS - Enter WK4FDK
POD=FRF - Enter WK4FDK
POD=OSN - Enter WT4J8S
POD=HOW - Enter WF6LH1
POD=PLA - Enter W8003H
POD=EIL - Enter WC1JH5
POD=HIK - Enter WX3JN7

(3) RDD - Required Delivery Date

(4) POD - POD Code From Address File

5. DATA ORGANIZATION

Route slips will be printed in the format noted in paragraph 4.

6. DISTRIBUTION AND RETENTION

a. The route slip is used to accomplish MEDALOC shipment functions.

b. The route slip is retained until shipment is complete.

7. PROCEDURES FOR REVIEW AND PROCESSING

a. The transshipment route slip should be placed with the materiel in the hold area until materiel is palletized.

b. All route slips for materiel palletized (both transshipment and originating) should be grouped together and information necessary for shipment close out annotated on the top route slip. These documents will then be used to record shipment completion.

APPENDIX F-76

CENTRAL DATA BANK MASTER RECORD

1. PURPOSE

To provide records that contain missing data elements requiring research and updating to the Central Data Bank.

2. FREQUENCY

As required this report is produced when requested in writing by the Prime Depot to the Manager of the Central Data Bank.

3. DATA ELEMENTS

a. Header Line:

(1) Report title

(2) Date

b. Data Elements:

(1) NSN - National Stock Number

(2) U/I - Unit of Issue

(3) ITEM NAME

(4) NMFC - National Motor Freight Classification

(5) LTL - Less Truck Load

(6) DM CD - Demilitarization Code

(7) PHY SEC - Physical Security Code

(8) DEL IND - Replace/Delete Code

(9) WATER COMM - Water Commodity Code

(10) AIR COM - Air Commodity Code

(11) A/C DIM - Air Cargo Dimension Code

(12) U/I WEIGHT - Unit of Issue Weight

(13) U/I CUBE - Unit of Issue Cube

(14) SHL LFE - Shelf-Life Code

(15) PD - Prime Depot Designator

(16) INV CAT - Inventory Category Code

(17) MD EX - Medical Exception Indicator

(18) SR CD - Special Requirement Code

(19) MGR - Commodity Manager Code

(20) HT CT - Number of Inquiries

(21) INQ DATE - Last date record was inquired

(22) BLK FLD - Blank field count

(23) ST - Status of Record

(24) UPDT DATE - Last Date record was updated

(25) USER IND - Registered User Indicator

(a) 1 indicates depot user, / indicates depot nonuser.

(b) Sequence of the depot indicator is as follows: SA - DDMP; SB - DDTC; SC - DCSC; SE - DESC; SM - DDMT; SR - DGSC; SU - DDOU.

(26) M/C USR - Marine Corps User

4. SEQUENCE

NSN or NIIN

5. DISTRIBUTION

Mailed to the requesting Prime Depot.

6. PROCEDURE FOR REVIEW

Requesting depot will review report and research missing data. Updating action will be accomplished through input of the Item Locator Card (appendix B-73).

APPENDIX F-77

REPLY TO AUDITOR LOCATION INQUIRY

1. PURPOSE

To prepare a detailed listing required for audit. The report is comprised of all or a portion thereof of the locations previously extracted from the locator during the random sample developed with the preparation of the F-66, Audit Review Report.

2. ORIGIN

Produced through inquiry action described in appendix E-009 P.

3. FREQUENCY

As requested and as determined by Data Systems Manager.

4. DATA ELEMENTS

a. Report Header Line:

(1) Report Number (F-77)

(2) Report Title

(3) Functional Routing Code

(4) Section

(5) Date - Month, day, year, and Julian date

(6) Page Number

b. Data Elements:

(1) LOCATION

(2) SEL NO - Selection Number

(3) NSN - National Stock Number (FSC and NIIN)

(4) MGR - Manager

(5) UI - Unit of Issue

(6) NOMEN - Nomenclature

(7) SSLIND - Shelf-Life Code

(8) PH SEC - Physical Security Code

(9) COND - Condition Code

(10) TY PK - Type Pack Code

(11) TYP LOC - Type Location Code

(12) DT PK - Date of Pack or Date of Establishment.

(13) TY STG - Type of Storage Location Code.

(14) INSDT - Date of Next Inspection.

(15) U PK - Unit Pack

5. DATA ORGANIZATION

a. Report heading on first line with detailed data columns headings on the second line.

b. Sequence by location as selected by original sample pull, see appendix F-66.

6. NUMBER OF COPIES AND DISTRIBUTION

Two copies - original and copy forwarded to originator of request.

7. PROCEDURE

The organizational element will review and accomplish audit of locations and pertinent data. When audit is accomplished and review is completed, report will be destroyed.

APPENDIX F-78

MRO STATUS DETAIL - PART 1 AND 2 - WAREHOUSE PDT CONTROL LISTING

1. PURPOSE

To provide detailed information to Directorate of Storage and Transportation regarding line items open in Storage, and not yet offered to Transportation. Listing is used to expedite the shipment and closeout of delinquent line items.

2. ORIGIN

Produced as a result of input of appendix B-58 as depicted in appendix D-105.

3. FREQUENCY

Daily, as requested.

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-78)

(2) Title

(3) Functional Routing Code

(4) Section

(5) Date: Month, day, year, and Julian date

(6) Page number

b. 80 pos. replica of input ZUG.

c. Data elements:

(1) WHSE AREA - Warehouse Area Code.

(2) RIC/DIC - RIC From/DIC A5J.

(3) SU NBR - Shipment Unit Number.

(4) CHK DIG - Check Digit.

(5) LINE - Shipment Unit Line Item Number.

(6) DOCUMENT NUMBER - From MRO.

(7) SF - Document Number Suffix.

(8) WHSE LOC - Warehouse Location.

(9) PDT - Planned Date to Transportation.

(10) MDT - Mandatory Date to Transportation.

(11) PROC - Process Code, appendix A-100.

(12) IPG - Issue Priority Group.

(13) ST CD - Shipment Unit Status Code, appendix A-102.

(14) SRC - Special Requirement Code, appendix A-81.

(15) TR-HLD - Transportation Hold Code.

(16) DEL REA - Delay Reason Code.

(17) PROJ CD - Project Code.

(18) NSN - National Stock Number.

(19) SLI - Single Line Indicator.

(20) AGE CATEGORY - Number of days held in storage, see appendix F-44.

(21) VALUE - *If line item value is less than $25.00.

(22) TOTAL - Line count per ZUG input.

NOTE: An M in the far right column indicates MEDALOC Eligible.

5. DATA ORGANIZATION

a. Sequence - Part 1

(1) Major - Warehouse Area Code.

(2) Intermediate - RIC FROM/DIC A5J.

(3) Intermediate - Shipment Unit Number.

(4) Unit Line Item Shipment.

b. Sequence - Part 2

(1) Major - Document Number

(2) Minor - Shipment Unit Number

c. Page break on each ZUG input.

6. DISTRIBUTION AND RETENTION

a. Three copies. Original to shipping Documentation Branch, Shipping Division, copies to Area Control Branches, Directorate of Storage and Transportation.

b. Destroy F-78 report for DoD activities 45 days after "force close" action.

7. PROCEDURES FOR REVIEW AND PROCESSING

Reviewed by DS/T personnel to identify those lines on which additional action should be initiated in order to ensure that late shipments are held to a minimum. The Shipping Documentation Branch will:

a. Receive appendix F-78 and distribute the report to appropriate Warehouse Areas to effect expedite and research action on individual line items. Warehouse personnel will take actions to ensure late lines are expedited.

b. Review the F-78 Listing:

(1) Oldest PDT.

(2) Oldest MDT.

(3) JCS Project Code (900 Series).

c. If line reflects a "Delay Reason Code" or "Transportation Hold Code" and the age category of the line is reasonable in relation to the delay or hold code, discontinue search.

d. If line does not reflect either code, check storage, and packing area for document:

(1) If document is located, expedite processing.

(2) If document is not located, upon completion of research, take the following action:

(a) Line Items with a value of less than $25.00 will be marked with an asterisk in the value column and the following action will be taken.

1. The MRO Force Close Card will be used to "force close" the Shipment Unit File and MRO History record.

2. Prepare a coding sheet for each line to be "force closed".

3. Use the format outlined in appendix B-128, paragraph 3b. Must contain Action Code GX, in pos. 79-80.

(b) If line item value is over $25.00 and it is possible to contact consignee:

1. When ascertained that materiel was received, secure sufficient information to prepare a confirmation.

2. When discovered that materiel was not received, process line item as in subparagraph d(2)(a), and advise consignee to initiate requisition followup action.

NOTE: DSC will make decision as to reinstating requisition.

(c) After 90 days have passed and all efforts to confirm have been exhausted, process line item as in subparagraph d(2)(a).

(d) The HF indicator will identify in the History File items force closed by a purge.

APPENDIX F-79

SHIPMENT PLANNING WORKSHEET

1. PURPOSE

To provide information for preplanning movement of materiel, control of processing through picking and assembly operations, and to prepare GBL, TCMD, and Intransit cards.

2. ORIGIN

Produced during each MRO cycle for all freight shipment units and multiline parcel post shipment units IAW depot option.

3. FREQUENCY

Each MRO cycle.

4. DATA ELEMENTS

a. SHIP TO - Address up to seven lines from DoDAAD. (Message indicating NORS/ANORS when applicable.)

b. MARK FOR - Export up to seven lines from DoDAAD.

c. MODE APPLICATION - Up to four lines from DoDAAD (future).

d. FREIGHT DESTINATIONS - Up to four lines from DoDAAD.

e. TU/SU CONTROL - Transportation Unit Number/Shipment Unit Number Control (computer assigned).

f. PGN - Two entries assigned by computer:

(1) SU page number

(2) Number of pages for SU

g. DUE - Two entries assigned by computer:

(1) PDT - Computer assigned

(2) MDT - Computer assigned

h. DEST - Destination Cross-Reference from the Activity Address File.

i. Copy Number (1 through 5 - preprinted).

j. ASSEMBLY PT - Assembly Point (computer assigned):

(1) Transportation Unit Assembly Point.

(2) Shipment Unit Assembly Point.

(3) Alternate Shipment Unit Point.

k. APOE - Aerial Port of Embarkation Code (from DoDAAD).

l. WPOE - Water Port of Embarkation Code (from DoDAAD).

m. APOD - Aerial Port of Debarkation Code (from DoDAAD).

n. WPOD - Water Port of Debarkation Code (from DoDAAD).

o. PIER - Water Port of Embarkation Code (from DoDAAD)*.

p. BBPT - Break Bulk Point (from DoDAAD).

q. LOGA - LOGAIR Destination Terminal (from DoDAAD)*.

r. QTRN - QUICK TRANS Destination Terminal (from DoDAAD)*.

s. NOPP - No Parcel Post Indicator (from DoDAAD).

t. NOMO - No Motor Freight Indicator (from DoDAAD)*.

u. NORO - No Rail Freight Indicator (from DoDAAD)*.

v. EFAK - FAK Eligible Consignee (from DoDAAD).

w. NEXC - No Mix Rule Exception Indicator (from DoDAAD).

x. PMOD - Planned Mode of Shipment (PP/FRT) (computer assigned).

y. PPZN - Parcel Post Zone Code (from DoDAAD).

z. GARA - Geographic Area Code (from DoDAAD).

aa. SARA - Geographic Sub Area Code (from DoDAAD).

ab. WARA - Warehouse Area Code (Stock Location Group Code (Locator).

ac. TYPE - Bin or Bulk (BLK) SU (computer assigned)*.

ad. BLOCK 1 - Routing (manual entry).

ae. BLOCK 2 - Bill of Lading Number (manual entry).

af. BLOCK 3 - MTMTS Release Number (manual entry).

ag. BLOCK 4 - Transportation Appropriation (manual entry).

ah. BLOCK 5 - Transportation Cost (manual entry).

ai. BLOCK 6 - Date Shipped (manual entry).

aj. BLOCK 7 - Desired Delivery Date (manual entry).

ak. BLOCK 8 - Type and Size Movement Equipment Ordered (manual entry).

al. BLOCK 9 - Type and Size Movement Equipment Furnished (manual entry).

am. BLOCK 10 - Date Movement Equipment Furnished (manual entry).

an. BLOCK 11 - Movement Equipment Number (manual entry).

ao. BLOCK 12 - Seal Numbers Applied (manual entry).

ap. BLOCK 13 - Capacity Loaded Vehicle. Check Y/N (manual entry).

aq. BLOCK 14 - Placarded Vehicle. Check Y/N (manual entry).

ar. BLOCK 15 - Skid or Pallet Weight (manual entry).

as. BLOCK 16 - Dunnage Weight (manual entry).

at. BLOCK 17 - Type of Cargo Label (manual entry).

au. BLOCK 18 - Conex Number (manual entry).

av. BLOCK 19 - USA Control Number (manual entry).

aw. BLOCK 20 - Remarks and Additional Data (manual entry except selected items for which "Air Challenge Exempt" is computer printed in this block).

ax. BLOCK 21 - MILSTAMP Hold Code, if applicable (manual entry).

ay. BLOCK 22 - Assembled Date and Assembler (manual entry).

az. BLOCK 23 - TCMD Prepared Date (manual entry). Computer entry of "Transceived" when MOWASP generated an Advance TCMD.

ba. BLOCK 24 - TCMD Dispatched Date (manual entry).

bb. AC - Air Commodity Code - (from locator).

bc. SUL - Shipment Unit Line Item Number (computer assigned).

bd. S - Shipment Unit Line Item Suffix (computer assigned).

be. M - Commodity Manager (computer assigned from MRO).

bf. C - Condition Code (computer assigned from MRO).

bg. AV - Advice Code (computer assigned from MRO).

bh. Document Number (computer assigned from MRO - dash after sixth and tenth digit).

bi. Stock Number (computer as from MRO - dash inserted after FSC, first two digits of NIIN, and next three digits of NIIN).

bj. Item Description (from locator).

bk. Unit Price (computer assigned from MRO).

bl. UI (from locator).

bm. Quantity Ordered (computer assigned from MRO).

bn. Total Packs (computer assigned).

bo. TP (from MRO subsistence item only).

bp. Unit Weight - four whole numbers, two decimals (from locator).

bq. Unit Cube - three whole numbers, three decimals (from locator).

br. Total Weight - whole numbers only (computer assigned).

bs. Total Cube - whole numbers only (computers assigned).

bt. Stock Locations - First and last locations printed on DD Form 1348-1 (from locator). Note: Storage-in-Transit data will be provided when available from locator file.

bu. W.COM - Water Commodity Code 5 positions (from locator).

bv. SR - Special Requirements Code (from locator).

bw. T - NMFC Class Rating - LTL Code (from locator).

bx. R - UFC Class Rating - LCL Code (from locator).

by. A - Air Dimension Code (from locator).

bz. V - Rail Variation Indicator (from locator)*.

ca. NMFC and SUFFIX number, blank between number and suffix (from locator).

cb. UFC and SUFFIX number, blank between number and suffix (from locator).

cc. FREIGHT CLASSIFICATION DESCRIPTION (from Freight Description File).

cd. SC - MNFFC Suffix Variation Code (computer assigned)*.

ce. PL UNIT PK - Planned Unit Pack (computer assigned)*.

Data in paragraphs 4ac through 4ae requested for each line item.

cf. HAZARD - Print HAZARD when Hazardous Indicator in FDF NIIN Record is "A".

cg. Mode/Tariff Description Indicator - Print code shown in Commodity Indicator in FDF NMFC record.

ch. Value - Print Value Amount shown in FDF NMFC record (2 place decimal).

ci. NIIN - Print Density Amount shown in FDF NMFC record.

cj. NIIN - Print NIIN Scan Indicator shown in FDF NMFC record.

Data in paragraphs 4bb through 4cj requested for each line item.

ck. SPEC INST BLOCK - Special project message (MOWASP Project In-The-Clear File).

cl. TOTALS BLOCK.

(1) Total weight for Shipment Unit, no decimals (computer assigned).

(2) Total cube for Shipment Unit, no decimals (computer assigned).

(3) Total weight for Shipment Unit, no decimal (actual weight - manually assigned).

(4) Total cube for Shipment Unit, no decimal (actual cube - manually assigned).

cm. TCMD Section.

(1) DOC IDENT - Document Identifier (manual entry).

(2) TRAILER CONTAINER NUMBER (manual entry).

(3) SHIPPER CONSIGNOR CODE (computer assigned).

(4) COMMODITY (manual entry).

(5) AD - Air Dimension (manual entry).

(6) POE - Port of Embarkation (from DoDAAD).

(7) POD - Port of Debarkation (from DoDAAD).

(8) M - Mode of Shipment (manual entry).

(9) TY PK - Type Pack Code (manual entry).

(10) TRANSPORTATION CONTROL NUMBER - Computer assigns first 15 positions. Last two positions are added manually if required.

(11) CONSIGNEE - Computer assigned from MRO.

(12) PR - Issue Priority Group. Computer assigned from MRO.

(13) RDD - Required Delivery Date. Computer assigned from MRO.

(14) PROJ - Project Code. Computer assigned from MRO.

(15) DATE SH - Date shipped (manual entry).

(16) ETA - Expected to arrive date (manual entry).

(17) TAC - Transportation Account Code (computer assigned).

(18) MR PIECES - Number of Pieces (manual entry).

(19) WEIGHT - (manual entry).

(20) CUBE - (manual entry).

*Data elements under development in MOWASP.

NOTES:

a. If Warehouse Area Code is X, a batch number and serial number within batch will appear in lower left corner of "Mark For" block.

b. The Sequence Option Code (appendix A-66) for the SPW will print in lower right corner of "Mark For" block.

c. The No Freight Indicator from DoDAAD will be entered in the "No Mo" block.

5. DISTRIBUTION

Five copies to Shipment Planning Branch, DS/T.

6. DATA ORGANIZATION

Data is printed on DLA Form 674 under titled columns. Prime locations are in warehouse location sequence.

7. PROCEDURE

Prepared by the computer on a scheduled basis for use by transportation office to preplan movement of materiel. During the picking, packing, marking, assembly and movement preparation, additional data is manually added as prescribed in appendix E-016 P.

APPENDIX F-80

LOCATOR FILE MANDATORY DATA STATUS REPORT

1. PURPOSE

Provides DS/T with a management tool to indicate the status of the data elements in the Locator File.

2. ORIGIN

Produced as a result of action as depicted in appendix D-83.

3. FREQUENCY

Data is available every time locator scan is executed, but will only be printed when the surveillance program depicted by appendix D-2 is run. Normally, this is the first day of each month.

4. DATA ELEMENTS

a. Report Header line which includes:

(1) REPORT NUMBER -

(2) TITLE -

(3) Product Control Number

(4) FRC - Functional Routing Code

(5) SECTION NUMBER -

(6) DATE - Month, day, year, and Julian date

(7) PAGE NUMBER -

b. Data Elements.

(1) CATEGORY - Prime or User DLA Items or non-DLA Items.

(2) DEPOT CODE - Four-digit Depot Code

(3) MANAGER - Single-digit Manager Code

(4) ACTIVE ITEMS:

(a) COMPLETE - Number of complete records.

(b) INCOMPLETE - Number of incomplete records.

(5) INACTIVE ITEMS

(a) COMPLETE - Number of complete records.

(b) INCOMPLETE - Number of incomplete records.

(6) NON-DLA - Number of non-DLA records.

(7) OTHER - Number of other records.

(8) TOTAL - Totals of all active and inactive records.

5. DATA ORGANIZATION

Report header data on first line and column headings on second and third lines. Detail data on subsequent lines.

6. NUMBER OF COPIES AND DISTRIBUTION

One copy to MOWASP Data Control Branch, MSO, and one copy to Chief, MSO.

7. PROCEDURE

This listing will be used as a management tool for determining the number of active and inactive items on the locator which are complete or incomplete by ownership. The effectiveness of the personnel preparing data for the file can be measured.

APPENDIX F-81

STORAGE ITEM CHANGE (SIC) MULTIPLE LOCATION LISTING

1. PURPOSE

Provide a listing of multiple locations which result from CMDN processing.

2. AUTHORITY

Chapter 66

3. FREQUENCY

Upon processing of CMDN Cards when NSN changes or consolidations result in multiple locations.

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-81)

(2) Report Title

(3) FRC - Functional Routing Code

(4) Section Numbe

(5) Date - Month, day, year, and Julian date

(6) Page Number

b. Data Elements:

(1) NSN - National Stock Number

(2) CONDITION - Condition Code

(3) TYP LOC - Type Location Code

(4) WHSE LOCATION - Warehouse Location

5. DATA ORGANIZATION

a. Single space within NSN, double space between FSNs.

b. Major sequence: NSN.

6. NUMBER OF COPIES AND DISTRIBUTION

Three copies to Warehousing Division, DS/T.

7. PROCEDURE FOR REVIEW AND PROCESSING

Bin Operations Branch and Area Control Branches will:

a. Review and analyze the listing as to feasability of consolidating stock locations.

b. Process consolidation actions as appropriate IAW appendix E-072 P.

c. Destroy listing upon completion of action(s).

APPENDIX F-82

STORAGE ITEM CHANGE (SIC) LISTING

1. PURPOSE

To provide media to:

a. Remark and/or repackage stocks.

b. Verify differences in unit of issue changes.

c. Change Commodity Manager Code, Physical Security Code and/or Shelf-Life Code.

2. AUTHORITY

Chapter 66

3. FREQUENCY

Upon processing of change cards, appendix B-23 produced during the processing depicted by appendix D-36.

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-82)

(2) Report Title

(3) FRC - Functional Routing Code

(4) Section Number

(5) Date - Month, day, year and Julian date

(6) Page number

b. Data Elements:

(1) Part 1 Manual Reconciliation Unit of Issue and NSN

(a) WHSE LOCATION (Blank)

(b) DESCRIPTION - Description of Action Required

(c) CM OLD NSN - Old Stock Number

(d) LOC UI - Locator Unit of Issue

(e) CM NEW NSN - New Stock Number

(f) LOC UI - Locator Unit of Issue

(g) NEW UI - New Unit of Issue

(h) CON FACT - Conversion Factor

(i) LOC WGT - Locator Weight

(j) LOC CUBE - Locator Cube

(k) EFF DATE - Effective date of change

(2) Part 2 Manual Reconciliation Phy Sec Shelf-Life Mgt Code

(a) WHSE LOCATION

(b) DESCRIPTION - Description of Action Required

(c) CM NSN - Stock Number

(d) COND - Condition Code

(e) INSP DATE - Inspection Date

(f) SHELF - Shelf-Life Code

1. CM - Code from Change Card

2. LOC - Code from Locator

3. F - Code from FAWESP Table

(g) DATPK/EXPIR - Date of Pack/Expiration Date

(h) PHYS - Physical Security Code

1. CM - Code from Change Card

2. LOC - Code from Locator

(i) MGT - Commodity Manager Code

1. Commodity Manager, Gaining

2. Commodity Manager, Losing

3. Commodity Manager, Locator

(j) EFF DATE - Effective Date of Change

(3) Part 3 Remarking Instructions

(a) WHSE LOCATION

(b) DESCRIPTION - Description of Action Required

(c) OLD NSN - Old Stock Number

(d) LOC UI - Locator Unit of Issue

(e) NEW NSN - New Stock Number

(f) COND - Condition Code

(g) NEW UI - New Unit of Issue

(h) CON FACT - Conversion Factor

(i) NEW U/WGT - New Unit Weight

(j) NEW U/CUBE - New Unit Cube

(k) EFF DATE - Effective Date of Change

(4) Part 4 Notice of Code Changes

(a) NSN - National Stock Number

(b) UI - Unit of Issue

(c) NOMEN - Nomenclature/Item Description

(d) NMFC - National Motor Freight Classification Code

(e) LTL - Freight Rate LTL Code

(f) PHY SEC - Physical Security Code

(g) NMFC SFX - National Motor Freight Classification Code Suffix

(h) IND - MTMC Confirmation Indicator

(i) LCL - Freight Rate LCL Code

(j) DE-MIL - Demilitarization Code

(k) WATER COM - Water Commodity Code

(l) AIR COM - Air Commodity Code

(m) AIR CRGO - Air Cargo Dimension Code

(n) STOR IN TRAN - Storage-In-Transit Privilege Code

(o) UNIT WEIGHT - Unit Weight

(p) UNIT CUBE - Unit Cube

(q) SSL IND - Short Shelf-Life Indicator Code

(r) POP GRP - Popularity Group Code

(s) INV EX - Inventory Category Exception Code

(t) HSCC - Hazardous Storage Compatibility Code

(u) SPEC RQMT - Special Requirement Code

(v) MGR - Commodity Manager Code

(w) MOS OF DEM - Months of Demand

(x) AVG DEM - Average Demand

(y) INV FLG - Inventory Flag

(z) INV C/O DAY - Inventory Cutoff Day

c. Second Header Line:

(1) COND - Condition Code

(2) TYPK - Type Pack Code

(3) TYPLOC - Type Location Code

(4) DATEPK - Date of Pack

(5) TYPSTG - Type of Storage Location Code

(6) WHSLOC - Warehouse Location Code

(7) INSPDATE - Date of Next Inspection

(8) UPK - Unit Pack

(9) LCNO - Lot/Contract Number

(10) LCIND - Lot/Contract Indicator

(11) PREDOC - Storage Item Change Card Predocumentation Interval

(12) CAGE - Contractor and Government Entity Code

(13) LDC - Lot Date Code

5. DATA ORGANIZATION

a. See formats

b. Parts 1 and 2 major sequence: NSN.

c. Part 3 major sequence: Location. (Eject to new page on first three positions of location.)

d. Part 4 major sequence: NSN, with multiple FSCs and NSNs per page.

6. NUMBER OF COPIES AND DISTRIBUTION

a. Part 1 - Three copies, original and one copy to MOWASP Data Control Branch, MSO, copy to Quality Control Branch, DS/T.

b. Part 2 - Four copies, original and one copy to MOWASP Data Control Branch, copy to Quality Control Office, and copy to Stock Readiness Branch, Warehouse Division.

c. Part 3 - Four copies, original and one copy to Warehousing Division, copies to MOWASP Data Control Branch and MSO, DS/T.

d. Part 4 - Four copies, original and one copy to MOWASP Data Control Branch, MSO; one copy to Stock Readiness Branch, Warehousing Division; one copy to Shipping Planning Branch, Transportation and Traffic Management Ofice.

7. PROCEDURE FOR REVIEW AND PROCESSING

MOWASP Data Control Branch receives the SIC Listing, appendix F-82. Listing is furnished upon receipt of Storage Item Change (SIC) Cards from the DLA/ICP that have been processed to the MOWASP Central Data Bank and subsequently pushed to the applicable depot locator.

a. Part 1 - Review actions to determine the correct NSN is updated with correct information.

(1) The absence of a conversion factor prohibits the automatic updating of the UI to the Locator File. Prepare an Item Locator Record Card, appendix B-73, utilizing DIC ZBC for UI change and change of UI, weight, and cube as appropriate. This action will update the Locator File.

(2) Process an Item Locator Inquiry Card, appendix B-79, DIC ZBJ with Action Code FE, for all NSNs appearing on part 1 of F-82 report without a conversion factor, and receive appendix F-37 for review.

(3) Forward appendix F-37 to the Stock Readiness Branch requesting that stock be remarked, as necessary, and that listing be annotated to indicate action taken.

(4) Receives annotated appendix F-37 from the Stock Readiness Branch and review/verify that necessary action has been taken.

b. Part 2 - Review and verify to determine if changes indicated by entries on the F-82 must be manually changed in the Locator File. Prepare an Item Locator Record Card. Appendix B-73 utilizing DIC ZBC for all NSNs requiring a manager change. This action will place the correct manager code in the Locator File. Forward Part 2 to the Stock Readiness Branch for verification of shelf-life code and next inspection date.

c. Part 3 - Provides notification of NSN and UI changes for Warehouse use remarking, repackaging, and placarding stocks.

(1) Annotate nondefinitive UI changes on the F-82 with Quantitative Expression data received via TWX or letter from the DSCs if applicable.

(2) Forward annotated copy to the Stock Readiness Branch requesting stock be identified and remarked as necessary, and that listing be annotated to indicate action taken.

(3) Notify the DSC IM when repackaging/remarking/placarding of stock effected by nondefinitive UI changes is completed.

(4) Forward annotated copy of listing to the Receiving Operations Branch as notification of pending nondefinitive UI changes.

d. Part 4 - Provides a record of all code changes for an NSN when a DIC CBC has updated the FSC UI Manager, Shelf-Life Code, NMFC or Physical Security Code. Action should be reviewed to determine correct data is processed to update the locator, and the remarking of stock is accomplished when required.

e. F-82, parts 1, 2, 3, and 4 retain for 60 days, then destroy.

APPENDIX F-83

LATE MRO/DRO PROCESS

1. PURPOSE

a. To identify individual MRO Line Items that are late in Storage (part 1). DRO, DICOMSS and MROs with extended RDD (A, X, S pos. 62) are excluded. Also MROs with an automatic clear date are excluded.

b. To identify individual MRO Line Items that are late in Transportation (part 2) DRO, DICOMSS and MROs with extended RDD (A, X, S pos. 62) are excluded.

c. To identify individual MRO Line Items that are shipped Late (part 3).

(1) Forced Closed Includes MRO Line Items with/without extended RDD, DROs and DICOMSS.

(2) Excludes DRO unless forced closed.

(3) Excludes DICOMSS unless forced closed.

(4) Excludes MROs with extended RDD, unless forced closed.

d. To identify individual DRO Line Items that are late in Storage (part 4).

2. ORIGIN

Produced during the processing as depicted in appendices D-28, D-30 and D-31.

3. FREQUENCY

Daily

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-83)

(2) Area Control Branch

(3) Report Title

(4) Section Number

(5) Date - Month, day, year and Julian date

(6) Page Number

b. Part 1 - MRO Line Items Late in Storage

(1) Data Elements:

(a) LOC GRP - Location Group Code

(b) WHSE LOC - Warehouse Location

(c) IPG - Issue Priority Group

(d) MGR - Manager (RIC From)

(e) DIC - Document Identifier Code (A5_) excludes A5J, DICOMSS, and MRO with extended RDD.

(f) SU Number - Shipment Unit Number

(g) CK DGT - Check Digit Number

(h) SU LI NR - Shipment Unit Line Item Number

(i) DOCUMENT NUMBER - Document Number assigned to Requisition and Suffix, if applicable.

(j) DEST - DCR, BBP, POE or Consignee DoDAAC.

(k) NSN - National Stock Number

(l) DATE RCVD - Date MRO Received (Year-Julian day).

(m) PDT - Planned Date to Transportation (Julian day).

(n) MDT - Mandatory Date to Transportation (Julian day).

(o) PROJ CODE - Project Code

(p) DEL REA - Delay Reason Shipment Code (appendix A-64).

(q) HOLD CODE - Hold Code (appendix A-21).

(r) Dollar Value (*If Line Item Value is Less Than $25.00).

c. Part 2 - MRO Line Items Late in Transportation

(1) Data Elements:

(a) LOC GRP - Location Group Code

(b) LOC - Location (first three positions of Prime Location)

(c) IPG - Issue Priority Group

(d) DAYS STG - Will Reflect the Number of Days in Storage.

(e) DAYS TRNS - Will Reflect the Number of Days in Transportation (first appearance part 2, field will have a value of 1 based on current day minus date offered).

(f) SU NUMBER - Shipment Unit Number

(g) CK DGT - Check Digit Number

(h) SU LI NR - Shipment Unit Line Item Number

(i) DOC/SFX/TCN NUMBER - Document Number and Suffix, if applicable, and/or Transportation Control Number.

(j) CONSIG - MRO Consignee

(k) NSN - National Stock Number

(l) DATE RCVD - Date MRO was Received (Year-Julian day).

(m) PDT - Planned Date to Transportation (Julian day).

(n) MDT - Mandatory Date to Transportation (Julian day).

(o) DTE OFF - Date Offered to Transportation (Julian day).

(p) PRJ CD - Project Code

(q) TRNS HOLD - Transportation Hold Code

(r) DEL REA - Delay Reason Shipment Code

(s) DIC - Document Identifier Code (A5_) excludes A5J, DICOMSS, and MRO with extended RDD.

(t) MODE - Planned Mode Computer Assigned (one digit alphanumeric code).

(u) MGR - Manager

(v) Dollar Value - (*If Line Item Value is Less than $25.00).

d. Part 3 - MRO Line Items Shipped Late

(1) Data Elements:

(a) LOC GRP - Location Group Code

best copy available

(b) LOC - Location (first three positions of Prime Location).

(c) IPG - Issue Priority Group

(d) TOT DAY - Number of Days Late in Storage. Record will be asterisked(*) in last field if storage caused the MRO to be late.

(e) SU NUMBER - Shipment Unit Number

(f) SU LI NR - Shipment Unit Line Item Number

(g) DOC/SFX/TCN NUMBER - Document Number and Suffix if applicable, and/or Transportation Control Number.

(h) DEST - DCR, BBP, POE or Consignee DoDAAC

(i) DATE RCVD - Date MRO was Received (Year-Julian day).

(j) MDT - Mandatory Date to Transportation (Julian day).

(k) DTE OFF - Date Offered to Transportation (Julian day).

(l) DTE SHIP - Date Shipped (Julian day)

(m) HOLD CODE - Hold Code (appendix A-21)

(n) ACT CODE - Action Code GX - NON-MOFAST, X - MOWFAST if Item Forced Closed; otherwise field will be blank.

(o) DEL REA - Delay Reason Code (appendix A-64)

(p) TRNS HOLD - Transportation Hold Code

(q) MODE - Mode of Shipment Code

(r) WEIGHT - Weight of Shipment

(s) TOT PCS - Total Number of Pieces

(t) CUBE - Cube of Shipment

(u) Dollar Value - (*If Line Item Value is Less than $25.00).

(v) MGR - Manager

e. Part 4 - DRO Line Items Late in Storage

(1) Data Elements:

(a) LOC GRP - Location Group Code

(b) MGR - Manager

(c) SU NUMBER - Shipment Unit Number

(d) CK DGT - Check Digit

(e) SU LI NR - Shipment Unit Line Item Number

(f) DOCUMENT NUMBER - Document Number assigned to Requisition and Suffix, if applicable.

(g) WAREHOUSE LOCATION - Warehouse Location

(h) PDT - Planned Date to Transportation (Julian day).

(i) MDT - Mandatory Date to Transportation (Julian day).

(j) PROC CODE - Process Code Assigned (appendix A-100).

(k) IPG - Issue Priority Code

(l) STAT CODE - Status Code

(m) TRNS HOLD - Transportation Hold Code

(n) DEL REA - Delay Reason Code

(o) PRJ CDE - Project Code

(p) NSN - National Stock Number

(q) AGE CATEGORY - Age Category of Line Item

(r) DV - Dollar Value - (*If Line Item is Less than $25.00).

5. DATA ORGANIZATION

a. Report header data on first line with detailed column headings on second and third lines. Detailed data on subsequent lines.

b. SEQUENCE

(1) Part 1: MAJOR - Area Control Branch; Intermediate-LOC Group Code; IPG; Minor-Warehouse Location.

(2) Part 2 and 3: MAJOR - Area Control Branch; Intermediate-LOC Group Code, then Location (first three positions of Prime Location) within LOC GRP Code; Minor-IPG, then Document Number.

(3) Part 4: MAJOR - Area Control Branch; Intermediate-IPG within LOC Group Code; Minor-Shipment Unit and Line Item Number.

(4) Page break on each Area Control Branch.

(5) Double space each print line.

6. NUMBER OF COPIES AND DISTRIBUTION

Original to MSO, DS/T. One copy, each to the Chief, Warehousing Division, and Chief, Shipping and Transportation Division, DS/T. One copy to each Area Control Branch.

7. PROCEDURES FOR REVIEW AND PROCESSING

a. To be used by DS/T to evaluate and effect a specific and concentrated effort to eliminate late shipments with decisive corrective action.

b. To be used as a management tool to identify causes of late shipments.

c. Retain listing for 45 days, then destroy.

APPENDIX F-84

ACTIVITY ADDRESS RECORD LISTING

1. PURPOSE

To provide a listing of Activity Addresses and appropriate change actions and to facilitate review and subsequent file maintenance of the Activity Address File.

2. AUTHORITY

Chapter 2

3. FREQUENCY

a. F-84 section 1 (inquiries). This section is output as a result of an Activity Address Inquiry, Document Identifier ZAB, appendix B-119. If input is from a CRT this format will be displayed back to the CRT. If input is by card, this output will be produced daily on the F-84 listing.

b. F-84 section 2 (additions, changes and deletions to Activity Address Codes). This section is output daily as a result of processing transactions with Document Identifiers TA1, TA3, TA4, MA1, MA2, ZVD, AVE, ZGP, or ZGR, reference appendices: B-126, B-127, B-129, B-176, B-177. New and old information is printed for data that was changed by transactions which alter the Address File regardless of the source of input. When additions, changes or deletions are made to TAC 1 or TAC 2 addresses, both TAC 1 and TAC 2 old and new addresses will be printed even though only one address changed.

c. F-84 section 3 - Not available.

d. F-84 section 4 (DCR/AAC Cross-Reference Print Old/New). This section is output daily as a result of a master AAC being deleted. The computer automatically assigns a new master. This section will not be produced if no master records are deleted.

e. F-84 section 5 (DCR/AAC Cross-Reference Print, associated). This section is output daily as a result of processing a DCR Inquiry, Document Identifier ZVN, appendix B-119. This output will not be produced if no inquiries are processed.

f. F-84 section 6 (ZIP/AAC Cross-Reference Report). This section is output daily as a result of processing ZIP Code Inquiry, Document Identifier ZVP, appendix B-119. This output will not be produced if no inquiries are processed.

4. DATA ELEMENTS

a. Report header line which includes:

(1) Report Number

(2) Title

(3) Functional Routing Code

(4) Section Number and Title

(5) Date: Month, day, year, and Julian date

(6) Page Number

b. F-84 section 1

(1) Shipment Planning Data

(a) Activity Address Code - AAC

(b) Breakbulk Point Code - BBP

(c) Destination Cross-Reference - DCR

(d) ZIP Code/APO/FPO - ZIP

(e) Parcel Post Zone Code - P/P

(f) Geographic Area Code - GA

(g) Geographic Sub-Area Code - SA

(h) Motor Standard Point Location Code - SPLC

(i) Small Parcel Carrier Code - SPCC

(j) Transit Time - TT

(k) Government Bill of Lading Office Code - GBLO

(l) Consolidated Pack Indicator - CP

(m) State Code - ST

(n) Mode Restriction Code - MR

(o) CONUS Military Air Terminal - TRM

(p) Aerial Port of Embarkation Code - APOE

(q) Aeriel Port of Debarkation Code - APOD

(r) Water Port of Embarkation Code - WPOE

(s) Water Port of Debarkation Code - WPOD

(t) SEAVAN Indicator - SE

(u) DICOMSS Bank Code - DBC

(v) BG - SEAVAN Stop Number

(w) ST-NR - SEAVAN Stop Number

(2) Address Data

(a) Type Address Code - T

(b) Line Sequence No. of Address - L

(c) In-the-Clear Address

(d) MAPAC Special Instruction Indicator - S

(e) Freight Forwarder Location Code - FMS

c. F-84 section 2

(1) Shipment Planning Data (same as F-84 section 1).

(2) Address Data (same as F-84 section 1).

(3) Telephone (Duty Officer's Phone Number).

(4) Transaction Document Identifier Code - DIC.

(5) Actions:

(a) OLD

(b) NEW

(c) ADD

(d) DEL

d. F-84 section 3 - Not applicable.

e. F-84 section 4

(1) OLD DCR

(2) NEW DCR

(3) Associated AAC Values

f. F-84 section 5

(1) DCR

(2) Associated AAC Values

g. F-84 section 6

(1) ZIP Code - ZIP

(2) Activity Address Code - AAC

(3) Destination Cross-Reference - DCR

(4) TAC 2 Address Lines for AAC records which do not contain a Destination Cross-Reference Value and Tag G address lines for AAC records with a DCR value.

5. DATA ORGANIZATION

a. Report Header, first line to start each page of header: Print Report address list.

b. Shipment Planning Data Element Header: Print shipment planning data element header to start each page.

c. Sequence Data in report format by Activity Address Code Major, Type Address Code intermediate, Time Processed minor. Print only the first old address and the most recent new address.

d. Double space between header lines and type address records. Page change on each AAC change for section. Triple space when AAC changes on section 2.

6. DISTRIBUTION AND RETENTION

a. Two copies to Special Processing Section, Transportation and Shipping Division, DS/T.

b. Retention

(1) Section 1 (copies 1 and 2): No retention requirement, destroy upon completion of intended use.

(2) Section 2

(a) Copy 1: Used as work copy and may be destroyed upon completion of intended use.

(b) Copy 2: Maintain file in Special Processing Section for 120 days.

(3) Section 3: Not provided.

(4) Section 4, 5 and 6 (copies 1 and 2: No retention requirement, destroy upon completion of intended use.

7. PROCEDURE FOR REVIEW AND PROCESSING

a. Section 1 - Inquiry reply requiring no special review.

b. Section 2 (Adds, changes, or deletions) - This product will be reviewed to assure that all data required for distribution operations is available and accurate.

c. Section 3 - Not provided.

d. Section 4 - Notification of change in master record as a result of deleting old master. No special review required.

e. Section 5 - DCR inquiry reply. Review and make adjustments as required.

f. Section 6 - ZIP Code inquiry reply. This product is used to determine if AAC records which do not contain a DCR should be added to a common destination group or if new destination groups should be established.

APPENDIX F-85

VALIDATION REJECT REPORT

1. PURPOSE

To identify errors in machine input so that errors may be corrected and the corrected input reentered.

2. AUTHORITY

DLAM 4140.2, Volume III, Chapter 61

3. FREQUENCY

As required.

4. DATA ELEMENTS

a. Report Number and Title

b. Functional Routing Code

c. Section Number

d. Date - Month, day, year, and Julian date

e. Page Number

f. Data Header

(1) 0 through 80

(2) VIOLATION REASON CODES

(3) PROGRAM

g. Data Line: Input image, applicable VRC and program number.

h. Data Line: Asterisk

5. DATA ORGANIZATION

a. See Format

(1) Data Header: Numbers one through eight denoting field positions one through eighty. VRCs and program.

(2) Data Line: Input Image - An image of the input plus up to 15 VRCs. Last columns reflect the program designator in which the reject occurred.

(3) Data Line: Asterisks - An asterisk will appear under each position of the input image which is to be corrected. If all fields are valid, but the input does not match a record, no asterisks will appear. However, the apropriate VRC will appear in the Data Line containing the input image and VRCs.

b. Sequence

Sequence by DIC major and FRC minor and page break on DIC or FRC change.

6. NUMBER OF COPIES AND DISTRIBUTION

Five copies. Original to MOWASP Data Control Branch, MSO, copies to be distributed to the organizational element responsible for correcting the errors and as indicated by the FRC.

7. PROCEDURE FOR REVIEW AND PROCESSING

a. Refer to the appropriate E Appendix keyed to the DIC.

b. DICs which begin with numeric 9 in the first position of the DIC indicate the transaction was an internal transaction created automatically by the computer. When the error has been corrected, to reinput the 9 must be changed to a Z. Example: 9BA must be reinput as ZBA. In some cases the original DIC will be printed in the violated transaction, i.e., the DIC of the transaction which caused the 9_ transaction to be created.

8. REFERENCES

a. Appendix A-82, Violation Reason Codes

b. Appropriate E Appendices

APPENDIX F-86

MISSING DATA ELEMENT REPORT

1. PURPOSE

To provide research data on an NSN for which a depot has prime responsibility.

a. Part One: Provided in instances when depot has no locator record.

b. Part Two: Provided in instances where record exists on locator file.

2. ORIGIN

Output during the process as depicted in appendix D-17.

3. FREQUENCY

Daily

4. DATA ELEMENTS

a. Header Line:

(1) Report Number and Title

(2) Functional Routing Code

(3) Cycle Number

(4) Date

(5) Page Number

b. Data Elements:

(1) *NSN - National Stock Number

(2) *UI - Unit of Issue

(3) *NOMEN - Nomenclature/Item Description

(4) *NMFC - National Motor Freight Classification Code

(5) *LTL - Freight Rate LTL Code

(6) *PHY SEC - Physical Security Code

(7) *NMFC SUFX - National Motor Freight Classification Suffix

(8) LCL - Freight Rate LCL Code

(9) WATER COM - Water Commodity Code

(10) AIR COM - Air Commodity Code

(11) AIR CRGO - Air Cargo Dimension Code

(12) STOR IN-TRAN - Storage In-Transit Privilege Code

(13) *UNIT WEIGHT - Unit Weight

(14) *UNIT CUBE - Unit Cube

(15) *SSL IND - Short Shelf-Life Indicator Code

(16) *INV EX - Inventory Category Exception Code

(17) *HSCC - Hazardous Storage Compatibility Code (part 2 only)

(18) *SPEC RQMT - Special Requirement Code

(19) *MGR - Commodity Manager Code

(20) RIC OF REQ DEPOT - Identification of Requesting Depot

(21) LOC 1 - Location 1 (part 2)

(22) LOC 2 - Location 2 (part 2)

*Mandatory data elements for reentry.

5. SEQUENCE

a. NSN - Major, part 1 and part 2.

b. Location, first current record part 2, Minor.

6. NUMBER OF COPIES AND DISTRIBUTION

Two copies to MOWASP Data Control Branch, Management Support Office, Directorate of Storage and Transportation.

7. PROCEDURE FOR REVIEW AND PROCESSING

a. Part 1

MOWASP Data Control Branch will research and complete missing data, prepare and process ZBC input to update MOWASP data bank.

b. Part 2

This report is the F-34 report, but contains only DLA-owned same as the items for which depot has prime responsibility and for which there has been a demand from the Data Bank. After the required data are developed, a ZBC will be processed by MOWASP Data Control Branch which will result in updating the locator file and the MOWASP data bank.

APPENDIX F-87

MRO STATUS DETAIL - PART 2 - TRANSPORTATION DTT CONTROL DETAIL

1. PURPOSE

To provide detailed information to DS/T regarding line items open in Transportation.

2. ORIGIN

Produced as requested by specific option parameters input according to appendix B-58 (DIC ZUG) and as depicted in appendix D-105.

3. FREQUENCY

Specific request by appendix B-58 (DIC ZUG) input.

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-87)

(2) Title

(3) Functional Routing Code

(4) Cycle (Section)

(5) Date - Month, day, year, and Julian date

(6) Page Number

b. DIC ZUG (appendix B-58) input, print 80 position data.

c. Data Elements:

(1) CONSIGNEE - MRO Consignee

(2) IPG - MRO Issue Priority Group Code

(3) SU NR - Shipment Unit Number

(4) CK DIG - Check Digit

(5) LINE - Shipment Unit Line Item Number

(6) DOCUMENT NR - MRO Document Number from pos. 30-43

(7) SF - Document Number Suffix from MRO pos. 44

(8) PRJ - Special Project Code

(9) DTT - Date offered to Transportation

(10) RDD - Required Delivery Date

(11) ST - Processing Status Code, appendix A-102

(12) PROC - Assigned Processing Code, appendix A-100

(13) SRC - Special Requirement Code, appendix A-81.

(14) HLD - Transportation Hold Code

(15) PCS - Number of pieces (from lead document of SU only).

(16) WEIGHT - Weight of the shipment (from lead document of SU).

(17) CUBE - Cube of the shipment (from lead document of SU).

(18) AGE CATEGORY - Number of days held in Transportation, see appendix F-44.

(19) MED - MEDALOC Eligible

(20) TOTAL LINES IN TRANSPORTATION - Line count per ZUG input.

5. DATA ORGANIZATION

a. Sequence: IPG (major), Consignee within IPG, then Shipment Unit Number within Consignee.

b. Page break on each ZUG input.

c. Double space each print line.

6. DISTRIBUTION AND RETENTION

a. Three copies. Original to Commercial Traffic Branch, Transportation Office, copies to Shipping Documentation Branch, Shipping Division and to MSO, DS/T.

b. Listing will be destroyed after action is completed on lines that were open.

7. PROCEDURES FOR REVIEW AND PROCESSING

Transportation Office will utilize this listing to maintain control over line items that have been offered to transportation but have not been shipped.

a. This listing is utilized to perform research on open line items that have not been completed and expedite shipment action when appropriate. If data is desired other than what is normally printed on this report additional options can be determined after review of the MRO Status Summary Listing, appendix F-44. Various criteria or combinations of criteria governing specific types of line items to be printed are entered through appendix B-58.

b. Review the F-87 Listing.

(1) Research sequence will be by IPG in the following order of precedence within consignee.

(a) Earliest RDD

(b) Oldest DTT

(2) If line reflects a Transportation Hold Code and the age category of the line is reasonable in relation to the hold code, discontinue search.

(3) If line does not reflect a hold code, check previous F-87 listing to determine if delay of shipment action is valid, i.e., awaiting notification of release, carrier.

(4) If no annotation is found, check transportation area for document:

(a) When document is located determine whether delay action is valid. If delay is valid, annotate listing accordingly indicating reason and estimated release date. Should delay action not be valid, expedite shipment.

(b) If document cannot be located prepare a DIC ZEN, appendix B-128, card with Action Code GX for force closure of MRO record.

c. Refer to appendix E-137 P for related procedures.

APPENDIX F-88

SUMMARY ANALYSIS OF RELEASED WORKLOAD - PART 3 (GEOGRAPHICAL AREA)

1. PURPOSE

To provide a listing of the number of Shipment Units within an area or subarea sequenced by volume of MROs.

2. ORIGIN

Produced during the processing as depicted in appendix D-98.

3. FREQUENCY

With each release of MROs.

4. DATA ELEMENTS

a. Report header line which includes:

(1) Report Number

(2) Title

(3) FRC - Functional Routing Code

(4) SECTION - Section Number

(5) DATE - Month, day, year, and Julian date

(6) PAGE - Page number

b. First header line:

(1) ISSUE PRIORITY GROUP I

(2) Subheader Line:

(a) GEO AREA - Geographical Area Code

(b) SUB-GEO AREA OR LOGAIR FLIGHT - Sub-Geographical Area or last three digits of the LOGAIR Flight Number.

(c) SHIPMENT UNIT NO. - Shipment Unit Number

(d) NUMBER LINE ITEMS - Number of line items in the shipment unit.

(3) Subheader Line:

(a) SUBTOTALS - Total number for the Sub-Geographical Area or the LOGAIR Flight Number.

(b) TOTALS - Total number for each geographical area.

(4) Subheader Line: FINAL TOTALS (All Areas).

(a) SHIPMENT UNITS - Total number of shipment units for all geographic areas.

(b) NUMBER OF L/I - Total number of line items for all geographic areas.

(5) Subheader Line: SUMMARY of IPG I by AREA CODE.

(a) PRIORITY - IPG I, II and III, as appropriate.

(b) NO ADDRESS - Number of line items without an address available in the DoDAAD.

(c) AREA A through Z - Number of line items for shipment to Geographic Area Code A, B, C, D, etc.

(d) TOTAL LINES - Total number of line items for shipment by the priority in paragraph 4b(5)(a) above.

c. Second header line:

(1) ISSUE PRIORITY GROUP II

Will have exactly the same format as for IPG I, described in paragraph 4b(1) above.

d. Third header line:

(1) ISSUE PRIORITY GROUP III

Will have exactly the same format as for IPG I, described in paragraph 4b(1) above.

5. DATA ORGANIZATION

a. Report header data on first line, detail column heading on second line, detail data on third and subsequent lines.

b. Sequence - Number of lines in SU in descending order - major within geographical area. Sub-Geographical Area or LOGAIR Flight Number minor.

c. Page break on Geographic Area.

6. DISTRIBUTION AND RETENTION

Three copies - Original to Shipping Division, copies to MOWASP Data Control Branch, MSO, and Workload Control Branch, Operations Control Office, DS/T. Destroy this listing after establishing lines in the mechanized warehouses or after review of Geographic Shipping Cycles.

7. PROCEDURES FOR REVIEW AND PROCESSING

Shipping Division is responsible for review of the listing; however, other organizational elements may utilize this listing as a management tool for planning purposes or statistical data accumulation.

a. The Summary Analysis of Released Workload depicts released Shipment Units in Geographic Area, Subarea, greatest number of line items in a Shipment Unit, and Shipment Unit Number sequence. This listing can be effectively used in a mechanized warehouse to establish working lines utilizing the information as to number of MROs to be processed by each line to staff the line and effectively use the facility to expedite the processing of shipments.

b. MSO should review the listing to ensure that the shipping cycle established by appendix B-66 for each geographical area is realistic in that a review of the listing may indicate the shipping cycle should be made weekly instead of twice a week, and so on. Review of this listing will point out errors in establishing the Geographic Shipping Cycle.

APPENDIX F-89

FORCE CLOSED MRO LISTING

1. PURPOSE

To provide information on each Materiel Release Order force closed when research of lost MRO did not indicate positive supply action.

2. ORIGIN

Produces as a result of processing a Government Bill of Lading Closeout/MRO Force Closure Card DIC ZEN with Action Code GX or upon receipt of a DIC AFL followup with a BE Action Code from the ICP/DSC. Produced during the processing as depicted by appendix D-57.

3. FREQUENCY

Upon submission of Force Closure Card DIC ZEN with Action Code GX or processing of a DIC AFG followup with a DE Action Code from the DSC/ICP.

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-89)

(2) Report Title

(3) Functional Routing Code

(4) Section Number

(5) Date: Month, day, year, and Julian date

(6) Page Number

b. First Header Line:

(1) D/I - Document Identifier Code

(2) R/I - Routing Identifier Code To

(3) M/S - Media and Status Code

(4) NSN - National Stock Number

(5) SBM TME - Submission Time

(6) UI - Unit of Issue

(7) QTY ORDRD - Quantity Ordered

(8) DOCUMENT NO. - Document Number

(9) SFX - Suffix Code

(10) SUPPL ADDR. - Supplementary Address

(11) SIG - Signal Code

(12) FND - Fund Code

(13) DIS - Distribution Code

(14) PRJ - Project Code

(15) PRI - Priority Designator Code

(16) RDD - Required Delivery Date

(17) R/I FRM - Routing Identifier Code From

(18) MGMT DATA - Management Data

(a) O/P - Ownership or Purpose Code

(b) C - Condition Code

(c) M - Management Code

(d) NR - New Receipt Indicator

(19) UNIT PRICE

(20) STATUS

c. Second Header Line:

(1) SU NO - Shipment Unit Number

(2) LINE ITEM - Line Item Number

(3) DATE RECVD - Date MRO Received

(4) MDT - Mandatory Date to Transportation.

(5) PDT - Planned Date to Transportation.

(6) WEIGHT - Weight of shipment

(7) CUBE - Cube of shipment

(8) NBR PCS - Number of Pieces

(9) SHIPPED

(a) QTY - Quantity (force closed)

(b) DATE - Date (of force closure)

(10) GBL/REG NUMBER - Government Bill of Lading/Parcel Post Register Number.

(11) MODE SHIP - Mode of Shipment Code

(12) TCN - Transportation Control Number:

(a) Shipment - TCN or

(b) Force Close Action.

1. Force Closure Indicator HF (first two positions)

2. Document Control Code (fourth position).

a. 1 - Storage

b. 2 - Transportation

c. 3 - Defense Supply Center, AFG followup with BE Action Code.

(13) TCN PTL - Transportation Control Number Partial Indicator.

(14) POE - Port of Embarkation

(15) HOLD CODE - Hold Codes

(16) DTT - Date to Transportation

5. DATA ORGANIZATION

a. Data as shown in the Shipment Unit File or History File will be relected. If more than one action has been taken, each transaction will be recorded.

b. Double space.

6. NUMBER OF COPIES AND DISTRIBUTION

Four copies. Original to Shipping Documentation Branch, Shipping Division; copy to Commercial Traffic Branch, Transportation and Traffic Management Office; two copies to Inventory Control Office, DS/T.

7. PROCEDURE

Reviewed to determine the results of each "force closure". Used for the purpose of rectifying/evaluation inventory shortages. Refer to appendix E-128 P, paragraph 4b.

APPENDIX F-90

LOCATION SURVEY REPORT

1. PURPOSE

To provide the DS/T with advice as to Location Survey number and area being surveyed.

2. ORIGIN

This report is produced simultaneously with the Location Survey Cards, DIC ZBH, appendix B-78, or the Location Survey Listing, appendix F-152, as a result of the process depicted in appendix D-21.

3. FREQUENCY

On input of a Location Survey Request, DIC ZBG, appendix B-77.

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-90)

(2) Title

(3) FRC - Functional Routing Code

(4) Section Number

(5) Date: Month, day, year, and Julian date

(6) Page Number

b. Data Elements:

(1) SURVEY NO - Location survey number assigned by the computer.

(2) SURVEY TYPE - Location survey code (appendix A-62).

(3) LOW WHSELOC - First location to be surveyed.

(4) HIGH WHSELOC - Last location to be included in the survey or last location selected per Table and Control limits (see appendix E-077 P).

(5) Total number of locations in the survey.

5. DATA ORGANIZATION

a. Report Header data on 1st line; detail data (paragraph 4b) on second and subsequent lines.

b. Page break as necessary to accommodate entire report.

c. Sequence report by Survey Number.

d. Single space.

6. NUMBER OF COPIES AND DISTRIBUTION

Two copies to Inventory Control Office, DS/T.

7. PROCEDURE

a. This report will be used to advise DS/T of the number of surveys in process and the number of locations being surveyed.

b. Report may be destroyed when the specific Location Survey is complete.

APPENDIX F-91

SURVEILLANCE CONTROL REPORT FOR DD FORM 1225

1. PURPOSE

To provide a control listing of and a source of document numbers for DD Form 1225, which have resulted from the assignment of Management Code M or Z to Materiel Adjustment Cards (appendix B-22) being sent to a DSC.

2. ORIGIN

This report results from the processing of Surveillance Inspection/ Operational Card (appendix B-116) as depicted in appendix D-39.

3. FREQUENCY

Each computer processing cycle with a DIC ZCO (appendix B-116) input.

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-91)

(2) Title

(3) FRC - Functional Routing Code

(4) Section Number

(5) Date - Month, day, year, and Julian date

(6) Page Number

b. Data Elements:

(1) RIC TO - Routing Identifier Code of DSC to take adjustment action.

(2) STOCK NUMBER - NSN of item being adjusted.

(3) TY PK - Type of Pack Code of item being adjusted.

(4) RIC FR - Routing Identifier Code of depot activity reporting adjustment.

(5) U/I - Unit of Issue of item being adjusted.

(6) QUANTITY - Quantity of item to be adjusted.

(7) DOCUMENT NUMBER - The Document Number assigned to the Materiel Adjustment Card (appendix B-22) sent to the DSC.

(8) COND TO - Condition Code to which the quantity (subparagraph (6), above) of the item is being transferred.

(9) COND FR - Condition Code from which the quantity (subparagraph (6), above) of the item is being transferred.

(10) MGT - Management Code applicable to the transaction (appendix A-13).

5. DATA ORGANIZATION

a. RIC (Commodity Manager), Major; Condition Code, Intermediate; NSN, Minor.

b. Spacing - Single spaced.

6. NUMBER OF COPIES AND DISTRIBUTION

Two copies with partially completed ZC0 cards to the Stock Readiness Branch, Warehousing Division, DS/T. One copy to Quality Control Office, DS/T.

7. PROCEDURES FOR REVIEW AND PROCESSING

In accordance with appendix E-091 P.

UKF091 SURVEILLANCE CONTROL REPORT FOR DD 1225 FRC SECTION 234 DATE 02.05.75.036 PAGE 00001

APPENDIX F-92

COMMISSARY SUPPORT MANAGEMENT REPORT

1. PURPOSE

a. Parts 1 and 2, Brand Name (Type Item Code B) and Local Purchase (Type Item Code L), will provide the DS/T listings showing those management data required to plan workload, detect trends, and respond to HQ DLA requests for data.

b. Part 3 has been deleted for Troop Support.

c. Part 4 of this report will provide DPSC furnished information (extracted from the DICOMSS Residual Materiel Card, appendix B-27, and the depot locator record) to assist in identifying and segregating residual materiel.

d. Part 5 of this report will provide information pertaining to DICOMSS MRO Cancellations (DIC AG6, Status Code BQ, appendix B-81), Followups (DIC AE6, Status Code CB, appendix B-94), and Depot Locator Record to assist depot personnel in identifying and segregating residual materiel.

2. ORIGIN

This report is output with data based on the daily workload of commissary related receipts and shipments.

3. FREQUENCY

Daily

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-92)

(2) Title

(3) Product Control Number

(4) FRC - Functional Routing Code

(5) Section Number

(6) Date - Month, day, year, and Julian date

(7) Page Number

b. Data Elements (Reports parts 1 and 2, Brand Name and Local Purchase, respectively):

(1) CYCLE - Alpha Cycle Code obtained from the Commissary Support Planning Card, appendix B-16, Receipt Confirmation Card, appendix B-20, the Materiel Release Confirmation Card, appendix B-14, and the Direct Commissary Support Management Data Card, appendix B-211.

(2) CYCLE DATE - Input by appendix B-211.

(3) REQUIRED DELIVERY DATE - Input by appendix B-211.

(4) NOT LATER THAN DATE - Not Later Than (NLT) delivery date - Input by appendix B-211.

(5) RECEIVING

(a) LI DUE-IN - Line Items Due-In, number of stock numbers expected to be received; input by appendix B-211.

(b) LI RECEIVED - Line Items Received.

1. DAILY - Computed from the number of commissary D4_ transactions processed to the ICP for the particular day. The first D4_ for a stock number will be the only count for the particular stock number.

2. CUM - Cumulative - Computed from the number of commissary D4_ transactions processed to the ICP for the particular cycle. The cycle code is determined by the entry in pos. 66 of the PMR Card.

(c) PERCENTAGE OF LINE ITEMS

1. IN - The percent of lines due-in that have been received for the cycle irrespective of the NLT.

2. OT - ON TIME - The percent of lines due-in, paragraph 4b(5) above, received on a date equal to or less than the MLT. This is cumulative for the cycle until the NLT is reached.

(d) TONS DUE-IN - Input by appendix B-211.

(e) TONS RECEIVED

1. DAILY - Computed from entry in commissary ZV, ZX transactions for the cycle.

2. CUM - Cumulative - Tons received from commissary ZV, ZX transactions for the cycle.

(f) % OF TONS RECV'D - Percent to Date, Percent of tons due-in from appendix B-211 for the cycle.

(6) SHIPPING

(a) MROs DUE-OUT - Total lines from CKJ transactions used to produce F-73. (These may add or subtract depending on pos. 52 of CKJ). Subtract from MROs due-out any total cancellations processed by MOWASP.

(b) MROs RECEIVED

1. DAILY - The number of commissary MROs received for the particular cycle and date. Subtract any MROs which are totally denied or canceled by MOWASP.

2. CUM - Cumulative - The number of commissary MROs received for the cycle. Subtract any MROs which are totally denied or canceled by MOWASP.

(c) % of MROs DUE-IN - The percentage of MROs due-in for the cycle that have been received - cumulative.

(d) MROs SHIPPED

1. DAILY - The number of commissary MRO line items closed for which any part of the ordered quantity was shipped, for the cycle and date.

2. CUM - Cumulative - The number of commissary items closed for which any part of the ordered quantity was shipped, cumulative for the cycle.

(e) % OF MROs SHIPPED - Percent to Date - The percent of MROs due-in for the cycles that have been shipped.

(f) TONS SHIPPED

1. DAILY - The number of tons shipped on commissary MROs for the cycle and date; data are derived from case weight recorded in the shipment unit file for each line item.

2. CUM - Cumulative - The number of tons shipped on commissary MROs for the cycle; data are derived from each line item processed to History, File, rounded to one decimal place.

(g) % OF TONS SHIPPED - Percent to Date - The percent of tons due-in for a cycle that have been shipped. Data are derived by dividing tons due-in for a cycle into the tons shipped for a cycle.

(h) MROs OFFERED ON TIME

1. DAILY - The number of MROs shipped (based on last partial or single offer of entire quantity) offered to transportation on or before the computed Mandatory Date to Transportation (MDT) for the cycle and date.

2. CUM - Cumulative - The number of MROs (based on last partial or single offer of total quantity) offered to transportation.

(i) MROs OFFERED LATE

1. DAILY - Number of MROs (based on last or single offer of total quantity) offered to transportation.

2. CUM - Cumulative - Number of MROs (based on last partial or single offer of total quantity) offered to transportation after the MDT, for the cycle.

(j) % ON TIME FILL EFFECTIVENESS

1. DAILY - The percentage of MROs shipped that were on time as defined in subparagraph (h)1 above for the current day.

2. CUM - Cumulative - The percentage of MROs shipped for the cycle that were on time as defined in subparagraph (h)2 above.

c. Part 3, Troop Support has been deleted.

d. Data Elements (part 4):

(1) DIC - Document Identifier Code of the Residual Materiel Card (CRS).

(2) NAT STOCK NUMBER FSC NIIN - The National Stock Number of the DICOMSS item declared to be residual.

(3) PIIN OR DOC NR - The Procurement Instrument Identification Number will be a constant DLA13H followed by the seven digit order number or document number.

(4) SUPP PIIN - Supplementary Procurement Instrument Identification Number

(5) UI - Unit of Issue

(6) QUAN - The quantity to be reported as residual stock.

(7) OP - The ownership or purpose code.

(8) CND - Condition Code of the item, reference appendix A-16.

(9) CYC - DICOMSS Cycle Code, reference appendix A-30.

(10) DATE - Julian date of the transaction.

(11) UNIT PR - Vendor unit price.

(12) LOCATIONS - The location(s) selected as matching the DIC CRS data, see paragraph 5b(4).

e. Data Elements (part 5):

(1) DIC - Document Identifier Code of cancellation (AG6) or followup (AE6).

(2) NSN - The National Stock Number of the DICOMSS MRO which was canceled or rejected and thus determined to be residual materiel.

(3) DOC NR - Document Number of the MRO which was canceled or rejected.

(4) SFX - Document Number Suffix

(5) UI - Unit of Issue

(6) QUANT - The quantity reported as residual stock.

(7) OP - The ownership or purpose code.

(8) CND - Condition Code

(9) CYC - Cycle Code

(10) DATE - Julian date of the cancellation or followup action.

(11) UNIT PR - Unit price of the item.

(12) LOCATIONS - The locations of materiel that will be moved to residual.

5. DATA ORGANIZATION

a. Report is arranged in columnar style as shown in this appendix.

b. Item data as follows:

(1) Part 1 contains data related to Brand Name (Code B) items.

(2) Part 2 contains data related to Local Purchase (Code L) items.

(3) Part 3 data related to Troop Issue (Code T) items has been deleted.

(4) Part 4 reflects data extracted from the DICOMSS Residual Materiel Card (DIC CRS), appendix B-27. This data will appear together with location information extracted from the locator record. If the DICOMSS Cycle Code Extend Option has been exercised, the location data will be related to the cycle code, pos. 76, present in the DICOMSS Residual Materiel Card by the cycle code extent. Report sequence will be NSN (minor) within from code (major).

(5) Part 5 reflects data extracted from the MRO cancellation (DIC AG6, appendix B-81, Status Code BQ) and the MRO Followup (DIC AE6, appendix B-94, Status Code CB). This data will appear together with the location information extracted from the depot locator record. Report sequence will be Cycle Code Major and NSN Minor.

c. Page break on Part Number.

6. NUMBER OF COPIES AND DISTRIBUTION

Four copies: Original, DS/T, one copy Chief Commissary Division, one copy Chief Transportation and Traffic Management Office.

7. PROCEDURES

Report will be utilized to ensure progress is maintained in commissary support and to develop reports to higher headquarters, as required. See appendix E-140 P for related procedures.

APPENDIX F-93

RECEIPT FORECAST REPORTS

1. PURPOSE

To provide projections of receipts workload based upon Prepositioned Materiel Receipt (PMR) data. Parts 1 and 2 of the report differ only by the sequence in which they are produced.

2. ORIGIN

Reports are produced as a result of processing Receipt Forecast Request Cards. Procedures for processing request cards are provided in appendix E-084 P.

3. FREQUENCY

As required.

4. DATA ELEMENTS

a. Report Header Line includes:

(1) Report Number (F-93)

(2) Version Number - Part 1 or Part 2

(3) Title - Procurement Receipts Forecast - for EDD — or Receipts Forecast - For EDD -- and/or Source ----.

(4) FRC

(5) Section Number

(6) Date - Month, day, year, and Julian date

(7) Page Number

b. Data Elements (all data obtained from the PMR Record selected):

(1) DIC - Document Identifier Code

(2) RIT - Routing Identifier To

(3) PIIN or DOC NO - Procurement Instrument Identification Number or Document Number

(4) SUPP PIIN - Supplemental Procurement Instrument Identification Number

(5) CLIN or SUPADR - Contract Line Item Number or Supplementary Address

(6) EDD - Estimated Delivery Date

(7) NATIONAL STOCK NUMBER

(8) QUANTITY

(9) UI - Unit of Issue

(10) CND - Condition Code

(11) MGT - Management Code

(12) OP - Ownership/Purpose Code

(13) DIS - Distribution Code

(14) PRJ - Project Code

(15) SIG - Signal Code

(16) FND - Fund Code

(17) DCM CYC - DICOMSS Cycle Code

(18) NUM INQ - Number of Inquiries - Indicates the number of receipts in process against the PMR Record.

(19) TYPE PACK

5. DATA ORGANIZATION

a. Part 1

(1) Sequence: PIIN (minor) within last two digits of PIIN (major).

(2) Page break on last two digits of PIIN.

b. Part 2

(1) Sequence: PIIN and/or Document Number.

(2) No page break.

6. NUMBER OF COPIES AND DISTRIBUTION

One copy to the originator of the Receipt Forecast Request Card.

7. PROCEDURES

a. Part 1

(1) The first record selection option provides all PMR Records for new procurement receipts for a specific EDD. The sequence of the resulting report facilitates purging of hard copy contract files and projecting procurement receipt clerical workload in the Receipt Documentation Branch.

(2) The second record selection option provides all PMR records for new procurement receipts for a specific EDD in a specific terminal digit (last two positions of PIIN) range. This option allows a contract clerk to select PMR records pertaining to his or her portion of the hard copy contract files and permits selective purging or workload projection within a specific work area.

b. Part 2

(1) The first record selection option for part 2 provides all PMR records for a specific EDD and, if desired, a specific type of receipt (procurement or other than procurement). This report is produced in PIIN or Document Number sequence and provides a basis for receipt workload forecasting.

(2) The second record selection option for part 2 provides all PMR records for a specific source (first four positions of PIIN or Document Number) and, if desired, a specific EDD. This report allows receipt workload projections for a specific procurement source (DSC) or returns froma specific location when required.

c. Further instructions for using the appendix F-93 report are provided in appendix E-093 P.

APPENDIX F-94

BULK RECEIPT FORECAST REPORT

1. PURPOSE

To provide projections of receipt workload exceeding a selected cube parameter based upon Prepositioned Materiel Receipt (PMR) data.

2. ORIGIN

Reports are produced as a result of processing Receipt Forecast Request Cards. Procedures for processing request cards are provided in appendix E-084 P.

3. FREQUENCY

As required.

4. DATA ELEMENTS

a. Report Header Line includes:

(1) Report Number (F-94)

(2) Version Number

(3) Title - Bulk Receipts Forecasted for EDD ----.

(4) FRC

(5) Section Number

(6) Date - Month, day, year and Julian date

(7) Page Number

b. Data Elements (all data obtained from the PMR Records selected):

(1) DIC - Document Identifier Code

(2) RIT - Routing Identifier To

(3) NATIONAL STOCK NUMBER

(a) FSC - Federal Supply Class

(b) NIIN - National Item Identification Number

(4) PIIN or DOC NR - Procurement Instrument Identification Number or Document Number

(5) QUANTITY

(6) CUBE - Indicates total cube of the receipt based upon Unit Cube recorded in the Stock Locator File.

(7) TYPE PACK

(8) UI - Unit of Issue

(9) CND - Condition Code

(10) MGT - Management Code

(11) OP - Ownership/Purpose Code

(12) PRJ - Project Code

(13) DIS - Distribution Code

(14) SIG - Signal Code

(15) FUND - Fund Code

(16) DCM CYC - DICOMSS Cycle Code

(17) NUM INQ - Number of Inquiries - Indicates the number of receipts in process against the PMR Record.

5. DATA ORGANIZATION

a. Sequence: PIIN/Document Number (minor) within NSN (major).

b. No page break.

6. NUMBER OF COPIES AND DISTRIBUTION

One copy to the originator of the Receipt Forecast Request Card.

7. PROCEDURES

a. The first record selection option provides all PMR Records for a specific EDD and for which the computed total cube equals or exceeds the minimum cube parameter desired. The resulting report can be used to forecast the number of bulk receipts which can be expected to exceed a given cube limit within a given period and provides a basis for storage planning and resource allocation.

b. The second record selection option provides the same data as provided for in option one except that the report can be limited to a specific type of receipt (procurement or other than procurement). This allows a specific review of projected new procurements or returns which can be expected to exceed a given cube in a given period.

c. Further instructions for using the appendix F-94 Report are provided in appendix E-093 P.

APPENDIX F-96

LOCATOR FILE OVERFLOW LOCATIONS

1. PURPOSE

To provide a listing of all stock numbers on the Location File which have more than 30 sublocations.

2. ORIGIN

Produced during the process depicted in appendix D-64.

3. FREQUENCY

Semimonthly

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-96)

(2) Title

(3) FRC - Functional Routing Code

(4) Section Number

(5) Date - Month, day, year, and Julian date

(6) Page Number

b. Data Elements (first heading line):

(1) NAT STOCK NUMBER - National Stock Number

(a) FSC - Federal Supply Class

(b) NIIN - National Item Identification Number

(2) MGR - Commodity Manager Code

(3) UI - Unit of Issue

(4) ICD

(a) Item Code

(b) Compatibility Code

(c) Density Code

(5) NOMEN - Nomenclature

(6) A CAR - Air Cargo Dimension Code

(7) A COM - Air Commodity Code

(8) WCOM - Water Commodity Code

(9) SPRQMT - Special Requirement

(10) MHSTD - Manhour Standards Application Code

(11) NMFC - National Motor Freight Classification Code

(12) SFX - National Motor Freight Classification Suffix Code

(13) LTL - Freight Rate LTL Code

(14) LCL - Freight Rate LCL Code

(15) SIT - Storage In-Transit Privilege Code

(16) UCUBE - Unit Cube

(17) UWT - Unit Weight

(18) SSLIND - Shelf-Life Code

(19) DM CD - Demilitarization Code

(20) PHYSEC - Physical Security Code

(21) POPGRP - Popularity Group Code

(22) MOSDEM - Months Demand

(23) AVGDEM - Average Demand

(24) INVEX - Sample Inventory Exception Code

(25) INVFLG - Inventory Flag

(26) INVCOFF - Inventory Cutoff

c. Data Elements (second heading line):

(1) COND - Condition Code

(2) TYPK - Type Pack Code

(3) TYPLOC - Type Location

(4) DATEPK - Date of Pack (or date or record establishment).

(5) TYPSTG - Type of Storage Code

(6) WHSLOC - Warehouse Location

(7) INSPDATE - Date of Next Inspection

(8) UPK - Unit Pack

(9) LCNO - Lot/Contract Number

(10) LCIND - Lot/Contract Indicator

(11) PREDOC - Storage Item Change Card Predocumentation Interval

(12) CAGE - Contractor and Government Entity Code

(13) LDC - Lot Date Code

5. DATA ORGANIZATION

a. Report header data on the first line, detailed column heading on the second and third lines.

b. Sequence: NSN.

c. Page break by FSC.

6. NUMBER OF COPIES AND DISTRIBUTION

Six copies. Original to MOWASP Data Control Branch, MSO, copy to each Area Control Branch, Warehousing Division, DS/T.

7. PROCEDURE

Used by DS/T during MRO processing to obtain additional locations which are not carried in the first 30 sublocations and for other research and rewarehousing requirements. See appendix E-052 P for related procedures.

APPENDIX F-97

REINSTATEMENT OF DELETED ITEMS LISTING

1. PURPOSE

Provide a listing of deleted items which are being reinstated by the DSC.

2. AUTHORITY

Chapter 66

3. FREQUENCY

Daily, as CKH cards are received from DSC.

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-097)

(2) Title

(3) FRC - Functional Routing Code

(4) Section Number

(5) Date - Month, day, year, and Julian date

(6) Page Number

b. Data Elements:

(1) DIC - Document Identifier Code

(2) RITO - Routing Identifier Code To

(3) NSN - National Stock Number

(4) DOCNO - Document Number

(5) SFX - Suffix Code

(6) EFFDATE - Effective Date

(7) CNTDAY - Count Day

(8) RIFR - Routing Identifier Code From

(9) COND - Condition Code

(10) MGMT - Management Code

5. DATA ORGANIZATION

a. Sequence: NSN.

b. 80-80 print of CKH card.

6. NUMBER OF COPIES AND DISTRIBUTION

Two copies. Original to Inventory Control Office, copy to MOWASP Data Control Branch, MSO, DS/T.

7. PROCEDURE FOR REVIEW AND PROCESSING

a. Used as a control to ensure that all Deleted Item Cards are accounted for through processing with the DSC.

b. Used as source data for extracting information during manual research of invalid NSNs.

c. Retain one copy for 2 days after processing, then destroy.

APPENDIX F-98

INVENTORY HISTORY PRINTOUT

1. PURPOSE

a. To provide a listing/microfiche reflecting count information considered in the Inventory Count Adjustment System during the process of finalizing the results of a physical inventory for an NSN, and by condition and type of pack, as applicable.

b. The F-98 will be prepared as two distinct parts:

(1) The F-98 part 1 - This listing is created by the input of DIC ZAT (appendix B-96) for an individual NSN. It contains inventory history information for all inventories taken during the current month. (The current month history will remain and may be inquired for 15 days following month's end). (See note.) The inventory history includes all count and strike balance information, and all transactions (MROs and receipts) which were controlled during the inventory.

NOTE: Count and strike balance information for all inventories with major discrepancies ($800.00 or over) and any discrepancy for NSNs with Inventory Category Code E or U will be retained in history until the next inventory. They may be inquired with DIC ZAT during this time.

(2) F-98 part 2 - This listing/microfiche is automatically created at the beginning of each month for all inventories which were completed the preceding month. It contains inventory history; counts and strike balances plus all transactions controlled for all of last month's inventories.

2. ORIGIN

Produced as a result of input contained in appendix B-96 or as a result of planned requests as depicted in appendix D-91.

3. FREQUENCY

a. F-98 part 1 as required by input of DIC ZAT.

b. F-98 part 2 is created at the beginning of each month for inventories completed the previous month.

4. DATA ELEMENTS (Part 1 and Part 2)

a. Report header which includes:

(1) Report Number

(2) Revision Number

(3) Report Title

(4) Run Date

(5) Date

(6) Page Number

b. First heading line data:

(1) FSC - Federal Supply Class

(2) NIIN - National Item Identification Number

(3) MGR - Managing DSC of Commodity

(4) TINV - Type of Inventory Code

(5) MGT - Management Code

(6) LOT NO - Sample Inventory Lot Number

(7) ICC - Inventory Category Code

(8) UI - Unit of Issue

(9) CUTOFF DATE- Inventory Cutoff Date

(10) UNIT PRICE - Current Unit Price of item taken from Inventory Balance Notification Card (DSC strike balance).

(11) FRC - Functional Routing Code (fill only when history is by request).

(12) PREV C/O DATE - Last Inventory Cutoff Date (prior to Current Cutoff Date).

c. Second heading line data:

This heading line contains headings which are applicable to type of transaction identified from the Inventory Document Control File.

(1) DIC - Document Identifier Code. Document Identifier Codes and data pertinent to the document will be listed in the following descending sequence:

(a) DICs in the A5_ series issue transactions.

(b) DIC ZUF, which reflects DICs in D4_ and D6_ series receipt transactions.

(2) CC - Condition Code

(3) DOC/PIIN NO. - Applies to issue, receipts, and adjustment.

(4) SX - Suffix

(5) QTY ORD/REC - Indicates quantity ordered, adjusted, or received.

(6) QTY SHP - Indicates quantity shipped for A5_ documents.

(7) QTY CAN - Indicates quantity canceled for A5_ documents.

(8) MGT - Management Code

(9) DATE RECVD - Date Received

(10) TP NR/DT REL - Indicates Management Date to Transportation.

(11) MDT - Indicates Management Date to Transportation.

(12) PDT - Indicates Planned Date to Transportation.

(13) LOCATION - Nine digit warehouse location or third digit location if receipt record.

(14) IDC DATE - Date record was established on IDC File.

(15) TR - Denotes Type Record Code as defined in appendix A-87.

(16) ADJ COD - IDC Adjustment Code, appendix A-88.

(17) SC - Denotes IDC Status Code.

d. Third heading line data:

This heading line contains headings which are applicable to Inventory Balance Notification Data (DSC strike balance).

(1) DIC - Document Identifier Code (CKE)

(2) COND - Condition Code

(3) T/P - Type of Pack of materiel, when applicable.

(4) PRE DATE - Date CKE was prepared.

(5) REC DATE - Date CKE was received.

(6) STK BAL - DSC strike balance.

(7) ADJ STK - Adjusted DSC strike balance.

e. Fourth heading line data:

This heading line contains headings which are applicable to inventory count cards.

(1) DIC - Document Identifier Code (ZKA)

(2) COND - Condition Code

(3) T/P - Type of pack, when applicable.

(4) SERIAL - Count card serial number

(5) LOCATION - Warehouse location

(6) CT DAY - Count Day

(7) COUNT 1 - First count quantity

(8) COUNT 2 - Second count quantity

(9) COUNT 3 - Third count quantity

NOTE: A total count and an adjusted count will be calculated for each completed count and will be printed under each count column.

(10) BAL TO DSC - Record summarized count to DSC will be recorded for each condition and type of pack, when applicable.

(11) DOLLAR VAR - Dollar variance between DSC strike quantity and depot summarized count.

(12) REL OPT - Option Code selected by inventory monitor to release summarized count to DSC.

5. ORGANIZATION

Report header on first line and detail data on subsequent lines arranged in columns under headings identified in paragraph 4c, d, and e.

6. SEQUENCE

National Stock Number. Page break by NSN.

7. DISTRIBUTION

One copy to the Inventory Office, when generated from a planned program or to the to the FRC when requested by input of ZAT document.

8. PROCEDURES

a. F-98 part 1 - The report will be used for the purpose requested and retained until no longer needed.

b. F-98 part 2 - This listing/microfiche will be used in subsequent inventories for reference as required and retained for 2 years.

APPENDIX F-99

MANAGEMENT INFORMATION SYSTEM (MIS) CHANGE CARD LISTING

1. PURPOSE

To provide an 80-80 printout of MIS Cards, indicating elements on the F-9 report which were adjusted and quantities of the adjustments.

2. ORIGIN

Produced as a result of processing a Management Information System Card, appendix B-135, as depicted in appendix D-80.

3. FREQUENCY

As requested and upon the preparation of appendix F-9, Management Information System Feeder Data.

4. DATA ELEMENTS

a. Report header line which includes:

(1) Report Number (F-099)

(2) Report Title

(3) Product Control Number

(4) Functional Routing Code

(5) Section Number

(6) Date - Month, day, year, and Julian date

b. First header line:

(1) Document Identifier Code ZUM.

(2) Element Number - If RCS DLA(M)232(0)MIN data element, as indicated in appendix A-83 paragraph 3, will be followed by IPG (if applicable) and manager (Data Field F-9 part 1). If RCS DLA(M)26(C)MIN data element, as indicated in appendix A-83 paragraph 4, there is no IPG or manager (F-9 part 2).

(3) Quantity of the adjustment and a plus or minus sign to indicate whether this quantity represented an addition to or subtraction from the quantity in the computer.

(4) Remarks - Explanation entered in the ZUM card.

(5) Date of the preparation of the ZUM card.

(6) FRC - Functional Routing Code of the organizational element preparing the card.

5. DATA ORGANIZATION

a. Report header data on first line, detailed column heading on second line.

b. Sequence: Element Number.

c. Page Break: As necessitated by the spacing requirements contained in the Reports Format File.

6. NUMBER OF COPIES AND DISTRIBUTION

Three copies. Original to Performance Analysis and Reports Division, Office of Comptroller, copies to MSO, DS/T.

7. PROCEDURE FOR REVIEW AND PROCESSING

This listing will be reviewed for the purpose of maintaining the integrity of the F-9 report, identifying special study areas and determining those functions which require more emphasis and management surveillance. Procedures on preparing input card are contained in appendix E-115 P.

APPENDIX F-100

NO ADDRESS MRO(S)

1. PURPOSE

To provide a list of MROs that do not have a Ship-To address loaded in the DoDAAD File.

2. ORIGIN

Produced as a result of the processing depicted in appendix D-41.

3. FREQUENCY

Daily

4. DATA ELEMENTS

a. Report header line:

(1) Report number (F-100)

(2) Report title

(3) Functional Routing Code

(4) Date - Month, day, year and Julian date

(5) Page number

b. Report Data:

(1) MRO Image - MRO

(2) Missing Ship-To-Address and Activity Address Code

(a) TAC1

(b) TAC2

(3) Date received.

5. DATA ORGANIZATION

a. Report Header:

Print report header to start each page.

b. Report Data:

(1) Print report data header once each page.

(2) Sequence detail line by Ship To AAC major, Document Number in MRO minor.

(3) Double space between each detail line.

6. DISTRIBUTION AND RETENTION

a. Two copies to Special Processing Section, Transportation Division, DS/T.

b. All copies are for research purposes. Destroy upon completion.

7. PROCEDURE AND RETENTION

Add missing addresses to the MOWASP Address File. If address is not loaded MRO will remain suspended from further processing. If address is an exception address use process descripted in appendix E-003 Exception MRO/Address input.

APPENDIX F-101

MISSING POE/POD REPORT

1. PURPOSE

To provide a list of shipment units that are missing POE and/or POD codes that will be needed for export shipping label addresses.

2. ORIGIN

Produced as a result of the processing depicted in appendix D-98.

3. FREQUENCY

Daily

4. DATA ELEMENTS

a. Report header line:

(1) Report number (F-101)

(2) Report title

(3) Functional Routing Code

(4) Date - Month, day, year and Julian date

(5) Page number

b. Report data:

(1) Shipment Unit (SU)

(2) Ship-to-address and Activity Address Code

(3) Missing data

(a) APOE

(b) APOD

(c) WPOE

(d) WPOD

(4) Remarks

5. DATA ORGANIZATION

a. Report Header:

Print report header to start each page.

b. Report data:

(1) Print report data header once each page.

(2) Sequence detail line by SU.

(3) Double space between each detail line.

6. DISTRIBUTION AND RETENTION

a. Two copies to Special Processing Section, Transportation Division, DS/T.

b. All copies are for research purposes. Destroy upon completion.

7. PROCEDURE AND RETENTION

Update Shipment Unit File with missing POE or POD using appendix E-238 P-D SU/LI inquiry.

APPENDIX F-103

DELINQUENT LOGISTICS REASSIGNMENT STORAGE INFORMATION REPLY CARDS

1. PURPOSE

To provide a listing of DIC DZC, Logistics Reassignment Storage Information Cards, for which no DIC DZD, Logistics Reassignment Storage Information Reply Cards, have been prepared.

2. ORIGIN

Produced as a result of processing depicted in appendix D-128.

3. FREQUENCY

Daily

4. FORMAT

a. Report Header Line which includes:

(1) Report Number

(2) Report Title

(3) Date: Month, day, year and Julian date

(4) Page Number

b. Data Elements:

(1) DIC - Constant DZC

(2) RIC TO - Routing Identifier of the distribution depot.

(3) NSN - National Stock Number

(4) UI - Unit of Issue

(5) TRNSFR QTY - Transfer quantity, quantity being transferred to the gaining inventory manager.

(6) DOC NUMBER - Document number of the transaction.

(7) SFX - Document Number Suffix.

(8) GAINING RIC - Routing identifier of the gaining inventory manager.

(9) VAR - Variable (data entered by the Service/Agency).

(10) PROJ - Project code

(11) EFF DATE - Effective transfer data, date when logistics reassignment is effective.

(12) RIC FR - Routing identifier of the activity preparing the document.

(13) OWNR PURP - Ownership purpose card.

(14) COND - Condition Code

(15) MGMT - Management Code

(16) VAR - Variable (data entered by the Service/Agency).

(17) RETN QTY - Retention quantity, always zero.

5. SEQUENCE

a. Date DIC DZC is received - major.

b. Manager initiating DIC DZC - intermediate.

c. National Stock Number - minor.

6. NUMBER OF COPIES AND DISTRIBUTION

One copy to Inventory Control Office.

7. PROCEDURES

a. Sensitive and/or classified items appearing on this report require a warehouse count and then manual preparation of a DIC DZD reply card.

b. Refer to appendix E-187 P for more information.

8. DISPOSITION AND RETENTION

This listing will be retained until all entries on the listing have been processed and a DIC DZD reply card created. The listing will then be destroyed.

APPENDIX F-104

DIRECT COMMISSARY SUPPORT SYSTEM LOCATOR UPDATE LISTING

1. PURPOSE

a. This listing will be produced for Commissary Stock Number having missing data elements required for procesing of Commissary shipments and entered into the locator file.

b. The appendix F-104 will be output in three parts:

(1) Part 1 for Brand Name stock numbers.

(2) Part 2 for Local Purchase stock numbers.

(3) Part 3 for Troop Issues stock numbers.

2. ORIGIN

Upon processing of any type location "Add" transaction. Listing will be output only one time for each add transaction; i.e., it will not be duplicated at a later date if the missing data is not entered.

3. FREQUENCY

In accordance with processing CKK cards.

4. DATA ELEMENTS (Part 1, 2, and 3)

a. Report Header Line which includes:

(1) Report Number (F-104)

(2) Report Title

(3) FRC - Functional Routing Code

(4) Section Number

(5) Date - Month, day, year, and Julian date

(6) Page Number

b. Heading line data:

(1) NSN - Stock Number

(2) MGR - Manager

(3) NOMENCLATURE - Fifty position (maximum) nomenclature.

(4) UI - Unit of Issue

(5) CP - Compatibility Code

(6) CASE PACK

(7) DN - Density Code

(8) CASE WEIGHT - (two decimal places).

(9) CASE CUBE - (three decimal places).

(10) PHY SEC - Physical Security Code

(11) WCOM - Water Commodity Code

(12) HSCC - Hazardous Storage Compatibility Code

(13) LOC1 - Warehouse location 1

(14) LOC2 - Warehouse location 2

(15) NOTE - Type of transaction (ADD/CHG).

5. DATA ORGANIZATION

a. Report header data on first line, detailed data on second and subsequent lines.

b. Stock Number sequence. (All parts)

6. NUMBER OF COPIES AND DISTRIBUTION

Two copies. Original to Commissary Support Division, copy to MSO, DS/T.

7. PROCEDURES

a. DS/T will review listing and input missing data elements with ZBA, ZBC or CKK cards.

b. Research blank data elements to determine which data elements are necessary to complete the basic record of that particular stock number.

c. Appendix F-104 will be destroyed on completion of input documentation.

APPENDIX F-105

DIRECT COMMISSARY SUPPORT SYSTEM LOCATOR INQUIRY LISTING

1. PURPOSE

a. This listing provides DS/T with printout of active locator data for a selected stock number.

b. Appendix F-105 will be output in three parts:

(1) Part 1 for Brand Name stock numbers.

(2) Part 2 for Local Purchase stock numbers.

(3) Part 3 for Troop Issue stock numbers.

2. ORIGIN

Input of Item Locator Record Inquiry Card, ZBJ, with Action Code GA. Output from process depicted in appendix D-23.

3. FREQUENCY

Daily, upon processing of ZBJ with Action Code GA.

4. DATA ELEMENTS (Parts 1, 2 and 3)

a. Report Header Line which includes:

(1) Report Number (F-105)

(2) Report Title

(3) FRC - Functional Routing Code

(4) Section Number

(5) Date - month, day, year and Julian date

(6) Page Number

b. Heading line data:

(1) NSN - Stock Number

(2) MGR - Commodity Manager

(3) NOMENCLATURE

(4) UI - Unit of Issue

(5) CP - Compatibility Code

(6) CASE PACK

(7) DN - Density Code

(8) CASE WEIGHT (two decimal places)

(9) CASE CUBE (three decimal places)

(10) PHY SEC - Physical Security Code

(11) WCOM - Water Commodity Code

(12) HSCC - Hazardous Storage Compatibility Code

(13) SLF CD - Shelf-Life Code

(14) COND - Condition Code

(15) TYPK - Type Pack Code

(16) TYPLOC - Type Locator Code

(17) DATEPK - Date of Pack

(18) TYPSTG - Type of Storage Code

(19) WHSLOC - Warehouse Location Code

(20) INSPDATE - Next Inspection Date

(21) UPK - Unit Pack

(22) LCNO - Lot/Contract Number

(23) LCIND - Lot/Contract Indicator

(24) PREDOC - Predocumentation Interval

(25) CAGE - Contractor andd Government Entity Code

(26) LDC - Lot Date Code

5. DATA ORGANIZATION

a. Report header data on first line, detail data on second and subsequent lines. Page break on FRC.

b. Sequence

(1) Major - Functional Routing Code (FRC).

(2) Minor - Stock Number.

6. NUMBER OF COPIES AND DISTRIBUTION

Two copies. Original to inquiry initiator as indicated by FRC, copy to MSO, DS/T.

7. PROCEDURES

The organizational element which initiated the request for this data will accomplish necessary actions and then destroy the listing. See appendix E-079 P for related procedures.

APPENDIX F-106

DIRECT COMMISSARY SUPPORT SYSTEM EMERGENCY LOCATOR LISTING

1. PURPOSE

a. This listing provides DS/T a printout of all active locator data for Commissary items, by manager.

b. The appendix F-106 will be output in three parts:

(1) Part 1 for Brand Name stock numbers.

(2) Part 2 for Local Purchase stock numbers.

(3) Part 3 for Troop Issue stock numbers.

2. ORIGIN

Upon processing of Item Locator Record Inquiry Card, ZBJ, with Action Code GB. Output from process depicted in appendix D-23.

3. FREQUENCY: Upon processing of ZBJ with Action Code GB.

4. DATA ELEMENTS (Parts 1, 2, and 3)

a. Report Header Line which includes:

(1) Report Number (F-106)

(2) Report Title

(3) FRC - Functional Routing Code

(4) Section Number

(5) Date - Month, day, year, and Julian date

(6) Page Number

b. Heading line data:

(1) NSN - Stock Number

(2) MGR - Manager

(3) NOMENCLATURE

(4) UI - Unit of Issue

(5) CP - Compatibility Code

(6) CASE PACK

(7) DN - Density Code.

(8) CASE WEIGHT (two decimal places)

(9) CASE CUBE (three decimal places)

(10) PHY SEC - Physical Security Code

(11) WCOM - Water Commodity Code

(12) HSCC - Hazardous Storage Compatibility Code

(13) SLF CD - Shelf-Life Code

(14) COND - Condition Code

(15) TYPK - Type Pack Code

(16) TYPLOC - Type Location Code

(17) DATEPK - Date of Pack Code

(18) TYPSTG - Type of Storage Code

(19) WHSLOC - Warehouse Location

(20) INSPDATE - Next inspection date

(21) UPK - Unit Pack Code

(22) LCNO - Lot/Contract Number

(23) LCIND - Lot/Contract Indicator

(24) PREDOC - Predocumentation Interval

(25) CAGE - Commercial and Government Entity Code

(26) LDC - Lot Date Code

5. DATA ORGANIZATION

a. Report header data on first line, detail data on second and subsequent lines. Page break on FSC.

b. Sequence by stock number.

6. NUMBER OF COPIES AND DISTRIBUTION

Four copies. Original to security area. Copies to MSO, Warehousing Division and Commissary Support Division.

7. PROCEDURES

a. Listing will be retained for emergency use, to assign location data for MROs and to locate receipts.

b. Destroy previous listing on receipt of new listing.

APPENDIX F-107

HISTORY FILE LISTING OF ITEMS IN DP STATUS

1. PURPOSE

To provide a record of MROs, DROs and Stock Segregation Notices which require manual processing to provide confirmation, shipment status and answers to cancellation and followup transactions. The original History File is reflected on this report when a duplicate MRO is received.

2. ORIGIN

Output of processes as depicted in the following:

a. Appendix D-1, Processing MRO History Manual Control Card, DIC ZAQ.

b. Appendix D-28, Processing MRO Control/Status Request Card, DIC ZBM.

c. Appendix D-57, Daily History File Analysis.

d. Appendix D-103, Stock Segregation Notice, DIC CNS.

3. FREQUENCY

Daily

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number - (F-107)

(2) Title

(3) FRC - Functional Routing Code

(4) SECTION - Section Number

(5) DATE - Month, day, year and Julian date

(6) PAGE - Page Number

b. Data Elements - first line:

(1) D/I - Document Identifier

(2) R/I TO - Routing Identifier To

(3) M/S - Media and Status Code

(4) NSN - National Stock Number

(5) SBM TME - Submission Time

(6) UI - Unit of Issue

(7) QTY ORDRD - Quantity Ordered

(8) DOCUMENT NO

(9) SFX - Suffix

(10) SUPPL ADDR. - Supplementary Address

(11) SIG - Signal Code

(12) FND - Fund Code

(13) DIS - Distribution Code

(14) PRJ - Project Code

(15) PRI - Priority Code

(16) RDD - Required Delivery Date

(17) ADV - Advice Code

(18) R/I FRM - Routing Code From

(19) MGMT DATA -

(a) O/P - Ownership or Purpose Code

(b) C - Condition Code

(c) M - Management Code

(20) NO - Number receipt indicator

(21) UNIT PRICE -

c. Data Elements - third line:

(1) SU NO - Shipment Unit Number

(2) LINE ITEM - Shipment Unit Line Item

(3) DATE RECVD - Date MRO was received

(4) MDT - Mandatory Date to Transportation

(5) PDT - Planned Date to Transportation

(6) WEIGHT -

(7) CUBE -

(8) NBR PCS - Number of pieces for line

(9) SHIPPED -

(a) QTY - Quantity

(b) DATE -

(10) GBL/REG NUMBER - Government Bill of Lading/Registered Parcel Post Number.

(11) MODE SHIP - Mode of Shipment Code

(12) TCN - Transportation Control Number

(13) TCN PTL - TCN Partial Indicator

(14) POE - Port of Embarkation Code

(15) HOLD CODE -

(16) DTT - Date offered to transportation.

(17) SUPPL. TO SU. - Supplement to Shipment Unit

5. DISTRIBUTION AND RETENTION

Two copies. Original to Shipping Documentation Branch, Shipping Division, copy to Commercial Traffic Branch, Transportation and Traffic Management Office, DS/T.

a. Retain MRO Control File on MAP MROs 45 days and destroy.

b. Retain MRO Control File on Regular MROs 45 days and destroy.

c. Retain MRO Control File on other than DLA MROs for 90 days and destroy.

6. PROCEDURES FOR REVIEW AND PROCESSING

a. Shipping Documentation Branch processing personnel will:

(1) Receive F-107 report and file in Manual MRO Control File in document number sequence. This file will be used for the following:

(a) Processing manually controlled MROs to completion.

(b) Answering followup and cancellation request output on the F-50 report.

(c) Use of the F-5 listing used to investigate the reason for a line item being in Shipment Unit File for 355 days.

(d) Manual update actions for Stock Segregation Notices.

(e) Automatic line item removal from Shipment Unit File after being recorded 355 days, F-5 report.

(2) Receive F-85 report and post data to F-107 report; i.e., receipt of duplicate MRO, Reason Code F3.

(3) When F-107 report is a result of ZAQ card input or ZBM card with DP Action Code, enter correct data on the F-107 report and prepare manual Denial/ Adjustment, Materiel Release Confirmation, and/or Shipment Status AS_ cards for transceiving.

(4) When F-107 report is received with DIC CNS, Stock Segregation Notice, process IAW appendix E-209 P, SUP No. 1.

(5) When F-107 report and matching F-5 report is received, attach F-5 report to F-107 for research action.

b. Warehouse Area Control Branch will receive DD Forms 1348 and process appendix E-011 P. When unable to locate MRO/DRO, advise Shipping Documentation Branch.

c. Shipping Documentation Branch will receive documentation and:

(1) Prepare ZBM, ZBP, and/or ZEN cards to update Shipment Unit File.

(2) Receive F-85 report, Reason Code F4 and post closing action to F-107 report.

(3) Receive F-85 report, Reason Code KA which is a result of automatic DP action (F-5 report) or previous input pf ZBM DP action. Prepare manual AR_, AS_, or A6_ cards for transceiving.

(4) When F-5 report is attached to F-107 report, perform through search to locate documents for closing action. If documents cannot be located, prepare "Force Closing" action. Post action to F-107 report.

(5) Prepare daily report to Management Support Office, Resources Control and Performance Analysis Branch for update of Management Information System (MIS), by input of ZUM card, appendix B-135. Report should contain number of lines shipped, canceled, denied, partially denied, or adjustments, broken down by Manager Code.

d. See appendices E-099 P, E-123 P, E-139 P, and E-209 P for related procedures.

APPENDIX F-108

DELINQUENT IDC RECORD UPDATE

1. PURPOSE

To provide information on open records in the Inventory Document Control (IDC) File, when the file does not reflect an update action as indicated by appendices B-92 and B-93. This report is produced in three parts as follows:

a. Part 1 - Open Receipts - MRC on file with no matching ZBA. (Will be produced only after the Mechanized Receipt Suspense File is implemented at Defense Depots.)

b. Part 2 - Open Receipts, no MRC or ZBA on file.

c. Part 3 - Open MRO.

2. ORIGIN

Produced as a result of daily scan of IDC file, beginning on day preceding the cutoff day.

3. FREQUENCY

Daily, if file contains open record.

4. DATA ELEMENTS: Data Elements, including report header elements, are identical for all three parts of this report. These consist of:

a. Report header which includes:

(1) Report Number

(2) Report Title

(3) Date and Julian date

(4) Page Number

(5) Report subtitle (applicable).

(a) PART 1, OPEN RECEIPTS - MRC ON FILE WITH NO MATCHING ZBA

(b) PART 2, OPEN RECEIPTS - NO MRC OR ZBA ON FILE

(c) PART 3, OPEN MRO

b. Heading line data:

(1) DIC - Document Identifier Code

(2) NSN - National Stock Number

(3) COND - Condition

(4) T/P - Type Pack

(5) DOCUMENT - Document or PIIN Number

(6) SFX - Suffix

(7) MGR - Manager

(8) INPUT DTE - Date Into IDC

(9) TYP REC - Type Record

(10) CUT OFF - Cutoff Date

(11) LOCATION - (nine digits). If established by RCC will be three digit Warehouse Area only.

(12) TP NBR - Teleprocessing Number (parts 1 and 2).

(13) DTE REC - Date received (parts 1 and 2).

(14) SU NO - Shipment Unit (part 3 only).

(15) SU LINE - Shipment Unit Line Number (part 3 only).

5. DATA ORGANIZATION

a. Report header data on first line, detail data on second and subsequent lines.

b. Sequence by location, page break on change of first three digits, minor by Document Number.

6. NUMBER OF COPIES AND DISTRIBUTION

a. Part 1 - One copy to Warehousing Division and two copies to Inventory Office. (Will be produced only after the Mechanized Receipt Suspense File is implemented at defense depots.)

b. Part 2 - One copy to Receiving Division and two copies to Inventory Office.

c. Part 3 - One copy to Warehousing Division, one copy to Shipping Division, and two copies to Inventory Office.

7. PROCEDURES FOR REVIEW AND PROCESSING

Warehousing, Receiving, and Shipping Divisions will review each entry and provide a status update IAW appendices B-92, B-93, E-014 P, and E-055 P, as appropriate, for those MROs remaining open on IDC file. Input will be expedited to ensure availability for processing to the IDC file prior to close of business on the cutoff date.

APPENDIX F-109

SUSPENDED EXCEPTION MRO(S)

1. PURPOSE

To provide a list of MROs that require exception data added in order to process through the MOWASP system.

2. ORIGIN

Produced as a result of the processing depicted in appendix D-185.

3. FREQUENCY

Daily

4. DATA ELEMENTS

a. Report header line:

(1) Report number (F-100)

(2) Report title

(3) Functional Routing Code

(4) Date - Month, day, year and Julian date

(5) Page number

b. Report Data:

MRO Image

(1) Depict document number field.

(2) Date received.

5. DATA ORGANIZATION

a. Report Header:

Print report header to start each page.

b. Report Data:

(1) Print report data header once each page.

(2) Sequence detail line by document number.

(3) Double space between each detail line.

6. DISTRIBUTION AND RETENTION

a. Two copies to Special Processing Section, Transportation Division, DS/T.

b. All copies are for research purposes. Destroy upon completion.

7. PROCEDURE AND RETENTION

Add missing exception data using appendix E-003 Exception MRO address input process.

APPENDIX F-110

INVENTORY EFFECTIVENESS

1. PURPOSE

To provide a report of Inventory Effectiveness summarized into counts, their equality to DSC strike records, and dollar and quantity variance (if applicable) by manager, and total inventories completed.

2. ORIGIN

Results from local counts of NSNs compared and matched to DSC strike quantities and dollar values through count adjustment criteria, and total of NSNs completed and reported to the DSC. This listing is prepared as depicted in appendix D-91.

3. FREQUENCY

a. Parts 1, 2 and 4: Monthly, as a result of completed inventory count records being passed to Inventory History.

b. Part 3: Quarterly, as a summary of the monthly part 1 data.

4. DATA ELEMENTS

a. The header of the report includes:

(1) Report Number

(2) Title

(3) Product Control Number

(4) Date of Report

(5) Page Number

b. Part 1:

(1) MGR: Commodity Manager of NSNs inventoried.

(2) Category H: Total of ICC H NSNs inventoried.

(3) Category E: Total of ICC E NSNs inventoried.

(4) Category L: Total of ICC L NSNs inventoried.

(5) Category T: Total of ICC T NSNs inventoried.

(6) Category U: Total of ICC U NSNs inventoried.

(7) Category O: Total of ICC O NSNs inventoried.

(8) Specials: Total of Type Inventory Code C inventories completed.

(9) Spots: Total of Type Inventory Codes E and F inventories completed.

(10) Totals:

(a) Total of all inventories completed by manager.

(b) Total of all inventories completed by ICC, Special and Spots.

(c) Total of all inventories completed.

c. Part 2:

(1) TYPE INV: Type of physical inventory code of counts.

(2) TOTAL COUNTS: Total counts taken during month by type inventory.

(3) NO STK: Counts for which no strike balance (DIC CKE) was received from the DSC.

(4) COUNTS EQUAL STRIKE: Counts which equaled the DSC strike balance, and were automatically released to the DSC.

(5) COUNTS OVER STRIKE: Counts which resulted in an inventory gain.

(6) COUNTS UNDER STRIKE: Counts which caused an inventory loss.

(7) COUNTS WITHIN OPTION: Counts did not equal DSC strike balance but were released to the DSC automatically because they were within the dollar release option.

(8) COUNTS OVER OPTION: The dollar release option was exceeded. Counts were not automatically released.

(9) 1ST COUNT ONLY: One count only was required.

(10) 2ND COUNT:

(a) TOTAL: Total second counts that were taken.

(b) = 1ST: Second counts taken that equaled first count.

(11) 3RD COUNT:

(a) TOTAL: Total third counts that were taken.

(b) = 1ST: Third counts taken equaled first count.

(c) = 2ND: Third counts taken that equaled second count.

(12) DOLLAR DIFFERENCES:

(a) OVER: Counts over DSC strike multiplied by unit prices.

(b) UNDER: Counts under DSC strike multiplied by unit prices.

(c) NTE: Net dollar differences between depot counts and DSC strikes.

(13) TOTALS FOR MANAGER: Totals of all types of inventory by commodity manager.

(14) TOTALS FOR DEPOT: Totals of all commodity managers for the depot.

d. Part 3: Same as part 1.

e. Part 4:

(1) MGR - Commodity Manager Code.

(2) HIGHEST PRIORITY IN IWB - Represents highest priority still remaining in Prioritized Inventory Workload Bank.

(3) ICC - Inventory Category Code.

(4) INVENTORIES COMPLETED - Self-explanatory.

5. ORGANIZATION

Report header on the first line, with part 1, part 2, part 3 and part 4 headers following in sequence.

6. SEQUENCE

a. Parts 1 and 3 data in commodity manager sequence. Print totals for depot following manager.

b. Part 2 data is grouped by manager by type of inventory action being taken, and by first, second and third counts. Page break for each manager. Print totals for depot following manager.

c. Part 4 data is grouped by manager by inventory category code.

7. DISTRIBUTION

Two copies to Inventory Office, Directorate of Distribution.

8. PROCEDURES

a. Part 1 is intended to provide an indication of progress toward achieving programed/scheduled number of inventories.

b. Part 2 is intended as a general analysis of inventory count effectiveness.

c. Part 3 is intended to provide data required to complete the Report of Inventory Control Effectiveness, RCS DD-M(Q)935.

d. Part 4 is intended to provide data for use on the depot Quarterly Report of Inventory Performance, RCS DD-MIL(Q)935.

APPENDIX F-111

MOWASP ENTRY/EXIT EXCEPTION LIST NO COMM RI

1. PURPOSE

To list a printout of all documents requiring transmission by AUTODIN for which no Communications RIC is found in file.

2. ORIGIN

Produced during the exit system process with matching deck of cards.

3. FREQUENCY

Each cycle when required.

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-111)

(2) Title

(3) Date - Month, day, year, and Julian date

(4) Time

(5) Page Number

b. First header line:

(1) Numbers 05 through 80 denoting field positions 1-80.

(2) REJECT OR SPECIAL HANDLING MESSAGES.

(3) DAY

(4) TIME

5. DATA ORGANIZATION

Report header data on 1st line, detail column heading on 2nd line. Eighty column printout, messages, day and time on the third and subsequent lines.

6. NUMBER OF COPIES AND DISTRIBUTION

Two copies. Original to Communications Division, Directorate of Installation Services, copy to Shipping Division, DS/T.

7. PROCEDURE

a. Processing personnel will take the following action upon receipt of the F-111 listing for:

(1) Lack of Communication RIC on file for ICP. Transmit an AR_, AG_, CA6_, A1_, A6_, as indicated on the F-111 listing IAW paragraph 4b. Update the AUTODIN Routing Indicator file IAW appendix E-086 P by input of ZF7 in format of appendix B-86.

(2) Lack of Cummunication RIC on file for the requisitioner, pos. 30-35, and Media and Status Code is K or S. Transmit AS1 card in format of B-24 IAW paragraph 4b. Update the AUTODIN file IAW E-085 P by input of STA card in format of appendix B-85. Update local data activity address file IAW appendix E-126 P by input of ZGP in format of appendix B-126.

(3) Lack of Communication RIC for supplementary addressee, and Media and Status Code is M or V. Transmit AS2 card in format of appendix B-24 IAW paragraph 4b. Update the AUTODIN file IAW appendix E-085 P by input of STA card in format of apendix B-85. Update local data activity address file as required IAW appendix E-126 P.

b. When the shipment priority is 1-8 convert the AS_ card to TWX and forward to the communication center for transmission to applicable addressee. When the priority is 9-15, mail the AS_ card to the applicable addressee.

NOTE: When the above actions are completed, annotate the F-111 listing with action taken, sign, date and file for 45 days and then destroy.

APPENDIX F-112

ENTRY/EXIT EXCEPTION LIST LOCAL DATA

1. PURPOSE

To provide a printout of all supply actions going to activities collocated with the processing depot.

2. ORIGIN

This listing with deck of cards is output during the exit system processing.

3. FREQUENCY

Each cycle when required.

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-112)

(2) Title

(3) Date - Month, day, year, and Julian date

(4) Time

(5) Page Number

b. First Header line:

(1) Numbers 05 through 80 denoting field positions 1-80.

(2) REJECT OR SPECIAL HANDLING MESSAGE.

(3) DAY

(4) TIME

5. DATA ORGANIZATION

Report header data on 1st line, detail column headings on 2nd line. Eighty column printout, messages, day and time on third and subsequent lines.

6. NUMBER OF COPIES AND DISTRIBUTION

Two copies to Shipping Documentation Branch, Shipping Division, DS/T.

7. PROCEDURE

a. DS/T will utilize this listing to check data being forwarded to collocated activities.

b. Processing personnel will forward the Shipment Status Cards received with the listing by messenger to the appropriate addressee, sign, date, and file the listing for 45 days and then destroy.

ENTRY/EXIT EXCEPTION LIST TO FUNCTIONAL MANAGER

1. PURPOSE

To provide a list of:

a. All invalid cards to or from the Entry/Exit System including daily DoDAAD update "Batch Control Narrative Cards" insert in communication messages by DAASO.

b. Coded Address Reject Cards.

c. Cards for which a valid Type of Address Code (TAC) 1 is not available.

d. Cards with an invalid DIC.

e. Cards for which "manual review required".

f. Cards from Service ICPs rejecting a transaction which could not be processed due to erroneous or missing data on other than DLA/GSA managed items.

g. Storage Item Data Correction Cards from DSCs and Service ICPs for correction of data for other than DLA/GSA managed items.

2. ORIGIN

Produced as a result of invalid document being discovered during the entry or exit system processing and output with matching deck of cards.

3. FREQUENCY

Each cycle if invalid data is found.

4. DATA ELEMENTS

a. Report header line which includes:

(1) Report Number (F-113)

(2) Report Title

(3) Date - Month, day, year, and Julian date

(4) Time

(5) Page Number

b. First header line:

(1) Numbers 05 through 80 denoting field positions 1-80.

(2) REJECT OR SPECIAL HANDLING MESSAGES.

(3) DAY

(4) TIME

5. DATA ORGANIZATION

a. Report header data on first line, detail column heading on second line. Eighty position printout with message, day, and time on third and subsequent lines.

b. Double spaced.

6. NUMBER OF COPIES AND DISTRIBUTION

Three copies. Original to Communications Division, Directorate of Installation Services; copy to Shipping Division; copy to Commercial Traffic Branch, DS/T.

7. PROCEDURE

All recipients will review reject listing and take action to correct IAW appendix E-143 P.

APPENDIX F-114

ENTRY/EXIT EXCEPTION LIST SUSPECTED NARRATIVE

1. PURPOSE

To provide a printout of AUTODIN traffic with suspected narrative data.

2. ORIGIN

Produced in the entry system when AUTODIN has received a message with suspected narrative data and output with matching decks of cards.

3. FREQUENCY

Each cycle when required.

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-114)

(2) Title

(3) Date - Month, day, year, and Julian date

(4) Time

(5) Page Number

b. First Header Line:

(1) Numbers 05 through 80 denoting field positions 1-80.

(2) REJECT OR SPECIAL HANDLING MESSAGES.

(3) DAY

(4) TIME

5. DATA ORGANIZATION

a. Report header data on first line, detail column heading on second line. Eighty column printout with messages, day and time on third and subsequent lines.

b. Double spaced.

6. NUMBER OF COPIES AND DISTRIBUTION

Two copies to Shipping Documentation Branch, Shipping Division, DS/T.

7. PROCEDURE

The Shipping Documentation Branch will:

a. Receive the F-114 listing and corresponding deck of cards.

b. Review message(s).

c. If narrative data is in regard to exception type MRO/DROs, match with open Exception Data File or establish new Exception Data File as applicable and process any MRO/DRO as outlined in appendix E-007 P.

d. If narrative data is in regard to materiel diversion type DICs (TM_), match with open entry on Notice of Cancellation Request Report, appendix F-69, part 2 and process as outlined in appendix E-005 P.

e. If action requested in narrative message can be accomplished within established MILSTRIP/MOWASP procedures, complete requested action utilizing corresponding cards as applicable. Annotate F-114 listing with action taken.

f. If action is not within MILSTRIP/MOWASP procedures or information is incomplete, advise the originator of the message.

g. If originator cannot be determined, discontinue action on the message and annotate F-114 accordingly.

h. Retain annotated copy of F-114 report for 45 days and then destroy.

APPENDIX F-115

ENTRY/EXIT EXCEPTION LIST MAIL DATA

1. PURPOSE

To provide a printout of all AS1 and AS2 Shipment Status Cards to be transmitted by mail. These documents are received when automatic transmission of Shipment Status to DAAS for mailing cannot be completed and the Media and Status (M&S) Code in the individual MROs is L, T, N or V indicating transmission by mail.

2. ORIGIN

Produced as a result of processing as depicted in appendix D-75. Normally, mail status is forwarded to DAAS in lieu of mailing at depot. This listing will only be printed in an emergency when DAAS cannot handle mail traffic. Listing is received with deck of cards.

3. FREQUENCY

Each cycle when required.

4. DATA ELEMENTS

a. Report header line which includes:

(1) Report Number (F-115)

(2) Title

(3) Date - Month, day, year, and Julian date

(4) Time

(5) Page Number

b. First header line:

(1) Numbers 05 through 80 denoting field positions 1-80.

(2) REJECT OR SPECIAL HANDLING MESSAGES.

(3) DAY

(4) TIME

5. DATA ORGANIZATION

a. Report header data on first line, detail column heading on second line, and 80 position printout of AS_ cards on third and subsequent lines.

b. Sequence by RIC.

6. NUMBER OF COPIES AND DISTRIBUTION

Two copies to Shipping Documentation Branch, Shipping Division, DS/T.

7. PROCEDURE

a. Processing personnel will take the following action upon receipt of the F-115 listing, Shipment Status Cards, preaddressed envelopes and/or addressed labels.

(1) When M&S Code (pos. 7) is L or T, AS1 card (in format of appendix B-24) are to be forwarded to the requisitioner. Match data in pos. 30-35 of the Shipment Status Cards with applicable accountability printed on the preaddressed envelope and/or label. Insert corresponding cards in preaddressed envelope, or if label is to be used, place cards in an adequate size envelope and affix label to the envelope.

(2) When M&S Code (pos. 7) is N or V, AS2 cards (in format of appendix B-24) are to be forwarded to the Supplementary Addressee. Match data in pos. 45-50 of the Status Card with applicable accountability printed on the preaddressed envelope and/or label. Insert corresponding cards in envelope, or if label is to be used, place cards in an adequate size envelope and affix label to the envelope. (Note: Appendix C-40 preaddressed envelope is designed for a total of 48 cards. When more than 48 cards are being forwarded, a larger envelope can be manually prepared and appendix C-40 envelope can be destroyed.)

b. When the shipment priority is 1-8, utilize air mail channels for forwarding the data. When the priority is 9-15, use regular mail channels.

c. Seal and forward envelopes to the Mail and Distribution Branch for mailing.

d. When the above actions are completed, annotate the F-115 listing with actions taken, sign, date, and file for 45 days, then destroy.

APPENDIX F-116

COMMUNICATION REJECTS LISTING

1. PURPOSE

To provide notification of the AUTODIN messages which reject from the Entry System Communication Validation process.

2. ORIGIN

Produced simultaneously with card format AUTODIN input as a result of the process depicted in appendix D-71.

3. FREQUENCY

On input of AUTODIN message traffic into the MOWASP entry process.

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-116)

(2) Title

(3) Report Number - Communications Number

(4) Page Number

b. Data Elements:

(1) 80 CHARACTER LINE BLOCK IMAGE - A column-by-column reflection of the AUTODIN input record.

(2) REJECT MESSAGE - An in-the-clear reason for reject (individual messages are reflected in appendix D-71).

(3) DAY - Three-digit Julian day of receipt of AUTODIN record.

(4) TIME - Four-digit time of receipt of AUTODIN record.

5. DATA ORGANIZATION

a. Report header data on first line; detail data (paragraph 4b) on second and subsequent lines.

b. Page break as necessary to accommodate entire report.

c. Sequence report by AUTODIN Routing Indicator.

d. Single space.

6. NUMBER OF COPIES AND DISTRIBUTION

Two copies to Communications Division, Directorate of Installation Services.

7. PROCEDURE

This listing (and accompanying cards) will be used as a basis for contacting the sender for clarification, or retransmission of an erroneous AUTODIN record or as the basis for contacting operating elements of the local activity for disposition of teletype formatted messages received via AUTODIN. Specific instructions for processing are contained in appendix E-146 P this listing.

APPENDIX F-117

INVENTORY CANCELLATION LISTING

1. PURPOSE

To provide a listing to DS/T indicating NSNs which were canceled. The canceled NSNs may have been canceled from the Inventory Workload Bank (IWB) not in the IWB but prior to count cards being produced or after count cards were produced.

2. ORIGIN

This listing is produced during the processes depicted by appendix D-7 if deleted from the IWB, or by appendix D-6 on or after flag day.

3. FREQUENCY

Daily, or as cancellation requests occur. Cancellation requests may occur automatically resulting from DICs CK_, CM_, ZUF, A5J; or being in the IWB over 30 days without establishment of cutoff day; or by input of a ZAS or ZAX with Action Code WY.

4. DATA ELEMENTS

a. Report header line which includes:

(1) Report Number (UWF-117)

(2) Title

(3) Date: Month, day, year and Julian date

(4) Page Number

b. Header line data:

(1) NSN - National Stock Number

(2) MGR - Commodity Manager

(3) COND - Condition Code

(4) T/P - Type Pack Code

(5) C/O - Inventory Cutoff Day

(6) TIC - Type of Inventory Code

(7) U/I - Unit of Issue

(8) MGT - Management Code

(9) LOCATION - Warehouse Location

(10) CCC-NO - Count Card Control Number

(11) LOT-NO - Sample Inventory Lot Sample Number

(12) EST - Date NSN established on the Inventory Workload Bank.

(13) FRC - Functional Routing Code.

(14) CANC - Indicates why NSN was canceled; may be DIC or an abbreviation of cancellation reason. See notes 1 and 2.

(15) STATUS - Indicates the status of the inventory when the NSN was canceled.

(a) B - Canceled from the IWB.

(b) N - Count cards not yet produced.

(c) C - Count cards produced.

NOTE 1: Several types of transactions may cause the automatic cancellation of NSNs under inventory. If this has occurred, the DIC of the transaction will appear in the CANC field. The following is a list of DICs which may appear:

A5J, CK9, CKB, CKC, CKD, CMC, CMD, CMM, CMR, ZAS, ZCO/ZC9, ZUF, or CK9 with Management Code P.

NOTE 2: Abbreviations and explanation of other cancellation reasons are as follows:

ABBREVIATION	EXPLANATION
MGR	Inventory monitor has elected to cancel an entire manager.
LOT	Entire sample lot canceled because of manual input by monitor or automatic cancellation causing the sample to go below acceptable limits.
FSC	Entire FSC has been canceled.
C/O	Entire cutoff date canceled.
OLD	Automatic cancellation due to exceeding the 15 day period after cutoff date.
NON	Automatic cancellation due to an issue/receipt document inprocess or coming in-process for a non-DLA NSN under inventory.
DUP	MROs being processed with duplicate document numbers.

5. DATA ORGANIZATION

a. Report header on first line and detail data on subsequent lines arranged in columns under data element headings identified in paragraph 4 above.

b. Sequence:

(1) Inventory status (see paragraph 4b(15) above).

(2) National Stock Number

6. NUMBER OF COPIES AND DISTRIBUTION

One copy to Inventory Office, DS/T.

7. PROCEDURES FOR REVIEW AND PROCESSING

a. This listing reflects those NSN cancellations for inventory. The listing will be utilized by the inventory monitor to adjust workload based on cancellations of inventory, to investigate reasons for large numbers of cancellations, and, if necessary, to reschedule the NSNs for inventory when the reason for the cancel has been resolved.

b. When count cards have been produced, ensure that they (DIC ZKAs) are removed from inventory and not entered into the inventory adjustment process.

c. When the DIC causing cancellation is CK9 and the NSN is followed by a double asterisk and an Inventory Cancellation Code P, do not reschedule this NSN for inventory. This code indicates the inventory was initiated due to a location reconciliation mismatch - DSC balance/no depot location, and the inventory is being canceled by the DSC because its on-hand balance is $25.00 or less.

APPENDIX F-118

VIOLATION FOLLOWUP LISTING

1. PURPOSE

To furnish a control for the reentry of Materiel Release Orders (MROs) and Disposal Release Orders (DROs) which were violated. This listing reflects all MRO/DRO violations that have not been cleared and are still suspended in cumulative register by date of violation. Data listed is to be utilized as a management control to assure timely processing of controlled violations and to identify problem area.

2. AUTHORITY

Chapter 61

3. FREQUENCY

Daily until the violation(s) have been cleared.

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-118)

(2) Report Title

(3) FRC - Functional Routing Code

(4) Section Number

(5) Date - Month, day, year, and Julian date

(6) Page Number

b. Heading Line data:

(1) Numbers one through eight denoting positions 1-80.

(2) DATE RCVD - Date MRO violated.

(3) Input Image - An 80/80 image of the MROs and DROs in violation.

5. DATA ORGANIZATION

a. Report header data on first line, detail data on second and subsequent lines.

b. Sequence: Document Number (Major); RIC (From) (Minor).

6. NUMBER OF COPIES AND DISTRIBUTION

Two copies. Original to Shipping Documentation Branch, Shipping Division, copy to MOWASP Data Control Branch, MSO, DS/T.

7. PROCEDURES FOR REVIEW AND PROCESSING

a. Processing personnel will receive Violation Followup Listing (appendix F-118) daily, until the violation(s) have been cleared.

b. Violation Followup Listings reflect those violations which are overage. Violations should be cleared within the following time limits:

(1) IPGs I and II - Maximum 8 hours.

(2) IPG III - Maximum 2 workdays.

c. Research and correct error(s) causing the violation, and reinput on the original F-85 when it is available. If original F-85 cannot be located, reinput per applicable MRO or DRO appendix.

d. Retain listing for periodic statistical evaluation of violation errors, their causes, and responsible elements to effect improvement in meeting time standards. After correction and extraction of pertinent data, destroy the listing.

NOTE: When research shows previously received violations were reentered, check for possible reentry reject action.

APPENDIX F-119

LOCATOR REPORT BY DATE OF PACK

1. PURPOSE

Provide all item locator data from the basic and subrecords for inspection of materiel for condition and disposition.

2. ORIGIN

Produced as a result of processing an Item Locator record by Date of Pack request card, appendix B-85, with Type Sequence Code and Date of Pack parameters as depicted in appendix D-3.

3. FREQUENCY

Upon submission of a request card, to produce a Locator Report by Date of Pack.

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-119)

(2) Locator Sort Sequence

(3) Report Title

(4) Functional Routing Code

(5) Date: Month, day, year, and Julian date

(6) Page number

b. Data Elements (first heading line):

(1) NSN - National Stock Number

(2) MGR - Commodity Manager Code

(3) UI - Unit of Issue

(4) NOMEN - Nomenclature

(5) AIR CGO - Air Cargo Dimension Code

(6) AIR COM - Air Commodity Code

(7) WATER COM - Water Commodity Code

(8) SPEC RQMT - Special Requirement Code

(9) HSCC - Hazardous Storage Compatibility Code

(10) NMFC - National Motor Freight Classification Code

(11) SFX - National Motor Freight Classification Code Suffix

(12) LTL - Freight Rate LTL Code

(13) LCL - Freight Rate LCL Code

(14) SIT - Storage Intransit Privilege Code

(15) UCUBE - Unit Cube

(16) UWT - Unit Weight

(17) SSL - Shelf-Life Code

(18) DE-MIL - Demilitarization Code

(19) PHY SEC - Physical Security Code

(20) POP GRP - Popularity Group Code

(21) DEMANDS

(a) MOS - Months Demand

(b) AVG - Average Demand

(22) INVENTORY

(a) EXC - Sample Inventory Exception Code

(b) FLG - Inventory Flag

(c) COFF - Inventory Cutoff Date

c. Data Elements (second heading line):

(1) COND - Condition Code

(2) TYPK - Type Pack Code

(3) TYPLOC - Type Location Code

(4) DATEPK - Date of Pack (or date of record establishment).

(5) TYPSTG - Type of Storage Location Code.

(6) WHSLOC - Warehouse Location Code

(7) INSPDATE - Date of Next Inspection

(8) UPK - Unit Pack

(9) LCNO - Lot/Contract Number

(10) LCIND - Lot/Contract Indicator

(11) PREDOC - Storage Item Change Card Predocumentation Interval

(12) CAGE - Contractor and Government Entity Code

(13) LDC - Lot Date Code

5. DATA ORGANIZATION

a. Report heading data on first line, detailed column heading on the second and third lines.

b. Sequence (within Date of Pack parameters):

(1) Manager - Major, location - Minor for Type Sequence Code 3.

(2) Location for Type Sequence Code 2.

(3) Date of Pack - Major, location - Minor for Type Sequence Code 3.

(4) NSN - Major, location - Minor for Type Sequence Code 4.

(5) Date of Pack - Major, NSN - Minor for Type Sequence Code 5.

6. NUMBER OF COPIES AND DISTRIBUTION

Original and one copy to Quality Control and Surveillance Inspection Branch, or as directed by the Management Support Office.

7. PROCEDURE

The organizational element which initiated the request for this data will accomplish necessary actions and then destroy the report.

```

APPENDIX F-120

MRO(S) SUSPENDED FOR INVENTORY REPORT

1. PURPOSE

To provide a record of MROs suspended because the NSN is currently under inventory. This report reflects those MROs suspended in the MRO Workload Bank.

2. ORIGIN

Produced when the F-38 Workload Report is produced, as depicted in appendix D-27.

3. FREQUENCY

Once daily.

4. DATA ELEMENTS

a. A report header including:

(1) Report Number (F-120)

(2) Title

(3) Section Number

(4) Date - Month, day, year, and Julian date

(5) Page Number

b. A data header:

(1) NSN - National Stock Number

(2) DIC - Document Identifier Code

(3) RIT - Routing Identifier Code of DSC

(4) CC - Condition Code of the requested shipment.

(5) TP - Type Pack

(6) QTY - Quantity requested on document.

(7) DOCUMENT NUMBER -

(8) SX - Suffix, if any.

(9) PRI - Priority of shipment

(10) ICOF - Inventory Cutoff date

(11) MDT - Mandatory Transportation date

(12) PDT - Planned Transportation Date

(13) MGMT - Management Code assigned to the MRO.

(14) WHSE AREA - Prime Area of available stock.

5. DATA ORGANIZATION

a. Report header data on first line, detail column heading on second line.

b. Major sequence by Cutoff Date, minor by MDT.

c. Page break by Inventory Cutoff Date.

6. DISTRIBUTION

Two copies to Inventory Office, DS/T. One copy to Warehousing Division, DS/T.

7. PROCEDURE

a. This report represents a record of IPG 3 MRO documents being held pending completion of inventory action. Daily research into the report will be made to ascertain if any inventory action in progress is contributing to late shipment actions. Low priority shipments will be delayed by inventory actions in some cases where MDT and cutoff date conflict; however, daily screening of report data can give advance warning of impending delay of shipment actions.

b. The F-120 (Suspended MRO Report) will be analyzed daily by managers for the following data:

(1) Large quantities of MROs suspended after MDT.

(2) Large quantities of MROs suspended before MDT, especially where the first count consisted of hard counts or for other reasons would be difficult to clear.

(3) Large quantities of MROs suspended by one NSN.

c. In the event one of the above situations is encountered and is contributing to or expected to contribute to late shipment actions, an input DIC ZBL (appendix B-98) may be processed to release seleted MROs.

(1) Entry of NSN in pos. 8-20 will release only MROs for that specific NSN (if past DRD) from the workload bank or remove inventory flag if DRD has not been passed.

(2) Entry of only Inventory Cutoff Date in pos. 64-67 without NSN in pos. 8-20 will release all MROs (if past DRD) flagged with this Cutoff Date or remove suspense flag in the workload bank if DRD has not been passed.

d. If shipping document suspense actions are excessive, as revealed by subject report, action will be taken to complete inventory; if necessary, the Inventory Monitor will cancel the inventory, rescheduling at a later date.

e. Pertinent detail data relating to suspended documents, late or otherwise, will be extracted from the report for weekly and monthly analysis of inventory effectiveness.

f. Report may be destroyed when analysis is completed.

APPENDIX F-121

HAZARDOUS PACKING INFORMATION (DD FORM 1348-1)

1. PURPOSE

To provide needed packing information on an additional DD Form 1348-1. This information will be all NIIN mode descriptions that are loaded in the Hazardous Materials Packaging and Transportation File.

2. ORIGIN

This report is produced during process depicted by appendix D-98.

3. FREQUENCY

Daily

4. DATA ELEMENTS

a. Stock Number

b. Ship-To - Print "Hazardous Packing Information".

c. Shipment Unit Number

d. Flash Point

e. DOT Exemption Number

f. Radioactive Form

g. Transport Index

h. Radionuclide

i. Radioactivity

j. DOT Proper Shipping Name

k. DOT Hazard Class

l. Hazardous Item Identification Number

m. DOT Hazard Class

n. IMO Proper Shipping Name

o. IMO Hazard Class

p. Hazardous Item Identification Number

q. IMO Hazard Label

r. IMO Subsidiary Risk Label

s. IATA Proper Shipping Name

t. IATA Hazard Class

u. Hazardous Item Identification Number

v. IATA Hazard Label

w. IATA Subsidiary Risk Label

x. 4145.3 Proper Shipping Name

y. 4145.3 Hazard Class

z. Hazardous Item Identification Number

aa. 4145.3 Hazard Label

5. DATA ORGANIZATION

a. Data is printed on a blank DD Form 1348-1.

b. Print stock number in stock number field, Hazardous Packing Information in the Ship-To field block B, Shipment Unit in block V, and Mode descriptions beginning in block W through end of form.

c. DD Form 1348-1 is sequenced directly behind the applicable MRO.

6. NUMBER OF COPIES AND DISTRIBUTION

One set to DS/T, Packing Division.

7. PROCEDURE FOR REVIEW AND PROCESSING

The information on the DD Form 1348-1 will assist the packer in labeling and certifying of materiel.

APPENDIX F-122

FORECAST OF NSN(S) TO BE INVENTORIED

1. PURPOSE

To provide information on NSNs by location which have been scheduled for inventory.

2. ORIGIN

Produced as shown in appendix D-12 when the location record is flagged for inventory.

3. FREQUENCY

Once daily, if NSNs are scheduled for inventory.

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number

(2) Report Title

(3) Date of Report

(4) Page Number

b. Data body of the report follows in the following sequence - left to right:

(1) NSN - National Stock Number

(2) UI - Unit of Issue

(3) COND - Condition Code

(4) LOCATION - Storage Location

(5) CUTOFF - Cutoff Date

(6) DSC INIT - Center initiated (indicated by an * in column).

5. ORGANIZATION

Data on report is printed below header line in location sequence.

6. SEQUENCE

Location sequence, page break on different first three digits of location code.

7. DISTRIBUTION

Two copies to Warehousing Division and one copy to Inventory Office.

8. PROCEDURES

a. Warehousing Division will utilize the report to ready applicable areas for inventory action. In the event an area scheduled for inventory is not acceptable, i.e., rewarehousing action is being performed, Warehousing Division will immediately notify Inventory Office requesting cancellation or postponement of the specific inventory.

b. Inventory Office will monitor the report daily to confirm that an inventory has been triggered as requested. Report will be utilized to cancel or reschedule inventories requested by Warehousing Division as stated in subparagraph a above.

APPENDIX F-123

SUPER HIGH PRIORITY MROS

1. PURPOSE

To provide a listing of Super High Priority requisitions, i.e., MICAP/NMCS/ANMCS/999 as follows:

a. Part 1 - Super High Priority MROs not Confirmed.

b. Part 2, Section 1 - Super High Priority MROs Confirmed.

c. Part 2, Section 2 - Daily Summary of Super High Priority MROs by Item Manager.

d. Part 3 - Monthly Summary of Super High Priority MROs Shipped.

2. ORIGIN

Produced during the processing depicted by appendix D-133. No input required.

3. FREQUENCY

Part 1 and Part 2 - Daily. Part 3 - Monthly.

4. DATA ELEMENTS

a. Report header line which includes:

(1) Report Number (F-123)

(2) Shipping Activity

(3) Report Title - Super High Priority MROs

(4) Functional Routing Code - constant by depot

(5) Section Number

(6) Date - Month, Day, Year and Julian date

(7) Page Number

b. Part 1 - not confirmed:

Data Elements

(1) IPG - Issue Priority Group from MRO

(2) SU NR - Shipment Unit Number - computer assigned serial number used for control during processing and for file update and inquiry.

(3) CD - Check Digit Number - one digit alpha/numeric code

(4) SU LI - Shipment Unit Line Item Number

(5) DOC NR/SFX - Document Number Assigned to Requisition and Suffix, if applicable

(6) RDD - Required Delivery Date (pos. 62, reflected as an N or E)

(7) MD - Planned Mode of Shipment - computer assigned (one digit alpha/numeric code)

(8) ZONE - Zone Code (1-8 CONUS, 9 EXPORT)

(9) WHSE - Warehouse Location - First three positions - if no location, will be blank

(10) HOLD - Hold Code

(11) MDT - Mandatory Date to Transportation (year-Julian day)

(12) OFF - Date offered (DDT) to Transportation (year-Julian day)

c. Part 2, Section 1 - Shipment Confirmed:

Data Elements

(1) IPG - Issue Priority Group from MRO

(2) SU NR - Shipment Unit Number - computer assigned serial number used for control during processing and for file update

(3) SU LI - Shipment Unit Line Item Number

(4) DOC NR/SFX/TCN - Document Number and Suffix if applicable, and/or Transportation Control Number

(5) DEST - DCR, BBP, POE or Consignee DoDAAC

(6) MDT - Mandatory Date to Transportation (year-Julian day)

(7) OFF - Date offered (DDT) to Transportation (year-Julian day)

(8) SHIP - Date shipped (year-Julian day)

(9) MD - Mode of Shipment Code (one position alpha/numeric code)

(10) WT - Shipment Weight

(11) CU - Cube

(12) HOLD - Hold Code

(13) GBL NR - Government Bill of Lading Number

d. Part 2, Section 2 - Summary of Super High Priority MROs by Item Manager.

Data Elements

(1) ITEM MANAGER - Commodity Manager (RIC FROM).

(2) MICAP/NMCS/ANMCS - N or E in cc-62 of MRO.

(a) BIN - Type of Location Code A or B.

(b) BULK - Type of Location Code K or L.

(3) EXPEDITED HANDLING 999 - In cc 62-64 of MRO.

(a) BIN - Type of Location Code A or B.

(b) BULK - Type of Location Code K or L.

(4) MGR TOTAL - Total Number of MICAP/NMCS/ANMCS/999 MROs by Item Manager.

(5) OVERALL TOTAL - Total Number of BIN/BULK MROs for each specified category above.

e. Part 3 - Monthly summary of shipments confirmed:

Data Elements

(1) ZONE - CONUS/EXPORT (1-8 CONUS, 9 EXPORT).

(2) IPG - Issue Priority Group from MRO.

(3) MODE - Mode of Shipment Codes.

(4) NUMBER LINES - Total Number of Lines Shipped for each Mode of Shipment Code.

(5) WEIGHT - Total Weight Shipped for each Mode of Shipment Code.

5. DATA ORGANIZATION

a. Report Header Data on first and second lines and detailed column headings on third line. Detail data on subsequent lines.

b. Sequence:

(1) Part 1 and Part 2, Section 1

(a) MAJOR - IPG (Double space between IPG I and II).

(b) INTERMEDIATE - Shipment Unit Number.

(c) MINOR - Shipment Unit Line Item Number.

(2) Part 2, Section 2 - Item Manager

(3) Part 3

(a) MAJOR - CONUS/EXPORT

(b) INTERMEDIATE - IPG

(c) MINOR - Mode of Shipment

(4) Part 3 - Is single spaced between IPG within CONUS/EXPORT and double spaced between totals and CONUS/EXPORT.

6. NUMBER OF COPIES AND DISTRIBUTION

a. Part 1 and 2 - Two copies; original and one to Management Support Office, Directorate of Storage and Transportation.

b. Part 3 - Three copies; original and two to Management Support Office, Directorate of Storage and Transportation. One copy to be mailed to Headquarters DLA-OT.

7. PROCEDURES FOR REVIEW AND PROCESSING

a. A partial shipment will not reflect in part 2 until the total shipment is confirmed. Part 3 will reflect the first mode of shipment if multi modes are involved and will include the total weight of all modes.

b. Part 1 and 2, Section 1 - Will be used as a management tool to review and analyze the processing of Super High Priority Material Release Orders (MROs). The listings will provide visibility of Drop Patterns, Volume being received, Mode of Shipment, Destination, and Timeliness of Shipment. Late Shipments and Erroneous Modes of Shipment can be readily identified and problems corrected. The listings will facilitate compliance with next day delivery service for these requisitions.

c. Part 2, Section 2 - Will be used for reporting volume and type of Super High Priority MROs confirmed by item manager to the Directorate, Storage and Transportation.

d. Part 3 - The monthly summary list will be used as a management tool in tracking the mode of shipment and volume of Super High Priority MROs shipped by each DLA Depot.

e. The listings will be retained until action is completed or usefulness is no longer required, then destroyed.

APPENDIX F-124

LOCATOR RECONCILIATION EXCEPTION CARD LIST (FOR OTHER THAN DLA ACTIVITIES)

1. PURPOSE

To provide the DS/T a working list of exception cards for manual review.

2. ORIGIN

Produced during the processing depicted by appendix D-13.

3. FREQUENCY

Upon receipt of Locator Reconciliation Exception Cards from the ICP.

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-124)

(2) Title

(3) FRC - Functional Routing Code

(4) Section

(5) Date - Month, day, year and Julian date

(6) Page Number

b. Data Elements:

(1) DIC - Document Identifier Code

(2) RIT - Routing Identifier Code of depot.

(3) STOCK NUMBER -

(4) TP - Type Pack Code

(5) UI - Unit of Issue

(6) DATE - Date of Reconciliation Card Preparation

(7) FORMER NSN -

(8) RECON CARD NO. - Reconciliation Card Number.

(9) RIF - Routing Identifier Code of ICP.

(10) COND - Condition Code.

5. DATA ORGANIZATION

a. Report header data on first line, column titles on second line, detail data on third and subsequent lines.

b. Sequence by NSN within RIC From.

c. Page break on RIC From.

6. NUMBER OF COPIES AND DISTRIBUTION

Three copies. Original to MOWASP Data Control Branch, MSO, copies to Stock Readiness Branch, Warehousing Division, and Inventory Control Office, DS/T.

7. PROCEDURE FOR REVIEW AND PROCESSING

Utilized by DS/T as an aid in reconciling discrepancies and remarking of stock, and other storage maintenance actions. See appendices E-028 P and E-083 P for related procedures.

APPENDIX F-125

OUTBOUND BILL OF LADING REGISTER

1. PURPOSE

Provide a record of GBL usage.

2. ORIGIN

Produced as a result of processing Government Bill of Lading Closeout Cards, appendix B-128. Produced during the processing as depicted in appendix D-57.

3. FREQUENCY

a. Part 1 - As GBL numbers within a block of 100 are all accounted for.

b. Part 2 - Daily

4. DATA ELEMENTS

a. Report header line which includes:

(1) Report Number (F-125)

(2) Report Title

(3) Functional Routing Code

(4) Section Number

(5) Date - Month, day, year and Julian date

(6) Page Number

b. Data Elements:

(1) GBL NUMBER - Government Bill of Lading Number

(2) TCN - Transportation Control Number

(3) ISSUED - Issued date

(4) SHIPPED - Shipped date

(5) MODE - Mode of transportation

(6) CARRIER - Carrier Code

(7) TU/SU NUMBER - Transportation Unit/Shipment Unit Number

(8) SU LINE - Shipment Unit Line

(9) DEST - Destination Cross-Reference from the Activity Address File.

(10) DoDAAD CODE - Department of Defense Activity Address Directory Code.

(11) IPG - Issue Priority Group

(12) NUMBER OF LINES/PIECES - Number of Lines and Pieces.

(13) WEIGHT - Shipment Weight

(14) CUBE - Cube

(15) COST - Cost

5. DATA ORGANIZATION

a. Report heading data on the first line and detailed column heading on the second line.

b. Sequence is by GBL Number.

c. Report is single spaced for multiple lines for same GBL Number and double spaced between GBL Numbers.

d. A GBL number may appear on more than one daily listing (part 2) due to reentry of invalid DIC ZEN cards or late submissions.

6. NUMBER OF COPIES AND DISTRIBUTION

One copy will be distributed to the Commercial Traffic Branch.

7. PROCEDURE FOR REVIEW AND PROCESSING

The Commerical Traffic Branch will utilize these listings for reference and supply detail required to satisfy inquiries. Complete blocks will be retained for 4 years after the issue date of the latest bill in the block. Incomplete blocks will be destroyed when a complete block has been received. A complete block is either issued or otherwise accounted for.

APPENDIX F-126

OUTBOUND B/L NUMBERS - STATUS OF INCOMPLETE BLOCKS OF 100

1. PURPOSE

Provide a display of Government Bill of Lading blocks of 100 upon which some activity has been recorded but all are not accounted for.

2. ORIGIN

Produced as a result of the daily and no input is required.

3. FREQUENCY

Daily

4. DATA ELEMENTS

a. Report header line which includes:

(1) Report Number (F-126)

(2) Report Title

(3) Functional Routing Code

(4) Section Number

(5) Date - Month, day, year and Julian date

(6) Page Number

b. Data Elements:

(1) B/L BLOCK STARTING ENDING - The starting and ending numbers for a block of 100 Government Bill of Lading.

(2) 1 through 100 - The number of Government Bill of Lading in a block. An alpha X indicates that a certain numbered Government Bill of Lading is accounted for.

(3) UNACCTD TOTAL - The total number of Government Bill of Lading in a block that are not accounted for.

5. DATA ORGANIZATION

a. Report heading data on the first line and detailed column heading on the second line.

b. Sequence is by Government Bill of Lading Number.

best copy available

c. Report is double spaced between blocks of 100 Government Bills of Lading.

6. NUMBER OF COPIES AND DISTRIBUTION

Two copies will be distributed to the Commercial Traffic Branch.

7. PROCEDURES FOR REVIEW AND PROCESSING

The Commercial Traffic Branch will review the appendix F-126 and take necessary action to assure that blocks are in current status. Where Government Bills of Lading are canceled or otherwise utilized in non-MOWASP actions, an appendix B-128 with Action Code GR will be prepared and submitted. Destroy upon completion and update action.

APPENDIX F-127

TRANSPORTATION MOVEMENT DETAIL BY MODE AND COMMERCIAL CARRIER

1. PURPOSE

Provide a summary of movements during the previous month by mode and commercial carrier, and SPLC.

2. ORIGIN

Produced during the processing depicted by appendix D-87. No input is required.

3. FREQUENCY

Monthly

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-127)

(2) Shipping Activity

(3) Report Title

(4) Functional Routing Code

(5) Section Number

(6) Date - Month, day, year, and Julian date

(7) Page Number

b. Data Elements:

(1) Part 1 and 2

(a) MODE - Mode Codes A, B, C, D, E, J, K, L, M, P, Q, S, T, V, 5, 8 and 9 only.

(b) CARRIER - Standard Carrier Alpha Code (SCAC).

(c) RELEASE - Release Indicator for a particular mode code and carrier code during the month.

(d) NUMBER LINES - Number of lines shipped by a particular mode code and carrier code during the month.

(e) WEIGHT - Weight shipped by a particular mode code and carrier code during the month.

(f) CUBE - Cube shipped by a particular mode code and carrier code during the month.

(g) COST - Shipment cost for a particular mode code and carrier code during the month.

(h) COST/100 LBS. - Shipment cost per 100 pounds for a particular mode code and carrier code during the month.

(i) MONTH TOTAL - Lines, weight, cube, cost and cost/100 lbs by mode and carrier.

(j) YTD TOTAL - Totals year-to-date by mode and carrier.

(2) Data Elements (Part 3)

(a) SPLC - First four positions of Standard Point Location Code.

(b) MODE - Mode Codes A, B, C, D, E, J, K, L, M, P, Q, S, T, V, 5, 8 and 9 only.

(c) CARRIER - Standard Carrier Alpha Code (SCAC).

(d) NBR LINES - Number of lines shipped to a SPLC by a particular mode code and carrier code during the month.

(e) NBR B/Ls - Number of B/Ls shipped to a SPLC by a particular mode code and carrier code during the month, when applicable.

(f) WEIGHT - Weight shipped to a SPLC by a particular mode code and carrier code during the month.

(g) CUBE - Cube shipped to a SPLC by a particular mode code and carrier code during the month.

(h) COST - Shipment cost to a SPLC for a particular mode code and carrier code during the month.

(i) COST/100 LBS - Shipment cost per 100 pounds to a SPLC on a particular mode code and carrier code during the month.

(j) TOTAL MONTH/TOTAL YTD - Month and cumulative year to date totals summarized by the two-position SPLC Code. These totals represent number of lines, bills of lading, weight, cube, cost and cost/100 lbs. for each mode/carrier relationship.

5. DATA ORGANIZATION

a. Report heading data on the first line and detailed column heading on the second line.

b. Sequence:

(1) (Parts 1 and 2)

(a) Major is Mode.

(b) Carrier is intermediate.

(c) Minor is Release Indicator.

(2) Part 3 - SPLC (first four positions) - major. Mode with SPLC and carrier with mode.

c. Report

(1) Part 1 of report is single spaced between mode and carrier codes and double spaced between totals.

(2) Part 2 of report is double spaced.

(3) Part 3 is single spaced between carriers; double spaced between modes and SPLCs; and single spaced between month and year-to-date totals.

d. Report is divided into three parts: Part 1 gives all data for report period, by mode, carrier, and release indicator, and totals for month and calendar year-to-date by mode and carrier; part 2 gives calendar year-to-date totals by carrier. Part 3 gives all data for report period and year-to-date by SPLC, mode and carrier.

6. NUMBER OF COPIES AND DISTRIBUTION

Two copies will be distributed to the Traffic Management Branch.

7. PROCEDURE FOR REVIEW AND PROCESSING

The Traffic Management Branch will utilize these data in performance of their movement analysis function and to maintain cumulative carrier distribution records. One copy reflecting any management decisions will be passed to the Shipment Planning Branch. The Shipment Planning Branch will use the listing within the scope of their routing authority for tonnage distribution. Traffic Management Branch may retain listing for one year and then destroy.

APPENDIX F-128

TRANSPORTATION MOVEMENT ANALYSIS BY MODE OF SHIPMENT

1. PURPOSE

Provide a transportation movement analysis by mode of shipments for the previous month. Part 1 reflects commercial freight. Part 2 reflects parcel post and part 3 reflects all other modes of shipment.

2. ORIGIN

Produced during the processing as depicted by appendix D-87. No input is required.

3. FREQUENCY

Monthly

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-128)

(2) Shipping Activity

(3) Report Title

(4) Product Control Number

(5) Functional Routing Code

(6) Section Number

(7) Date - Month, day, year, and Julian date

(8) Page Number

b. Data Elements:

(1) PART 1 - Mode of Shipment Summary for Commercial Freight. Eligible modes are A, B, C, D, E, J, K, L, M, P, Q, S, T, V, 5, 8 and 9.

(a) MODE - Mode Code

(b) RELEASE - Release indicator for a particular mode code during the month.

(c) NUMBER LINES - Number of lines shipped by a particular mode during the month.

(d) WEIGHT - Weight shipped by a particular mode code during the month.

(e) CUBE - Cube shipped by a particular mode during the month.

(f) COST - Shipment cost for a particular mode code during the month.

(g) COST/100 LBS. - Shipment cost per 100 pounds for a particular mode code during the month.

(2) PART 2 - Mode of Shipment Summary for Parcel Post. Eligible modes are G, H, 6 and 7. All headings applicable to part 1 are applicable to part 2 except COST and COST/100 LBS.

(3) PART 3 - Mode of Shipment Summary for all other modes. Eligible modes are I, N, O, U and 4. All headings applicable to part 1 are applicable to part 3 except COST and COST/100 LBS.

5. DATA ORGANIZATION

a. Report heading data on the first line and detailed column headings on the second line for parts 1, 2, and 3.

b. Sequence - Mode.

c. Report is single spaced between mode and double spaced between totals and Parts.

6. NUMBER OF COPIES AND DISTRIBUTION

Two copies will be distributed to the Traffic Management Branch, one copy will be distributed to the Shipment Planning Branch.

7. PROCEDURE FOR REVIEW AND PROCESSING

The Traffic Management Branch will utilize these data in performance of their movement analysis function. Retain one year and then destroy.

APPENDIX F-129

TRANSPORTATION MOVEMENT ANALYSIS BY COMMODITY, IPG, AND MODE

1. PURPOSE

Provides a transportation movement analysis by Commodity, IPG, and Mode for the previous month.

2. ORIGIN

Produced during the processing depicted by appendix D-87. No input is required.

3. FREQUENCY

Monthly

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-129)

(2) Shipping Activity

(3) Report Title

(4) Product Control Number

(5) Functional Routing Code

(6) Section Number

(7) Date - Month, day, year and Julian date

(8) Page Number

b. Data Elements:

(1) COMMODITY - DLA Commodity Managers only and limited to C, E, G, I, M, S and T.

(2) IPG - Issue Priority Group

(3) MODE - Mode of shipment

(4) NUMBER LINES - Number of Lines shipped by a particular Commodity, IPG and Mode during the month.

(5) WEIGHT - Weight shipped by a particular Commodity, IPG and Mode during the month.

(6) CUBE - Cube shipped by a particular Commodity, IPG, and Mode during the month.

(7) COST - Shipment cost for a particular Commodity, IPG, and Mode during the month. No costs for Modes other than A, B, C, D, E, J, K, L, M, P, Q, S, T, V, 5, 8 and 9.

(8) COST/100 LBS. - Shipment cost per 100 pounds for a particular Commodity, IPG, and Mode during the month. No costs for Modes other than A, B, C, D, E, J, K, L, M, P, Q, S, T, V, 5, 8 and 9.

(9) TOTALS

5. DATA ORGANIZATION

a. Report heading data on the first line and detailed column heading on the second line.

b. Sequence:

(1) Major is Commodity.

(2) First minor is IPG.

(3) Second minor is Mode.

c. Report is single spaced between IPGs within commodity and double spaced between totals and commodity.

6. NUMBER OF COPIES AND DISTRIBUTION

Two copies will be distributed to the Traffic Management Branch, and one copy will be distributed to the Defense Logistics Agency, ATTN: DLA-LO(DORO), Richmond, VA 23297. The copy to DORO will be labeled RCS DLA(M)2389(0).

7. PROCEDURE

The Traffic Management Branch will utilize these data in performance of their movement analysis function and trends and pertinent information will be passed to DLA-OT citing DLA(M)1559(0). Retain listing for one year and then destroy.

APPENDIX F-130

TRANSPORTATION MOVEMENT ANALYSIS OF DESTINATION AND COMMODITY

1. PURPOSE

Provides a transportation movement analysis of Export and Domestic Shipments by Destination, Commodity, and Mode for the previous month, with totals and rates by destination for calendar year to date.

2. ORIGIN

Produced during the processing as depicted by appendix D-87. No input is required.

3. FREQUENCY

Monthly

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-130)

(2) Shipping Activity

(3) Report Title

(4) Product Control Number

(5) Functional Routing Code

(6) Section Number

(7) Date - Month, day, year and Julian date

(8) Page Number

b. Data Elements: IDENTITY - COMMERCIAL FREIGHT ACTIVITY, PARCEL POST ACTIVITY and TOTAL ACTIVITY.

(1) DEST - Export/Domestic Destination. Export codes are indicated by an E, followed by the major export codes in appendix A-79. Domestic codes are indicated by a D, followed by the State Codes in appendix A-80. Note: When the major export and State Codes are blank; this indicates an incomplete record in the address file.

(2) MGR - Commodity Manager Code, (DLA/non-DLA) appendix A-44.

c. Data Elements: COMMERCIAL FREIGHT ACTIVITY.

(1) LINES - Number of Lines shipped by destination code and commodity during the month.

(2) WEIGHT LBS - Weight shipped by a destination code and commodity during the month.

(3) CUBE FT - Cube shipped by a destination code and commodity during the month.

(4) TOTAL COST - Total cost for shipments for a particular destination code and commodity during the month.

(5) PR CWT - Cost per 100 lbs for a particular destination code and commodity during the month.

d. Data Elements: PARCEL POST ACTIVITY.

(1) LINES - Number of lines shipped by a destination code and commodity code during the month.

(2) WEIGHT LBS - Weight shipped by a destination code and commodity during the month.

(3) CUBE FT - Cube shipped by destination code and commodity during the month.

e. Data Elements: TOTAL ACTIVITY.

(1) LINES - Total lines shipped freight and parcel post by destination code and commodity during the month.

(2) WEIGHT LBS - Total weight shipped freight and parcel post by destination code and commodity during the month.

(3) CUBE FT - Total cube shipped freight and parcel post by destination code and commodity during the month.

f. Data elements: TOTAL AC - Columnar totals.

g. Year to Date: Totals for each destination columnar totals.

5. DATA ORGANIZATION

a. Report heading data on the first line, subheading on second line and detailed column heading on the third line.

b. Sequence

(1) Destination - Major.

(2) Commodity - Minor.

c. Report is single spaced between commodity within destination and double spaced between totals and destination.

d. Commercial Freight Activity consists of Modes A, B, C, D, E, J, K, L, M, P, Q, S, T, V, 5, 8 and 9. Parcel Post Activity consists of Modes G, H, 6 and 7. Total activity is total of all activity and may or may not equal that covered by Freight and Parcel Post Modes.

6. NUMBER OF COPIES AND DISTRIBUTION

Two copies will be distributed to the Traffic Management Branch.

7. PROCEDURES FOR REVIEW AND PROCESSING

The Traffic Management Branch will utilize these data in performance of their movement analysis function by destination, commodity and trends and pertinent information will be passed to DLA-OT citing DLA(M)1559(0). Retain listing for one year and then destroy.

APPENDIX F-131

LOCATOR/DEPOT BALANCE/TRANSACTION REGISTER (DB&TR) RECONCILIATION ANALYSIS LISTING

1. PURPOSE

To provide listings of the results of the daily and monthly reconciliations - Locator to DB&TR and DB&TR to Locator. The summary listing will be analyzed by management elements to determine trends and problem areas. The detail listing will be used by operational elements to identify mismatches and determine action to be taken to correct the mismatch.

2. ORIGIN

This listing is produced as a result of the process depicted by appendix D-175.

3. FREQUENCY

a. Parts 1 and 4 - Daily.

b. Part 2 - Monthly.

c. Part 3 - Monthly.

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (UWF131 Part_)

(2) Report Title

(3) For Month Of

(4) Depot Identification

(5) Date - month, day, year, and Julian date

b. Heading Line data for part 1:

(1) Locator Manager - Item manager currently on the locator.

(2) Locator NSN - NSN currently on the locator.

(3) Locator U/I - Unit of issue currently on the locator.

(4) Type of Error - Identifies mismatches between the locator and the DB&TR when locator updates result in the following: new manager, new NSN, new unit of issue, first locator add, and/or last locator delete.

(a) DB&TR Manager - Commodity Manager currently on record in the DB&TR.

(b) DB&TR NSN - National Stock Number currently on record in the DB&TR.

(c) DB&TR U/I - Unit of Issue currently on record in the DB&TR.

(d) First Add - First locator add for an NSN, condition, and type of pack for which there is no DB&TR balance record. Indication in this field will be the condition code of the transaction. See note.

(e) Last Delete - Last locator delete for an NSN, condition and type of pack for which there is a current DB&TR balance record. Indication in this field will be the condition code of the transaction. See note.

(f) DB&TR Zero Balance - When the DB&TR balance file goes to zero and a last locator delete has not been processed.

NOTE: A reserved location of any sort will not be considered an active location. Each entry in these paragraphs will result in an inventory for that NSN.

(5) Location - Actual location where last location is deleted or first location added.

(6) Manager Total - Column totals by commodity manager for each type of error.

(7) Depot Total - Column totals for the depot for each type of error.

c. Heading Line data for part 2.

(1) Manager - Commodity Manager Code.

(2) Locator Updates - Number of actions which cause the following locator updates: first locator deletes, manager, NSN or unit of issue. adds, last locator.

NOTE: A reserved location of any sort will not be considered an active location.

(3) DB&TR Errors - Locator update action which when a reconciliation is made the DB&TR conflicts with the locator.

(4) Percent Effective - DB&TR Errors divided by Locator updates.

(5) Type of errors described in paragraph 4b Error - Type of above where the locator. DB&TR differed from the locator.

(a) Manager errors (the error will be recorded for - Total manager the manager in the DB&TR).

(b) NSN - Total NSN errors.

(c) U/I - Total Unit of Issue errors.

(d) First Add - First locator adds for an NSN condition and type of pack for which there is a DB&TR balance record. See note.

NOTE: A reserved location of any sort will not be considered and active location.

(6) ZJAs Created - ZJAs mechanically produced as a result of subparagraphs (4)(d) and (e) above.

(7) Depot Total - Totals for the depot by each data element (last line).

d. Heading Line data for part 3.

(1) LOC MGR - Item manager currently on locator.

(2) DBTR MGR - Item manager currently on DB&TR.

(3) LOCATOR NSN - NSN currently on locator.

(4) DB&TR NSN - NSN currently on DB&TR.

(5) LOC UI - Unit of issue currently on locator.

(6) DB&TR UI - Unit of issue currently on DB&TR. Note: A blank in the unit of issue field indicates that no unit of issue was available at time of receipt. An inquiry was submitted to central data bank for this information.

(7) LOC COND - Condition Code currently on locator.

(8) DB&TR COND - Condition Code currently on DB&TR.

(9) LOC T/PK - Type of pack currently on locator.

(10) DB&TR/T/PK - Type of pack currently on DB&TR.

(11) LOCATION - Location currently on depot locator file (if there is no location for the NSN, condition, and/or type of pack this field will remain blank).

(12) DB&TR POS BAL NO LOCATION - The DB&TR balance file reflects a balance record for this NSN, condition and/or type of pack with a positive quantity. The depot locator file reflects no active location for this NSN, condition and type of pack. Indication in this field will be Management Code A.

(13) DEPOT LOC NO DBTR BAL - There is an active location on the depot locator file and there is no matching balance record for this NSN, condition and type of pack. Indication in this field will be Management Code B.

(14) DBTR ZERO BAL DEPOT LOC - The DB&TR balance file reflects a balance record for this NSN, condition and type of pack but there is a zero quantity balance. The depot locator reflects an active location for this NSN, condition and type of pack. Indication in this field will be Management Code B.

NOTE: If a difference exists in the manager, NSN, unit of issue, condition, or type of pack between the depot locator and the DB&TR balance file, the listing will reflect what is recorded on each file in the appropriate listing field. If no difference exists in these fields between the locator and the DB&TR, the entry will be shown in the locator fields only.

5. DATA ORGANIZATION

a. Report header data on first line, detail data (paragraph 4b) on second and subsequent lines.

b. Sequence:

(1) Part 1 - Manager, major; NSN within manager, minor; double spaced.

(2) Part 2 - Manager, double spaced.

(3) Part 3 - Manager, major; NSN within manager, minor; page break by manager; single spaced.

(4) Part 4 - Location.

6. NUMBER OF COPIES AND DISTRIBUTION

a. Part 1 - One copy to Inventory Control Office.

b. Part 2 - Two copies. One to Inventory Control Office, one to DS/T Management Support Office.

c. Part 3 - One copy to Inventory Control Office.

d. Part 4 - One copy to Warehousing Division.

7. PROCEDURES

a. Part 1 of this listing will be used by the Inventory Office to research and determine causes of errors between the locator file and the DB&TR records in order that corrective action may be taken to preclude similar errors from taking place.

b. Part 2 of this listing will be used by management elements to determine trends and identify problem areas.

c. Part 3 of this listing will be used by the Inventory Control Office to research and determine causes of errors between the DB&TR records and the depot locator. Corrective action will be taken to keep the DB&TR and depot locator as accurate as possible. This part will also be used to determine causes of errors to preclude similar errors from happening.

d. Part 4 of this listing will be used by the Warehousing Division to review all first locator adds and last locator deletes for determining if the correct stock is in the location or if a last delete, if the location is actually empty. Errors should be corrected in Warehousing as appropriate.

APPENDIX F-132

TRANSPORTATION MOVEMENT ANALYSIS BY CATEGORY ORIGIN

1. PURPOSE

Provides a transportation movement analysis by category origin for the previous month.

2. ORIGIN

Produced during the processing as depicted by appendix D-87. No input is required.

3. FREQUENCY

Monthly.

4. DATA ELEMENTS:

a. Report Header Line which includes:

(1) Report Number (F-132)

(2) Shipping Activity

(3) Report Title

(4) Functional Routing Code

(5) Section Number

(6) Date - Month, day, year, and Julian day

(7) Page Number

b. Data Elements:

(1) ORIGIN - Load Indicator

(2) CATEGORY - For parcel post shipments only. Mode codes applicable are G, H, 6 and 7.

(3) NUMBER LINES - Number of lines shipped by a particular category origin during the month.

(4) WEIGHT - Weight shipped by a particular category origin during the month.

(5) CUBE - Cube shipped by a particular category origin during the month.

(6) NUMBER PIECES - Number of pieces shipped by a particular category origin during the month.

(7) TOTALS - Columnar Totals

5. DATA ORGANIZATION

a. Report heading data on the first line and detailed column headings on the second line.

b. Sequence:

(1) Major is by origin

(2) Minor is by category

c. Report is double spaced.

6. NUMBER OF COPIES AND DISTRIBUTION

Two copies will be distributed to the Traffic Management Branch.

7. PROCEDURE:

The Traffic Management Branch will utilize these data in the performance of their movement analysis function by category origin. Retain listing for one year and then destroy.

APPENDIX F-133

TRANSPORTATION MOVEMENT ANALYSIS OF CONUS POE TRAFFIC

1. PURPOSE

Provides a transportation movement analysis of CONUS POE traffic for the previous month.

2. ORIGIN

Produced during the processing as depicted by appendix D-87. No input is required.

3. FREQUENCY

Monthly

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-133)

(2) Shipping Activity

(3) Report Title

(4) Product Control Number

(5) Functional Routing Code

(6) Section Number

(7) Date - Month, day, year and Julian date

(8) Page Number

b. Data Elements:

(1) POE - Port of Embarkation Code

(2) COMMODITY - DLA Commodity Manager only and limited to C, E, G, I, M, S and T.

(3) NUMBER LINES - Number of lines shipped at a particular POE for a commodity during the month.

(4) WEIGHT - Weight shipped at a particular POE for a commodity during the month.

(5) CUBE - Cube shipped at a particular POE for a commodity during the month.

(6) COST - Shipment cost at a particular POE for a commodity during the month.

(7) COST/100 LBS. - Shipment cost per 100 pounds at a particular POE for a commodity during the month.

(8) AIR POE TOTALS - Columnar totals.

(9) WTR POE TOTALS - Columnar totals.

5. DATA ORGANIZATION

a. Report heading data on the first line and detailed column headings on the second line.

b. Sequence:

(1) Major is by POE.

(2) Minor is by Commodity.

c. Report is single spaced between commodity within POE and double spaced between totals and POE.

6. NUMBER OF COPIES AND DISTRIBUTION

Two copies will be distributed to the Traffic Management Branch.

7. PROCEDURES FOR REVIEW AND PROCESSING

The Traffic Management Branch will utilize these data in performance of their movement analysis function by CONUS POE traffic and trends and pertinent information will be passed to DLA-OT citing RCS DLA(M)1559(O). Retain listing for one year and then destroy.

APPENDIX F-134

TRANSPORTATION FUND OBLIGATIONS REPORT - WEEKLY/MONTHLY

1. PURPOSE

a. Provide a summary of weekly transportation appropriations to be forwarded to DLA Supply Centers with appendix B-125, Transportation Fund Obligation Cards.

b. Provide a detailed record of obligations of transportation appropriations for the previous month.

2. ORIGIN

a. Weekly Report - Produced as a result of the processes depicted by appendix D-159. Input of a report control card specified in DLAM 4745.1 is required.

b. Monthly Report - Produced during the processing as depicted by appendix D-87. No input is required.

3. FREQUENCY

Weekly or monthly as specified in paragraph 2 above.

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-134)

(2) Report Part Number - assigned based upon first position of B/L number.

(3) Depot Activity Symbol

(4) Report Title. Specify weekly or monthly, as applicable.

(5) Functional Routing Code

(6) Section Number

(7) Date - Month, day, year and Julian date

(8) Page Number

b. Data elements:

(1) Line 2

APPROP CODE - Appropriation number for the account. This number will be blank when the Appropriation Code/Citation is not identified on the MOWAS Appropriation Table, reference appendix B-66.

(2) Line 3

(a) B/L NBR. AND AMOUNT - Bill of Lading Number and Dollar Value. This report reflects up to four B/L NBR and Amount to a line.

(b) TOTAL COST - New balance as a result of adding the amount for each B/L.

5. DATA ORGANIZATION

a. Report heading data on the first line and detailed column headings on the second and third lines.

b. Sequence is by appropriation code within each report part number.

c. Minor sequence is B/L number.

d. Report is double spaced.

6. NUMBER OF COPIES AND DISTRIBUTION

a. Weekly Report - Three copies will be distributed to the Traffic Management Branch with Transportation Fund Obligation Cards, appendix B-125.

b. Monthly Report - Three copies will be distributed to the Traffic Management Branch. EAM cards will not be submitted with this report.

7. PROCEDURES FOR REVIEW AND PROCESSING

a. Weekly Report and EAM Cards

(1) Traffic Management Branch will analyze cost data shown on the report and the report and enter corrections to major discrepancies in transportation cost amounts.

(2) EAM cards, appendix B-125, containing erroneous data will be submitted to the Data Entry Section for correction.

(3) EAM cards and one copy of the F-134 will be mailed to the applicable Supply Center.

(4) Remaining copies of the F-134 will be distributed according to local procedures.

b. Monthly Report

(1) Traffic Management Branch will forward one copy of this report to the applicable DLA Supply Center. EAM cards will not be furnished with this report.

(2) A copy of this report will be retained for one year and then destroyed.

APPENDIX F-135

TRANSPORTATION FUND OBLIGATIONS REPORT - DAILY

1. PURPOSE

Provides daily detail of obligations against a non-DLA suballocation of transportation funds.

2. ORIGIN

Produced during the processing as depicted by appendix D-57. No input is required.

3. FREQUENCY

Daily

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-135)

(2) Report Part Number - assign based upon first position of B/L number.

(3) Report Title

(4) Functional Routing Code

(5) Section Number

(6) Date - Month, day, year and Julian date

(7) Page Number

b. Data Elements:

(1) Line 2

(a) APPROP CODE - Appropriation code for the account.

(b) APPROP NR - Appropriation number for the account.

(c) Opening Balance - Opening dollar balance at the beginning of the day.

(2) Line 3

(a) B/L NBR. AND AMOUNT - Bill of Lading Number and Dollar Value. This report reflects up to four B/L NBR and Amount to a line.

(b) NEW BALANCE - New dollar balance as a result of subtracting the amount for each B/L from the opening balance.

5. DATA ORGANIZATION

a. Report heading data is on the first line and detailed column headings on the second and third line.

b. Sequence is by appropriation code within each report part number.

c. Minor sequence is B/L number.

d. Report is double spaced.

6. NUMBER OF COPIES AND DISTRIBUTION

One copy will be distribution to the Commercial Traffic Branch and three copies will be distributed to the Finance and Accounting Office.

7. PROCEDURES FOR REVIEW AND PROCESSING

The Commercial Traffic Branch will utilize this listing to control obligations against a non-DLA suballocated fund. Destroy after receipt of the succeeding days listing. The final obligation or end of period listing (original) will be passed with the financial bill of lading copies to the appropriate Finance and Accounting Office. A copy will be retained for one year and then destroyed.

APPENDIX F-136

TRANSPORTATION ANALYSIS OF CONSIGNEE FREQUENCY AND VOLUME

1. PURPOSE

Provides a summary of movements to geographical areas and major customers within geographical areas for the previous month.

2. ORIGIN

Produced during the processing as depicted by appendix D-87. No input is required.

3. FREQUENCY

Monthly

4. DATA ELEMENT

a. Report Header Line which includes:

(1) Report Number (F-136)

(2) Shipping Activity

(3) Report Title

(4) Product Control Number

(5) Functional Routing Code

(6) Section Number

(7) Date - Month, day, year, and Julian date

(8) Page Number

b. Data Elements:

(1) GEO AREA - Geographical Area Code

(2) DEST - Standard Point Location Code

(3) MODE - Mode of Shipment Code

(a) PP - Parcel Post. Mode Code G, H, 6 and 7 only.

(b) FRT - Freight. All other mode codes.

(4) IPG 1 NUMBER OF LINES POUNDS - The number of lines and pounds for Issue Priority Group 1 for a particular geographical area, standard point location code, and mode for the previous month.

(5) IPG 2 NUMBER OF LINES POUNDS - The number of lines and pounds for Issue Priority Group 2 for a particular geographical area, standard point location code, and mode for the previous month.

(6) IPG 3 NUMBER OF LINES POUNDS - The number of lines and pounds for Issue Priority Group 3 for a particular geographical area, standard point location code, and mode for the previous month.

(7) TOTAL NUMBER OF LINES POUNDS - The total number of lines and pounds for Issue Priority Groups 1 through 3 for a particular geographical area, standard point location code, and mode for the previous month.

5. DATA ORGANIZATION

a. Report heading data is on the first line and detailed column headings on the second line.

b. Sequence:

(1) Major is by geographical area.

(2) Minor is by standard point location code.

c. Report is single spaced by standard point location code within geographical areas and double spaced between totals and geographical areas.

6. NUMBER OF COPIES AND DISTRIBUTION

Two copies will be distributed to the Shipment Planning Branch.

7. PROCEDURES FOR REVIEW AND PROCESSING

The Shipment Planning Branch will utilize these data for determining and updating the assignment of Geographical Area Codes. Retain for one year and then destroy.

APPENDIX F-137

OUTBOUND B/L REGISTER ACTIVITY ON CLOSED BLOCKS OF 100

1. PURPOSE

Provides a record of activity recorded against Government Bills of Lading that are on closed blocks of 100 for reentry of invalid DIC ZEN Cards (appendix B-128) or late submissions.

2. ORIGIN

Produced as a result of MRO closeout and as depicted in appendix D-57.

3. FREQUENCY

Daily

4. DATA ELEMENTS

a. Report header line which includes:

(1) Report Number (F-137)

(2) Report Title

(3) Functional Routing Code

(4) Section Number

(5) Date: Month, day, and year and Julian date

(6) Page Number

b. Data Elements:

(1) GBL NUMBER - Government Bill of Lading Number

(2) TCN - Transportation Control Number

(3) ISSUED - Issued Date

(4) SHIPPED - Shipped Date

(5) MODE - Mode of Transportation

(6) CARRIER - Carrier Code

(7) TU/SU NUMBER - Transportation Unit/Shipment Unit Number

(8) SU LINE - Shipment Unit Line

(9) DEST - Destination Cross-Reference from the Activity Address File.

(10) DoDAAD CODE - Department of Defense Activity Address Directory Code

(11) IPG - Issue Priority Group

(12) NUMBER OF LINES/PIECES - Number of Lines and Pieces

(13) WEIGHT - Shipment Weight

(14) CUBE - Cube Shipped

(15) COST - Shipment Cost

5. DATA ORGANIZATION

a. Report heading data on the first line and detailed column headings on the second line.

b. Sequence:

(1) Major is Government Bill of Lading Number.

(2) Minor is Transportation Control Number.

c. Report is single spaced for multiple lines for same GBL Number and double spaced between GBL Numbers.

6. NUMBER OF COPIES AND DISTRIBUTION

One copy will be distributed to the Commercial Traffic Branch.

7. PROCEDURES FOR REVIEW AND PROCESSING

The Commercial Traffic Branch will manually enter this information to the Outbound Bill of Lading Register, appendix F-125. If room is not available, an attention mark such as an asterisk will be entered and the information shown after the last number. Destroy after annotations are made to appendix F-125.

APPENDIX F-138

TRANSPORTATION MOVEMENT ANALYSIS - RESEARCH DETAIL

1. PURPOSE

To provide transportation statistics as required by HQ DLA.

2. ORIGIN

a. Produced as a result of input of appendix B-128 with action codes specifying the following data sequencing options and as depicted in appendix D-31.

(1) Part 1: Action Code GW

(2) Part 2: Action Code GQ

b. "Negative Report" will be produced when data is not available for a state code or destination code.

3. FREQUENCY

Daily, as required.

4. DATA ELEMENTS

a. Report Header Line that includes:

(1) Report Number (F-138)

(2) Title

(3) FRC - Functional Routing Code

(4) Section Number

(5) Date - Month, day, year, and Julian date

(6) Page Number

b. Data Elements (parts 1 and 2):

(1) DEST - Export Destination/State Codes - Appendices A-79 and A-80.

(2) DCR - Destination Cross-Reference from the Activity Address File.

(3) DoDAAD - Consignee Code

(4) IPD - Issue Priority Designator

(5) MODE - Mode of Shipment

(6) DOCUMENT NUMBER

(7) STOCK NUMBER -

(8) MGR - Commodity Manager

(9) QTY - Quantity

(10) TOT WT - Total Weight

(11) CONTROL NR - GBL or TCN

(12) DATE SHIPPED -

(13) TOTAL LINES -

(14) TOTAL WT - Total weight

c. Sequence:

(1) Part 1, destination - primary, SPLC/DoDAAD-secondary.

(2) Part 2, destination - primary, stock number-secondary.

5. DISTRIBUTION

Two copies will be forwarded to HQ DLA, ATTN: DLA-OT.

APPENDIX F-139

HAZARDOUS MATERIEL PACKAGING AND TRANSPORTATION FILE LISTING

1. PURPOSE

To provide a listing for the packing specialist with pertinent data to certify and package hazardous materiels for shipment.

2. ORIGIN

Produced as a result of processing depicted in appendix D-32.

3. FREQUENCY

Monthly/as required.

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) NIIN

(2) Title

b. Part Number Sub Line

(1) Report Number (F-139)

(2) Part Number (which segment of the report)

(3) Part Number Title

(4) Date - Day - Month - Year

(5) Page Number

c. Data Elements:

(1) NIIN/PART-NMBR - National Item Identification Number/Part Number.

(2) FSCM - Federal Supply Code for Manufacturers.

(3) VARIATION - FSCM Variation Code.

(4) DATE-OF-LAST-CHANGE - The date the record was added or changed.

(5) NET-QTY-PER-PKG - Net Quantity Per Package.

(6) USED FOR BASIC RECORD ONLY - FSCM - VARIATION - FSCM and/or Variation code used for the basic record only.

(7) NEUTRALIZING-MAT - Neutralizer used in case of spills.

(8) BOILING POINT - Temperature in either degrees F or C.

(9) MULTI-FSCM-FLAG - Quantity of FSCMs in file for NIIN.

(10) FLASH POINT - The temperature in both degrees F and C.

(11) METHOD - The abbreviation for the method of determining flash point.

(12) REPORTABLE-QTY - Reportable quantity in pounds or kilograms.

(13) STOCK CLASS - The Federal Stock Classification number.

(14) EXEMPTION-DATE-NUMBR - Date DOT exemption number expires. Exemption number authorized by DOT.

(15) HCC - Hazardous Compatability Code.

(16) FORM-FLAG-DATA - Radioactive material (normal or special).

(17) TRANS-IDX - Transportation Index for radioactive material.

(18) NAME-RADIONUCLIDE - Name and radionuclide for radioactive material.

(19) RADIOACTIVITY - Radioactive material measured in curies or fractions thereof.

(20) WASTE - Waste indicator and proper shipping name of hazardous waste.

(21) DOT MODE - Data elements for Department of Transportation (DOT) mode.

(22) NAME - DOT proper shipping name.

(23) CONT-SPEC-NMBR - DOT container specification number and description.

(24) NAME-SUPPLEMENT - DOT words in italics from proper shipping name used to provide additional information.

(25) CLASS - DOT hazard class.

(26) LMT-QTY - Identifies material that may or may not require packaging limits.

(27) HAZARD-ITEM-ID - Hazardous Item Identification.

(28) UI-CONTAINER - DOT specified container for a particular NSN.

(29) LABEL - DOT label.

(30) HAZARD-FLAG - Flag to identify type of annotation for HM Column of shipping papers.

(31) NET-EXPLOSIVE-WGT - The total net explosive weight for the active components in Class A and B explosives.

(32) REG-REF-PKG - Complete packaging reference.

(33) ADDITIONAL-DATA - Any additional data that may be necessary.

(34) IMO MODE - Data elements for Intergovernment Maritime Organization (IMO) mode.

(35) NAME - IMO proper shipping name.

(36) NAME-SUPPLEMENT - IMO words in italics from proper shipping name.

(37) CLASS - IMO hazard class.

(38) HAZARD-ITEM-ID - Hazardous Item Identification.

(39) LABEL - IMO label.

(40) HAZARD-FLAG - Flag to identify the type of annotation in the HM Column of the shipping papers.

(41) IMDG-CODE-PAGE-NUMBER - Specific page number in the IMDG code.

(42) SUBSIDIARY-RISK-LABEL - Label to identify secondary risks.

(43) PACKAGING-GROUP - Degree of danger a hazardous material presents.

(44) IATA MODE - Data elements for International Air Transport Association (IATA) mode.

(45) NAME - IATA proper shipping name.

(46) NAME-SUPPLEMENT - IATA words in italics from proper shipping name.

(47) CLASS - IATA hazard class.

(48) PASS-LIMIT - Passenger Carrying Aircraft Limitations.

(49) HAZARD-ITEM-ID - Hazardous Item Identification.

(50) CARGO-LIMIT - Net quantity allowed per package by IATA.

(51) LABEL - IATA label.

(52) HAZARD-FLAG - Flag to identify the type of annotation in the HM Column of the shipping papers.

(53) PACKING-GROUP - Degree of danger a hazardous material presents.

(54) REF-CARGO - Packaging instruction number specified by IATA.

(55) PACKING-REF-PASS - Packaging instruction number specified by IATA.

(56) SUBSIDARY-RISK/LABEL - Numeric identification label of the subsidiary risk.

(57) STRENGTH-OF-FIELD - Performance criteria for magnetized material.

(58) 4145-3 MODE - Data elements for Military Air (DLAM 4145.3) mode.

(59) NAME - Military Air proper shipping name.

(60) NAME-SUPPLEMENT - Italicized words from proper shipping name.

(61) PAX-CARGO - Identifies material for cargo or DoD duty aircraft only.

(62) OVER-PACK - Identifies material which requires overpacking.

(63) CLASS - DLAM 4145.3 Hazardous Class.

(64) INTERNAL-PSI - Internal pounds per square inch.

(65) HAZARDOUS-ITEM-ID - Hazardous Item Identification.

(66) LOAD-STORAGE - Identifies load and storage group data.

(67) LABEL - DLAM 4145.3 label.

(68) HAZARD-FLAG - Flag to identify the type of annotation in the HM Column of the shipping papers.

(69) MAX-NET-QTY-REF-PKG - DOT container specification number and description.

(70) REG-REF-PKG - DLAM 4145.3 packaging reference.

(71) MAX-STRENGTH-OF-FIELD - Performance criteria for magnetized material per DLAM 4145.3.

(72) SECONDARY-CLOSURE - Material which require a secondary closure.

(73) ADDITIONAL-DATA - Any additional data that may be necessary.

(74) UPS MODE - Data elements for United Parcel Service (UPS) mode.

(75) NAME - UPS proper shipping name.

(76) CLASS - UPS hazard class.

(77) HAZ-ITEM-ID - UPS Hazardous Item Identification number.

(78) LABEL-LTD-QTY-OR-EXEMPT - Identifies DOT label. Eligibility for exemption or exemption number.

(79) PACKING-NUMBER - UPS hazardous material package number.

(80) MAXIMUM-UNIT-QTY - UPS maximum allowable hazardous material per container.

(81) ADDITIONAL-DATA - Any additional data that may be necessary.

(82) OSHA LABLE - Occupational Safety and Health Administration label.

(83) NATIONAL STOCK NUMBER OR PART NUMBER - Self-explanatory.

(84) TRADE-NAME - Name or number used to designate a product.

(85) ITEM-NAME - Item name recorded in Federal Cataloging System.

(86) COMMON-NAME - Name commonly used to identify item.

(87) CHEMICAL-NAME - Chemical name of a single element or compound.

(88) HAZARD CHEMICAL INGREDIENT - Names of all hazardous elements.

(89) MANUFACTURER - Name of the manufacturer of the product.

(90) MANUFACTURER ADDRESS - Address of the manufacturer of the product.

(91) MANUFACTURER TELEPHONE NUMBER - Telephone number of the manufacturer.

(92) HAZARD WARNING - Warning for personnel handling the hazardous item.

5. DATA ORGANIZATION

a. Part 1:

(1) NIIN and report header data on the first line.

(2) Report number, report part number, part number title, date and page number on second line.

(3) Sequenced by NIIN/part number with DOT mode, IMO mode, IATA mode, DLAM 4145.3 mode, UPS mode, OSHA label and manufacturer (FSCM).

(4) Page break at end of manufacturer data.

b. Part 2:

(1) NIIN and report header data on the first line.

(2) Report number, report part number, part number title, date and page number on second line.

(3) Sequenced by NIIN/part number with DOT mode, IMO mode, IATA mode, DLAM 4145.3 mode, and UPS mode.

(4) Page break at end of UPS mode.

c. Part 3:

(1) NIIN/part number and report header on first line.

(2) Report number, report part number, part number title, date and page number on second line.

(3) Sequenced by NIIN/part number with OSHA label.

(4) Page break on each NIIN/part number.

d. Part 4:

(1) Report header on first line.

(2) Report number, report part number, part number title, date and page number on second line.

(3) Sequenced by NIIN/part number.

e. Part 5:

(1) Report header on first line.

(2) Report number, report part number, part number title, date and page number on second line.

(3) Sequenced by NIIN/part number.

f. Part 6:

(1) Report header on the first line.

(2) Report number, report part number, part number title, date and page number on second line.

(3) Sequenced ALPHA/NUMERIC by FSCM code.

6. NUMBER OF COPIES AND DISTRIBUTION

Five Copies - One original copy to Transportation Division, four copies to Warehousing Division.

APPENDIX F-140

DELINQUENT INVENTORY LISTING

1. PURPOSE

To provide a listing to allow daily monitoring by the Inventory Office of NSNs under inventory for which no counts have been released to the DSC.

2. ORIGIN

Output as depicted in appendix D-12.

3. FREQUENCY

Daily. This listing is output 8 days after inventory cutoff date, and daily thereafter until the inventory is canceled or completed.

4. DATA ELEMENTS

a. Report header which includes:

(1) Report Number

(2) Report Title

(3) Date: Month, day, year, and Julian date

(4) Page Number

b. Data Elements:

(1) NSN - National Stock Number

(2) MGR

(3) LOT NO - Sample inventory lost control number

(4) CUTOFF DATE - Inventory cutoff date

(5) AUTO CANC DATE - Automatic cancellation date

5. ORGANIZATION

Report header line on first line and detail data on subsequent line arranged in columns under data element headings identified in paragraph 4 above.

6. SEQUENCE

Major sequence by cutoff day, minor sequence by NSN.

7. NUMBER OF COPIES AND DISTRIBUTION

One copy to Inventory Office, DS/T.

8. PROCEDURE

a. This listing is prepared for use by the Inventory Monitor to research inventories that are 8 days after inventory cutoff date. The Inventory Monitor should take the necessary steps to close the inventory and release the count to the DSC or to cancel the inventory if it cannot be completed with an accurate count.

b. If action is not completed, the inventory will be automatically canceled on the date listed (15 days following cutoff day). If action cannot be completed prior to that date and cancellation is not desired, the Automatic Cancellation Date can be overridden by entry of a DIC ZAS with a Management Code E in pos. 22 IAW appendix B-70. Inventories automatically canceled will be annotated as such on the appendix F-117, Inventory Cancellation Listing.

UWF140 DELINQUENT INVENTORY LISTING DATE 05.01.76.122 PAGE 001

APPENDIX F-141

SUSPENDED AND TRANSCEIVED TK4 DATA

1. PURPOSE

a. To provide a record of TK4 Intransit Data records suspended, awaiting Proof of Delivery from the carrier.

b. To provide a record of TK4 Intransit Data records updated with the date received and transceived to the MILSTEP Central Data Collection Point (CDCP), Tracy, California by AUTODIN.

c. To provide a record of TK4 Intransit Data records deleted from the system when no action is taken to transceive the data to the CDCP within sixty days from the date shipped.

2. ORIGIN

a. Deleted TK4's - Part 1. TK4's deleted from the suspended TK4 data file that have been suspended for sixty days from the date shipped and no action has been taken to transceive the data to the CDCP.

b. Suspended TK4's - Part 2. TK4's suspended will be identified by an operator input key in the MOFAST GBL Print Process, appendix E-224 P, part A (program UWFM05) or Processing Suspended TK4, appendix E-041 P (program UWFM50). TK4's appearing on this listing will be identified as awaiting Proof of Delivery from the carrier.

c. Transceived TK4's - Part 3. Record of daily activity of TK4 Intransit Data Cards transceived to the CDCP as a result of a date received entered in the MOFAST Processing Suspended TK4 Cards, appendix E-041 P (program UWFM50).

3. FREQUENCY

Daily

4. DATA ELEMENTS

a. Deleted TK4's - Part 1

(1) Report Header Line which includes:

(a) Report Number (F-141)

(b) Part Number (Part 1)

(c) Report Title

(d) Date

(e) Page Number

(2) Data Elements

(a) DIC - Document Identifier Code (TK4)

(b) SCAC - Standard Carrier Alpha Code

(c) CONSIGNOR - Consignor

(d) DTE-RCVD - Date Received

(e) MODE - Mode of Shipment Code

(f) CONSIGNOR - Consignor

(g) B - Program Constant

(h) GBL NUMBER - Government Bill of Lading Number

(i) DESTINATION - Consignee

(j) PRTY - Issue Priority Group

(k) DDD - Desired Delivery Date

(l) DTE-SHPD - Date Shipped

b. Suspended TK4's - Part 2

(1) Report Header Line which includes:

(a) Report Number (F-141)

(b) Part Number (Part 2)

(c) Report Title

(d) Date

(e) Page Number

(2) Data Elements:

(a) DIC - Document Identifier Code (TK4)

(b) SCAC - Standard Carrier Alpha Code

(c) CONSIGNOR - Consignor

(d) DTE-RCVD - Date Received

(e) MODE - Mode of Shipment Code

(f) CONSIGNOR - Consignor

(g) B - Program Constant

(h) GBL-NUMBER - Government Bill of Lading Number

(i) DESTINATION - Consignee

(j) PRTY - Issue Priority Group

(k) DDD - Desired Delivery Date

(l) DTE-SHPD - Date Shipped

c. Transceived TK4's - Part 3

(1) Report Header Line which includes:

(a) Report Number (F-141)

(b) Part Number (Part 3)

(c) Report Title

(d) Date

(e) Page Number

(2) Data Elements:

(a) DIC - Document Identifier Code (TK4)

(b) SCAC - Standard Carrier Alpha Code

(c) CONSIGNOR - Consignor

(d) DTE-RCVD - Date Received

(e) MODE - Mode of Shipment Code

(f) CONSIGNOR - Consignor

(g) B - Program Constant

(h) GBL NUMBER - Government Bill of Lading Number

(i) DESTINATION - Consignee

(j) PRTY - Issue Priority Group

(k) DDD - Desired Delivery Date

(l) DTE-SHPD - Date Shipped

5. DATA ORGANIZATION

a. SCAC Code - Major

b. GBL Number - Minor

6. DISTRIBUTION

One copy to Transportation Division, DS/T.

7. PROCEDURES FOR REVIEW AND PROCESSING

a. Part 1 - TK4 Intransit data appearing on this report have been deleted from the file when no action has been taken to transceive the data to the CDCP within sixty days from the date shipped. If Proof of Delivery is received after the date has taken place, reestablish the data using Processing Suspended TK4 Cards, appendix E-041 P (program UWFM50).

b. Part 2 - TK4 data appearing on this report have been suspended and are awaiting input of the date received.

c. Part 3 - TK4 data appearing on this report have been transceived to the CDCP as a result of a date received being entered.

APPENDIX F-142

ACCEPTANCE ALERT/REPORT INQUIRY RESPONSE

1. PURPOSE

The displays are output in response to specific requests for Acceptance Alert (A/A) or Acceptance Report (A/R) data. The information may be used in the research and preparation of manual A/R responses or correction to previous reports.

2. ORIGIN

The displays are produced by input of the proper inquiry format of appendix B-39 or B-40 IAW appendix E-194 P.

3. FREQUENCY

As requested.

4. DATA ELEMENTS

a. Acceptance Alert Inquiry Response, Part 1

(1) TITLE

(2) PIIN - Procurement Instrument Identification Number

(3) SPIIN - Supplementary PIIN (Call/Order Number)

(4) CLIIN - Contract Line Item Number

(5) SHIP NR - Contractor/vendor number identifying the receipt shipment.

(6) SS - Alpha code associated with the shipment number, usually Z which signifies final shipment.

(7) NSN - National Stock Number

(8) ADP PT - DoDAAD of the Defense Contract Administration Services Region (DCASR) requesting the A/R response.

(9) QTY SHIP - Vendor quantity shipped as indicated on the receipt documentation, i.e., DD Forms 250/1155.

(10) P/U - Purchase Unit

(11) DT SHIP - Receipt shipment date as reflected on the DD Forms 250/1155.

(12) A/A DATE - Date the A/A or subsequent followup was received and recorded on the A/A file.

(13) TS - Transaction Status. This code will be blank or numeric if a followup has been received.

(14) QTY-ACPT - Total quantity accepted as of the report date. This quantity will be supported by one or more A/R actions.

b. Acceptance Report Inquiry Response, Part 2

(1) TITLE

(2) DIC - Document Identifier Code PKN or PKP

(3) PIIN - Procurement Instrument Identification Number

(4) SPIIN - Supplementary PIIN (Call/Order Number)

(5) CLIN - Contract Line Item Number

(6) SHIP NR - Contractor/vendor number identifying the receipt shipment.

(7) SS - Alpha code associated with the shipment number, usually Z which signifies final shipment.

(8) QTY SHIP - Vendor quantity shipped as indicated on the receipt document, DD Forms 250/1155. May be zero filled for DIC PKP.

(9) P/U - Purchase Unit. May be zero filled for DIC PKP.

(10) QTY ACP - Quantity (in purchase units) accepted by the receipt inspector. Will reflect zero fill on interim reports.

(11) ADP PT - DoDAAD of the Defense Contract Administration Services Region (DCASR) to which the A/R was sent.

(12) DC - Shipment/Acceptance Discrepancy Explanation, appendix A-74.

(13) ACP-DT - Actual or estimated acceptance date and should equal the MRC date.

(14) DEL-DT - Date the receipt was delivered or offered for receipt. The date should be equal to the date of receipt.

(15) PREP DT - Date the A/R was prepared.

(16) TS - Transaction Status, reference appendix A-73.

5. DATA ORGANIZATION

The display of A/A or A/R data, parts 1 or 2, will reflect five records per screen face. The provision to call for additional records will be provided. If additional records are available the display will reflect the word "More" and when no further records exist "No More". More than one display may, therefore, be required to view all records associated with the A/A or A/R inquiry.

6. DISTRIBUTION

The A/A or A/R Inquiry Responses, parts 1 or 2, will be produced at the input terminal, as applicable. A hard copy of the data may be printed if the terminal is equipped for this purpose.

7. PROCEDURE

a. The Acceptance Alert Inquiry Response, part 1, may be used in conjunction with appendix F-204, Acceptance Action Reports, to determine the reason why an automatic A/R, DIC PKN/PKP, could not be produced. Comparison of Receipt History records to available A/A data can reveal reasons for original failure to match existing A/A by those receipts requiring A/R.

b. The Acceptance Report Inquiry Response, part 2, may be used to research incorrect or invalid A/Rs and in conjunction with appendix F-204 resolve receipt problems occurring when the receipt confirmation requiring A/R fails to match existing A/A data.

APPENDIX F-143

DELINQUENT A/A DATA AND PKP A/R ACTIVITY

1. PURPOSE

a. The report will list the old Acceptance Alert (A/A) records which have not been used to generate an Acceptance Report (A/R), DIC PKN. The A/A records will be presented in three age categories for review and investigation by appropriate personnel.

b. The second portion of the report will present a record of A/Rs which have been issued without a matching A/A available, DIC PKP.

2. ORIGIN

a. The Delinquent A/A report will be produced from a screening of the A/A data.

b. PKP A/R will be produced on a daily basis as they are generated via the receipt confirmation process.

3. FREQUENCY

a. Delinquent A/A Data, part 1, will be output monthly.

b. PKP A/R Activity, part 2, will be output daily.

4. DATA ELEMENTS

a. Report header line which includes:

(1) Report Number (F-143)

(2) Report Title

(a) Delinquent A/A Data, part 1

(b) PKP A/R Activity, part 2

(3) FRC - Functional Routing Code

(4) Section

(5) Date - Month, Day, Year and Julian date

(6) Page Number

b. Part 1:

(1) First Age Category - 15-29 Days Past Ship Date

(a) PIIN - Procurement Instrument Identification Number

(b) SPIIN - Supplementary PIIN (Call/Order Number)

(c) ADP PT - DoDAAD of the Contract Administration Office

(d) SHIP TO - DoDAAD of the consignee to whom the shipment was made.

(e) SHIP NR - Vendor Shipment Number

(f) SS - Shipment Number Suffix

(g) CLIN - Contract Line Item Number

(h) QTY SHIP - Quantity shipped as documented on the DD Forms 250/1155.

(i) PU - Purchase Unit

(j) NSN - National Stock Number

(k) DATE SHIP - Date the vendor shipped the receipt as documented on the DD Forms 250/1155.

(l) QAS - Procurement Quality Assurance Site; D for Destination, S for Source Inspection.

(m) LD - Liquidated Damages Clause, appendix A-75.

(n) CD - Cash Discount Stipulation: D for contract that contains provision, N for otherwise.

(o) TS - Transaction Status Code. May reflect numeric data if an A/A followup has been received; otherwise, will be blank. Requests for corrected transactions, E in pos. 80, will also be considered as A/As until answered.

(p) A/A DT - The Julian date the A/A (or followup) was received, processed and/or recorded.

(q) QTY-ACPT - Quantity recorded as accepted and for which an A/R(s) has been prepared.

(2) Second Age Category - 30-60 Days Past Ship Date.

Data same as Part 1.

(3) Third Age Category - Over 60 Days Past Ship Date.

Data same as Part 1.

c. Part 2:

(1) PIIN - Procurement Instrument Identification Number

(2) SPIIN - Supplementary PIIN (Call/Order Number)

(3) CLIN - Contract Line Item Number

(4) SHIP NR - Vendor Shipment Number

(5) SS - Shipment Number Suffix

(6) QTY SHIP - Quantity entered on DIC ZV_ as extracted for the DD Forms 250/1155. May be zero filled of PKP was generated by a DIC ZX_ confirmation.

(7) QTY ACPT - Quantity accepted (expressed as Purchase Units).

(8) ADP-PT - DoDAAD of the Contract Administration Office as determined from the ADM entry from appendix B-108/109.

(9) SHIP TO - DoDAAD of the depot originating the DIC PKP A/R.

(10) P/U - Purchase Unit as extracted from available (automated) contract data. May be zero filled if automated contract data is not available.

(11) DC - Shipment/Acceptance Discrepancy Explanation, appendix A-74.

(12) ACP-DT - Materiel Receipt Card date. Will appear in the PKP as the Actual/Estimated Acceptance Date.

(13) DEL-DT - Date Delivered/Offered. Will equal the date of receipt.

(14) TS - Transaction Status.

(15) PREP DT - Date A/R was prepared.

5. DATA ORGANIZATION

a. Delinquent Acceptance Alert data will be displayed in three age categories using Ship Date, pos. 70-76, as the basic time period. Records displayed as 60 Days Past Shipping Date will either be purged at the time the report is output or shortly thereafter. The report will be produced on a monthly basis.

(1) Sequence of the report will be PIIN (SPIIN if applicable) major, and CLIN minor.

(2) Page break on Age Category. If Age Category is not available, "No Records" message will appear.

b. PKP Acceptance Report transactions will be produced daily as actions/reports are generated.

(1) Sequence of the report will be PIIN (SPIIN if applicable) major, and CLIN minor.

(2) No specified page break.

6. NUMBER OF COPIES AND DISTRIBUTION

Each part will be produced in two copies. The original and copy will both be delivered to Receiving Division, Receipt Documentation Branch, DS/T.

7. PROCEDURE

The reports will be used to determine the reason for A/A Delinquency and to determine exactly the receipt situation which resulted in the output of a DIC PKP in lieu of a PKN. The following suggestions are offered to provide guidance in investigating the reason for Delinquent A/A and A/R output having no matching A/A data:

a. Has the receipt matching the Delinquent A/A been received?

b. Was a DIC PKP output because no matching A/A was available? This would only apply to those DIC PKPs with zero filled shipment numbers.

c. Was a DIC PKP output due to CLIN error? A shipment number transposition error in the Receipt Confirmation will cause a F-204 to be output providing PIIN/SPIIN and CLIN matching an existing A/A record. The F-204 would reflect a possible shipment number error.

d. Was the zero filled shipment number in the DIC PKP due to missing or incomplete data/documentation?

APPENDIX F-144

RECEIPT DISCREPANCY REPORT

1. PURPOSE

To provide a summary of all materiel or documentation discrepancies recorded during receipts processing and a list of all stations responsible for 20 or more discrepant receipts.

2. ORIGIN

Automatically generated from the Completed Receipt File.

3. FREQUENCY

Monthly.

4. DATA ELEMENTS

a. Summary Page

(1) Report Header Line includes:

(a) Report Number (F-144)

(b) Title (Receipt Discrepancy Summary Report)

(c) Product Control Number

(d) Functional Routing Code

(e) Section Number

(f) Date - Month, Day, Year, and Julian date

(g) Page Number

(2) Data Elements:

(a) Discrepancy Code

(b) Manager - Separate columns of summarized discrepancy totals will be printed for DCSC, DESC, DGSC DISC, DPSC-C&T, DPSC-SUB, DPSC-MED, and other with a further columnar breakdown identifying the number of discrepancies by source for procurement (origin or destination) and the total number of discrepancies for nonprocurement receipts (returns and redistribution). Columnar headings are as follows:

1. DCSC

a. ORGN

b. DEST

c. RTRN/RDST

2. DESC

a. ORGN

b. DEST

c. RTRN/RDST

3. DGSC

a. ORGN

b. DEST

c. RTRN/RDST

4. DISC

a. ORGN

b. DEST

c. RTRN/RDST

5. DPSC - C&T

a. ORGN

b. DEST

c. RTRN/RDST

6. DPSC-SUB

a. ORGN

b. DEST

c. RTRN/RDST

7. DPSC-MED

a. ORGN

b. DEST

c. RTRN/RDST

8. OTHER

a. ORGN

b. DEST

c. RTRN/RDST

(c) TOTAL - The final column will contain summarized totals across each row for each Discrepancy Code.

b. Station List

(1) Report Header Line includes:

(a) Report Number (F-144)

(b) Title (Receipt Discrepancy Report - Station)

(c) Functional Routing Code

(d) Section Number

(e) Date - Month, Day, Year and Julian date

(f) Page Number

(2) Data Elements:

(a) STATION - Activity Address Code, Julian day, Serial Number (Document Number)

(b) COND - Condition Code

(c) QTY - Quantity

(d) A through Y - Primary Discrepancy Codes

(e) TOTAL BY DISCREPANCY

(f) TOTAL DISCREPANCIES

5. DATA ORGANIZATION

a. Sequence - The summary page will appear as the first and second page of the total report followed by the Station Report in document number sequence.

b. Page Break - The Station Report will page break on Service Assignment Code.

6. DISTRIBUTION

Distribution will be in accordance with local instructions.

7. PROCEDURES

a. The first part of the report is a summary by manager and type of discrepancy and contains a total of all discrepancies identified during the reporting period.

b. The second or station part of the report is used to identify contracting offices (procurement), customers (returns) or depots (redistribution) who have accumulated 20 or more discrepancies in a given month.

c. Use of the report is at the discretion of the local manager.

APPENDIX F-145

DEPOT BALANCE AND TRANSACTION FILE PRINTOUT

1. PURPOSE

To provide a printout of transactions from the file for special reviews (e.g., Depot Balance and Transaction Data Program, Reconciliation, No Location Research, and Survey).

2. ORIGIN

a. Part 1 - Produced as a result of the monthly reconciliation of DSC and depot balances and transactions. This F-145 consists of all depot transactions for NSNs which appear on the F-146 produced by the same cycle. Part 1 is produced as a result of processing as depicted in appendix D-131.

b. Part 2 - Produced as a result of the monthly purge of the depot transaction file. This listing/microfiche contains all depot transactions with a transaction date earlier than the ending reconciliation cutoff date. Part 2 is produced as a result of processing as depicted in appendix D-131.

c. Part 3 - Produced as a result of processing a depot balance and transaction file inquiry card, appendix B-107 and an Automatic ZAN Inquiry generated as a result of a "No Location" condition in the stock selection process, appendix D-184. Part 3 is produced as depicted in appendix D-126. In the event the NSN inquired is not on the DB&TR file, a message will appear on the part 3, NO RECORD. In the event more than one inquiry is made, a message will appear on the part 3 when the inquiry is not processed for the requester, DUPLICATE REQUEST.

d. Part 4 - Produced as a result of transactions processed to the depot balance and transaction register which cause the depot balance file to go into, or further into, a credit balance position. Part 4 is produced as depicted in appendix D-122, D-124, D-125 and D-174.

e. Part 5 - Produced as a result of locator update actions which cause a first locator add/last locator delete (disregarding reserved locations) or a change to NSN, unit of issue, or manager when the locator update is not reflected on the DB&TR balance file. Part 5 is produced as depicted in appendix D-175.

f. Part 6 - If four days after a DICOMSS receipt processes to the DB&TR (transaction date) the corresponding DICOMSS MROs and/or DICOMSS Residual Materiel Cards do not cause the on-hand balance to go to zero, an F-145, part 6 will be produced. Part 6 is produced as depicted in appendix D-56.

3. FREQUENCY

a. Part 1 - Monthly, as the Depot Balance and Transaction Reconciliation is accomplished, see paragraph 2a above.

b. Part 2 - Monthly, as the Depot Balance and Transaction Files are purged, see paragraph 2b above.

c. Part 3 - Daily schedule upon input of Inquiry Card, DIC ZAN, see paragraph 2c above.

d. Part 4 - Daily, as the DB&TR balance records go into, or further into, a credit balance position, see paragraph 2d above.

e. Part 5 - Daily, as locator updates mismatch with the DB&TR balance file, see paragraph 2e above.

f. Part 6 - Daily, as DICOMSS MROs and/or DICOMSS Residual Materiel Cards do not equal the quantity of the corresponding DICOMSS receipt four days after the day the receipt processes to the DB&TR, see paragraph 2f above.

4. FORMAT (Same for all parts)

a. Report Header Line which includes:

(1) Report Number

(2) Report Title

(3) FRC

(4) Date (Julian and Calendar)

(5) Page Number

b. Data elements balance record line:

(1) TDI - Transaction Document Identifier Code

(2) ORG DIC - Original Document Identifier Code

(3) FSC - Federal Supply Class

(4) NIIN - National Item Identification Number

(5) DATE LAST ACTY - Date Last Activity

(6) ON HAND QUANTITY - Updated balance resulting from individual transactions.

(7) CM - Commodity Manager

(8) IC - Inventory Category Code

(9) OP - Owner Purpose Code

(10) CC - Condition Code

(11) TP - Type Pack Code

(12) TR QTY - Transaction Quantity

(13) UI - Unit of Issue

(14) DATE OF TRAN - Date of Transaction

(15) REV - Reversal Indicator

(16) DOCUMENT NR - Document Number Unit Price*

(17) SUF - Suffix

(18) VAR - Variable*

(19) REC SHIP NUMBER - Receipt Shipment Number*

(20) VARR - Variable*

(21) SUPP PIIN-Supplemental Procurement Instrument Identification Number*

(22) LAST ICOD VARR - Last Inventory Cutoff Date

(23) PRJ - Project Code

(24) MGT - Management Code

(25) VARR - Variable*

(26) INV STK BAL - Inventory Strike Balance*

(27) REC TP NR - Receipt Teleprocessing Number

*Multi-use fields (data in these fields is determined by the DIC).

c. Data elements transaction line:

(1) TDI - Transaction Document Identifier Code

(2) ORG DIC - Original Document Identifier Code

(3) FSC - Federal Supply Class

(4) NIIN - National Item Identification Number

(5) DATE LAST ACTY - Data of last recorded adjustment action.

(6) ON HAND QUANTITY - Updated balance resulting from individual transactions.

(7) CM - Commodity Manager

(8) IC - Inventory Category Code

(9) OP - Owner Purpose Code

(10) CC - Condition Code

(11) TP - Type Pack Code

(12) TR QTY - Transaction Quantity (* indicates memo entry only).

(13) UI - Unit of Issue

(14) DATE OF TRAN - Julian date that the transaction was recorded.

(15) REV - Reversal Indicator R will be reflected when transaction is being reversed.

(16) DOCUMENT NR - This field, while primarily reflecting document number, may reflect:

(a) NSN if storage item change record (DIC CMR).

(b) Location - First add or last delete (DIC ZEJ).

(17) SUF - This field, while primarily reflecting Suffix Code, will reflect an asterisk on DIC CMR to indicate that the NSN reflected in the Document Number field is the replaced with or changed to NSN. When asterisk is not used, the NSN reflected in the Document Field is the deleted NSN.

(18) VARR - This field can reflect variable data determined by DIC.

(a) DIC A5_ - from pos. 73 - Local Depot Input.

1. Code T received by telephone.

2. Code X received by teletype.

3. Code M received by mail.

(b) DIC DKA - from pos. 7 - Type of Inventory Code.

(c) DIC DAC - from pos. 77 - Condition Code From.

(d) DIC CMR - from pos. 4 - Phrase Code.

(e) DIC DZB - from pos. 7 - Item Data Correction Code.

(19) REC SHIP NUMBER - This field, while primarily reflecting Receipt Ship Number, may reflect:

(a) Receipt Shipment Number.

(b) If the receipt was in Condition H and Management Code J or M. This field will contain the last eight positions of the document number of the automatic generated DRO, DIC A5J created as a result of the receipt.

(20) VARR - This field can reflect variable data determined by the DIC.

(a) DIC D4_ - from pos. 45-50 - Receipt Item Number.

(b) DICs D6_ and COB - from pos. 45-50 - Supplemental Address.

(c) DICs D8_ and D9_ - from pos. 45-50 - Contract Line Item Number or blank.

(d) DIC DKA - Inventory Count Lot Number.

(21) SUPP PIIN - Supplemental Procurement Instrument Identification Number.

(a) DIC D4_ - from pos. 77-80 or blank.

(b) DICs D8_ and D9_ - from pos. 77-80 or blank.

(22) LAST ICOD VARR - In addition to Last Inventory Cutoff Date in the balance record, this field will contain variable data in the transaction record determined by DIC.

(a) DICs A5_, A6_, AUO, AUA, AUB, ARA, ARB, ARK and ARL from pos. 60-61 Priority Code.

(b) DIC AE6 and AEJ - from pos. 65-66 - Advice and Status Code HD for Previously Denied.

(c) DIC AG6 and AGJ - from pos. 65-66 - Advice and Status Code BQ Canceled as Requested.

(d) DICs CML and CMN from pos. 18-19 losing activity, and 20-21 gaining activity.

(23) PRJ - Project Code

(24) MGT - Management Code

(25) VARR - This field can contain variable data determined by the DIC.

(a) DICs D4_, D6_ and COB - from pos. 73-75 "Date Received".

(b) DIC DKA - from pos. 62-64 "Inventory Cutoff Date".

best copy available

(c) DICs CMC, CMD, CML, CMN and CMR - from pos. 57-60 - "Effective Date".

(26) INV STRIKE BALANCE - Inventory Strike Balance. This field may also contain REC TP NR - Receipt Teleprocessing Number.

NOTE: Detail data elements 19-21 will contain the Routing Identifier To and From and Effective Julian date for DICs DZC/DZD.

5. ORGANIZATION

Report header line on first line and detail data on subsequent lines. Arranged in columns under the data element headings identified in paragraph 4 above. Special attention should be made to those columns identified as containing variable data.

6. SEQUENCE

a. Manager - major

b. NSN - minor

7. DISTRIBUTION

a. Parts 1, 2, 4 and 5 - One copy to Inventory Office, Directorate of Storage and Transportation.

b. Part 3 - One copy distributed by FRC and one copy to Warehousing/Division DS/T.

c. Part 6 - One copy to Commissary Support Division, Directorate of Storage and Transportation.

8. PROCEDURES

a. Part 1 and 2 will be used as necessary to aid in determining cause of mismatched or unmatched transactions on the F-146 part 1 as a result of the monthly reconciliation of DSC and depot records in accordance with appendix E-184 P.

b. Part 3

(1) Part 3 will be produced as a result of an inquiry to the Depot Transaction File and will be used by requesting depot elements as determined by those making the inquiry and for research of No Location documents.

(2) If the message "NO RECORD" appears on the part 3, the requester should ensure the NSN inquired is valid; if not, correct and reinquire. If the NSN is valid, the message indicates there is not record on the DB&TR for the inquired NSN.

(3) The message "DUPLICATE REQUEST" appearing on the part 3 indicates there has been more than one inquiry for the NSN during the last cycle and the part 3 was processed for some other FRC. The requester should resubmit the inquiry with the next cycle.

c. Part 4 is prepared to alert the DB&TR functional personnel that a depot balance record has gone into, or further into, a credit balance position. The listing reflects depot transactions for those stock numbers when the balance records went into the credit position. The listing will aid in determining why the credit balance exists in order that corrective action may be taken.

d. Part 5 is produced to aid in the research process to find out why the Depot Locator File and the DB&TR Balance File do not agree. This research should be accomplished as quickly as possible so that either the locator or the DB&TR Balance File may be corrected as necessary. Results of the research may cause an inventory to be initiated.

e. Part 6 is produced as a signal to operating officials that there may be DICOMSS Residual Stock at the depot following the processing of MROs and Residual Materiel Cards against a receipt. Procedures for processing part 6 are found in appendix E-056 P.

APPENDIX F-146

MONTHLY RECONCILIATION UNMATCHED BALANCE/TRANSACTIONS

1. PURPOSE

To provide a printout of any out-of-balance conditions between DSC and depot, which will include all transactions made by the DSC for which there are no matching transactions made by the depot and all transactions made by the depot for which there are no matching DSC transactions.

2. ORIGIN

Produced during the processes as depicted by appendix D-131.

3. FREQUENCY

Monthly

4. FORMAT

This listing is prepared in two parts. Part 1 shows a printout of each stock number indicating stock imbalance between the center and the depot and also transactions which could have caused the imbalance. Part 2 of the listing is a summary of part 1 and is printed immediately following the last page of part 1.

a. Report header line part 1:

(1) Report Number (F-146 part 1)

(2) Title - MONTHLY RECONCILIATION UNMATCHED TRANSACTIONS

(3) PERIOD - Period included in the report - Julian date to Julian date

(4) DATE - Month, day, year, and Julian date

(5) Calendar date of report - day, month and year

(6) Page Number

b. Data Elements, part 1:

(1) TDIC - Transaction Document Identifier Code

(2) ORG DIC - Original Document Identifier Code

(a) DSC transactions will reflect DLAM 4140.2, Volume II, Document Identifier Code.

(b) Depot transactions will reflect DLAM 4140.2, Volume III, Document Identifier Code, with the exception of those D8_ and D9_ adjustments which are identified in DLAM 4140.2, Volume II.

(3) NAT STOCK NO - National Stock Number

(4) ICC - Inventory Category Code

(5) OP - Ownership/Purpose Code

(6) C - Condition Code

(7) TP - Type of Pack Code

(8) POB - Previous Months Out-of-Balance Indicator X

(9) ACT DAT - Activity Date - Applicable to that transaction.

(10) DOC NUMBER - Document Number

(11) SUF - Suffix to Document Number

(12) SUPP PIIN - Supplemental Procurement Instrument Identification

(13) REC SHIP NUMBER - Receipt Shipment Number

(14) CONT LN NUM - Receipt Contract Line Number, this field contains either "Receipt Contract Line Number," or is blank.

(15) IM - Item Manager (Balance record only).

(16) UI - Unit of Issue (Balance record only).

NOTE: If transaction record subparagraphs (15) and (16) above become one field it will appear as TP NR - Receipt TP Number.

(17) QUANTITY - Transaction Quantity. Any transaction causing a drop to the balance will be indicated by a "-" following last digit of Quantity Field.

(18) REV - Any transaction which is a reversal will be indicated by R.

(19) QDF "*" - Flag indicating when all data matches except quantity. Message in record field will read "DEPOT TR" or "CENTER TR".

(20) PR AD CD - Priority or Advice and Status Codes. In addition to Issue Priority Designators, for DIC AG6, this field will also contain advice and Status Code BQ indicating "canceled as requested".

(21) EXC - Exception Code, designates that document requires special processing.

(22) MC - Management Code

(23) VAR - For D4_ or D6_ - date received. For D7_ Manager Forced Directed Action Code (MFDAC).

(24) ON HAND DSC - DSC On Hand Balance

(25) ON HAND DEPOT - Depot On Hand Balance

(26) RECORD - Indicates balance record by the word "Basic".

(27) TOTAL DIFF - Total Difference - Contains the difference between subparagraphs b(23) and b(24) followed by "Blank" or "-" denoting more than or less than DSC Balance.

(28) Immediately following the date received (DAT REC) field of each transaction record, the following message will appear:

"No Matching Depot TR" indicating that there is not a depot transaction to match the center transaction, or "No Matching Center TR" indicating that there is not a center transaction to match the depot transaction. If a center transaction violates at the center, the message will be followed by a 2-digit violation code (DLAM 4140.2, Volume II, Appendix A-82). Example, "No Matching Center Transaction - BT," which indicates that the transaction had had violated because of no matching Due In/Receipt Record. This record will then be manually reentered (see note), which will bring the transaction record back into balance in the next month's match. If no action is taken to clear the violation, the transaction will appear as a mismatch in the following month's match and will appear until it is cleared. (This record is not considered as a mismatch in the overall summary. It indicates mismatch only because the transaction had violated at the center).

NOTE: The center has the capability of clearing violation records without reentering into the system. In this case, the record will appear as a mismatch with no violation code.

c. Report Header Line, part 2:

(1) Report Number (F-146 part 2)

(2) Title - MONTHLY RECONCILIATION UNMATCHED BALANCES/TRANSACTIONS-SUMMARY

(3) Mgr. - Single digit alpha representing the manager the summary pertains to.

(4) Date - Month, day, year and Julian date of the listing.

(5) Page number of the listing.

d. Data Elements, part 2: (Note: This listing is prepared with a Center side and a Depot side. The data elements for each side are the same except for DICs).

(1) Balance Record Processed:

(a) DSC: Total assets located at specified distribution depot within specified - ownership, purpose, condition, and type of pack code according to condition, and type of pack code according to DSC National Inventory Records.

(b) Depot: Total assets located at specified distribution depot within specified - ownership, purpose, condition, and type pack according to Depot Balance Records.

(2) Balance Records with Activity:

(a) Quantity: Of the total balance records processed, this figure represents those which had at least one transaction during the report period.

(b) Percent: Balance records with activity divided by total balance records processed.

(3) Balance Records not Matching:

(a) Quantity: Of the balance records processed, those entered in this section did not have a DSC/Depot Match.

(b) Percent: Quantity of balance records not matching divided by total balance records processed.

(4) Transactions Processed:

Total number of transactions processed to the depot by the center and number of transactions processed to the center by the depot.

(5) Transactions not Matching:

(a) Quantity: Of the total transactions processed, those entered in this section did not have a DSC/Depot Match.

(b) Percent: Total transactions not matching divided by the total transactions processed.

(c) Transactions not Matching - Current period (the match month).

1. Transactions processed during the match month which did not have a center/depot matching transaction.

2. Percent: Transactions not matching, processed during the match month divided by total transactions not matching.

(d) Transactions not Matching - Current period minus one.

1. Transactions processed during match month minus one, which did not have a center/depot matching transaction.

2. Percent: Transactions not matching, processed during match month minus one, divided by total transactions not matching.

(e) Transactions not Matching - Current period minus two.

1. Transactions processed during match month minus two, which did not have a center/depot matching transaction.

2. Percent: Transactions not matching, processed during match month minus two, divided by total transactions not matching.

(f) Transactions not Matching - Prior to current period minus two.

1. Transactions processed prior to match month minus two, which did not have a center/depot matching transaction.

2. Percent: Transactions not matching, processed prior to match month minus two divided by total transactions not matching.

(6) Transactions not Matching by DIC.

(a) DIC: Document Identifier Codes of transactions processed which did not have a center/depot matching transaction.

(b) Transactions: Number of transactions not matching for this DIC.

(c) Percent of Total: Number of transactions not matching for this DIC divided by total transactions not matching.

(d) Transactions with Unit Price: Number of transactions not matching for this DIC for which there is a unit price in the balance record.

(e) Dollar Value of Transactions with Unit Price: The extended dollar value of the quantity out-of-balance between the center and the depot (Note: Out-of-balance conditions when (1) the center balance is greater than the depot balance and (2) the depot balance is greater than the center balance. However, the dollar value of the transactions with unit price will be reflected as an absolute value - that is, the dollar value represents the total dollars out-of-balance regardless of center or depot out-of-balances).

(f) Total: The sum of dollar value of all DICs of transactions not matching.

(g) Total Dollar Value of Mismatched Quantities: This figure is obtained by multiplying the quantity in the "Total Diff" field for each balance record in the F-146 part 1 by the unit price of the item, and then adding them all together to obtain the total dollar figure.

5. SEQUENCE

a. NSN - Major

b. Owner/Purpose Code - First Intermediate.

c. Condition Code - Second Intermediate.

d. Type of Pack Code - Third Intermediate.

6. DISTRIBUTION AND RETENTION

a. One copy to the Physical Inventory Branch, DS/T, and one copy to HQ DLA, ATTN: DLAH-OS, RCS DD-M(Q)935.

b. Printout will be retained for one year and then destroyed.

7. PROCEDURES

a. F-146 part 1:

This printout is a listing of out-of-balance conditions between DSC and depot, also mismatching transactions from both center and depot which may have caused the out-of-balance. This printout is primary listing to research all mismatching transactions and/or out-of-balance conditions existing between depot and DSC. In conjunction with this printout, F reports 145 and 148 will also be used to research all matching transactions reflecting the same document number as mismatching transactions. For detailed procedures see appendix E-184 P.

b. F-146 part 2:

This listing is a printout summary of the F-146 part 1. It is used to indicate the volume of transactions flowing between the center and the depot and vice versa. It also shows the number of balance records on hand at the center and the depot. It lists volumes of types of transactions which are out-of-balance for the current and previous month and can be used to show the effectiveness of making corrections from month to month on problems causing out-of-balance conditions. It also shows the dollar value transactions which have caused out-of-balance conditions.

APPENDIX F-147

DEPOT BALANCE AND TRANSACTION DATA VIOLATION LISTING

1. PURPOSE

To provide a printout of transactions which do not match depot balance records, for the purpose of adjusting balance records between the depot and the center.

2. ORIGIN

Produced as a result of the processes depicted by appendices D-122, D-123, D-124, D-125, D-126, D-128 and D-130.

3. FREQUENCY

Daily

4. FORMAT

a. Report Header Line:

(1) Report Number F-147

(2) Report Title

(3) FRC

(4) Date (Julian and Calendar)

(5) Page Number

b. Data Elements:

(1) Data Header

Numbers one through eight denoting field positions one through eight and violation reason codes.

(2) Data line

Input image - an image of the input record plus up to ten violation reason codes.

(3) Data line

Asterisk - an asterisk will appear under each field position of each field of the input record which is in error. In addition, the appropriate violation reason code for each field in error will appear on the data line

containing the input record. In those cases where there are no fields in error but the input record does not match a record as intended, only the appropriate violation reason code will be reflected.

5. SEQUENCE

FSN

6. DISTRIBUTION AND RETENTION

a. Original and one copy - both copies to the Inventory Office, Directorate of Storage and Transportation.

b. Destroy on completion of corrective action.

7. PROCEDURE FOR REVIEW AND PROCESSING

To be used in conjunction with source documentation to accomplish corrective action.

8. REFERENCES

a. Appendix A-82, Violation Reason Codes.

b. Appendix E-185 V.

APPENDIX F-148

DSC BALANCE AND TRANSACTION FILE PRINTOUT

1. PURPOSE

a. Part 1 - To provide a printout of DSC closing balances and transactions for NSNs which were mismatched during the monthly reconciliation of DSC and depot records.

b. Part 2 - To provide a printout of DSC closing balances and transactions for all Inventory Category Code U items which are recorded on the DSC balance file tapes.

2. ORIGIN

Produced as a result of the monthly reconciliation of DSC and depot balances and transactions. The purpose is as depicted in appendix D-131.

3. FREQUENCY

Monthly as the DSC and depot balance and transaction file reconciliation is accomplished.

4. FORMAT (Parts 1 and 2): (Note: The format of the F-148 parts 1 and 2 is the same as the F-145 series reports. However, all of the fields required for the F-145 are not used in the F-148. Those fields not required by the F-148 will be left blank and annotated as such.)

a. Report Header Line:

(1) Report Number

(2) Report Title

(3) Date - Month, day, year, and Julian date

(4) Page Number

b. Data Elements, balance record line:

(1) FSC - Federal Supply Class

(2) NIIN - National Item Identification Number

(3) ON HAND QUANTITY - Opening balance for this record. Calculated from closing balance using quantities in transactions processed during the period.

(4) CM - Commodity Manager

(5) IC - Inventory Category Code

(6) OP - Ownership/Purpose Code

(7) CC - Condition Code

(8) TP - Type Pack Code

(9) UI - Unit of Issue

(10) UNIT PRICE - Unit Price

(11) LAST ICOD - (Blank)

(12) INV STRIKE BALANCE - (Blank)

c. Data Elements, transactions line:

(1) TDI - Transaction Document Identifier Code

(2) ORG DIC - Original Document Identifier Code

(3) DATE LAST ACTY - Date transaction processed at DSC.

(4) ON HAND QUANTITY - Updated balance resulting from individual transactions (calculated from DSC closing balance).

(5) CC - Condition Code

(6) TR QTY - Transaction Quantity

(7) UI - Unit of Issue

(8) DATE OF TRANS - (Blank)

(9) REV - (Blank)

(10) DOCUMENT NR - Document number of receipt procurement identification number.

(11) SUF - Suffix Code

(12) VARR - (Blank)

(13) REC SHIP NUMBER - Receipt Shipment Number

(14) VARR - This field can reflect variable data determined by the DSC:

(a) DIC D4_ - From pos. 45-50, Receipt Item Number.

(b) DIC D6_ - From pos. 45-50, Supplemental Address.

(c) DICs D8_ and D9_ - From pos. 45-50, Contract Line Item Number or blank.

(15) SUPP PIIN - Supplemental Procurement Instrument Identification Number.

(16) LAST ICOD VARR - For DIC D7_ this field will contain the priority code.

(17) PRJ - (Blank)

(18) MGT - Management Code

(19) VARR - For DICs D4_ and D6_ - Date Received.

(20) INV STRIKE BALANCE - (Blank)

(21) (No heading) Violation Reason Code will be printed when the transaction is on the DSC Violation Control File.

5. ORGANIZATION

Report header line on first line and detail data on subsequent lines. Arranged in columns under the data element headings identified in paragraph 4 above. Special attention should be made to those columns identified as containing variable data.

6. SEQUENCE

a. Manager - major

b. NSN - minor

7. DISTRIBUTION

One copy to Inventory Office, Directorate of Storage and Transportation.

8. PROCEDURES

a. Part 1 - This listing will be used as necessary to aid in determining causes of mismatched balances or transactions on the F-146 part 1 as a result of the monthly reconciliation of DSC and depot records in accordance with appendix E-184 P.

b. Part 2 - This listing will be used as an aid to research transactions during the quarterly inventory of ICC U items.

APPENDIX F-149

HAZARDOUS COMMUNICATION LABEL

1. PURPOSE

To provide a label for hazardous material so that workers will be apprised of the chemical hazards to which they are exposed.

2. ORIGIN

Produced as a result of on-line data entry processes.

3. FREQUENCY

A label is produced when requested through program UWFR85, Section Code O, as noted in appendix E-004 P, Hazardous Material Packaging and Transportation File Maintenance.

4. DATA ELEMENTS

a. First Line

National Stock Number or Part Number.

b. Second Line

Trade Name.

c. Third Line

Item Name.

d. Fourth Line

Common Name.

e. Fifth and Sixth Lines

Chemical Name.

f. Seventh through Fourteenth Lines

Hazard Chemical Ingredient.

g. Fifteenth Line

Manufacturer.

h. Sixteenth and Seventeenth Lines

Manufacturer Address.

i. Eighteenth Line

Manufacturer Telephone Number.

j. Nineteenth through Twenty-First Lines

Hazard Warning.

5. DATA ORGANIZATION

Printed in the format outlined above to fit into pin-fed label forms.

6. DISTRIBUTION AND RETENTION

a. One label will be produced for each container.

b. Attach printed label to the pertinent container.

7. PROCEDURES FOR REVIEW AND PROCESSING

None.

APPENDIX F-150

CUSTOMER COMPLAINT (CDCS) REPORT

1. PURPOSE

To provide a listing of Customer Depot Complaint System (CDCS) CD1/CD3/CD4 Activity, ICP/Depot Cross-Reference, ICP Customer Complaints by Control Number, ICP Customer Complaints by Document Number, CD4 Transaction Listing, CD4 Activity Listing, and CD4 History Listing.

2. ORIGIN

Part 1 of the report is generated by respective CD1/CD3 and CD4 data transmission from the center into the depot's CDCS program. Parts 2, 3, 4, 5, 6 and 7 are generated at user depot request, accomplished through appendix E-092 P Report request procedures.

3. FREQUENCY

Parts 1 through 7 are requested.

4. FORMAT

This report consists of seven parts.

a. Part 1, CD1/CD3/CD4 Activity List.

b. Part 2, ICP/DEPOT Cross-Reference Listing.

c. Part 3, ICP Customer Complaints by Document Number.

d. Part 4, ICP Customer Complaints by Control Number.

e. Part 5, CD4 Transaction Listing.

f. Part 6, CD4 Activity Listing.

g. Part 7, CD4 History Listing.

5. DATA ELEMENTS

a. Report Header line which includes:

(1) Report Number

(2) Part Number

(3) Part Title

(4) Function Routing Number

b. Part 1, CD1/CD3/CD4 Activity List. A list of active customer complaints with visibility of initial receipt of complaint (CD1/CD4), disposition (CD3/CD4), close-out transaction (CD4) and validation information.

(1) 80-CHARACTER LINE BLOCK IMAGE - A column by column reflection of the AUTODIN input record.

(2) ACTION/REJECT MESSAGE - An in-the-clear message describing the status of the individual DIC CD1/CD3/CD4 received.

c. Part 2, ICP/Depot Cross-Reference Listing. A cross-reference between the ICP generated complaints and the Depot Customer Complaint program.

(1) DOC-NUM - Document number.

(2) CONTROL-NR - ICP-assigned control number.

d. Part 3, ICP Customer Complaints by Document Number. A list of all activity against customer complaints since the previous report; those with CD3s received within the past thirty days, and only those complaints requiring depot response (CD2).

DIC CD1

(1) DOC-SUFX-NBR - Document/Suffix Number.

(2) CNTRL-NO - ICP assigned control number.

(3) STOCK/PART-NBR - Stock number or part number, if stock number not available.

(4) Followup - Number of Followup requests per specific complaint.

(5) ACT - Depot Action Code.

(6) DOL-VL - Dollar Value.

(7) C/S - Complaint or Shipment Date.

(8) MODE - Mode of Shipment.

(9) RIFR - Routing Identifier From.

(10) DISCR - Customer Complaint Discrepancy Code.

(11) TP - Type Document Code.

(12) GBL/TCN-CONTRACT - Government Bill of Lading, Transportation Control Number.

(13) INV - Investigation Results Code.

(14) MDE - Mode of Shipment.

(15) SHP-DT - Shipped Date.

(16) CBL/GBL/UPS - Commercial Bill of Lading, Government Bill of Lading or United Parcel Service number.

(17) TCN - Transportation Control Number.

(18) SCAC - Standard Carrier Alpha Code.

(19) PCS - Pieces.

(20) WGT - Weight.

(21) CBE - Cube.

(22) FRC - Functional Routing Code.

(23) ICP-CD1-DTE - Date CD1 is received from the center.

(24) ICP-CD2-DTE - Date CD2 is generated by the center.

(25) ICP-CD3-DTE - Date CD3 is received from the center.

(26) DP - Disposition Code.

e. Part 4, ICP Customer Complaints by Control Number. A list of all customer complaint transactions in control number sequence including those with disposition instructions (CD3) within the last thirty days.

(1) CNTRL-NO - Control Number.

(2) DOC-SUFX-NBR - Document Suffix Number.

(3) STOCK/PART-NBR - Stock/Part Number, if a stock number is not available.

(4) ACT - Depot Action Code.

(5) DOL-VL - Dollar Value.

(6) C/S-DT - Complaint/Shipment Date.

(7) MDE - Mode of Shipment.

(8) RIFR - Routing Identifier From.

(9) DISCP - Discrepancy Code.

(10) TP - Type of Document Code.

(11) GBL/TCN-CONTRACT - Government Bill of Lading/Transportation Control Number-Contract Number.

(12) INV - Investigation Results Code.

(13) MDE - Mode of Shipment.

(14) SHP-DT - Shipped Date.

(15) CBL/GBL/UPS - Commercial Bill of Lading/Government Bill of Lading/ United Parcel Service.

(16) TCN - Transportation Control Number.

(17) SCAC - Standard Carrier Alpha Code.

(18) PCS - Pieces.

(19) WGT - Weight.

(20) CBE - Cube.

(21) FRC - Functional Routing Code.

(22) ICP-CD1-DTE - Date CD1 is received from the center.

(23) ICP-CD2-DTE - Date CD2 is generated by the center.

(24) ICP-CD3-DTE - Date CD3 is received from the center.

(25) DP - Disposition Code.

f. Part 5, 6 and 7 CD4 Listings. Three separate listings of Depot complaints in Control Number sequence which provide visibility of complaint activity against an individual record, including History eligibility once disposition is received for total quantity.

(1) Part 5, CD4 Transaction Listing - Provides most current activity against a record including those eligible for History identified by the term FINAL in the interim reply field.

(2) Part 6, CD4 Activity Listing - Provides status of all active records including those eligible for History identified by the term FINAL in the interim reply field.

(3) Part 7, CD4 History Listing - Those records moved to History in accordance with the procedures in appendix E-092 P.

(a) CNTRL NMBR - Control Number.

(b) NSN/PART NBR - National Stock Number/Part Number.

(c) UI - Unit of Issue.

(d) CONTRACT OR DOCUMENT/SFX NBR - Contract Number or Document Suffix Number.

(e) CLIN - Contract Line Item Number.

(f) DOL VAL - Dollar Value.

(g) COND CODE - Condition Code.

(h) DISCR CODE - Discrepancy Code.

(i) INTRM REPLY - Interim Reply.

(j) CALL/ORD NUMBER - Call Order Number.

(k) CD4 DATE - Date CD4 received from the Depot.

(l) SSPNS DATE - Suspense Date.

(m) DISP CODE - Disposition Code.

(n) PTL IND - Partial Indicator.

(o) QTY - Quantity.

APPENDIX F-151

LOCATION SURVEY MANAGEMENT ACTIONS

1. PURPOSE

a. To provide DS/T with information as to warehouse deficiencies identified during the accomplishment of location surveys.

b. To provide information relative to potential discrepant stored items identified by survey activity which require review by qualified inspection personnel and/or PPPP&M.

2. ORIGIN

Information is developed during the location survey and processing of appendix B-78, Location Survey Card/Listing.

3. FREQUENCY

Upon entry of a ZEV card completing a location survey lot.

4. DATA ELEMENTS

a. Report Header Line, Part 1, Detail, and Part 2, Summary:

(1) Report Number

(2) Report Title

(3) Survey Lot Number

(4) Date

(5) Page Number

b. Data Elements, Part 1:

(1) Warehouse Location

(2) NSN

(3) Condition Code

(4) Bin Label Required

(5) Stack Label Required

(6) Warehouse Markings Required

(7) Warehouse Conditions

(8) Discrepancy Code

(9) Quantity

(10) LOC ADDS - Locations added through Survey action.

(11) LOC DELETES - Locations deleted through Survey action.

c. Data Elements, Part 2:

(1) Survey Lot Number

(2) Low Parameter 3-digit Location

(3) Bin Labels Required

(4) Stack Labels Required

(5) Warehouse Markings Required

(6) Warehouse Conditions

(7) Inspection Required

(8) Locations Added

(9) Locations Deleted

(10) Totals

5. DATA ORGANIZATION

a. Report Header First Line. Detail data on second and subsequent lines.

b. Part 1

(1) Page break by type deficiency.

(2) Sequence:

(a) Survey Lot Number

(b) Location

(c) NSN

c. Part 2

(1) Page break as necessary.

(2) Sequence:

(a) Survey Lot Number.

(b) Three-Digit Location within Lot Number.

6. NUMBER OF COPIES AND DISTRIBUTION

a. Part 1 - Two copies to Warehousing, one copy to Inventory Control Office, DS/T.

b. Part 2 - One copy to Office of the Director, DS/T.

7. PROCEDURE

a. Part 1 of this listing is utilized by Area Control Branches to correct housekeeping problems and to resolve identified discrepancies via Stock Readiness inspectors or other qualified inspection personnel. Inventory Control Office will maintain suspense to ensure actions are completed.

b. Part 2 of the listing is used by the Office of the Director, DS/T, to identify potential warehousing problem areas.

APPENDIX F-152

LOCATION SURVEY LIST

1. PURPOSE

To provide the DS/T with a detail listing of locations to be surveyed.

2. ORIGIN

Listing is produced based on entry of appendix B-77, Location Survey Request Card with Type of Survey Code L or P.

3. FREQUENCY

As requested by entry of appendix B-77, Location Survey Request Card.

4. DATA ELEMENTS

a. Report Header Line:

(1) Report Number

(2) Title

(3) Survey Number

(4) Date

(5) Page Number

(6) Type Survey

b. Data Elements from Input and Locator:

(1) Warehouse Location

(2) Type Survey

(3) Type Pack

(4) NSN

(5) Shelf-Life Code

(6) Type Storage

(7) Condition Code

(8) Unit of Issue

(9) Date Pack

(10) Unit Pack

(11) Inspection Date

c. Data Elements - Blank - For reentry information:

(1) Type Pack

(2) NSN (new)

(3) Shelf-Life Code

(4) Type Storage

(5) Condition Code

(6) Unit of Issue

(7) Date of Pack

(8) Unit Pack

(9) Inspection Date

(10) Discrepancy Code

(11) Quantity Discrepant

(12) Management Codes

(13) Action Code

(14) Remarks

5. DATA ORGANIZATION

a. Report Header First Line. Detail on second and subsequent lines.

b. Page break by Type Survey Code and lot number as necessary to list report.

c. Sequence:

(1) Type Survey Code

(2) Survey Lot Number

(3) Location within Lot Number

d. Double space detail data lines

6. NUMBER OF COPIES AND DISTRIBUTION

One copy to Inventory Control Office, DS/T.

7. PROCEDURE

a. This listing is used by Inventory Control Office to accomplish location survey in lieu of appendix B-78, Location Survey Card.

b. Adds, deletes, changes, PPPP&M data and Warehouse Deficiency information will be annotated on the listing during survey and then utilized to process data to computer.

APPENDIX F-154

LOCATION SURVEY STATISTICAL ANALYSIS

1. PURPOSE

a. To provide DS/T with statistical analysis summaries of Location Survey activities.

b. A record of static surveys requiring action to complete or cancel.

2. ORIGIN

Produced from data accumulated during processing of location surveys.

3. FREQUENCY

a. Part 1 - Monthly.

b. Part 2 - Monthly.

c. Part 3 - Monthly.

4. DATA ELEMENTS

a. Report Header Line:

(1) Report Number

(2) Report Title

(3) Date

(4) Reporting Period

b. Part 1:

(1) ACB - Area Control Branch

(2) AREA - The location areas of survey activity.

(3) LOCS SURVEYED - Locations Surveyed within the area parameters.

(4) DELETES

(5) ADDS

(6) NSN/COND/UI/TP ERR - Records corrected for NSN, Condition Code, UI, or Type of Pack for unique NSNs not counted as an add or delete.

(7) TOTAL ERRORS - Subparagraphs (4) plus (5) plus (6).

(8) PERCENT ACCURACY - Locator percent of accuracy.

(9) WAREHOUSE DEFICIENCIES

(10) AREA TOTALS - Totals of warehouse deficiencies by ACB.

(11) ACB TOTALS - Totals of all errors related to the Area Control Branch.

(12) TOTAL OVERALL - ACB location accuracy.

c. Part 2 - Monthly Location Survey Statistical Report:

(1) SURVEYS CUR MO - Surveys completed for report month.

(2) LOCS SRVYD - Locations surveyed for report month.

(3) LOC SYVD TO DATE - Total locations surveyed FY to date.

(4) TOTAL DELETES - Total locations found without stock.

(5) TOTAL ADDS - Total locations added.

(6) TOTAL--ERROR--IN--EACH Total errors in each of the following:

(a) NSN

(b) Condition Code

(c) UI

(d) Type of Pack

(7) TOTAL ERROR/MO - Total number or location records in error (total of subparagraphs (4) and (5) plus unique NSNs in subparagraph (6) which are not in subparagraph (4) or (5).

(8) LOCATOR ACCY/MO - Location survey accuracy this month (%) - subparagraph (7) divided by (2).

(9) TOTAL ERROR/YR - Total accumulated errors this FY to date.

(10) TOTAL ACCY/FY - Location survey accuracy FY to date (%) - Sum of total errors divided by total locations surveyed - subparagraph (9) divided by (3).

d. Part 3 - Surveys Open, not Completed/Canceled - Static survey actions 10 or more days old.

(1) Survey Number

(2) Type of Survey (appendix A-62)

(3) Low Warehouse Location First location of survey parameter (appendix B-77).

(4) High Warehouse Location Last location of survey parameter (appendix B-77).

(5) Date Prepared - Date of Survey Establishment (appendix B-77).

(6) Days Open - Number of days survey has been in progress with no cancellation/completion action received.

5. DATA ORGANIZATION

a. Part 1 - One page report.

b. Part 2 - One page report.

c. Part 3 - Sequence by days open, oldest date first.

6. NUMBER OF COPIES AND DISTRIBUTION

a. Part 1 - One copy to each Area Control Branch, one copy to Inventory Control Office, DS/T, and one copy to Office of the Director of Storage and Transportation.

b. Part 2 - One copy to Quality Control Office, DS/T, and one copy to Office of the Director of Storage and Transportation.

c. Part 3 - One copy to Inventory Control Office, DS/T, and one copy to Office of the Director of Storage and Transportation.

7. PROCEDURE

a. Part 1 is utilized to compare Location Accuracy by Area within an Area Control Branch. It is used by DS/T to identify areas requiring additional emphasis on warehousing conditions as well as locator conditions; and by Inventory Control Branch as a computer record of Location Survey Activity and effectiveness.

b. Part 2 is used to monitor locator survey accuracy against the DLA assigned goal of 99%.

c. Part 3 is utilized to identify old or delinquent survey activity requiring immediate action on the part of survey personnel to close or cancel. If identity of survey has been lost or status of survey actions is in doubt, survey should be canceled and rescheduled.

APPENDIX F-162

ADVANCE SEAVAN CONSIST - JOINT MESSAGE FORMAT

1. PURPOSE

This joint message format is produced in conjunction with the generation of the F-62 SEAVAN Consist listing, and functions as an advance consist notification to overseas SEAVAN customers.

2. ORIGIN

Joint message is produced as a result of processing appendix B-274, SEAVAN Consist/TCMD Update Print Request. The message is formatted IAW the JANAP 128(I) regulation.

3. FREQUENCY

Randomly upon input of appendix B-274 Transaction Code DV.

4. DATA ELEMENTS

a. Joint Message Format header data as required by JANAP 128-(I).

(1) Line 1: PCTUZYUW RUEDEKA4164 1161047 MTMS-UUUU--RUEDEBA.

(a) PCTUZYUW - (format constant).

1. P - Priority precedence indicator (format constant).

2. CT - Card/tape media indicator (format constant).

3. U - Unclassified (format constant).

4. ZYUW - Content indicator code (format constant).

(b) RUEDEKA - Example routing identifier of originator depot.

(c) 4164 - Example message batch number.

(d) 1161047.

1. 116 - Example message Julian date.

2. 1047 - Example message time (ZULU).

(e) MTMS-UUUU--RUEDEBA.

1. MTMS - Card format indicator (format constant).

2. UUUU - Unclassified (format constant).

3. RUEDEBA - Example routing identifier code(s) of message recipients.

(2) Line 2: ZNR UUUUU (format constant).

(3) Line 3: P 251047Z APR 87.

(a) P - Priority precedence indicator (format constant).

(b) 25 - Example true date.

(c) 1047Z - Example ZULU time and ZULU time indicator.

(d) APR - Example abbreviated month.

(e) 87 - Example year.

(4) Line 4: FROM DPSC PHILADELPHIA,PA//DPSC-NTS//

(a) FROM - Line title (format constant).

(b) DPSC PHILADELPHIA,PA - Example message initiator's name, city and state.

(c) DPSC-NTS - Example message initiator's office/organization symbol.

(5) Line 5: TO RUEOSOW/DSR EUROPE ZWEIBRUCKIN-GE//DPSRE-SW//DSRE-SS//

(a) TO - Line title (format constant).

(b) RUEOSOW - Example Routing Identifier Code of consist destination DoDAAC (from table B-277).

(c) DSR EUROPE ZWEIBRUCKIN-GE//DPSRE-SW//DSRE-SS// - Example in-the-clear name, address and office/organization symbol of consist destination DoDAAC (from table B-277).

(6) Line 5 supporting stop addresses (optional)

(a) Same data layout as line five above, without the line title.

(b) Routing Identifier Code(s) of first and second stop destination DoDAACs, when present (TCMD T_9 positions 54-59 and 68-73 identify stop loads. Positions 60-65 and 74-79 carry respective stop DoDAACs).

(7) INFO line: INFO RUFTREA/CH DSSF-B BREMERHAVEN GE//CH BCS//

(a) INFO - Line title (format constant).

(b) Same data layout as line five above.

(c) Information address lines which identify the activities requiring information copies of the advance consist message. Zero to four INFO lines accommodated (from table B-277).

(8) BT - Narrative traffic indicator (format constant).

(9) UNCLAS - Unclassified (format constant).

(10) SUBJECT: ADVANCE CONSIST DATA (format constant).

b. Consist header elements:

(1) SEAVAN LOAD NUMBER - From F-62 load number.

(2) VOYAGE NUMBER(S) - Applicable SEAVAN voyage numbers.

(3) OWNR - Van owner.

(4) VAN-NR - Van number.

(5) SEAVAN-TCN - SEAVAN TCN.

(6) POE - Shipment port of embarkation.

(7) POD - Shipment port of debarkation.

(8) VESSEL-NAME - Name of vessel.

(9) ETA - Estimated date of arrival (Julian).

(10) CONSIGNEE - DoDAAC and in-the-clear address of final destination consignee.

(11) STOP-1 - DoDAAC and in-the-clear address of first stop consignee (when applicable).

(12) STOP-2 - DoDAAC and in-the-clear address of second stop consignee (when applicable).

c. Consist shipment data (column headings, first line):

(1) ITEM DESCRIP - In-the-clear item description (DICOMSS, from BNSI; other than DICOMSS, from locator file).

(2) REQUISITION-NBR - Document number and suffix.

(3) STOCK NUMBER - Stock number.

(4) UPK - Unit pack.

(5) WGT - Extended line weight.

(6) CUBE - Extended line cube.

(7) PCS - Extended line pieces.

d. Consist shipment data (column headings, second line):

(1) VPR-PRC - Variable price. Two decimal positions. For brand name items the four position MRO unit price is rounded off by the third position. Local purchase and troop support MRO unit prices are received as two position fields and require no rounding.

(2) LCL-PRC - From Receiving Contract Data File.

(3) CS-PRICE - Product of MRO unit price times the number of units in a case (rounded to two decimal positions).

(4) RDD - Required Delivery Date.

e. Consist shipment data totals:

(1) TOTAL WEIGHT - Total load weight.

(2) TOTAL CUBE - Total load cube.

(3) TOTAL PIECES - Total load pieces.

5. DATA ORGANIZATION

a. A separate Advance SEAVAN Consist message format will be prepared for each SEAVAN load.

b. Messages will be formatted IAW JANAP 128(I) requirements.

APPENDIX F-167

SEAVAN MONTHLY PERFORMANCE

1. PURPOSE

Provides depot managers with performance data within the SEAVAN workload banking, shipment planning and transportation functions. The report is produced in six sections which include:

a. Historical performance data accumulated from the above processes.

b. Accumulation of data adjustments. This section is provided to aid managers in identifying potential problem areas within the system which are within their capability to control.

c. Transshipment data history.

d. Shipment history by SEAVAN Destination.

e. DICOMSS line items received at destination early or late.

f. Monthly on time summary of DICOMSS line items.

2. ORIGIN

The primary data source is the on-line SEAVAN MIS as depicted in appendix B-280. Data is accumulated and available by remote display for an entire month. At months end the data is removed from the on-line files and printed on this report.

3. FREQUENCY

Monthly

4. DATA ELEMENTS

a. Standard Report Headings:

(1) Report Number and Title

(2) Functional Routing Code

(3) Section Number

(4) Report Date

(5) Page Number

b. Report Data Elements:

(1) Part 1 - SEAVAN MROs Processed.

(a) MROs RECEIVED - A summary of MROs received into the SEAVAN process by Issue Priority Group (IPG), DICOMSS and non-DICOMSS. Non-DICOMSS MROs are summarized by Inventory Control Point.

(b) MRO PROCESSING TIMES.

1. DAYS RECEIVED BEFORE RDD (DICOMSS Only) - An analysis of DICOMSS MROs received by the number of days preceding the Required Delivery Date (RDD).

2. DAYS AT DEPOT - An analysis of MRO total processing time at the shipping activity.

3. DAYS IN WORKLOAD BANK - An analysis by MRO totals of the number of days MROs are retained in the workload bank from the time MROs are received until released to warehousing for stock selection.

4. DAYS IN-STORAGE - An analysis by MRO totals of the number of days MROs are in-storage processing from the time of release from the workload bank until they are reported in processing in transportation.

5. DAYS IN TRANSPORTATION - An analysis by MRO totals of the number of days required to process through transportation functions from the time MROs are reported in transportation until they are reported as shipped.

(c) MROS SHIPPED - The total number of MROs shipped during the previous month. Totals are subdivided by DICOMSS, non-DICOMSS, total shipped on-time and the percentage of MROs shipped on-time. On-time effectiveness is computed by:

1. DICOMSS - Date shipped is equal to or less than RDD minus transit time.

2. Non-DICOMSS - Date offered is equal to or less than computed MDT.

(d) SEAVANS SHIPPED - An analysis of SEAVANS shipped during the previous month. Categories are subdivided by DICOMSS, Non-DICOMSS and mixed with a cumulative total of all shipments. Data elements within the categories are:

1. ON-TIME - Total SEAVANS shipped on or before the MDD.

2. LATE - Total SEAVANS shipped after the MDD.

3. % ON-TIME - Percentage of SEAVANS shipped on-time (SEAVANS on-time by total SEAVANS shipped).

4. % WEIGHT UTILIZATION - Summation of the total weight shipped divided by total weight capacity of Vans shipped.

5. % CUBE UTILIZATION - Summation of the total cube shipped divided by the total cube of Vans shipped.

6. VANS MEETING DLA GOAL - Number of Vans meeting or exceeding 40,000 pounds or 80% cube.

(2) Part 2 - SEAVAN Adjustment Transactions.

(a) DENIALS - This section portrays MRO stock denial reporting for categories DICOMSS, non-DICOMSS and Monthly Cumulative Total. Denials are counted for transaction codes DT, DK, DJ, DE and DG. Data elements within the categories are:

1. PARTIAL - Partial denials reported.

2. COMPLETE - Complete denials reported.

3. TOTAL - Total of partial and complete denials reported.

4. DENIAL RATE - Percentage of denials reported (total denials divided by total MROs shipped plus complete denial).

(b) CANCELLATIONS. This section contains MRO cancellation (DIC AC6, AC7) performance for categories DICOMSS, non-DICOMSS and Total. Data elements within the categories are:

1. PARTIAL - Cancellations for partial MRO quantities received.

2. COMPLETE - Cancellations for complete MRO quantities received.

3. TOTAL - Total cancellations received, sum of subparagraphs 1 and 2 above.

4. EFFECTED - Total cancellations processed by the shipping activity, i.e., total number of cancellation actions reported to the ICP.

5. % EFFECTED - The number of cancellations effected divided by the number of cancellations received.

(c) OTHER ADJUSTMENTS - This section contains the monthly accumulation data of MRO adjustment transactions other than denials and cancellations for categories DICOMSS, non-DICOMSS and Total. Data elements within the categories are as follows:

1. REMOVED FROM SEAVAN - A count of adjustments with Transaction Code DH.

2. ADDITIONAL WORKLOAD - A count of adjustments with Transaction Code DS.

3. REPLANNED TO ANOTHER LOAD - A count of MRO adjustments with Transaction Code DY.

4. RETURNED TO WORKLOAD BANK - A count of MRO adjustments with Transaction Code VW.

5. REMOVED FROM LOAD AND SINGLE LINED - A count of MRO adjustments with Transaction Code VU.

6. PARTIALLED - A count of MRO adjustments with Transaction Code VV.

7. FORCED CLOSED - A count of MRO adjustments with Transaction Codes DU, DW and DQ.

8. DP STATUS - A count of MRO adjustments with Transaction Code DP.

(3) Part 3 - Transshipment Data.

This section contains monthly cumulative data for transshipments processed through the SEAVAN Shipment Planning process.

(a) RECEIVED:

1. SHIPMENT UNITS - Total shipment units received.

2. WEIGHT - Total weight of transshipment units received.

3. CUBE - Total cube of transshipment units received.

(b) SHIPPED:

1. SHIPMENT UNITS - Total number of transshipment shipment units shipped.

2. WEIGHT - Total weight of transshipment shipment units shipped.

3. CUBE - Total cube of transshipment shipment units shipped.

4. AVERAGE PROCESSING TIME - The average processing time required to process transshipment shipment units shipped. Computed from the time the SU is received until reported shipped.

(4) Part 4 - Shipment History by Destination.

This section contains monthly cumulative data for shipments made to each SEAVAN Destination.

(a) DESTINATION - The activity address code of the actual SEAVAN Destination. The address may signify a breakbulk point, the master address of a booking group or a single consignee.

(b) CONSIGNEE - The ultimate destination to which the load or portions thereof, are consigned.

(c) MROs - Total MROs shipped to the designated consignee.

(d) WEIGHT - Total weight shipped to the designated consignee.

(e) CUBE - Total cube shipped to the designated consignee.

(f) DEST TOTAL - Cumulative data totals for the destination.

(5) Part 5 - This section contains those DICOMSS Line Items shipped that will be received either more than 15 days early of the line item RDD or more than 15 days late of the line item RDD. Data Elements needed for this section are:

(1) Destination - From the MRO

(2) VAN TCN - From the Load Record

(3) MRO RDD - From the MRO

(4) VAN RDD - From the Load Record

(5) VAN ETA - From the Load Record

(6) DATE MRO Received at depot - From the Load Record

(7) Compatibility Code - From the MRO

(8) Type Cargo Code - From the MRO

(9) Window Indicator - Late or Early

(6) Part 6 - This section contains a summary of total DICOMSS Lines Shipped and On-Time Percentage of DICOMSS shipped that will be received either more than 15 days early of the line item RDD or more than 15 days late of the line item RDD. This summary will be provided relative to the following.

Total DICOMSS line	All DICOMSS lines processed for the monthly recording period.
Total % on-time DICOMSS lines	All DICOMSS lines processed on-time for the monthly recording period.
Total DICOMSS lines by country	The line item destination will be matched against table 6 (Destination - Country Cross-Reference) to obtain the Country Code.
Total % on-time DICOMSS lines by country	Same as above.
Total DICOMSS lines by POE	All DICOMSS lines processed by POE for the monthly recording period.
Total % on-time lines by POE	All DICOMSS lines processed on-time for the monthly recording period.

Total DICOMSS lines by POD	All DICOMSS lines processed by POD for the monthly recording period.
Total % on-time DICOMSS lines by POD	All DICOMSS lines processed on-time by POD for the monthly recording period.
Total DICOMSS lines by commissary	All DICOMSS lines processed by commissary for the monthly recording period.
Total % on-time DICOMSS lines by commissary	All DICOMSS lines processed on-time by commissary for the monthly recording period.

5. SEQUENCE

a. Part 1 - Sequenced by the data elements outlines in paragraph 4b(1) above.

b. Part 2 - Sequenced by the data elements outlined in paragraph 4b(2) above.

c. Part 3 - Sequenced by the data elements outlined in paragraph 4b(3) above.

d. Part 4 - Destination (major), Consignee within Destination (minor).

e. Part 5 - Destination (major), VANTCN (intermediate) MRO RDD (intermediate), VANRDD (minor).

f. Part 6 - None. One line summary totals.

6. NUMBER OF COPIES AND DISTRIBUTION

Original and one copy to Director, Storage and Transportation.

7. PROCEDURE FOR REVIEW AND PROCESSING

This report is produced as a monthly summary of the SEAVAN Shipment Planning management information system. Disposition of the report or its data content is at the discretion of operating managers.

f. Part 6 - None. One line summary totals.

7. NUMBER OF COPIES AND DISTRIBUTION

Original and one copy to Director, Storage and Transportation.

8. PROCEDURE FOR REVIEW AND PROCESSING

This report is produced as a monthly summary of the SEAVAN Shipment Planning management information system. Disposition of the report or its data content is at the discretion of operating managers.

APPENDIX F-169

LOCATOR NSN INQUIRY BY NMFC

1. PURPOSE

To provide a listing of all NSNs and selected locator data elements having the same NMFC.

2. ORIGIN

This listing is produced as a result of processing an Item Locator Record Card (Freight Classification Data), appendix B-75, Action Code ET, as depicted in appendix D-19.

3. FREQUENCY

Upon submission of an inquiry card, appendix B-75.

4. FORMAT

a. This printout is not included in the Reports Format File. The following headings will be printed at the top of each page.

(1) Report number

(2) Report Title - Locator NSN Inquiry by NMFC

(3) Functional Routing Code

(4) Section Number

(5) Date: Month, day, year and Julian date

(6) Page Number

(7) Captions of Data Elements

b. Data Elements:

(1) NSN - National Stock Number

(2) UI - Unit of Issue

(3) NOMEN - Nomenclature

(4) NMFC - National Motor Freight Classification

(5) LTL - Freight Rate LTL Code

(6) PHY SEC - Physical Security Code

(7) NMFC SFX - National Motor Freight Classification Suffix Code

(8) LCL - Freight Rate LCL Code

(9) WATER COM - Water Commodity Code

(10) AIR COM - Air Commodity Code

(11) AIR CRGO - Air Cargo Dimension Code

(12) UNIT WEIGHT

(13) UNIT CUBE

(14) SP RQT - Special Requirements Code

(15) MGR - Commodity Manager Code

c. Page break by Functional Routing Code.

5. SEQUENCE

a. National Motor Freight Classification Code - Major.

b. National Motor Freight Classification Suffix Code - Intermediate.

c. National Stock Number - Minor.

6. DISTRIBUTION AND NUMBER OF COPIES

One copy to Functional Routing Code.

7. PROCEDURES FOR REVIEW AND PROCESSING

The organizational element which initiated the request for this data will accomplish the necessary research and analysis actions and then destroy the printout.

APPENDIX F-172

FREIGHT DESCRIPTION FILE MAINTENANCE REPORT

1. PURPOSE

Provide Freight Description clerks with information necessary to evaluate the data content of the Freight Description File (FDF). The report identifies NMFCs currently on the depot locator with no description on the FDF.

2. ORIGIN

Data for this report is compiled during file maintenance actions shown in appendices D-37 and D-139.

3. FREQUENCY

The report is generated automatically when locator file data passed to this process contains NMFC/LTL-KEY/Suffix Data not found on the FDF.

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-172)

(2) Report Title

(3) Date - Month, day, year, and Julian date

(4) Page Number

b. Data elements, Unmatched Locator NMFC.

(1) NMFC/LTL - Code on Locator not on FDF.

(2) NSN - Of missing NMFC.

5. DATA ORGANIZATION

a. The report header line appears on the first line of each page. Report part number and title will appear on the second print line of each page. Detail information will appear on subsequent report lines.

b. The report is sequenced by NMFC/LTL Code. Data is sequentially formatted by NMFC, left to right across the page.

6. NUMBER OF COPIES AND DISTRIBUTION:

Two copies. Original to Transportation and Traffic Management Office. Information copy to Management Support Office, DS/T.

7. PROCEDURE

Unmatched Locator NMFC.

a. The NMFCs shown in this section have been incorporated into the depot Locator File. No Freight Description exists on the depot FDF for an NSN.

b. Freight Description clerks must determine the appropriate Freight Classification Description information for the NMFC/LTL/REC SEQ. This data must be incorporated into the FDF using either the process shown in appendix D-37 or D-139.

APPENDIX F-174

ADVANCE DOMESTIC AIR CHALLENGE LISTING

1. PURPOSE

To provide a list of Air Eligible Domestic Shipments to be used for advanced air challenge at MOFAST depots.

2. ORIGIN

Produced as a result of the MOWASP shipping run, reference appendices D-98 and D-99.

3. FREQUENCY

Output each time MOWASP shipping is run.

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-174)

(2) Report Title

(3) Cycle (section)

(4) Date - Month, day, year and Julian date

(5) Page Number

b. Data Field Headings and Data:

(1) IP - Issue Priority from 1st MRO

(2) DEST - Destination Activity Address Code

(3) SU-NO - Shipment Unit Number

(4) TCN - Transportation Control Number

(5) NO. LI - Number of MROs in Shipment

(6) PPZ - Shipment Unit Parcel Post Zone Code

(7) SU WT - Shipment Unit Weight

(8) SU CU - Shipment Unit Cube

(9) DOC NO - Document Number for each MRO.

(10) NSN - National Stock Number and Nomenclature for each MRO.

(11) QTY - Quantity from each MRO.

(12) U/I - Unit of Issue for each MRO.

(13) FND - Fund Code from each MRO.

(14) RDD - Required Delivery Date for each MRO.

(15) PRJ - Project Code for each MRO.

(16) DST - Distribution Code for each MRO.

(17) SR - Special Requirements Code for each MRO.

(18) TC - Type Cargo Code for each MRO.

c. Other data (clear text addresses):

(1) Ship/POE Address.

(2) Ultimate Consignee/Mark For Address.

5. DATA ORGANIZATION

Sequence - Destination major, Shipment Unit Number minor.

6. DISTRIBUTION AND RETENTION

a. One copy to be provided to the Special Processing Section.

b. Listing will be destroyed after intended use has been served.

7. PROCEDURE FOR REVIEW AND PROCESSING

Use the list to contact consignees and validate their requirement for premium transportation.

UWF174 ADVANCE DOMESTIC AIR CHALLENGE LISTING FRC SECTION 001 DATE 10.06.76.280 PAGE 00002

APPENDIX F-175

AREA CONTROL BRANCH DENIAL LISTING

1. PURPOSE

To provide a quantitative listing of Materiel Release Order (MRO) denials by Area Control Branch (ACB) and Action Code.

2. ORIGIN

Produced as a result of the processing depicted in appendix D-28.

3. FREQUENCY

Monthly

4. DATA ELEMENTS

a. Report Header Line:

(1) Report Number (F-175)

(2) Report Title

(3) Product Control Number

(4) Section Number

(5) Date - Month, day, year, and Julian date

(6) Page Number

b. Other Data Elements:

(1) Action Code - DIC ZBM denial Action Codes DE, DG, DJ, DK, DL, DM and DT (appendix A-42).

(2) Management Codes - 1 through 5 (appendix A-13).

(3) NO LOC - MROs denied which had no location when MRO was released (Mgt Code 6).

(4) ACB - Area Control Branch

(5) C - Complete denial(s)

(6) P - Partial denial(s)

(7) TOTAL - Total denials by Action Code and ACB, and accumulated totals.

5. DATA ORGANIZATION

The report contains summary totals of denials for each ACB by denial Action Code (Management Code), as well as warehouse denials for which there were no locations.

6. DISTRIBUTION

Original to the MSO and one copy to the Warehousing Division, DS/T.

7. PROCEDURES FOR REVIEW AND PROCESSING

To be used by DS/T as a management tool for the identification of ACBs where MRO denials are occurring in order to take corrective action to reduce the number of such denials. Note that this report does not reflect denials generated automatically from the Workload Consolidation File, and thus does not match totals shown on the F-9 report.

APPENDIX F-176

MOFAST SHIPMENT UNIT CONTROL LIST

1. PURPOSE

Provide a summary of line items included in freight shipment units.

2. ORIGIN

Produced as a result of the MOWASP Shipping Documentation Process, appendix D-98, at MOFAST depots only.

3. FREQUENCY

Daily, in conjunction whith the MOWASP Shipping Documentation Process.

4. DATA ELEMENTS

a. Report Header, line one:

(1) Report Number (F-176)

(2) Title

(3) Section

(4) Date - Month, day, year, and Julian date

(5) Page Number

b. Report Header, line two:

(1) Consignee - DoDAAC of consignee

(2) DEST - Destination

(3) POE - Port of Embarkation

(4) APOE - Air Port of Embarkation

c. Report Header, line three:

(1) Shipment Unit Number

(2) TCN - Master TCN

(3) IPG - Issue Priority Group

(4) WHSE - Warehouse Area

(5) Batch Number

(6) Chute Number

d. Line Item Information:

(1) L/I - Line Item Number. An asterisk will be placed by the line item selected as the TCN.

(2) NSN - National Stock Number

(3) NOUN - Noun Description

(4) QTY - Quantity Ordered

(5) LOC - Warehouse Location

(6) EXT WEIGHT - Estimated Weight

(7) EXT CUBE - Estimated Cube

(8) NMFC-SFX - National Motor Freight Classification/Suffix

(9) SIT - Storage Intransit Code

(10) MED - MEDALOC Eligible

(11) Total Shipment Unit - Totals for Shipment Unit Weight and Cube.

(12) Space reserved to manually record Hold Code, Denial Code, quantity changes, and container information as it becomes necessary.

5. REPORT ORGANIZATION

a. Page break for each shipment unit record printer.

b. Print report header lines and line item information for each shipment unit.

c. Sequence by:

(1) Location Group Code - Major.

(2) Shipment Unit Number - Minor.

6. DISTRIBUTION AND RETENTION

a. One copy to Warehousing Division with DD Form 1348-1 MROs. One copy to Transportation Division, Shipment Planning.

b. List is not required after functions described in paragraph 7 below have been completed.

c. User depots can discontinue preparation of this report at their option.

7. PROCEDURES FOR REVIEW AND PROCESSING

This report is used by stock picking and packing personnel to select and assemble line items pertinent to a specific shipment unit. It is also provided to permit advance shipment planning for SUs not processed through the freight terminal.

a. Area Control Branch (ACB) Stock Selection Process:

(1) The F-176 report provides a means to ensure that MROs which are in the stock selection process are returned to the ACB Shipment Unit assembly area.

(2) The control clerk in the shipment unit assembly area will use the F-176 report to account for each line item in the shipment unit as follows:

(a) The Shipment Unit Control List (F-176) is forwarded to the ACB with DD Form 1348-1 MROs. The F-176 list is placed in a suspense file sequenced by shipment unit number while picking functions are in process.

(b) Materiel which has been picked is returned to the shipment unit assembly area. The F-176 list for the pertinent shipment unit is obtained from the suspense file. The control clerk:

1. Verifies the receipt of all MROs which were issued to stock pickers.

2. Ensures proper documentation of quantity variations on DD Form 1348-1. Forwards parcel post documents with quantity variations to ACB CRT operator.

3. Identifies items to be placed in hold status. Forwards pertinent DD Form 1348-1 document to ACB CRT operator for single line action.

4. Forwards completed shipment unit to packing area with pertinent DD Forms 1348-1 and F-176 list.

b. Packing personnel will receive materiel to be packed, applicable MROs (DD Form 1348-1) and Shipment Unit Control List (F-176). Packers will verify content of shipment unit as items are being packed. Variations from quantity ordered are recorded on DD Form 1348-1 using proper quantity Action Code (reference appendix A-104). The F-176 list is not required after items are packed.

c. The report will also be used as a tool to plan and control shipments not normally processed through the freight terminal.

APPENDIX F-177

MOFAST MECHANIZED CENTER RELEASED WORKLOAD SCHEDULE

1. PURPOSE

Provide a summary of line items released to a mechanized center for picking and packing action.

2. ORIGIN

Produced as a result of the Shipping Documentation Process, appendix D-98.

3. FREQUENCY

Produced at the completion of each shipping documentation cycle.

4. DATA ELEMENTS

a. Report Header Line:

(1) Report Number (F-177)

(2) Title

(3) Section

(4) Date - Month, day, year, and Julian date

(5) Page Number

b. Report Header Second Line:

(1) IPG - IPG Category

(2) BATCH NR - MRO Batch Number

(3) Location Group Codes for pertinent mechanized warehouse.

(4) Totals column

c. Release Workload Information:

(1) TOTAL LINE ITEMS - Total line items released.

(2) PICKING MAN-HOURS - Manual annotation of picking man-hour resources needed (for internal planning purposes).

(3) SINGLE LINES - Number of line items in single line shipment units released.

(4) MULTILINES - Number of line items in multiline shipment units released.

(5) SHIPMENT UNITS - Number of MRO shipment units (Totals column only).

(6) DRO L/I - Number of DRO line items.

(7) PACKING MAN-HOURS - Manual annotation of packing man-hour resources needed (for internal planning purposes).

(8) HOURS PER LOT - Manual annotation of estimated man-hours required to complete processing of the MRO batch.

5. DATA ORGANIZATION

a. Report Header: Print report header, first and second lines as noted in paragraph 4a and b above, for each page break.

b. Page break for each mechanized area and batch number.

c. Sequence line item data in report format by location group code category identified in the report header.

d. Double space report lines.

6. DISTRIBUTION AND RETENTION

a. Two copies. One copy to pertinent mechanized warehouse and one copy to Workload Control Branch, MSO, DS/T.

b. Retain report until workload planning functions have been accomplished.

7. PROCEDURES FOR REVIEW AND PROCESSING

This report is used to provide a summary of released workload for mechanized warehouse areas. It is provided as a workload planning and manpower allocation tool and can be used at the discretion of each depot.

APPENDIX F-178

MOFAST RELEASED WORKLOAD WAREHOUSE DIVISION

1. PURPOSE

Provide a summary of the mix of workload released from MOWASP for processing by the Warehousing Division.

2. ORIGIN

Data for this listing is produced as a result of the MOWASP Shipping Documentation Process, appendix D-98.

3. FREQUENCY

Produced daily as a result of the MOWASP Shipping Documentation process.

4. DATA ELEMENTS

a. Report Header Line:

(1) Report Number

(2) Title

(3) Section Number

(4) Date - Month, Day, Year, and Julian date

(5) Page Number

b. Report Header Second Line:

(1) LOCATION GROUP CODE - Warehouse Location Group Code

(2) IPG - Issue Priority Group

c. Report Header Third Line:

(1) BATCH NUMBER - MRO Batch Number

(2) COMPLETION TIME PICK - Manually Annotate Estimated Picking Time Required for Batch.

(3) COMPLETION TIME PACK - Manually Annotate Estimated Packing Time Required for Batch.

d. Report Data:

(1) LOCATION - Warehouse Area

(2) FREIGHT TOTAL LINE ITEM - Number (All modes of shipment except G, H, J, 5, 6 and 7).

(3) FREIGHT SHIPMENT UNITS - Shipment Units.

(4) FREIGHT SHPT UNITS SINGLE L/I - Number of Single Line Freight Shipment Units.

(5) PARCEL POST TOTAL LINE ITEMS - Number of Parcel Post Line Items (G, H, 6 and 7 Mode of Shipment).

(6) PARCEL POST SHIPMENT UNITS - Number of Parcel Post Shipment Units.

(7) PARCEL POST SHPT UNITS SINGLE L/I - Single Line Parcel Post Shipment Units.

(8) SMALL PACKAGE CARRIER TOTAL LINE ITEMS - Number of Small Package Carrier Line Items (Mode of Shipment J and 5).

(9) SMALL PACKAGE CARRIER SHIPMENT UNITS - Number of Small Package Carrier Shipment Units.

(10) SMALL PACKAGE CARRIER SHPT UNITS SINGLE L/I - Number of Single Line Small Package Carrier Shipment Units.

(11) DRO TOTAL LINE ITEMS - Number of DRO Line Items.

(12) TOTAL LINE ITEMS - Total Number of MRO/DRO Line Items.

(13) TOTAL SHIPMENT UNITS - Total Number of Freight, Parcel Post, and Small Package Carrier Shipment Units.

(14) TOTAL SHPT UNITS SINGLE L/I - Total Number of Single Line Item Shipment Units for Freight, Parcel Post, and Small Package Carrier.

(15) TOTALS:

(a) TOT BATCH - Total Lines in the Batch within Location Group Code.

(b) TOT LGC - Total Lines within the Location Group Code.

(c) TOT IPG - Total Lines for IPG.

(d) *TOT WORKLOAD* - Total Lines for the Entire Report.

5. DATA ORGANIZATION

a. Report header data shown to start each report page.

b. Double space each line of detail report data.

c. Page break for each Location Group Code and Batch Number.

d. Sequence by:

(1) IPG - Major

(2) Location Group Code

(3) Batch Number

(4) Warehouse Area

6. DISTRIBUTION AND RETENTION

a. Prepare six copies to MSO, DS/T.

b. Retain until workload planning requirement is accomplished.

7. PROCEDURE FOR REVIEW AND PROCESSING

This report provides summary totals of the data contained in the MOWASP F-041 and F-042 released workload reports and is used in conjunction with workload planning activities.

APPENDIX F-180

MOFAST ROUTE SLIP

1. PURPOSE

Provide Shipment Unit (SU) and routing information necessary to process a freight shipment through the MOFAST system.

2. ORIGIN

Produced as a result of the MOFAST Label/Route Slip Preparation Process, appendix D-143.

3. FREQUENCY

Produced when a SU has completed processing through sorter or other input functions.

4. DATA ELEMENTS

a. First Line:

(1) Date - Month, day, year, and Julian date

(2) CRT NO - Terminal number from which the route slip was initiated.

(3) DTT - Data offered to transportation.

(4) SORTER LINE - Line from which container was released.

b. Second Line:

(1) CHECK DIGIT - SU Check Digit

(2) DEST - Destination Cross-Reference from the Activity Address file.

(3) LOCATION - Manually annotate the location of freight held in the freight terminal or warehouse area.

c. Third Line:

Carrier Code assigned to SU Record.

d. Fourth Line:

(1) SU NUMBER

(a) Seven-digit basic SU number.

(b) Eleven-digit single line SU.

(c) Thirteen-digit partialled SU number.

(2) Number of pieces of Freight in SU.

(3) Gross Weight assigned to SU.

(4) Total Cube assigned to SU.

(5) Process Code, appendix A-100.

(6) Special Requirements Code.

(7) Spur Number, SEAVAN, or Mode I for Government Truck - Terminal Routing.

(8) GBL Number assigned to SU.

(9) GBL Sequence Number assigned to SU.

e. Fifth Line:

Exception address message or no label required message, when applicable.

f. Sixth Line (when applicable):

(1) TCN Change Message

(2) New TCN

g. Seventh Line TCMD Message (when applicable):

(1) ATCMD Transceived - Verification Required - Output when SU TCMD status flag is X indicating ATCMD prepared at the time the SU was documented by MOWASP.

(2) ATCMD Required - Output when SU TCMD status flag is blank and SU Process Code is AC, AD, BB or BL indicating export air eligible.

h. Eighth Line:

(1) PDT Planned Date to Transportation.

(2) IPG Issue Priority Group.

i. Ninth Line:

Military time that a shipment is offered.

j. Tenth Line:

FMS Pack and Hold (when NOA has been generated).

k. Eleventh Line:

FMS GBL TAC Code (when applicable).

l. Twelfth Line:

(1) MEDALOC - E Shipment (when shipment is MEDALOC eligible and APOD = FRF or RMS).

(2) MEDALOC - K Shipment (when shipment is MEDALOC eligible and APOD = OSN)

(3) MEDALOC - P Shipment (when shipment is MEDALOC eligible and APOD = HOW or PLA)

(4) MEDALOC - A Shipment (when shipment is MEDALOC eligible and APOD = EIL)

(5) MEDALOC - H Shipment (when shipment is MEDALOC eligible and APOD = HIK)

m. Thirteenth Line:

(1) MODE - Manually annotate the mode of shipment.

(2) STATUS - Manually annotate the status mode.

(3) HOLD - Manually annotate the hold code assigned to SU.

(4) TAC - Manually annotate TAC Code.

(5) COMM - Manually annotate Commodity Code.

5. DATA ORGANIZATION

a. The route slip is printed in the format noted in paragraph 4 above.

b. Route slips will be produced in the sequence SUs are completed through the process noted in paragraph 3 above.

6. DISTRIBUTION AND RETENTION

a. The route slip is attached to the set of DD Form 1348-1 (MROs) which will eventually be used either in special processing or GBL preparation processes.

b. The route slip is retained until the pertinent SU has completed the MOFAST shipping process.

7. PROCEDURES FOR REVIEW AND PROCESSING

a. Freight Terminal:

(1) Obtain the route slip from the designated printer after completion of sorter or other than sorter input functions.

(2) Include the route slip with the set of MROs remaining with the SU. Attach documentation to the first container of the SU.

(3) A container missing on sorter label line may be recovered from sorter line or lines indicated on route slip.

(4) Route freight to the Freight Terminal outloading or hold area as noted in "Spur Number" field on the route slip.

(5) Materiel arriving in terminal hold or outload areas will be assigned either to a floor/rack location or a load number. This information will be annotated in the "Location" portion of the routing slip.

(6) When the materiel has been placed in location, forward pertinent route slip and MRO documents to Transportation Office.

(7) Transportation GBL and Special Processing functions will use the documentation package to complete the shipping process.

b. Transportation Office:

The Transportation Office will receive MROs for shipment held outside the Freight Terminal.

(1) Perform input to offer the SU to transportation.

(2) Obtain route slip from printer and combine with MRO documents.

(3) Perform actions necessary to ship the items, i.e., Shipping Instructions, GBL preparation, and so forth. Record pertinent data on route slip copy.

(4) Retain route slip until signed copy of GBL is returned to Transportation office.

APPENDIX F-181

MOFAST REPORT OF GBL/CBL TRANSACTIONS

1. PURPOSE

a. Provide status of GBL/CBLs which are processed by the batch billing procedure.

b. Provide a summary of daily GBL/CBL activity.

c. Provide a count of shipment unit, and NMFC records processed through GBL/CBL Assembly, GBL/CBL Print and microfiche actions.

d. Provide a record of shipment units updated to completed status as a result of a computer batch process.

2. ORIGIN

a. Batch Billing - Part 1 - GBLs to be processed in batch mode will be identified by an operator input key in the MOFAST GBL Preparation Process, appendix E-238 P part K, (program UWFK05). GBLs appearing on this listing will be identified as being completed or rejected due to erroneous or missing data.

b. Completed GBL Report - Part 2 - Record of daily activity on the GBL/CBL register.

c. GBL Microfiche Data - Part 3 - Counts of GBL/CBL Shipment Unit, and NMFC records are recorded during the GBL/CBL Assembly, print and file maintenance processes.

d. MOFAST Batch Update of Shipment Unit Records - Part 4 - Shipment Unit records associated with reprinted GBLs or a consolidated pack on a completed GBL are confirmed as shipped during a batch process at the close of each days business. This section of the report identifies the status of each Shipment Unit processed via this action.

3. FREQUENCY

Daily

4. DATA ELEMENTS

a. Batch Billing Report - part 1:

(1) Report Header Line which includes:

(a) Report Number (F-181)

(b) Part Number (Part 1)

(c) Report Title

(d) Functional Routing Code

(e) Data - Month, day, year and Julian date

(f) Page Number

(2) Data Elements:

(a) GBL Number of GBL in-process.

(b) Message: An in-the-clear message indicating whether the GBL process was completed or any error/missing data encountered during the batch process.

b. MOFAST Completed GBL Report - part 2:

(1) Report Header Line which includes:

(a) Report Number (F-181)

(b) Part Number (Part 2)

(c) Report Title

(d) Date: Day, Month and Year

(e) Page Number

(2) Data Elements:

(a) Completion Code Description.

1. C - Canceled

2. D - Canceled due to GBL reprint.

3. P - Successfully completed.

(b) Completed GBL/CBL Record.

1. GBL/CBL Number

2. Completion Code

(c) Summary of GBL/CBL Daily Activity.

1. Open - SUs still being accumulated.

2. Stopped - SU accumulation is stopped.

3. Canceled - GBL/CBL cancel actions.

4. Printed - Number GBL/CBL printed.

5. Deleted - Number deleted due to reprint.

6. Total - Total GBL/CBL register actions.

c. GBL Microfiche Data - part 3:

(1) Report Header Line which includes:

(a) Report Number (F-181)

(b) Part Number (Part 3)

(c) Report Title

(d) Date: Day, Month, Year

(e) Page Number

(2) Data Elements:

(a) GBL/CBL - Government or Commercial Bill of Lading number.

(b) Assembly - Count of records processed during the GBL assembly program.

1. SU - Shipment Unit Records.

2. FD - Freight Description Records (NMFC).

(c) Print - Count of records processed during the GBL Print Process.

1. SU - Shipment Unit Records.

2. FD - Freight Description Records (NMFC).

(d) Microfiche - Count of records assembled for processing to microfiche output during the daily system maintenance process.

1. SU - Shipment Unit Records.

2. FD - Freight Description Records (NMFC)

3. LI - MRO Line Item Records.

(e) Bal - An alpha O indicated a record imbalance exists.

d. MOFAST Batch Update of Shipment Unit Records - part 4.

(1) Report Header Line which includes:

(a) Report Number (F-181)

(b) Part Number (part 4)

(c) Report Title

(d) Date: Julian

(e) Page Number

(2) Data Elements:

(a) GBL - Government or Commercial Bill of Lading number.

(b) ST - GBL Status Code.

(c) NEW GBL - Revised GBL number assigned when G/L reprint occurs.

(d) SU - Shipment Unit Number.

(e) TP - Type Pack Code.

(f) C CTL - Container Control Number, Consolidated Pack only.

(g) MSTR SU - Master SU number, Consolidated Pack only.

(h) DT SHP - Date Shipped.

(i) ST - Short GBL Shipment Unit Status.

(j) CODES - Access Method Return Code (reference DLAM 4745.1).

5. DATA ORGANIZATION

a. Report header data on the first line and detailed column heading on the second line.

b. Sequenced by GBL.

c. Report is double spaced.

6. NUMBER OF COPIES AND DISTRIBUTION

a. One copy will be distributed to Transportation Division, DS/T.

b. One copy to office of Data Systems.

7. PROCEDURES FOR REVIEW AND PROCESSING

a. Part 1 - GBL numbers appearing on the F-181 have been identified for the GBL batch process by operator input of a batch process flag after GBL CRT edit routines have been accomplished (appendix E-238 P part K). The narrative message on this report indicates whether the GBL is complete and ready for printing, or whether the GBL contains errors/missing data which must be corrected. If the message indicates the preparation process has been

completed, print the GBL IAW the MOFAST GBL Print Procedure, appendix E-224 P part A. If errors/missing data are noted by the narrative message, enter corrections by using the MOFAST GBL Preparation Process, appendix E-238 P part K.

b. Part 2 - GBL/CBL numbers appearing in this part of the F-181 are completed records which have been placed in microfiche history. Also included in this section is a summary of daily GBL/CBL activity. This report should be retained and used as a record of completed GBL/CBLs and as a source for reporting workload data.

c. Part 3:

(1) This report is an accounting of shipment unit, and freight description (NMFC) records processed through the GBL/CBL assembly, print, and file maintenance process of MOFAST. An alpha O in the "Bal" column of this report identifies an out-of-balance condition which exists between one or more of the three processes. Functional operators should notify the Office of Data Systems of all out-of-balance conditions. ODS will, in turn, take action to determine the cause of the out-of-balance condition and attempt to restore files containing missing records.

(2) Functional operators are to use this report as a basis to audit the completeness of microfiche data returned from vendors. Compare microfiche totals shown on this report to the counts returned from vendors. Out-of-balance conditions are to be resolved by ODS, DS/T and vendor coordination.

d. Part 4:

(1) The purpose of this report section is to identify the status of SUs completed as a result of the batch update process. Access method return codes other than 1 or 2 indicate problems occurred within the batch process. Indication of problems requires reprocessing of the batch run according to procedures outlined in DLAM 4745.1.

(2) The distribution of this report should only be to the Office of Data Systems.

APPENDIX F-182

MOFAST TCMD TRANSACTION LISTING

1. PURPOSE

Provide a summary of Transportation Control Movement Documents (TCMD) prepared and/or transceived by the MOFAST or MOWASP system.

2. ORIGIN

Produced from MOFAST TCMD Cards and Transceiver Data Process, Appendix D-158 and Advanced TCMD Preparation for Air Export Shipments, Appendix D-176.

3. FREQUENCY

Produced after each shipping cycle and when MOFAST AUTODIN Exit (UWFHEMIT) is run.

4. DATA ELEMENTS

a. Report Header:

(1) Report Number (F-182)

(2) Report Title

(3) Functional Routing Code

(4) Date - Month, day, year and Julian date

(5) Page Number

b. Report Data:

(1) Content Indicator

(2) Route To - Transceiver Routing Address

(3) Transaction - GBL TCMD Header Card

(4) Transaction - 80 column TCMD format per DoD 4500.32-R

(5) SU Number on ATCMD

(6) MEDALOC

5. DATA ORGANIZATION

a. Report Header

Print report header to start each page.

b. Report Data

(1) Sequence data by:

(a) Content Indicator

(b) Route To

(c) GBL Number

(d) Document Number

(e) Document Identifier Code

(f) MED - MEDALOC Eligible

(2) Double spaced between each report line and header lines.

c. Page break when route to changes.

6. DISTRIBUTION AND RETENTION

a. Two copies. Both copies to Special Processing Section, Transportation Division, DS/T.

b. Destroy report after functions noted in paragraph 7 have been completed.

7. PROCEDURES FOR REVIEW AND PROCESSING

This report is used by Special Processing clerical personnel for maintaining records of action upon our release requests and providing information regarding TCMD document output.

a. Special Processing Air Release clerks will:

(1) Review report to determine the release output for the prior day or transceiving cycle.

(2) Record responses from the air clearance authority. Annotate this information adjacent to pertinent record listed upon the report format.

(3) Update pertinent Shipment Unit (SU) records based upon instructions received. Reference MOFAST TCMD Cards and Transceiver Data, appendix E-228.

b. Special Processing TCMD clerks will:

(1) Use the report as a basis for confirming that TCMD data was properly transceived.

(2) Provide answers to telephone status requests.

APPENDIX F-183

LOGAIR/QUICKTRANS TRUCK MANIFEST

1. PURPOSE

To provide a listing to be used by Transportation personnel in locating and loading materiel to be moved via Government Truck to a Logair or Quicktrans terminal.

2. ORIGIN

Produced by UWFM30 as a result of processing Type L or Q Input Codes. Reference MOFAST TCMD cards and Transceiver Data Process, appendix D-158.

3. FREQUENCY

This listing will be produced each time program UWFM30 is processing and Logair or Quicktrans transactions, Type Input Codes L or Q, respectively, are processed.

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number

(2) Report Title

(3) Julian date.

b. Data Elements (from the SU record):

(1) Mode

(2) Shipment Unit Number

(3) Transportation Control Number

(4) Pieces

(5) Weight

(6) Cube

(7) Location

5. DATA ORGANIZATION

a. Report Header

Print report header at the start of each report.

b. Report Data

(1) Double Space

(2) Print in order of input.

6. DISTRIBUTION AND RETENTION

a. One copy to Special Processing Section, Transportation Division, DS/T.

b. One copy sent with materiel to Logair/Quicktrans Terminal.

7. PROCEDURES FOR REVIEW AND PROCESSING

Utilize as a load list for pulling freight. Forward with load as a truck manifest.

APPENDIX F-184

MOFAST CONSIGNEE/DEST SHIPMENT UNIT LISTING

1. PURPOSE

Provide the ability to identify Shipment Units (SUs) in process for a specific consignee or Destination.

2. ORIGIN

Produced as a result of CRT Consignee Inquiry (appendix B-207), Type Code CA, and the MOFAST Special Processing Exception MRO Process (appendix D-163).

3. FREQUENCY

As required.

4. DATA ELEMENTS

a. Report Header:

(1) Report Number (F-184)

(2) Title

(3) Date - Month, day, year, and Julian date

b. Report Header, Second Line:

(1) Consignee Code

(2) SU List follows Message

c. Report Data

List of SU numbers.

5. DATA ORGANIZATION

a. Sequence:

(1) Consignee Code

(2) SU Number (listed left to right/top to bottom).

b. Single space between report lines.

c. Print report on remote on-line printer.

6. DISTRIBUTION AND RETENTION

a. One copy to organization requesting inquiry message.

b. Retain until research value has expired.

7. PROCEDURE FOR REVIEW AND PROCESSING

This listing summarizes SU numbers in process for a specific consignee. Additional information relative to SU records must be obtained by inquiring the specific SU record using appendices B-215 (part 1) and E-238 P (part D) formats.

```

APPENDIX F-186

MOFAST SORTER - COMPLETED SHIPMENT UNIT MESSAGE

1. PURPOSE

Identification of Shipment Units (SUs) which are in completed (F) status on the MOFAST sorter.

2. ORIGIN

The message generates from the MOFAST Sorter First and Second Operator processes noted in appendices D-140 and D-141.

3. FREQUENCY

Message appears each time a SU being processed through the MOFAST sorter reaches Status Code F.

4. DATA ELEMENTS

Format and data content of the completed shipment unit message is dependent upon which sorter option (consignee or destination AAC) is being utilized.

a. Consignee (see Figure 1 for example)

(1) Sort Line Number

(2) Shipment Unit Number

(3) Status Code

(4) IPG

(5) Geographic Area Code

(6) Consignee

(7) Shipment Unit Weight

(8) Number of Containers

b. Destination AAC (see Figure 2 for example):

(1) Sort Line Number

(2) Shipment Unit Number

(3) Status Code

(4) IPG

(5) Destination AAC

(6) Shipment Unit Weight

(7) Shipment Unit Cube

(8) Number of Containers

(9) Potential Volume Destination (indicated by an asterisk)

5. DATA ORGANIZATION

The message will print in the sequence that the SUs are completed.

6. DISTRIBUTION AND RETENTION

a. The message prints at the sorter release station.

b. Retain the data until the specific SU has been released from the sorter.

7. PROCEDURES FOR REVIEW AND PROCESSING

a. The F-186 message indicates that the SU noted is complete and ready to be released from the MOFAST sorter.

b. The sorter operator must use the Sorter Inquire/Release System procedures in appendix E-219 P to release the shipment. If depot policy is to maximize consolidation of shipment to a common consignee, the operator should utilize inquiry programs which identify the contents of the sorter and make the necessary decision required to release the compatible SUs at the same time interval.

APPENDIX F-187

MOFAST ADDRESS LABEL

1. PURPOSE

Provide computer prepared address labels to be attached to shipping containers.

2. ORIGIN

Produced as a result of the MOFAST Label/Route Slip Preparation Process, appendix D-143.

3. FREQUENCY

Produced when a Shipment Unit (SU) has completed processing through sorter or other than sorter input functions.

4. DATA ELEMENTS

a. First Line:

(1) Transportation Control Number

(2) Required Delivery Date

(3) Project Code

b. Ship To Block:

(1) First line

(a) Shipment Unit Number

(b) SPLC - Standard Point Location Code

(2) Lines two through five

DoD Activity Address Code and In-the-Clear Ship To Address.

c. POD Block

Port of Debarkation (POD) Code and In-the-Clear POD Address.

d. Ultimate Consignee or Mark For Block

Activity Address Code and In-the-Clear Address. On overseas Breakbulk Point Shipments the last line contains M/F plus the DoDAAC of the ultimate consignee.

e. Final Line

(1) Container Number

(2) Total Number of Containers/Pieces in SU.

(3) Weight of Individual Container.

(4) Cube of Individual Container.

5. DATA ORGANIZATION

Printed in the format outlined above to fit into pin-fed label form.

6. DISTRIBUTION AND RETENTION

a. One label will be produced for each container in the SU.

b. Attach printed label to the pertinent container as shown by the container number noted in the label format.

7. PROCEDURES FOR REVIEW AND PROCESSING

APPENDIX F-188

MOFAST LOAD ACCUMULATION LISTING

1. PURPOSE

Provide the Transportation Division with notification of large volume shipments which exist at the respective depot.

2. ORIGIN

Produced as a result of MOFAST Load Accumulation Report Preparation Process, appendix D-144.

3. FREQUENCY

Printed at an on-line printer within the Transportation Office as the GBL weight or cube criteria noted in appendix D-144 are reached.

4. DATA ELEMENTS

a. First Line:

(1) Report Number (F-188)

(2) Title

(3) Date - Month, day, year, and Julian date

(4) Time Report Printed

b. Report Data:

(1) GBL Number

(2) Standard Point Location Code

(3) Consignee Code

(4) Issue Priority Group (SU record last entered)

(5) Carrier Code between NSN

(6) GBL Weight (short GBL record)

(7) GBL Cube (short GBL record)

(8) GBL Total Piece Count

5. DATA ORGANIZATION

Printed in the format outlined in paragraph 4 above.

6. DISTRIBUTION AND RETENTION

a. One copy to Transportation Division, DS/T.

b. Retain until shipment planning and GBL preparation process has been completed.

7. PROCEDURES FOR REVIEW AND PROCESSING

This report is provided to assist shipment planners in determining the accumulation rate of volume shipments.

UWF188 MOFAST LOAD ACCUMULATION NOTICE 80046 1025

K0000211	845200	FB5270	3	UPSS	40001	56.0	1

APPENDIX F-189

FREIGHT CONSOLIDATION POTENTIAL REPORT

1. PURPOSE

To align MOWASP shipment data into a concise report format that will enable depot transportation officers and Headquarters management personnel to determine instances of potential freight consolidation that are being missed at DLA depots.

2. ORIGIN

Produced during the processing as depicted by appendix D-87. No input is required.

3. FREQUENCY

Monthly

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-189)

(2) Shipping Activity

(3) Report Title

(4) Functional Routing Code

(5) Section Number

(6) Date - month, day, year, and Julian date

(7) Page Number

b. Data Elements

(1) DEST - Consignee DCR, BBP DCR, POE/APOE

(2) GBL DATE - Date of GBL Issue

(3) MODE CODE - Mode of Shipment Code (appendix A-17)

(4) ORIG. CAR. SCAC - Standard Carrier Alpha Code

(5) GBL NUMBER

(6) TOTAL GBL WGT - Total weight on GBL

5. DATA ORGANIZATION

a. Report heading data on first line and detailed column heading on the second line.

b. Sequence:

(1) DEST - Consignee DCR, BBP DCR, POE/APOE

(2) GBL Date - Secondary

(3) SCAC - Tertiary

c. Report is double spaced between headings and data, single spaced between data lines having the same DCR, the same GBL date and the same basic mode (surface or air). Data will print only when there are two or more GBLs with equal dates, DCRs and basic modes.

d. Basic surface modes are Mode Codes (appendix A-17) A, B and M; basic air modes are Mode Codes Q, R and T. On the report these modes will be treated as equal, for surface and air respectively, for sequencing and spacing purposes; however, the specific surface or air mode code applying to the individual GBL will be indicated in the Mode of Shipment column.

6. NUMBER OF COPIES AND DISTRIBUTION

One copy will be distributed to the depot Transportation Division and one copy to HQ DLA (OT).

7. The depot Transportation Division will use this report to detect instances of uneconomical shipping practices and to revise procedures, as required, to avoid future diseconomies.

APPENDIX F-190

MOFAST GBL MICROFICHE HISTORY

1. PURPOSE

Provide a permanent history record of GBLs printed in the MOFAST system.

2. ORIGIN

GBL history is copied to tape during daily file maintenance processes. This tape is transferred to microfiche format on a weekly basis.

3. FREQUENCY

Weekly

4. DATA ELEMENTS

a. Report Header:

(1) Report Number (F-190)

(2) GBL Number

(3) Title

(4) Date - Month, day, year, and Julian date

b. GBL First Page Record:

Includes exact format and data elements established for the first page of the GBL, reference appendix C-95.

c. GBL Continuation Sheet:

(1) First Line

(a) GBL Number

(b) Title

(c) Date Prepared - Month, day, and year

(2) Report Data - Description of Articles

(a) IPGI/NMCS Statement

(b) Temperature Controlled Statement

(c) TCN and Total Cubic Feet pertinent to SU

(d) Shipment Unit Number and Project Code.

(e) NMFC Number

(f) Number and Type of Packs.

(g) In-the-clear Freight Description and Total Weight.

(h) MRO 80 position data, container number, and quantity shipped.

(i) Transportation Appropriation

(j) In-the-Clear Remarks Data

5. DATA ORGANIZATION

a. Sequence by GBL number.

b. Content of the GBL Microfiche record reflects the printed copy.

6. DISTRIBUTION AND RETENTION

a. One set of microfiche to Transportation and Shipping Division, DS/T.

b. Retention of GBL Microfiche data must satisfy established GBL record retention requirements.

7. PROCEDURE FOR REVIEW AND PROCESSING

Microfiche records are established to support research and followup request made to each depot.

APPENDIX F-191

DATE OFFERED - DELAYED ENTRY REPORT - DETAIL

1. PURPOSE

To provide a detail report of shipment units in the In-Process File at MOFAST depots which contain a manually entered date to transportation.

2. ORIGIN

Produced during the process depicted in appendix D-105 by scanning the In-Process File for Shipment Unit records which contain a CRT number identifying an initial input terminal. This report is obtained by input of MRO Status Detail Request Card, DIC ZUG, with a Report Indicator 3 in pos. 4 as shown in appendix B-58.

3. FREQUENCY

As requested by entry of DIC ZUG per appendix B-58. Enter 3 in pos. 4 of the ZUG format.

4. DATA ELEMENTS

a. Report Header:

(1) Report Number (F-191)

(2) Title

(3) Product Control Number

(4) Date - Month, day, year, and Julian date

(5) Page Number

b. Report Data:

(1) CRT NUMBER

(2) SHIP UNIT NUMBER

(3) SHIP UNIT LINE-ITEM - Shipment Unit Line Item and Partial Shipment identification.

(4) CRT ENTRY DATE

(5) IPG

(6) DATE OFFERED - Date to Transportation

(7) MAND DATE TRANS - Mandatory Date to Transportation

(8) STATUS CODE

(9) PROCESS CODE

(10) CONSIGNEE - Consignee Code

(11) HOLD CODE

(12) SHIP UNIT WEIGHT

(13) SHIP UNIT CUBE

(14) SHIP UNIT PIECES - SU Pieces

5. DATA ORGANIZATION

a. Print report header to start each page.

b. Double space each print line.

c. Sequence Data:

(1) CRT Number, major.

(2) Shipment Unit/Line Number, minor.

6. DISTRIBUTION

Prepare two copies.

a. One copy to MSO, DS/T.

b. One copy to the Office of Planning and Management.

7. PROCEDURES FOR REVIEW AND PROCESSING

This report identifies Shipment Units which have had a manual date to transportation entered. The content of this report should be analyzed by management personnel to determine conditions contributing to date to transportation input actions which have been initiated after the mandatory date to transportation.

APPENDIX F-192

MOFAST LIST OF SHIPMENT UNITS CANCELED FROM GBL

1. PURPOSE

a. Provide a summary of Shipment Units (SU) in the MOFAST In-Process File with CANCEL in the GBL number field. These SUs are those which have been canceled from a GBL and not reassigned.

b. Provide a count of completed Shipment Units and Bills of Lading processed by MOFAST.

c. Provides notification whenever 5000 GBL numbers or less remain on the GBL register.

2. ORIGIN

Produced during daily In-Process File maintenance routine.

3. FREQUENCY

Daily. At the close of each days business.

4. DATA ELEMENTS

a. MOFAST Shipment Units Canceled from GBL (part 1)

(1) Report Header First Line:

(a) Report Number (F-192)

(b) Title

(c) Date - Month, day, year, and Julian date

(d) Page Number

(2) Report Data Second Line:

(a) SU NO - Shipment Unit Number

(b) SFX - Suffix, Partial Shipment

(c) LINE ITEMS - Total Line Items

(d) TOT OCS - Total Pieces

(e) TOTAL WGT - Total Weight

(f) TOTAL CUBE - Total Cube

(g) PROC CODE - Process Code

(h) SPEC REQR - Special Requirements

b. MOFAST Shipment Unit and GBL Summary (part 2)

(1) Report Header First Line:

(a) Report Number (F-192)

(b) Title

(c) Date - Month, Day and Year

(d) Page Number

(2) Report Data:

(a) Category 1 - Total SU Records Z Status (cancel or blank GBL): Total SU records manually confirmed as parcel post, or freight shipments confirmed without use of GBL or CBL Number.

(b) Category 2

1. Total SU Records Z Status (GBL Number): Total of completed SU records shipped via MOFAST GBL.

2. Total SU Records Z Status (CBL Number): Total of completed SU records shipped via MOFAST CBL.

3. Total SU Records Z Status (Registered GBL Number): Total of completed SU records shipped via non-MOFAST GBL or CBL Number, registered, insured or certified mail. Also includes UPS shipments.

(c) Category 3 - Total SU Records Y Status (Cancellations or Denials): Total line items, entire quantity cancellation or denial.

(d) Category 4 - Total SU Records Automatic Parcel Post Clear: Total SU records confirmed via Automatic Parcel Post Clear process.

(e) Category 5 - Total SU Records Cleared: (Total of categories 1-4 above.)

(f) Category 6 - Recap of Completed GBLs: Summary of the number of B/Ls, SUs, Line Items and Containers involved with completed shipments shown in Category 2, above.

(g) Category 7 - Notification of 5000 or less GBL numbers remaining on the GBL register.

5. DATA ORGANIZATION

a. MOFAST Shipment Units Canceled from GBL (part 1).

(1) Print report header to start each page.

(2) Sequence by SU number.

(3) Print two SU records per print line.

(4) Double space each print line.

b. MOFAST Shipment Unit and GBL Summary (part 2).

(1) Print report header.

(2) Sequence by line (category) number.

(3) Double space between categories.

6. DISTRIBUTION AND RETENTION

a. MOFAST Shipment Units Canceled from GBL (part 1).

(1) Prepare one copy for Transportation Division, DS/T.

(2) Retain until all records shown have been reassigned to a GBL or completed as being shipped by other methods.

b. MOFAST Shipment Units Canceled from GBL (part 2).

(1) Prepare one copy for Transportation Division, DS/T.

(2) Retain for use as point-of-count data for the MIS Monthly RCS DLA(M)26(C)MIN and RCS DLA(M)232(O)MIN Reports.

7. PROCEDURES FOR REVIEW AND PROCESSING

a. MOFAST Shipment Units Canceled from GBL (part 1).

(1) Transportation Division must review this report each day and take action to either reassign items to another GBL or clear the item by shipping it by other methods.

(2) Shipment units must be determined to be available for shipment prior to reassignment to a GBL number.

(3) Reassignment and cancellation of items from GBL records must be performed under the direction of the GBL preparation function.

(4) Reassign SU to a GBL using appendix B-215, part D format.

b. MOFAST Shipment Unit and GBL Summary (part 2).

(1) Transportation Division must use this report as a basis for accumulating information for the RCS DLA(M)26(C)MIN and RCS DLA(M)232(O)MIN Reports.

(2) This information is provided on a monthly basis to these individuals responsible for compiling these RCS Reports.

(3) This information is provided as notification to request a new block of GBL numbers from General Services Administration.

7. Notice: 5000 GBL Numbers remain on register.

APPENDIX F-193

FREIGHT SHIPMENTS LESS THAN 70 LBS.

1. PURPOSE

To configure MOWASP shipment data in a format that will enable depot transportation officers to quickly identify those shipments that moved via a freight mode of transportation that could have been forwarded by a small parcel mode.

2. ORIGIN

Produced during the processing as depicted by appendix D-87. No input is required.

3. FREQUENCY

Monthly

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-193).

(2) Shipping Activity.

(3) Report Title.

(4) Functional Routing Code.

(5) Section Number.

(6) Date - month, day, year, and Julian date.

(7) Page Number.

b. Data Elements

(1) GBL DATE - Date of GBL Issue.

(2) GBL NUMBER.

(3) MODE CODE - Mode of Shipment Code (appendix A-17).

(4) GBL WEIGHT - Total weight on GBL.

5. DATA ORGANIZATION

a. Report heading data on first line and detailed column headings on the second line.

b. Sequence

(1) GBL DATE - Primary.

(2) MODE CODE - Secondary.

c. Report is double spaced between headings and data, single spaced between GBLs with same issue date, and double spaced between GBLs having different issue dates. Data will print only when the total weight on the GBL is less than 71 lbs.

6. NUMBER OF COPIES AND DISTRIBUTION

One copy will be distributed to the depot Transportation Division and one copy to HQ DLA (OT).

7. PROCEDURE FOR REVIEW AND PROCESSING

The depot Transportation Division will use this report to detect instances of uneconomical shipping practices and to revise procedures, as required, to preclude future diseconomies.

APPENDIX F-194

MOFAST RATE TABLE LISTING

1. PURPOSE

Provide a hard copy print of the data contained in the MOFAST On-Line Rate File.

2. ORIGIN

Listing is produced as a result of the Rate and Tariff File batch maintenance process.

3. FREQUENCY

Report is produced as a result of MOFAST Rating Card, appendix B-180, or on request to the Data Systems Manager.

4. DATA ELEMENTS

a. Report Header:

(1) Report Number (F-194)

(2) Title

(3) Functional Routing Code

(4) Section

(5) Date - Month, day, year, and Julian date

(6) Page Number

b. Part 1 - SPLC-Rate Base-Tariff Tender Cross-Reference File:

(1) SPLC - Standard Point Location Code

(2) MODE - Mode Code

(3) R-B-NR - Rate Base Number

(4) TARIFF - NR Tariff Number

(5) FAK - FAK Flag

(6) Tariff Tender File Data (12 categories per record)

(a) CARR - Carrier Code

(b) TNDR - Tender Number

(c) T - Type Rate

(d) CL - Contraband List Code

(e) A - Alternating Flag

(f) P - Prime Carrier Flag

c. Part 2 - Rate Base File:

(1) RATE-BSE-NR - Rate Base Number

(2) TARIFF-NR - Tariff Number

(3) BEY-CDE - Beyond Code

(4) GRP - Group Code

(5) MIN-AMT - Minimum Amount

(6) Weight/Amount Categories (10 categories per record).

(a) WGT - Maximum Weight for Weight Group.

(b) RTE - Cost Applicable to Weight Group.

d. Part 3 - Beyond Indicator Record:

(1) BEY-CDE - Beyond Code

(2) SPLC - Standard Point Location Code

(3) CARR - Carrier Code

(4) CARR-APPL - Carrier Application Flag

(5) LTL - LTL Indicator (per appendix B-185)

(6) MIN - Minimum Amount

(7) MAX - Maximum Amount

(8) ARB - Arbitrary Amount

(9) Weight/Amount Categories (8 categories per record).

(a) WGT - Maximum Weight for Weight Group.

(b) RTE - Cost Applicable to Weight Group.

e. Part 4 - Tariff Tender File:

(1) CARR - Carrier Code

(2) TNDR - Tender Number

(3) TYP-R - Type Rate Code

(4) MIN-WGT - Minimum Weight

(5) MIN-CST - Minimum Cost

(6) Weight Amount Categories (10 categories per record).

(a) WGT - Maximum Weight for Weight Group.

(b) R-C - Cost Applicable to Weight Group.

f. Part 5 - Special Tariff File:

(1) TARIFF NR - Tariff Number

(2) DIST - Distribution Code

(3) CTBD-LST - Contraband List Code

(4) ALT-C - Alternating Flag

(5) PAL-WGT-FAC - Pallet Weight Factor

(6) BEY-CHRG - Beyond Charge Code

(7) S-CHG - Stop Charge Amount

(8) Distribution Charge Data

(a) A-CWT - Amount/CWT

(b) MIN-C - Minimum Charge

(c) MAX-C - Maximum Charge

(9) M-CST - Minimum GBL Cost

(10) M-WGT - Minimum GBL Weight

(11) Weight Amount Categories (6 categories per record).

(a) WGT - Maximum Weight for Weight Group.

(b) CWT - Cost Applicable to Weight Group.

g. Part 6 - Spur File:

(1) SEQ - Record Sequence Number

(2) S - Spur Number

h. Part 7 - Contraband List Table by NMFC:

(1) CTBD - LIST Contraband List Code

(2) SEQ - Sequence Number

(3) NMFC - NMFC Number

i. Part 8 - GBL Exception Carriers:

(1) EXCPT-CD - Exception Code

(2) SEQ - Sequence

(3) FLD - Standard Carrier Alpha Code (11 categories per record)

j. Part 9 - Multiple Amount Record:

(1) MULTI-KEY - Multiple Amount Key

(2) Weight Amount Categories (10 categories per record)

(a) WGT - Maximum Weight for Weight Group

(b) AMT - Cost Applicable to Weight Group

k. Part 10 - Carrier/RIN Statement:

(1) TYPE - Type Statement

(2) CODE - Carrier Statement/RIN Number

(3) SEQ - Sequence or Line Number

(4) STATEMENT - Carrier Statement or RIN Statement

l. Part 11 - Guaranteed Rates Per Hundred

(1) CARRIER - Carrier Code

(2) RATE-GROUP-CODE - Rate Group Code

(3) TYPE-SERVICE - Type Service Code

(4) Weight-Rate Categories (16 categories per record)

(a) WGT - Maximum Weight for Weight Group

(b) RATE - Cost Applicable for Weight Group

(5) NR-FLAT-RATE - Number of Rates Designated as Minimum Cost Rates

m. Part 12 - Guarantees/Small Parcel Carrier Rates

(1) CARRIER - Carrier Code

(2) WEIGHT - Actual Weight

(3) TYPE-SERVICE - Type Service Code

(4) ZONE - Rate Categories (12 categories per record)

(a) Z - Zone

(b) RTE - Cost Applicable to Weight Group

5. DATA ORGANIZATION

a. Prepare report header to start each page.

b. Page break to start each report part number.

c. Data Sequence:

(1) Part 1:

(a) SPLC - Major

(b) Mode

(c) Rate Base Number

(2) Part 2:

(a) Rate Base Number Major

(b) Tariff Number

(3) Part 3:

(a) Beyond Code

(b) SPLC Number

(4) Part 4:

(a) Carrier Code - Major

(b) Tender Number

(c) Type Rate

(5) Part 5:

(a) Tariff Number - Major

(b) Distribution Code

(6) Part 6:

Sequence Number

(7) Part 7:

(a) Contraband List - Major

(b) Sequence Number

(8) Part 8:

(a) Exception Code

(b) Sequence Number

(9) Part 9:

(a) Multiple Amount Key

(b) Weight/Amount Groups

(10) Part 10:

(a) Type Statement Codes

(b) Carrier Statement/RIN Number

(11) Part 11:

(a) Carrier Code - Major

(b) Rate Group Code

(c) Type Service

(12) Part 12:

(a) Carrier Code - Major

(b) Weight

(c) Type Service

6. DISTRIBUTION AND RETENTION

a. Two copies to Transportation Division, DS/T.

b. Retain report until replaced by updated listing.

7. PROCEDURE FOR REVIEW AND PROCESSING

a. This report is a hard copy print of the rating file data used to support computer billing processes.

b. Changes made to the rating data contained in this listing must be incorporated into the on-line files using the entry formats and procedure noted in appendices B-185 and E-236 P.

APPENDIX F-195

MOFAST UNMATCHED LINE ITEM/SHIPMENT UNIT LIST

1. PURPOSE

Identify unmatched shipment unit and line item records found during MOFAST In-Process File loading processes.

2. ORIGIN

MOFAST In-Process File loading process.

3. FREQUENCY

Daily

4. DATA ELEMENTS

a. Report Header:

(1) Report Number (F-195)

(2) Title

(3) Date - Month, day, year, and Julian date

(4) Page Number

b. Report Content:

(1) Shipment Unit (SU) or Line Item (LI) Rejected.

(2) Reject Reason

(3) Negative Report if no unmatched records.

5. DATA ORGANIZATION

a. Print report header to start each page.

b. List SU records in numeric sequence (two records per line).

6. DISTRIBUTION AND RETENTION

a. One copy to ODS and one copy to Office of Planning and Management.

b. Retain listing until file load problem is found and corrected.

7. PROCEDURES FOR REVIEW AND PROCESSING

a. Items shown on the F-195 listing are those in which the LI content indicated in the SU record disagrees with that shown in the LI record.

b. Recurring errors of this type indicate that a problem exists in the MOFAST File Load process.

c. Depot programing personnel should attempt to locate the cause of the problem by utilizing the MOWASP Automatic Data Processing System Documentation Manual (DLAM 4745.1). If unable to resolve the problem, contact DSAC-D (Utah) for assistance.

APPENDIX F-196

MOFAST TCN-GBL FINAL CROSS-REFERENCE (MICROFICHE)

1. PURPOSE

Provide a cross-reference of TCN number to GBL number as a permanent history record.

2. ORIGIN

This report is prepared as a portion of the MOFAST file maintenance process.

3. FREQUENCY

This report is updated daily during file maintenance processes.

4. DATA ELEMENTS

a. Report Header:

(1) Report Number (F-196)

(2) Title

(3) Date - Month, day, and year

b. Report Content:

(1) TCN Number

(2) GBL Number

5. DATA ORGANIZATION

a. Print report header for each block of microfiche data.

b. Sequence data by TCN number (left to right/top to bottom of format).

c. Output is microfiche copy.

6. DISTRIBUTION AND RETENTION

a. One set of microfiche to Transportation and Shipping Division, DS/T.

b. Retain microfiche formats to comply with established GBL document retention requirements.

7. PROCEDURES FOR REVIEW AND PROCESSING

This report provides the information necessary to reference a materiel release order document number (TCN) to a specific GBL. This data allows Special Processing personnel to handle telephone shipment status requests in an efficient manner. Should additional data be required from the referenced GBL, the GBL microfiche format, Appendix F-190, can be used.

APPENDIX F-197

DATE OFFERED - DELAYED ENTRY SUMMARY REPORT

1. PURPOSE

Provide daily summary totals of MOFAST initial input transactions.

2. ORIGIN

This report is produced from daily counts of initial input transactions processed through the MOFAST System. Transaction counts are accumulated for shipment units offered to transportation with manually assigned dates and the total volume of transactions processed by the initial input programs.

3. FREQUENCY

Daily. Produced at the close of each day's business.

4. DATA ELEMENTS

a. Report Header:

(1) Report Number (F-197)

(2) Title

(3) Product Control Number

(4) Date - Month, day, year, and Julian date

(5) Page number

b. Report Data:

(1) CRT Number - CRT Number

(2) AUTOMATIC DTT - Total shipment units with automatically assigned date to transportation.

(3) MANUAL DTT - Total shipment units with manually assigned date to transportation.

(4) TOTAL DTT - Summation of total SUs processed through MOFAST initial input this day.

5. DATA ORGANIZATION

a. Print report header to start each page.

b. Double space each print line.

c. Sequence data - CRT number, major.

6. DISTRIBUTION AND RETENTION

Prepare two copies:

(1) One copy to MSO, DS&T.

(2) One copy to Office of Planning and Management.

7. PROCEDURES FOR REVIEW AND PROCESSING

This report provides totals of transaction types processed through the MOFAST initial input programs. The content of this report should be analyzed to determine input areas where date to transportation transactions are occurring after the mandatory date to transportation.

APPENDIX F-199

AUTOMATIC CLEAR LINE ITEM RECORD SUMMARY

1. PURPOSE

Provide totals of parcel post line items in the MOFAST In-Process File with automatic clear dates assigned. This report may be used to estimate the number of line items with automatic clear dates prior to current date on the F-9 report (Element 0170) which have been shipped, but which have not been dropped from MOFAST In-Process File and passed to MOWASP.

2. ORIGIN

Produced as a result of the MOFAST in Process File maintenance process.

3. FREQUENCY

Daily

4. DATA ELEMENTS

a. Report Header, first line:

(1) Report number (F-199)

(2) Title

(3) Date - Month, day, year, and Julian date

(4) Page number

b. Report Data, second line: Planned Drop Date

c. Request Data, third line:

(1) IPG

(2) Whse Area - Warehouse area

(3) Planned Drop Date (current, +1, +2, etc.)

(4) Greater total - Total for warehouse area

d. Report Data, fourth line: For each column with a planned drop date, show the actual automatic clear date beneath it (3-digit Julian date).

e. Totals are shown for each column with IPG. Grand totals are shown for all IPGs.

f. Total count of shipment units and line items in MOFAST In-Process File is printed beneath grand totals on IPG 3 page.

5. DATA ORGANIZATION

a. Print report header to start each report page.

b. Double space each print line reflecting data.

c. Sequence data:

(1) IPG - Major

(2) Warehouse Area - Minor

d. Page break to start each IPG.

6. DISTRIBUTION

Prepare two copies:

(1) One copy to Performance Analysis and Reports Division, Office of the Comptroller.

(2) One copy to MSO, DS/T.

7. PROCEDURES

This listing will be used by DS/T in conjunction with part 1, F-44, to calculate the open MROs in each area control branch for workload planning purposes and isolation of backlog areas.

APPENDIX F-200

RECEIPT CONTROL DOCUMENT

1. PURPOSE

To provide current information from the Prepositioned Materiel Receipt File (PMRF) and the Locator Record, when available, to assist Receipt Division personnel in processing a new receipt action. The document will serve additionally as a coding form for the Receipt Confirmation Card, appendix B-108 and B-109.

2. ORIGIN

The Receipt Control Document (RCD) is generated at a remote terminal via input of a Type A Receipt and Locator Inquiry action, appendix B-41. The RCD is also produced through a batch process when requested by card input, DIC ZB6, appendix B-102.

3. FREQUENCY

Daily as Receipt and Locator Inquiry actions are processed.

4. DATA ELEMENTS

a. Document header which includes:

(1) Document Title

(2) Inquiry A - The image of the Type A Inquiry as input. Note: This line will not be output if the inquiry is generated via a DIC ZB6, Receipt and Locator Inquiry card.

(3) Message Lines:

(a) NO PMRR - No matching Prepositioned Materiel Receipt Card is available.

(b) INVENTORY - (Plus 3-digit Julian cut-off date).

(c) NO WT/CU - No weight/cube is recorded on the Locator File.

(d) NO WT or NO CU - See above.

(e) BRAND Cycle_ - The applicable cycle code will be output as documented in the PMR record.

(f) LOCAL Cycle_ - The applicable cycle code will be output as documented in the PMR record.

(g) TROOP Issue - The applicable troop issue identification will be output.

(h) FRT DATA - This message will indicate that the Water Commodity Code, or the NMFC, or the LTL is missing from the Locator record, reference paragraph 7b.

(i) NEW NIIN - NIIN has been changed due to SICC action. Inquiry has been made with new data (NIIN).

(j) A/R REQ - Acceptance Report Required. This message indicates the PMR Management Code (D or F) specifies destination acceptance and unless the contract specified Fast Pay an Acceptance Report, DIC PKP/N, is required.

(k) HSCC ABB DEF - Hazardous Storage Compatibility Code Abbreviated Definition (appears on lower portion of format).

(l) EXPEDITE B/O PENDING - Expedite Receipt Confirmation (appears on lower portion of format). Indicates the DSC has backorders for this item.

(m) PMR IN E - A PMRC has been received which reflects Condition Code E, pos. 71, indicating the item has been purchased in this condition. The receipt will require minor preservation, packaging, or marking, etc., to bring the stock to serviceable condition. This requirement will be reflected on the contract.

b. PMRR Response (if matching PMRR available; otherwise, refer to paragraph 4d).

(1) PIIN/DOC NUMBR - Procurement Instrument Identification Number (procurement items) or Document Number (other than procurement)

(2) MGR - Commodity Manager Code.

(3) CND - Condition Code.

(4) MGT - Management Code as reflected in the PMR record.

(5) CLIN/SUPADD - Contract Line Item Number (procurement) or Supplementary Address (other), as applicable.

(6) SPIIN/RB - Supplementary PIIN (procurement) or Reverse Billing (other), as applicable. (SPIIN will be printed as extracted from Type A Inquiry input.)

(7) UI - Unit of Issue. (Mechanically printed, if locator record available.)

(8) OP - Ownership/Purpose Code.

(9) FSC - Federal Supply Class (mechanically printed, if locator record available).

(10) NIIN - National Item Identification Number.

(11) TYPK - Type Pack.

(12) T.P. NMBR - Teleprocessing Control Number.

(13) REC - Date of Receipt.

(14) DUE - Date that Materiel Receipt Card must be output to prevent a late receipt action.

c. RCC INPUT (PMRR available) - The appropriate Receipt Confirmation Input format reflecting mandatory as well as optional entries, reference appendix B-10 and B-109, as applicable. Reference paragraph 4d for RCC Input for a "no matching" PMRR record.

(1) DIC - ZV_, ZW_ only.

(2) T.P. NMBR - Teleprocessing Control Number.

(3) Quantity - The receipt quantity accepted.

(4) Weight - The receipt weight.

(5) WHSE - The three-digit area and station to which the accepted receipt was forwarded.

(6) DISC-CD - The Receipt Discrepancy Code.

(7) OVR - Quantity or weight override required when either quantity or weight entry exceeds 99,999, or if quantity exceeds (procurement) contract specifications.

(8) CND - Condition Code.

(9) MGT - Management Code.

(10) CLIN SUPPADD - Contract Line Item Number (procurement) or Supplementary Address (other), as applicable.

(11) U/I - Unit of Issue.

(12) FSC - Federal Stock Class.

(13) SHIP NMBR - Shipment Number (applicable to DIC ZV_ or ZWT only) of the procurement receipt.

(14) S - Signal Code - Applicable for DIC ZW_ only.

(15) FD - Fund Code - Applicable for DIC ZW_ only.

(16) PRJ - Project Code - Applicable for DIC ZW_ only.

(17) SFX - Suffix Code.

(18) SS - Shipment Number Suffix.

(19) ADM - Administering Location Code - Applicable for DIC ZV_ only. Will be extracted from Contract Data (mechanical), when available, when matching PMR reflects Management Code D or F. This code, 001 through 172, identifies the DCSAR payment office.

(20) QTY SHIP - Quantity Shipped in Purchase Units as indicated on the DD Form 250/1155 or other document (vendor), as available. Applicable for DIC ZV_ only.

d. The PMRR response may result in a No PMR record output. In this instance the RCD will print:

(1) PMR Response - Following by the message NO PMR RECORD.

(2) NIIN - National Item Identification Number.

(3) REC - Date of Receipt.

(4) DUE - Date of Receipt.

e. RCC Input Coding Information.

(1) DIC - ZX_, ZY_.

(2) RIC - Routing Identifier Code.

(3) TYPK - Type of Pack Code. DICOMSS Cycle Code may be entered when known, reference subparagraph e(23).

(4) PIIN DOC/NMBR - Procurement Item Instrument Number (DIC ZX_) or Document Number (DIC ZY_).

(5) CD - Condition Code.

(6) MGT - Management Code.

(7) CLIN/SUPP ADD - Contract Line Item Number (DIC ZX_) or Supplementary Address (DIC ZY_).

(8) UI - Unit of Issue (mechanically printed, if locator record available).

(9) FSC - Federal Stock Class (mechanically printed, if locator record available).

(10) SPIIN - Supplementary PIIN. Mandatory entry if A or D is present in 9th position of PIIN. (Mechanically printed as extracted from A Inquiry.)

(11) OP - Ownership/Purpose Code.

(12) T.P. NMBR - Teleprocessing Control Number.

(13) QUANTITY - The receipt quantity accepted.

(14) WEIGHT - The receipt weight.

(15) WHSE - The three digit area and station to which the accepted Receipt was forwarded.

(16) DISC CD - The Receipt Discrepancy Code.

(17) OVR - Quantity or weight override indicator required when the quantity and/or weight exceeds 99,999.

(18) SHIP NMBR - Shipment Number of the procurement receipt, applicable to DIC ZX_ or ZYT only.

(19) S - Signal Code, applicable for DIC ZY_ only.

(20) FD - Fund Code, applicable for DIC ZY_ only.

(21) PRJ - Project Code, applicable for DIC ZY_ only.

(22) SFX - Suffix Code.

(23) DICOMSS IND - Entry, Alpha D, to identify DICOMSS receipt Action (DIC ZX_).

(24) SS - Shipment Number Suffix (DIC ZX_).

(25) ADM - Administering Location Code, applicable for DIC ZX_ only, or Contract Administering Service Code to identify the DCSAR payment office.

(26) ID - Item Description.

5. DATA ORGANIZATION

a. Report header (title) followed by an inquiry image, PMRR response, if available, and an appropriate RCC coding form.

b. Locator response, if locator record available, will be limited to those data fields described above and an abbreviated definition of the Hazardous Storage Compatibility Code (HSCC) will, when applicable, appear on the lower portion line of the document; reference appendix F-202 for full information.

6. DISTRIBUTION AND NUMBER OF COPIES

The RCD will be produced in two copies; color or other identification will be a depot option.

a. Original - Routing to Receipt Document Control, Receiving Division, Directorate of Storage and Transportation, at the conclusion of receipt inspection.

b. Copy - Routed with the materiel to the storage location.

c. The message EXPEDITE - B/O PENDING indicates the presence of backorders at the DSC and the processing of the receipt should be expedited. The message will appear only in response to a Remote A Inquiry.

7. REVIEW AND PROCESSING

a. The use and appropriate annotations required in the RCD are described in detail in the applicable receipt instruction, reference appendix B-108-109.

b. The message FRT DATA indicates the absence of critical Freight Data. Therefore, the depot may by local option, elect to forward a copy of the RCD (reflecting the FRT DATA message to the appropriate shipping area for freight data update. Similarly, the NO WT/CU message may be used to have receipt inspection personnel capture the missing data for subsequent entry to the system.

APPENDIX F-201

CONTRACT DATA SHEET - 3

1. PURPOSE

To provide necessary contract information required by Receiving Division personnel to assist in receipt and inspection of a procurement item. The printout will be furnished only when contract information, matching the Type A Inquiry, is recorded in a distribution depot's Contract Data File.

2. ORIGIN

The Contract Data Sheet (CDS) will be printed for procurement items with the Receipt Control Document, appendix F-200, which is initiated by a receipt and Locator Inquiry action, appendix B-41 and B-102.

3. FREQUENCY

The CDS will be output for each Receipt and Locator Inquiry when matching Contract Data is available, or as required (reference appendix E-194 P, paragraph 4j).

4. DATA ELEMENTS

a. Report Header:

(1) Title - Contract Data Sheet - 3.

(2) TP NR - Teleprocessing Number assigned to the Receipt Control Document.

b. First line elements and data:

(1) PIIN - Procurement Instrument Contract Number

(2) SPIIN - Supplementary Procurement Instrument Control Number

(3) CLIN - Contract Line Item Number

(4) ADM - The Contract Administration Office (CAO) Code

(5) VEND - Prime Contractor Code

(6) FPI - Indicator that fast pay provisions apply to the PIIN.

(7) ACI - Automatic Contract Indicator

(8) MGR - Commodity Manager Code

(9) PAY - Payment Code

(10) MGT - Management Code

(11) QUP - Quantity of Unit Pack.

(12) DATE RCVD - Date Received Recorded on the RCD.

c. Second line elements and data:

(1) NSN - National Stock Number

(2) PU - Purchase Unit

(3) QUANTITY - The item quantity to be received per contract requirements.

(4) CONV FACTR - The data element necessary to convert the stock unit of issue to purchase unit of isue.

(5) QUANTITY RANGE - A set of high (+) and low (-) quantities which are acceptable per stated contract terms. The figures incorporate the allowable deviation as stated in the contract. Quantity variance code, reference appendix A-113. Note: The $100.00 excess quantity clause will be mechanically incorporated into the quantity range figure for all contracts.

(6) QV CD - The three digit Quantity Variance Code contained in the contract and used to calculate the acceptable high-low quantity range, reference appendix A-113.

(7) PRICE - The CLIN unit price.

d. Third line elements and data:

MIL STD 726-Common inspection standards applicable to the purchased item.

e. Subsequent elements and data:

(1) PACKAGING DATA 1 - The packaging, packing, preservation and marking references applicable to this NSN or FSC. This element will appear when recorded in the Procurement Technical Data File.

(2) PACKAGING DATA 2 - A further definition of the packaging, packing, preservation and marking references applicable to this NSN or FSC. This element will appear when recorded in the Procurement Technical Data File.

(3) PACKAGING DATA FIELD D - The Introductory Clause Book Statement which applies to the managing DSC. Also data which further defines the packaging, packing, preservation and marking references for the NSN or FSC. This element and/or data will appear when recorded in the Procurement Technical Data File.

(4) PURC FSCM - The Purchase Federal Supply Code for manufacturers.

(5) PURC PT NR - The Purchase Part Number.

(6) Receipt History for:

(a) The specific Contract Line Item Number (CLIN) to which the Contract Data Sheet applies. This CLIN was specified in the receipt inquiry or was selected from the PMR file based upon the NIIN entered in the Receipt and Locator Inquiry.

(b) The number of receipts (partials) which have been received and confirmed. These partial receipts do not represent the total contract quantity and, therefore, are an active history of the CLIN receipts to date. Display selected Materiel Receipt Confirmation Card (MRC) information of past receipts transmitted to the DSC under DIC D4_.

(c) If three receipt histories are shown, receipt data may exist; therefore, inquire for full Receipt History.

(7) The final message line may indicate "Partials on File" when the Suspended Receipt File shows receipts which have a like NIIN, PIIN/SPIIN and CLIN recorded.

5. DATA ORGANIZATION

a. The Contract Data Sheet may display information from three sources.

(1) Contract Data.

(2) Completed Receipt History record.

(3) Receipt Suspense File - Message "Partials on File".

b. The CDS will be output following a related Receipt Control Document.

6. DISTRIBUTION AND NUMBER OF COPIES

The Data Sheet will be produced in two copies. All copies, together with the Receipt Control Document, will be forwarded to the Receipt Inspection Branch for appropriate action.

7. PROCEDURE

a. The Receipt Inspector will use the Contract Data Sheet to inspect and verify that the received item complies with contract specifications and requirements. Detailed receipt procedures are to be found in appendix E-047 P.

b. If more than three partials are indicated as being received and confirmed or the "Receipts In Process" indicates additional suspended receipts activity, the inspector will request the necessary information via a Completed Receipt History Inquiry, appendix B-69, or Suspended Receipts File Inquiry, appendix B-146, to complete receipt inspection.

c. The Contract Data Sheet will be used for receipt inspection. When this purpose is accomplished, the CDS shall be destroyed.

APPENDIX F-203

CONTRACT AUDIT REPORT

1. PURPOSE

To provide a regular periodic report of mechanically completed and selected outstanding contract records for review to assist in the management of hard copy contract files. To record delete actions when performed by the DSC or local depot input.

2. ORIGIN

The Contract Audit Report is prepared as a product of the review of Contract Data for those item managers submitting data via appendix B-31, i.e., Item Managers C, E, I, G or M.

3. FREQUENCY

a. Part 1, monthly.

b. Part 2, daily, as necessary.

4. DATA ELEMENTS

a. Part 1

(1) Report header which includes:

(a) Report Number (F-203 part 1)

(b) Title: Contract Audit Report PIINs Transferred to History.

(c) Section Number

(d) Purge Date: A date 90 days in the future (YYDDD).

(e) Date: Current month, day, year and Julian date.

(2) Data Elements:

(a) PIIN - Procurement Instrument Identification Number of the completed contract for this report period.

(b) SPIIN - Supplementary Procurement Instrument Identification Number

(c) NSN - National Stock Number

(d) CLIN - Contract Line Item Number

best copy available

(e) QUAN ORDERED - The Contract Line Item Quantity

(f) ISSUE QTY RCVD - The quantity received/reported in issuable status.

(g) PMRR EDD - This date will only appear when either the contract has been removed due to inactivity, the last matching PMRR has expired with additional PMR update or contract activity has been received. The message NO CONTRACT DATA will appear if the line represents only delinquent/expired PMR data.

(h) A/R - Acceptance Report Indicator. Entry of Y in this area indicates acceptance reporting was applicable on this contract.

(3) Contract Data Summary:

(a) PIINs Completed/Deleted (Report Month).

(b) PIINs Active (Report Month).

(c) PIINs Active for Non-Issuable Receipt Conditions (Report Month).

b. Part 2

(1) Report header which includes:

(a) Report Number: F-203 part 2

(b) Title: Contract Audit Report, PIINs/CLINs Canceled.

(c) Section Number

(d) Date: Month, day, year and Julian date.

(2) Data Elements:

(a) PIIN - Procurement Instrument Identification Number.

(b) SPIIN - Supplementary PIIN only (for canceled blanket purchase agreements).

(c) CLIN - Contract Line Item Number.

(d) ISSUABLE QTY RCVD - Quantity received and reported prior to cancellation action.

(e) NON-ISSUABLE QTY RCVD - Quantity suspended in Condition Code L.

(f) CANCELLATION DATE - Date record was canceled by DSC action or deleted by local receipt activity.

(g) SOURCE - The Action Code 1 for DSC originated deletes or 4 for local deletes per appendix B-31.

5. DATA ORGANIZATION

a. Header followed by detail data arranged in columns under data element headings, both parts.

b. Page break by Manager and/or PIIN terminal digits.

c. Sequence by PIIN or PIIN terminal digits.

d. Single space for data elements (CLIN) within PIIN; double space between PIINs.

6. DISTRIBUTION AND NUMBER OF COPIES

One copy each part to Receipt Documentation Branch, Receiving Division, Directorate of Storage and Transportation.

7. PROCEDURE

a. F-203 Part 1

(1) The PIINs identified on the report are matched to the hard copy contract file. Matching hard copy contracts or receipt documents are removed from active status and retired to the Completed Contract File. Conduct monthly review of completed contract file and on the purge date remove and retire hard copy contracts and destroy F-203 part 1 listing, retaining only those contract records as required IAW appendix E-017 P.

(2) PMR records appearing on the report are for reference only. Excessive appearance of this PMRR data may indicate loss of Contract Data through excessive rejects or other problems. Investigation should be initiated.

b. F-203 Part 2

(1) Review canceled lines for indication of quantities received in Condition Code L or non-issuable status.

(2) Ensure that all reclassification action for suspended receipts is completed.

(3) Ensure that final A/R (Acceptance Report) action has been accomplished by review of the appropriate Acceptance Data Action Report, appendix F-204.

(4) File with part 1 for remainder of 90 day history retention period.

c. The depot has the option of how this report is sequenced. The options are to sequence either by entire PIIN or by the last two digits of the PIIN. DS/T is responsible for notifying the Office of Data Systems of the sequence option selected.

APPENDIX F-204

ACCEPTANCE ACTION INQUIRY REPORT

1. PURPOSE

This report is produced to furnish all available data required to research and manually prepare an Acceptance Report when the following conditions occur:

a. Conversion Factor is missing. The Contract Purchase Unit is different than the item Unit of Issue. Therefore, the completed receipt item Unit of Issue quantity must be converted to Purchase Unit quantity to obtain the quantity accepted on the Acceptance Report.

b. An Acceptance Followup has been received which requests corrective action. A DIC PK5 with a Transaction Status Indicator, Code E, has been forwarded by the Contract Administration Office (CAO) to the storage activity. The appropriate response cannot be mechanically determined and manual research must be accomplished to identify, prepare and issue a correct report replay.

c. A DIC ZB0 or a DIC ZB1, General Purpose Receipt Inquiry has been prepared requesting NSN and Procurement Item Instrument Number (PIIN) information in accordance with appendix E-061 P. DIC ZB0 inquiries will generate A/A data responses via the F-204 report. DIC ZB1 inquiries will develop A/R data via this report. In addition to this, DIC ZB0 or ZB1 inquiries will continue to produce Prepositioned Materiel Receipt and Receipt History Report, respectively.

d. A procurement receipt, which has previously been documented on an interim A/R, is being reclassified. This applies to receipts held in Condition Code L which are being changed to Condition Code A as instructed by the item manager.

e. A procurement receipt confirmation has been prepared which matches an Acceptance Alert by PIIN and, if applicable, CLIN and/or SPIIN but does not match a Shipment Number and/or Shipment Number Suffix Code. A mechanical response cannot be prepared because of insufficient data. Manual research must be accomplished to identify and, if applicable, prepare and issue an Acceptance Alert reply.

f. An Acceptance Followup has been received with a Transaction Code of 2 or greater. The CAO previously issued a followup and failed to get a positive response. Manual research must be accomplished to identify, prepare and issue a correct report reply.

g. An Acceptance Alert/Followup has been received for which no matching Completed Receipt (history) or Prepositioned Materiel Receipt Card (PMRC) record exists. Lack of a PMRC and missing history will be grounds to prepare a Possible Transshipment Report. Manual research and reply will be required even if the subject of the A/A is not a transshipment.

h. A receipt requiring Acceptance Reporting has been processed with an Administering Location Code/Contract Administration Service Code (ADMCAS) incompatible with the code reflected in appendix D-69 and documented in DoD 4105.59-H, DoD Directory of Contract Administration Services Components, (Jan 81.) Manual preparation of the A/R is required.

i. The Prepositioned Materiel Receipt Record (PMRR), Management Code D or F, requires Acceptance Reporting but analysis of the contract reflects no Acceptance Report requirement. Entry of XXX in the Administering Location Code field has canceled automatic preparation of DIC PKN/P.

2. ORIGIN

An Acceptance Report cannot be mechanically prepared due to:

a. Lack of a conversion Factor or Quantity Variance Code.

b. An Acceptance Followup has been received which requests corrective action on a previously transmitted Acceptance Report.

c. A procurement receipt is being reclassified from Condition Code L to Condition Code A.

d. A receipt confirmation has been prepared not including a Shipment Number and/or Shipment Number Suffix Code which matches that of the Acceptance Alert.

e. An Acceptance Followup was received from the CAO who has previously submitted an Acceptance Alert and Acceptance Followup. This report also results from a General Purpose Receipt Inquiry (DIC ZB0 or ZB1).

f. The receipt process which does not require a Prepositioned Materiel Receipt Card, Materiel Receipt Card or Receipt History to process a receipt whose Procurement Instrument/Contract specifies only transshipment.

g. The Administering Location Code contained in the receipt confirmation reflected A/R Cancellation Code XXX or could not be automatically converted to the Contract Administration ADP Point DoDAAC required in A/R, DIC PKP/N, appendix B-134.

3. FREQUENCY

a. This report will not be produced on a regular schedule. Output will occur when one of the circumstances outlined in a paragraph is encountered.

b. A negative report will not be produced.

4. DATA ELEMENTS

a. A report Identification Header Line consisting of the following computer-generated elements:

(1) Report Number (F-204)

(2) Title

(3) Functional Routing Code

(4) Section Number

(5) Report Date: Month, day, year and Julian date

(6) Page Number

b. A message of Action Required Header Line consisting of one of the following messages:

(1) Acceptance Report Required - No Conversion Factor may reflect input transactions DIC ZV_, ZX_.

(2) Acceptance Report Correction Required.

(3) Inquiry Response - Information only for DIC ZB0 and ZB1 data requests.

(4) Suspend - Item Awaiting Reclassification.

(5) No Acceptance Report Prepared - Shipment Number Research Required.

(6) Acceptance Followup Received - Manual Response Required. (This message is used when an Acceptance Followup is received with a Transaction Status Code of 2 or greater and when the PU and UI do not match and the Quantity Variance Code is not available).

(7) Possible Transshipment - Manual response required.

(8) Acceptance Report Required - Administering Location Code exceeds table limits (DIC ZV_, ZX_ input transactions only).

(9) A/R Requirement Waived - DSC administered contract. This message will indicate, in most cases, that Automatic Acceptance Report output was canceled because a DCASR was not reflected on the contract as a payment office; therefore, no Acceptance Report is required. This report results directly from the entry of X fill in the Administering Location Code field of DIC ZV_/ZX_ IAW appendix E-108 P.

c. First Data Identification Header - Image of Acceptance Alert/Followup input or Acceptance Alert/Report information if generated for ZB0 or ZB1 inquiry response; see message line, paragraph 4b(3). If the report was generated by this receipt of an A/A, DIC PK5, the header will read Input Transaction. If the report was output as a result of a receipt confirmation when no Acceptance Alert was available, the header will reflect Input Transaction also except the DIC of the input will be ZV_ or ZX_ (paragraph 4b(1) and 4b(8) only).

(1) DIC - PK5, PKN, PKP or ZV_/ZX_

(2) PIIN - Procurement Instrument Identification Number

(3) SPIIN - Supplementary PIIN (call or order number)

(4) ADP PT - The DoDAAD Code of the Contract Administration Office.

(5) SHIP TO - DoDAAD Code of the consignee (depot).

(6) SHIP NR - The contractor/vendor number identifying the shipment.

(7) SFX - The Shipment Number Suffix.

(8) CLIN - Contract Line Item Number

(9) QTY - The quantity documented as shipped on the applicable shipping document, DD Form 250 or 1155.

(10) PU - Purchase Unit

(11) NSN - National Stock Number - DIC PK5 only.

(12) DT SHPD - The Date Shipped is the date (year, month, and day) reflected on the shipping document, i.e., DD Form 250 or Form 1155 - DIC PK5 only.

(13) QLY/AS - Quality Assurance Site Code indicates whether inspection will be destination (d) or source (s), DIC PK5 only.

(14) LD - Liquidated Damage Clause IAW appendix A-75, DIC PK5 only.

(15) CD - Cash Discount Contract will reflect a D, DIC PK5 only.

(16) QUAN ACC - The quantity reported as accepted, DIC PKN/PKP only.

(17) DC - Shipment discrepancy code, reference appendix A-74, DIC PKN/PKP only.

(18) ACP DT - The actual or estimated acceptance date, reference appendix A-76, DIC PKN/PKP only.

(19) DEL DT - Date offered or delivered, reference appendix A-76, DIC PKN/PKP only.

(20) TS - Transaction Status Indicator in accordance with appendix A-73.

(21) A/A DT - The year and Julian day the A/A or A/R followup, DIC PK5, was received. Only the last date of activity will be maintained.

(22) PREP DATE - The year and Julian day the A/R, DIC PKN/P, was prepared/transmitted to the DCASR. Applicable only for A/R responses, DIC PKN/P, to a general purpose receipt inquiry, appendix B-61. If multiple responses have been prepared for the same record, only the last date of activity will be retained.

d. Second Data Identification Header - Receipt/Contract Data (All records matching NIIN, PIIN, and SPIIN of input or receipt records for materiel awaiting reclassification).

(1) DIC D4_ - Represents the Materiel Receipt Card Document Identifier Code.

(2) TP NR - Teleprocessing Control Number

(3) QTY - The quantity of the confirmed/completed receipt action for the Unit of Issue.

(4) CND - Condition Code of RCC

(5) DT RCVD - Date received

(6) RCC DT - The Receipt Confirmation Date. A date RCC appeared on the Suspended Receipt File.

(7) MRC DT - Materiel Receipt Confirmation (MRC) date is the date the DIC D4_ was released to the Item Manager.

(8) DISCR - Discrepancy Code, in accordance with appendix A-26; identifies the discrepancy (if any) associated with the receipt line.

(9) SFX - Suffix, Alpha A through Z, identification indicating condition code split on original RCC or quantity exceeding 99,999 on the original RCC, thereby creating multiple MRC, DIC D4_ records.

(10) NSN - National Stock Number

(11) CLIN - Contract Line Item Number

(12) SHIP NR - Shipment number associated with the completed receipt action.

(13) SFX - The Shipment Number Suffix.

(14) PU - Purchase Unit, reference subparagraph c(10), recorded on the contract.

(15) CON FCT - Conversion Factor applied to the Unit of Issue quantity when the Unit of Issue differs from Contract Purchase Unit.

(16) UI - Unit of Issue.

e. Acceptance Report History Data Header (all records matchinng NIIN, PIIN and SPIIN of input or interim Acceptance Report produced for materiel awaiting reclassification). Not applicable for Inquiry response, paragraph 1c.

(1) DIC - PKN or PKP

(2) PIIN - Procurement Instrument Identification Number

(3) SPIIN - Supplementary PIIN (call or order number)

(4) ADP PT - The DoDAAD Code of the Contract Administration Office.

(5) SHIP TO - DoDAAD Code of the Consignee (depot).

(6) SHIP NR - The contractor/vendor number identifying the shipment.

(7) SFX - The Shipment Number Suffix.

(8) CLIN - Contract Line Item Number

(9) QTY SHIP - The quantity documented as shipped on the applicable shipping document, DD Form 250 or 1155.

(10) PU - Purchase Unit

(11) QTY ACC - The quantity reported as accepted.

(12) DC - Shipment Discrepancy Code, reference appendix A-74.

(13) ACP DT - The actual or estimated acceptance date, reference appendix A-76.

(14) DEL DT - Date offered or delivered, reference appendix A-76.

(15) TS - Transaction Status Indicator, reference appendix A-73.

(16) PREP DT - The year and Julian day the A/R, DIC PKN/P, was prepared/transmitted to the DCASR. Applicable only for A/R responses, DIC PKN/P, to general purpose receipt inquiry, appendix B-61. If multiple responses have been prepared for the same record, only the last date of activity will be retained.

f. Fourth Date Identification Header - Acceptance Report Entry. Not applicable for inquiry responses per paragraph 1c.

(1) DIC - Document Identifier Code will be ZKN or ZKP.

(2) The following items are extracted from the received Acceptance Alert or Followup. For detailed explanation, see paragraph c1 through 10.

(a) PIIN

(b) SPIIN

(c) ADP PT

(d) SHP TO

(e) SHIP NR

(f) SFX

(g) CLIN

(h) QTY SHIP

(i) PU

(3) QTY ACC - Document Clerk enters actual quantity accepted in accordance with appendix B-134.

(4) DISCR - Document Clerk enters appropriate Discrepancy Code in accordance with appendix A-74, when a difference between quantity shipped and accepted exists.

(5) MRC DT - Document Clerk enters the year and Julian date of item acceptance on the Materiel Receipt Card (MRC) in accordance with appendix B-134, paragraph 4d(7).

(6) DT RCVD - Document Clerk enters the year and Julian date representing the Date of Receipt in accordance with appendix B-134, paragraph 4d(5).

(7) TP NMBR - Document Clerk enters TP Control Nuumber for the receipt being reported as recorded in the Receipt History Record.

(8) STATUS - Document Clerk enters Code A, C, D or E as applicable, in accordance with appendix A-73 and B-134, Transaction Status Codes.

5. DATA ORGANIZATION

One Acceptance Action per page; a maximum of ten data lines for each header.

6. DISTRIBUTION AND NUMBER OF COPIES

Two copies of the report will be automatically prepared and forwarded by Data Systems to Receiving Division, Receipt Documentation Branch for action. A record of the completed manually-prepared Acceptance Report will be retained in the Acceptance Report History; therefore, a file copy will only be retained to correct F-85 report errors, if applicable.

7. REVIEW AND PROCESSING

a. This report is essentially comprised of three data groups and one coding display format.

b. The Acceptance Data is an image of the Alert or Followup requesting the preparation of an appropriate Acceptance Report in accordance with the manual procedure outlined in appendix E-094 P. In addition, the date the Alert or last Followup was received will also be displayed, i.e., YYDDD, 81103. Input transactions may also reflect receipt confirmation DICs ZV_/ZX_ when they contain Administering Location Codes in excess of the table limits (reference appendices D-69 and D-70) or the Administering Location Code field reflects XXX specifying a cancellation/waiver of the Automatic Acceptance Report. Cancellation of the Automated Acceptance Report must be supported by specifications reflected in the contract/active award documentation of other appropriate authority.

c. Receipt Contract Data is extracted from the completed Receipt History File and may display up to ten entries of related data.

d. The Coding Format of Acceptance Report entry is provided to assist the Receipt Document Clerk in preparing an applicable Acceptance Report based upon the research evaluation provided by the Contract and Receipt Data. The format will be partially machine prepared offering additional positions for the required Acceptance Report data defined in appendix B-134, Acceptance Report. The date the Acceptance Report was prepared and transmitted to the DCASR will also be reflected as a date of last activity. Multiple responses for one record will exhibit only the latest date of activity.

e. Detail Procedures for preparing the manual Acceptance Report are found in appendix E-094 P, Manual Preparation of Acceptance Reports.

f. Receipt History or PMR Inquiries will, in accordance with appendix E-061 P, generate A/A or A/R responses via appendix F-204. In these instances the balance of the F-204 report, second, third and fourth Identification Header Lines, will not be produced. This report is for information only. No input or corrective action is implied or requested.

g. A suspense copy of the F-204 report will be produced for each receipt (procurement only) which has been downgraded to a nonissuable condition (Condition Code L). This suspense copy will contain an image of the Completed Receipt History and interim Acceptance Report data together with the A/R coding

form, and is the report to be filed with the related documentation (SF 364, etc). The report will be used to document the A/R required if the receipt is upgraded to Condition Code A. The DIC ZKN should be prepared concurrent with the DIC DAC reclassification action. Prompt preparation of the A/R documenting acceptance of the receipt will permit mechanical responses to infloat/future A/A Followups.

h. Those receipt items with Prepositioned Materiel Receipt Management Codes D or F require Automatic Acceptance Reporting. However, when the Administering Location Code is X filled on the receipt confirmation, Automatic Acceptance Reporting requirements are waived. All of these records will appear under the report heading "A/A Requirement Waived - DSC Administered Contract" for final review to ensure that the Automatic Acceptance Reporting cancellation was justified. The listing will then be destroyed.

APPENDIX F-205

CONTRACT ACTIVITY/DATA RESPONSE

1. PURPOSE

a. To provide Contract Data or Contract Activity information for receipt inspection or management purposes via a CRT display format.

b. This report may be requested via remote terminal inquiry in either of the following displays:

(1) Part 1 will display only contract information relating to a particular PIIN. The display can be tailored, using required data inputs, reference appendix B-68, to offer specific NSN, Contract Line information or a total contract record (all NSNs and lines within the PIIN).

(2) Part 2 will display procurement as well as "other than" procurement receipt history. Procurement history will also reflect an Acceptance Report (A/R) output indicator together with the date of last activity. Inquiry options are outlined in appendix B-69, Completed Receipt Inquiry, and appendix B-61, General Purpose Receipt Inquiry (Detail Acceptance Report Data).

c. The display may be printed at the remote terminal for review or research purposes.

2. ORIGIN

The data will be produced at the remote terminal by an immediate mechanical review of the Recipt Contract or History File records.

3. FREQUENCY

As requested.

4. DATA ELEMENTS

a. F-205 Part 1.

(1) Title - Contract Data Response

(2) PIIN - Procurement Instrument Identification Number

(3) SPIIN - Supplementary Procurement Instrument Identification Number

(4) SDM - Administering Location Code, reference appendix A-110.

(5) FPI - Fast Pay Indicator

(6) MGR - DLA Commodity Manager Code, reference appendix A-44.

(7) CLIN - Contract Line Item Number

(8) NSN - National Stock Number

(9) PU - Purchase Unit

(10) QUANTITY - The quantity to be received per terms of the procurement document.

(11) RCVD ISS - The quantity already reported/received in Condition Code A or issuable.

(12) RCVD O/T - The quantity reported as received in other than issuable condition, i.e., Condition Code L receipts.

(13) PRICE - The unit price of a stock unit of issue.

(14) QUANTITY (HI-LO) RANGE - The quantity of stock that may be accepted over and/or under the stated contract quantity. Note: This high/low limit is determined mechanically using the quantity variance code and $50.00 excess quantity clause.

(15) QVCD - Quantity variance code, reference appendix A-113.

(16) MIL STD 726 - The Military Standard 726 reference specifying the preservation, marking, packing, etc., requirements for the purchase item. This element will appear when recorded in the Procurement Technical Data File.

(17) PACKAGING DATA 1 - The packaging, packing, preservation and marking references applicable to this NSN or FSC. This element will appear when recorded in the Procurement Technical Data File.

(18) PACKAGING DATA 2 - A further definition of the packaging, packing, preservation and marking references applicable to this NSN or FSC. This element will appear when recorded in the Procurement Technical Data File.

(19) PACKAGING DATA FIELD D - The Introductory Clause Book Statement which applies to the managing DSC. Also data which further defines the packaging, packing, preservation and marking references for the NSN or FSC. This element and/or data will appear when recorded in the Procurement Technical Data File.

(20) PURC FSCM - The Purchase Federal Supply Code for Manufacturers

(21) PURC PT NR - The Purchase Part Number

b. F-205 Part 2.

(1) Title - Completed Receipt Response

(2) PIIN or DOC NMBR - Procurement Item Identification Number if record represents procurement history; Document Number if record represents other than procurement item history.

(3) NSN - National Stock Number

(4) SPIIN - Supplementary PIIN (procurement only)

(5) HIST DT - Date PIIN (contract) was placed in history status. Entry not applicable to other than procurement records.

(6) CLIN/SUPADR - Contract Line Item Number (procurement response) Supplementary Address (other response).

(7) CND - Condition Code

(8) QUANTITY - Quantity indicated on the MRC.

(9) UI - Unit of Issue

(10) RCVDT - Date of Receipt.

(11) MRCDT - Date of Materiel Receipt Confirmation.

(12) PRD - Days in process between date of receipt and confirmation.

(13) SFX - Suffix Code

(14) CYC - DICOMSS Cycle Code

(15) DC - Discrepancy Code

(16) SHIP NO - Shipment Number

(17) S SFX - Shipment Number Suffix

(18) TP NMBR - Teleprocessing Control Number assigned to the receipt action.

(19) CI - Change indicator which will be the last position of the action code of the DIC ZEW record correction.

(20) A/R - Acceptance Report flag to indicate that an A/R was processed for the shipment.

(21) MGT - Management Code

(22) PREP-DT - The year and Julian date the last Acceptance Report was prepared and transmitted to the DCASR. Only the latest date of activity will be maintained.

5. DATA ORGANIZATION

a. The F-205 part 1 Contract Data display will provide PIIN details preceding the CLIN and NSN information. Only one CLIN description per display screen with options to review the total contract line item by line item. In addition, by inquiry option, a specific NSN or CLIN within the PIIN may be requested.

b. The F-205 part 2 Completed Receipt Response will provide an abbreviated receipts history inquiry response; required by CLIN within NSN and PIIN for procurement receipts. Record responses for Returns or Redistribution receipts will be displayed by Document Number and NSN; no sequence will be required. As with Contract Data, more than one display may be required to review the total Receipt History of the PIIN. A display screen may contain a single NSN and related line item records or multiple NSNs and associated records.

c. The message portion of the Contract Data Response (part 1) may indicate the following conditions:

(1) ADDNL CLINS AVAIL - If more than one CLIN is recorded for the PIIN or Contract Record.

(2) ADDNL CLINS AVAIL THIS NIIN - More than one CLIN is available on the PIIN/NIIN inquired.

(3) PIIN/NIIN REQ NOT AVAIL - The record requested is not available on the Contract Data File. If neither is available, the inquiry will be rejected with the message NO MATCHING RECORD. Reference appendix B-68.

d. The Completed Receipt Response, part 2, will display messages as in paragraph 5c(1) and (2) only when the inquiry, reference appendix B-69, involves a procurement receipt.

6. DISTRIBUTION

The applicable report format will be produced as a CRT display with provisions for printing a single hard copy at the terminal (if equipped for this purpose). The report will be used by Receiving Division personnel of the Inspection and Receipt Documentation branches.

7. PROCEDURE

a. Prepare the appropriate inquiry format as outlined in appendix B-68 or B-69.

b. Review the display and, when necessary, select the appropriate page for hard copy print. Contract Data may be large enough to require multiple displays to output total information.

c. The hard copy will be destroyed after review is concluded.

APPENDIX F-210

SEAVAN LOAD PLAN

1. PURPOSE

This report provides information about SEAVAN Loads which have been mechanically planned. Section 1 provides information about compatible SEAVAN Loads to a single destination. Section 2 provides load plans by booking group. This portion consolidates less than van load shipments into loads by booking group.

2. ORIGIN

This report is produced during operation of the SEAVAN Load Plan Function.

3. FREQUENCY

Daily

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-210)

(2) Title - SEAVAN Load Plan

(3) FRC - Functional Routing Code

(4) Section Number

(5) Date - Month, day, year and Julian date

(6) Page Number

b. Section 1 - Loads by Destination AAC (see figure 1)

(1) Destination Activity Address Code - DEST

(2) Precedence Group Code - PREC

(3) Special Requirements Code - SR

(4) Type Cargo Group Code - C/GRP

(5) Compatibility Code - COMP

(6) Water POD Code - WPOD

(7) SEAVAN Size/Type - SZ/TY

(8) Total Planned MROs - TOT LINES

(9) Total Planned Cube - TOT/CU

(10) Total Planned Weight - TOT WT

(11) Must Plan Van Indication - MUST PLAN VAN

(12) Lines, Weight, Cube by Precedence Group - LINES, CUBE, WEIGHT

(13) Booking Group - BKNG GR

(14) Stop Number - STOP NR

(15) Predominant RDD - PRDT RDD

(16) DICOMSS MROs - LINES

(17) DICOMSS Cube - CUBE

(18) DICOMSS Weight - WEIGHT

(19) Other MROs - LINES

(20) Other Cube - CUBE

(21) Other Weight - WEIGHT

(22) In-Process - MRO LINES

(23) In-Process Cube - CUBE

(24) In-Process Weight - WEIGHT

(25) Hazardous Cargo by type cargo code occurs up to 25 times per load.

(a) Type Cargo Code - TC

(b) MROs - LINES

(c) Cube - CUBE

(d) Weight - WEIGHT

(26) Total Hazardous Cargo.

(a) MROs - LINES

(b) Cube - CUBE

(c) Weight - WEIGHT

(27) Warehouse information by Location Group Code. Occurs up to 36 times per load.

(a) Location Group Code - GP

(b) MROs - LINES

(c) Cube - CUBE

(d) Weight - WEIGHT

c. Section 2 - Loads by Booking Group (see figure 2)

The data elements remain the same as identified for section 1 (Loads by Destination AAC), with the following exceptions.

(1) Section 2 uses the element BKG GP (booking group) in lieu of the element DEST. The booking group code is displayed as a four position code, the first two of which are 99 (program constant); and the second two the booking group code.

(2) The following stop information elements are provided in addition to the elements identified for section 1.

(a) St No - STOP NUMBER

(b) Lines - STOP LINES

(c) Cube - STOP CUBE

(d) Weight - STOP WEIGHT

5. DATA ORGANIZATION

a. Report Header: Print report header, first line to start each page.

b. Other Headers: Print once for each load plan.

c. Page eject for each change of load.

d. Sequence:

(1) SEAVAN Load Plan (by Destination)

(a) Load Accumulation Key - (Major).

1. Destination

2. Special Requirement

3. Precedence

4. Cargo Group Code

5. Compatibility Code

(2) SEAVAN Load Plan (by Booking Group).

(a) Destination (Major)

(b) Load Compatibility (Intermediate)

1. Special Requirement Code

2. Precedence Code

3. Cargo Group Code

4. Compatibility Code

6. DISTRIBUTION AND RETENTION

a. Three copies to Shipment Planning.

b. Retention: All three copies are for planning and control purposes. Destroy upon completion.

7. PROCEDURES FOR REVIEW AND PROCESSING

This product is used to determine which SEAVAN Loads will be released. This product is also used as a source of information required for requesting MTMC releases.

APPENDIX F-211

SEAVAN TCMD LISTING

1. PURPOSE

The TCMD listing is used as a waybill in lieu of a GBL for SEAVAN shipments with origin service Code M through GBL. This report is also used by the depot to answer any inquiries from the Water Terminal Clearance Authority (WTCA) about transcieved TCMD data. A TCMD listing is prepared for each SEAVAN shipped.

2. ORIGIN

Appendix B-274, SEAVAN TCMD/CONSIST Update/Print Request.

3. FREQUENCY

Randomly, as required.

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-211)

(2) Title - SEAVAN TCMD listing

(3) Date - Month, day, year and Julian date

(4) Page Number

b. Address Data

(1) Shipped From - DoDAAC and clear text address of shipper.

(2) POE - POE Code and clear text address of POE.

(3) POD - POD Code and clear text address of POD.

(4) Ultimate Consignee - DoDAAC and clear text address of Destination AAC, if the van is a full load to a single destination. If the SEAVAN Load is for a booking group output the words STOP-OFF SEAVAN in lieu of address.

c. Load Information

(1) Load Number - LOAD NR

(2) SEAVAN TCN - SEAVAN TCN

(3) SEAVAN Size - VN SZ

(4) Vessel Name - VESSEL NAME

(5) Steamship Line Name - SHIP LINE

(6) Ship Sailing Date - SAIL DT

(7) Estimated Time of Arrival at POE - ETA

(8) Carrier Code to POE - CARR

(9) SEAVAN Number - SEAVAN NR

(10) SEAVAN Owner - OWNER

(11) Total Weight - TOT WGT

(12) Total Cube of Contents - TOT CUBE

(13) SEAL NUMBER - Seal Number

(14) HAZARDOUS MATERIALS INFORMATION

(a) PCS - Number of pieces

(b) TP - Type of container

(c) DESCRIPTION - Hazardous Description

(d) WGHT - SU Weight

(e) CUBE - SU Cube

(f) UN NR - UN Number

(g) CL - Class

(h) TCN - Shipment Unit TCN

(i) In-the-clear hazardous certification; plus name of certifying official, facility address, and commercial telephone number.

(15) 80-column images of SEAVAN TCMD T_2 and trailer information cards.

d. SEAVAN Content Information

80-column images of Shipment Unit TCMDs and trailer information cards.

5. DATA ORGANIZATION

a. Report Header: Print report header, first line to start each page.

b. Address Data: Print once on the first page of the report.

c. Load Information: Print once immediately following address data. Sequence 80 column image of SEAVAN TCMD and trailer cards by Document ID (positions 1-3) major and card sequence number (position 80) minor.

d. SEAVAN Content Information: Sequence all SU TCMDs and trailers by second position of Document ID/TCN (positions 30-46) major, Document ID (positions 1-3) intermediate, and card sequence number (position 80) minor. Print and double space on TCN change.

6. DISTRIBUTION AND RETENTION

a. Three copies printed on a remote printer.

(1) One copy placed in a water-proof envelope and attached inside the door of the SEAVAN.

(2) One copy is signed by the carrier representative and retained as proof of shipment and to answer WTCA inquiries.

(3) One copy provided to the vehicle driver to be used as a waybill.

b. Retention

One copy filed by Transportation for 90 days.

UNF211 SEAVAN TCN LISTING DATE 05 02 88 123 PAGE 1

APPENDIX F-212

SEAVAN LOAD LIST

1. PURPOSE

Provide a list of MROs configured in a SEAVAN Load which will facilitate:

a. Pick, pack and assembly information and control.

b. Physical loading of the van.

c. Reporting discrepancies, stock shortages, cancellation actions accomplished, load reconfiguration and missing essential data elements to shipment planning/data entry personnel.

2. FREQUENCY

In conjunction with each output of SEAVAN shipping documentation.

3. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report number and title

(2) Functional Routing Code

(3) Section number

(4) Report date

(5) Page number

b. Data elements (first heading line):

(1) LOAD NO - SEAVAN load number.

(2) MDD - Mandatory Departure Date. The date the SEAVAN must depart the depot to meet the vessel sailing date. It is input as part of the workload release request.

(3) TOT LINES - Total number of MROs in the SEAVAN load.

(4) PIECES - Total number of pieces in the SEAVAN load.

(5) WEIGHT - Total weight for the SEAVAN load.

(6) CUBE - Total cube for the SEAVAN load.

(7) SEAVAN NUMBER - SEAVAN trailer identification number.

(8) VAN OWNR - Owner of SEAVAN trailer.

(9) SZ - Trailer length in feet.

(10) VAN LOC - Location of the SEAVAN.

(11) CONSIGN - Requisitional consignee.

(12) TP - Transportation Priority.

(13) RDD - Required Delivery Date of the MRO containing the earliest RDD.

(14) TUASSY - Load assembly area if same for all SUs.

c. Data Elements (Second Heading Line for each location group):

(1) LGC - Location Group Code

(2) LINES - Total MROs for this location group.

(3) PIECES - Total estimated pieces for this location group.

(4) WEIGHT - Total weight planned for this location group.

(5) CUBE - Total cube planned for this location group.

d. Data Elements (report content header line):

(1) HZ - Type cargo of hazardous MROs (A, C, F, G, I, J, K, L, N, O, P, R, S, T, V, W, X, or Y).

(2) SU NUMBER - Shipment Unit Number

(3) CD - Shipment unit check digit.

(4) LINE - Shipment unit line item sequence number.

(5) R by line if MRO is a Replan, R* by line if MRO is TCN.

(6) NATL STOCK NBR - National Stock Number (NSN) of materiel to be shipped.

(7) LOCATION - Warehouse storage location of materiel.

(8) CYC - Cycle code for cycle of materiel ordered.

(9) PCS - Total number of cases/containers of stock to be selected based on unit pack and quantity ordered.

(10) UPK - Unit pack - The number of individual units of materiel per case.

(11) QTY - Total quantity of materiel units ordered.

(12) CMP - Compatibility group code of materiel to identify consolidation/exclusion with other types of materiel.

(13) SEQ - Loading sequence of consignees to be loaded in the van, i.e., last consignee to be off-loaded is 01, second to last is 02, etc.

(14) DEN - Density Code. A equals 00 to 15 pounds per cubic foot, B equals 15.01 to 35 pounds per cubic foot, and C equals 35.01 or over pounds per cubic foot.

(15) LI WT - Total weight of this MRO.

(16) LI CU - Total cube of this MRO.

(17) TUASSY - TU Assembly Area for this S/U.

(18) SUASSY - SU assembly area.

(19) ACTION - The action code (appendix A-42) to deny or cancel (partially or totally) requisitioned quantities (manually annotated).

(20) QTY SHP - Total units quantity shipped. Manually annotated only if different from quantity ordered. Must be accompanied with a corresponding appropriate action code entry.

(21) DEN/CAN - Total units quantity denied by warehouse refusal or canceled by cancellation notification from the ICP. Must be accompanied by a corresponding action code entry (manually annotated).

4. DATA ORGANIZATION

a. A separate SEAVAN Load List will be prepared for each load.

b. Major sequence will be by Location Group Code; minor sequence by Shipment Unit/Line Item Number.

c. Page break for each Location Group Code.

5. PROCEDURE

a. The SEAVAN Load List will be output for each SEAVAN load. It will be forwarded to stock selection areas and be used as a control for MROs in the stock selection process. DS/T personnel will annotate the list with denial/cancellation data as appropriate and forward the list with MROs and materiel to the load assembly area indicated.

b. Outloading personnel will load the van in the sequence indicated if applicable, annotate materiel not loaded, any available data not indicated in the header line of the list, such as seal number, etc., and/or correct any erroneous data listed. The load list with applicable copies of the MRO will then be forwarded to transportation personnel.

c. Transportation personnel will review load list copies for completeness, annotate remaining missing data (i.e., GBL, carrier, date shipped) and forward the list to data entry.

d. Data input will update MRO in-process records with annotated data via remote entry devices to facilitate machine production of a Consist (F-62) and Transportation Control and Movement Documents (TCMDS).

APPENDIX F-213

SEAVAN EQUIPMENT/MTMC RELEASE MISSING DATA REPORT

1. PURPOSE

Provides information to Storage and Transportation personnel when a SEAVAN load is released from the SEAVAN Workload Bank and necessary SEAVAN Equipment or MTMC release data is not available for the destination in the Release Data or SEAVAN Equipment Pool Files.

2. FREQUENCY

Whenever necessary data is unavailable on MRO documentation for a SEAVAN load.

3. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report number (F-213)

(2) Functional Routing Code

(3) Section Number

(4) Report date

(5) Page number

b. Data Elements:

(1) DESTINATION - Activity Address Code of SEAVAN destination.

(2) LOAD NR - Number assigned to load.

(3) RDD - Earliest Required Delivery Date of MROs configured in the shipment.

(4) RELEASE - "NO" when MTMC release data is not available in the MTMC release file; "YES" when data is available but equipment (VAN) data is unavailable.

(5) VAN - "NO" when SEAVAN Equipment Pool Data is not available at the time the load is released from the workload bank.

c. The following entries will be printed on the report when only release data is available.

(1) VAN NO - SEAVAN serial number (manually annotate)

(2) OWNER - SEAVAN owner

(3) SIZE - SEAVAN length

(4) TYPE - SEAVAN type, i.e., refrigerated, etc.

(5) CUBE - Net cubic capacity of van.

(6) LOC - Warehouse location where van is to be spotted (manually annotate).

(7) CARRIER - Line haul carrier to POE where known.

4. PROCEDURE

a. MTMC Release. Upon receipt of the report Storage and Transportation planners will determine and obtain release data from MTMC (normally by telephone). Upon receipt of data, input necessary elements via remote entry device (appendix B-278) to the In-Process Load Control File.

b. SEAVAN Equipment. Upon receipt of the report Storage and Transportation planners will determine if suitable equipment is available but not recorded in the data file or make arrangements to obtain necessary equipment. Upon receipt of the equipment, pertinent data may be manually annotated in the data fields of the report to be subsequently input to the In-Process Load File via remote entry device (appendix B-278). All of the above processes should be completed prior to internal load processing completion to be available for final load documentation.

c. The report may be destroyed when each entry has been accomplished.

APPENDIX F-214

SEAVAN IN-PROCESS MRO(S) NOT ASSIGNED TO A LOAD

1. PURPOSE

This report indicates MROs which are in-process and are not assigned to a SEAVAN load. All MROs not assigned to a SEAVAN load which have a release date greater than three days old and have not been designated for replanning will appear on this report.

2. ORIGIN

This report is produced during the daily in-process review function.

3. FREQUENCY

Daily

4. DATA ELEMENTS

a. Report header line which includes:

(1) Report Number (F-214)

(2) Title - SEAVAN In-Process MROs Not Assigned to a Load.

(3) FRC - Functional Routing Code

(4) Date - Month, day, year and Julian date

(6) Page Number

b. MRO Details:

(1) Shipment Unit Number - SU NR

(2) Line Item Number - LI NR

(3) MRO Image - MRO

(4) Location Group Code - LGC

(5) First Warehouse Location - LOCATION

5. DATA ORGANIZATION

a. Report header: Print report header, first line to start each page.

b. MRO Detail header: Print once each page.

c. Sequence: SU Line Item Number.

6. DISTRIBUTION AND RETENTION

a. Two copies to Shipment Planning.

b. All copies are for research purposes. Destroy upon completion.

7. PROCEDURES FOR REVIEW

Review should be taken to determine action required to complete MRO, i.e., replan, deny, confirm shipped outside SEAVAN, add to an in-process load, etc.

APPENDIX F-215

SEAVAN MRO MISSING DATA REPORT

1. PURPOSE

This report provides a listing of MROs which are missing essential data elements required to complete shipment planning. MROs missing essential shipment planning data are suspended in the SEAVAN process until the data is added. MROs missing addresses are printed on the list but are not suspended from processing.

2. ORIGIN

This report is produced during the MOWASP interface and MRO merge function.

3. FREQUENCY

Daily.

4. DATA ELEMENTS

a. Report header line which includes:

(1) Report Number (F-215)

(2) Title - SEAVAN MRO Missing Data Report

(3) FRC - Functional Routing Code

(4) Date - Month, day, year and Julian date

(5) Page Number

b. MRO Details:

(1) MRO Image - MRO

(2) DICOMSS Flag - DICOMSS

(3) Missing Data

(a) Materiel Location - LOC - See paragraph 7, Procedures for entry meaning.

(b) MRO Weight - WGT

(c) MRO Cube - CUBE

(d) Case/Unit Pack - PACK

(e) Water Commodity Code - WC

(f) Location Group Code - LGC

(e) Type Item Code - TIC

(g) Missing Address Flag - MISSING ADDRESS

5. DATA ORGANIZATION

a. Report Header: Print report header, first line to start each page.

b. MRO Detail Header: Print once each page.

c. Sequence: NSN major, Document Number/Suffix minor.

6. DISTRIBUTION AND RETENTION

a. Two copies to Shipment Planning Function.

b. All copies are for research purposes. Destroy upon completion.

7. PROCEDURES FOR REVIEW

a. Research first those MROs that have been on the report longest (see LOC column). If an asterisk (*) appears in the LOC column, it indicates a NO LOC situation exists which occurred after the MRO was received, so an automated denial will not be generated, but it must be researched in order to clear it from suspended status. If a number appears in the LOC column, it indicates all of the following:

(1) A NO LOC situation existed at the time the MRO was received.

(2) The number of days the MRO has been on thee report.

(3) An automated denial will be generated after the MRO has been on the report beyond the automatic denial parameter established by the depot.

b. Search for missing shipment planning data and add to the MRO record using SEAVAN MRO Document Number Inquiry/Update, appendix B-255. Data should also be added to the MOWASP Locator File.

c. Add missing addresses to the MOWASP Address File.

APPENDIX F-216

SEAVAN TRANSSHIPMENT ERROR LIST

1. PURPOSE

This report provides a listing of transshipment TCMD data that was invalid. Errors that are detected will be flagged and the TCN printed with the appropriate errors.

2. ORIGIN

Report is produced as a result of processing appendix B-281, SEAVAN Advance Transportation Control and Movement Documents for Transshipments.

3. FREQUENCY

Daily

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-216)

(2) Title - SEAVAN Transshipment Error List

(3) FRC - Functional Routing Code

(4) Date - Month, day, year and Julian date

(5) Page Number

b. Data elements (first heading line):

(1) TCN - From TCMD

(2) MESSAGE - Error Message

5. DATA ORGANIZATION

a. Report Header - Print report header, first line to start each page.

b. TCMD Data Header - Print once each page.

c. Sequence - TCN

6. DISTRIBUTION AND RETENTION

a. Two copies to Shipment Planning Function.

b. All copies are for research purposes. Destroy upon completion.

7. PROCEDURES FOR REVIEW

Review should be taken to determine action required based on error message. If update of TCMD transaction is required, it will be accomplished in accordance with appendix B-283.

APPENDIX F-217

SEAVAN SUSPENDED MRO(S)

1. PURPOSE

This is a three part report that provides a listing of MROs that are under inventory. Part 1 is a listing of DICOMSS MROs that are undocumented. Part 2 is a listing of commodity manager MROs that are undocumented. Part 3 is a listing of DICOMSS or manager MROs that have been released.

2. ORIGIN

This report is produced as a result of MROs with cycle codes that match SEAVAN DICOMSS cycle codes that are under inventory or MROs with a commodity manager code that matches SEAVAN commodity manager codes that are under inventory (reference appendix B-277, table 5).

3. FREQUENCY

As required.

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-217)

(2) Title - SEAVAN Suspended MROs

(3) FRC - Functional Routing Code

(4) Date - Month, day, year and Julian date

(5) Page Number

b. Part 1, Undocumented DICOMSS MRO Data.

(1) NSN - From MRO

(2) Quantity By Cycle - From MRO.

(3) Total Qty - Sum of quantity by cycle.

c. Part 2, Undocumented Commodity Manager Data.

(1) Commodity Manager - From MRO.

(2) Number of Lines - Total number of lines suspended by Commodity Manager.

d. Part 3, MROs Released.

(1) Load - Load that was assigned to MRO.

(2) SU Line - Shipment Unit assigned to MRO.

(3) Open Qty - Quantity from MRO In-process File.

5. DATA ORGANIZATION

a. Report Header - Print report header first line to start each page.

b. Part 1 Header - Print once each page, sequence by NSN.

c. Part 2 Header - Print once each page, sequence by Commodity Manager.

d. Part 3 Header - Print once each page, sequence by Load - major, SU/LI - minor.

6. DISTRIBUTION AND RETENTION

a. Two copies to DICOMSS Inventory Function.

b. Two copies to Warehouse Inventory Function.

c. All copies are for research purposes. Destroy upon completion.

7. PROCEDURES FOR REVIEW

a. Part 1 identifies the total residual MROs by DICOMSS cycle that are obligated in the bank. This total will be used to adjust the inventory count to reflect an accurate inventory count.

b. Part 2 identifies the number of total residual MROs by commodity manager that are being suspended in the bank during inventory.

c. Part 3 identifies those MROs that have been released and are in-process.

APPENDIX F-218

SEAVAN UNMATCHED TRANSACTION REPORT

1. PURPOSE

To identify abnormal conditions that need manual corrective action taken. These conditions would be weights or cubes that are too large for machine planning, SU lines with no load records, load records with no lines, etc.

2. ORIGIN

This report is produced as a result of conditions that have the potential to cause the SEAVAN batch processing to abend with a program error. Most programs in the ASSP Batch Processing can have input to the report.

3. FREQUENCY

As required.

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-218)

(2) Title: SEAVAN Unmatched Transaction Report

(3) FRC - Functional Routing Code

(4) Date - Month, day, year and Julian date

(5) Page Number

b. MRO Detail Line:

(1) SEAVAN DOCUMENT NUMBER

(2) LOAD

(3) SHIPMENT UNIT

(4) LINE

(5) STATUS

(6) MESSAGE

(7) PROG ID - Program Identification

5. DATA ORGANIZATION

a. Report Header: Print report header, first line to start each page.

b. MRO Detail Header: Print once each page.

c. Sequence: Program ID major, shipment unit intermediate, document number minor.

6. DISTRIBUTION AND RETENTION

a. Two copies to Shipment Planning.

b. All copies are for research purposes. Destroy upon completion.

7. PROCEDURES FOR REVIEW

Review each message and take the appropriate action needed.

a. The following messages will require that Data Systems be contacted for research of the SEAVAN Files.

(1) NO SHIPMENT UNIT ON LOAD.

(2) SU UNMATCHED TO LI RECORD.

(3) LI UNMATCHED TO SU RECORD.

(4) UWTS110G TRANS - NO MATCH TO INPROCESS REC.

(5) LINE ITEM RECORD WITH NO MATCHING SHIPMENT UNIT RECORD.

b. The following messages are for user information as to computer action taken.

(1) LOAD RECORD DROPPED DUE TO LOAD RE-CYCLE.

(2) LOAD RECORD DROPPED - NO LINES ON LOAD.

(3) LINE DROPPED - 360 DAYS PAST DATE RECEIVED.

(4) LINE MOVED TO LOAD ZERO.

(5) LINE MOVED TO LOAD ZERO - NO LOAD RECORD.

(6) LOAD RECORD DROPPED - NO SU ON LOAD.

(7) MRO WGT GREATER THAN VAN CAPACITY - DROPPED/LOAD PLAN. This message indicates that either the MRO case weight exceeds the van capacity or this is a replan MRO that exceeds the van capacity. Replan MROs cannot be split.

(8) MRO CUBE GREATER THAN VAN CAPACITY - DROPPED/LOAD PLAN. This message indicates that either the MRO case cube exceeds the van capacity or this is a replan MRO that exceeds the van capacity.

APPENDIX F-219

SEAVAN SPECIAL PROJECT LISTING

1. PURPOSE

This report provides a listing of those MROs that have project codes requiring special handling.

2. ORIGIN

This report is produced as a result of MROs with project codes that match the project codes that need special handling (reference appendix B-277, table 05).

3. FREQUENCY

As required.

4. DATA ELEMENTS

a. Report Header line which includes:

(1) Report Number and Title

(2) Functional Routing Code

(3) Section Number

(4) Report Date

(5) Page Number

b. Data Elements (first header line):

(1) DESTINATION - Destination Activity Address Code

(2) PROJECT - Project Code

(3) DOCUMENT NR/SUF - Document Number/Suffix

(4) NSN - National Stock Number

(5) QTY - Quantity

(6) WEIGHT

(7) CUBE

5. DATA ORGANIZATION

a. Report Headers: Print report header and first line to start each page.

b. Page eject for each destination and project code change.

c. Sequence:

(1) Destination - Major.

(2) Project Code - Intermediate.

(3) Document Number - Minor.

6. DISTRIBUTION AND RETENTION

a. Three copies to Shipment Planning.

b. Retention: All copies are for planning and control purposes. Destroy upon completion.

APPENDIX F-220

CARRIER PERFORMANCE INTRANSIT ANALYSIS REPORT

1. PURPOSE

Provide detailed and summary reports of transit times by carrier, mode, or destination to monitor and evaluate performance, and select mode of shipment which is most responsive and economical in support of ultimate consignee.

2. ORIGIN

Listings are produced as a result of processing appendix B-2.

3. FREQUENCY

a. Parts 1, 2, 3, 4 and 5 as requested.

b. Part 6 is produced as violations occur during processing.

4. FORMAT

These reports are prepared in six parts.

a. Part 1, Detail Performance Analysis by Destination

b. Part 2, Detail Performance Analysis by Carrier

c. Part 3, Section 1, Summary of Mode MSS Rating

d. Part 3, Section 2, Summary of Carrier MSS Rating

e. Part 4, Carrier/Mode Service Trends by SPLCs

f. Part 5, Summary of SPLC Group Performance

g. Part 6, IDC Reject List

5. DATA ELEMENTS

a. Report Header line which includes:

(1) Report Number

(2) Shipping Activity

(3) Report Title

(4) Date - Month, day, year and Julian date

(5) Page number

(6) Part Number and Name

(7) Report Month

b. Data Elements:

(1) Part 1, Detail Performance Analysis by Destination

(a) ZONE - Locally established Transit Zone Table by SPLC (appendix B-66K, table 11, part 4).

(b) SPLC - Standard Point Location Code (MOWASP address record).

(c) DESTINATION - Clear-text mode delivery point, TAC A, B or C of Consignee (MOWASP address record), or last line of Type G, 2 or 1 address depending on availability.

(d) CONSIGNEE - Activity Address Code or POE of the CONUS ship to consignee extracted from MILSTEP Intransit Data Card, DIC TK4.

(e) MODE - Mode of Shipment

(f) TP - Transportation Priority

(g) CARRIER CODE - Standard Carrier Alpha Code (SCAC)

(h) TCN/C-GBL - Transportation Control Number/Commercial or Government Bill of Lading assigned to shipment.

(i) DATE SHIP - Julian day of shipment.

(j) DATE RCVD - Julian day shipment received.

(k) MIN SVC STD (MSS) - Minimum Service Standard in days established locally for each zone and mode (appendix B-66K, table 11, part 1).

(l) PERFORMANCE STD and TRANSIT TIME

1. S/LT - Same as/less than mode median.

2. MODE MED - Median days of transit time by SPLC and mode during the current month.

3. OVER MODE MED - Transit times exceed the MODE MEDIAN.

4. SUSPECT ERROR - Transit times 30 days or greater and are suspect reporting errors.

5. MEDIAN OVER MSS - * indicates MODE MED exceeds Minimum Service Standard.

(m) RECAP TOTALS OF SHIPMENT

1. S/LT - Total number of shipments with a Transit Time same as/less than the MODE MEDIAN.

2. MODE MED - Total number of shipments delivered.

3. OVER MODE MED - Total number of shipments exceeding the MODE MEDIAN.

4. SUSPECT ERRORS - Total number of shipments exceeding 30 days Transit Time.

5. Gross Percentage for each category except suspect errors (suspect errors included in OVER MODE MED percentage).

(n) SHIPMENTS WITHIN MSS COUNT - Total number of shipments within Minimum Service Standards.

(o) MSS RATING - Performance rating of on-time delivery based on Minimum Service Standards.

(2) Part 2, Detail Performance Analysis by Carrier.

(a) CARRIER - Standard Carrier Alpha Code (SCAC)

(b) SPLC - Standard Point Location Code

(c) DESTINATION - Clear-text mode delivery point

(d) CONSIGNEE - AAC or POE

(e) MODE

(f) TP - Transportation Priority

(g) TCN/C-GBL Number

(h) DATE SHIP - Julian Date shipped

(i) DATE RCVD - Julian Date received

(j) MIN SVC STD - Minimum Service Standard

(k) TRANSIT TIMES

1. S/LT - Same as/less than Minimum Service Standard

2. Greater than MSS - Greater than Minimum Service Standard

(l) Totals of S/LT MSS and Greater than MSS

(m) MSS Rating - Carrier Performance Rating of on-time delivery based on Minimum Service Standards.

(3) Part 3, Section 1, Mode MSS Rating

(a) MODE

(b) ZONE

(c) MIN SVC STD - Minimum Service Standard

(d) 5th Previous Month:

1. Number of Shipments

2. MSS Rating - Percentage of shipments delivered within the Minimum Service Standard.

(e) 4th Previous Month:

1. Number of Shipments

2. MSS Rating

(f) 3rd Previous Month:

1. Number of Shipments

2. MSS Rating

(g) 2nd Previous Month:

1. Number of Shipments

2. MSS Rating

(h) 1st Previous Month:

1. Number of Shipments

2. MSS Rating

(i) Current Month:

1. Number of Shipments

2. MSS Rating

3. MSS Standard

4. MEDIAN - Median Transit Times by Mode and Zone for current month

(j) Recap Totals for each month by Modes:

1. Number of Shipments

2. MSS Rating

3. MEDIAN - Median Transit Times by Mode for all Zones

(k) Grand Total for each month by all Modes and Zones

(4) Part 3, Section 2, Carrier MSS Rating

(a) CARRIER

1. CODE - Assigned SCAC

2. NAME - Clear-text carrier name (MOWASP Carrier File).

(b) 5th Previous Month:

1. Number of Shipments

2. MSS Rating - Carrier Performance Rating of on-time delivery based on Minimum Service Standards.

(c) 4th Previous Month:

1. Number of Shipments

2. MSS Rating

(d) 3rd Previous Month:

1. Number of Shipments

2. MSS Rating

(e) 2nd Previous Month:

1. Number of Shipments

2. MSS Rating

(f) 1st Previous Month:

1. Number of Shipments

2. MSS Rating

(g) Current Month:

1. Number of Shipments

2. MSS Ratings in ascending order

(5) Part 4, Carrier/Mode Service Trends

(a) SPLC

(b) DESTINATION BY MODE

(c) MODE

(d) MSS BY MODE

(e) CARRIER CODE (*** indicates LOGAIR shipment, no Carrier Code assigned).

(f) Six, six month increments, i.e., Jan through Jun, Feb through Jul, Mar through Aug, etc. (* indicates no shipment during the most current month of the increment; ** indicates no shipment during the six month increment).

1. 5th Previous Increment:

a. Jul - Dec

b. Number of Shipments.

c. Median - Median Transit Times by SPLC and Mode for each carrier during the six month period.

2. 4th Previous Increment:

a. Aug - Jan

b. Number of Shipments.

c. Median

3. 3rd Previous Increment:

a. Sep - Feb

b. Number of Shipments

c. Median

4. 2nd Previous Increment:

a. Oct - Mar

b. Number of Shipments

c. Median

5. 1st Previous Increment:

a. Nov - Apr

b. Number of Shipments

c. Median

6. Current Increment:

a. Dec - May

b. Number of Shipments

c. Median

(g) Current Month Median - * indicates no shipment. Median Transit Time by SPLC and Mode for each carrier during the current month.

(h) Recap Totals by Mode by SPLC - Median reflects Transit Times for all carriers by Mode and SPLC.

(i) CURRENT MONTH TOTALS - Total number of shipments by Mode during the current month.

(j) Shipment Totals by SPLC Group - Total number of shipments by SPLC group during the current month.

(6) Part 5, SPLC Group Performance

(a) SPLC Group - The first two positions of the SPLC in the MOWASP Address File (SPLC Group by Destinations).

(b) ZONE - Locally established Transit Zone Table by SPLC

(c) MODE - Mode of Shipment from IDC format

(d) MSS - Minimum Service Standard for the SPLC Group.

(e) MEDIAN - Median number of transit days for all shipments within each Mode to each SPLC Group and Zone for the six month period.

(f) CARRIER - SCAC assigned (*** indicates LOGAIR shipment, no Carrier Code assigned).

(g) Six Months Accumulation for each carrier.

1. Median

2. Number of Shipments

3. MSS Rating

(h) Current Month Data for each carrier.

1. Median

2. Number of Shipment (** indicates no shipments in current month)

3. MSS Rating

(7) Part 6, IDC Reject List

(a) Data Header - Number 1 through 8 denoting pos. 1-80.

(b) Input Image - An image of the input that violated.

(c) REJECT MESSAGE - In-the-clear reasons for the reject.

6. DATA ORGANIZATION

a. Report heading on first line, subheading on second line and detailed column headings on third line for parts 1 through 6.

(1) Part 1, Detail Performance Analysis by Destination. Report is double spaced between changes in SPLC, Mode or Carrier Code.

(2) Part 2, Detail Performance Analysis by Carrier. Report is double spaced between changes in SPLC or Mode. Page break between Carrier Codes.

(3) Part 3, Section 1, Mode MSS Rating. Report is single spaced between Zones within Mode and double spaced between Totals and Mode.

(4) Part 3, Section 2, Carrier MSS Rating. Report is double spaced.

(5) Part 4, Carrier/Mode Service Trends. Report is single spaced between Carrier within Mode and double spaced between Totals, Mode and SPLC.

(6) Part 5, SPLC Group Performance. Report is single spaced between Carrier within Mode and double spaced between Mode, Zone and SPLC Group.

(7) Part 6, IDC Reject Listing. Report is double spaced between violations and triple spaced between DIC changes.

b. Sequence

(1) Part 1, Detail Performance Analysis by Destination

(a) Major - Standard Point Location Code (SPLC)

(b) Minor:

1. Mode

2. Carrier

3. Consignee AAC

4. Date Received

(2) Part 2, Detail Performance Analysis by Carrier

(a) Major - Carrier

(b) Minor:

1. SPLC

2. Mode

3. Consignee AAC

4. Date Received

(3) Part 3, Mode MSS Rating

(a) Major - Mode

(b) Minor - Zone

(4) Part 3, Carrier MSS Rating

Major sequence by Carrier Code in ascending order of current month rating.

(5) Part 4, Carrier/Mode Service Trends

(a) Major - SPLC

(b) Minor:

1. Mode and MSS

2. Carrier

(6) Part 5, SPLC Group Performance

(a) Major - SPLC Group

(b) Minor:

1. Zone

2. Mode

3. Carrier Transit Median (low to high, six months accumulation)

(7) Part 6, IDC Reject List

(a) Major - DIC

(b) Minor - Violation Reasons

7. NUMBER OF COPIES AND DISTRIBUTION

Distribution of the report will be as follows:

Three copies to the Transportation Division, DS/T.

8. PROCEDURE FOR REVIEW AND PROCESSING

These reports identify shipments which meet or exceed the established Minimum Service Standards. Action should be initiated to eliminate carriers to destination with poor performance.

APPENDIX F-221

SEAVAN MRO ANALYSIS

1. PURPOSE

This is a two part report that provides a list of SEAVAN MROs that need analysis. Part 1 is a list of MROs that Extended Weight or Cube exceeds 75% of the weight or cube of the planning parameters of a 20 foot van. Part 2 is a list of MROs that are assigned a Precedence Code 1 upon receipt from the DSC.

2. ORIGIN

This report is produced during operation of the SEAVAN Load function.

3. FREQUENCY

Daily

4. DATA ELEMENTS

a. Report Header line which includes:

(1) Report Number (F-221)

(2) Title - SEAVAN MRO Analysis

(3) FRC - Functional Routing Code

(4) Date - Month, day, year and Julian date

(5) Page number

b. Part 1, MROs that Exceed 75% of 20 foot van parameters for weight/cube.

(1) MRO image

(2) DEST - Destination

(3) PREC - Precedence.

(4) C/GRP - Type Cargo Group Code

(5) COMP - Compatibility Code

(6) EXT WGT - Extended Weight

(7) EXT CUBE - Extended Cube

(8) DEN - Density

(9) MDT - Mandatory Delivery Date

c. Part 2, Precedence 1 MROs Received from DSC

(1) MRO image

(2) DEST - Destination

(3) C/GRP - Type Cargo Group Code

(4) COMP - Compatibility Code

(5) EXT WGT - Extended Weight

(6) EXT CUBE - Extended Cube

(7) MDT - Mandatory Date

d. Part 3, MRO Late Report

(1) MRO image

(2) DEST - Destination

(3) C/GRP - Type Cargo Group Code

(4) COMP - Compatibility Code

(5) EXT WGT - Extended Weight

(6) EXT CUBE - Extended Cube

(7) MDT - Mandatory Date

5. DATA ORGANIZATION

a. Report Header: Print report header, first line to start each page.

b. Other Headers: Print once for each page.

c. Page break on parts

d. Sequence by destination for parts 1 and 2

e. Sequence part 3 by destination major, RDD minor. If RDD is not valid (001 through 366) use MDT as minor sequence

6. DISTRIBUTION AND RETENTION

a. Two copies to Shipment Planning function

b. All copies are for research purposes. Destroy upon completion.

7. PROCEDURES FOR REVIEW

a. Part 1 identifies those MROs that the system may plan in a manner which may preclude desirable van utilization.

b. Part 2 provides visibility of MROs assigned Precedence Code 1 when the MROs are introduced into the ASSP system. This report provides the capability to add the MROs to loads in the assembly process rather than waiting for the next shipping cycle.

c. Part 3 provides visibility of those MROs that need immediate attention because the depot has determined that the RDD or MDT cannot be met.

APPENDIX F-222

SEAVAN VAN UTILIZATION REPORT

1. PURPOSE

Provide a management report to measure van cube utilization. Report is also used in researching customer or center inquiries and providing a history of demand and service provided to each customer.

2. ORIGIN

Produced as a result of data accumulation at the completion of the load review process.

3. FREQUENCY

Part 1 is produced weekly, parts 2 and 3 are produced monthly.

4. DATA ELEMENTS

a. Report header line which includes:

(1) Report Number and Title.

(2) Functional Routing Code.

(3) Report Date.

(4) Page Number.

b. Data Elements:

(1) Part 1 - Weekly SEAVAN Cube Utilization.

(a) DoDAAC - DoD Activity Address Code.

(b) VAN SNBR - Van Serial Number.

(c) VAN OWNR - Van Owner.

(d) LOAD NBR - Load Number.

(e) VAN SIZE - Van Size.

(f) OCEAN CARR - Ocean Carrier.

(g) WEIGHT - Van Weight.

(h) CUBE - Van Cube.

(i) INCUBE - Van Inside Cube.

(j) CU UTL - Cube Utilization.

NOTE: For those vans that equal or exceed the weigh-out parameters, print an asterisk to the side of the weight field.

(2) Part 2 - Monthly SEAVAN Cube Utilization.

(a) DoDAAC - DoD Activity Address Code.

(b) VAN SNBR - Van Serial Number.

(c) VAN OWNR - Van Owner.

(d) LOAD NBR - Load Number.

(e) VAN SIZE - Van Size.

(f) OCEAN CARR - Ocean Carrier.

(g) WEIGHT - Van Weight.

(h) CUBE - Van Cube.

(i) INCUBE - Inside Cube.

(j) CU UTL - Cube Utilization.

(k) SUMMARY DATA - Self-Explanatory.

(l) OCEAN CARR - Ocean Carrier.

(m) VSZ - Van Size.

(n) NBR VSZ - Number Van Size.

(o) NBR WEIGH-OUTS - Number of Weigh-Outs.

(p) TTL CU UTL - Total Cube Utilization.

NOTE: For those vans that equal or exceed the weigh-out parameters, print an asterisk to the side of the weight field.

(3) Part 3 - Monthly SEAVAN Grand Totals.

(a) TTL NBR VNS - Total Number of Vans.

(b) TTL WEIGH-OUT VNS - Total Number of Weigh-Out Vans.

(c) AV CU LESS WEIGH-OUT - Average Cube Less Weigh-Out. Compute average cube, add cube totals and inside cube totals, divide inside cube totals into total cube giving percent. Do not include weigh-out cube totals.

(d) TTL AV CUBE - Total Average Cube. Compute total average cube, add all cube totals, add all inside cube totals, divide total inside cube into total cube giving total average cube percent.

5. DATA ORGANIZATION

a. Report Header: Print report header, first line to start each page.

b. Other Headers: Print once for each page.

c. Page break on DoDAAC and parts.

d. Sequence: DoDAAC major, Van Serial Number minor for parts 1 and 2. Part 3 is overall total for all DoDAACs.

6. DISTRIBUTION AND RETENTION

a. Two copies to Shipment Planning function.

b. All copies are for research purposes. Destroy upon completion.

7. PROCEDURES FOR REVIEW

These reports reflect summary data to be used at the discretion of the operating manager.

APPENDIX F-223

RECEIVING SPD MASTER RECORD

1. PURPOSE

To provide a visible record of the Receiving SPD Master Record format, the data elements in that master record, as well as input to the record that rejected for the reasons displayed.

2. ORIGIN

The transaction which establishes, changes, or deletes a Receiving Master record (DIC XMM) is initiated by the depot Methods and Standards organization.

3. FREQUENCY

As required or requested.

4. DATA ELEMENTS

a. Part I

(1) Report header line includes:

(a) Report Number (UWF223P1)

(b) Title (RECEIVING SPD MASTER RECORD)

(c) Date - (day, month and year)

(d) Page

(2) Header line data includes:

(a) DIC - Document Identifier Code (DIC XMM).

(b) RCVG SITE ID CODE - Receiving Site Identification Code (2-position code identifying where a receipt was processed and which can be related to a specific work center).

(c) EMPLOYEE ID - Unique Employee Identification Number assigned each employee using CRTs.

(d) MAINT CODE - Applicable code for this transaction (Add, Change or Delete).

(e) EMPLOYEE TYPE - Type work accomplished (Inspection, non-Inspection, etc.).

(f) RECEIVING SITE LOC - Location of Receiving site (first three positions only).

(g) EMPLOYEE NAME - 35-position field for surname, first name, and initial.

b. Part II

(1) Report header line includes:

(a) Report Number (UWF223P2).

(b) Title (RECEIVING SPD MASTER RECORD TRANSACTIONS/REJECTS).

(c) Date - (day, month and year).

(d) Page

(2) Header line data includes:

(a) DIC - Document Identifier Code (DIC XMR).

(b) RCVG SITE ID CODE - Receiving Site Identification Code (2-position code identifying where a receipt was processed and which can be related to a specific work center).

(c) EMPLOYEE ID - Unique Employee Identification Number assigned each employee using CRTs.

(d) MAINT CODE - Applicable code for this transaction (Add, Change or Delete).

(e) EMPLOYEE TYPE - Type work accomplished (Inspection, non-Inspection, etc.).

(f) RECEIVING SITE LOC - Location of Receiving site (first three positions only).

(g) EMPLOYEE NAME - 35-position field for surname, first name, and initial.

(h) ERROR REMARKS - Self explanatory (see below).

ADD ALREAD ESTABLISHED	- REJECTED
INVALID EMPL SITE	- REJECTED
DIC NOT XMR	- REJECTED
INVALID MAINT CODE	- REJECTED
NO RECORD TO DELETE	- REJECTED
NO RECORD TO CHANGE	- REJECTED
NO MATCHING RECORD	- REJECTED
INVALID EMPL TYPE	- REJECTED

DUP DETAIL RECORD - REJECTED
WAREHOUSE CODE INVALID - REJECTED
MAINT TYPE INVALID - REJECTED

5. DATA ORGANIZATION

a. Report header: On each page.

b. Sequence:

(1) Primary: Receiving Site ID Code.

(2) Secondary: Employee ID.

c. Page Break: Limited to line limit per page.

d. Spacing: Single.

6. DISTRIBUTION

One copy, unless otherwise specified, to the depot Methods and Standards organization responsible for establishment and maintenance of the Receiving SPD Master Record.

7. PROCEDURE FOR REVIEW AND PROCESSING

a. It will be the responsibility of the Methods and Standards organization, paragraph 6 above, to maintain a current version of the Receiving SPD Master Record (part I) on hand at all times. This version can be hardcopy or electronic, but it must be current.

b. As personnel changes occur in Receiving Inspector/Verifier ranks, it is essential this Master Register be kept current and not allowed to accumulate old, out of date data.

(1) Any adds, changes, or deletions submitted for processing should be supported by written request from Receiving.

(2) These written requests will be input/processed to the Record within one workday of receipt of the request.

c. The errors on input data are identified in the ERRORS REMARK portion of part II, and should be corrected and reinput, assuming the original intent/purpose is still valid.

d. A review of the file should be conducted and approved by the Directorate of Distribution on a semiannual basis, and this approval should be in writing and on file in the Methods and Standards organization files.

UWF223P1 PART I - RECEIVING SPD MASTER RECORD DATE: 21 JAN 87 PAGE 1

DIC	RCVG SITE ID	EMPLOYEE NUMB	EMPLOYEE TYPE	MAINT CODE	RCVG LOC	EMPLOYEE NAME
XXX	XX	XXXXX	X	X	XXX	XXXXXXXXXXX-----35-----XXXXXXXXXXXX
XXX	XX	XXXXX	X	X	XXX	XXXXXXXXXXX-----35-----XXXXXXXXXXXX

XXX	XX	XXXXX	X	X	XXX	XXXXXXXXXXX-----35-----XXXXXXXXXXXX

////////////

APPENDIX F-224

INVALID RECEIVING SPD DATA AND RECEIVING SPD PRODUCTION TOTALS

1. PURPOSE

To provide a visible/written record of:

a. Transactions generated by the program for each of the four Receiving functions with a production count (DIC XMS) for each receipt by SPD Record Code for each of the three functional areas (Central Bin, Bulk, and Direct Bulk).

b. Part II

Invalid DIC 9MS transactions for review by Management.

2. ORIGIN

a. Part I. This data reflects the number of production counts (DIC XMS) generated by the program with SPD Record Codes in each of the four functions (Depack and Move, Verification, Inspection, Document Processing) in Receiving. This data is then broken out into the three functional areas (Central Bin, Central Bulk, or Direct Bulk) in which they occurred.

b. Part II. The data being displayed reflects invalid DIC 9MS being generated from data input to the Receiving Master Record by depot Management via the responsible Methods and Standards organization.

3. FREQUENCY

Daily.

4. DATA ELEMENTS

a. Part I.

(1) Report header line includes:

(a) Report Number (UWF224P1)

(b) Title (PART I, RECEIVING SPD PRODUCTION COUNT TOTALS)

(c) Process Date (Day and Month)

(d) Page

(2) Header line data includes:

(a) First header includes:

1. TOTAL RECORDS RECEIVED - Indicates total number of DIC XMS processed.

2. ERROR RECORDS NOT PROCESSED - Number of DIC XMS received and rejected.

3. TOTAL RECORDS PROCESSED - Number of DIC XMS processed to completion.

(b) Second header includes three fields:

1. CENTRAL - Indicates Receiving Central Bin area.

2. BULK - Indicates Receiving Central Bulk area.

3. INSPECTION - Indicates Receiving in Direct Bulk (warehouse).

(c) Each of the above fields is subdivided into:

1. DEPACK AND MOVE - Indicates first function in Receiving.

2. VERIFICATION - Indicates second function in Receiving.

3. DIRECT - Indicates second and/or third function in Receiving.

4. DOC. PROCESSING - Indicates last function of Receiving.

(d) Each subdivision above, EXCEPT Document Processing, includes two columns:

1. PROC - Indicating receipt transactions from Procurement.

2. RTNS - Indicating receipt transactions from the field (Returns).

(e) Each column above displays count for each SPD Record Code processed.

1. RCD-xxx - Indicates number of Procurement transactions processed.

2. RCD-xxx - Indicates number of Return transactions processed.

(f) At the right side of each major field, see paragraph b(2)(b) above, is a Total field, reading from left to right, EXCLUDING DOCUMENT PROCESSING.

(g) At the bottom is a TOTAL field for each of the columns, from top to bottom, and in the lower right hand corner is a GRAND TOTAL entry.

b. Part II.

(1) Report header line includes:

(a) Report Number (UWF224P2)

(b) Title (PART II, INVALID RECEIVING SPD DATA)

(c) Process date (Day and Month)

(2) Header line data includes:

(a) DIC - Document Identifier Code (9MS).

(b) RCVG SITE ID - Receiving Site Identification Code.

(c) EMPLOYEE ID - Unique 5-digit number assigned all users of a Receiving CRT.

(d) TYPE DOC - Type document being processed (Procurement or non-Procurement).

(e) TYPE WORK - Indicates whether employee is Inspector or non-Inspector.

(f) TYPE STG3 - Indicates third position of Type of Storage Code.

(g) JULIAN DATE - 4-position Julian date (YDDD).

(h) ERROR REMARKS - Entry indicates reason for transaction rejecting.

5. DATA ORGANIZATION

a. Report header: On each page.

b. Sequence:

(1) Primary: Functional areas (Central, Bulk, and Direct).

(2) Secondary: Receiving functions (Depack and Move, Verification, etc.).

(3) Tertiary: SPD Record Codes.

c. Page Break: With every warehouse change.

d. Spacing: Single.

6. DISTRIBUTION

One copy unless otherwise specified by the depot Methods and Standards organization responsible for the input and Maintenance of the Receiving Master Update Register.

7. PROCEDURE FOR REVIEW AND PROCESSING

a. It will be the responsibility of the Methods and Standards organization to maintain an accurate, current version of the Receiving Master Record.

(1) Because the DIC 9MS is program generated, it can be in error ONLY if erroneous employee data has been entered in the Receiving Master Record.

(2) This means all DIC 9MS must be carefully reviewed and appropriate corrective action taken to remove erroneous data from the Receiving Master Record.

b. It will also be their responsibility to see that all employee data from the Directorate of Distribution is input within one working day of receipt of the data.

APPENDIX F-225

SPD MASTER RECORD

1. PURPOSE

To provide a written record of the Special Purpose Data (SPD) Master Record for the Bin/Bulk and Receiving operation and any transactions input to the Master Record that were rejected.

2. ORIGIN

The transaction which establishes, changes, or deletes entries in this Master Record is the DIC XMM, initiated by depot personnel in the Comptroller's Methods and Standards office, who are charged with the responsibility for establishing and maintaining the SPD Master Record.

3. FREQUENCY

As requested by the depot Methods and Standards organization and whenever an add, change, or delete, to the Master Record is processed, and whenever a reject to the Master Record occurs.

4. DATA ELEMENTS

a. Part I

(1) Report header line includes:

(a) Report Number (UWF-225P1)

(b) Report Title (SPD MASTER RECORD)

(c) Process Date (Day, Month, Year)

(d) Page Number

(2) Header line data includes:

(a) DIC - Document Identifier Code.

(b) WHSE - Warehouse (first three positions only).

(c) SPD CD - 3-digit SPD Record Code assigned each function.

(d) COMM CD - Commodity Code (not used as such any more).

(e) MAINT CD - Maintenance code (Add, Change, or delete).

(f) WRK CTR - Work Center Code (up to five positions).

(g) COST CD - Cost Code (nine position field).

(h) PSN CD - Peformance Standard Number applicable.

(i) WRK INFO - Work Center information (up to five positions).

b. Part II

(1) Report header line includes:

(a) Report Number (UWF-225P2)

(b) Report Title (SPD MASTER RECORD TRANSACTIONS/REJECTS)

(c) Process Date (Day, Month, Year)

(d) Page Number

(2) Header line data includes:

(a) DIC - Document Identifier Code (Constant XMM).

(b) WHSE - Warehouse Code (first three positions only).

(c) SPD CD - 3-digit SPD Record Code assigned each function.

(d) COMM CD - Commodity code (not used anymore).

(e) MAINT CD - Maintenance code (Add, Change, or Delete).

(f) WRK CTR - Work Center code (up to five positions).

(g) COST CODE - Cost code (nine position field).

(h) PSN CD - Performance Standards Number applicable.

(i) WRK INFO - Work Center information (up to five positions).

(j) ERROR REMARKS - Reason for transaction being rejected.

WAREHOUSE CODE INVALID	- REJECTED
MAINT TYPE INVALID	- REJECTED
COST ACCOUNT CODE INVALID	- REJECTED
WORK CENTER INVALID	- REJECTED
PERF STD NUMBER INVALID	- REJECTED
RECORD TYPE INVALID	- REJECTED
DIC NOT --XMM--	- REJECTED
NO MATCHING MASTER	- REJECTED
NO RECORD TO DELETE	- REJECTED
ADD ALREADY ESTABLISHED	- REJECTED
DUP DETAIL RECORD	- REJECTED

5. DATA ORGANIZATION

a. Part I

(1) Report Header: On each page.

(2) Sequence:

(a) Primary: Warehouse.

(b) Secondary: SPD Record Code.

(3) Page Break: With each warehouse.

(4) Spacing: Single within warehouse.

6. DISTRIBUTION

One copy unless otherwise specified by the Methods and Standards organization responsible for the input and maintenance of the SPD Master Record.

7. PROCEDURE FOR REVIEW AND PROCESSING

a. It will be the responsibility of the depot Methods and Standards organization to maintain a current version of the SPD Master Record on hand at all times. This version can be hardcopy or an electronic copy on a CRT.

b. It will also be their responsibility to ensure that all written Add, Change, or Delete actions requested by the Directorate of Distribution will be input/processed within one workday of the receipt of the request.

c. Close coordination between the Methods and Standards personnel is essential in keeping the SPD Master Record current. The only rejects generated should be those deliberately coded that way so as to reflect what is really happening in the functional areas.

APPENDIX F-226

SPD PRODUCTION COUNTS TOTALS AND REJECTS

1. PURPOSE

To provide a visible record of those production count records (DIC XMS) that were generated by the Automated SPD Counts program, the work area sources, processed to the SPD Master Record, and the transactions rejected with the reason for the rejection displayed.

2. ORIGIN

a. Part I

The transactions (DIC XMS) that are being summarized on this report are generated by the program as a result of a Bin/Bulk stow, rewarehousing, replenishment, selection, shipment, or receipt having been accomplished and processed by MOWASP/DWASP. Then when the DIC XMS was processed to the Master Record, it was rejected and became part of the statistics in this report. The production counts are displayed by the work area in which they were generated.

(1) Bin SPD Record Codes.

(2) Bulk SPD Record Codes.

(3) Receiving Record Codes.

(4) APCAPS input.

b. Part II

The transactions (DIC XMS) being rejected and listed on this report were generated by the program as a result of a Bin/Bulk stow, rewarehousing, replenishment, selection, shipment, or receipt action accomplished and processed by MOWASP/DWASP. When the DIC XMS was processed to the Master Record, some were rejected for the reason(s) shown on the report.

3. FREQUENCY

Daily

4. DATA ELEMENTS

a. Part I

(1) Report header line includes:

(a) Report Number (UWF226P1)

(b) Title (PART I, SPD PRODUCTION COUNT TOTALS)

(c) Process Date (Day and Month)

(d) Page

(2) First header line data includes: RECORD INPUT SUMMARY.

(a) Sub-header line includes:

1. Bin Records

2. Bulk Records

3. Receiving Records

(b) Each of the above headers are subdivided into:

1. RCD - SPD Record Code Number. ----¦ These lines are repeated for each SPD Record Code generated in the day's processing, summarized, and disposition shown.

2. ERR - Error (Rejection). ---------¦

3. GOOD - Accepted/processed. -------¦

(c) More summary statistics provided are:

1. TOTAL RECORDS RECEIVED - Total number of DIC XMS created by the program.

2. RECORDS WRITTEN TO HOLD FILE - Total number of DIC XMS with future dates that have been put in suspense (NOT REJECTED) for processing when that suspense date arrives.

3. ERROR RECORDS NOT PROCESSED - Total number of DIC XMS rejected and not processed.

4. TOTAL LINES PROCESSED - Paragraph 4a(2)(c)1 minus paragraph 4a(2)(c)2 and 3 equals paragraph 4a(2)(c)4.

(3) Second header line includes: YHJ CARD SUMMARY.

(a) Subheader line data includes:

1. YHJ - Document Identifier Code, is followed by a SPD Record Code and a quantity representing total production counts processed that day for that SPD Record Code.

2. The above entry is repeated for all SPD Record Codes processed that day.

(b) Another subheader line reads: TOTAL OF ALL XMS RECORDS (OTHER/BIN/BULK).

1. RCD - Total DIC XMS Record "Other" received for processing.

2. ERR - Total DIC XMS Record "Other" rejected when processed.

3. GOOD - Total DIC XMS transactions processed and accepted.

b. Part II

(1) Report header line includes:

(a) Report Number (UWF226P2)

(b) Title (PART II, DAILY PRODUCTION COUNT REJECTS - BY WAREHOUSE)

(c) Date (Day, Month, and Year)

(d) Page

(2) Header line data includes:

(a) DIC - Document Identifier Code (DIC XMS).

(b) WHSE - Warehouse (first three positions only).

(c) RECORD CODE - SPD Record Code.

(d) COMM CODE - Commodity Code (Not used).

(e) COUNT - Production count (constant 00001).

(f) TYPE STG 3 - Type Storage Code (3rd position only).

(g) LINE NBR - Line Number.

(h) PARTIAL NUMBER - Refers to further break down of the Line Number.

(i) ERROR REMARKS - Reason for the transaction being rejected.

5. DATA ORGANIZATIONS

a. Part I

(1) Report header: On each page.

(2) Sequence:

(a) Primary: Bin transactions.

(b) Secondary: Bulk transactions.

(c) Tertiary: Receiving transactions.

(3) Page break: Between Bin, Bulk, Receiving, and part II.

(4) Spacing: Single within each Record Code, but Double between Record Codes.

b. Part II

(1) Report header: On each page.

(2) Sequence:

(a) Primary: Warehouse.

(b) Secondary: SPD Record Code.

(c) Tertiary: Commodity.

(3) Page break: With each warehouse.

(4) Spacing: Single.

6. DISTRIBUTION

One copy unless otherwise specified by the depot Methods and Standards organization responsible for reviewing daily output of the Automated SPD Counts program.

7. PROCEDURE FOR REVIEW AND PROCESSING

a. The F-226 counts all DIC XMS transactions generated by the Automated SPD Counts program, processed to the Master Record, and lists those rejected to that point. It should be reviewed carefully to locate problem areas (Bin/Bulk/Receiving) as well as to identify the type of work giving problems, as indicated by the SPD Record Codes experiencing higher error rates.

b. The F-224 should be reviewed to ensure whether or not the transactions listed should have been rejected or not.

(1) Because of local peculiarities, some DIC XMS transactions generated by the program SHOULD be rejected: the SPD Master Record is deliberately coded to cause a reject.

(2) By the same token, the reason for the rejection could also be due to erroneous data having been loaded into the SPD Master Record.

c. A detailed review of the report will reveal the above errors and provide an opportunity for corrective action to be taken. Coordination with Workcenter personnel/supervisors should be productive to all concerned.

APPENDIX F-227

SPD PRODUCTION TOTALS BY WAREHOUSE

1. PURPOSE

To provide a summary of the daily transactions processed in each warehouse in terms of total transactions, rejects, and transactions accepted and processed.

2. ORIGIN

The transactions (DIC XMS) being summarized on this report were generated by the program as a result of a Bin/Bulk stow, rewarehousing, replenishment, selection, shipment, or receipt action having been accomplished and processed by MOWASP/DWASP Receiving. Then when the DIC XMS was processed to the Master Record, some were rejected, and all became part of these statistics.

3. FREQUENCY

Daily.

4. DATA ELEMENTS

a. Part I

(1) Report header line includes:

(a) Report Number (UWF227P1).

(b) Title (PART I, SPD PRODUCTION TOTALS BY WAREHOUSE)

(c) Process Date (Day and Month)

(d) Page

(2) Header line data includes:

(a) WAREHOUSE - Warehouse number (first two positions only).

(b) TOTAL READ - Total number of transactions entered for processing.

(c) BAD RECORDS - Number of transactions rejected.

(d) GOOD RECORDS - Number of transactions accepted and processed.

(e) Total - Total number of records listed in each column.

(3) Sub-header line data includes:

(a) RECORD CODE - SPD Record Code.

(b) TOTAL - Total number of SPD Record Codes processed in warehouse that day.

b. Part II

(1) Report header line includes:

(a) Report Number (UWF227P2)

(b) Title (PART II, SPD PRODUCTION SUMMARY TOTALS BY WAREHOUSE)

(c) Process Date (Day and Month)

(d) Page

(2) Header line data includes:

(a) WAREHOUSE LOCATIONS - First two positions only in alphabetic columns and progressing numerically across the page left to right.

(b) TOTAL column - Total for all warehouses beginning with A--, B--, etc..

(c) TOTAL OF WAREHOUSES - Total activity in all warehouses.

5. DATA ORGANIZATION

a. Report header: On each page.

b. Sequence:

(1) Primary: Warehouse.

(2) Secondary: SPD Record Code.

c. Page break - Part I: between warehouses; and between Parts I and II.

d. Spacing: Single.

6. DISTRIBUTION

Two copies unless otherwise specified by the depot Methods and Standards organization responsible for monitoring the daily output of the Automated SPD Counts program.

7. PROCEDURE FOR REVIEW AND PROCESSING

a. Close review of this report (F-227) initially, will help locate trouble areas where unusual numbers of rejects occur.

b. Basically, the only reason for rejects are:

(1) Erroneous data is being input manually, or

(2) Erroneous data has been loaded into the Master Record.

c. An extra copy of the F-227 is provided so a copy can be provided the appropriate management personnel for followup action.

APPENDIX F-228

SPD PRODUCTION TOTALS BY WORK CENTER

1. PURPOSE

To provide a summary of the daily production counts credited to each work center in terms of total transactions generated, rejected, and accepted/processed.

2. ORIGIN

The transactions (DIC XMS) being summarized on this report were generated by the program as a result of a Bin/Bulk stow, rewarehousing, replenishment, selection, shipment, or receipt action having been accomplished and processed by MOWASP/DWASP Receiving. Then when the DIC XMS was processed to the Master Record, some were rejected. All became part of these statistics which are broken in terms of the work centers performing the functions counted.

3. FREQUENCY

Daily.

4. DATA ELEMENTS

a. Report Header line includes:

(1) Report Number (UWF228)

(2) Title (SPD PRODUCTION TOTALS BY WORK CENTER)

(3) Process Date (Day and Month)

(4) Page

b. Header line data includes:

WORK CENTER - Work center organization code (up to five positions).

c. First subheader line data includes:

(1) RECORD CODE - SPD Record Code number.

(2) QTY - Number of that particular SPD Record Code number processed in that work center that day.

(3) TOTAL - Total number of SPD production counts processed in this work center today.

d. Second subheader line data includes:

OVERALL COUNT TOTAL - Total of all work center totals displayed in this report.

5. DATA ORGANIZATION

a. Report header: On each page.

b. Sequence:

(1) Primary; Work Center.

(2) SPD Record Code.

c. Page break: By Work Center.

d. Spacing: Single.

6. DISTRIBUTION

Two copies unless otherwise specified by the depot Methods and Standards organization responsible for monitoring the daily production data of the work centers involved.

7. PROCEDURE FOR REVIEW AND PROCESSING

a. A close review of this report (F-228) will help locate trouble areas where unusal numbers of rejects are being generated.

b. Basically, there are two prime reasons for rejects:

(1) Erroneous data being entered into the system manually, or

(2) Erroneous data has been loaded into the Master Record.

c. An extra copy of the F-228 is provided for distribution to each Work Center for their review and followup action.

d. This report (F-228) plus a copy of the F-227, which is the same data in Warehouse sequence, will help identify trouble areas, and then corrective action can be taken.

NOTE:

1. There will be a page break between workcenters, contrary to this sample page.
2. The report will list all workcenters in which there was some automated production counts generated, and they will be listed in alphabetic sequence.
3. Those production counts without a matching workcenter in the Master Record will be credited to a bogus workcenter, "NOWRK", which will be listed on the report in alphabetic sequence.

APPENDIX F-231

WEEKLY SMALL PACKAGE CARRIER REPORT

1. PURPOSE

To provide a record of shipments made via Small Package Carrier (mode of Shipment Codes J - Air Small Package Carrier and 5 - Surface Package Carrier).

2. ORIGIN

Produced as a result of processes depicted in appendix D-159

3. FREQUENCY

Weekly

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number

(2) Report Title

(3) Functional Routing Code

(4) Section

(5) Date - Month, day, year and Julian date

(6) Page Number

b. Data Elements

(1) COMMERCIAL - Commercial Number

(2) TCN/DOCUMENT NR - Transportation Control Number and Document Number

(3) SHIPPED - Shipped Date

(4) TU/SU NUMBER - Transportation Unit/Shipment Unit Number

(5) LINE - Shipment Unit Line

(6) DEST - Destination Cross-Reference from the Activity Address File

(7) DoDAAD CODE - Department of Defense Activity Address Directory Code of consignee

(8) IPG - Issue Priority Group

(9) NUMBER OF PIECES - Number of Pieces

(10) WEIGHT - Line Item Weight

(11) CUBE - Line Item Cube

(12) ITEM COST - Line Item Cost (A5_ only)

5. DATA ORGANIZATION

a. Report heading data on the first line and detailed column heading on the second line.

b. Sequence

(1) Major - Date shipped

(2) Intermediate - Destination

(3) Minor - Commercial Number

c. Report is single spaced for multiple lines for the same Commercial number and double spaced between Commercial numbers.

6. NUMBER OF COPIES AND DISTRIBUTION

One copy will be distributed to the Commercial Traffic Branch.

7. PROCEDURE FOR REVIEW AND PROCESSING

This report may be used for reference and backup documentation and should be maintained and disposed of in accordance with DLAM 5015.1.

APPENDIX F-245

DSC ASSET LISTING

1. PURPOSE

To provide a listing to the depot which reflects the DSC Assets as of the close of business for the month. To be used in Interim Functional Alternate (IFA) Procedures.

2. ORIGIN

Produced by running the DSC WESP tape which is received by the depot on a monthly basis.

3. FREQUENCY

As required

4. DATA ELEMENTS

a. Report header line which includes:

(1) Report number

(2) Report title

(3) Manager

(4) Date of Report

(5) Page number

b. Data Elements

(1) FSC - Federal Stock Class

(2) NIIN - National Item Identification Number

(3) FEDERAL ITEM NAME - Approved name (nomenclature) of the materiel

(4) U/I - Unit of Issue

(5) UNIT PRICE - Unit price of the materiel

(6) BACK ORDER IND - Back order Indicator

(7) DUE-IN IND - Due-in Indicator

(8) MAXIMUM RELEASE QUANTITY - Maximum quantity which will be released automatically without review

(9) LAST ACT DATE - Date of last activity for this item

(10) DECAP CODE - Decapitalization Code (D = NIR Key Code DX or DZ for log loss items, C = NIR Key Code PG for log gain items)

(11) SHLF LIFE CODE - Shelf-Life Code.

(12) INV CAT CODE - Inventory Category Code (appendix A-54).

NOTE: The following data elements may be printed from 1-8 times, or more as required. The additional line will be printed for each different combination of purpose codes, condition codes, or type of pack codes (see appendix B-159, page 2 and 3, Stock On Hand, 2-8 quantities).

(13) PURP CODE - Purpose Code (appendix A-15)

(14) COND CODE - Condition Code (appendix A-16)

(15) TYPE PACK CODE - Type of Pack Codes (appendix A-72)

(16) ON HAND QUANTITIES Stock on hand quantities, 1st, 2nd, 3rd, and so forth (for each purpose, condition, and type of pack)

5. DATA ORGANIZATION

a. The listing title includes the commodity manager.

b. Sequence listing by NSN first, Purpose Code second and Condition Code third

c. Page break by FSC

d. Double space between NSN

6. NUMBER OF COPIES AND DISTRIBUTION

Two copies. Original and one copy to the Emergency Supply Operations Center (ESOC)

7. PROCEDURES

Refer to the War Emergency Support Plan (WESP), annex N, section 5, paragraph 5106 and 5107. Also refer to DLAM 4140.2, volume III.

APPENDIX F-246

REPORT OF RECEIVING ACTIONS REQUIRED

1. PURPOSE

To provide a means of informing depot personnel of adjustments required in completing receipt actions as a result of processing Suspended Receipt Record Deletions or File Maintenance Cards.

2. ORIGIN

The conditions which cause the report to be produced are as follows:

a. Record Deletion (ZZN) - When a Suspended Receipt Record Deletion (appendix B-43 or B-97) is processed to a record for which a Receipt Stow Notice (appendix B-46 or B-144) has already been recorded, the stow information will have to be processed to the new receipt record when it is established. Appendix F-246 report will indicate the Stow Notice information recorded in the deleted record.

b. File Maintenance (ZZR) - When a Suspended Receipt File Maintenance Card (appendix B-145) is processed to a record which has not been confirmed and the data elements changed cause the status of the record to change from NO PMR Available to PMR Available or vice versa, the corresponding Receipt Confirmation Card (RCC) input required to complete that record will also change. Appendix F-246 will indicate the new type of RCC input, when necessary.

3. FREQUENCY

Automatically produced as required.

4. DATA ELEMENTS

a. Report Header Line includes:

(1) Report Number (F-246)

(2) Title (Receiving Actions Required (ZZN/ZZR))

(3) Functional Routing Code

(4) Section Number

(5) Date - Month, day, year and Julian date

(6) Page Number

b. Data Elements:

(1) Card Image - The first 80 positions of the report line will be the 80 column card image of the input which caused the report to be printed (D, ZZN, or ZZR).

(2) Stow Data - If a deletion (D or ZZN) has been processed to a receipt already stowed, the applicable stow notice information will be printed as follows:

(a) Short Form Stow Notice - If the RCC has been processed, the 3-position Warehouse Area will appear in the location column.

(b) Long Form Stow Notice - The following data will be printed after the card image, as applicable:

1. Type of Storage Code

2. Location (or locations, if multiple location option used on DIC ZZ9, Stow Notice).

3. Inspection Date

4. Unit Pack

5. Date of Pack

6. Lot/Contract Number

7. Lot/Contract Indicator

(3) Remarks:

If a ZZR Suspended Receipt File Maintenance Card has been processed to change the PIIN/Document Number, Supplemental PIIN and/or CLIN, and the new data results in a change to the PMR status of the Suspended Receipt record (PMR available to NO PMR or vice versa), an appropriate in-the-clear message will be printed after the card image to indicate the new RCC input format required (e.g., ZX_/ZY_ RECEIPT CONFIRMATION NOW REQUIRED) to clear the receipt record.

5. DATA ORGANIZATION

Teleprocessing Control Number sequence.

6. NUMBER OF COPIES AND DISTRIBUTION

Two copies to the Receipt Documentation Branch, Receiving Division.

7. PROCEDURE

a. The originator of the Suspended Receipt Record Deletion (Type D or ZZN) will review the report and take action to assure that the Receipt Stow Notice indicated on the report is reinput using the Teleprocessing Control Number of the new record which replaces the one deleted. If the NIIN or Condition Code of the new record differs from that on the old record action will also be taken to assure that the materiel is properly stowed and labeled. Further instructions are provided in appendix E-110 P.

b. The originator of the Suspended Receipt File Maintenance Card (ZZR) will review the report and take action to assure that the DLA Form 529 is clearly annotated to indicate the RCC input required to complete the receipt action. Further instructions are provided in appendix E-108 P.

APPENDIX F-248

MONTHLY SUMMARY OF LATE RECEIPTS

1. PURPOSE

To identify problem areas in receipts processing

2. ORIGIN

The report is produced automatically from the Completed Receipt File.

3. FREQUENCY

Monthly

4. DATA ELEMENTS

a. Report Header Line

(1) Report Number (F-248)

(2) Version Number (part 1 or part 2)

(3) Title (Monthly Summary of Late Receipts for Receiving (part 1) or for Storage (part 2)

(4) Product Control Number

(5) Functional Routing Code

(6) Section Number

(7) Date - Month, day, year and Julian date

(8) Page Number

b. Data Elements

(1) Part 1 - Data will be arrayed in 12 columns, each representing days in-process. The number of late receipt lines completed during the last month will be printed in the appropriate column based on dates recorded in the Completed Receipt File. Three categories of receipt processing will be shown, each of these being broken down into procurement, nonprocurement and total. The three categories of processing are:

(a) Days between date received and inquiry date - Represents the amount of time between actual receipt of materiel at the depot and when the Type A Inquiry recording the receipt was processed to the system.

(b) Days between inquiry date and confirmation date - Represents the amount of time between the Type A Inquiry and when a valid Receipt Confirmation Card was processed to the system.

(c) Days between date received and confirmation date - Represents the total amount of processing time in Receiving Division from actual receipt of materiel to processing of a valid Receipt Confirmation Card.

(2) Part 2 - Data will be arranged as for part 1 in 12 columns representing days in process. The report will show the number of late receipts completed in the past month in the appropriate time category. Totals will be shown for each warehouse area in which the late receipts were stowed or assumed stowed. The warehouse area will be determined from the area identified in the Receipt Confirmation Card indicating the area to which Receiving Division forwarded the materiel or from the actual location identified in the Receipt Stow Notice. The criterion for columnar entries will be the number of days between the date the Receipt Confirmation Card was processed and the date on which a valid Receipt Stow Notice was processed. This provides an approximation of receipt processing time in Storage Division. The number of late receipt lines for each area and time category will be broken down into procurement, nonprocurement and total. Grand totals for all areas will be shown at the end of the report.

5. DATA ORGANIZATION

a. Part 1 - Single page as indicated above

b. Part 2 - Warehouse area sequence page break on first position of warehouse area

6. NUMBER OF COPIES AND DISTRIBUTION

a. Part 1 - One copy to Receiving Division, one copy to MSO, DS/T

b. Part 2 - One copy to Storage Division, one copy to MSO, DS/T

7. PROCEDURE

a. Part 1 - To be used by Receiving Division to identify possible causes for late receipts. For example, excessive numbers of late lines which required more than 1 or 2 days between date received and inquiry date could indicate manpower shortage in offloading of materiel.

b. Part 2 - To be used by Storage Division to identify problem areas in processing receipts. For example, a warehouse area showing an excessive number of late receipt lines requiring 2 or more days between date confirmed and stow date could indicate personnel augmentation in that area is required.

APPENDIX F-249

DLA TONS IN STORAGE

1. PURPOSE

To provide a summary total of tons of DLA materiel in storage at each major storage activity by depot manager and FSC. Primarily used for reporting purposes required under the Warehouse Operations Report, RCS DLA(M)232(O)MIN. This listing is produced during the reconciliation process and results from a mechanical match of the DSC asset tapes and depot locator tapes in that UI Weight of each NSN is multiplied by the asset quantity. Totals are provided, reduced to one-tenth ton per FSC, and total tons per storage activity and manager in a format outlined in this appendix.

2. ORIGIN

This report is generated during the normal Reconciliation Process.

3. FREQUENCY

Monthly, or when individual depot/DSC reconciliation tape match is accomplished

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-249)

(2) Report Title

(3) Depot Designator

(4) FRC - Functional Routing Code

(5) Section Number

(6) Date - Month, day, year, and Julian date

(7) Page Number

b. Data Header Line which includes:

(1) FSC - Federal Supply Class

(2) DCSC

(3) DESC

(4) DGSC

(5) DISC

(6) MED - Medical

(7) SUB - Subsistence

(8) C&T - Clothing and Textiles

(9) FSC TOTAL

(10) MGR TOT - Summarized total of tons in storage for manager indicated

5. DATA ORGANIZATION

a. Report header data on first line. Detail data on second and subsequent lines.

b. Double spaced, 24 lines per page with summarized totals at end of report.

6. DISTRIBUTION

Two copies to MSO, one copy to Chief, Warehousing Division.

7. PROCEDURE

This listing will be used by management elements of DS/T in developing data for reporting tons in storage required by RCS DLA(M)232(O)MIN.

APPENDIX F-258

RECONCILIATION - LOCATIONS NO CENTER BALANCE CONDITION A/B ONLY IN NSN SEQUENCE

1. PURPOSE

To provide, for review and corrective action, a listing of locations for NSNs for which there were no matching NSNs with assets on the DSCs asset tapes.

2. ORIGIN

This report is produced simultaneously with the appendix F-260, Reconciliation Locations No Center Balance Condition A/B Only in Location Sequence.

3. FREQUENCY

Quarterly or as required.

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-258)

(2) Report Title

(3) FRC - Functional Routing Code

(4) Section

(5) Date - Month, day, year, and Julian date

(6) Page Number

b. Data Elements

(1) NATIONAL STOCK NUMBER

(2) CENTER - Data reflected on asset tape

(a) MGR - Commodity Manager, appendix A-44

(b) COND - Condition Code, appendix A-16

(c) TYPK - Type of Pack Code, appendix A-4

(d) U/I - Unit of Issue, appendix A-48

(3) DEPOT - Data reflected on locator file.

(a) MGR - Manager

(b) COND - Condition

(c) TYPK - Type of Pack Code

(d) U/I - Unit of Issue

(4) LOCATIONS - Locations applicable to the listed NSN

(5) POP GRP - Popularity Group Code, appendix A-52

c. TOTAL NSNS - Totals line with total of NSNs listed

5. DATA ORGANIZATION

a. Report header data on first line, detail header data on second line, detail data on third and subsequent lines with totals printed on last line of the listing.

b. Sequenced by NSN within Commodity Manager; page break on Commodity Manager change.

c. Double spaced.

6. NUMBER OF COPIES AND DISTRIBUTION

Three copies. Original and one copy to Inventory Control Office and one copy to Inventory monitor at cognizant DSC.

7. PROCEDURE

This listing will be used in conjunction with appendix F-260 to verify that correct stock is in locations listed and request inventory of stock by the appropriate DSC. Detailed procedures for use of this report are contained in appendix E-258 P.

APPENDIX F-259

RECONCILIATION - LOCATIONS NO CENTER BALANCE CONDITION NOT A/B ONLY IN NSN SEQUENCE

1. PURPOSE

To provide for review and corrective action, a listing of locations for NSNs for which there were no matching NSNs with assets on the DSCs asset tapes.

2. ORIGIN

This listing is produced simultaneously with a deck of appendix B-26, Physical Inventory Request Cards, as a result of Reconciliation Output Request Codes in appendix A-71. Produces as a result of the processes depicted by appendices D-111 and D-114.

3. FREQUENCY

Monthly or as required

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-259)

(2) Report Title

(3) FRC - Functional Routing Code

(4) Section Number

(5) Date - Month, day, year and Julian date

(6) Page

b. Data Elements

(1) NATIONAL STOCK NUMBER

(2) CENTER - Data reflected on asset tape

(a) MGR - Commodity Manager, appendix A-44

(b) COND - Condition Code

(c) TYPK - Type of Pack Code

(d) U/I - Unit of Issue

(3) DEPOT - Data reflected on locator file

(a) MGR - Manager

(b) COND - Condition Code

(c) TYPK - Type of Pack Code

(d) U/I - Unit of Issue

(4) LOCATION - Locations applicable to the listed NSN and Condition

(5) POP GRP - Popularity Group Code

c. TOTAL NSNS - Totals line with total of NSNs listed

5. DATA ORGANIZATION

a. Report header data on first line, detail header data on second line, detail data on third and subsequent lines with totals printed on last line of the listing

b. Sequenced by Commodity Manager major, NSN and Condition minor. Page break on Commodity Manager change.

c. Double spaced.

6. NUMBER OF COPIES AND DISTRIBUTION

Five copies. Original and one copy to Quality Control Office, one copy to MSO and one copy filed in ODS for reference purposes.

7. PROCEDURE/INSTRUCTIONS

a. Quality Control Office:

(1) Review listing and research discrepancy reports (DD Forms 1225 and SF 364) to determine if action has been previously initiated to the DSC on NSNs listed.

(2) On determination that action has been initiated to the DSC on NSNs listed, destroy matching DJA card(s).

(3) On determination that action has not been initiated to the DSC and that NSN is correct and in the location listed, forward DJA card(s) prepared at the time the listing was prepared to the Inventory Control Office with information that an inventory is required.

(4) Through the above research, it may be determined that the depot locator records are wrong. In these instances, Warehousing Division will be notified of the error by annotating a copy of the listing with the correct data. The annotated listing will be held until all research has been completed before forwarding to the Warehousing Division for action. Destroy matching DJA card(s).

(5) If through research and investigation as indicated above, it is found that the NSN on the depot locator file is not in the location listed, destroy the matching DJA card(s) and inform the Warehousing Division by furnishing an annotated copy of the listing that the location is vacant and should be deleted through initiation of a ZBA Action Code FY, Delete Card.

b. Inventory Control Office: Review DJA card(s) from the Stock Readiness Branch and forward to ODS for transceiving in communication batch as administrative message to applicable DSC.

c. Warehousing Division: Prepare a DIC ZBA Action Code FY, Locator Delete Card, for the vacant location(s) and DIC ZBA Action Code FZ, Locator Change Card(s) for those items located under the wrong condition as identified through research and annotated on the listing for correction. Forward ZBA card(s) to ODS for processing to the locator file.

8. FLOW CHART

Flow chart not required.

TOTAL NSNS ***

APPENDIX F-266

RECONCILIATION - PILFERABLE ITEM REPORT

1. PURPOSE

To provide a listing of "Center Balance No Location" and denied NSNs that are classified as pilferable items.

2. ORIGIN

Produced as a result of the processes depicted by appendix D-117.

3. FREQUENCY

Monthly or as required.

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-266)

(2) Report Title

(3) Cutoff Date, year and Julian date

(4) FRC - Functional Routing Code

(5) Section

(6) Date: Month, day, year and Julian date

(7) Page Number

b. Line Data Elements

(1) NATIONAL STOCK NUMBER

(2) CENTER/DENIAL

(a) MGR - Commodity Manager Code of DSC

(b) COND - Condition Code

(c) TYPK - Type of Pack Code

(3) LOCATION - Locations from depot locator file

(4) DEN/CUTOFF DATE - Date of denial or cutoff date of locator reconciliation.

(5) ADD/DEL DATE - Date the new/deleted location was processed to the locator file.

(6) LAST CNTR - Last Center.

(a) INV DTE - Date of last inventory from locator file.

(b) BAL - DSC Balance indicator, contains Item Manager Code when applicable.

(7) DNL - Denial, Code D, when applicable to indicate NSN has had a denial.

(8) DLT - Deleted location indicator (blank)

(9) AUD - Audit action indicator (blank)

(10) REW - Rewarehousing indicator (blank)

5. DATA ORGANIZATION

a. Report header data on first line, detail header data on second and third lines, and detail data on fourth and subsequent lines.

b. Sequenced by NSN.

c. Double spaced.

6. NUMBER OF COPIES AND DISTRIBUTION

Four copies. Original and two copies to DS/T, and one copy to Command.

7. PROCEDURE

This listing is reviewed to determine if pilferable stock has been stored IAW security regulations. Detailed procedures for use of this listing are contained in appendix E-266 P.

APPENDIX F-267

RECONCILIATION - CENTER BALANCE AND DELETED LOCATION REPORT

1. PURPOSE

To provide a listing of "DSC Balance No Location" NSNs that have had stock locations deleted.

2. ORIGIN

Produced as a result of the processes depicted by appendix D-118.

3. FREQUENCY

Daily, as occurs.

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-267)

(2) Report Title

(3) FRC - Functional Routing Code

(4) Section Number

(5) Date: Month, day, year and Julian date

(6) Page Number

b. Line Data Elements

(1) NATIONAL STOCK NUMBER

(2) CENTER/DENIAL

(a) MGR - Manager

(b) COND - Condition Code

(c) TYPK - Type of Pack Code

(3) LOCATION - Warehouse location

(4) DEN/CUTOFF DATE - Date of denial or cutoff date of locator reconciliation.

(5) ADD/DEL DATE - Date the location was deleted

(6) LAST CNTR - Last Center

(7) DNL - Denial indicator (blank)

(8) DLT - Deleted location indicator (blank)

(9) AUD - Audit action indicator (blank)

(10) REW - Rewarehousing indicator (blank)

(11) REASON - In-the-clear explanation of print line

5. DATA ORGANIZATION

a. Report header data on first line, detail header data on second line, and detail data on third and subsequent lines with DSC balance printed first and deleted locations data for the same NSN printed on following lines.

b. Sequenced by NSN.

c. Double spaced.

6. NUMBER OF COPIES AND DISTRIBUTION

Five copies. Original and three copies to DS/T and one copy to Command.

7. PROCEDURE

This listing will be used to determine if locations listed have been deleted correctly. Detailed procedures for use of this report are contained in appendix E-267 P.

APPENDIX F-268

RECONCILIATION - CENTER BALANCE OR DENIAL AND NEW LOCATION ADD

1. PURPOSE

To provide, for review and corrective action, a listing of NSNs of "Center Balance No Location" records or denials for which there has been a new location add as a result of locator survey action.

2. ORIGIN

Produced as a result of the processes depicted by appendix D-119.

3. FREQUENCY

Daily

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-268)

(2) Report Title

(3) FRC - Functional Routing Code

(4) Section Number

(5) Date: Month, day, year and Julian date

(6) Page Number

b. Line Data Elements

(1) NATIONAL STOCK NUMBER

(2) CENTER/DENIAL

(a) MGR - Commodity Manager Code of DSC having "Center Balance No Location" record.

(b) COND - Condition Code

(c) TYPK - Type of Pack Code, appendix A-4, from applicable record.

(3) LOCATION - New Location(s) added as a result of location surveys.

(4) DEN/CUTOFF DATE - Date of denial or cutoff date of locator reconciliation.

(5) ADD/DEL DATE - Date the new location was processed to the locator file.

(6) LAST CENTER - Last Center

(a) INV DTE - Cutoff Date of last inventory from locator file.

(b) BAL - DSC Balance indicator, contains Item Manager Code when applicable.

(7) DNL - Denial indicator, Code D when applicable to indicate NSN has had a denial.

(8) DLT - Deleted location indicator (blank)

(9) AUD - Audit action indicator (blank)

(10) REW - Rewarehousing indicator (blank)

5. DATA ORGANIZATION

a. Report header data on first line, detail header data on second and third lines, detail data on fourth and subsequent lines with "Center Balance No Location" or denial line data printing prior to the new location add data lines for each NSN.

b. Sequence by NSN.

6. NUMBER OF COPIES AND DISTRIBUTION

Five copies. Original and three copies to DS/T, one copy to Command.

7. PROCEDURE

This listing will be used to determine if an inventory is required for the new location added NSN. Detailed procedures for use of this report are contained in appendix E-268 P.

APPENDIX F-269

DENIALS AND DELETED LOCATION LISTING

1. PURPOSE

To provide a listing of deleted locations that can be checked to determine if denials were correctly processed.

2. ORIGIN

Produced as a result of the processes depicted by appendix D-115.

3. FREQUENCY

Daily

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-269)

(2) Report Title

(3) Denial Date, year and Julian date

(4) FRC - Functional Routing Code

(5) Section Number

(6) Date: Month, day, year and Julian date

(7) Page Number

b. Line Date Elements

(1) NATIONAL STOCK NUMBER - NSN or denial

(2) CENTER/DENIAL

(a) MGR - Manager Code

(b) COND - Condition Code, appendix A-16, of denial

(c) T/P - Type of Pack Code, appendix A-4, of denial, when applicable

(3) LOCATION - Warehouse location or NEGATIVE line indicates that multiple denials were processed for the NSN in same cycle when a positive record also appears for that NSN.

(4) DEN/CUTOFF DATE - Date of denial action

(5) ADD/DEL DATE - Date location by NSN

(6) LAST CNTR - Last Center

(a) INV DTE - Inventory date (blank)

(b) BAL - Center balance indicator (blank)

(7) DNL - Denial indicator (blank)

(8) DLT - Deleted location indicator, Code X when applicable

(9) AUD - Audit action indicator, Code X when applicable

(10) REW - Rewarehousing indicator, Code X when applicable

5. DATA ORGANIZATION

a. Report header data on first line, detail header data on second line and detail data on third and subsequent lines.

b. Part 1, matches from reconciliation, sequenced by warehouse location.

c. Part 2, ZAF replies, sequenced by Warehouse Location.

d. Part 3, ZAF replies, sequenced by NSN.

6. NUMBER OF COPIES AND DISTRIBUTION

One copy to DS/T.

7. PROCEDURE

This listing is used to check the deleted locations to determine if locations were erroneously deleted. Detailed procedures for use of this listing are contained in appendix E-269 P.

APPENDIX F-270

DUPLICATE DELETED LOCATION LISTING

1. PURPOSE

To provide a listing of NSNs on which more than one delete transaction for the same location has been processed to the locator file.

2. ORIGIN

Produced as a result of the processes depicted by appendix D-115.

3. FREQUENCY

Daily

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-270)

(2) Report Title

(3) FRC - Functional Routing Code

(4) Section Number

(5) Date: Month, day, year and Julian date

(6) Page Number

b. Line Data Elements

(1) NATIONAL STOCK NUMBER

(2) CENTER/DENIAL

(a) MGR - Manager Code

(b) COND - Condition Code

(c) TYPK - Type of Pack Code

(3) LOCATION

(4) DEN/CUTOFF DATE

(5) ADD/DEL DATE

(6) LAST CNTR - Last Center

(a) INV DTE - Inventory Date

(b) BAL - Center Balance

(7) DNL - Denial Indicator (blank)

(8) DLT - Deleted location indicator, Code X when applicable

(9) AUD - Audit action indicator

(10) REW - Rewarehousing indicator, Code X when applicable

5. DATA ORGANIZATION

a. Report header data on first line, detail header data on second line, and detail data on third and subsequent lines with original delete transaction printed first and duplicate delete transaction printed second.

b. Sequenced by NSN.

c. Double spaced.

d. Records are purged on a monthly basis when they are more than 90 days old.

6. NUMBER OF COPIES AND DISTRIBUTION

Three copies. Original and one copy to MSO, one copy to Command.

7. PROCEDURE

This listing is analyzed by Management elements to determine reasons for duplicate delete actions being generated. Detailed procedures for use of this listing are contained in appendix E-270 P.

APPENDIX F-272

DELETED LOCATIONS REPORT

1. PURPOSE

To provide for review and corrective action a list of locations contained in the deleted location file of all locations deleted in the past 60 days.

2. ORIGIN

Deleted locations file.

3. FREQUENCY

As required.

4. FORMAT

a. Report header line which includes:

(1) Report number (F-272)

(2) Report title - deleted locations report

(3) FRC - Functional routing code

(4) Date - Month, day, year and Julian date

(5) Page number

5. DATA ELEMENTS

a. NSN - National Stock Number

b. COND - Condition Code

c. WHS LOC - Warehouse Location

6. SEQUENCE

Major - NSN

Minor - Location

7. DISTRIBUTION

One copy to inventory on microfiche.

APPENDIX F-280

BORROW/LOAN LEVEL ORGANIZATION UPDATE ACTION REPORT, PART 1

1. PURPOSE

To provide a listing of the transaction(s) processed to make changes to the BLLO Compatibility Master File.

2. ORIGIN

Produced during the processing of the BLLO Compatibility Master File.

3. FREQUENCY

As the result of input of YLL and YLM transactions.

4. DATA ELEMENTS

a. Report header line which includes:

(1) Report Number

(2) Title

(3) Date and Time - Month, day, year, Julian date and time of report production.

(4) Page Number

b. Data Elements:

(1) Input Card

(2) Action Taken

(3) Image of Input Transaction(s).

(4) Explanation of Action Taken.

5. DATA ORGANIZATION

a. Report header data on first four lines, detail data (paragraph 4b) on fifth and subsequent lines.

b. Sequence - By DIC as processed.

c. Page break - No more than 25 transactions per page.

6. NUMBER OF COPIES AND DISTRIBUTION

One copy to Workload Control Office.

7. PROCEDURE

The BLLO Update Action Report, part 1, is used by the Workload Control Office to verify that changes to the BLLO Compatibility Master File have been processed.

BORROW/LOAN LEVEL ORGANIZATION UPDATE ACTION REPORT, PART 2

1. PURPOSE

To indicate those BLLOs that have been added to the BLLO Compatibility Master File when the system noted the BLLO is not in the working file match to the daily Organization Data Master File.

2. ORIGIN

Produced during the match between the daily Organization Data Master File and the BLLO Compatibility Work File.

3. FREQUENCY

Produced on an as required basis.

4. DATA ELEMENTS

a. Report header line which includes:

(1) Report Number

(2) Title

(3) Date and Time - Month, date year, Julian date, and time of report production.

(4) Page Number

b. Data Elements:

(1) Dividing Line

(2) Action Taken Header

(3) BLLO

(4) Explanation of Action Taken.

5. DATA ORGANIZATION

a. Report header data on first four lines, detailed data (paragraph 4b) on fifth and subsequent lines.

b. Sequence by alphabetic BLLO organization.

c. Page break - No more than 25 lines per page.

6. NUMBER OF COPIES AND DISTRIBUTION

One copy to Workload Control Office.

7. PROCEDURE

The BLLO Update Action Report, part 2, is used to notify the Workload Control Office that incompatibility existed between the master files and the daily working files and additions have been made.

APPENDIX F-282

JOB ORDER HISTORY FILE

1. PURPOSE

To record the actual work accomplished and manhours expended in the Job Order History File.

2. ORIGIN

Produced as the result of processing YLE cards that are updating the Job Order History File (JOHF).

3. FREQUENCY

Daily

4. DATA ELEMENTS

a. Report header line which includes:

(1) Report Number

(2) Title

(3) Date and Time - Month, day, year, Julian date and time of report production.

(4) P ge Number

b. Data Elements:

(1) Job Order Identification - ID Assigned by WCC in conjunction with work center personnel. The same Job Order Identification is reflected in the Job Order Master File (JOMF).

(2) Workday - Year and Julian date of the year.

(3) Workday-2 - Year and Julian date which is two days prior to workday.

(4) Delete Code - When a delete action, DIC YLK, is input into WOPACS, a delete code of 1 will reflect for the first cycle. The Job Order will remain on record for nine complete cycles. After nine cycles the Job Order will drop from the Job Order History File.

(5) Manhours to Date WD-2 - Manhour accumulation extracted from the YLE Workload Card for Job Orders.

(6) Work Units to Date WD-2 - Accumulation of work units completed extracted from the YLE Workload Card for Job Orders.

(7) Cycle Number WD-2 - Number of cycles elapsed as of WD-2.

(8) Carryover WD-2 - The work units per cycle (from JOMF) multiplied by the number of cycles as of WD-2 (JOHF) less the work units accomplished as of WD-2 (JOHF).

5. DATA ORGANIZATION

a. Report header data on first three lines, detailed data (paragraph 4b) fourth and subsequent lines.

b. Sequence - By alphabetical and ascending numerical Job Order ID.

c. Page Break - No more than 24 data print lines per page.

6. NUMBER OF COPIES AND DISTRIBUTION

Two copies - Original to Branch and/or Division Supervisor, and one copy to Workload Control Office.

7. PROCEDURE

Supervisors, in conjuction with the WCO, will use this listing as a reference to the status of the job orders to ensure their timely completion.

APPENDIX F-283

BORROW/LOAN LEVEL ORGANIZATION MASTER FILE

1. PURPOSE

To reflect the compatibility between BLLOs should the need for borrowing or loaning of manpower exist.

2. ORIGIN

Developed jointly by WCC and the Division Chiefs and approved by the Director of Storage and Transportation.

3. FREQUENCY

Produced on an as needed basis and/or following an update action to the master file.

4. DATA ELEMENTS

a. Report header line which includes:

(1) Report Number

(2) Title

(3) Date and Time - Month, day, year, Julian date and time of report production.

(4) Page Number

b. Data Elements:

(1) Borrowing BLLO - The BLLO that can borrow.

(2) Compatible BLLOs - Those BLLOs that are compatible as to skills and priority.

5. DATA ORGANIZATION

a. Report header data on first three lines, detail data (paragraph 4b) on fourth and subsequent lines.

b. Sequence - By borrowing BLLOs alphabetically and for compatible BLLOs by BLLO sequence number.

c. Page Break - No more than 21 borrowing BLLOs per page.

6. NUMBER OF COPIES AND DISTRIBUTION

Two copies - Original to Division Chiefs, and one copy to WCC Office

7. PROCEDURE

The file is initially established jointly by WCC in conjunction with Division Chiefs and approved by the Director of Storage and Transportation. This is done to assure that manhours are loaned to or borrowed from organizations in descending sequence in relationship to the priority order of all work within the Storage and Transportation environs. After initial establishing of the master file, periodic maintenance may be required.

APPENDIX F-284

WORK PLANNING AND CONTROL SYSTEM CALENDAR

1. PURPOSE

To create a calendar from which the WOPAC System can extract schedulable/non-schedulable Julian days, day of the month, and day of the week.

2. ORIGIN

Created as the result of a control card input to create a calendar file.

3. FREQUENCY

Quarterly or as required.

4. DATA ELEMENTS

a. Report header line which includes:

(1) Report Number

(2) Title

(3) Date and Time - Month, day, year, Julian date and time of report production.

(4) Page Number

b. Data Elements:

(1) Date - Month and calendar day

(2) Julian Date - Year and Julian date

(3) Day - Day of week

(4) Holiday Code - To indicate holidays.

(5) Schedule Code - To indicate nonschedulable days.

5. DATA ORGANIZATION

a. Report header data on first two lines, detail data (paragraph 4b) on third and subsequent lines.

b. Sequence - By calendar day from left to right, then top to bottom.

c. Page Break - No more than 50 print lines per page, single-spaced.

6. NUMBER OF COPIES AND DISTRIBUTION

One copy (original) to WCC.

7. PROCEDURE

This printout is used as a reference for the internal calendar schedule used by the WOPAC System and indicates those days when workload is not to be scheduled.

APPENDIX F-285

UNIT OF SCHEDULE/JOB ORDER LEVEL DECISION (YL5) UPDATE ACTION REPORT

1. PURPOSE

To show the action taken to revise the planned work units and planned manhours on the Planning Schedule, part 1.

2. ORIGIN

Produced following the processing of YL5 cards used to update the forecasted workload.

3. FREQUENCY

Daily

4. DATA ELEMENTS

a. Report header line which includes:

(1) Report Number

(2) Title

(3) Date and Time - Month, day, year, Julian date and time of report production.

(4) Page Number

b. Data Elements:

(1) Input Card

(2) Action Taken

(3) Image of Input Transaction(s).

(4) Explanation of Action Taken.

5. DATA ORGANIZATION

a. Report header data on first two lines, detail data (paragraph 4b) on third and subsequent lines.

b. Sequence - By DIC/SLO processed.

c. Page Break - No more than 25 transactions per page.

6. NUMBER OF COPIES AND DISTRIBUTION

One copy to Workload Control Office.

7. PROCEDURE

This report is used to verify that the changes to Planned Work Units and Planned Manhours have been accomplished on the Planning Schedule, part 1.

APPENDIX F-286

SUPERVISOR'S DETAIL OF ACCOMPLISHMENT

1. PURPOSE

To provide a comparison of what actually happened to what was scheduled to happen on the workday, for all activities within the Workload Control Center (WCC). The comparison is formatted for ready identity of how and where accomplishments were not as scheduled and the apparent causes. It is provided on the day after the workday to permit timely action on "News" as contrasted to "History".

2. ORIGIN

Produced during the processing of the Detail of Accomplishments report.

3. FREQUENCY

Daily

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number

(2) Title

(3) Date and Time - Month, day, year, Julian date, day of week, and time of report production.

b. Data Elements:

(1) U/S or J/O Title - A description, in abbreviated form, describing the Unit of Schedule or Job Order.

(2) Work Units:

(a) Unit of Measure - An abbreviated description identifying the unit of count for US/JO.

(b) Actual New Work - Reflects data input by DIC YLE to update Unit of Schedule History File/Job Order History File.

(c) Schedule - This data is extracted from Production Schedule part 1.

(d) Actual Accomplished - Reflects data input by DIC YLE to update USHF/JOHF.

best copy available

(e) PCT DEV - Reflects percent of deviation of Actual Accomplished versus Scheduled to be Accomplished.

(f) Actual Carryover Close of Business, Workday - Reflects data extracted from the USHF/JOHF.

(3) Manhours:

(a) Scheduled - Data extracted from the Production Schedule part 1.

(b) Actual - Reflects data input by DIC YLE to update USHF/JOHF.

(c) Percent Deviation - Reflects percent of deviation of actual manhours used versus scheduled.

5. DATA ORGANIZATION

a. Report Header data on first line; detail data (paragraph 4b) on second and subsequent lines.

b. Sequence:

(1) Borrow Loan Level Organization - Major.

(2) Scheduling Level Organization - Intermediate.

(3) U/S NO - Minor.

c. Page break - Scheduling Level Organization.

6. NUMBER OF COPIES AND DISTRIBUTION

Two copies. Original to Branch and Division Supervisors. Copy to Workload Control Office.

7. PROCEDURE

The Supervisor's Detail of Accomplishment is used to determine what happened in the Borrow Loan Level Organization/Scheduling Level Organization - usually as a backup to the analysis performed on the Summary of Accomplishment.

APPENDIX F-320

COPAD MANAGEMENT INFORMATION REPORT

1. PURPOSE

Provides the depot managers with statistical information for the processing of Contractor Operator Parts Depot (COPAD) MROs.

2. ORIGIN

Produced from data accumulated during daily and monthly MOWASP/MOFAST processing.

3. FREQUENCY

Daily

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-320)

(2) Report Title - COPAD Management Information Report

(3) Functional Routing Code

(4) Date - Month, day, year and Julian date

b. Summary Information

(1) Cancellations received, daily and month to date.

(2) MROs received daily, daily and month to date.

(3) MROs in bank.

(4) MROs in bank over 30 days.

(5) MROs passed to the in process file, daily and month to date.

(6) MROs shipped, daily and month to date.

(7) Part 1. Mode of Shipment - CONUS MROs shipped by mode and IPG, month to date with cumulative totals by IPG and service for:

(a) Army - PP Zones 1 through 8 and Service Code W, A, B or C.

(b) Air Force - PP Zones 1 through 8 and Service Code of F, J, D or E.

(c) Navy - PP Zones 1 through 8 and Service Code of N, R, V, Q or P.

(d) Marine Corps - PP Zones 1 through 8 and Service Code of M, K or L.

(e) Others - PP Zone 1 through 8.

(8) Part 2. Mode of Shipment - Overseas Eastern Area MROs shipped by mode and IPG, month to date with cumulative totals by IPG and service for:

(a) Army - BBP W25N14 or PP Zone 9, with Service Code W, A, B or C and ZIP Code beginning with 09 or 34.

(b) Air Force - PP Zone 9 with Service Code F, J, D or E and ZIP Code beginning with 09 or 34.

(c) Navy - PP Zone 9 with Service Code N, R, V, Q or P and ZIP Code beginning with 09 or 34.

(d) Marine Corps - PP Zone 9 with Service Code M, K or L and ZIP Code beginning with 09 or 34.

(e) Others - PP Zone 9 and ZIP Code beginning with 09 or 34.

(9) Part 3. Mode of Shipment - Overseas Western Area MROs shipped by mode and IPG, month to date with cumulative totals by IPG and service for:

(a) Army - BBP W62N2A or PP Zone 9 with Service Code W, A, B or C and ZIP Code beginning with 96 or 98.

(b) Air Force - PP Zone 9 with Service Code F, J, D or E and ZIP Code beginning with 96 or 98.

(c) Navy - PP Zone 9 with Service Code N, R, V, Q or P and ZIP Code beginning with 96 or 98.

(d) Marine Corps - PP Zone 9 with Service Code M, K or L and ZIP Code beginning with 96 or 98.

(e) Others - PP Zone 9 and ZIP Code beginning with 96 or 98.

(10) Totals - Cumulative totals by IPG and Service for parts 1 through 3.

5. SEQUENCE

None

6. DATA ORGANIZATION

Report is produced in the same format shown in the summary information above.

7. DISTRIBUTION AND RETENTION

a. Three copies to Directorate of Storage and Transportation.

b. Disposition of the report is at the discretion of the DS/T Manager.

8. PROCEDURE FOR REVIEW PROCESSING

The COPAD Management Information Report is used by DS/T to provide statistical data to the operating managers.

APPENDIX F-321

COPAD MRO(S) 30 DAYS OR OLDER

1. PURPOSE

This report will be used to identify those COPAD MROs that have not been released for shipment that are 30 days or older.

2. ORIGIN

Produced as a result of the MRO date received being older than 30 days. Data is obtained from the MOWASP/MOFAST In-process file.

3. FREQUENCY

Weekly

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-321)

(2) Report Title - COPAD MROs 30 days or older.

(3) Functional Routing Code

(4) Date - Month, year, day, and Julian date

b. Data Elements:

(1) Date Received

(2) Call Number

(3) MRO Image

5. SEQUENCE

a. Date received - Major.

b. Call Number - Minor.

6. DATA ORGANIZATION

Print report header on first line to start each page.

7. DISTRIBUTION AND RETENTION

a. Three copies to Directorate of Storage and Transportation.

b. All copies are for research purposes. Destroy upon completion.

8. PROCEDURE FOR REVIEW

A copy of this report should be forwarded to DCSC for review to determine action required to complete MRO, i.e., did the CAO receive contract data, is contractor having difficulty getting materiel, should MRO be canceled, etc.

APPENDIX F-322

COPAD MRO(S) IN-PROCESS MORE THAN FIVE DAYS

1. PURPOSE

This report is used by DS/T to identify those MROs that are in-process but not shipped that are five days or older.

2. ORIGIN

This report is produced as a result of a weekly in-process review of MROs in-process.

3. FREQUENCY

Daily

4. DATA ELEMENTS

a. Report Header Line which includes:

(1) Report Number (F-322)

(2) Report Title - COPAD MROs In-process More Than Five Days.

(3) Functional Routing Code

(4) Date - Month, year, day, and Julian date

b. Data Elements:

(1) Date released

(2) Shipment Unit and Line Item Number

(3) Call Number

(4) Mode of Shipment

(5) MRO Image

5. SEQUENCE

a. Date Released - major

b. Call Number - minor

6. DATA ORGANIZATION

a. Print report header on first line to start each page.

b. Report will be by document number within release date.

7. DISTRIBUTION AND RETENTION

a. Three copies to Directorate of Storage and Transportation.

b. All copies are for research purposes. Destroy upon completion.

8. PROCEDURES FOR REVIEW

Review should be taken to determine action required to complete MRO.

APPENDIX F-323

ASSEMBLY DATA REJECT/RESEARCH REPORT

1. PURPOSE

This report will provide notification to the assembly activity of inconsistencies in unit assembly data that have been received from the assembly manager or locally input. The inconsistencies which require research and correction have been identified by error messages.

2. ORIGIN

Produced when inconsistencies exist as a result of processing the batch run of transceived or locally entered unit assembly data.

3. FREQUENCY

As required.

4. DATA ELEMENTS

a. Report Header Line:

(1) Report Number - F-323.

(2) Title - Assembly Data Reject/Research Report.

(3) FRC - RX.

(4) Date - Month, Day, Year and Julian day.

(5) Page Number.

b. Build Directive Number.

c. Error Messages.

(1) Missing end item data record.

(2) Assemblage data mismatch.

(a) Total number of assemblages from input.

(b) Assemblage control numbers received.

(c) Assemblage identification numbers received.

(3) Component data record error.

(a) Components received.

(b) Components required.

(4) Missing component data card sequence no. 1.

(a) Stock Number.

(b) Function/Group Code.

(c) Subfunction Code.

(5) Missing function/group data for following codes.

(6) Missing subfunction data for the following codes.

(7) Quantity Imbalance.

(a) Component control number.

(b) Extended quantity.

(c) Authorized short.

(8) Additional quantity required.

(a) Assemblage identification number.

(b) Component control number.

(c) Quantity required.

(9) Excess Quantity packed/inprocess.

(a) Assemblage identification number.

(b) Component control number.

(c) Quantity required.

(10) Final partial processed - all containers/pallets not recorded as shipped.

(a) Assemblage identification number.

(b) Container/pallet number.

(11) System error contact DSAC-DC.

5. DATA ORGANIZATION

a. Report Header: Print on first line of each page.

b. Sequence:

(1) Build directive number - major.

(2) Print applicable error messages for each build directive number.

(3) Print assemblage control numbers, stock numbers, Function/Group Codes and Subfunction Codes in sequence under the applicable error messages.

6. DISTRIBUTION AND RETENTION

a. Two copies to the assembly activity.

b. Destroy after use.

7. PROCEDURES FOR REVIEW AND PROCESSING

Review the F-85 validation reject report to determine if missing data is due to validation rejects. When violation reason is:

a. Assembly data mismatch, determine if required assemblage control numbers and assemblage identification numbers are present and that no duplications exist.

b. Recycled for more than 30 days due to no matching C2A/Z2A or C2B/Z2B, ensure matching C2A/Z2A or C2B/Z2B formats are input into the DEPMEDS system. Rejected or corrected transactions may be reentered locally or by retransmission from the assembly manager.

APPENDIX F-324

UNIT ASSEMBLY PLANNING DATA

1. PURPOSE

This report will provide the assembly activity with the unit assembly data received from the assembly manager. It will be used for planning container assignment, determining component availability and for planning the assembly process. Updated assembly data may be obtained upon request.

2. ORIGIN

This report is produced automatically when unit assembly data is received from the assembly manager or as a result of processing an appendix B-319, Unit Assembly Planning List Request.

3. FREQUENCY

Upon request or as required from automatic generation.

4. DATA ELEMENTS

a. Report Header Line:

(1) Report Number - F-324.

(2) Title - Unit Assembly Planning Data.

(3) FRC - RX.

(4) Report Date - Month, Day, Year and Julian day.

(5) Page Number.

b. Requester Identification.

c. Report Header Information:

(1) Build Directive Number.

(2) Unit Assembly Number.

(3) Stock Number.

(4) Nomenclature.

(5) Total Number of Assemblages.

(6) Estimated Cost.

(7) Project Order Number.

(8) Manager Code

(9) Job Order Number.

(10) Build Completion Date.

(11) Assemblage Control Numbers.

(12) Assemblage Identification Numbers.

d. Function/Group Code.

e. Function/Group Name.

f. Subheader Line (pallet).

(1) Pallet Number.

(2) Type Package Code.

(3) Pallet Description.

(4) Shipping Document Sequence Number.

g. Subheader Line (container):

(1) Container Number Low.

(2) Container Number High.

(3) Type Package Code.

(4) Container Description.

(5) Shipping Document Sequence Number.

(6) Container Label Data.

h. Compatibility Group Name.

i. Detail Header Line.

(1) Component Control Number.

(2) Component Stock Number.

(3) Unit of Issue.

(4) Unit of Issue Weight.

(5) Unit of Issue Cube.

(6) Nomenclature.

(7) Shelf-Life Code (potency).

(8) Physical Security Code.

(9) Hazardous Storage Compatibility Code.

(10) Special Requirements Code.

(11) Water Commodity Code.

(12) Air Commodity Code.

(13) Original Stock Number.

(14) Subfunction Code.

(15) Basic Quantity

(16) Quantity Weight.

(17) Quantity Cube.

(18) Compatibility Group Names.

(19) Extended Quantity.

(20) Quantity Authorized Short.

(21) Quantity Substituted.

(22) On Hand Quantity.

(23) Due-In Quantity.

(24) Substitute Stock Number.

(25) Assemblage Build Capability.

j. Subtotal Line (compatibility group).

(1) Compatibility Group Name.

(2) Basic Weight.

(3) Basic Cube.

k. Subtotal Line (container).

(1) Container Number Low.

(2) Container Number High.

(3) Basic Weight.

(4) Basic Cube.

l. Subtotal Line (pallet).

(1) Pallet Number.

(2) Basic Weight.

(3) Basic Cube.

m. Subtotal Line (function/group).

(1) Function/Group Name.

(2) Basic Weight.

(3) Basic Cube.

n. Total Line.

(1) Build Directive Number.

(2) Basic Weight.

(3) Basic Cube.

5. DATA ORGANIZATION

a. Report Header: Print report header first line to start each page.

b. Report Header Information: Print once per build directive number immediately following the report header.

c. Subheader Line: Print each time container number low, changes.

d. Detail Header Line: Print after compatibility group name on page 1 and each time the compatibility group code changes on succeeding pages.

e. Subtotal Line (compatability group): Print at the end of the component data for each compatibility group.

f. Subtotal Line (container): Print immediately following the subtotal line for the last compatibility group in the container.

g. Subtotal Line (pallet): Print immediately following the subtotal line for the last container in the pallet.

h. Subtotal Line (function/group): Print immediately following the subtotal line for the last container in the function/group.

i. Total Line: Print immediately following the subtotal line for the last function/group in the build directive.

j. Sequence:

(1) Requester Identification - major.

(2) Build Directive Number - first intermediate.

(3) Function/Group Code - second intermediate.

(4) Pallet Number - third intermediate.

(5) Container Number Low - fourth intermediate.

(6) Compatibility Group Code - fifth intermediate.

(7) Component Control Number - minor

6. DISTRIBUTION AND RETENTION

a. Two copies to the assembly activity.

b. Destroy after use.

7. PROCEDURES FOR REVIEW AND PROCESSING

a. Report will be used to review assembly data which was received from the assembly manager.

b. Input of missing data, assignment of container numbers and planning of components to containers will be accomplished through appendix B-317, Component/Planning Data.

APPENDIX F-325

ASSEMBLY RECEIPT FOLLOWUP REPORT

1. PURPOSE

To provide followup information to the assembly activity on component stock numbers for which advance receipt data has been received and the corresponding materiel has not arrived within a specified time. Delinquency will be determined by the estimated delivery date for materiel from procurement and by locally tabled data for materiel shipped from the depots.

2. ORIGIN

Produced following the batch run which confirms receipt of materiel in the assembly activity.

3. FREQUENCY

Daily.

4. DATA ELEMENTS

a. Report Header Line:

(1) Report Number - F-325.

(2) Title - Assembly Receipt Followup Report.

(3) FRC - RX.

(4) Date - Month, Day, Year and Julian day.

(5) Page Number.

b. Report Data Groupings:

(1) Receipt from other than procurement.

(2) Receipts from procurement.

c. Shipping Depot RIC.

d. Build Directive Number.

e. Assembly Manager.

f. Component Data Header:

(1) Stock Number.

(2) Unit of Issue.

(3) Due-In Quantity.

(4) Component Document Number.

(5) Suffix Code.

(6) Condition Code.

(7) Estimated Delivery Date.

(8) Date Advance Receipt Data Established.

5. DATA ORGANIZATION

a. Report Header: Print on the first line of each page.

b. Print all the receipts from other than procurement in a group prior to printing the receipts from procurement.

c. Print component data header, following each build directive number change.

d. Sequence:

(1) Source of Receipts - major (procurement vs. other than procurement).

(2) Shipping Depot RIC - first intermediate.

(3) Build Directive Number - second intermediate.

(4) Minor Sequence:

(a) Date established on other than procurement (earliest date first).

(b) Estimated delivery date on procurement (earliest date first).

6. DISTRIBUTION AND RETENTION

a. Two copies to the assembly activity.

b. Destroy after use.

7. PROCEDURES FOR REVIEW AND PROCESSING

For use as defined by local receipt followup procedures.

APPENDIX F-326

ASSEMBLY RECEIPT MOVEMENT DOCUMENT - ASSEMBLY AREA

1. PURPOSE

To direct component stock which is designated for pick on receipt to the applicable assembly area(s) for packing.

2. ORIGIN

This document is produced as a result of processing Assembly Receipt Data, appendix B-320.

3. FREQUENCY

As required.

4. DATA ELEMENTS

a. Report Header Line:

(1) Report Number - F-326.

(2) Title - Assembly Receipt Movement Document - Assembly Area.

(3) Date - Month, Day, Year and Julian day.

b. Movement Data Elements Header:

(1) Stock Number.

(2) Unit of Issue.

(3) Nomenclature.

(4) Unit of Measure.

(5) Measurement Quantity.

(6) Receipt Document Number.

(7) Suffix Code.

(8) Movement Quantity.

(9) Assembly Area.

(10) Reprint Message.

c. Item Data Change Information:

(1) Old Stock Number.

(2) Old Unit of Issue.

d. Packing Data Elements Header:

(1) Build Directive Number.

(2) Function/Group Code.

(3) Subfunction Code.

(4) Assemblage Identification Number.

(5) Container Number.

(6) Component Control Number.

(7) Shelf-Life Code (potency).

(8) Physical Security Code.

(9) Hazardous Storage Compatibility Code.

(10) Special Requirements Code.

(11) Water Commodity Code.

(12) Inspection Required Indicator.

(13) Packing Quantity.

(14) Position Alignment Code.

5. DATA ORGANIZATION

a. Report Header: Print once each document.

b. Movement Data Elements Header: Print once per document, following the report header.

c. Packing Data Elements Header: Print once per document immediately following movement data.

d. Print a separate document for each component control number and assembly line.

6. DISTRIBUTION AND RETENTION

a. Output using three-part paper on a remote printer in the assembly activity.

b. Destroy after use.

7. PROCEDURES FOR REVIEW AND PROCESSING

a. This document will be used to route the component receipt or the applicable quantity of the receipt to the designated assembly area.

b. After routing and packing are accomplished, this document may be used by the CRT operator for remote entry of the packing completion data.

APPENDIX F-327

COMPONENT AVAILABILITY STATUS

1. PURPOSE

To provide visibility of the number of components available in the assembly activity and based on quantity, the potential for assembly. This will be expressed as a percentage of components available to complete each assemblage included in the build request.

2. ORIGIN

This report is produced as a result of processing the Component Availability Status Request, appendix B-326.

3. FREQUENCY

Upon request.

4. DATA ELEMENTS

a. Report Header Line.

(1) Report Number - F-327.

(2) Title - Component Availability Status.

(3) FRC - Functional Routing Code.

(4) Date - Month, Day, Year and Julian day.

(5) Page Number.

b. Requester Identification:

c. Report Header Data:

(1) Build Directive Number.

(2) Unit Assembly Number.

(3) Stock Number.

(4) Nomenclature.

(5) Number of Assemblages.

(6) Estimated Cost.

(7) Project Order Number.

(8) Assembly Manager.

(9) Job Order Number.

(10) Build Completion Date.

d. Total Components by BDN.

e. Function/Group Name.

f. Function Group Code.

g. Total Components for Function/Group Name.

h. Container Number.

i. Total Components by Container.

j. Availability Data:

(1) Assemblages.

(2) Number of components available.

(3) Percent of components available.

5. DATA ORGANIZATION

a. Report Header: Print report header on the first line of each page.

b. Report Header Data: Print once per report immediately following the header line on the first page.

c. Sequence:

(1) Requester Identification - major.

(2) Build Directive Number - first intermediate.

(3) Function/Group Code - second intermediate.

(4) Container Number - third intermediate.

d. Print availability data with assemblage control number as the minor sequence for the BDN, each function/group and each container.

6. DISTRIBUTION AND RETENTION

a. Two copies to the assembly activity.

b. Destroy after use.

7. PROCEDURES FOR REVIEW AND PROCESSING

For use by the assembly activity to determine stock availability.

APPENDIX F-328

COMPONENT PICK/MOVEMENT DOCUMENT

1. PURPOSE

To provide Picking/Movement Documents in the requested location sequence for components located in the assembly storage area.

2. ORIGIN

This document is produced as a result of processing the Component Picking/Packing Request (appendix B-308).

3. FREQUENCY

Upon request.

4. DATA ELEMENTS

a. Report Header Line.

(1) Report Number - F-328.

(2) Title - Component Pick/Movement Document.

(3) FRC - RX.

(4) Date - Month, Day, Year and Julian day.

b. Data Elements.

(1) Picking Data Header:

(a) Stock Number.

(b) Unit of Issue.

(c) Nomenclature.

(d) Unit of Measure.

(e) Measurement Quantity.

(f) Locations.

(g) Movement Quantity.

(g) Shelf-Life Code (potency).

(h) Physical Security Code.

(i) Hazardous Storage Compatibility Code.

(j) Special Requirements Code.

(k) Water Commodity Code.

(l) Inspection Required Indicator.

(m) Packing Quantity.

(n) Position Alignment Code.

5. DATA ORGANIZATION

a. Report Header: Print report header at the beginning of each document.

b. Picking Header Data: Print once per document immediately following the report header.

c. Packing Data Header: Print once per document following the picking header data.

d. Print a separate document for each componet control number and assembly area.

6. DISTRIBUTION AND RETENTION

a. Output on three-part paper for delivery to the assembly activity.

b. Destroy after use.

7. PROCEDURES FOR REVIEW AND PROCESSING

a. This document will be used to pick component stock at the assembly location and move it to the designated assembly area.

b. This document should remain with the component stock until packing is completed and may then be used for CRT input of the packing completion data.

APPENDIX F-329

ASSEMBLAGE CONTROL PACKING DATA

1. PURPOSE

This report is provided upon request or output automatically as a result of processing the Component Picking/Packing Request. When produced automatically, it provides tailored component picking data corresponding to the parameters in the Component Picking/Packing Request.

2. ORIGIN

a. Produced as a result of processing the Assemblage Control Packing Data Request (appendix B-327).

b. Produced automatically as a result of processing the Component Picking/Packing Request (appendix B-308).

3. FREQUENCY

As requested.

4. DATA ELEMENTS

a. Report Header Line:

(1) Report Number - F-329.

(2) Title - Assemblage Control Packing Data.

(3) FRC - RX.

(4) Report - Month, Day, Year and Julian day.

(5) Page Number.

b. Assembly Area.

c. Requester Identification.

d. Build Directive Number Header:

(1) Build Directive Number.

APPENDIX F-330

PACKING STATUS

1. PURPOSE

This report will provide packing status in the form of the number and percentage of components packed per container for the parameters included in the report request.

2. ORIGIN

Provided as a result of processing the Packing Status Request (appendix B-328).

3. FREQUENCY

As requested.

4. DATA ELEMENTS

a. Report Number - F-330.

(1) Report Number - F-330.

(2) Title - Packing Status.

(3) FRC - RX.

(4) Date - Month, Day, Year and Julian day.

(5) Page Number.

b. Requester Identification.

c. Build Directive Number Header:

(1) Build Directive Number.

(2) Unit Assembly Number.

(3) Component Stock Number.

(4) Nomenclature.

(5) Number of Assemblages.

(6) Assemblages Packed.

(7) Estimated Cost.

(8) Project Order Number.

(9) Assembly Manager.

(10) Job Order Number.

(11) Build Completion Date.

d. Assemblage Control Number Header:

(1) Assemblage Control Number.

(2) Assemblage Identification Number.

(3) Number of Functions.

(4) Functions Packed.

(5) Number of Containers.

(6) Containers Packed.

(7) Number of Components.

(8) Components Packed.

(9) Percent Packed.

e. Function/Group Header:

(1) Function/Group Code.

(2) Function/Group Name.

(3) Number of Containers.

(4) Containers Packed.

(5) Number of Components.

(6) Components Packed.

(7) Percent Packed.

f. Container Header:

(1) Container Number.

(2) Number of Components.

(3) Components Packed.

(4) Percent Packed.

5. DATA ORGANIZATION

a. Report Header: Print on first line of each page.

b. Sequence:

(1) Requester Identification - major.

(2) Build Directive Number - first intermediate.

(3) Assemblage Control Number - second intermediate.

(4) Function/Group Code - third intermediate.

(5) Container Number - minor.

6. DISTRIBUTION AND RETENTION

a. Two copies to the assembly activity.

b. Destroy after use.

7. PROCEDURES FOR REVIEW AND PROCESSING

Report will be used to review packing status.

APPENDIX F-331

CONTAINER PACKING LIST

1. PURPOSE

To provide a packing list which identifies all component stock numbers which are included in the packed container.

2. ORIGIN

Produced as a result of processing the Container Packing List Request appendix B-310.

3. FREQUENCY

Upon request.

4. DATA ELEMENTS

a. Report Header Line:

(1) Report Number - F-331.

(2) Title - Container Packing List.

(3) Date - Month, Day, Year and Julian day.

(4) Page Number.

b. First Subheader:

(1) Build Directive Number.

(2) Unit Assembly Number.

(3) Stock Number.

(4) Nomenclature.

(5) Assemblage Control Number.

(6) Container Number.

(7) Earliest Expiration Date.

(8) Pallet Number.

c. Second Subheader:

(1) Component Stock Number.

(2) Nomenclature.

(3) Quantity Packed.

(4) Unit of Issue.

(5) Position Alignment.

(6) Date of Manufacturing.

(7) Expiration Date.

(8) Subfunction Name.

(9) Function/Group Name.

d. Multiple container message for a single stock number.

5. DATA ORGANIZATION

a. Report Header: Print on first line of each page.

b. First Subheader: Print following the report header on each page.

c. Second Subheader: Print following the first subheader on each page.

d. Print multiple container message for a single stock number, when applicable, following the second subheader data.

e. Produce a new container list for each container number.

6. DISTRIBUTION AND RETENTION

a. Print two copies in the assembly area.

b. One copy will be placed inside the container and one attached to the outside.

APPENDIX F-332

ASSEMBLY PACKING LIST

1. PURPOSE

To provide a packing list which will include packing information on components, containers, pallets and exception information required for use in the shipment of an assembled build directive.

2. ORIGIN

Produced as a result of processing an Assemblage Completion Notification (appendix B-321).

3. FREQUENCY

Upon request.

4. DATA ELEMENTS

a. Report Header Line:

(1) Report Number - F-332.

(2) Title - Assembly Packing List.

(3) FRC - RX.

(4) Date - Month, Day, Year and Julian day.

(5) Page Number.

b. Report Subheader:

(1) Assembly Stock Number.

(2) Nomenclature.

(3) Build Directive Number.

(4) Unit Assembly Number.

(5) Assemblage Control Number.

(6) Document Number.

(7) Narrative Data.

c. Summary Subheader:

(1) Number of Loose Containers.

(2) Container Weight.

(3) Container Cube.

(4) Number of Pallets.

(5) Net Pallet Weight.

(6) Pallet Cube.

(7) Total Pallet Weights.

(8) Total Weight.

(9) Total Cube.

(10) Container Number Low in assembly.

(11) Container Number High in assembly.

(12) Containers Not Used in assembly.

(13) Pallet Number Low in assembly.

(14) Pallet Number High in assembly.

(15) Pallets Not Used in assembly.

d. Container/Pallet Subheader.

(1) Container Number.

(2) Container Weight.

(3) Container Cube.

(4) Pallet Number.

(5) Net Pallet Weight.

(6) Pallet Weight.

(7) Gross Pallet Weight.

(8) Pallet Cube.

(9) Shipping Document Sequence Number.

e. Shortage Data Elements:

(1) Function Group Name.

(2) Subfunction Name.

(3) Component Stock Number.

(4) Unit of Issue.

(5) Nomenclature.

(6) Quantity Short.

f. Substitute Data Elements:

(1) Function/Group Name.

(2) Subfunction Name.

(3) Component Stock Number.

(4) Unit of Issue.

(5) Nomenclature.

(6) Total Quantity Substituted.

(7) Substitute Stock Number.

(8) Substitute Nomenclature.

(9) Quantity Substituted.

g. Shelf-Life Data Elements:

(1) Function/Group Name.

(2) Subfunction Name.

(3) Component Stock Number.

(4) Unit of Issue.

(5) Nomenclature.

(6) Quantity Packed.

(7) Container Number.

(8) Date of Manufacturing.

(9) Expiration Date.

(10) Manufacturers Name.

(11) Lot Number.

(12) Contract Number.

(13) Serial Number.

h. Special Handling Data Elements:

(1) Compatibility Group Name.

(2) Component Stock Number.

(3) Unit of Issue.

(4) Nomenclature.

(5) Quantity Packed.

(6) Container Number.

i. Container Component Data Elements:

(1) Container Number Low.

(2) Container Number High.

(3) Pallet Number.

(4) Function/Group Name.

(5) Component Stock Number.

(6) Unit of Issue.

(7) Nomenclature.

(8) Quantity.

(9) Subfunction Name.

5. DATA ORGANIZATION

a. Report Header: Print on first line of each page.

b. Report Subheader: Print on the first page following the report header.

c. Summary Subheader: Print on first page following the report subheader narrative data.

d. Container Subheader: Print following the summary subheader data. Sequence by pallet number and container number within pallet number.

e. Shortage data elements: Print following the container subheader data with Function/Group Code as the major sequence, Subfunction Code as an intermediate sequence and stock numbers the minor sequence.

f. Substitute data elements: Print following the shortage information with Function/Group Code as the major sequence, Subfunction Code as an intermediate sequence and stock number the minor sequence.

g. Shelf-life data elements: Print following the substitute information with Function/Group Code as the major sequence, Subfunction code as intermediate sequence and stock number the minor sequence.

h. Special handling data elements: Print following the shelf-life information, with compatability group codes as the major sequence and component stock number as the minor sequence.

i. Container component data elements: Print following the special handling information with container number as the major sequence and stock number the minor sequence.

6. DISTRIBUTION AND RETENTION

a. Print four copies for use by the assembly activity as follows:

(1) One copy in designated box of the assemblage.

(2) One copy to send to the destination activity.

(3) One copy to the respective field service office.

(4) One copy for the assembly activity records.

b. Destroy file copy in accordance with local procedures.

7. PROCEDURES FOR REVIEW AND PROCESSING

For use as defined in local procedures.

APPENDIX F-333

INCOMPLETE COMPONENT LIST

1. PURPOSE

To provide notification, in lieu of the container packing list, of specific components that have not been recorded as packed.

2. ORIGIN

Produced as a result of processing the appendix B-310, Container Packing List Request.

3. FREQUENCY

As required.

4. DATA ELEMENTS

a. Report Header Line:

(1) Report Number - F-333.

(2) Title - Incomplete Component List.

(3) Date - Month, Day, Year and Julian day.

(4) Page Number.

b. Assembly Area.

c. Build Directive Subheader:

(1) Build Directive Number.

(2) Unit Assembly Number.

(3) Stock Number.

(4) Nomenclature.

(5) Assemblage Identification Number.

d. Container Number.

e. Container Subheader:

(1) Component Control Number.

(2) Component Stock Number.

(3) Unit of Issue.

(4) Nomenclature.

(5) Quantity to be Packed.

(6) Unit of Measure.

(7) Quantity Packed.

5. DATA ORGANIZATION

a. Report Header: Print on the first line of each page.

b. Sequence:

(1) Assembly Line - major.

(2) Build Directive Number - first intermediate.

(3) Container Number - second intermediate.

(4) Container Subheader: Print following container number.

(5) Component Stock Number - minor.

6. DISTRIBUTION AND RETENTION

a. Output one copy on a remote printer in the assembly activity.

b. Destroy after use.

7. PROCEDURES FOR REVIEW

Research to determine availability of missing components.

APPENDIX F-334

ASSEMBLY RECEIPT MOVEMENT DOCUMENT - LOCATION

1. PURPOSE

To direct receipts of component stock, which are not scheduled for an assembly line, to the assembly storage area and to provide existing locations if available for the same stock number.

2. ORIGIN

This document is produced as a result of processing Assembly Receipt Data, appendix B-320.

3. FREQUENCY

As a result of a receipt input.

4. DATA ELEMENTS

a. Report Header Line.

(1) Report Number - F-334.

(2) Title - Assembly Receipt Movement Document - Location.

(3) Date - Month, Day, Year and Julian day.

b. Data Elements:

(1) Stock Number.

(2) Unit of Issue.

(3) Nomenclature.

(4) Unit of Measure.

(5) Measurement Quantity.

(6) Receipt Document Number.

(7) Suffix Code.

(8) Movement Quantity.

(9) Location (up to 3).

(10) Date of Manufacture (up to 3).

(11) Expiration Date (up to 3).

(12) Reprint Message.

c. Item Data Change Information:

(1) Old Stock Number.

(2) Old Unit of Issue.

(3) Shelf-Life Code (potency).

(4) Physical Security Code.

(5) Hazardous Storage Compatibility Code.

(6) Special Requirements Code.

(7) Water Commodity Code.

(8) Inspection Required Indicator.

5. DATA ORGANIZATION

a. Report Header: Print report header at the beginning of each document.

b. Detail header format, print once per document.

c. Print information for each component stock number on a separate document.

d. Print locations in sequence.

6. DISTRIBUTION AND RETENTION

a. Output using three-part paper on a remote printer in the assembly activity.

b. Destroy after use.

7. PROCEDURES FOR REVIEW AND PROCESSING

a. This document will be used by the assembly warehouse personnel to accomplish the stow action.

b. After the stow action has been completed, this document may be used by the CRT operator for remote entry of the location data if the materiel has been placed in a new location which is not recorded on the assembly locator.

APPENDIX F-335

ASSEMBLY COMPONENT SHORTAGE REPORT

1. PURPOSE

This report will provide a list of the components within the parameters of the Assembly Component Shortage Request, for which there is a quantity short.

2. ORIGIN

This report is provided as a result of processing the Assembly Component Shortage Request (appendix B-316).

3. FREQUENCY

Upon request.

4. DATA ELEMENTS

a. Report Header:

(1) Report Number - F-335.

(2) Title - Assembly Component Shortage Report.

(3) FRC - RX.

(4) Date - Month, Day, Year and Julian day.

(5) Page Number.

b. Requester Identification.

c. Build Directive Subheader:

(1) Build Directive Number.

(2) Unit Assembly Number.

(3) Stock Number.

(4) Nomenclature.

(5) Number of Assemblages.

(6) Estimated Cost.

(7) Project Order Number.

(8) Assembly Manager.

(9) Job Order Number.

(10) Build Completion Date.

d. Data Elements:

(1) Function/Group Code.

(2) Function/Group Name.

(3) Container Number Low.

(4) Container Number High.

e. Component Subheader:

(1) Component Control Number.

(2) Component Stock Number.

(3) Unit of Issue.

(4) Basic Quantity.

(5) Extended Quantity.

(6) Nomenclature.

(7) Original Stock Number.

(8) Subfunction Code.

(9) Authorized Short.

(10) Quantity Substituted.

(11) On Hand Quantity.

(13) Quantity Short.

(14) Substitute Stock Number (up to 3).

(15) Assemblage Build Capability.

5. DATA ORGANIZATION

a. Report Header: Print on first line of each page.

b. Component Subheader: Print following each container number.

c. Sequence:

(1) Requester Identification - major.

(2) Build Directive Number - first intermediate.

(3) Function/Group Code - second intermediate.

(4) Container Number - third intermediate.

(5) Component Stock Number - minor.

d. Break page when Build Directive Number changes.

6. DISTRIBUTION AND RETENTION

a. Two copies to the assembly activity.

b. Destroy after use.

7. PROCEDURES FOR REVIEW AND PROCESSING

For use by the assembly activity in determining component availability.

APPENDIX F-337

FUNCTION AND SUBFUNCTION REPORT

1. PURPOSE

To provide a listing of all function/groups and subfunctions associated with a build directive number.

2. ORIGIN

This report is produced as a result of processing an appendix B-324, Function and Subfunction Data inquiry for a Build Directive Number.

3. FREQUENCY

Upon request.

4. DATA ELEMENTS

a. Report Header Line:

(1) Report Number - F-337.

(2) Title - Function and Subfunction Report.

(3) FRC - RX.

(4) Date - Month, Day, Year and Julian day.

(5) Page Number.

b. Requester Identification.

c. Data Elements:

(1) Build Directive Number.

(2) Unit Assembly Number.

(3) Stock Number.

(4) Nomenclature.

(5) Number of Assemblages.

(6) Estimated Cost.

(7) Project Order Number.

(8) Assembly Manager.

(9) Job Order Number.

(10) Build Completion Date.

(11) Function/Group Code.

(12) Function/Group Name.

(13) Subfunction Code.

(14) Subfunction Name.

5. DATA ORGANIZATION

a. Report Header: Print report header, first line to start each page.

b. Detail Header: Print once each page.

c. Sequence.

(1) Requester Identification - major.

(2) Build Directive Number - first intermediate.

(3) Function/Group Code - second intermediate.

(4) Subfunction Code - minor.

6. DISTRIBUTION AND RETENTION

Two copies to the assembly activity, destroy after use.

7. PROCEDURES FOR REVIEW

For use by the assembly activity in researching function/group, and subfunction data.

CONTAINER DATA REPORT

1. PURPOSE

To provide a listing of container data for all containers included in the request parameters.

2. ORIGIN

This report is produced as a result of processing an appendix B-325, Container Data Request which includes more than four containers.

3. FREQUENCY

Upon request.

4. DATA ELEMENTS

a. Report Header Line.

(1) Report Number - F-338.

(2) Title - Container Data Report.

(3) FRC - RX.

(4) Date - Month, Day, Year and Julian day.

(5) Page Number.

b. Requester Identification.

c. Data Elements:

(1) Build Directive Number.

(2) Unit Assembly Number.

(3) Stock Number.

(4) Nomenclature.

(5) Number of Assemblages.

(6) Estimated Cost.

(7) Project Order Number.

(8) Assembly Manager.

(9) Job Order Number.

(10) Build Completion Date.

(11) Assemblage Control Number.

(12) Assemblage Identification Number.

d. Container Subheader:

(1) Container Number.

(2) Type Package Code.

(3) Container Description.

(4) Pallet Number.

(5) Location.

(6) Container Weight.

(7) Container Cube.

(8) Weight of the Pallet.

(9) Shipping Document Sequence Number.

(10) Container Label Data.

5. DATA ORGANIZATION

a. Report Header: Print on first line to start each page.

b. Detail Header: Print once each page.

c. Sequence:

(1) Build Directive Number - major.

(2) Assemblage Control Number - first intermediate.

(3) Container Number - minor.

6. DISTRIBUTION AND RETENTION

a. Two copies to the assembly activity.

b. Destroy after use.

7. PROCEDURES FOR REVIEW AND PROCESSING

Report may be used to obtain container data and container locations as requested.

APPENDIX F-339

INCOMPLETE ASSEMBLAGE REPORT

1. PURPOSE

To provide notification in lieu of an assembly packing list of components that have not been recorded as packed and containers and pallets that do not have recorded storage locations.

2. ORIGIN

Produced as a result of processing the appendix B-321 Assembly Completion Notice when packing and location of materiel is not complete.

3. FREQUENCY

As required.

4. DATA ELEMENTS

a. Report Header Line:

(1) Report Number - F-339.

(2) Title - Incomplete Assemblage Report.

(3) FRC - RX.

(4) Date - Month, Day, Year and Julian day.

(5) Page Number.

b. Build Directive Subheader:

(1) Build Directive Number.

(2) Unit Assembly Number.

(3) Stock Number.

(4) Nomenclature.

(5) Assemblage Identification Number.

c. Component Shortage header:

(1) Container Number.

(2) Component Control Number.

(3) Component Stock Number.

(4) Unit of Issue.

(5) Nomenclature.

(6) Quantity to be Packed.

(7) Unit of Measure.

(8) Quantity Packed.

d. Containers Requiring Location Assignment.

e. Pallets Requiring Location Assignment.

f. Missing container data.

g. Missing pallet data.

5. DATA ORGANIZATION

a. Report header: Print on the first line of each page.

b. Print component shortages under each new build directive subheader followed by containers requiring location assignment, with containers in sequence and pallets requiring location assignment, in pallet number sequence.

c. Sequence:

(1) Build Directive Number - major.

(2) Container Number - first intermediate.

(3) Component Stock Number - minor.

6. DISTRIBUTION AND RETENTION

a. Two copies of the assembly activity.

b. Destroy after use.

7. PROCEDURES FOR REVIEW

a. Research to determine availability of missing components.

b. Complete packing and enter packing completion notices using appendix B-109 for components found during research.

c. If, in coordination with the assembly manager determination is made to complete the container with missing components as authorized shortages, a C2D transaction from the assembly manager or a Z2D transaction (local input) must be processed before requesting the Container Packing List. Process a Container Packing List Request using program UWMH70, Section Code UD.

d. Establish storage locations using program UWMH70, Section Code UE, for all containers and pallets shown as requiring location assignment.

e. The container numbers listed under the "Missing Container Data" line may be inquired using UWMH70, Section Code UK. Review and enter required data if missing from the following fields:

(1) Container weight.

(2) Container cube.

(3) Type package code.

(4) Weight of the pallet if type package code is PT or SD. Container numbers may also be cleared by requesting a packing list for the container using UWMH70, Section Code UD.

f. Inquire pallet numbers listed under the "Missing Pallet Data" heading, using UWMH70, Section Code UG. Review and enter required data if missing from the following fields:

(1) Gross pallet weight.

(2) Gross pallet cube.

(3) Type cargo code.

(4) Weight of the pallet, if type package code is PT or SD.

g. After above actions have been completed, reenter the Assembly Completion Notice using program UWMH70, Section Code RE, to obtain the Assembly Packing List and initiate receipt confirmation to the assembly manager.

APPENDIX F-340

DEPMEDS UNIT OF ISSUE/STOCK NUMBER MISMATCH REPORT

1. PURPOSE

This report will provide notification to the assembly activity of transactions with DICs of CM_ or C2D, Z2D (card sequence 4) which were rejected without updating DEPMEDS records with Unit of Issue or Stock Number changes.

2. ORIGIN

This report is produced when:

a. CM_ transactions with Unit of Issue or Stock Number changes are received from other than the medical manager.

b. Unit of Issue Old, on C2D, Z2D (card sequence 4) does not match the Unit of Issue currently in the DEPMEDS records.

3. FREQUENCY

As required.

4. DATA ELEMENTS

a. Report Header Line:

(1) Report Number - F-340.

(2) Title - DEPMEDS Unit of Issue Mismatch Report.

(3) FRC - RX.

(4) Date - Month, Day, Year and Julian day.

(5) Page Number.

b. Card Column Header: 0 through 8.

c. Data Line: Card image of the rejected transaction.

5. DATA ORGANIZATION

a. Report Header Line: Print report header on the print line of each page.

b. Field Position Header Line: Print numbers 0 through 8 - denoting field positions one through eighty, immediately following the report header line on each page.

c. Data Line: Print card image in the applicable fields under the field position header line.

d. Sequence:

Sequence by Stock Number.

6. DISTRIBUTION AND RETENTION

a. Two copies to the assembly activity.

b. Destroy after use.

7. PROCEDURES FOR REVIEW AND PROCESSING

a. Report will be used to identify attempted stock number and unit of issue changes for DEPMEDS stock.

b. Information can be used to communicate with the assembly manager to ensure that necessary C2D (card sequence 4) transactions are received at the assembly activity.

```

APPENDIX F-341

DEPMEDS ITEM DATA CHANGE REPORT

1. PURPOSE

This report will provide notification to the assembly activity of all unit of issue stock number and item data changes which have updated the DEPMEDS files.

2. ORIGIN

Produced as a result of processing CM_, CBC, ZBC or card sequence 4 of C2D/Z2D transactions.

3. FREQUENCY

As required.

4. DATA ELEMENTS

a. Report Header Line:

(1) Report Number - F-341.

(2) Title - DEPMEDS Item Data Change Report.

(3) FRC-RX.

(4) Date - Month, Day, Year and Julian day.

(5) Page Number.

b. Field Position Header: 0 through 8.

c. Data Line: Card image of the processed transaction.

5. DATA ORGANIZATION

a. Report Header Line: Print report header on the first line of each page.

b. Field Position Header Line: Print numbers 0 through 8 denoting field positions one through eighty, immediately following the report header line on each page.

c. Data Line: Print the card image for each transaction in the correct positions under the field position header line.

d. Sequence:

Sequence by stock number.

6. DISTRIBUTION AND RETENTION

a. Two copies to the assembly activity.

b. Destroy after use.

7. PROCEDURES FOR REVIEW AND PROCESSING

For review of Unit of Issue and Stock Number changes for stock in the DEPMEDS System.

```

APPENDIX F-342

DEPMEDS STOCK CHANGE REPORT

1. PURPOSE

This report identifies locations of stock in the DEPMEDS area which may require packaging or remarking due to unit of issue or stock number changes.

2. ORIGIN

Produced as a result of processing CM_ or card sequence 4 of C2D/Z2D transactions.

3. FREQUENCY

As required.

4. DATA ELEMENTS

a. Report Header Line.

(1) Report Number - F-342.

(2) Title - DEPMEDS Stock Change Report.

(3) FRC - RX.

(4) Date - Month, Day, Year and Julian day.

(5) Page Number.

b. Field Position Header: 0 through 8.

c. Data Line:

(1) DEPMEDS stock location.

(2) Card image of input transaction.

5. DATA ORGANIZATION

a. Report Header Line: Print report header line of first line of each page.

b. Field Position Header Line: Print numbers 0 through 8 denoting field positions one through eighty, immediately following the report header line on each page.

c. Data Line: Print location and card image under applicable fields.

d. Sequence:

(1) Location - major.

(2) Stock Number - minor.

6. DISTRIBUTION AND RETENTION

a. Two copies to the assembly activity.

b. Destroy after use.

7. PROCEDURES FOR REVIEW AND PROCESSING

For use as required in packaging and remarking of stock.

ALPHABETIC INDEX OF G APPENDICES

TITLE OF REPORT OR LISTING	APP NO.
Abbreviations	G-2
Charting Symbols	G-3
Definitions	G-1
Standard Handwriting of Characters	G-4

APPENDIX G-1

DEFINITIONS

TERM	MEANING
Accountability	The obligation imposed by law or lawful order or regulation of an officer or other person for keeping accurate record of property, documents, or funds. The person having this obligation may or may not have actual possession of the property, documents, or funds. Accountability is concerned primarily with records, while responsibility is concerned primarily with custody, care, and safekeeping.
Accountable Officer	An individual, either civilian or military, required to assure that accurate recording of property transactions is accomplished and current records pertaining thereto are maintained. Accountable Officers will be appointed in writing by Heads of DLA primary level field activities.
Action Code	A two position alpha code designed to identify the specific action to be taken against a table, file, or record when used with a specific DIC (see appendix A-42).
Activity Address Code	A six position alpha/numeric code depicting an in-the-clear address of individuals or activities authorized to direct, ship or receive materiel, documentation, and/or billing.
Advice/Status Code	A one/two/three position alpha/numeric code to provide instructions/information to supply sources and customers (see appendix A-12).
Air Cargo Dimension Code	A one position alpha/numeric code used to identify the minimum size aircraft cargo door required to permit loading of a piece of cargo.
Air Commodity Codes	A two position alpha/numeric code which is utilized in the Item Locator Record for the following purposes: a. Enable mechanical preparation of transportation control movement document. b. Identify type of cargo on DD Form 1348-1 for special marking and labeling requirements.
Aisle	Any passageway in storage areas.

TERM	MEANING
Alteration, Conversion and Modification	An order issued by a DSC to perform ACM action on a given assembly.
Bailment	The method of issuing Government Furnished Materiel (GFM) to contractors whereby the contractors pay transportation costs and dictate the mode of shipment.
Batching	A system option available for use in Mechanized Areas of Warehousing. Provides for assembling shipping documentation in manageable and workable groups (batches). Batch numbers and control numbers are utilized and appear on Materiel Release Orders and Shipment Planning Worksheets.
Batch Number	Two digit number assigned sequentially to each computer cyclic output for stock selection in Area X (Mechanized). The number is printed in the right margin of the DD Form 1348-1 table, whether single or multiline shipment units. Batch Numbers are assigned starting with 01 and continuing through 99, except when the first cycle in a day will be 95 or higher. The computer then reverts to 01 to ensure that an out-of-sequence condition will not occur in passing from 99 to 01 in the same cycle.
Batching Schedule	Form published daily which establishes the starting and ending times for stock selection and packing of batched line items in the mechanized area. A schedule contains the number of lines, personnel allocation, and other information in local format pertinent to completion of the workload.
Bill of Lading Number	a. Government Bills of Lading are serially numbered when printed and the numbers are immediately preceded by symbol letters which are approved by the Comptroller General of the United States (see DLAR 4500.3, paragraph 214006a). b. Commercial Bills of Lading are serially numbered by issuing Transportation Officer.
Bin Size	A one position alpha code used to identify the dimensions of the bin.
Brand Name Item	An item that is requisitioned and procured by a specific producer's registered name.

TERM	MEANING
Brand Name Master Item File (BNMIF)	A mechanical file containing identification record of all brand name items being requisitioned under DICOMSS.
Brand Name Master Item Identification List (BNMILL)	A published listing of all items recorded on Brand Name Master Item File.
Bureau Number	That number which is assigned either by the delivering transportation company's agent, or the local transportation officer, when shipments are recorded for transit as approved by the appropriate weighing and inspection bureau.
Certifying Officer	An individual, either civilian or military, authorized to attest to the accuracy or legality of a written statement or to the facts of a property transaction. Certifying Officers will be appointed in writing by Heads of DLA primary level field activities.
Chill Space	Refrigerated warehouse area in which the temperature can be controlled between 32 F and 50 F.
City of Origin	A 15-position clear text name of the city from which a shipment originates.
Commander	The Head of a primary level field activity except Defense Documentation Center (DDC).
Commodity Manager Code	A one position alpha code used to identify the Inventory Control Point which has the stock accounting function for the item.
Condition Code	A one position alpha code indicating the physical state or condition of materiel.
Consignee Activity Address Code	A six position alphanumeric code that designates where materiel is being shipped.
Contract Line Item Number	A six digit number from the contract which is entered into the Materiel Receipt Card.
Controlled Humidity Space	Area equipped with humidity control equipment.
Conversion Factor	A five position numeric factor by which the old weight and cube is converted to the new weight and cube when Unit of Issue is changed.
Covered Space	Area within any roofed structure.

TERM	MEANING
Covered Storage Space Occupied by DLA Commodities at DLA Operated Storage or Distribution Depots	Total covered space of all types occupied by DLA-owned inventories at DLA-operated storage or distribution depots.
Date of Pack	A four position numeric to identify the date of cure/manufacture/assembly or pack, i.e., two digits for Month and two digits for Year. The date is assigned and utilized in the Item Locator Subrecord to ensure proper management control of shelf-life items and permit stock rotation as follows: a. Date of Manufacture, cure or assembly. b. Date products were canned (fill date). c. Date of Packaging. d. Unmarked nonshelf-life material received from Contractors (new) will be assigned the contract date. e. Unmarked nonshelf-life items received as station returns will be assigned the same date as the oldest stock (same FSN) in storage.
Deadline Mandatory Transfer Date	This is the final date for DoD excess materiel to be transferred from the Defense Supply Center to the Property Disposal Officer.
Decimal Locator Code	A one position numeric code which locates decimal in conversion factor and in unit price identification.
Defects Classification and Classes	a. Classification of Defects: A classification of defects is an enumeration of possible deficiencies in an item classified according to their importance. b. Defects Classes: For the purpose of storage inspection and quality control, a "defect" is any deviation of an item from serviceability requirements, i.e., impairment of function or intended use. Defects may be classified as critical, major, or minor.

TERM	MEANING
	(1) Critical Defect: A critical defect is one that could result in hazard to life or health, or could create unsafe conditions for individuals using or maintaining the product, or is a defect which will make the product completely inoperative.
	(2) Major Defect: A major defect is one, other than critical, that could prevent efficiency.
	(3) Minor Defect: A minor defect is one that does not materially reduce the usability of the item for its intended purpose or is a departure from established standards, but has no significant bearing on the effectiveness of the item.
DICOMSS Cycle Code	Appendix A-30. An alpha code, used for internal processing at the DSC and the distribution depot, denoting the specific processing cycle, e.g., B-2nd cycle January, C-1st cycle February, D-2nd cycle February.
Direct Commissary Support System (DICOMSS)	A system for obtaining supplies for overseas commissaries by shipment directly from vendors to a selected break-bulk distribution depot where supplies are reassembled into van loads destined for individual commissary addressees.
Distribution Code	A two part, three position alpha/numeric code. This two part code indicates if alpha in the first position, the recipient of additional status and reflects in the second and third position nonsignificant internal control data of the originator.
Document Availability Code	Appendix A-65. An alpha code used by the distribution depot to indicate to the DSC receipt/nonreceipt of PMRCs/shipping documents with or without voluntary price reductions.
Document Identifier Code	This three position alpha/numeric code may be arranged in any combination of characters. It provides a means of identifying any document (i.e., requisition, shipment, receipt, file maintenance and so forth) to the system to which it belongs and identifies such data as to its intended purpose and action required.

TERM	MEANING
Document Number	A 14-position alpha/numeric/number used to identify the document during the entire processing cycle. It consists of the following basic elements. a. Service Designator Code b. Activity Address Code c. Julian Date d. Serial Number
Document Release Date	The actual date that Materiel Release Receipt Documents are released to the storage element for picking, packing, and marking of materiel.
Facility Characteristics	A one position numeric code indicating the characteristics of the building or sections thereof.
Federal Supply Code	The first four digits of the National Stock Number (FSC).
Flammable Space	Warehouse area which has been designed for the storage of highly flammable materiel.
Freeze Space	Refrigerated warehouse area in which the temperature can be controlled below a level of 32 F (see chapter 63).
Freight Bill Date	The date that the delivering carrier prepared their freight bill (collect or prepaid).
Freight Classification Number	A six position alpha/numeric number identifying the NMFC or UFC.
Freight Rating LCL	A one position alpha code that identifies the classification rating of less than carload shipments.
Freight Rating LTL	A one position alpha code that identifies the classification rating of less than truckload shipments.
Frequency Count Codes	The Frequency Count in the Item Locator Record records the number of Materiel Release Orders received by a depot for each Federal Stock Number during previous, current, and the past 6 months.

TERM	MEANING
Fund Code	A two digit alpha/numeric code used to indicate that funds are available and, for customers, to identify the appropriation and year of funds.
General Purpose Space	Warehouse area other than controlled humidity, flammable, and refrigerated warehouse area.
Gross Covered Storage Space Available	Total gross covered space of all types, including space used in support of storage functions, aisles, and structural loss, available for storage operations.
Gross Space	Inside area between exterior walls, without deductions for fire walls and other structural losses. Overall measurements of open storage areas with no deductions for trackage and permanent roads within the areas.
Gross Space Used in Support of Storage	That area used for preservation and packaging, assembly, packing and crating, container manufacturing, receiving, shipping, inspection and identification, administrative storage offices, employee rest areas, tool rooms, time clock areas, battery charging stations and other similar support functions.
Gross Storage Space	Gross area (regardless of its location or the purpose for which the space being used was designed or is designated) which is assigned or used for any operation concerning storage or the support of storage functions.
Inbound Rate	The rate which constitutes the base for computation of cost of movement from origin to destination (inbound). Usually expressed in cents per hundred pounds.
Inbound Route	The route over which an inbound shipment moved, as shown on carrier's freight bills. Usually expressed in authorized abbreviations for carrier(s) name and sometimes showing junction points where freight is interchanged.
Inspection Date	a. The Inspection Date is the Month and Year Date assigned where applicable in the Item Locator Record to indicate the next regular inspection date of supplies in storage. The Inspection Date is four digits.

TERM	MEANING
	b. The Inspection Date is used in conjunction with the Short Shelf-Life Code.
Issue Priority Code	A two position numeric code used to indicate the MISTRIP issue priority requirement.
Location	A nine position alphanumeric code that identifies the address (building, floor, short row, long row, and level) of an item in storage.
Lot/Contract Number Code	The Lot/Contract Number is composed of six digits assigned and utilized only where applicable in the Item Locator Record to identify specific materiel in storage. The Lot/Contract Number has limited use and will remain blank if not used. The sixth digit, when used, is L (Lot) or C (Contract).
Management Code	A one position alpha code used to identify special procedures or restrictions applicable to specific items or types of items.
Mandatory Date to Transportation	The computer MDT represents the latest date that materiel may be offered to the Transportation Officer for shipment.
Mandatory Transfer Date	This is the date when the transfer of accountability for Purpose Code M materiel is consummated between a Defense Supply Center and a Property Disposal Officer.
Media and Status Code	A one alpha or numeric character that designates the activity to which status and communications should be directed.
Mode of Shipment Code	A particular form of carriage, e.g., air, express, freight forwarder, rail, water, etc.
National Motor Freight Classification (NMFC) Number	a. A six digit number utilized in the Item Locator Record to identify applicable freight classification of items for shipment via Public Motor Freight carrier. An NMFC may or may not be further identified by a one digit suffix code as provided by MILSTAMP. b. NMFC numbers are published in NMFC Guides, MILSTAMP, and freight data lists of supply catalogs; therefore, are not furnished in this volume.

TERM	MEANING
National Motor Freight Classification Reference	The first six digits of the NMFC used as a cross-reference to the Uniform Freight Classification.
National Motor Freight Classification Suffix Codes	a. The NMFC Suffix Code is a one digit alpha code utilized in the basic Item Locator Record in conjunction with the NMFC. b. Code depicts the type of assemblage of the materiel in storage, i.e., assembled or disassembled, nested or loose, etc. and a specific rating. c. Each NMFC Suffix Code designates a specific percentage of the base rate. d. NMFC Suffix Codes are published in MILSTAMP.
National Stock Number (NSN)	A 13-digit number assigned to identify a specific item. This number consists of a four digit Federal Supply Class (FSC) and a nine digit National Item Identification Number (NIIN). The NSN will supplement the FSN in Sept 1974.
Net Covered Storage Space Available at DLA-Operated Storage or Distribution Depots	Total net covered space of all types available and allocated for storage of inventories at DLA-operated storage or distribution depots.
Net Storage Space	Floor area upon which bins are erected plus the floor area upon which material can be stored.
Nonbailment	The method of issuing Government Furnished Materiel (GFM) to contractors whereby the Government pays transportation costs and determines the mode of shipment.
Nonperishable Item	Items consisting of food products which are canned, dried, dehydrated, or otherwise processed so that storage life is possible, for extended periods without refrigeration.
Nonwarehouse Space	Any covered area except warehouse space assigned for storage purposes.
Occupied Net Storage Space	Amount of net storage space which is actually occupied by materiel plus the entire bin area.
Open Improved Storage Space	Open area which has been graded and hard surfaced or prepared with topping of some suitable material so as to permit effective materiels handling operations.

TERM	MEANING
Open Space	Improved or unimproved are designated for use in storing materiel. Open space used for employee parking purposes (as opposed to space used for vehicle storage) will not be included.
Open Unimproved Storage Space	Area which has not been surfaced but is actually in use for storage purposes.
Other Storage	Any area assigned for storage operations, within a structure designed for other than storage purposes.
Outleased Storage Space	Storage space leased to a private or commercial industrial enterprise for which rent is paid by the lessee.
Physical Security Code	A one position alpha code reflecting security classification of a Stock Number.
Pilferable Items	Items other than sensitive items which are valuable, attractive, and useful, and which require a measure of protection from pilferage or theft during storage and shipment above that afforded under normal warehousing and shipping procedures.
Planned Date to Transportation	This date is the planned date materiel is to be released from the storage element to the transportation element.
Popularity Group Code	A one position alpha code that reflects the popularity of a stock number based on the number of MROs received for that item.
Potential Vacant Space	That portion of covered net usable space which is temporarily not available for storage because of repair or alteration to the storage area or that space that can be made available by rewarehousing, elimination of honey-combing or utilization of maximum heights in stacking.
Preservation, Packaging, and Packing	Definitions for preservation, packaging, and packing terms, including materiels, processes, methods, and equipment, refer to Federal Standard No. 75, entitled, Glossary or Packaging Terms, and DLAM 4145.2, Preservation Packaging and Packing of Military Supplies and Equipment.

TERM	MEANING
Print Control Number	Four digit number assigned sequentially to each DD Form 1348-1 having initial pick location in the mechanized area. Control numbers are assigned, based on the descending number of lines in the shipment units, with control number 0001 being the shipment unit with the greatest number of lines. S/L prints in control number position on single line shipment units.
Priority Group	A one numeric position identifying the order and shipping time for a range of issue priority designators.
Procurement Instrument Identification Number	A fourteen position alphanumeric field used to record the manufacturers lot or contract number as shown on the procurement instrument.
Project Code	A three position alphanumeric code assigned to projects/items which require special recognition and handling by the supplier.
Quantity per Standard Pack	A five position numeric that identifies the quantity in a standard pack.
Rail Express Agency (REA) Code	The REA Item Code is a single digit code utilized in the Item Locator Record to identify items which may be moved by REA, surface or air, and the scale rate of commodities. Applicable codes will be obtained from REA by each depot.
Rate	Transportation rate usually expressed in cents per hundred weight or cents per short ton.
Required Delivery Date	A three position numeric date entered on the requisition stating date the materiel will be needed.
Responsibility	The obligation of an individual for the proper custody, care, and safekeeping of property or funds entrusted to his possession or under his supervision.
Responsible Officer	An individual, either civilian or military, responsible for the proper custody, care, and safekeeping of property entrusted to his possession or under his supervision to include pecuniary liability for any loss which might occur because of failure to exercise this obligation. Responsible Officers will be appointed in writing by Heads of DLA primary level field activities.

TERM	MEANING
Reviewing Authority	A person or group of persons who are required to review the findings made by a person, committee, board, or the like, to ascertain the legality or practicality of the findings and to affirm, repudiate, or modify the judgment of the originator or originating activity of a report of survey.
SEAVAN Consist	A van load list reflecting required identification data for each item loaded in a sea van.
Sensitive Items	Items (not classified in relation to interest of national defense) such as narcotics and precious metals, which require a high degree of protection and control during storage and shipment due to statutory and regulatory requirements to prevent loss from pilferage or theft.
Sequence Code	A one position alpha or numeric code used to identify bin locations, reserved bin locations, and bulk locations.
Shed Space	Area in a building without complete side and end walls.
Shelf-Life Item	A one position alpha or numeric code that reflects the period of time that an item may remain in storage without being condemned or reconditioned.
Shelf-Life Item	Any item of supply possessing deteriorative or unstable characteristics to the degree that a storage time period must be assigned to assure the issuance of materiel that will perform satisfactorily in service. There are two types of shelf-life items: a. Type I - Nonextendable Dated Item: An item of supply having a definite storage time period that cannot be extended. This item is disposed of when the established date has expired. b. Type II - Extendable Dated Item: An item of supply which has an assigned storage time period but may have the time period extended after prescribed inspection or restorative action.
Shipment Unit	A shipment unit consists of one or more items for shipment to one ultimate consignee under a single key transportation control number.

TERM	MEANING
Shipment Status	Positive advice of shipment including date of shipment, mode, bill of lading, airway bill number etc. as applicable.
Signal Code	A one position alpha character that designates the document field containing the intended consignee and the activity to receive and effect payment, when applicable.
Special Requirement Code	A one position alpha code used to indicate an item has peculiar or particular requirements for packing or shipping, e.g., controlled humidity, precious metals, flammable, etc.
Standby Storage Space	Storage space contained in completely empty covered structures or open improved area which are not required to support the installation's mission and which have been secured (see chapter 63).
State of Origin	A two digit numeric code assigned to each state, e.g., (01 - Alabama; 02 - Arizona, etc.).
Storage Serviceability Standards	Serviceability standards issued by groups of supplies wherever feasible. For items with unusual or distinctive features separate standards are prepared. Storage serviceability standards will contain but are not limited to the following elements: a. Lists of quality characteristics that are subject to deterioration in storage. b. Lists of defects for defect classification which apply. c. Instructions for visual and dimensional examinations and for laboratory testing. d. Serviceability quality levels utilized. e. Normal sampling procedures. f. Fixed or variable intervals of scheduled inspections and tests. g. Special inspection and test information. h. Normal storage environment.

TERM	MEANING
	i. Normal preservation and packing for extended storage.
	j. Minor preservation and repair procedures.
Storage and Materials Handling	See Chapter 1, General, Section II, Glossary of Terms, Joint Storage and Materials Handling Manual, DLAM 4145.1.
Structural Loss Space	Amount of space not usable for storage because of construction features or physical characteristics. Within covered storage areas, such items as toilets, posts, firewalls, elevator shafts, stair wells, ramps, steam pits, switch panels, loading wells, and door clearances will be considered structural loss. Within improved open storage areas, such additional items as fire breaks, streams, stream beds, railroad tracks, and clearances maintained for utility lines should be considered as structural loss.
Suffix Code	A one position alpha code which relates and identifies supply transactions for "partial quantities" to the original requester transactions without duplicating or causing loss of identity of the original document number.
Supplementary Address Code	A two part, six character alphanumeric code which indicates, in the first position, the service or other governmental element or sponsorship and indicates, in the last five positions, the specific account number or activity number (address) for the purpose of receiving material or receiving documentation.
Surveillance Inspection	Examination and testing of supplies and services (including, when appropriate, raw materials, components, and intermediate assemblies) to determine whether the supplies and services conform to applicable requirements.
Testing	Testing is an element of inspection and generally denotes the determination by technical means of the physical and chemical properties or elements of materials, supplies, or components thereof, involving not so much the element of personal judgment as the application of established scientific principles and procedures.

TERM	MEANING
Transit Reference	Billing reference as outlined in DLAR 4500.3, paragraph 210013a.
Transportation Compatibility Codes	Appendix A-68. An alpha code used to identify materiel that can be shipped in one container for brand name commissary items.
Transportation Control Number	A fifteen position to be generated and used for the control of MILSTRIP, NON-MILSTRIP and unit move shipments.
Type Bill of Lading	a. U.S. Government Bill of Lading (Standard Form 1131). b. U.S. Government Transit Bill of Lading (Standard Form 1131). c. Commercial bills of lading as supplied by local carrier.
Type Container Code	A two position alpha code to identify the type of container in which the item is being shipped in.
Type of Facility	A one position alpha code indicating the basic type of building or open storage area.
Type of Inventory Code	A one position numeric code used to identify types of inventories being taken (i.e., special, sample etc.).
Type Pack	A one position numeric code used to identify the state of outer packing.
Type Storage Code	A three position alphanumeric code indicating the physical conditions of storage under which an item is placed.
Type of Location	A one position code indicating bulk location, bin location, or reserved location.
UFC Reference	The five position UFC number, preceded by alpha U, that is used in cross-referencing the UFC to the NMFC.
Uniform Freight Classification (UFC) Numbers	The Uniform Freight Classification is a five digit code, preceded by alpha U, that is utilized in the Item Locator Record to identify applicable freight classification of items for shipment via rail.

TERM	MEANING
Uniform Freight Classification Suffix Code	a. The Uniform Freight Classification (UFC) Suffix Code is a two digit numeric code utilized in the Item Locator Subrecord in conjunction with the UFC. b. Code depicts the type of assemblage of the materiel in storage, i.e., assembled or disassembled, nested or loose, etc. and a specific rating. c. Each UFC Suffix Code designates a specific percentage of the base rate. d. UFC Suffix Codes are published in MILSTAMP.
Unit Cube	a. The Unit Cube consists of six digits or positions and is utilized in the Item Locator Record to compute the cube of items required for shipment on a Materiel Release Order. b. The Unit Cube is applicable to one of an item by Unit of Issue, e.g., one pair, one each etc. The Unit Cube includes Unit packaging. c. The six digits alloted for Unit Cube may be utilized to indicate three whole numbers and three decimals, e.g.: 001000 — 1 Cu. Ft. 000100 — 1/10 Cu. Ft. 000010 — 1/100 Cu. Ft. 000001 — 1/1000 Cu. Ft.
Unit of Issue	A two position alpha code catalog abbreviation of the Unit of Issue of an item.
Unit Pack	The Unit Pack consists of five digits and is utilized in the Item Locator Subrecord to indicate the number of items per Unit of Issue in a container. Unit Pack for items in bin storage is usually expressed as one, e.g., 00001.
Unit Weight	a. The Unit Weight consists of six digits or positions and is utilized in the Item Locator Record to compute the weight of items required for shipment on a Materiel Release Order. b. The Unit Weight is applicable to one of an item by Unit of Issue, e.g., one each, etc. The Unit Weight includes unit packaging.

TERM	MEANING
	c. The six digits alloted for Unit Weight may be utilized to indicate four whole numbers and two decimals, e.g.: 000100 — 1 pound 000010 — 1/10 pound 000001 — 1/100 pound
Vacant Net Storage Space	Amount of net storage space less occupied net storage space.
Violation Reason Code	A 2-position alpha code to notify operating elements that the input documents cannot be processed through the system until invalid data elements/formats have been corrected.
Voluntary Price Reduction (VPR)	A decreased unit price offered by vendors at time of shipment. This price, when offered, is reflected on shipping documents and perpetuated through the system including reflection on the SEAVAN Consist.
Warehouse Space	Area in a building designed for storage purposes and constructed with roof and complete side and end walls.
Water Commodity Code	A 5-position alphanumeric identifying specific commodities for cargo and exception purposes. These codes are published in MILSTAMP.

APPENDIX G-2

ABBREVIATIONS

ABBREVIATION	MEANING
AAC	Activity Address Code
ACC	Air Commodity Codes
ACDC	Air Cargo Dimension Code
ACM	Alteration, Conversion and Modification
